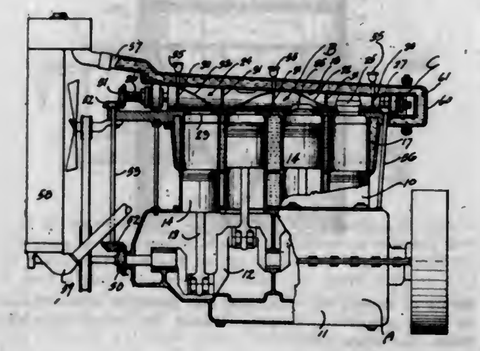
1,695,346. SMOKELESS RECEPTACLE. HENRY AUGUST REESE, Glendale, N. Y., assignor of one-half to Evan S. Webster, Long Island, N. Y. Filed June 21, 1927. Serial No. 200,312. 5 Claims. (Cl. 131—51.)

1. A receptacle of the character described having a cover, a tube leading downward therefrom and a flange within the receptacle engaging said tube and extending upward and outward therefrom.

---

1,695,347. COFFEE URN AND BIGGIN. PETER G. ROUSSEAS, Brooklyn, N. Y. Filed July 28, 1927. Serial No. 209,037. 4 Claims. (Cl. 53—3.)



1. In a coffee urn the combination with a boiler having a biggin made of fabric with a substantially flat bottom

suspended therein, a water inlet pipe located on the upper side of the boiler, and a nozzle mounted on the inlet pipe having a perforated angular outlet positioned on one side of the biggin to spray the water downward so as to strike the entire bottom of the biggin.

---

1,695,348. ROTARY VALVE. HERBERT SCHEEL, Maplewood, Mo., assignor, by mesne assignments, to Scheel Motors Corporation, a Corporation of Delaware. Filed Oct. 21, 1920. Serial No. 418,564. 7 Claims. (Cl. 123—80.)

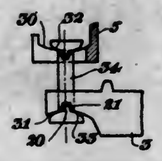
1. In an internal combustion engine the combination of a plurality of cylinders and a cylinder head, having a longitudinal seat therein, of a rotary valve disposed in said seat, antifriction means for adjusting said valve to provide and maintain a practically uniform predetermined clearance between said valve and said seat, and means for maintaining said valve at a practically uniform temperature whether said engine is running free or running under varying loads.

---

1,695,349. DIRECTION SIGNAL. SIGMOND SCHREIBER, Pittsburgh, Pa. Filed Feb. 29, 1928. Serial No. 257,974. 3 Claims. (Cl. 116—47.)

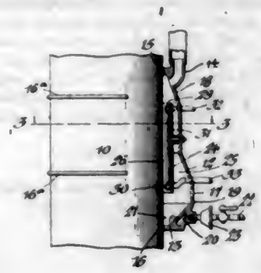
1. A vehicle direction indicator comprising a casing having an inner end wall, a marginal wall and an outer end wall, a shaft extending axially in the casing and projecting from the outer end wall thereof, bearings for said shaft in said casing against the inner faces of said end walls, one bearing having an arm extending beneath the shaft and formed with a bearing sleeve, a drive shaft extending into said casing through the marginal wall and journaled in the bearing sleeve, intermeshing gears carried by said shafts, direction indicating means carried by the outer end wall, and a hood for the outer end wall and indicating means carrird by the outer end portion of the first-mentioned shaft and formed with a sight opening through which a selected portion of the indicating means may be disclosed by rotating the hood and shaft carrying the hood.

---



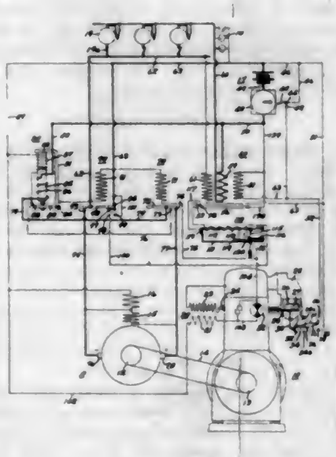
1,695,350. SAFETY CLAMP. GEORGE BARTRAM SHIVELY, Waynesboro, Pa. Filed Sept. 12, 1927. Serial No. 219,058. 3 Claims. (Cl. 24—3.)

1. A device of the kind described comprising a bill folder, an elongated strip attached thereto, a slidable clamp adapted to be positioned around said strip between the points at which it is attached to the bill folder and adapted to slide upon said strip, the clamp having an elongated upwardly extending portion having attached thereto means for securing the device upon the clothing of a person, substantially as set forth.



---

1,695,351. POSITIONING DEVICE FOR RAILWAY-CAR COUPLERS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed June 16, 1926, Serial No. 116,407. Divided and this application filed Feb. 2, 1928. Serial No. 251,311. 4 Claims. (Cl. 213—21.)

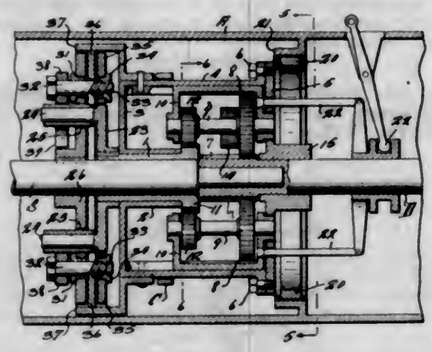


1. In a railway car; the combination of a car part element, a coupler carrier element, and a pair of links swingably suspending the opposite ends of the carrier thereto, eccentric engaging surfaces between one of said links and said elements, respectively, extending on both sides of the normal contacting lines between the respective parts whereby upon lateral swing of the links in either direction the engaging surfaces roll upon each other and gradually shift the contacting lines therebetween.

1,695,352. HEATER FOR DOMESTIC BOILERS. THOMAS H. STAMP, Buffalo, N. Y. Filed June 21, 1926. Serial No. 117,343. 2 Claims. (Cl. 122—20.)

1. A heater of the character described, comprising a jacket open at its inner side and having bearing faces conforming to a water boiler, the jacket being provided in its base with a burner and having air inlets in its lower portion above the burner, and an imperforate upright partition arranged in the jacket about midway between its outer wall and its bearing faces, forming an air passage between the jacket and the partition, the lower end of the latter terminating near said air inlets.

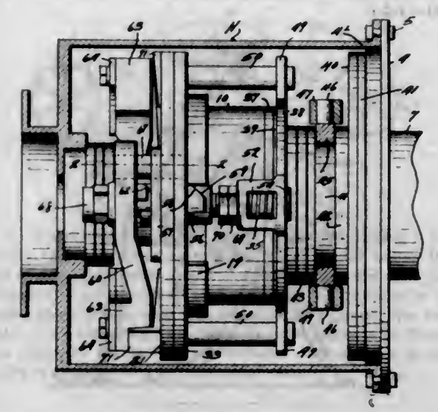
1,695,353. ELECTRICAL GENERATING SYSTEM. FRANK F. STARR, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 16, 1925. Serial No. 69,311. 6 Claims. (Cl. 290—30.)



3. A power plant comprising, in combination, an internal-combustion engine, and a single temperature responsive means for controlling the engine fuel mixture proportions and for causing the engine to start and stop automatically in response to engine temperature.

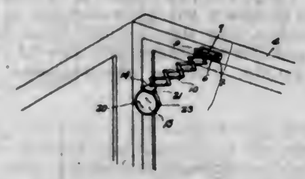
1,695,354. BOILER-COMPOUND DISSOLVER. JOHN A. THOMASON, Atlanta, Ga. Filed June 7, 1927. Serial No. 197,195. 9 Claims. (Cl. 210—37.)

1. A boiler compound dissolver, comprising a container having a water inlet at its upper end, a steam inlet at a lower point, and an outlet for the dissolved compound, said container having arranged therein one above the other a series of separate and removable sections or compartments to receive the compound and provided with strainer or filter plates and arranged below the water inlet and above the steam inlet.

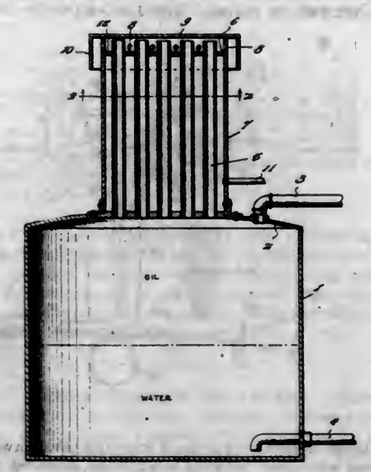


1,695,355. CLUTCH MECHANISM. WILLIAM ISIAH WHEELER, Scottville, Ill. Original application filed Jan. 2, 1923, Serial No. 610,249. Divided and this application filed Nov. 21, 1925. Serial No. 70,590. 3 Claims. (Cl. 192—105.)

1. In combination with a plurality of relatively rotatable members, one of said members being provided with a slot, a shaft carried by a second member and disposed through the slot of the first member, an articulated rod operatively connecting the shaft to the first named member, a head provided with a bill engageable with the shaft, means associated with the head for rocking the same in one direction under centrifugal force, another member supported for rotation independently of the first named rotatable members and including a part extending between said first named rotatable member and a third of said relatively rotatable members, and means operating upon such rocking movement of the head to bring the first and third of said rotatable members and the part of the last member extending therebetween into clutching engagement.

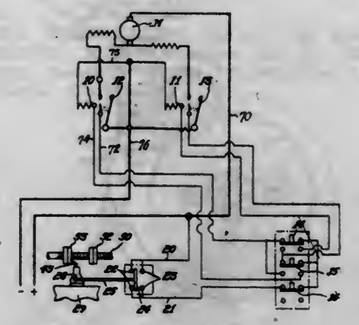


1,695,356. TRANSMISSION MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Filed July 26, 1927. Serial No. 208,621. 7 Claims. (Cl. 74—34.)



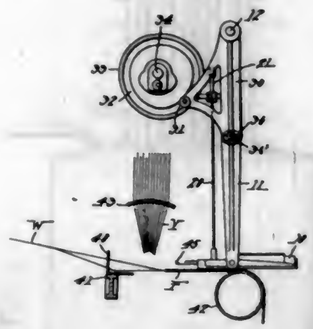
1. A transmission mechanism comprising, in combination, a drive element, a driven element, a member free to rotate with respect to the drive and driven elements, a gear assembly associated with the drive element and the member to rotate the driven element at a reduction when said member is held against rotation, an automatic clutch operable under centrifugal action to cause said member and the driven element to have direct rotation, a braking means for said member, and an operative connection between the braking means and the clutch, shifting the braking means to inoperative position when the clutching means is operative, said means for operating the clutch also operating under torque to release the clutching means and to applying the braking means.

1,695,357. AUTOMOBILE ANTIGLARE SHIELD. IRA L. WORDEN, Wichita, Kans. Filed Mar. 19, 1927. Serial No. 176,707. 1 Claim. (Cl. 296—97.)



An automobile anti-glare shield comprising a fixed horizontal bracket having spaced projections, a horizontal pivot supoprted by the said projections, a clamp consisting of a plate doubled on itself to form a bearing sleeve and to provide a pair of spaced ears, the sleeve being arranged on the said pivot to permit a vertical swinging movement of the clamp and the latter being of a width less than the space between the projections to permit sliding movement of the clamp on the pivot, a lazy tong supporting member normally operating in a horizontal plane and having one end pivoted between the said ears for lateral swinging movement, the outer end of the lazy tong supporting member being free, a shield normally arranged in a vertical plane and depending from the free end of the lazy tong supporting member and provided at its top with a transverse pivot, and a clamp consisting of a plate doubled on itself to provide a bearing sleeve and a pair of ears, the bearing sleeve of the second clamp receiving the shield and the ears of the said second clamp receiving and pivoted to the free end of the lazy tong supporting member.

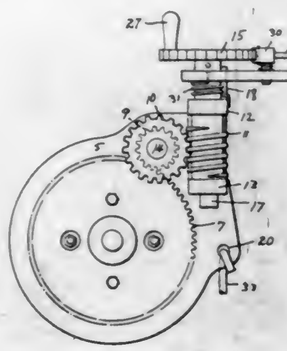
1,695,358. OIL-STORAGE TANK. BOYD K. APPLEMAN, Beaumont, Tex. Filed May 13, 1927. Serial No. 191,213. 3 Claims. (Cl. 220—85.)



1. Means for storing oil comprising a tank, tubes fitted in the top of the tank and rising therefrom, and a water-jacketing housing mounted on the top of the tank around said tubes in spaced relation thereto, said housing being closed to the tank and provided with vent and overflow openings adjacent its upper end below the upper ends of the tubes.

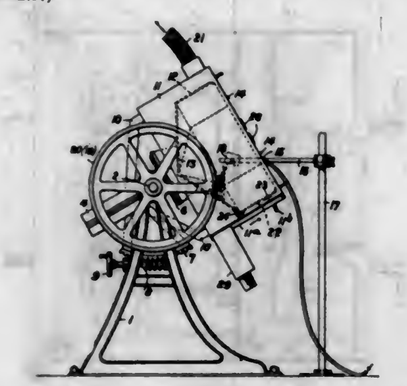
1,695,359. MOTOR-CONTROL MECHANISM FOR MACHINE TOOLS. STANLEY W. BATH, Worcester, Mass., assignor, by mesne assignments, to John Bath. Filed Dec. 14, 1925. Serial No. 75,226. 11 Claims. (Cl. 172—239.)

1. In a machine tool having a member movable in opposite directions, and having a reversible electric motor to actuate said member, with normal control circuits therefor, the combination of a motor-controlled mechanism comprising control means effective to break a control circuit of the motor at either end of a predetermined range of travel of said member, and means responsive to said control means to break a circuit of said motor at a second point, said control means thereafter restoring said control circuit at the first break and thereby permitting subsequent manual control of said motor.



1,695,360. ACTUATING AND SUPPORTING MECHANISM FOR THE KNOTTING TABLES OF ORIENTAL-RUG LOOMS. MARIUS A. BAUER, Worcester, Mass., assignor to M. J. Whittall Associates, a Voluntary Association of Massachusetts. Filed May 18, 1927. Serial No. 192,446. 4 Claims. (Cl. 139—4.)

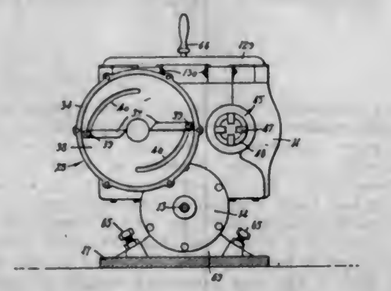
1. In an oriental rug loom, a knotting table having yarn severing and yarn twisting mechanism mounted thereon, said yarn severing mechanism operating prior to the operation of the yarn twisting mechanism, a rock shaft, a plurality of supporting arms depending from said rock shaft and to which said table is pivotally connected, a cam shaft rotatably mounted parallel to and at the rear of said rock shaft, cams on said cam shaft, and operating connections between each cam and the associated supporting arm by which said table is oscillated.



---

1,695,361. WARP LET-OFF MECHANISM FOR LOOMS. JOHN BERNINI, Allentown, Pa. Filed Oct. 18, 1927. Serial No. 226,902. 3 Claims. (Cl. 139—110.)

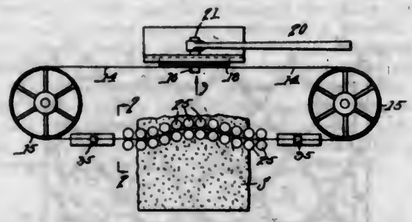
1. A mechanism of the class described, including, in combination, a gear adapted to be secured to a warp beam, an annular member on the gear, a ring about the annular member, a pinion meshing with the gear, a lever, means pivotally mounting the lever on the ring, means for rotating the pinion by oscillation of the lever, spring means associated with the lever for holding it in a predetermined position, a link engaged with the ring, a lever, means for pivotally mounting the second mentioned lever at one end of the frame of a loom, and spring tension means engaged with the second mentioned lever at an angle thereto.



1,695,362. SEPARATING APPARATUS. CARL BOURGES, Hagen, Germany, assignor to Metallisator Berlin A. G., Berlin, Germany. Filed Feb. 24, 1927, Serial No. 170,723, and in Germany Apr. 9, 1926. 2 Claims. (Cl. 91—1.2.)

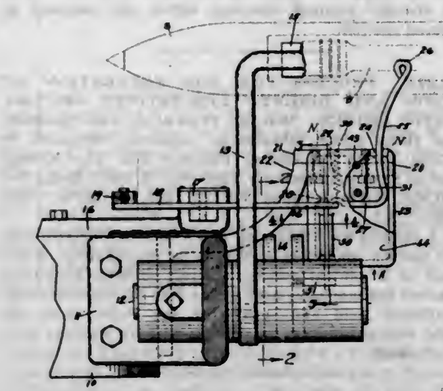
1. Apparatus for the treatment of a plurality of pieces of work by means of a jet of spraying bodies mixed with gases under pressure, comprising an obliquely supported rotatable container for the articles to be treated, said rotatable container being open at the upper end, a non-rotatable casing co-axial with and enclosing said rotatable container, means for varying the inclination of the common axis of said container and said casing, a spraying nozzle for discharging at the articles to be treated a jet of gases under pressure mixed with spraying bodies, a cover closing the upper end of said non-rotatable casing, said cover being formed with an aperture through which the spraying nozzle can be introduced, and means for adjusting the spraying nozzle at different inclinations to the bottom surface of the rotatable container so that the spraying nozzle can send out its jets as perpendicularly as possible to the parts of the rotatable container upon which they impinge.

---



1,695,363. PIPE CUTTER. GUY M. CAUSEY, Salem, Oreg., and MONROE E. MILLER, Washington, D. C. Original application filed Mar. 1, 1926, Serial No. 91,524. Divided and this application filed July 10, 1926. Serial No. 121,675. 1 Claim. (Cl. 164—60.)

A pipe cutter comprising a casing, a tubular shaft mounted in said casing, a sleeve rotatable on said shaft, cooperable members on the outer ends of the shaft and sleeve on the exterior of the casing, a cutting member slidable radially in one of said members, the other member having a spiral slot engaging said cutting member to move the cutting member radially by the relative rotation of said shaft and sleeve, and gearing within the casing connecting said shaft and sleeve to rotate them at different relative speeds.

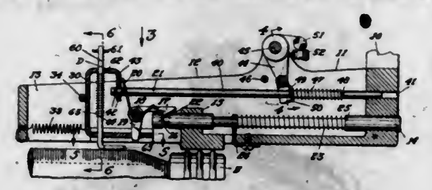


1,695,364. STONE-SAWING MACHINE. ELORY A. CHASE, Northfield, Vt. Filed Feb. 4, 1927. Serial No. 165,959. 5 Claims. (Cl. 125—16.)

1. A machine for sawing stone blocks comprising a relatively thin saw-plate of substantially greater width than the depth of the saw cut, means to reciprocate said plate lengthwise of the cut, and a plurality of guide rolls disposed at each side of said saw plate and adjacent the work, said rolls engaging the sides of said plate and forcing the plate to follow a predetermined curved path as said plate is reciprocated between said rolls.

---

1,695,365. SIDE-SLIPPING WEFT DETECTOR FOR LOOMS. ALBERT CEDERLUND, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 30, 1926. Serial No. 125,853. 4 Claims. (Cl. 139—281.)



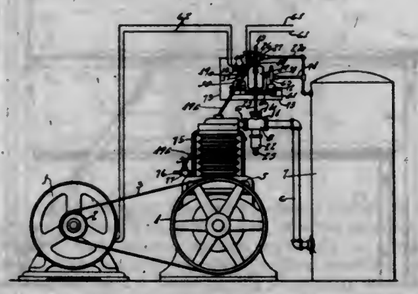
1. In a weft detector for looms having a support and a detector movable longitudinally in the support when sufficient weft is present and movable angularly with respect to the support when insufficient weft is present, an actuator having a regular movement on detecting beats of the loom, a controller carried by the support and operatively connected to the detector to be moved by the latter in a direction substantially parallel with the motion of the detector on non-indicating detecting beats of the loom and having a portion thereof normally operatively related to the actuator, said actuator having a portion extending laterally on both side of the cooperating part of the controller, and means to vary the position of the support and the detector, the controller and actuator maintaining operative relationship throughout a limited range of adjustment of the support.

---

1,695,366. WEFT DETECTOR IN LOOM TRANSFERRER. ALBERT CEDERLUND, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1927. Serial No. 232,432. 6 Claims. (Cl. 139—271.)

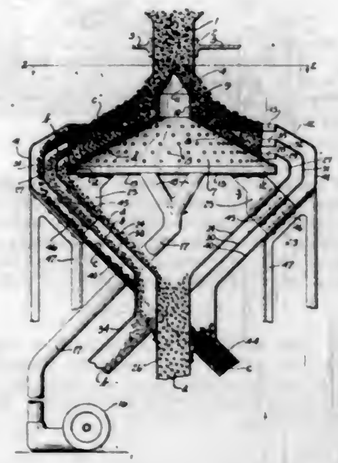
1. In weft detecting mechanism for a loom having a regularly movable transferrer arm, an indicating plunger slidably mounted on the arm, a latch to hold the plunger in non-indicating position and yielding means to move the plunger to indicating position when the latch is moved to releasing position, a weft detector, and means to guide said weft detector on the transferrer arm to move in a direction substantially parallel to the surface being detected at the time of indication of weft exhaustion, said means maintaining the detector in substantially the same angular position relatively to the surface being detected as the detector moves along the surface being detected, said means moving into engagement with the latch when the detector moves to indicate exhaustion of weft.

---



1,695,367. METAL-TESTING APPARATUS. GEORGE B. COLLINS, Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 5, 1923. Serial No. 666,669. 7 Claims. (Cl. 73—51.)

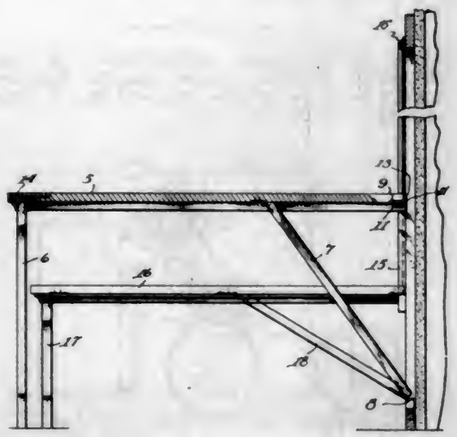
7. Apparatus for testing strip metal comprising a base having a groove extending longitudinally thereof, oppositely disposed jaw members slidably mounted in said groove, means for securing an end of the metal strip to be tested to each of the slidable jaw members, and an eccentric cooperating with one of the slidable jaw members for effecting a limited and regular reciprocating movement of said member.



---

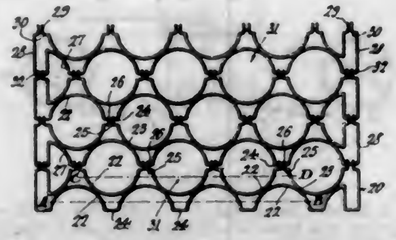
1,695,368. CONTROLLING MECHANISM FOR COMPRESSORS. RUDOLPH CONRADER, Erie, Pa. Filed Dec. 3, 1923, Serial No. 678,369. Renewed May 11, 1928. 12 Claims. (Cl. 230—4.)

1. In a controlling mechanism for compressors, the combination of a compressor; an electric motor driving the compressor; an unloader for the compressor; an electric line supplying current to the motor; a regulator sensitive to pumped fluid controlling the unloader; and means acting independently of the regulator for actuating the unloader with a stoppage of the current in the line connected with the electric motor.



1,695,369. MECHANISM AND PROCESS FOR SEPARATING INTERMIXED DIVIDED MATERIALS. KENNETH DAVIS, St. Benedict, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 8, 1921. Serial No. 520,932. 37 Claims. (Cl. 209—466.)

1. A dry separator for separating intermixed divided materials including in combination an annular, non-rotatable support, means tending to move the intermixed materials on the support transversely thereof for stratifying them, and means for separately receiving the separated materials from the strata.



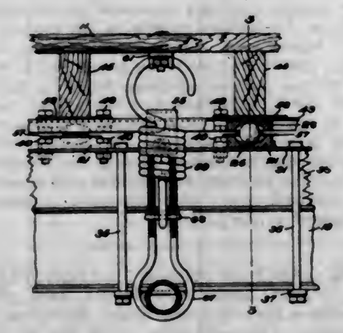
---

1,695,370. CONCEALABLE FURNISHINGS. WALTER C. FAIN, Norfolk, Va. Filed Aug. 3, 1925. Serial No. 47,955. 3 Claims. (Cl. 45—51.)

1. The combination with a foldable board, and a grooved support for the same, of a brace iron extending continuously across the board and having pintles at its ends projecting laterally beyond the board and adapted to slide in said grooves, and means attaching said brace iron to one end of said board in such manner that said board may shrink and expand without resistance from said brace iron.

1,695,371. SCREEN. ANDREW L. FELDE, Barnesville, Minn. Filed Mar. 31, 1927. Serial No. 179,936. 2 Claims. (Cl. 209—84.)

1. A sorting belt of the class described, comprising transverse members each made up of two lines of semicircular parts, the semicircular parts in each line of each member being disposed in staggered relation to the semicircular parts of the other line of the same member, the semicircular parts of the lines having tangential contact and being joined together at their places of tangential contact, there being connections that unite the semicircular parts in each line, and means for uniting the connections in one line of each member with the connections of the other line of an adjoining member hingedly, to permit swinging movement between said members and to form circular grading openings which are disposed in staggered relation.



---

1,695,372. PROCESS FOR THE SEPARATION OF MONO- AND DIALKYL DERIVATIVES OF AROMATIC AMINES. WALTER FLEMMING, Ludwigshafen, and HANS KLEIN, Mannheim, Germany, assignors to Silesia Verein Chemischer Fabriken Ida- und Marienhuette, Sarrau, Germany. Filed Nov. 3, 1927, Serial No. 230,923, and in Germany Nov. 19, 1926. 3 Claims. (Cl. 260—128.)

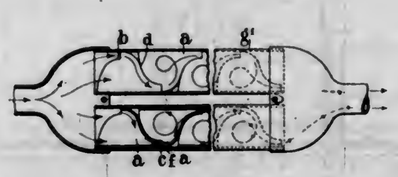
1. A process for separating mono- and di-alkylated aromatic amines consisting in dissolving the mixture of the amines in a neutral solvent, adding phthalic anhydride to convert the monoalkylated amine into the corresponding phthaliminic acid and separating the latter from the neutral solvent solution by shaking with an aqueous solution of alkali.

---

1,695,373. VEHICLE BODY SUPPORT. WILLIAM D. HARPER, Waltham, Mass. Filed July 26, 1923. Serial No. 653,937. 4 Claims. (Cl. 296—35.)

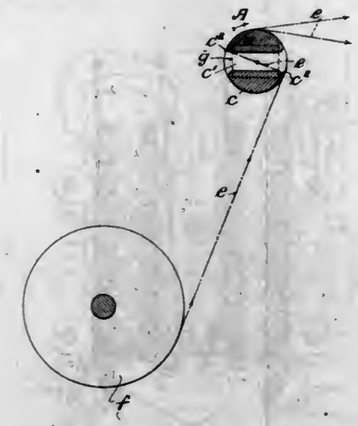
1. In a road vehicle employing a support and a load-carrying body, a supporting unit permitting movement of the body from its normal position and a consequent lift of the body, said supporting unit comprising a pair of complementary bearing cups, one of which is adapted to be secured to the body and the other to the support, and an interposed ball member arranged to move about therein, said bearing members presenting a smooth, unbroken curved bearing surface of varying sharpness of curvature over which the ball may ride on relative movement of the bearing cups, the radius of curvature of the bearing surface of the cup towards its outer edges being less than the diameter of the ball but greater than the radius thereof and the radius of curvature of the mid portion being greater than the diameter of the ball.

---



1,695,374. CAMP CONVENIENCE CHAIR. JOHN HARRISON, Roxbury, Mass. Filed Apr. 5, 1926. Serial No. 99,713. 1 Claim. (Cl. 155—31.)

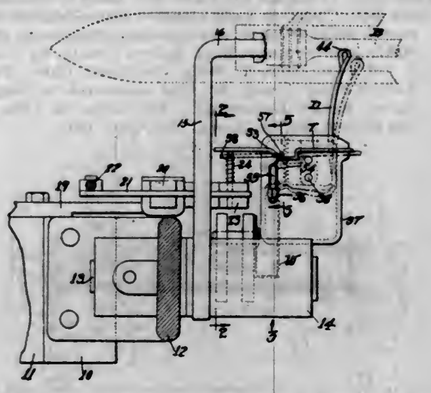
A camp convenience chair consisting of two pair of legs, means permitting it to be used as a toilet seat consisting of two U shaped bars to which each pair of legs is connected, a rectangular piece of canvas with an aperture therein solidly connected to the U shaped members, and means permitting it to be used as a chair, without exerting any pressure on the toilet seat, consisting of a rectangular piece of canvas solidly connected on one side to the canvas of the toilet seat and detachably connected to the opposite end of the chair, said seat being shorter than the corresponding part of the toilet seat.



---

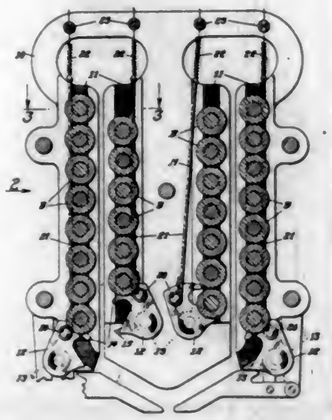
1,695,375. EXHAUST SILENCER FOR INTERNAL-COMBUSTION OR OTHER ENGINES. FREDERICK HEATHER, Fulham, London, England. Filed Sept. 15, 1926, Serial No. 135,673, and in Great Britain Oct. 8, 1925. 8 Claims. (Cl. 137—160.)

1. An exhaust silencer comprising a plurality of similar sections of tubular form arranged in end to end abutting relation and adapted to provide for the gases an undivided path of wave-like form having the interior space of each section progressively and continuously diminishing in cross-sectional area from the part where the gases enter the space to the part where they leave said space the last mentioned part constituting an outlet and being located at an end of and to one side of said space.



1,695,376. MEANS FOR REGULATING THE TENSION OF WARPS IN LOOMS FOR WEAVING. EDWARD HOLLINGWORTH, Dobeross, England, assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 24, 1926, Serial No. 118,312, and in Great Britain June 27, 1925. 4 Claims. (Cl. 139—97.)

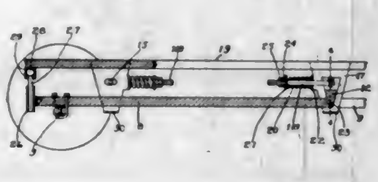
1. A warp tension applying and regulating device comprising a revolubly mounted roll and weighting means therefor, said roll having a longitudinal slot through which the warp is passed diagonally in the manner set forth.



---

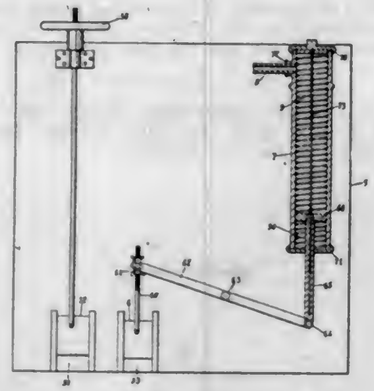
1,695,377. SIDE-SLIP WEFT DETECTOR FOR LOOMS. VICTOR H. JENNINGS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Original application filed May 13, 1926, Serial No. 108,942. Divided and this application filed Aug. 1, 1927. Serial No. 209,705. 5 Claims. (Cl. 139—281.)

1. In a side slip weft detector to effect a change in the operation of a loom, a support, a weft detector mounted on the support, said detector moving forwardly as a whole relatively to the support on non-indicating detecting beats of the loom and said detector having an angular movement about a part of the support as a center on indicating detecting beats of the loom, a laterally movable member to be engaged and moved by the detector when the latter moves angularly, an actuator, a controller therefor operatively disposed with respect to the member, said member having an inclined portion, and means fixed relatively to the support and engaging the inclined portion to cause the controller to be operatively related to the actuator when the member is moved laterally by an angular movement of the detector.



1,695,378. DEVICE TO PREVENT UNWINDING OF YARN FROM BOBBINS. ELMER JACOB, North Adams, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 10, 1927. Serial No. 218,769. 8 Claims. (Cl. 139—245.)

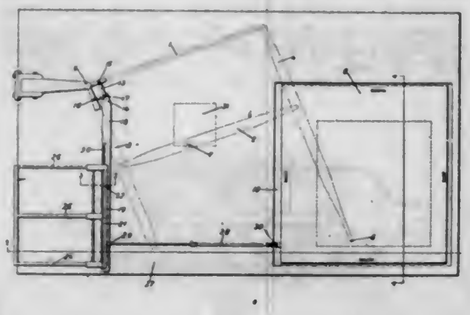
1. In a weft replenishing mechanism, means to guide a stack of bobbins which move toward transfer position by gravity, and flexible means resiliently mounted to engage the conical portions of the yarn on the bobbins adjacent the tips of the bobbins to prevent the winds of yarn adjacent the tips from unwinding.



---

1,695,379. VEHICLE SUSPENSION. MAX KECK, Covington, Ky.; Christian Keck, administrator of Max Keck, deceased, assignor, by direct and mesne assignments, of one-eighth each to Alwine Keck, Kenton County, Ky.; James J. Foley and Alma B. Foley, Cincinnati, Ohio; Martha Keck, Kenton County, Ky., and one-fourth to Joseph J. Stevee, Kenton County, Ky. Filed June 16, 1923. Serial No. 645,896. 8 Claims. (Cl. 280—124.)

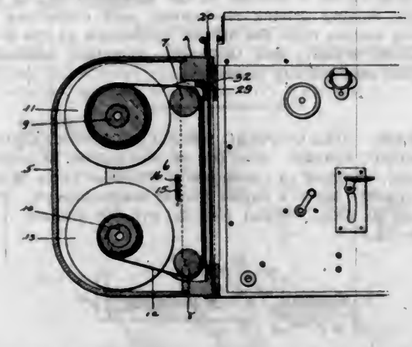
1. In a device of the class described the combination of a front and a rear axle, a chassis comprising depending brackets at its front and rear ends, bell crank levers each comprising a long and a short arm, each lever being pivotally mounted at the junction of its said arms to one of the brackets, the long arms of the levers extending longitudinally of the chassis and substantially from end to end thereof and having their free ends mounted upon the axles, and yielding means expansible and contractible in a plane substantially parallel with the horizontal planes extending longitudinally of the chassis and the levers and having a connection with the free ends of the shorter arms of the levers.



1,695,380. FEED CONTROL OF PAPER-MAKING MACHINES AND APPARATUS THEREFOR. AUGUST KOLITSCH, Port Alfred, Quebec, Canada. Filed Dec. 5, 1927, Serial No. 237,763, and in Canada Oct. 13, 1927. 7 Claims. (Cl. 92—46.)

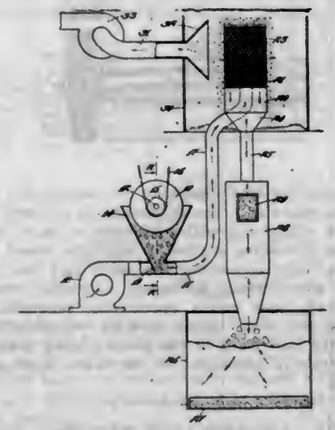
1. In the process of paper making, the step of controlling the feed of stock to the machine, by means of the variation of vacuum in the suction devices.

---



1,695,381. COMPENSATING APPARATUS FOR PANTOGRAPHS. JOHN H. LARRABEE, Washington, D. C. Filed Nov. 3, 1924. Serial No. 747,617. 4 Claims. (Cl. 33—25.)

1. A parallelogram type pantograph copying arrangement comprising interconnected arms, a tracing point and a reproducing point located on said arms, a movable copy-board and means connecting the interconnected arms and copy-board for imparting a progressive movement to the copy board in response to movement of the tracing point thereover.

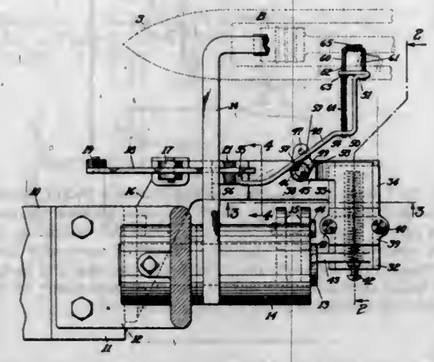


1,695,382. ROLL-HOLDING CAMERA. BYRON MCCANDLESS, Annapolis, Md. Filed Jan. 4, 1927. Serial No. 158,973. 3 Claims. (Cl. 95—34.)

1. A roll holding camera comprising a body portion, a casing detachably mounted adjacent to one side of the body portion, an intermediate frame member positioned between the body portion and casing, a sensitized paper roll holder removably mounted within the frame and covered by the casing, and means carried by the frame for indicating the extent of adjacent exposures on the sensitized paper.

---

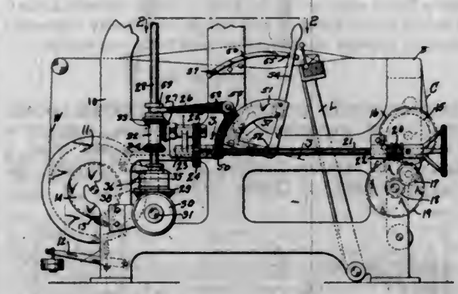
1,695,383. METHOD OF AND APPARATUS FOR SEPARATING AND CLEANING MICA. LOUIS MCCARTHY, Boston, Mass., assignor to The Macallen Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 27, 1922. Serial No. 603,485. 20 Claims. (Cl. 209—2.)



1. The herein described method of handling separated plates or leaves of mica and delivering the same without compaction or adhesion which consists in permitting the same to fall by gravity substantially to the point of delivery against an upward current of gaseous fluid.

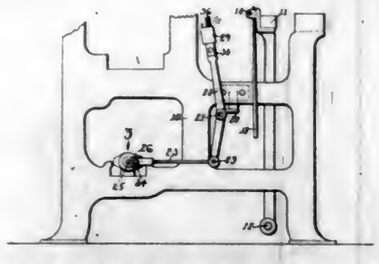
---

1,695,384. SIDE-SLIPPING WEFT DETECTOR FOR LOOMS. OSCAR V. PAYNE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 9, 1926. Serial No. 114,799. 2 Claims. (Cl. 139—285.)



1. In a side slipping weft detector for looms, an actuator to effect a change in the operation of the loom, a pivoted carrier adjacent the actuator and having a controller end rigid therewith for said actuator, a detector slidably mounted on the carrier, said controller end of the carrier being normally out of the path of the actuator and movable into the path of said actuator when the carrier has a pivotal movement, said detector sliding on the carrier

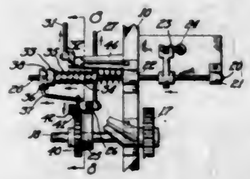
when sufficient weft is present and preventing pivotal movement of the carrier by contact of the detector with the weft, and said detector sliding along a bobbin having insufficient weft to impart pivotal movement to the carrier to move the controller of said carrier under the actuator.



---

1,695,385. PICK-OUT DEVICE FOR LOOMS. OSCAR V. PAYNE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1927. Serial No. 172,156. 10 Claims. (Cl. 139—316.)

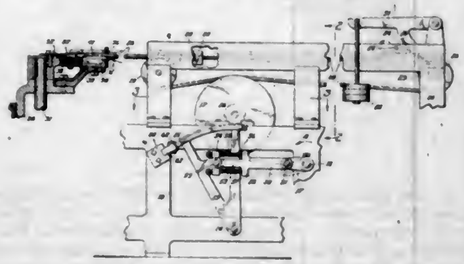
1. In a take-up for looms, a take-up roll, means always in operative connection with said roll to rotate the same either forwardly or backwardly, and a device acting conjointly with said means to give the roll a predetermined reverse movement when changing from forward to backward rotation while the means is operatively connected to the take-up roll.



1,695,386. PICKER-ROD LUBRICATOR FOR LOOMS. OSCAR V. PAYNE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 6, 1927. Serial No. 238,144. 9 Claims. (Cl. 139—146.)

1. In a loom having a lay provided with a picker spindle to be moved with the lay forwardly and backwardly each pick of the loom, an oil reservoir, a movable mounting for said reservoir, flexible elements extending upwardly from the reservoir to have contact with the spindle, and means to move said reservoir out of range of movement of the spindle on alternate beats of the loom.

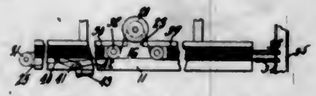
---



1,695,387. STOPPING MECHANISM FOR KNITTING MACHINES. JOHN REGAN, New Bedford, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 27, 1925. Serial No. 46,218. 2 Claims. (Cl. 66—157.)

1. In a knitting machine, a reverse locking mechanism comprising a normally inoperative holding device, and means to render said holding device operative to prevent rearward movement of the machine as said machine is about to be stopped, said holding device comprising a ratchet wheel, a holding pawl, a sliding rod, a pawl-controlling finger mounted on said rod, a spring-pressed actuating device for said sliding rod, and automatically controlled means for holding and releasing said actuating device.

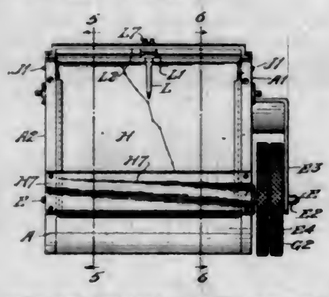
---



1,695,388. NEEDLE MOTION FOR AXMINSTER LOOMS. WILLIAM W. ROBERTSON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 13, 1927. Serial No. 198,393. 19 Claims. (Cl. 139—124.)

1. In a needle motion for Axminster looms having a selvage shuttle, a constantly moving driving mechanism, operating mechanism for the needle, a stop for said operating mechanism, and a motion absorbing connection between the driving mechanism and the operating mechanism, said operating mechanism being brought into engagement with the stop during a portion of the movement of the constantly moving driving mechanism, said connection absorbing motion from the driving mechanism as the latter continues to move and the needle operating mechanism remains substantially at rest.

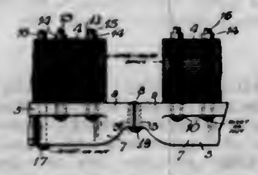
---



1,695,389. PILE-CUTTING MECHANISM FOR DOUBLE-FABRIC LOOMS. WILLIAM W. ROBERTSON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 9, 1927. Serial No. 211,815. 8 Claims. (Cl. 26—14.)

1. In a loom for weaving double pile fabric, a rotatable cutter, a support for said cutter, and means to reciprocate said support and cutter across the loom between the upper and lower plies of said fabric, said reciprocating means directly engaging and simultaneously rotating said cutter.

---

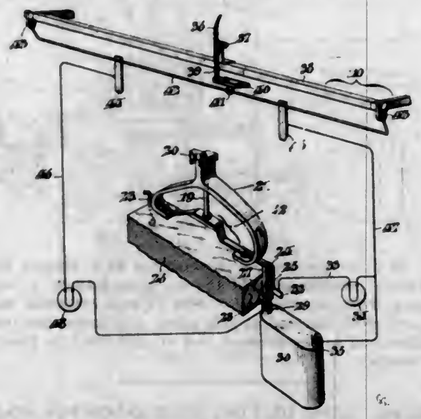


1,695,390. RADIO APPARATUS. ALFRED F. SANFORD, Knoxville, Tenn. Filed Dec. 17, 1925. Serial No. 76,099. 20 Claims. (Cl. 40—95.)

1. In a radio receiving apparatus, the combination of two members concerned with tuning, and to be set with reference to each other and with reference to wave lengths coming from a sending station, a movable record sheet, means operatively connecting the sheet and one tuning member for simultaneous movement, a pointer extending over the sheet, and means operatively connecting the pointer with the other tuning member for simultaneous movement, the movement of the pointer being transverse to the direction of movement of the sheet, substantially as described.

---

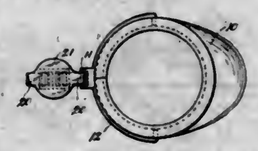
1,695,391. SQUIRREL-CAGE WINDING. THEODOR SCHOU, Mansfield, Ohio, assignor to Ideal Electric & Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Filed July 14, 1920. Serial No. 396,250. 5 Claims. (Cl. 171—252.)



1. A squirrel cage winding including a segmental end connecting ring, the ends of the segments being disposed approximately in abutting relation with a conoidal aperture-

disposed perpendicularly to the plane of said ring at the joint, in combination with a conducting sleeve having a split side disposed in said aperture and a conoidal wedge fitting tightly within said sleeve to expand the same tightly against said segments.

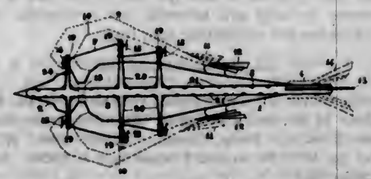
---



1,695,392. SIGNAL MEANS FOR TYPEWRITERS. ROBIN SEIDELINGER, Philadelphia, Pa. Filed Oct. 28, 1926. Serial No. 144,690. 4 Claims. (Cl. 197—187.)

1. The combination in a typewriter embodying a platen roller and carriage therefor; of signal means operative upon exhaustion of a paper sheet being typed including an actuating detector finger and co-operative pendulous member pivoted on the carriage and adapted to be outwardly flipped—to close an electric circuit through the signal means—by the trailing end of the sheet incidental to terminal passage of the latter about the platen roller.

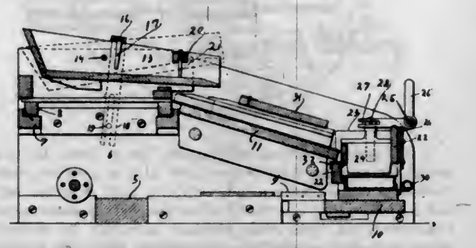
---



1,695,393. NOSE-PROTECTING STRAP FOR GOGGLES. HARRY F. SHINDEL, Reading, Pa., assignor to Willson Products, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1927. Serial No. 218,670. 1 Claim. (Cl. 2—14.)

In combination with separate lens framings; a connecting buckle-strap comprising a buckle adapted to adjustably engage the strap ends, and a strap having end portions of less width than said buckle and a widened midway portion forming a nose-rest which laterally overlaps the ends engaging buckle.

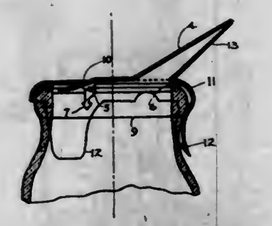
---



1,695,394. AIRSHIP WITH MIXED SUSTENTATION. GUIDO TALLEI, Rome, Italy. Filed Sept. 29, 1926, Serial No. 138,464, and in Italy Oct. 13, 1925. 5 Claims. (Cl. 244—5.)

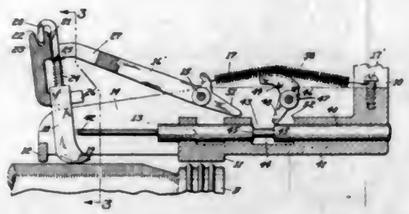
1. An air ship with mixed sustentation, comprising an engine, supporting surfaces to supply in flight aerodynamical lifting power, an envelope of sheet metal and filled with air, a hollow tube extending along the longitudinal axis of the envelope, the exhaust gases of the engine being led to said longitudinal tube for the purpose of heating the air contained in the envelope and thus supplying aerostatic lifting power, ring shaped girders supporting the envelope, and spokes radiating from said hollow longitudinal tube for stiffening the girders.

---



1,695,395. ASSORTING MACHINE. LEVERETT W. TIFFANY, Winsted, Conn. Filed Sept. 14, 1925. Serial No. 56,155. 3 Claims. (Cl. 226—2.)

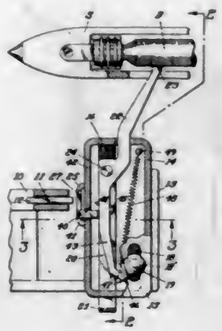
1. An assorting machine for pins and the like, including in combination, a movable hopper, means providing a receiving compartment, means for effecting a delivery of articles from said hopper to said receiving compartment, and means forming a fixed part of the machine and extending into said hopper and in contact with said articles for disposing of said articles in predetermined positions.



---

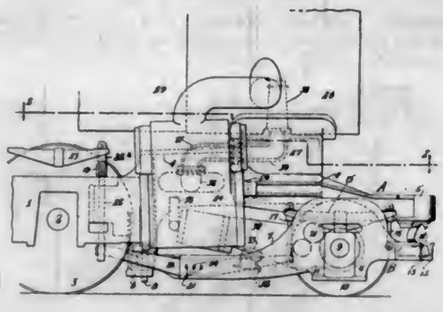
1,695,396. BOTTLE COVER, ESPECIALLY ADAPTED FOR THE USE WITH MILK BOTTLES. LAZAR MARK TRAUB, Brookline, Mass., assignor to Traub Company Inc., Boston, Mass., a Corporation of Massachusetts. Filed Sept. 16, 1926. Serial No. 135,970. 1 Claim. (Cl. 215—63.)

A cover for an open-topped receptacle comprising a cap adapted to seat on the open top of the receptacle and having means for securing the cap to the receptacle when seated on the said open top, the cap having an opening and an open spout extending from the opening, a flap intermediately hinged to opposite sides of the opening, the flap having a body portion for covering the opening, a lid on one side of the hinge for resting against the open spout to close the spout when the flap occupies its normal position, and an extension at the other side of the hinge that extends into the opening and under the cap to engage the underside of the cap when the flap occupies its normal position, the portion of the flap on the spout side of the hinge being heavier than the portion of the flap on the extension side of the hinge, whereby the flap is adapted to occupy its normal position by gravity when the receptacle occupies its normal position with its open top uppermost, and whereby, when the receptacle is tilted from its normal position, the flap will pivot from its normal position about the hinge in response to the pressure exerted upon the lid by the contents of the receptacle.



1,695,397. FEELER IN TRANSFERRER ARM. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 21, 1927. Serial No. 227,801. 8 Claims. (Cl. 139—271.)

1. In weft detecting mechanism for a loom having a regularly moving transferrer arm with a carrier pivoted thereto provided with a side slipping weft detector which has an indicating movement when the weft is substantially exhausted, an indicating plunger normally in retracted position and located for engagement with the detector when the latter has an indicating movement, a retaining device mounted on the transferrer arm independent of the carrier and having lateral engagement with the plunger, and a single resilient device to hold the carrier and detector normally raised with respect to the transferrer arm and also to hold the retaining device against the plunger to prevent accidental movement of the latter.



---

1,695,398. SIDE-SLIP WEFT DETECTOR. KENNETH J. UNWIN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 21, 1927. Serial No. 234,585. 2 Claims. (Cl. 139—286.)

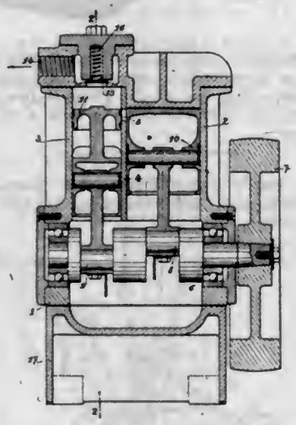
1. In weft detecting mechanism a substantially closed casing in which is slidably mounted a detector carrier, a side slipping weft detector pivotally supported by the slide, cooperating means formed on the detector and slide to limit angular movement of the detector with respect to the slide in one direction, an arm integral with the detector and extending forwardly and located within the casing, said arm being provided with a plurality of notches which are at different distances from the center of rotation of said detector, and a tension spring located within the casing and having one end fast with respect to the casing and having the other end held by one of the notches.

1,695,399. LOCOMOTIVE CONSTRUCTION. HARRY S. VINCENT, Ridgewood, N. J., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Jan. 28, 1925. Serial No. 5,183. 18 Claims. (Cl. 105—44.)

1. In a locomotive, the combination of a unitary front extension member secured to the main frames, a radial leading truck pivoted to the rear of said extension member and receiving load at said pivot, and means for transmitting load to the forward end of said truck in front of its wheels.

---

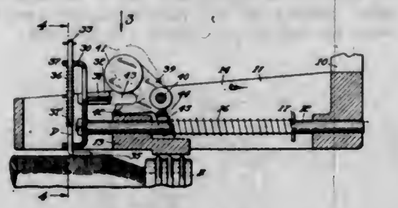
1,695,400. LINK DRIVING MECHANISM FOR WASHING MACHINES. WILLIAM H. VOSS, Davenport, Iowa. Filed Jan. 26, 1925. Serial No. 4,671. 2 Claims. (Cl. 74—14.)



1. In a device of the class described, the combination of a support, a tub shiftably mounted thereon, a link having a bearing forming an axis of oscillation, said link being formed of two plates spaced apart and provided with registering slots extending longitudinally thereof from said axis of oscillation, a pin extending across said plates therebetween with its ends lying in said slots, a rod having a fork pivoted to said pin and to the tub, a control rod pivoted to said pin between the furcations of said fork and means for oscillating said link.

---

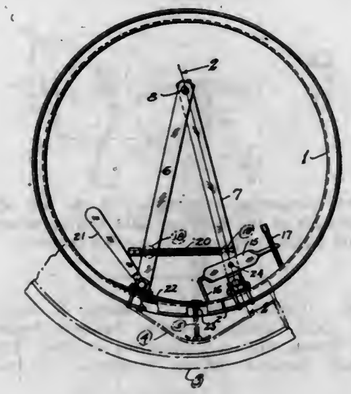
1,695,401. AIR PUMP. PAUL VOREAUX, Paris, France, assignor of one-half to Société "Etablissements Samga & Bavox Réunis," Paris, France. Filed Mar. 17, 1927, Serial No. 176,186, and in France Nov. 6, 1926. 1 Claim. (Cl. 230—222.)



In an air pump, the combination of a low pressure cylinder, a high pressure cylinder arranged in parallelism with the said low pressure cylinder and juxtaposed to the latter, a piston of a large diameter in the said low pressure cylinder, a piston of small diameter in the said high-pressure cylinder, a crank-shaft adapted to operate the said pistons, the cranks of the said shaft being angularly displaced the one relatively to the other, and links connecting the said pistons to the respective cranks, the said high pressure cylinder having in its wall, in the plane of oscillation of the respective link, a suction port opening

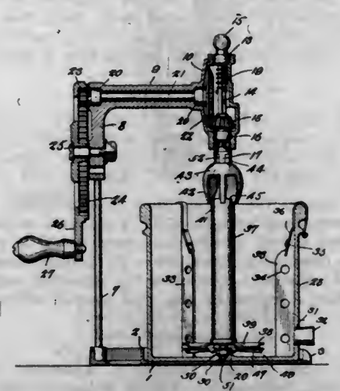
to the exterior, and in the plane of the cylinder axes, a port opening into the top of the low pressure cylinder, and the said high pressure piston being provided in its cylindrical face with a very deep circular groove whose wall at the side of the upper end of the respective link is inclined in a direction parallel to the plane of rotation of this link, the lower part of this wall being situated on the suction port side and extending about to the level of the axis of articulation of the said high pressure piston with the respective link.

---



1,695,402. WEFT DETECTOR MOUNTED ON INDICATING PLUNGER OF REGULARLY-MOVING TRANSFERRER ARM. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1927. Serial No. 232,422. 7 Claims. (Cl. 139—271.)

1. In a weft detecting mechanism for looms having a regularly moving transferrer arm, an indicating plunger slidably mounted on the transferrer arm, a weft detecting element, a carrier for the element supported by and movable with the indicating plunger, and means tending to move the indicating plunger from non-indicating to indicating position on each detecting beat of the loom, engagement of the detector with a sufficient supply of weft preventing movement of the plunger to indicating position.

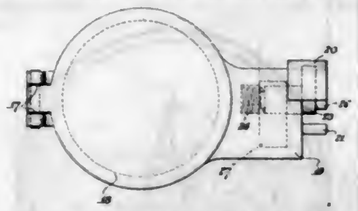


1,695,403. RIM TOOL. FRANCIS H. WEBSTER, St. Louis, Mo. Filed Dec. 14, 1927. Serial No. 239,928. 11 Claims. (Cl. 157—1.)

1. In a rim tool, means for overlapping the ends of a split rim, and a member controlled by said means for holding a tire valve stem outside of the rim.

---

1,695,404. CHURN. GEORGE E. WHEELER, Burlington, Iowa, assignor to The Burlington Separator Co., Burlington, Iowa. Filed July 30, 1926. Serial No. 125,988. 3 Claims. (Cl. 259—96.)

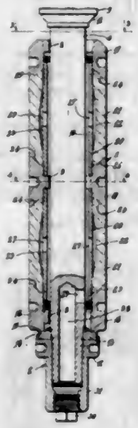


1. In a churn a dasher including a tubular stem, a member having spaced wings engaging one end of the stem and providing air inlets between them, a disk at the other end of the stem having depressions, a bottom disk bearing against the depressions to provide air outlets therebetween, cooperating interfitting means upon the disks for holding them against relative rotation, and an adjustable connection between the bottom disk and the stem engaging member for binding the disks together.

---

1,695,405. LOCKING DEVICE FOR CLOSURES. JOHN A. WILLNESS, Philadelphia, Pa., assignor to Penn Utility Company, Conshohocken, Pa., a Corporation of Delaware. Filed Apr. 1, 1925. Serial No. 20,019. 3 Claims. (Cl. 202—109.)

1. In combination with a closure, a fixed formation and a movable formation, a key operated locking element



seated in one of said formations having both rotative and longitudinal movement therein and adapted to be brought into locking relation with the other formation and

means for permitting engagement of the key with and disengagement of the key from said locking element only when said locking element is in locking position.

---

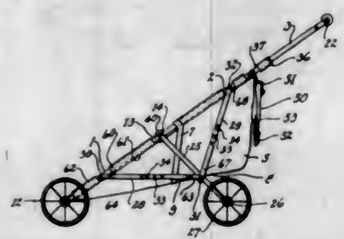
1,695,406. CASING SWAB. FORREST J. YOUNG, Torrance, Calif., assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 17, 1926. Serial No. 88,842. 6 Claims. (Cl. 103—225.)

1. In a swab, the combination of a mandrel, and a tubular sleeve longitudinally slidably mounted on the said mandrel and spaced therefrom to provide a fluid passage said sleeve comprising upper, lower and intermediate nuts, and sleeves adjustably connecting the said nuts, and packing cylinders mounted on the said sleeves between the said nuts.

---

1,695,407. LIP STICK. GEORGE F. ANDERSON, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 27, 1926. Serial No. 125,247. 4 Claims. (Cl. 206—56.)

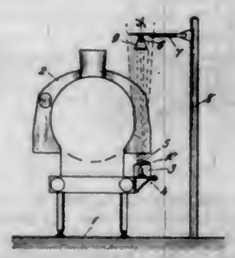
3. In a holder for cosmetics and the like, the combination of an outer casing, a rotatable tube in the casing having a longitudinal slot, a cosmetic holder in the tube and provided with a projection extending through the slot, a helix engaged by the projection for effecting a longitudinal movement of the holder in the casing, and shoulders on the helix arranged for engagement by the projection on application of pressure applied to a cosmetic carried in the holder to prevent the carrier from inward longitudinal movement during the use of the cosmetic.



1,695,408. INNER SOLE AND METHOD OF MAKING THE SAME. HARRIE A. BALLARD, Beverly, Mass., assignor, by mesne assignments, to International Shoe Company, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 17, 1921, Serial No. 452,946. Renewed Oct. 25, 1928. 8 Claims. (Cl. 36—22.)

1. The method of making an inner sole which comprises channeling a sole blank in opposite directions about its margin, compacting one of the channel lips so formed, and bending the other thereover to form a rib of the desired contour.

---

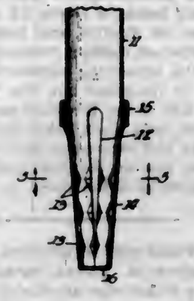


1,695,409. BABY CAB. HERBERT B. BANKS, Chicago, Ill. Filed Sept. 3, 1927. Serial No. 217,475. 4 Claims. (Cl. 280—41.)

4. A folding carriage comprising a pair of double jointed side bars, a front rod connecting one pair of adjacent ends of said bars, a handle rod connecting the other ends of said bars, a wheel bar pivoted to a joint of each side bar and normally extending angularly therefrom, an axle connecting the outer end of each wheel bar, a wheel mounted on each end of said axle, a pair of jointed spaced supporting bars pivoted to each side bar and to the wheel bar, a second rod connecting said side bars between said handle rod and said front rod, and a flexible fabric sheet depending from and supported by said front rod, said second rod and said side bars.

---

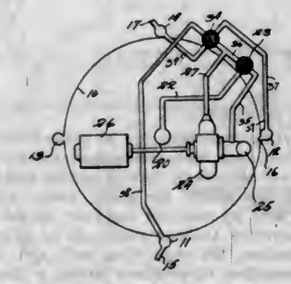
1,695,410. TRAIN-CONTROLLING MEANS BY LIGHT RAYS. WOLFGANG BÄSELER, Munich, Germany, assignor to Lorenz-Zeiss-Zugsicherungs-G. m. b. H., Berlin-Tempelhof, Germany. Original application filed Feb. 12, 1927, Serial No. 167,759, and in Germany Feb. 16, 1927. Divided and this application filed Jan. 9, 1928. Serial No. 245,380. 3 Claims. (Cl. 246—29.)



1. In an automatic train control system of the character described, the combination of electromechanical locomotive control means of the train brakes including a light-influenced element and actuatable only when said element is

influenced by the action of light, a light source arranged on the locomotive, a light-reflecting member having three reflecting planes positioned in a distinct angle relationship with respect to each other and adapted to reflect incoming light rays at a constant angle with respect to this incoming direction, said reflecting member being fixedly arranged on the track adjacent to a danger section or occupied block of a railway and being in its operative position under danger conditions to reflect light rays radiated by said light source on the locomotive in such a direction as to act upon said light influenced element.

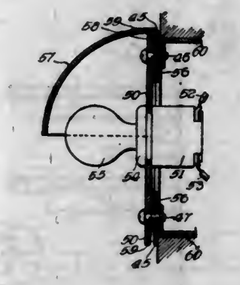
---



1,695,411. METAL FURNITURE. CHARLES H. BUSCH, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 2, 1921. Serial No. 449,072. 4 Claims. (Cl. 5—279.)

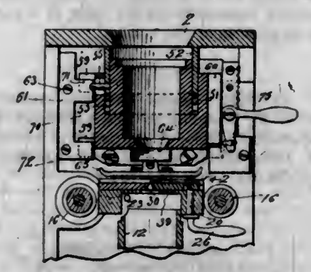
1. An article of furniture comprising a main frame provided with a depending tubular sheet metal post slitted longitudinally at its base to form a plurality of elongated fingers, and a continuous walled tapered tubular shell fitting over and contracting said base, said fingers having the lateral edges bent inwardly to reinforce same against contracting strain and thereby cause the fingers to frictionally interlock with the shell.

---



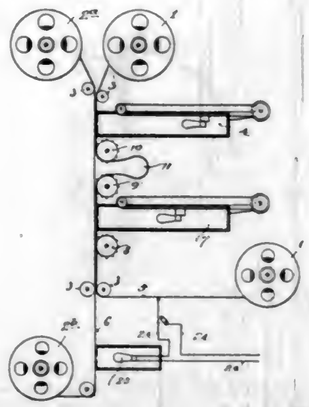
1,695,412. DISHWASHER. ROBERT L. COTTERILL, Philadelphia, Pa. Filed July 2, 1927. Serial No. 203,146. 5 Claims. (Cl. 141—9.)

1. A washing machine including a tank, the tank being formed to provide a water inlet leg at one point, having nozzles uniformly spaced in a vertical series on said leg and discharging tangentially with relation to the tank, a rack rotatably mounted, within the tank, and valve means whereby the passage of water from the nozzles and through the tank may be controlled.



1,695,413. ELECTRIC-LIGHT FIXTURE. WILLIAM P. CROCKETT, Chicago, Ill. Filed Apr. 4, 1927. Serial No. 180,672. 8 Claims. (Cl. 240—73.)

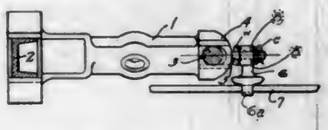
2. In an electric light fixture of the class described, the combination of a wall plate, said wall plate being apertured, a face plate also apertured and adapted to receive an electric light socket and lamp, a ring interposed between said wall and face plates, said ring being of a lesser dimension than both of said wall and face plates and of a sufficient thickness to furnish a shoulder on its outer perimeter, said shoulder and outwardly extending portions of said wall and face plates forming a groove, a shade, an inwardly extending flange on said shade, the inner perimeter of said flange being adapted to contact with the outer perimeter of said intermediate ring, said wall plate, face plate, shade flange and intermediate ring having frictional contact to permit the rotation of said shade and flange in said groove to any place desired.



---

1,695,414. TALKING-MOVING-PICTURE MACHINE. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, a Corporation of Delaware. Filed Dec. 7, 1923. Serial No. 679,260. 18 Claims. (Cl. 179—100.1.)

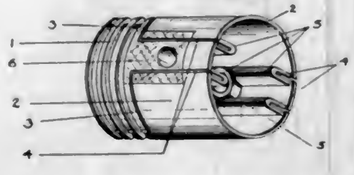
2. In a light slit assembly for a sound picture attachment, a supporting plate with an orifice therethrough, a light slit plate positioned in front of said supporting plate and formed with a slot therethrough extending to the area of said orifice, a slidable slit forming member mounted in said slot, and means for moving said member in said slot to adjust the size of the slit formed thereby.



1,695,415. TALKING-MOTION-PICTURE RECORD. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of Delaware. Filed May 17, 1924. Serial No. 713,887. 9 Claims. (Cl. 95—75.)

1. The method of preventing the production of ground noises from positive photographic films having sound records separated by unexposed portions, which comprises subjecting the positive film to light exposure at the unexposed portions corresponding to the silent portions of the negative to blacken those portions of the film.

---



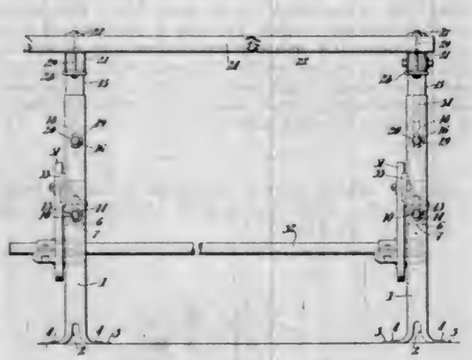
1,695,416. BRAKE-BEAM STRUCTURE. FREDERIC T. DE LONG, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1927. Serial No. 188,682. 15 Claims. (Cl. 188—213.)

1. In a brake beam, a third or fourth point support chair angularly adjustable on the beam in a vertical plane extending lengthwise of the beam.

---

1,695,417. PISTON. JAMES EDWARDS DIAMOND, Mount Vernon, N. Y., assignor to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 18, 1922, Serial No. 561,997. Renewed Sept. 14, 1927. 3 Claims. (Cl. 74—108.)

1. A piston for an internal combustion engine, having a head, a skirt and piston pin bosses on the skirt, said skirt having slots therein extending into the piston pin bosses and forming grooves therein.

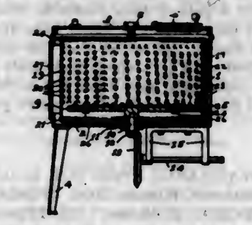


1,695,418. RESILIENT MOUNTING FOR THE STYLUS HOLDER OF TALKING MACHINES. JOSEPH DURHAM, Roselle, near Sydney, New South Wales, Australia. Original application filed Apr. 17, 1923, Serial No. 632,646, and in Australia Oct. 14, 1922. Divided and this application filed Sept. 23, 1924. Serial No. 739,356. 1 Claim. (Cl. 274—35.)

In a mounting for a stylus holder on a sound box, a sound box having parallel spaced lugs extending laterally therefrom, a block having a recess for mounting a stylus therein, a stylus bar fixed in and carried by the block, a U-shaped member of resilient material having the legs diverging from the connecting portion thereof, pivots adjustably carried by the sound box lugs for engagement of the ends of the legs of the U-shaped member to pivotally support the same, said block being engaged within said U-shaped member and secured to the connecting portion thereof with the legs of the U-shaped member free of and extending laterally of the block.

---

1,695,419. SUPPORTING STRUCTURE FOR POWER TABLES. GEORGE M. EAMES, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 19, 1926. Serial No. 95,848. 14 Claims. (Cl. 45—31.)

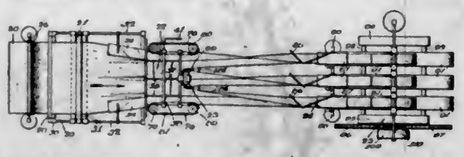


1. A supporting structure for a power-table consisting of supporting legs each comprising substantially vertical primary and secondary channel-bar leg-members slidingly disposed one within the other, means for adjustably securing said leg-members together, spaced supporting rails of inverted U-shape sustained by pairs of secondary leg-members, the supporting rails and the upper ends of the secondary leg-members having a channel-wall fitting engagement of one within the other, and a table-top secured upon said spaced rails.

---

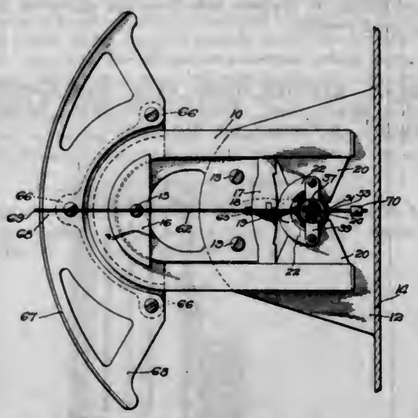
1,695,420. POTATO PEELER. ANTON ECKERT, Pittsburgh, Pa. Filed Mar. 24, 1927. Serial No. 177,868. 3 Claims. (Cl. 146—49.)

1. A vegetable peeler comprising a casing, a grater cylinder mounted therein, a flat, apertured rotatable grater disk positioned within and in proximity to the lower end of said cylinders, and driving means for said



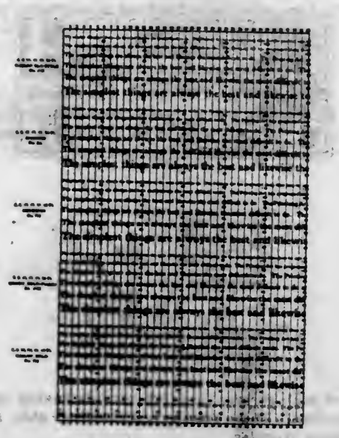
disk, said cylinder being split, and a grater plate carried by said casing and extending into said cylinder between the split ends thereof and above said disk.

---



1,695,421. MACHINE FOR SLITTING AND FOLDING FABRIC. JOHN F. GAIL, Evanston, Ill., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 5, 1925. Serial No. 60,382. 12 Claims. (Cl. 270—86.)

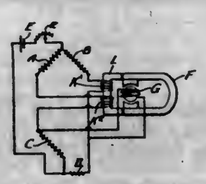
1. In a machine of the character described, means for furrowing the fabric supply strip, means for guiding the edges of said strip as it is narrowed by the furrowing operation, means for slitting the strip intermediate the furrow and an edge of the strip, and means for adjusting the furrowing operation to render the edge guiding and slitting mechanism operable for guiding and slitting supply strips of various widths.



---

1,695,422. ELECTRIC METER. GEORGE W. GRISDALE and ELMER SCHNEIDER, Chicago, Ill., assignors to Republic Flow Meters Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1924. Serial No. 733,903. 12 Claims. (Cl. 171—95.)

1. An electrical measuring instrument comprising a magnet having opposed pole pieces, a web of non-magnetic material arranged adjacent said pole piece and bridging the space between the arms of said magnet, said web being spaced from said pole pieces adjacent the central portion thereof, and a galvanometer element slidably connected with said web and movable into and out of position between said pole pieces.

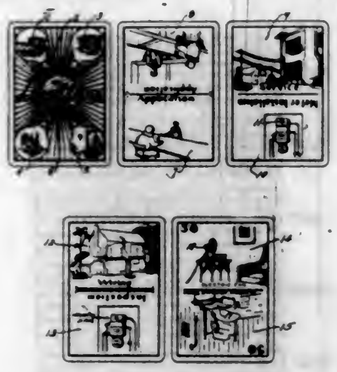


1,695,423. PRINTING CHART. WALLACE W. GYLLENBERG, Detroit, Mich. Filed Sept. 12, 1927 Serial No. 218,910. 6 Claims. (Cl. 283—1.)

4. A chart for printing having arranged on its face a plurality of sets of characters representing different styles and points of printing type and a numeral associated with the type of each style and point indicating the number of characters of such style and point in an average line of a given length.

---

1,695,424. WHEATSTONE BRIDGE METER SYSTEM. THOMAS R. HARRISON, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 26, 1925. Serial No. 18,626. 4 Claims. (Cl. 171—95.)

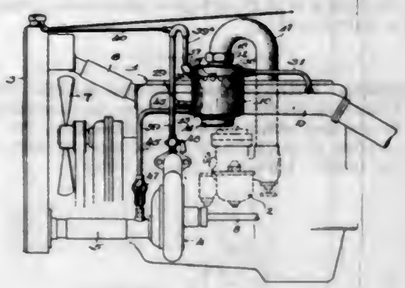


1. In a meter system comprising a Wheatstone bridge having two pairs of opposing arm junctions, a source of energizing current connected between the two junctions forming one of said pairs and a deflecting galvanometer connected between the other two junctions, the improvement which consists in a winding electro-magnetically associated with the galvanometer and energized by said source of energy and adapted to produce an effect on the galvanometer deflection opposite to that produced by the bridge as a result of fluctuations in the energizing current and in substantially constant proportion to the total flow of current through said bridge from said source.

---

1,695,425. PLAYING CARD. MARGARET T. HARTNACKE, Grand Rapids, Mich. Filed Aug. 17, 1928. Serial No. 300,330. 3 Claims. (Cl. 273—152.)

1. A pack of playing cards having upon their faces pictorial illustrations representing various phases in the procedure of securing service of electric current, other cards having upon their faces pictorial illustrations showing



household appliances and devices used by consumers of current, other cards having upon their faces pictorial illustrations representing sources of trouble encountered in

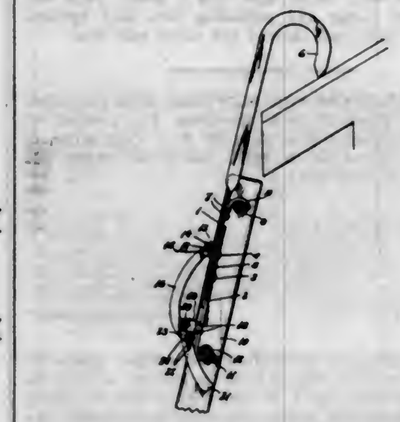
the use of such current, and other cards having upon their faces pictorial illustrations representing aids for overcoming such troubles.

---

1,695,426. AIR CONDITIONER. DREW HEAD, Chicago, Ill. Filed Jan. 3, 1927. Serial No. 158,448. 11 Claims. (Cl. 123—25).

1. An air conditioning device for internal combustion motors comprising a casing having a plurality of connected chambers therein, forming a circuitous air passage from the atmosphere to the carburetor of said motor and including a central passgae through which the air passes in an upward direction, a nozzle arranged axially of said central passage and connected with a source of water supply, a water receptacle below said central passage and connected with said source of water supply, and a heat chamber in said casing intermediate two of said air passages and having inlet and outlet connections with a source of heat from said motor.

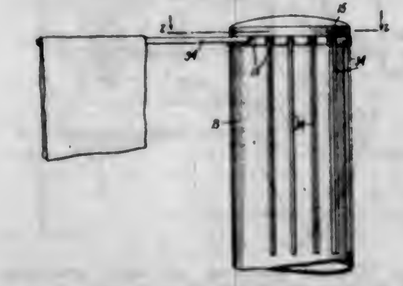
---



1,695,427. PEROGEN DOUGH CUTTING AND TRIMMING TOOL. SOLOMON HELFGOTT, New York, N. Y. Filed Nov. 15, 1926. Serial No. 148,391. 1 Claim. (Cl. 107—49.)

A dough cutting and trimming tool of the class described comprising a handle formed by two spring arms of metal integrally connected at one end, said arms being bowed outwardly at a point adjacent the opposite end of the handle, a pivot pin carried at the inner end of one of the arms and adapted to be locked in an aperture in the end of the opposite arm, a pair of discs rotatably mounted on said pin, one of said discs having a fluted edge and the second disc being of a smaller diameter than the first mentioned disc and provided with a toothed periphery, locking pins for detachably connecting said discs and a clamping sleeve for locking said discs as a unit on the pivot pin at the end of said arms.

---



1,695,428. DETACHABLE HOOK FOR ROOF LADDERS. JOSEPH A. JOHNSON, Weston, Mass. Filed Oct. 25, 1927. Serial No. 228,569. 2 Claims. (Cl. 228—51.)

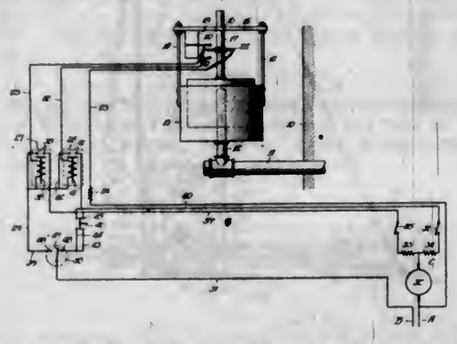
1. A detachable hook for roof ladders, comprising two members movably secured together and longitudinally slidable upon each other, one of said members having its free end portion in form of a hook to engage a round of a ladder, the other of said members having its free end portion in the form of a hook to engage a support, as a roof, and a hook to engage another round of the ladder; a hand lever pivoted to one member; and an operating bar pivoted to the other member, and having its free end portion pivotally connected to the hand lever, whereby opposite movements of the hand lever will cause said hook members to slide longitudinally in opposite directions, and engage or disengage said rounds.

---

1,695,429. KITCHEN TOWEL RACK. OTTO KARTZMARK, West Haven, Conn. Filed Nov. 22, 1926. Serial No. 149,913. 9 Claims. (Cl. 211—110.)

4. In a towel rack of the nature set forth, the combination with a supporting band, of a series of sheet metal socket pieces secured thereto in spaced relation, and a series of arms, one for each socket piece pivotally and slidably movable therein respectively, each socket piece having a pair of spaced parallel cheek pieces having registering

slots remote from the band, a pivot pin extending through said slots and arm for connecting the arm to the socket piece, the socket piece having an inbent abutment formed therein and the arm having a notch complemental to the abutment and having a nose projecting into the space between the abutment and the band, and the cheek pieces being formed with positive supporting means adjacent to the slots for positively holding the pivot pin in such position as to prevent accidental withdrawal of the arm from the abutment when in supporting position.



---

1,695,430. AGENT FOR CLEANING AND IMPARTING RUST-INHIBITIVE PROPERTIES TO STEEL. JAMES D. KLINGER, Detroit, Mich. Filed June 27, 1924. Serial No. 722,720. 6 Claims. (Cl. 148—8.)

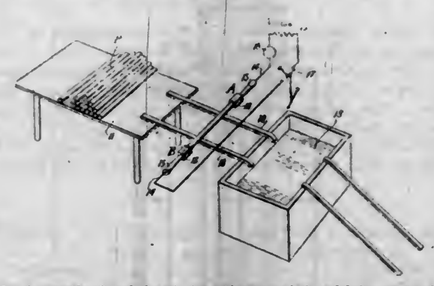
5. A solution to be used for cleaning and imparting rust resisting properties to steel containing a hydroxycarboxylic acid.

---

1,695,431. COMBUSTION CONTROL IN STEAM-BOILER FURNACES. FRED H. LINLEY, Duluth, Minn. Filed Oct. 5, 1926. Serial No. 139,672. 7 Claims. (Cl. 236—15.)

1. In combustion control mechanism, means for operating a damper comprising a motor having two circuits, one for each direction of rotation, each circuit being adapted to be connected to a source of current by a relay, means for operating one or the other of said relays depending upon pressure conditions in a combustion chamber, comprising a double switch mechanism having two fixed contact points and a movable contact point, the movable contact point and one of said two contact points being connected when the pressure in said combustion chamber increases a certain predetermined extent and the movable contact point and the other of said two contact points being connected when said pressure in said combustion chamber diminishes to a certain predetermined extent.

---



1,695,432. TOILET-PAPER HOLDER. ARTHUR W. LOVEJOY, Lowell, Mass. Filed Mar. 18, 1924. Serial No. 700,017. 1 Claim. (Cl. 220—43.)

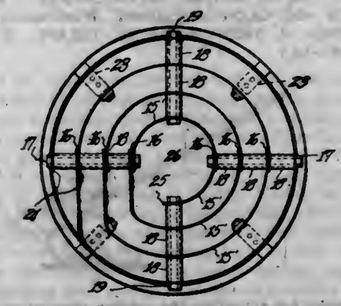
A toilet paper holder comprising a box of tube type having a closure flap consisting of a panel hinged to the back, a second panel hinged to the first said panel, each panel having a hole therein, which holes are in mating relation when the panels are folded against each other, a slot being formed in the hinge line between the back and the first said panel of the closure flap, and a tab on the said second panel and insertible in said slot when the panels are folded against each other, whereby said folded panels will constitute a means for suspending the holder.

---

1,695,433. HEAT TREATMENT OF METALS. ANGUS S. MACDONALD, Great Neck, N. Y., assignor to Snead & Company, a Corporation of New Jersey. Filed Oct. 11, 1924. Serial No. 742,966. 2 Claims. (Cl. 148—4.)

1. A method of heat treating metal which comprises heating the body of metal to be treated, by passage of current therethrough, up to a temperature at which the desired grain structure effect is quickly brought about, and thereupon quenching it before shutting off the current.

---

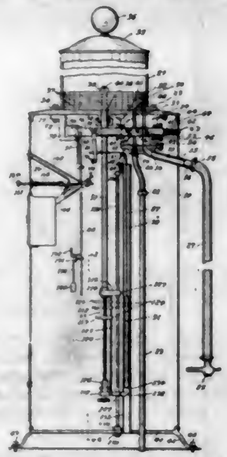


1,695,434. AIR PREHEATER FOR FURNACES. LEON T. MART, Kansas City, Mo. Filed May 23, 1925. Serial No. 32,522. 3 Claims. (Cl. 257—167.)

3. In a preheater for heating inlet air by flue gases, a flue for hot gas, upper and lower walls of which are apertured and free from threads, the apertures in the upper wall being the larger, in combination with tubes passing through the apertures in the upper wall and extending above its apertures and a covering of heat insulation sealing material between the tube extensions and the apertures in the upper wall.

---

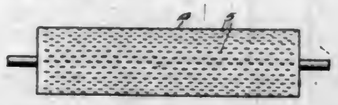
1,695,435. SILENCER. HIRAM PERCY MAXIM, Hartford, Conn., assignor to The Maxim Silencer Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 8, 1925. Serial No. 55,042. 6 Claims. (Cl. 137—160.)



1. A silencer comprising a spiral sheet scroll interposed between header plates to form a continuous closed unin-

terrupted spiral passage from an axial chamber to a lateral peripheral opening, the wall of said scroll being made up of sections each forming part of the continuous convolutions of said scroll, the joints of the adjacent sections in each successive convolution of said scroll being located in radial alignment, and means for fastening said sections together at said joints.

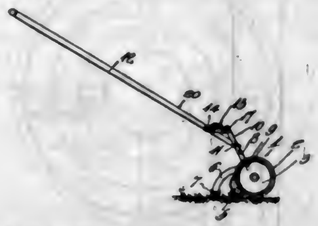
---



1,695,436. GASOLINE-DISPENSING DEVICE. IRA F. NEWTON, St. Paul, Minn. Filed Apr. 13, 1921. Serial No. 460,978. 15 Claims. (Cl. 221—103.)

13. A liquid dispensing machine comprising a measuring device, a plurality of members for regulating the amount of liquid dispensed by said measuring device and means for simultaneously adjusting the said regulating devices to proportionally increase or decrease the volume of liquid dispensed by the machine.

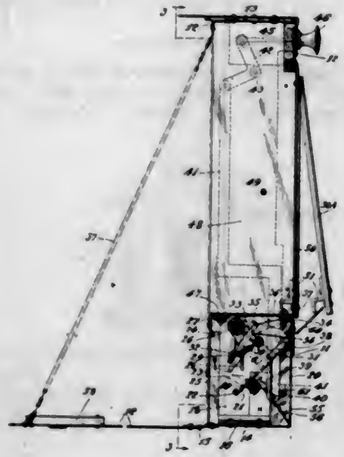
---



1,695,437. PRINTING ROLLER. JOHN P. NISSEN, Jr., Philadelphia, Pa. Filed Jan. 17, 1925. Serial No. 3,053. 1 Claim. (Cl. 91—67.8.)

An inking roller for printing presses comprising a substantially cylindrical solid body of resilient rubber-like material, having integral outstanding peripheral walls of said yielding material forming ink-holding pockets in its periphery that are elongated longitudinally of the axis of rotation of the roller and open through its periphery.

---



1,695,438. LAWN-MOWER ATTACHMENT. ANATOLE PANALLE and GRANT ALEXANDER, Washington, D. C. Filed Sept. 3, 1926. Serial No. 133,476. 1 Claim. (Cl. 306—14.)

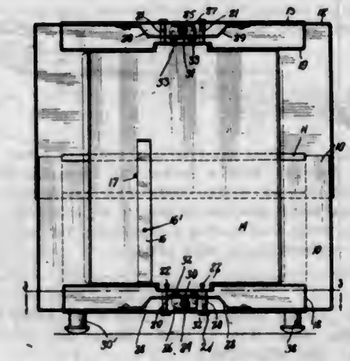
In a device for adjusting the cutting element of a lawn mower with respect to a lawn, the combination of a handle, two identically constructed plates having apertures therein, a toothed rack formed on the plates, a bolt adapted to pass through the handle and engage the plates on each side thereof and a second bolt adapted to rest in the rack of the plates and bear on the handle, and a third bolt adapted to engage the bail of the mower, whereby positioning of the mower at various angles with respect to the handle and lawn is accomplished by moving the second bolt along the rack so as to engage various teeth thereof.

---

1,695,439. COIN-OPERATIVE DEVICE. FELIX Q. RABT, New York, N. Y. Filed Mar. 17, 1927. Serial No. 176,073. 6 Claims. (Cl. 194—65.)

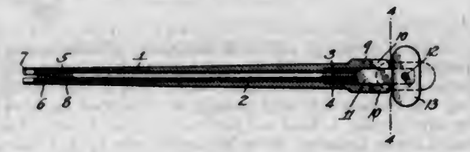
1. In a coin-operative device, in combination, a casing, a plurality of compartments within the casing, a hinged door covering the front opening of each compartment, a coin slot for each front door, a revoluble rod passing longitudinally of the device and below the compartments, a coin rest fixedly attached to said rod beneath each compartment capable of receiving a coin passed through a coin slot, means operatable exteriorly of the casing revolving said rod, means whereby the revolution of said rod will cause a coin deposited upon a coin rest to unlock a front door, means inoperative from the front of the casing and operative from the rear of the casing for locking each front door, means preventing the insertion of a coin into a coin slot when its front door is open and a door covering the rear openings of the compartments.

---



1,695,440. GUN SIGHT. JOHN H. REDFIELD, Denver, Colo., assignor to Frank P. Kellogg, Denver, Colo. Filed Aug. 14, 1926. Serial No. 129,119. 5 Claims. (Cl. 33—54.)

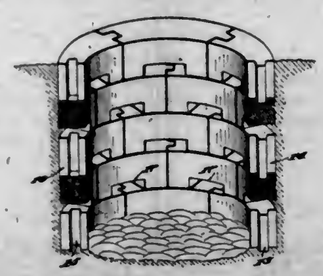
3. In a gun sight, a base block provided with a groove for receiving a leaf spring, said groove having an arcuate bottom and the extremities of said bottom where it merges with the surface of the block being inwardly-turned whereby to engage the ends of a leaf spring and retain the same in said groove.



1,695,441. LOOSE-LEAF CONTAINER. SAMUEL S. REESE, Brooklyn, N. Y. Filed Oct. 2, 1926. Serial No. 139,102. 7 Claims. (Cl. 129—43.)

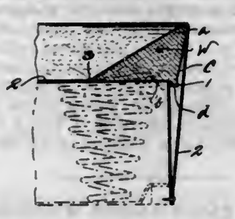
1. A tray for holding loose leaves comprising a box-like member, the said member having a laterally movable side wall and means adapted to adjust the distance between said side walls and to hold them in adjusted position.

---



1,695,442. HAIR CURLER. LEOPOLD STEINER, Brooklyn, N. Y., assignor to John M. Ohlenbusch, New York, N. Y. Filed Jan. 24, 1925. Serial No. 4,473. Renewed May 14, 1928. 12 Claims. (Cl. 132—34.)

1. A hair curler comprising two relatively rotatable spindles having portions arranged one within the other, one of said spindles being provided at an end with a locking recess, the other spindle extending beyond the first-named spindle at said end, and means pivotally mounted on said extension on an axis transverse to the spindle and rotatable about said axis into engagement in said recess to lock said two spindles against relative rotation.



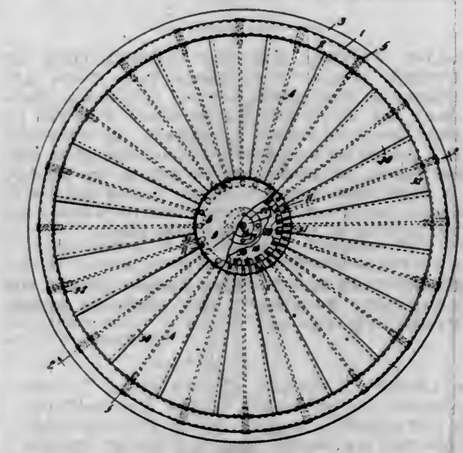
---

1,695,443. BUILDING BLOCK. GILBERT STUDLEY, Jr., Yarmouth, Mass. Filed Sept. 16, 1927. Serial No. 219,878. 3 Claims. (Cl. 210—6.)

2. A molded cementitious block for the purpose specified, comprising a curved elongated block having a tongue at one end and a groove on the other, and provided in its bottom wall with an elongated drainage slot extended through the body thereof, said slot being provided with beveled end walls for the purpose specified.

1,695,444. UPHOLSTERING WELT. JAMES W. TREW, Baltimore, Md. Filed July 14, 1927. Serial No. 205,685. 3 Claims. (Cl. 155—184.)

1. In combination with a member provided with a side face, a welt mounted upon said member and having a marginal bead providing a shoulder for contact with the side face of said member, and a lamination secured to said member and disposed over the applied welt, means for connecting the lamination to the member adjacent to the inner marginal portion of the applied welt and to the side face of the member at a point away from the welt.



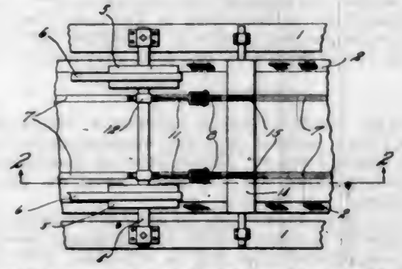
---

1,695,445. FOOD PRODUCT. HOWARD F. WEISS, Madison, Wis., assignor, by mesne assignments, to Wood Conversion Company, Cloquet, Minn., a Corporation of Delaware. Filed Apr. 20, 1918. Serial No. 220,760. 2 Claims. (Cl. 99—11.)

2. A stock food comprising the composite sugar products of hydrolysis of western larch wood, including galactose, in a concentrated state and in admixture with finely divided hydrolyzed larch wood residue.

---

1,695,446. COOLING-SYSTEM CONTROL. FREDERICK W. WESTON, Chicago, Ill. Filed June 8, 1922. Serial No. 566,884. 9 Claims. (Cl. 123—174.)



1. In an apparatus for automatically controlling the temperature of internal combustion engines, the combination with a cooling system, including a radiator adapted to have a motor-cooling fluid circulate therethrough, said radiator being subject to a cooling air current for cooling said fluid; of means for cutting off the air current comprising an annular series of shutter blades, each of said blades being rotatable on a longitudinal axis thereof; a heat responsive device associated with said cooling system so as to be in the circulatory path of said fluid; and suction operated mechanism controlled by said device for operating said means to rotate said blades to adjust the same and thereby regulate the temperature of the engine.

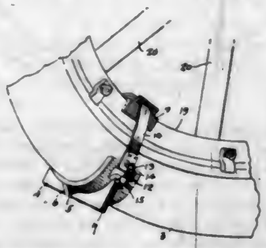
1,695,447. CATALYST FOR SYNTHETIC METHANOL PRODUCTION. JOHN C. WOODRUFF, GROVER BLOOMFIELD, and WILLIAM J. BANNISTER, Terre Haute, Ind., assignors to Commerical Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed Oct. 25, 1926. Serial No. 144,165. 3 Claims. (Cl. 260—156.)

1. A process for the production of synthetic methanol which comprises passing a mixture of hydrogen and carbon oxides at a pressure in excess of 50 atmospheres and at a temperature of 250–450° C. over a catalyst containing nickel reduced at a temperature of 300–950° C.

---

1,695,448. PAPER-MAKING MACHINE. LEON M. YOERG, Holyoke, Mass., assignor, by mesne assignments, to American Writing Paper Company, Incorporated, Holyoke, Mass., a Corporation of Delaware. Filed Mar. 21, 1927. Serial No. 177,049. 6 Claims. (Cl. 92—44.)

3. The combination in a Fourdrinier paper making machine of means to reduce the thickness of the material on the Fourdrinier wire longitudinally thereof, with means for engaging the material after the latter has been acted upon by said reducing means to produce an appearance of narrow lines of alternate thin and thicker material in said reduced portion of the material.



---

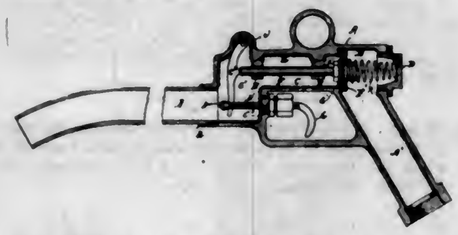
1,695,449. PROCESS FOR THE MANUFACTURE OF ESTERS. WILLIAM J. BANNISTER, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed Feb. 18, 1927. Serial No. 169,409. 12 Claims. (Cl. 260—106.)

1. A process for the production of an ester which comprises heating an alcohol and an acid in the presence of a liquid which forms a constant boiling mixture of minimum boiling point with water and the alcohol, and in the presence of a solid dehydrating agent.

---

1,695,450. TIRE SHOE. FRANK HERBERT BRYANT, Mill Valley, Calif. Filed May 16, 1927. Serial No. 191,898. 1 Claim. (Cl. 152—14.)

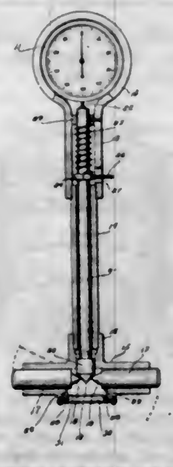
A tire shoe comprising a ground-gripping member, a flexible strap adjustably secured to said member for holding it on a wheel, and a rim protector mounted on the rim of the wheel and having eyelets for slidably receiving a strap, the portion of said protector disposed between said eyelets being rounded, said protector being channel shaped.



1,695,451. DENTAL MIRROR. EARL F. B. CAMPBELL, New Kensington, Pa., assignor of one-half to Evan J. Francis, New Kensington, Pa. Filed July 18, 1927. Serial No. 206,490. 2 Claims. (Cl. 132—84.)

1. Mirror structure comprising a reflector plate having a holder provided with a socket-like extension disposed at approximately 45° to the plane of the plate, said socket-like portion being adapted to receive a perforated handle of a tooth brush and having a depression for engagement with the perforation in said handle.

---

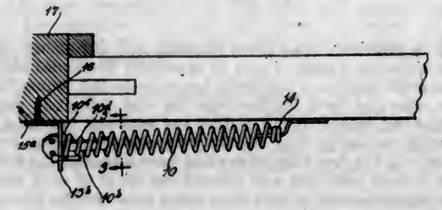


1,695,452. HOSE NOZZLE. ALMUS T. CARNES, Kansas City, Mo. Filed Nov. 1, 1927. Serial No. 230,293. 2 Claims. (Cl. 251—134.)

1. In a device of the class described, a valve housing having a passage therethrough, an annular valve seat shoulder around said passage, valve stem guides extending transversely into said passage, a valve stem supported in said guides, a head on said valve stem, a valve having a screw threaded cavity to receive said head, a sleeve having its interior diameter greater than the diameter of said valve stem and engaging the threads in said cavity whereby said valve is flexibly secured on said valve stem, and a spring between said valve and the closure cap of said passage.

---

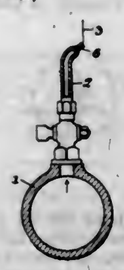
1,695,453. GAUGE. TSUNAUSKI Z. CARPENTER, Providence, R. I. Filed Mar. 10, 1922. Serial No. 542,612. 2 Claims. (Cl. 33—178.)



1. A bore measuring indicating gauge comprising an indicator having an operating pin, a transmitting rod

in engagement therewith, a pair of oppositely disposed aligned feelers extending laterally of said rod and having tapered ends engaging the opposite end thereof, a spring for moving the rod into engagement with said feelers, the work-engaging extremities of said feelers being rounded to form a portion of a sphere of substantially the radius of the bore to be measured.

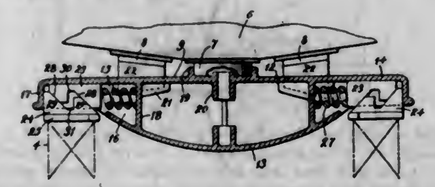
---



1,695,454. DOOR SPRING. EDWARD J. COYNE, Brooklyn, N. Y. Filed May 23, 1927. Serial No. 193,426. 12 Claims. (Cl. 267—69.)

5. The combination with a spring of the class described of brackets fashioned from sheet metal for supporting the end portions of said spring in connection with predetermined supports, a member movably supported with reference to one of said brackets having a part extending into and secured to one end of said spring for coupling the said bracket to said spring, said bracket being supported in connection with said member under tension, and means for retaining said member in predetermined positions of adjustment with reference to said bracket.

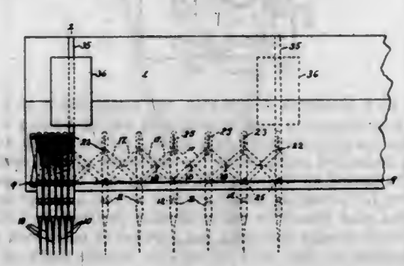
---



1,695,455. APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL FILAMENTS. JACQUES DELPECH, Rennes, France. Filed Dec. 7, 1925. Serial No. 73,907. 1 Claim. (Cl. 18—8.)

A device for spinning filaments from cellulose solutions comprising a spinneret having its delivery end bent at an angle to the axis of the body thereof and a guide for said filament located in a line substantially parallel to the said axis, so that the filament is caused to change its direction of movement as it issues from said orifice.

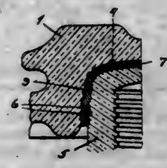
---



1,695,456. BOLSTER WITH ABSORPTION MECHANISM. PERCY R. DRENNING, Baltimore, Md., assignor to T. H. Symington & Son, Inc., Baltimore, Md., a Corporation of Maryland. Filed Sept. 2, 1927. Serial No. 217,173. 10 Claims. (Cl. 105—185.)

1. In combination, a body bolster having a center plate, a truck bolster having a center bearing closely receiving the center plate, said truck bolster being mounted for lateral motion within a truck, supporting springs beneath the truck bolster, outwardly spring pressed wedge members located within the truck bolster, and wedge members engaged upon the truck springs and cooperating with said first named wedge members.

---



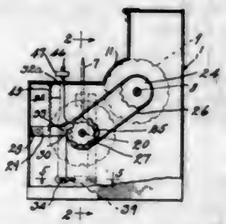
1,695,457. AUTOMATIC PEN-SETTING ATTACHMENT. MERRITT E. DUNCAN, Atlanta, Ga. Filed July 13, 1927. Serial No. 205,519. 3 Claims. (Cl. 33—45.)

1. Automatic pen setting mechanism comprising a support having a groove therein, a series of bars, pens carried by the bars, cross bars with bolts passing through both said bars and cross bars and extending into the groove in the support and having means thereon to clamp the edges of the groove.

---

1,695,458. INSULATOR. WALTER T. GODDARD, Hamilton, Ontario, Canada, assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Jan. 6, 1923. Serial No. 611,132. 5 Claims. (Cl. 22—202.)

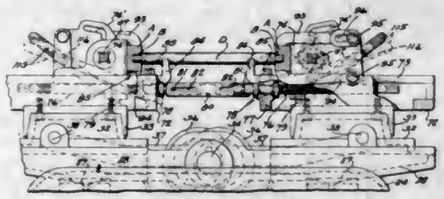
1. The method of connecting an insulating unit to an adjacent member which consists in assembling said unit and said member in nested relation with spacing means therebetween, and finally connecting adjacent surfaces of said unit and member at spaced intervals by pouring molten metal therebetween.



---

1,695,459. ARCH BRICK. RALEIGH J. HIMMELRIGHT, New York, N. Y., assignor to American Arch Company, a Corporation of Delaware. Original application filed May 23, 1922, Serial No. 568,043. Divided and this application filed Jan. 8, 1925. Serial No. 1,146. 5 Claims. (Cl. 110—87.)

1. A refractory member composed of laminæ of different lengths.



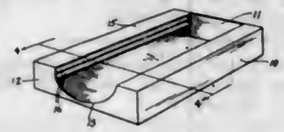
1,695,460. TOOTHPICK DISTRIBUTOR. JOSEPH IWANICKI, Detroit, Mich. Filed Aug. 11, 1927. Serial No. 212,167. 5 Claims. (Cl. 312—84.)

1. In a toothpick distributor, the combination of a casing, a container in said casing, said casing having a discharge opening therethrough, means for conveying toothpicks from said container to the underside of said opening, a slide having an inclined face at its upper end, an operating rod for actuating said conveying means, a spring for returning said operating rod to normal position, and means connected to said operating rod adapted to move said slide downwards so that its inclined face presses down on one end of a toothpick under said discharge opening and moves the latter into an inclined position projecting partly through said opening as said rod is returned to normal position.

---

1,695,461. EXTENSION-LADDER-ASSEMBLING MACHINE. JOHN E. KALGREN, Minneapolis, Minn., assignor to J. R. Clark Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 14, 1927. Serial No. 205,828. 16 Claims. (Cl. 144—2.)

1. In an extension ladder assembling machine, two rows of squeezing abutments, operating means for moving at least one row of said abutments alternately toward and from the other row thereof, rung supports between the two rows of squeezing abutments, and automatic means for transversely centering a pair of ladder side bars in respect to the rung supports.



---

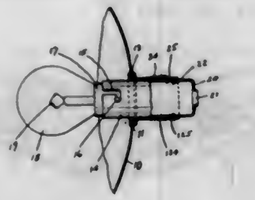
1,695,462. CHAIN. REINHARD KOLLMAR, Irvington, N. J., assignor to Forstner Chain Corporation, Irvington, N. J., a Corporation of New Jersey. Filed Sept. 14, 1926. Serial No. 135,424. 5 Claims. (Cl. 59—80.)

5. An ornamental chain having elongated loop links, decoration for said links comprising a U-shaped member having a reduced central connecting portion, slots formed in the sides of said U-member, an elongated notched bar positioned in the loop link and protruding each side thereof, the protruding portions of said bar extending into the slots in the U-member, the free ends of the U-member being seated in the notches of said elongated bar, and a ring link engaging the reduced connecting portion of the U-member to connect each adjacent elongated link of the chain.

1,695,463. DISPLAY AND VENDING DEVICE. DAVID LIPSCHUTZ, Louisville, Ky., assignor to The L. & R. Company, Louisville, Ky., a Corporation. Filed Dec. 14, 1925. Serial No. 75,338. 2 Claims. (Cl. 206—44.)

1. A relatively open faced shipping and dispensing carton including a back, a pair of oppositely positioned sides connected thereto, a relatively imperforate end connecting the sides and back together, another and oppositely positioned end connected to the sides and back and including a central cut out portion therein with edges extending outwardly to the free edge of the end from adjacent the back and toward each side and terminating short of each side, top means secured to said sides along substantially the entire length thereof and extending inwardly towards each other but terminating short of projecting beyond the cut out for display and dispensing purposes, and partition means extending the full length of the carton upon opposite sides and extending inwardly towards each other and terminating short of meeting engagement, the space therebetween registering with the top spacing between the top means and in alignment with the end cut out for display and dispensing purposes.

---

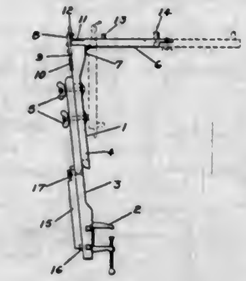


1,695,464. NONGLARE ELECTRIC LAMP FOR HEADLIGHTS. ROBERT P. MCCURDY, Pittsburgh, Pa., and FREDERICK W. HOCHSTETTER, Dayton, Ohio, assignors, by mesne assignments, to said Hochstetter. Filed May 23, 1924. Serial No. 715,406. 1 Claim. (Cl. 176—34.)

An electric filament lamp for use in headlights having the usual central filament projecting from the filament-base, and a light-filtering non-glare shield composed of a piece of ray filtering material supported on a forwardly-projecting offset from the top of said filament-base in front of said filament, for the purpose set forth.

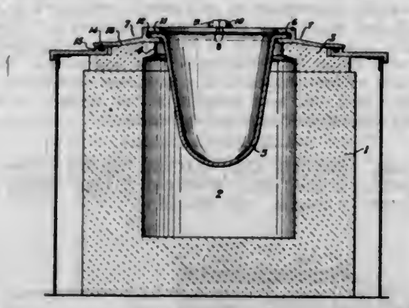
---

1,695,465. REFLECTOR-SUPPORTED LIGHT-SOCKET MOUNTING. FREDERICK W. C. NEUNER, Connersville, Ind., assignor to Indiana Lamp Corporation, Connersville, Ind. Filed Apr. 15, 1927. Serial No. 184,001. 1 Claim. (Cl. 240—41.)



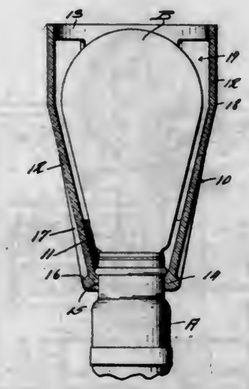
In a lamp structure, the combination with a reflector and a bulb having a filament, of means for removably supporting said bulb in fixed relation in respect to said reflector including a tubular sleeve having a double flanged head extending into and centrally of the reflector, said double flanged head adapted to embrace the adjacent portion of the reflector so as to securely unite said reflector and sleeve, a pair of oppositely disposed spring arms stamped out from the body of said sleeve and provided with latching teeth on the free ends thereof, and a bulb receiving socket extending through said sleeve, the body of said socket being provided with openings for receiving said teeth and causing the same to interlock said socket and sleeve, said latching teeth being arranged oppositely to each other whereby one of said teeth will prevent longitudinal movement between the sleeve and socket in one direction and the other tooth will prevent movement in the opposite direction.

---



1,695,466. WALL-PAPER BRACKET. WILLIAM O'FARIEL, Braddock, Pa. Filed Oct. 2, 1924, Serial No. 741,146. Renewed May 11, 1928. 3 Claims. (Cl. 216—4.)

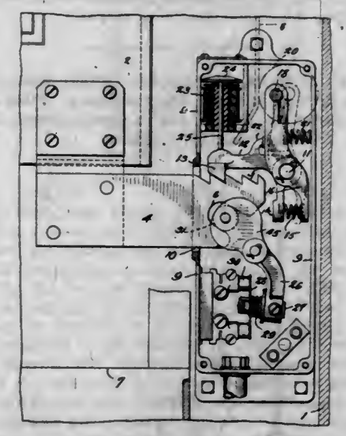
1. A bracket comprising a clamp, a vertical support attached thereto, means for varying the height of the support, an arm hinged to the top of the support, a resilient latching means for automatically engaging and retaining the arm in horizontal position when it is moved thereto.



---

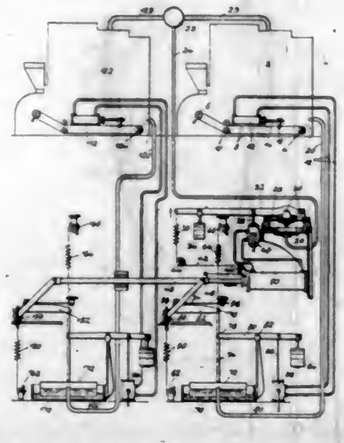
1,695,467. SUPPORTING AND SEALING MEANS FOR CYANIDE POTS. FREDOLF J. PETERSON, Detroit, Mich. Filed May 3, 1928. Serial No. 274,797. 2 Claims. (Cl. 263—11.)

1. In combination with a pot having a peripheral flange thereon, a ring formed of two separable parts for supporting the pot in a furnace or the like, said ring being provided with an annular channel to receive said flange, and means for compressing a gasket between the flange and channel to form a seal between the pot and ring.



1,695,468. ELECTRIC-LAMP GUARD. ROBERT W. REEVES, Newport, R. I. Filed Aug. 11, 1927. Serial No. 212,814. 4 Claims. (Cl. 240—102.)

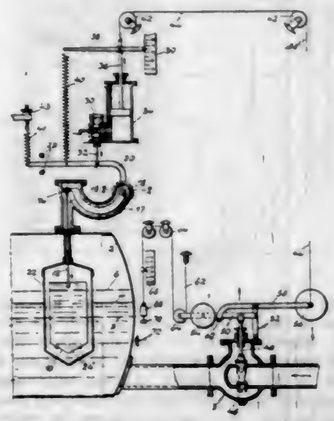
1. A guard for electric lamps formed of elastic insulating material, the guard being formed to provide a bulb-enclosing portion and the rear end portion having an aperture to receive an electric lamp socket, the wall of the aperture being elastic so as to be expanded over and to elastically clamp upon the socket.



---

1,695,469. INTERLOCK FOR ELEVATORS. MARTIN J. ROBERTSON, Louisville, Ky., assignor to American Elevator and Machine Co., Louisville, Ky. Filed Aug. 30, 1926. Serial No. 132,564. 8 Claims. (Cl. 187—31.)

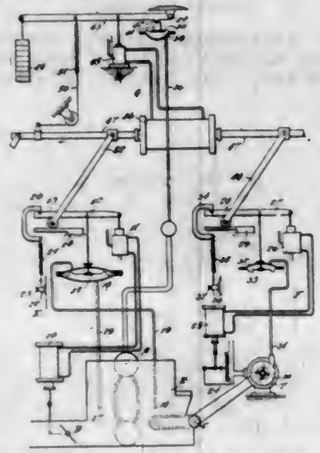
5. A lock for elevator doors including a housing, a member having a longitudinal series of teeth for attachment to a door insertible into the housing when the door is closed, separate contacts within the housing for electrical connection to the car switch, a lever fulcrumed in the housing, means carried thereby for engaging and closing the circuit between the contacts, means for releasing the door upon failure of current, and cooperating means upon the toothed member and the lever for electrically connecting the contacts positively when the toothed member is inserted into the housing and for automatically and positively breaking the connection between the contacts when the toothed member is withdrawn from the housing.



1,695,470. MEANS FOR REGULATING COMBUSTION. ERICH ROUČKA, Blansko, Czechoslovakia. Filed Apr. 20, 1925, Serial No. 24,629, and in Czechoslovakia May 13, 1924. 12 Claims. (Cl. 236—14.)

1. Furnace controlling apparatus comprising means for varying a pressure in a furnace, means movably responsive to said pressure, means including a lever system and spring means associated therewith to produce a variable mechanical force cooperating with said responsive means to balance the same, a governor actuated by cooperation of said responsive means and the third-mentioned means upon departures from balanced relation thereof to control the first-mentioned means, means responsive to variations in the heat demand, and movable means controlled by the last-mentioned responsive means in accordance with variations in the heat demand to cooperate with the third-mentioned means and vary the mechanical force exerted by said spring means upon the second-mentioned means.

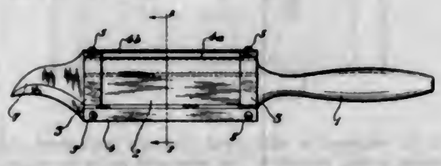
---



1,695,471. AUTOMATIC LIQUID FEED REGULATOR. ERICH ROUČKA, Blansko, Czechoslovakia. Filed Apr. 20, 1925, Serial No. 24,630, and in Czechoslovakia May 13, 1924. 7 Claims. (Cl. 137—101.)

1. Apparatus for regulating the supply of a liquid to a container, comprising means or controlling the supply of liquid to the said container, means movably responsive to variations in the level of said liquid for producing a mechanical force upon variations in the level of said liquid, means for producing a variable auxiliary force cooperating with said responsive means to balance the same, a governor actuated by and in accordance with departures from balanced relation of said responsive means and the balancing means due to variations in the level of liquid, a pilot motor controlled by said governor, and operative connections between said pilot motor and both said liquid supply controlling means and said balancing means to vary the supply of liquid and to vary said auxiliary force and restore said balanced relation of said responsive means and said balancing means.

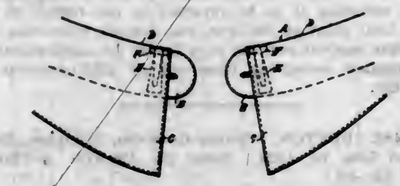
---



1,695,472. FURNACE-CONTROLLING APPARATUS. ERICH ROUČKA, Blansko, Czechoslovakia. Filed Aug. 23, 1927, Serial No. 214,930, and in Germany Sept. 1, 1926. 8 Claims. (Cl. 236—15.)

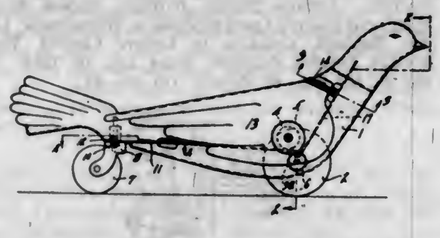
1. Furnace controlling apparatus, comprising means for varying the flow of combustion gases in a furnace, means responsive to variations in the pressure of said combustion gases, means cooperating with said responsive means to produce a normally balanced relation, a movable member for varying said relation, means actuated by cooperation of the two last-mentioned means upon departures from said balanced relation to cause actuation of the first-mentioned means, a fuel supplying means, means automatically responsive to the rate at which said fuel supplying means operates, means cooperating with the last-mentioned means to produce a normally balanced relation, a second movable member for varying the last-mentioned relation, means actuated by cooperation of said means responsive to the rate of fuel supply and said means producing a balanced relation to vary actuation of said fuel supplying means, a common means for actuating both of said movable members, and means responsive to a condition variable in accordance with the heat demand on the furnace or controlling actuation of said common means.

---



1,695,473. PARING AND SLICING KNIFE. STEFANO SANTILLI, Canton, Ohio. Filed Oct. 2, 1926. Serial No. 139,101. 2 Claims. (Cl. 30—20.)

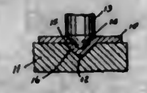
1. A knife comprising a core portion provided with a plurality of faces, flange portions of different thicknesses at the ends of said faces, and cutting blades secured to said flanges and parallel with said faces.



1,695,474. COLLAR. GEORGE THEODORE SWEETSER, New York, N. Y. Filed Apr. 23, 1926. Serial No. 104,115. 3 Claims. (Cl. 2—137.)

2. A soft fold collar comprising a band part and a collar part, a tape positioned near the ends of the collar and band parts, the ends of the tape being secured to the under side of the collar and outer sides of the band parts respectively with the intermediate portion of the tape being relatively loose with respect to the collar and band parts, and a cross strip of fabric bridging the tape intermediate the ends thereof.

---



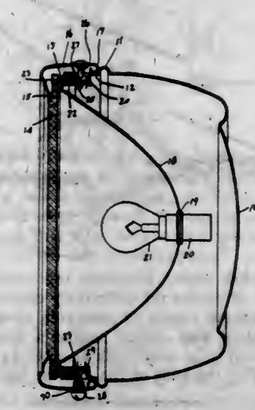
1,695,475. FIGURE WHEELED TOY. FERNAND H. VAUTRIN, Cleveland, Ohio. Filed Oct. 1, 1927. Serial No. 223,436. 3 Claims. (Cl. 46—45.)

3. A bird toy comprising a bird body, a pair of wheels supporting the front part of the body, wings hingedly mounted on the bird body and adapted for flapping movement, a swivelly mounted single wheel upon which the rear part of the body is mounted, said single wheel being mounted on substantially the longitudinal axis of the bird body so as to be adapted for steering, a motor and shaft operated thereby for rotating the front wheels, means operated from said shaft and connected to said wings for flapping same and means operated from said shaft and connected to the swivel mounting of said steering wheel so as to automatically vary the direction of movement of the bird during operation of the same, said connections to the wings and steering wheel being enclosed substantially within the bird body.

---

1,695,476. PROCESS OF COUNTERSINKING HOLES IN METAL. LOUIS G. WINKLER, Indianapolis, Ind., assignor to Parts Corporation, Indianapolis, Ind., a Corporation. Filed Dec. 19, 1927. Serial No. 241,023. 1 Claim. (Cl. 29—148.)

The process of countersinking holes in metal plates, consisting of deforming the plate to form a conical recess in one face and a projection upon the opposite face, and thereafter removing the central portion of the recessed portion of the plate and all of the projected portion upon the opposite face.

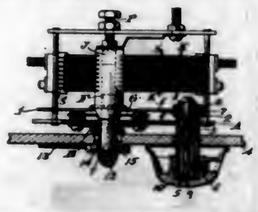


1,695,477. RECEPTACLE. ANTON ZEINDLHOFER, Vienna, Austria, assignor to Groove Lock Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 26, 1928. Serial No. 249,566. 9 Claims. (Cl. 782—83.)

1. A receptacle, comprising a body, a closure therefor, the body having a rim and the closure having a rib which covers said rim, and a sliding catch mounted on said rib to engage and release the rim.

---

1,695,478. HEADLAMP CONSTRUCTION. EDWARD C. ALBRIGHT, Connersville, Ind., assignor to Indiana Lamp Corporation, Connersville, Ind., a Corporation. Filed Mar. 28, 1927. Serial No. 178,834. 1 Claim. (Cl. 240—41.)

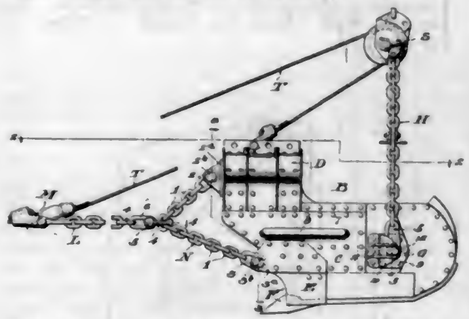


In a head lamp having a reflector and a closure and including a casing and a door rim nonrotatively connected together, the combination of a locking connection therebetween comprising an annular seat on the casing telescoped by the rim and teleacopically receiving the reflector, said rim bearing on the reflector through the closure, a plurality of depressions in said seat extending inwardly and engageable by the reflector for limiting inward movement thereof, and inwardly extending members carried by said rim and radially receivable by and extending into said depressions, said members and said depressions having a radially and inwardly directed wedging engagement for drawing the rim casing, closure and reflector together in clamped relation, one of said members being relatively and radially movable with respect to the rim for independent movement toward and away from the adjacent depression for rim and closure connection and disconnection.

---

1,695,479. CONDENSER. MORRIS H. BENNETT, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 26, 1926. Serial No. 97,529. 3 Claims. (Cl. 74—7.)

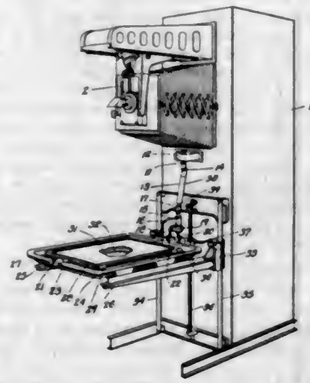
1. In an electrical tuning device the combination with a rotor shaft, a slow-motion driven member connected to



the rotor shaft, said member having a curved margin concentric with the rotor shaft, of a slow-motion driving mechanism comprising two friction disks of compressible elastic material arranged one on each side of the member

to contact with the opposite sides of the latter, a spacing member between the said disks, a screw passing through the disks and spacing member, a shaft into the end of which said screw is threaded, and means for rotating said shaft.

---



1,695,480. DRAG-LINE EXCAVATOR. CHESTER D. BUOY, Erie, Pa., assignor to G. H. Williams Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1926. Serial No. 145,258. 4 Claims. (Cl. 37—135.)

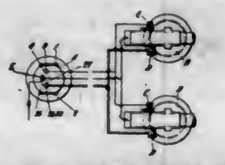
1. A drag-line bucket including the combination with a loading bail, of means for adjustably connecting the loading bail to spaced points at each side of the bucket, said means including side chains having a plurality of links therein adapted to be selectively engaged by connecting devices carried by the ends of the loading bail.

---

1,695,481. PHOTOGRAPHIC COPYING MACHINE. ARTHUR W. CAPS, Kansas City, Mo., assignor to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed June 26, 1925. Serial No. 39,753. 8 Claims. (Cl. 88—24.)

1. In a photographic copying machine, the combination with a camera body embodying a lens, of a reversible support for sensitized sheet material mounted within the casing in the focal plane of the lens, said holder being rotatable about a fixed axis, a multiple-faced copy holder arranged exteriorly of the camera body and having central pivots adapting it to be reversed in the region of the other focal point of the lens, and gearing connecting the reversible support and the copy holder for communicating synchronized movement from one of said elements to the other.

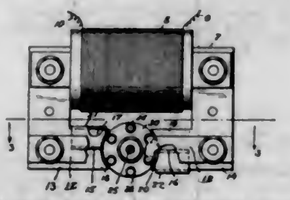
---



1,695,482. BUTTON. ERNEST CAVICCHI, Arlington, Mass. Filed June 16, 1927. Serial No. 199,373. 9 Claims. (Cl. 24—96.)

1. A button having a one-ply body portion provided on its back with two overlapping thread loop retaining arms, one situated between the body portion and the other arm, which arms form with the back of the body an eye to receive a loop of thread by which the button is anchored in place.

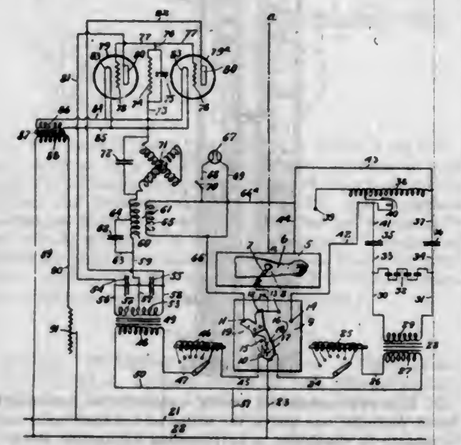
---



1,695,483. MEANS FOR USE IN THE LAYING OF ORDNANCE. ARTHUR TREVOR DAWSON, GEORGE EDWIN WATT, and ARTHUR LEONARD PERHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Aug. 13, 1920. Serial No. 403,432. 68 Claims. (Cl. 89—41.)

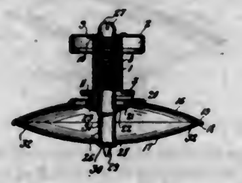
61. In a fire control system, an apparatus to be controlled from a distant station, controlling mechanism at the station including a pair of sighting devices adapted to be cooperatively actuated in train and elevation, transmitting means at the station operable from the actuation of the devices in train, means jointly responsive to the transmitting means and the corresponding movement of the apparatus for indicating the relative train of the sighting devices and the apparatus, and means for modifying the indications of the indicating means in accordance with correctional alterations in the relation between the devices and the apparatus.

---



1,695,484. SELF-STARTING SYNCHRONOUS INDUCTION MOTOR. CHARLES FAYER, Flushing, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed May 2, 1924. Serial No. 710,534. 2 Claims. (Cl. 172—278.)

1. A single phase induction-synchronous motor comprising a primary member having means for producing a strongly pulsating, shifting magnetic field, and a secondary member carrying a squirrel cage winding, the squirrel cage winding being composed of tubular conductors of such cross-section as to give the secondary member a salient pole effect.



1,695,485. ELECTROSURGICAL APPARATUS. CHARLES FAYER, Flushing, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed Aug. 6, 1924. Serial No. 730,359. 11 Claims. (Cl. 174—177.)

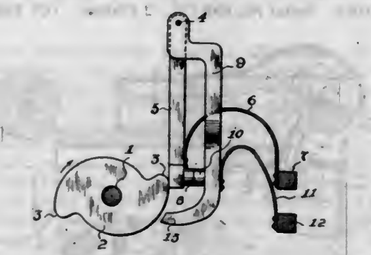
1. In an electro-surgical apparatus the combination of mechanism for producing damped oscillations, mechanism for producing undamped oscillations, a surgical electrode common to both of said mechanisms, and a switch connected with both of said first mentioned mechanism and with said surgical electrode, for enabling said surgical electrode to be energized by said first mentioned mechanisms alternately.

---

1,695,486. TOP. ELMER W. GIBBS, Canton, Ohio, assignor to The Gibbs Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 17, 1926. Serial No. 88,759. 2 Claims. (Cl. 46—32.)

1. In combination with a spinning top having a stem and a body portion thereon, said body portion having an aperture and a series of indentations in its upper side, a twisting head including a spring barrel, a disk permanently attached at each end of the barrel, a peripheral flange upon the upper disk, a toothed flange upon the lower disk for engagement with said indentations, and a twisting spring in the barrel connected thereto at its upper end, the lower end of the spring being received in said aperture.

---



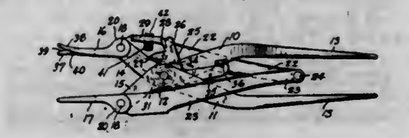
1,695,487. WRIST-WATCH STRAP. ART HADLEY, Providence, R. I., assignor to The Hadley Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 18, 1927. Serial No. 184,548. 1 Claim. (Cl. 24—71.)

In combination with a wrist watch strap, extensible strap-connecting means comprising a cover plate having side walls, means for securing a section of the strap between said side walls adjacent one end of the cover plate, an intermediate connector plate pivoted between said side walls adjacent the opposite ends of the cover plate, a second substantially flat connector plate hinged at one end to said intermediate plate and connected at its opposite end to a second strap section, the intermediate connector plate having a centrally disposed aperture adjacent its cover plate pivot, and a centrally disposed stud fixed in the other connector plate adjacent its strap connection and adapted frictionally to engage said aperture when the parts are in overlapped relation, thereby to lock said connector plates together.

---

1,695,488. CIRCUIT-CONTROLLING MEANS. THOMAS RANDOLPH HARRISON, Philadelphia, Pa., assignor to Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 4, 1924. Serial No. 717,901. 4 Claims. (Cl. 200—30.)

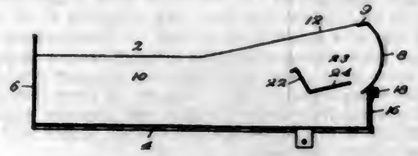
1. In combination, a lever, carrying a contact, a second lever carrying a contact, a rotating cam member, spring means for urging said levers into cooperation with said cam members, said cam member having a single steep sloping side cooperating with said spring means to move said contacts to engage and disengage each other with a snap action.



---

1,695,489. PROCESS OF CURING RIPE OLIVES. GEORGE S. HEWETT, Corning, Calif. Filed Dec. 28, 1925. Serial No. 78,000. 4 Claims. (Cl. 99—11.)

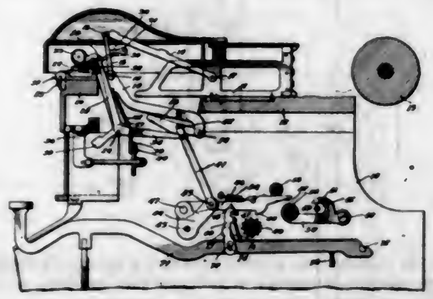
1. The herein described process of treating olives from which the natural bitterness has been removed comprising immersing them in a boiling brine, removing them from the boiling brine and subjecting them to a high heat until crisp.



---

1,695,490. VALVE LIFTER. WILLIS F. HOBBS and JOHN A. ANDERSON, Bridgeport, Conn., assignors to The Bridgeport Hardware Manufacturing Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 17, 1928. Serial No. 254,946. 6 Claims. (Cl. 29—86.3.)

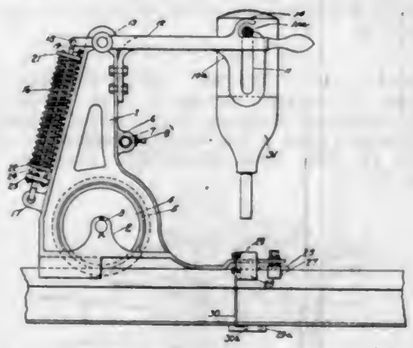
1. In a valve lifting tool, a pair of levers pivoted together including handles on one side of the pivot and extensions on the opposite side of the pivot arranged to move away from each other as the handles are moved together, jaws pivoted to said extensions and each having an arm extending beyond the pivot between the levers, and a pivot connecting said arms.



1,695,491. VEHICLE BODY. JOSEPH L. HOGLAND, Kansas City, Mo., assignor of one-half to Harry P. Thomson, Kansas City, Mo. Filed Feb. 3, 1928. Serial No. 251,605. 7 Claims. (Cl. 83—73.)

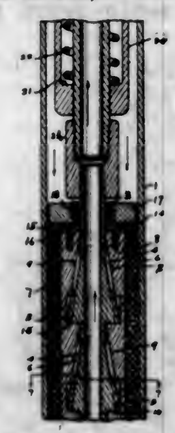
1. In combination, a vehicle body adapted to carry and discharge a previously mixed composition, and means extending entirely across said body for remixing the composition during the discharging operation.

---



1,695,492. TYPEWRITER. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Mar. 17, 1924. Serial No. 699,727. 2 Claims. (Cl. 197—17.)

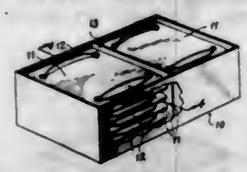
1. The combination with a sliding type carrier, of a vertically movable member for actuating said type carrier, a power drive, a horizontally movable actuator arranged to engage said power drive, a pivoted member connected with said actuator, and a link connecting said pivoted member and said vertically movable member.



---

1,695,493. CARRIAGE FOR DRILLING MECHANISM. EDWARD C. HOLMES, Cincinnati, Ohio. Filed July 16, 1925. Serial No. 43,985. 4 Claims. (Cl. 144—32.)

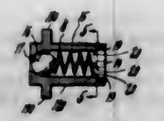
1. A screw spike driver carriage comprising, an upright member provided with a carrying wheel, a forked frame member secured to the upright member, vertical slots in the forked frame adapted to guide spider arms of a drilling mechanism or the like, and a pivoted rocker arm member with forked arms in alignment with the forked frame member extended so as to carry spider arms within the guiding slots.



1,695,494. SWAB. GRANVILLE A. HUMASON, Houston, Tex. Filed June 21, 1926. Serial No. 117,467. 4 Claims. (Cl. 74—109.)

1. In a swab a mandrel having a plurality of downwardly flared sections, one above the other and whose lower ends terminate in shoulders, a surrounding expansible sleeve, a plurality of expansible sections around the mandrel having inside faces which work against the mandrel sections and formed with shoulders which oppose the shoulders of the mandrel, the lower ends of said expansible sections having upwardly facing grooves into which the lower end of the sleeve fits.

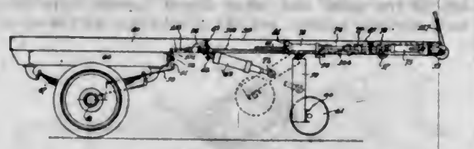
---



1,695,495. SHAPE-RETAINING PACKING DEVICE. BENJAMIN IKOWSKY, Brooklyn, and JULIUS JOSEPHS, Bronx, N. Y. Filed Sept. 23, 1927. Serial No. 221,438. 8 Claims. (Cl. 223—18.6.)

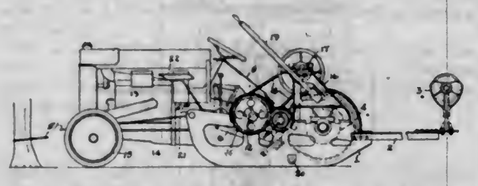
1. A cap-package comprising a relatively stiff flat member having a pair of elongated slits extending on opposite sides of a mid-portion thereof, and a cap having creased portions inserted in said slits, the crown of the cap abutting said mid-portion.

---



1,695,496. METHOD OF MAKING GREASE CUPS. RAYNALDO P. JACQUES, Woonsocket, R. I., assignor to Adams Industries, Inc., New York, N. Y., a Corporation of New York. Filed June 7, 1927. Serial No. 197,130. 4 Claims. (Cl. 29—156.)

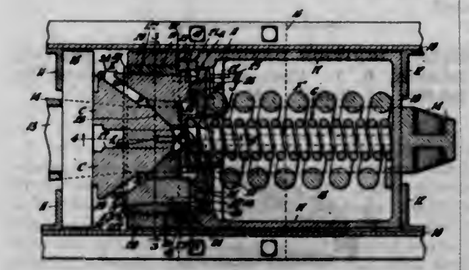
1. The method of making a nipple-shaped grease cup, which consists in forming a one-piece bar of indeterminate length, including a substantially cylindical body portion and longitudinally extending wings integral with the body portion and projecting from opposite side portions thereof, transversely severing said bar to form a blank for a single cup, removing portions of the wings from the blank to leave bayonet-joint studs on the body portion, screw-threading an end portion of the blank, and providing the blank with a longitudinal bore.



1,695,497. HYDRAULIC-CONTROLLED TRAILER LEG. CHARLES H. LAND, Detroit, Mich. Filed Mar. 16, 1927. Serial No. 175,744. 11 Claims. (Cl. 280—33.1.)

1. In a tractor trailer combination, a trailer, a leg structure adapted to be raised and lowered relative to said trailer, a hydraulic mechanism on said trailer adapted for raising and lowering said leg structure, said hydraulic mechanism including pivoted leg cylinders and reciprocable piston rods connected to said leg structure, a tractor, and means on said tractor engageable with said hydraulic mechanism adapted to actuate said hydraulic mechanism when said tractor is backed relative to said trailer.

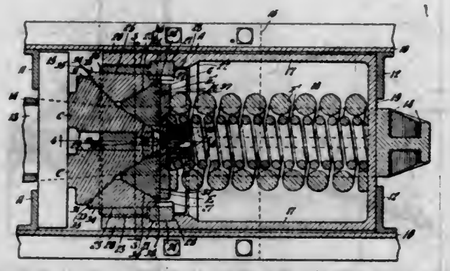
---



1,695,498. WINDING ENGINE. JOHN R. MCGIFFERT, Duluth, Minn., assignor to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Dec. 16, 1925. Serial No. 75,712. 8 Claims. (Cl. 254—166.)

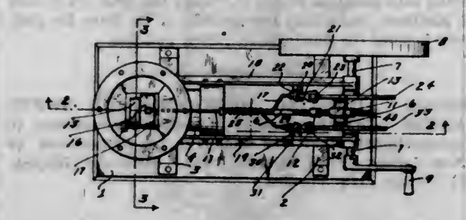
1. In apparatus of the character described, the combination of a winding drum, means for supporting said drum and for supporting the traction end of a motor-driven vehicle, said means comprising a skid non-rigidly and rockably connected to such vehicle by bearings adapted to receive the rear axle of such vehicle, means for communicating power from such axle to the said drum, and an outrigger and cable-guide projecting from the skid at one end.

---



1,695,499. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 23, 1927. Serial No. 207,946. 11 Claims. (Cl. 213—31.)

1. In a friction shock absorbing mechanism, the combination with a combined friction shell and spring cage; of a central friction element; a pair of wedge pressure transmitting members movable relatively to the central element and having frictional engagement with said central friction element; a plurality of friction shoes cooperating with said wedge pressure transmitting members, said shoes having sliding frictional contact with each other, certain of said shoes having frictional engagement with the shell; and spring resistance means opposing inward movement of the shoes.

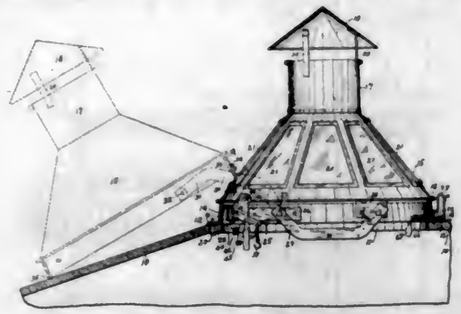


1,695,500. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 23, 1927. Serial No. 207,945. 5 Claims. (Cl. 213—31.)

1. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces; of friction shoes cooperating with said shell friction surfaces; a friction post; wedge pressure transmitting means movable relatively to the post and having frictional engagement therewith, said wedge pressure transmitting means and friction shoes having cooperating wedge faces; wedge blocks having wedging engagement with the friction shoes and wedge pressure transmitting means; and spring resistance means opposing relative movement of said shell and wedge blocks.

---

1,695,501. AUTOMATIC VOLUMETRIC-MEASURING DEVICE. BERNHARD OPITZ, Portland, Oreg. Filed Oct. 20, 1925, Serial No. 63,656. Renewed May 14, 1928. 3 Claims. (Cl. 221—103.)



1. In an automatic volumetric measuring device, a cylinder, a cylinder head threadable to one end of the cylinder, a piston reciprocable within said cylinder, a revolubly mounted crank, a piston rod secured to said piston at its one end and to said crank at its opposite end, an inlet and an outlet port for said cylinder, valves to open and close said ports, a valve stem, a rocker arm and a revolving cam to close each of said valves, compression springs to open said valves, said cams being mounted on said crank shaft and having their cam surfaces oppositely disposed to close said valves oppositely, and means upon said piston rod to vary the stroke of said piston.

---

1,695,502. CAP FOR SILOS. WILLIAM A. PARSONS, Fort Atkinson, Wis. Filed July 2, 1927. Serial No. 203,052. 8 Claims. (Cl. 98—1.)

1. The combination with an apertured roof structure, of a cap adapted to normally cover the aperture in the roof, and a set of substantially parallel links connecting the cap with the marginal portions of the roof, said links being

pivotally secured to the cap on the opposite side of a transverse diametrical center line from that at which the links are connected with the roof, and the central portions of the

links being downwardly offset to allow a bodily shifting movement of the cap to one side of the aperture without inversion.

---

1,695,503. ADJUSTING MECHANISM FOR SWEEP RAKES. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 26, 1924. Serial No. 752,287. 22 Claims. (Cl. 56—398.)

1. In a rake, the combination of a frame, a rake platform pivoted thereto, a bracket pivoted to the frame, adjusting members carried by the bracket and connected to the platform, a lever on the bracket for adjusting the platform, an assisting means normally spaced from the lever, means for moving said assisting means to engage the lever for raising the platform, and means independent of the lever for positively locking the platform in raised position.

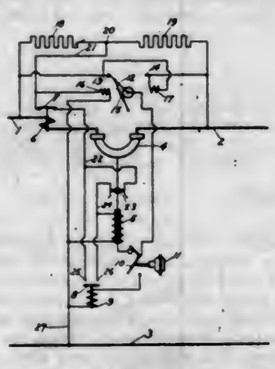
---

1,695,504. ADJUSTING MECHANISM FOR SWEEP RAKES. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 26, 1924. Serial No. 752,288. 17 Claims. (Cl. 56—398.)

1. In a hay rake, the combination of a frame, a rake platform mounted thereon for up and down movement, a lever on the frame for adjusting the platform to raised position, means on the frame for assisting the lever to adjust the platform to this position, and means on the lever independent of the assisting means and operative upon movement of the lever by the assisting means for locking the lever to retain the platform in raised position.

---

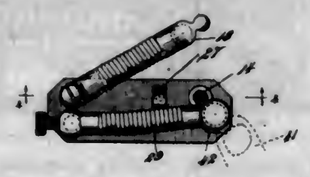
1,695,505. BRACELET CHAIN. EUGEN PRESTINARI, Irvington, N. J., assignor to New Jersey Chain Corporation, Newark, N. J., a Corporation of New Jersey. Filed Nov. 10, 1927. Serial No. 232,427. 4 Claims. (Cl. 59—79.)



1. A bracelet chain structure comprising a series of extendible link units each having a guide link formed of sheet stock folded to provide front, rear and side walls and a narrow connecting neck portion forming part of one end wall, portions of the side walls at the opposite end of the guide link being folded inwardly providing hook-receiving pockets, one end of said rear wall being de-

pressible and arranged to control the entrance to said hook-receiving pockets to permit the passage of the hooks to and from said pockets and a slide link in said guide link having laterally extending hook portions shaped to enter and leave said pockets in the next adjacent guide link when the rear wall thereof is depressed.

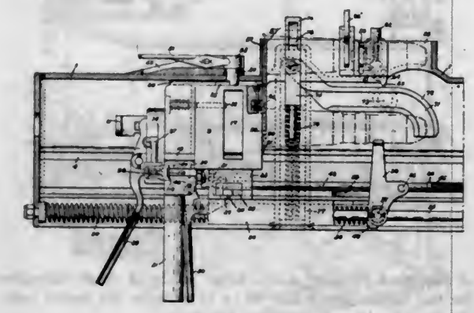
---



1,695,506. AUTOMATICALLY-RECLOSING CIRCUIT BREAKER. ESTELL C. RANEY, Columbus, Ohio. Filed Mar. 17, 1922. Serial No. 544,410. 25 Claims. (Cl. 175—294.)

1. In a system of electrical distribution having a plurality of sections, an automatically reclosing circuit breaker for connecting adjacent sections, a means for controlling reclosing of said breaker, and a means automatically responsive to change of direction of potential drop across adjacent sections to effect operation of said controlling means from the section having the lower potential.

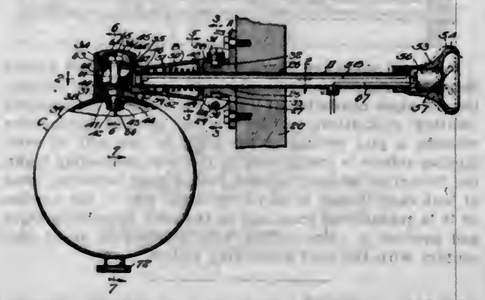
---



1,695,507. IGNITION DEVICE. JOSEPH M. REDINGER, Johnston, R. I. Filed July 18, 1927. Serial No. 206,503. 11 Claims. (Cl. 67—71.)

8. In an ignition device, a fuel reservoir, a wick extending therefrom, pyrophoric means for igniting the wick, a cover for said wick, means for hingedly supporting said cover including a resilient flexible section, a retaining post on the reservoir for holding said supporting means and cover in wick-covering position, said flexible section permitting the supporting means and cover to be lifted from covering position and swung to one side to expose the wick.

1,695,508. AUTOMATIC GUN. ASA H. SKINNER, Watervliet, and HENRY J. STAMBAUGH, Troy, N. Y. Filed Dec. 22, 1924. Serial No. 757,498. 39 Claims. (Cl. 89—3.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

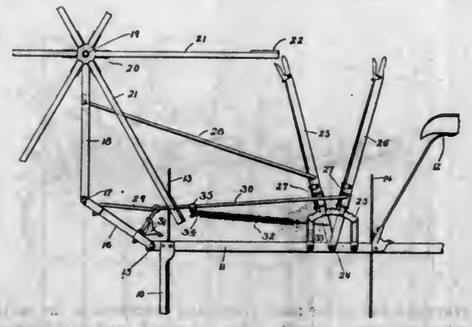


11. The combination of a cradle, a barrel therein having a breech formed with sockets, a movable breech block for the barrel, a breech lock including a pair of locking members pivoted in the block and adapted to fit in the barrel sockets, and means for actuating the breech lock in opening and closing.

37. A gun barrel, a breech block separable from the barrel, a breech lock in the block, means for actuating the breech lock and means carried by the block for holding the lock in unlocked position.

---

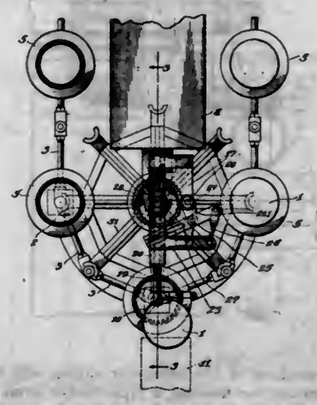
1,695,509. DIRIGIBLY-MOUNTED LIGHT. CLIFFORD SKLAREK, Chicago, Ill., assignor to International Spotlight Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1921, Serial No. 504,194. Renewed June 9, 1928. 15 Claims. (Cl. 240—61.)



1. In a dirigible light, the combination with a supporting housing mounted for rotation about one axis and having driving means secured thereon, of a light holder mounted for rotation about an axis disposed at an angle to said first axis and having driving means secured thereon; and an operating member extending into said housing having a plurality of operating means fixed thereon, said means being shiftable into operative relation with the driving means on said support or said holder.

---

1,695,510. ADJUSTING MECHANISM FOR HARVESTER REELS. DANIEL W. SMITH, Oak Park, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 3, 1926. Serial No. 106,191. 3 Claims. (Cl. 56—221.)

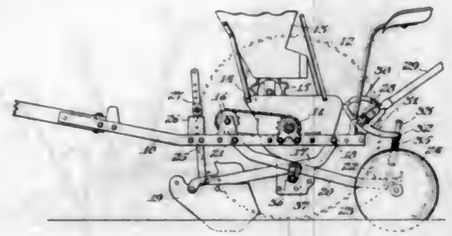


3. In a harvester having a frame, the combination of a reel carried by a support pivoted on the frame for up and down and fore and aft movement, a lever, a connection from the lever to the reel support for moving the reel fore and aft, a second lever, a connection therefrom to the reed support for moving the reel up and down, an anchor member

slidably carried on the second connection including a lock means, and a spring connected to the first lever and to said lock means, whereby the pull of the spring actuates said lock means to secure the anchor member on said second connection.

---

1,695,511. DISCHARGE MECHANISM FOR PIE MACHINES AND THE LIKE. DENNIS W. SMITH, Wilmette, Ill., assignor to Colborne Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 28, 1927. Serial No. 194,991. 6 Claims. (Cl. 107—1.)

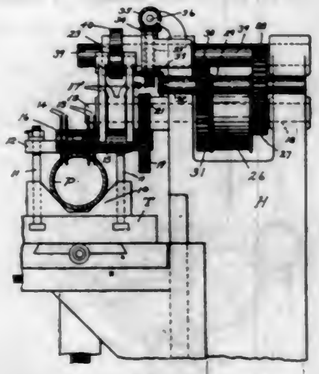


3. In a pie machine having pie supports mounted to travel about a fixed center, ejector means for cooperating with said supports, said means being mounted for adjustment about said center and having a positive driving connection with said supports so as to register with each support in any part of the adjusted positions.

---

1,695,512. FRAME-ADJUSTING MEANS. JOHN STUBROCK, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 9, 1924. Serial No. 731,059. 2 Claims. (Cl. 97—237.)

1. An implement of the class described comprising, in combination, a wheel supported main frame, an earth working element positioned near the rearward end of the main

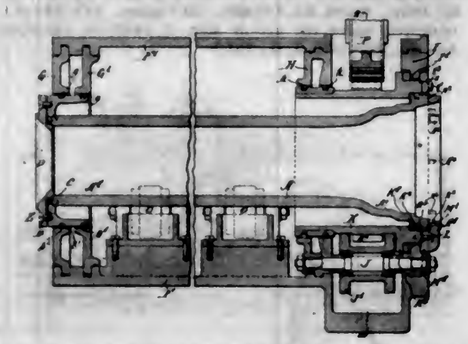


frame, a dragbar pivoted to the main frame and extending rearwardly to the earth working element, a furrow former positioned underneath the forward part of the main frame, a push bar pivoted near the rearward end of the main frame and extending forwardly to the furrow former, elevating and depressing means mounted on the

rearward end of the main frame and connected to the earth working element so as to raise or lower it, and anti-friction means secured to one of said bars and extending into the path of movement of the other bar so as to cause the earth working element and the furrow former to partake of joint and simultaneous upward movement.

---

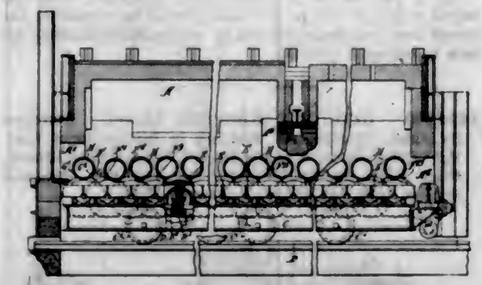
1,695,513. PIPE-SLOTTING MACHINE. BERTRAM C. TRAVIS, Los Angeles, Calif., assignor of one-half to Mark Levy, Los Angeles, Calif. Filed May 1, 1924. Serial No. 710,394. 2 Claims. (Cl. 29—69.)



1. In a machine of the character shown and described, including means for holding a pipe, rocker arms movably mounted to be moved to and from said pipe, pipe slotting tools carried by said arms, means for driving said pipe slotting tools, means for moving said arms toward said pipe to force aid cutting tools into said pipe, said tools being spaced from each other transversely of the axis of said pipe, whereby said pipe can be turned to position the cut made by one tool in position to receive the other tool, for the purpose described.

---

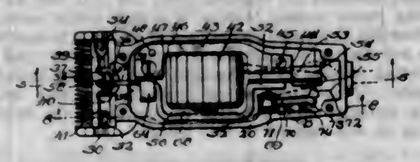
1,695,514. CENTRIFUGAL PIPE-CASTING MACHINE AND MOLD. JOHN H. UHRIG, Beverly, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Nov. 23, 1926. Serial No. 150,208. 3 Claims. (Cl. 22—65.)



1. In a centrifugal pipe casting machine a casing forming a water jacket surrounding the mold, in combination with a bell ended pipe mold revolvably supported in the casing, and means connected to the bell and spigot ends

of the mold forming water tight joints of equal diameter for the water jacket and so as to balance the water pressure and avoid end thrust on the mold.

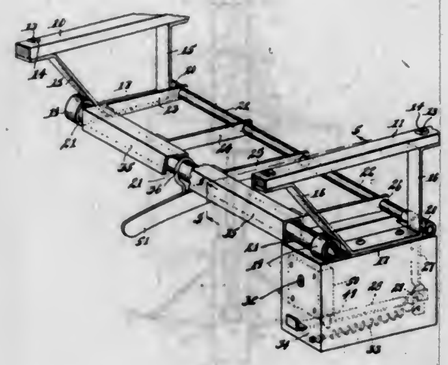
---



1,695,515. TRANSPORTING MECHANISM FOR PIPE-ANNEALING FURNACES. JOHN H. UHRIG, Beverly, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Dec. 28, 1926. Serial No. 157,450. 3 Claims. (Cl. 214—18.)

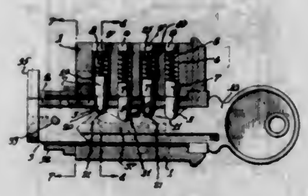
1. In an annealing furnace for cast iron pipes having means for supporting, rotating and progressively advancing the pipes consisting of a multiple series of overlapping rotating cylindrical rollers having notched peripheries whereby a pipe resting in the bight of one pair of overlapping rollers is transferred to the next succeeding bight, the formation of said notches with a pipe retaining crest at both ends thereof so as to retain the pipe in the notches as it is transferred from one to the next succeeding bight and prevent it from rolling with accelerated speed into contact with the next succeeding rollers.

---



1,695,516. CLIPPER. WILLIAM J. VAN OSDEL, Chicago, Ill. Filed Dec. 27, 1926. Serial No. 157,069. 23 Claims. (Cl. 30—1.)

1. A device of the character described including a support, a reciprocable blade mounted on said support, means for reciprocating said blade comprising an electromagnet and an armature adapted to be vibrated thereby, a portion of the armature being non-resilient but pliable, a head connected with said portion, the bottom of said head being rounded and means for connecting said head directly with the said reciprocable blade.

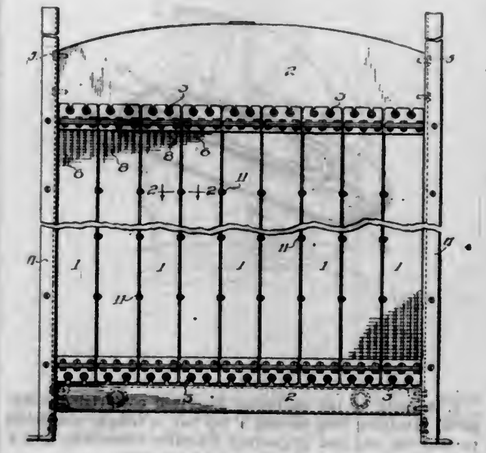


1,695,517. GARMENT HANGER AND PROTECTIVE DEVICE THEREFOR. CARL AUGUST WALDBAUER, Chicago, Ill. Filed Dec. 6, 1927. Serial No. 238,084. 5 Claims. (Cl. 211—124.)

2. A device of the kind described comprising a supporting frame, a second frame rockingly mounted on the supporting frame, a container secured to the supporting frame, said container having a reciprocating member actuated by a member connected to said second frame, and lock operated means within the container engageable in a notch on said reciprocating member.

---

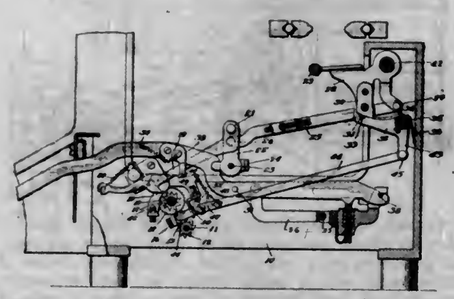
1,695,518. ELECTRIC LOCK. GLENN W. WATSON, Detroit, Mich. Filed Oct. 10, 1927. Serial No. 225,046. 8 Claims. (Cl. 70—50.)



1. In a locking device, a body, a barrel rotatable therein, tumblers adapted to lock said barrel to the body, an auxiliary electrically controlled locking device between said body and barrel, a broken circuit connected to said auxiliary device, and a key insertable in said barrel and adapted to complete said circuit.

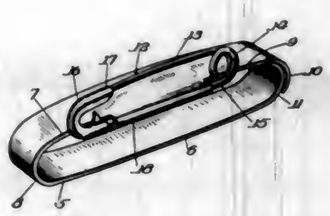
---

1,695,519. SECTIONAL RADIATOR. FRED M. YOUNG, Racine, Wis., assignor to Perfex Corporation, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 17, 1926. Serial No. 136,095. 3 Claims. (Cl. 257—130.)



2. A radiator comprising a pair of mutually spaced headers in combination with a closely set series of directly connected interchangeable oblong core sections which are functionally independent of one another and which are connected at their ends to said headers wherewith they directly communicate and manually operable means to detachably secure said sections directly to one another and

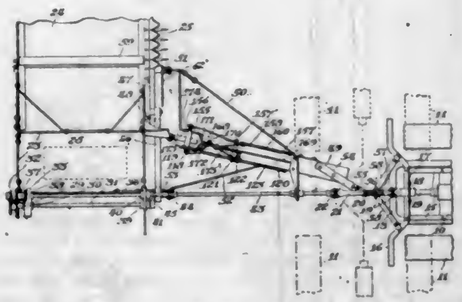
to said headers, said sections having lengthwise outstanding side flanges to receive those said means which secure the sections directly to one another.



---

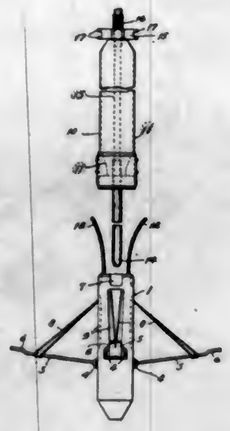
1,695,520. CASE-SHIFT MECHANISM FOR TYPEWRITERS. CONRAD D. YOUNGBERG, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Jan. 2, 1925. Serial No. 31. 9 Claims. (Cl. 197—73.)

1. In a typewriting machine, a case shift member, a continuously operating power drive, an actuator for said case shift member, a key lever for establishing connection between said power drive and actuator, and power actuated means other than said actuator for controlling the return of said case shift member after operation of said actuator.



1,695,521. LINGERIE CLASP. FRANK W. BEMM, Milwaukee, Wis., assignor to Otto G. Stoffregen, Chicago, Ill. Filed May 25, 1927. Serial No. 193,970. 3 Claims. (Cl. 24—73.)

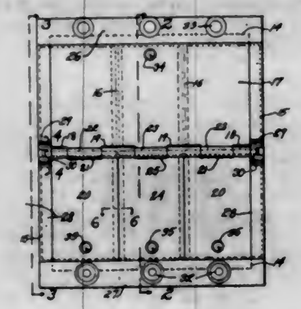
1. A clasp of the character described comprising a flat metal retaining loop having a top bar, a tongue connected to said top bar and projecting laterally therefrom, and a safety pin pivotally connected to the tongue.



---

1,695,522. POWER-DRIVE GRAIN BINDER. BERT R. BENJAMIN, Oak Park, CLEMMA R. RANEY, Chicago, and WILLIAM WEBBER, La Grange, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 3, 1923. Serial No. 616,645. 5 Claims. (Cl. 56—10.)

1. An implement having a plurality of movable elements, a tongue connected to said implement, a lever pivotally mounted on said tongue for adjusting one of said movable elements and having an angular extension beyond its pivot, and means including a prop pivoted to said tongue and a link pivotally connecting said prop with the extension on said lever for adjustably supporting the forward end of said implement.

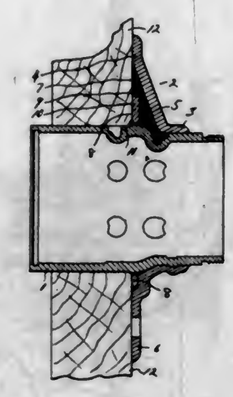


1,695,523. CONCRETE ANCHOR. WALTER E. BILHORN, St. Louis, Mo., assignor to Bilhorn Construction Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 28, 1925. Serial No. 52,977. 6 Claims. (Cl. 189—92.)

1. In combination, an anchor having flukes pivotally secured thereto and a removable cap, said cap having members overlapping the ends of said flukes.

---

1,695,524. MAIL BOX. ALBERT EDGAR BLACKMAN, Mount Vernon, N. Y. Filed Feb. 16, 1927. Serial No. 168,632. 11 Claims. (Cl. 232—25.)



1. A mail box comprising a plurality of compartments opening at the front, a door unit mounted on the front of the box for closing said compartments, said door unit comprising a master door adapted to close the upper portions of said compartments, and tenant doors, one for each compartment, pivotally mounted at their upper ends upon the lower end of said master door for closing the lower portions of said compartments, and pivot means mounted upon the sides of the box with its axis forward of the front of the sidewalls of the box for pivotally supporting the master door at its lower corners.

---

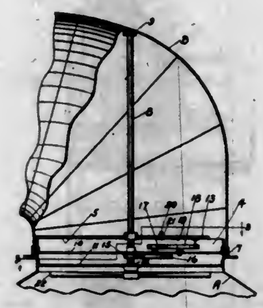
1,695,525. WHEEL HUB. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Aug. 3, 1925. Serial No. 47,936. 3 Claims. (Cl. 301—105.)

3. A wheel hub having, in combination, a barrel, a pressed flange secured upon said barrel and having an annular bearing face encircling said barrel and extending transversely of the axis thereof, and hollow reinforcing ribs extending from said bearing face to said barrel at an angle to said bearing face and forming recesses on the same side of said flange as said bearing face, a ring

encircling said barrel and having a bearing face in substantial alignment with said first-mentioned bearing face, said ring having radial projections engaging in the recesses formed by said ribs, and common means for securing said barrel, flange and ring to each other.

---

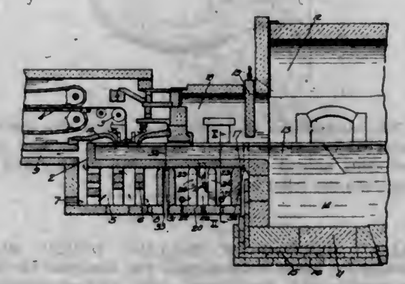
1,695,526. BRAKE DRUM. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Aug. 11, 1925. Serial No. 49,523. 9 Claims. (Cl. 188—218.)



1. A brake drum formed from sheet steel having a circular brake flange and a web provided with pressed annular and radial ribs for reinforcing the web.

---

1,695,527. OUTLET HOOD. NICHOLAS BRAUN, St. Louis, Mo. Filed May 14, 1927. Serial No. 191,488. 3 Claims. (Cl. 98—40.)

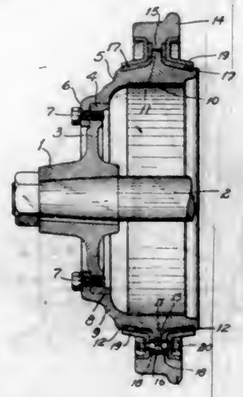


1. An outlet hood adapted to be mounted at the outlet of the heated gases from a heater, and means for automatically oscillating said hood relatively of the heater and comprising a spindle rotatably supporting said hood, a fan at the lower end of said spindle and operable by

the gases discharged through said outlet, and drive means intermediate said fan and hood for oscillating the latter during rotation of the fan.

---

1,695,528. GLASS FURNACE. WILLIAM K. BROWNLEE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 21, 1923. Serial No. 640,347. 8 Claims. (Cl. 49—17.)

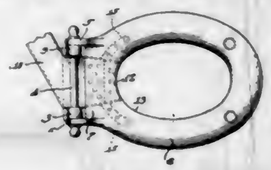


1. In the art of drawing sheet glass, the method of supplying molten glass to the pool from which the sheet is drawn, consisting in melting the glass producing materials, flowing the molten glass to the sheet source through a refining and cooling chamber, and simultaneously heating the lower strata and side portions of the flowing glass.

---

1,695,529. CAR WHEEL. NELSON R. BROWNYER, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 8, 1927. Serial No. 211,332. 7 Claims. (Cl. 188—218.)

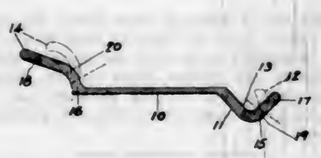
1. A car wheel comprising a hub portion, a web portion and a rim portion, said web portion having on its inner



side a brake drum whose inner surface is adapted for cooperation with a brake member and whose outer surface has a circumferential rib at the middle part thereof

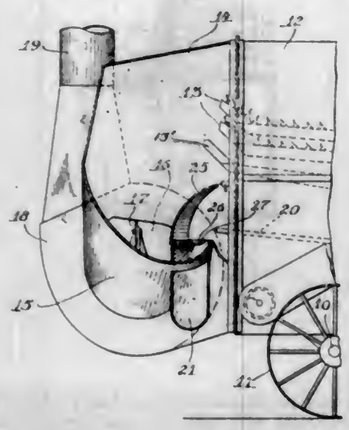
and thence tapers towards each end, said rim portion having an internal annular rib, and means engaging said rib to mount said rim on said drum.

---



1,695,530. TOILET SEAT. AUGUST J. BRUDER, Holly, Mich. Filed Aug. 30, 1926. Serial No. 132,348. 2 Claims. (Cl. 4—217.)

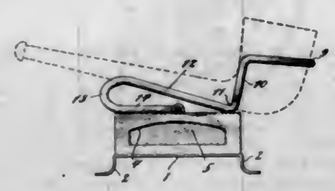
1. The combination of a toilet seat, a box-like ventilating member embedded in the rear portion of said seat, curved arms carried by said ventilating member and extending into the toilet seat.



---

1,695,531. METHOD OF ROLLING WHEEL RIMS. EDWARD G. BUDD, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1925. Serial No. 20,980. 4 Claims. (Cl. 80—60.)

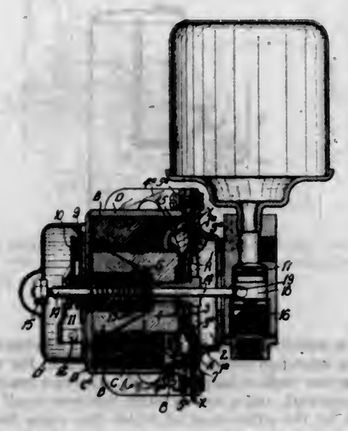
1. The method of forming vehicle wheel rims having an upturned flange which consists in hot rolling the rim and the flange with the base of the flange only at a substantially final angle but with the top portion of the flange at an angle slightly less than the final angle, and thereafter cold rolling the top of the flange to its final angle.



1,695,532. CHAFFER FOR THRASHERS. SHERMAN W. CADY, Richmond, Ind., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 6, 1927. Serial No. 196,671. 8 Claims. (Cl. 130—27.)

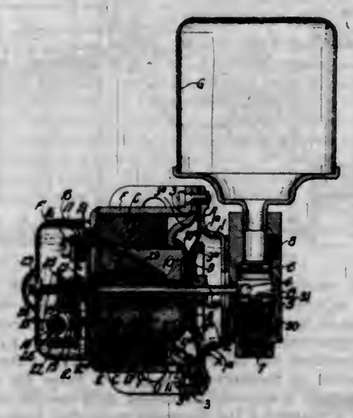
1. The combination with a thrasher having a straw discharge chute and a windstacker including a housing, of a chaffer screen, a chaff discharge chute, and a second windstacker, there being an opening in the straw windstacker housing whereby air under pressure is directed along the the chaffer chute in the direction of the second windstacker.

---



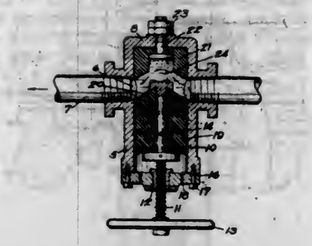
1,695,533. PIPE HOLDER. EDWIN CALDWELL, New York, N. Y. Filed Oct. 30, 1924. Serial No. 746,777. 3 Claims. (Cl. 131—12.)

1. In a pipe support, a base member having sockets, and a wire pipe bowl prop having its ends received in said sockets and intermediate of its ends bent to form a partial enclosure in which a pipe bowl may be supported in an upright position.



1,695,534. PUMP DIAPHRAGM. WILLIAM C. CARTER, Flint, Mich. Filed Feb. 27, 1925. Serial No. 12,056. 2 Claims. (Cl. 137—156.)

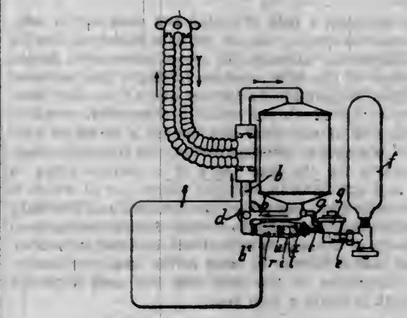
1. A laminated diaphragm composed of a plurality of layers of fabric treated with a linseed oil solution so as to render said layers impervious to liquids without making them stiff, brittle or inflexible.



---

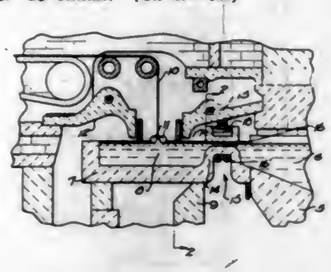
1,695,535. LIQUID-FUEL-PUMPING APPARATUS. WILLIAM C. CARTER, Flint, Mich. Filed Feb. 27, 1925. Serial No. 12,057. 17 Claims. (Cl. 172—126.)

1. In an electrically-operated pump, a solenoid for operating the pumping element provided with a core composed of an actuating member and a floating member, a switch for intermittently opening and closing the circuit that energizes the solenoid, and means for utilizing the movement of said floating member produced by closing the energizing circuit for increasing the pressure of the contacts of said switch on each other.



1,695,536. VALVE. JOSEPH P. CROWLEY, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 10, 1925. Serial No. 36,185. 8 Claims. (Cl. 251—77.)

8. A valve of the character described, comprising a housing provided with ports, a compressible valve seat and plunger therein, and means for moving the plunger to and from the valve seat to control the effective opening and the closing of said ports.



---

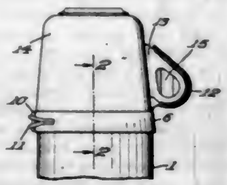
1,695,537. SELF-CONTAINED LUNG-POWER BREATHING DEVICE. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany; Elfriede Dräger, née Stange, executrix of said Dräger, deceased. Filed Nov. 15, 1922, Serial No. 601,030, and in Germany Dec. 10, 1921. 1 Claim. (Cl. 128—191.)

A self-contained breathing device adapted to prevent the breathing air from being overcharged with nitrogen, comprising in combination an air circuit system, a collapsible breathing bag in said system, an oxygen container, a reducing valve, a high-pressure connection from said container to the inlet side of said reducing valve, a continuously open connection from the outlet side of said reducing valve to said air circuit system constructed and arranged to continuously pass oxygen for revivifying the breathing air into said system in a predetermined constant amount per unit of time and an oxygen supply controlling device connected directly with said reducing valve connection and with said breathing bag independently of said continuously open connection and automatically operated by inspiration whereby additional oxygen is periodically supplied to the air circuit system in accordance with the breathing requirements prevailing at the time, said device comprising an auxiliary breathing bag having a collapsible wall, the said wall having a substantial area exposed to the atmosphere, a movable member therein adapted to be actuated by movement of said wall, and a valve controlled by said movable member.

1,695,538. METHOD AND MEANS FOR TREATING GLASS. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 7, 1926. Serial No. 133,788. 15 Claims. (Cl. 49—53.)

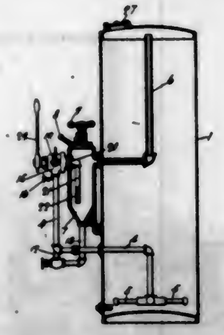
1. In glass apparatus, a tank containing a mass of molten glass, a pot communicating therewith, an upwardly extending projection arranged in the glass and over which the glass flows, means for heating the glass as it passes over said projection, and means for drawing a sheet vertically from said pot.

---



1,695,539. CALENDAR. WILLIAM H. DRAUGHON, Detroit, Mich. Filed Aug. 11, 1923. Serial No. 656,840. 2 Claims. (Cl. 40—108.)

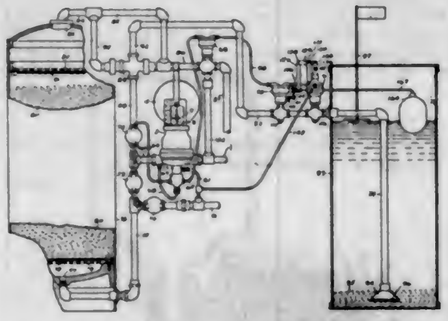
1. In a calendar, a pair of cylindrical members in relatively rotatable relation, one of the said members bearing monthly indications arranged in seven consecutive spaces and the other of the said members having a like series of spaces aligned longitudinally thereof and at one end bearing the days of a month and week in consecutive order in said spaces and at the other end having a series of year indications arranged in consecutive order in the said spaces, the indications for the leap years of a century being in duplicate and occurring in adjacent spaces one of which is a different color from the other, the January and February month indications being also in a color distinguishing from the remainder of the month indications, and means in addition to the said difference in color of the leap year indications for indicating to the user that the said duplicate numbers both indicate a leap year.



---

1,695,540. VACUUM BOTTLE. EINAR EDQUIST, Chicago, Ill. Filed May 11, 1928. Serial No. 276,936. 4 Claims. (Cl. 215—13.)

1. In a vacuum bottle, an envelope formed with a channel at its junction with the bottle neck, a collar integral with said envelope but detached therefrom throughout a portion of its length, a locking lever connecting the ends of said collar whereby the detached end may be releasably clamped against the attached end of said member, and a cup handle bracket carried by said collar.



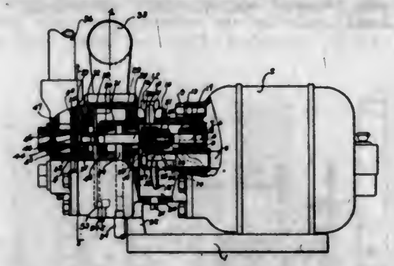
1,695,541. WATER-SOFTENER VALVE. CHARLES P. EISENHAUER, Dayton, Ohio. Filed Jan. 22, 1925. Serial No. 3,951. 9 Claims. (Cl. 210—24.)

1. In a water softener, a tank, conduits alternately employed as inlet and outlet conduits leading to the top and bottom of the tank, a supply conduit, a service conduit and a waste conduit, and a rotary valve common to all of said conduits, by the adjustment of which the water flow from said service pipe may be directed thru the tank inlet and outlet conduits in one direction and thence thru the service pipe or thru such tank inlet and outlet conduits in the opposite direction and thence thru the waste conduit or to entirely disconnect said service conduit.

---

1,695,542. WATER-SOFTENING APPARATUS. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed July 22, 1925. Serial No. 45,154. 17 Claims. (Cl. 210—24.)

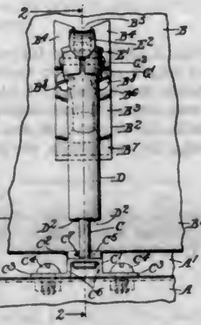
1. In an automatic water softening apparatus, a container for softening means, means to deliver hard water thereto, means to deliver regenerating material thereto, a source of regenerating material, a plurality of valves hydrostatically operated for controlling the period of softening and the period of regeneration, a control valve for said valves, electrical means for actuating said control valve and means actuated by the incoming water for rendering operative or inoperative said electrical means.



---

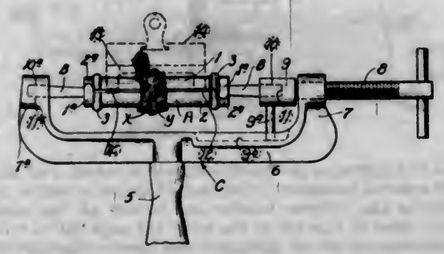
1,695,543. PUMP. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 25, 1926. Serial No. 90,636. 18 Claims. (Cl. 103—183.)

1. In a pump, a common base, a motor and a pump mounted thereon, said pump structure carrying suction and discharge lines, said motor having its armature shaft directly connected to a plurality of pistons working in a



plurality of cylinders communicating with a common suction line and a common discharge line delivering fluid from one to the other by the successive operation of the successive pistons in the successive cylinders and independent valves for each cylinder operated independently of each other by the fluid pressure in each cylinder.

---



1,695,544. HOOD LATCH. CHARLES B. GILMORE, Chicago, Ill., assignor to Chicago Forging & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 15, 1927. Serial No. 212,951. 14 Claims. (Cl. 292—114.)

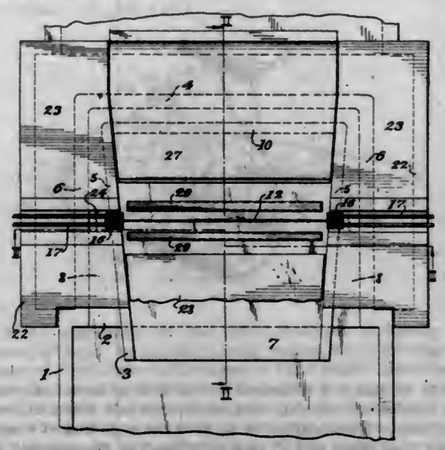
1. In a hood latch member, a latch body comprising an open ended tube, a plug member in the upper portion of said tube, a handle secured to said plug member, and including a member adapted for securing engagement with the opposed automobile hood, an engaging member adapted for cam engagement with said automobile hood, said member including a portion surrounding the upper end of said cylinder, and a securing member passing through said cylinder, plug and surrounding portion.

---

1,695,545. HAIR-CURLING DEVICE. ALEXANDER F. GODEFROY, St. Louis, Mo. Filed Nov. 5, 1927. Serial No. 231,271. 7 Claims. (Cl. 132—33.)

1. A hair curling device, consisting of an expansible member of substantially tubular shape, composed of a plurality of longitudinally-divided sections, said member being adapted to have strands of hair coiled around the same, wedges for expanding said member, and means for holding said member in an expanded condition after the wedges have been removed from said member.

---

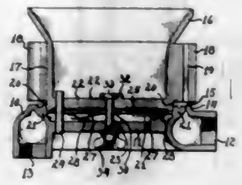


1,695,546. THERMOSTATIC CONTROL OF ELECTRIC CIRCUITS AND APPARATUS AND OTHER DEVICES. JULIAN G. GOODHUE, Evanston, Ill., assignor to trustees of The Electric Thermostatic Control Company, Chicago, Ill., a Trust Estate. Filed Jan. 15, 1923. Serial No. 612,574. 2 Claims. (Cl. 200—141.)

1. In a device of the class described, a container having two vertical chambers having their lower ends connected by a U-shaped passageway, a pair of electrical contacts permanently surrounded by mercury in recesses communicating with said passageway adjacent each of said chambers, a third contact in the lower portion of said passageway, mercury in said passageway, an insulating liquid in one of said chambers, and a gas and insulating liquid in the other, said liquid in the first named chamber being adapted to expand upon increase in temperature so as to break the mechanical and electrical connection of the mercury between one of said pairs of contacts and said third contact, and said chambers and said U-shaped passageway being adapted to permit portions of the insulating liquid to be transferred from one chamber to the other upon physical manipulation of the container.

---

1,695,547. DRAWING SHEET GLASS. LAWRENCE A. GROLEMUND, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 18, 1923. Serial No. 646,027. 11 Claims. (Cl. 49—17.)



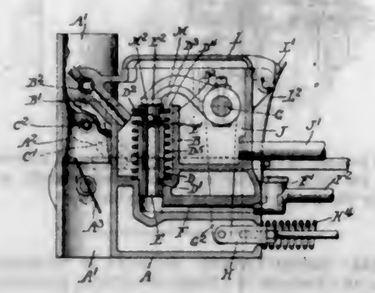
3. In a sheet glass drawing apparatus, an inner container for a pool of molten glass from which the sheet is

drawn, and an outer container surrounding the bottom and side walls of the inner containers but spaced therefrom, the space between the containers being filled with molten glass, and a heating chamber surrounding the bottom and side walls of the outer container, the sides of one of the containers being closer to the sides of the other container at their closed ends than at their open ends.

---

1,695,548. GAS BURNER. ERNEST A. HALL and GORDON E. BURNS, Toledo, Ohio, assignors to The Hall Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 9, 1928. Serial No. 245,370. 12 Claims. (Cl. 158—99.)

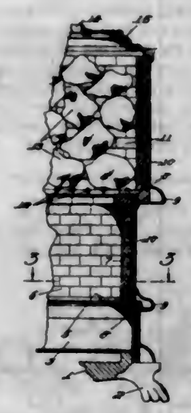
1. In a gas burner, the combination of a burner casting comprising a hollow ring with outlet holes for discharging gas, a supplemental member having flues in alinement with said holes and spaced therefrom to provide for the mixture of air with the gas, said ring being formed with an annular series of inwardly facing shoulders, said supplemental member having a downward extension fitting within said series of shoulders, and means for adjusting the distance between said supplemental member and said casting to vary the proportion of air in the mixture.



---

1,695,549. ADJUSTABLE ARM REST FOR AUTOMOBILES. JOSEPH HAUSLER, Chicago, Ill. Filed May 13, 1927. Serial No. 190,991. 2 Claims. (Cl. 155—198.)

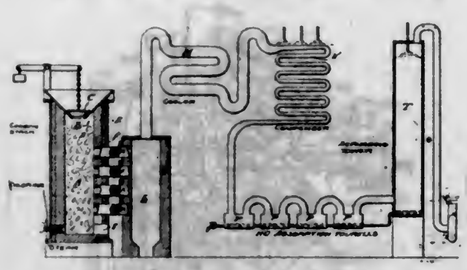
1. An arm rest formed of a strip of sheet metal of greater length than width tapered toward one end and bent to form a hook adapted to fit over the moulding of a window; the other end of said strip bent in the opposite direction to form a curved portion adapted to support the arm substantially as described.



1,695,550. CARBURETOR. WILLIAM H. C. HIGGINS, Jr., La Porte, Ind., assignor to Advance-Rumely Company, La Porte, Ind., a Corporation of Indiana. Filed Apr. 7, 1824. Serial No. 704,602. 12 Claims. (Cl. 158—36.4.)

1. In a carburetor a plurality of fuel chambers in combination with fuel supply means for supplying a different fuel to each chamber, pumps one for each fuel chamber adapted to force fuel into said fuel chambers, said pumps located within the carburetor part of the actuating means of such pumps being located within the carburetor.

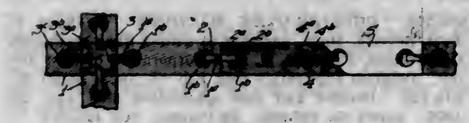
---



1,695,551. FURNACE. SAMUEL HILL and JUHA LATVALA, Twecoma, Mich. Filed Feb. 3, 1926. Serial No. 85,704. 1 Claim. (Cl. 126—58.)

A furnace section comprising a grate, walls supported upon the marginal portion thereof, and a lining for the walls supported upon the grate and disposed around the bars of the grate.

1,695,552. PROCESS OF PRODUCING HYDROCHLORIC ACID SYNTHETICALLY. WILHELM HIRSCHKIND, Antioch, and CARL W. SCHEDLER, Berkeley, Calif., assignors to Great Western Electro Chemical Company, San Francisco, Calif., a Corporation of California. Filed Sept. 14, 1925. Serial No. 56,376. 6 Claims. (Cl. 23—156.)

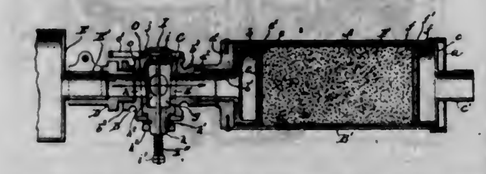


1. A process of producing hydrochloric acid synthetically from chlorine which comprises passing steam and chlorine through hot carbon in approximately the ratio required to balance the equation

$$C + 2H_2O + 2Cl_2 = 4HCl + CO_2$$

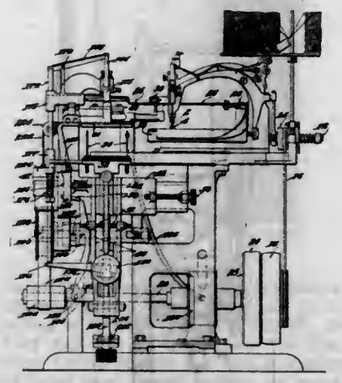
the gas being passed through an increased or diminished quantity of carbon to prevent the production of hydrogen and carbon monoxide.

---



1,695,553. TOY BUILDING BLOCK AND WALL CONSTRUCTION. FRANCES E. JONES, San Diego, Calif., and FRANCIS D. JONES, Helena, Mont. Filed Aug. 11, 1926. Serial No. 128,564. 7 Claims. (Cl. 72—16.)

1. In toy building blocks, blocks having key slots in their ends, said slots being transverse to the length of said blocks, and key members, of a length greater than the width of said blocks, each having a plurality of separate key portions adapted to be inserted into the end slots of said blocks, for tying pairs of the latter together into walls with the long edges of the pairs adjacent each other, said key members forming an intermediate portion of the walls formed by said blocks.

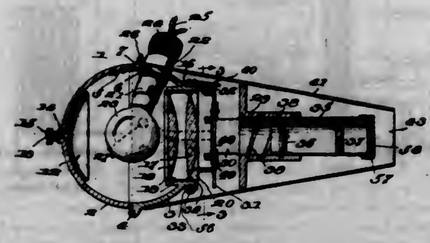


---

1,695,554. EXHAUST PURIFIER. LEONARD MARKELS, New York, N. Y. Filed Aug. 31, 1923. Serial No. 660,300. 5 Claims. (Cl. 183—48.)

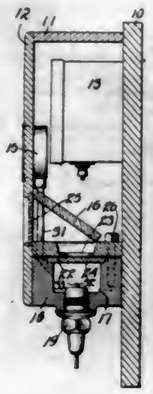
5. In a device of the class described, a purifying chamber, a hollow rotary by-pass valve interposed between the same and the flow of the exhaust thereto, and a relief valve seated upon the outer end of the said by pass valve and normally closed and supported by the by-pass valve and unaffected by the rotation of the latter, said by pass valve normally closing the vent to the atmosphere and the relief valve being opened by excess of exhaust pressure in the by pass valve chamber.

1,695,555. MACHINE FOR OPERATING ON PIECES OF SHEET MATERIAL. BENJAMIN F. MAYO, Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 28, 1920. Serial No. 420,182. 34 Claims. (Cl. 112—2.)



1. A machine for operating on sections of sheet material, having, in combination, means for operating on such material, a carrier for sections of such material movable from work receiving position to present the work to the operating means, movable to guide the work in its movement during the operation thereon and movable to restore the carrier to work receiving position after the completion of an operation and automatically actuated and controlled mechanism for imparting a complete cycle of movements to the carrier.

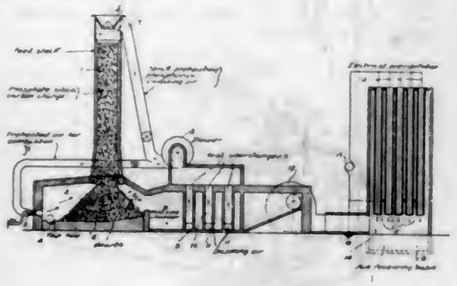
26. A machine for operating on sections of sheet material, having, in combination, means for operating on such material, a table for holding a stack of sections of such material, a carrier movable over the table and means for imparting a step-by-step upward movement to the table in successive cycles of operations to apply the topmost section on the stack to the carrier in each cycle.



---

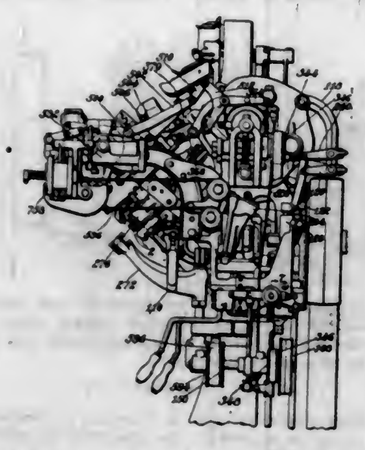
1,695,556. APPARATUS FOR PROJECTING LIGHT. HAROLD A. MCGUNNIGLE, New York, N. Y., assignor to Artlite, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 21, 1926. Serial No. 103,546. 6 Claims. (Cl. 240—41.)

1. An apparatus of the class described including a source of light, an optical lensing system for projecting a beam of light from said source, a light shield associated with said lensing system and including a centrally apertured support through whose aperture the light beam is adapted to pass, a plurality of plate-like members carried by said support and adjustable in planes parallel to that of the support about said aperture, and means for independently adjusting said members relative to each other



1,695,557. SPARK-PLUG-TESTING DEVICE. ROY H. MYERS, Hagerstown, Md., assignor to William H. Strauss, Waynesboro, Pa. Filed Apr. 16, 1926, Serial No. 102,529. Renewed Mar. 12, 1928. 5 Claims. (Cl. 175—183.)

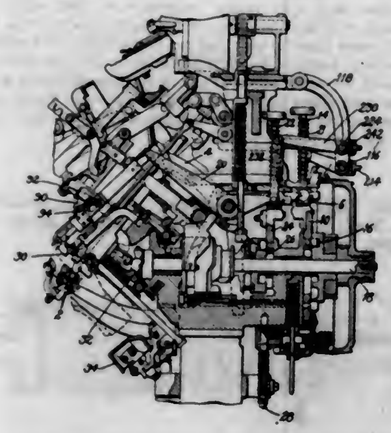
1. A spark plug tester comprising a casing, a pressure chamber in said casing having a transparent wall portion, said casing having a transparent wall portion disposed at an angle to said transparent wall portion of the pressure chamber, and a mirror disposed in a position to permit the interior of the pressure chamber to be observed through both transparent wall portions, substantially as set forth.



---

1,695,558. PROCESS FOR THE PRODUCTION OF PHOSPHORIC ACID. ALBERT NOBLE, Anniston, Ala., assignor to Federal Phosphorus Company, Birmingham, Ala., a Corporation of Alabama. Filed Feb. 29, 1924. Serial No. 695,945. 5 Claims. (Cl. 23—165.)

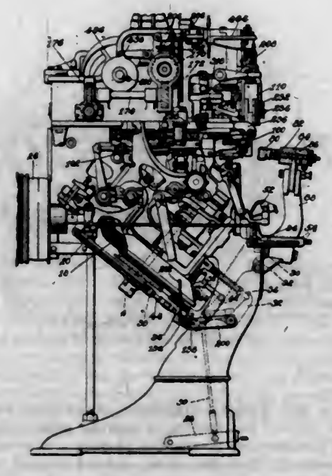
1. A process for the manufacture of phosphoric acid, which consists in charging a mixture of phosphate rock, silica and carbon into a feed stack disposed over the hearth of a heating chamber, impinging a flame on the charge in the heating chamber, passing air downwardly through the feed stack, oxidizing the evolved gases during their sojourn in the heating chamber, transferring heat from the gases to preheat air for combustion of the fuel, and collecting the oxidized phosphorus compounds.



1,695,559. MACHINE FOR SHAPING UPPERS OVER LASTS. CHARLES F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 15, 1923. Serial No. 619,120. 152 Claims. (Cl. 12—4.)

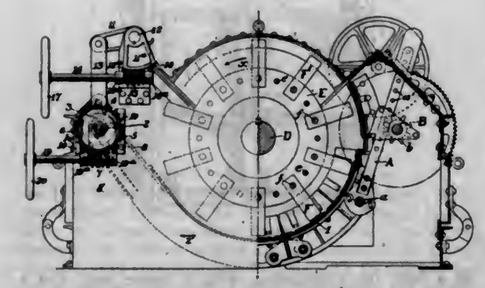
1. A pulling-over and toe lasting machine having, in combination, means for pulling-over an upper, toe-embracing wipers, and operating mechanism for imparting to said wipers in automatically determined time relation upwiping and over-wiping movements after the pulling-over operation has been substantially completed.

---



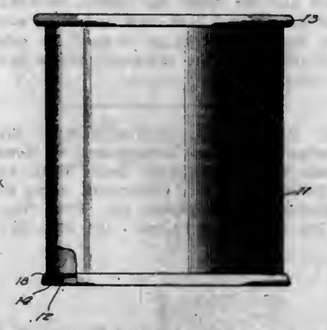
1,695,560. PULLING-OVER MACHINE. CHARLES F. PYM, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Feb. 15, 1923, Serial No. 619,120. Divided and this application filed Apr. 28, 1927. Serial No. 187,394. 39 Claims. (Cl. 12—9.)

1. In a machine of the class described, the combination with an upper-pulling gripper, of power-driven mechanism for moving said gripper at the will of the operator either in a direction to pull the upper or in a direction to relax the force of the pull, said mechanism comprising a power-driven pinion, racks connected to the gripper for moving it respectively in said different directions, and manual means for connecting the pinion to one or the other of said racks alternatively.



1,695,561. MACHINE FOR SHAPING UPPERS OVER LASTS. CHARLES F. PYM, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 8, 1924. Serial No. 730,929. 67 Claims. (Cl. 12—4.)

1. A pulling-over and toe lasting machine having, in combination, means for pulling an upper over a last, upwiping means and over wiping means movable as a unit heightwise of the toe with the upwiping means in engagement with the upper about the toe to wipe the upper to the edge of the insole, and power-driven mechanism for operating said upwiping means and overwiping means in automatically determined time relation to each other to upwipe the upper and to wipe its margin inwardly over the insole.



---

1,695,562. CAGE-ADJUSTING MECHANISM FOR CRUSHING MACHINERY. CHARLES R. ROUSE, Swissvale, Pa., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Filed June 21, 1926. Serial No. 117,374. 10 Claims. (Cl. 83—73.)

1. The combination, with a crushing machine having a cage or screen of the rigid type, and crushing means rotatable with respect to said cage, of rotative means operatively connected to one end of the cage for effecting adjustment of the cage with respect to the rotatable crushing means, and independent means for shifting the position of the cage-adjusting means; the resultant of the adjusting operations placing the cage in the desired position with respect to the crushing means.

1,695,563. CONTAINER. CHARLES STOLLBERG, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 6, 1922. Serial No. 534,498. 4 Claims. (Cl. 220—67.)

1. A container for heavy materials, comprising a sheet metal body wall having a protruding curl at its top, a bottom having a shoulder fitting within the lower end of said body wall and welded thereto, the edge of said bottom being folded upward and thence downward and having its inner part pressed against the outer face of said body wall, the outer part of the flange of the bottom being engaged and braced by the end of said inner part and adapted to cooperate with the said curl at the top to permit the rolling of the container.

---

1,695,564. TOOL-COUPLING DEVICE. CHARLES S. THOMAS, San Diego, Calif. Filed Feb. 26, 1927. Serial No. 171,222. 7 Claims. (Cl. 279—89.)

1. A device of the class described, including a brace shank, a tool, a cutout portion in said shank, notched portions in said tool adapted to fit in said cutout portions of said shank, and rigid and shiftable sleeve means non-rotatably mounted on said brace shank and shiftable into non-rotatable engagement with said tool for rigidly securing said shank to said tool.

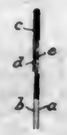
---

1,695,565. TOOL-COUPLING MEANS. CHARLES S. THOMAS, San Diego, Calif. Filed Feb. 26, 1927. Serial No. 171,223. 8 Claims. (Cl. 279—89.)

1. A device of the class described, including a brace shank provided with a dovetail female portion, a tool provided with a conforming dovetail male portion, a plurality of concentric slidably mounted sleeves on said shank, and screw and taper means in connection with said sleeves for locking said concentric sleeves over the joint of said shank and tool.

---

1,695,566. PHENOLIC RESIN COMPOSITION. VICTOR H. TURKINGTON, Caldwell, N. J., assignor to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed May 24, 1926. Serial No. 111,373. 4 Claims. (Cl. 134—26.)

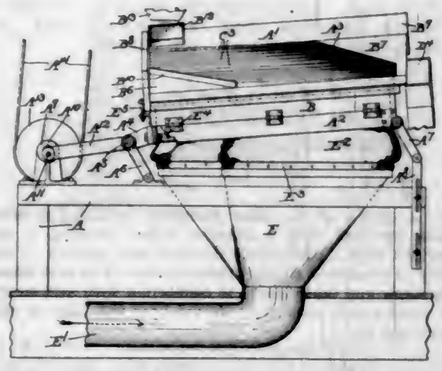


2. The hereindescribed varnish composition comprising a reactive phenol-mythylene resin, a volatile solvent therefor, and a di-alkyl ester of an organic acid.

1,695,567. ANIMAL FOOD. HARRY M. WEBER, Montclair, N. J., assignor to Ellis-Foster Company, Montclair, N. J., a Corporation of New Jersey. Filed Mar. 26, 1924. Serial No. 702,134. 1 Claim. (Cl. 99—11.)

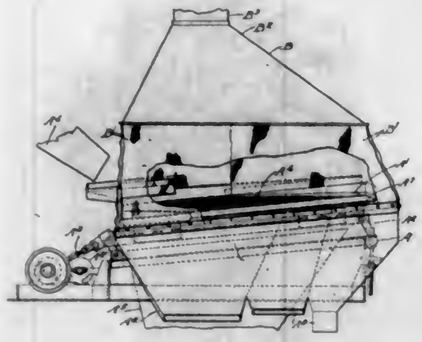
A baked and air dried dog biscuit enriched in vitamines, having a glazed hard crust and being substantially free from fissures whereby in view of the substantially air impervious crust, the vitamine content is preserved against oxidation.

---



1,695,568. PAPER BAG. HOWARD A. WOLF, Elkins Park, Pa., assignor, by mesne assignments, to Howard Wolf, Benjamin Wolf, Elias Wolf, Louis Wolf, and Albert Wolf, Philadelphia, Pa., Copartners, doing business as Wolf Brothers, Philadelphia, Pa. Filed Nov. 9, 1926. Serial No. 147,207. 6 Claims. (Cl. 229—68.)

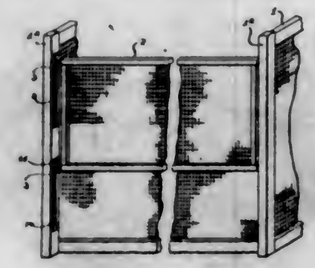
1. A paper bag including connected back and front walls separated at their upper ends to form an opening for the bag, a closing flap formed as an extension of the upper end of one of the walls, said flap being creased on a line adjacent the opening whereon it may be folded to close the opening, and a locking tongue hinged to the closing flap, said front and back walls being formed with aligning apertures spaced from the crease in the flap a distance less than that between the crease and the hinge line of the tongue, whereby, when the flap is folded over the opening along the crease and the tongue passed through the aligned apertures with its hinge line at the upper edge of an aperture, the flap will extend outwardly from the walls of the bag forming a handle.



---

1,695,569. DRY-SEPARATING MACHINE. RAY W. ARMS, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1924. Serial No. 706,853. 31 Claims. (Cl. 209—467.)

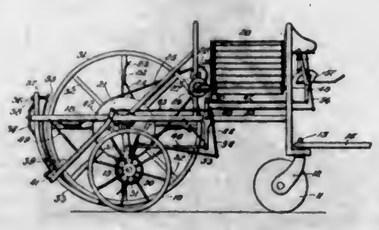
7. In an air separating table, a pervious deck, means for discharging air upwardly under pressure therethrough, means for reducing the flow of air through the deck along one side thereof, riffles projecting upwardly from the deck and terminating at the zone of the lower pressure.



1,695,570. DUST-COLLECTING SYSTEM FOR DRY-CLEANING TABLES. RAY W. ARMS, Chicago, Ill., assignor to Roberts & Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 9, 1926. Serial No. 80,138. 2 Claims. (Cl. 209—467.)

1. In a dry cleaning apparatus, a pervious reciprocating deck, means for feeding a flowing sheet of granular material thereacross, means for passing a moving column of air upwardly thru the sheet, a hood located above the deck containing an air settling chamber bounded on its underside by the sheet of material and means for withdrawing air from said hood at a point above the settling chamber and widely separated from the sheet of material, and a closure between the hood and the deck at all points about its periphery except the space thru which the sheet of material enters and is discharged from the deck, the hood being fixed in position independent of the movement of the deck.

---



1,695,571. CRIB. WILLIAM C. BAXTER, Rochester, N. Y., assignor to E. M. Trimble Mfg. Co. Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 23, 1927. Serial No. 186,018. 1 Claim. (Cl. 5—100.)

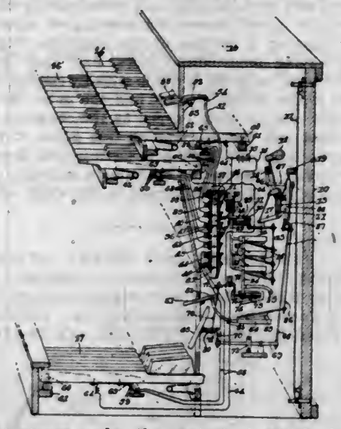
In a crib, the combination with a corner post, and a guide on the corner post formed with a chamber and a slot leading through said chamber having an enlargement, of a side member having a headed projection, the head of the projection operating in the chamber of the guide and the reduced portion operating in the slot, the projection being adapted to be disconnected from the guide by withdrawal of the head of the projection through the enlargement of the slot, and a bumper arranged in said enlargement to prevent the withdrawal of the head of the projection from the chamber.

1,695,572. SHOCK LOADER. BERT C. BERRY, Calgary, Alberta, Canada, and HARRY S. DICKINSON, Moline, Ill., assignors, by direct and mesne assignments, to Peerless Shock Loader Company, Wilmington, Del., a Corporation of Delaware. Filed July 28, 1923. Serial No. 654,407. 11 Claims. (Cl. 56—356.)

11. In a loader, the combination of a frame, an elevator mounted on the frame, supporting wheels for the frame, a vertically adjustable ground engaging device for furnishing power to the elevator, means for effecting vertical adjustment of the ground engaging device, gathing teeth carried by the frame in proximate relation to the elevator, means for vertically adjusting the gathering teeth, and co-operating connections for simultaneously actuating the ground engaging lifting means and the means for lifting the gathering teeth, substantially as described.

---

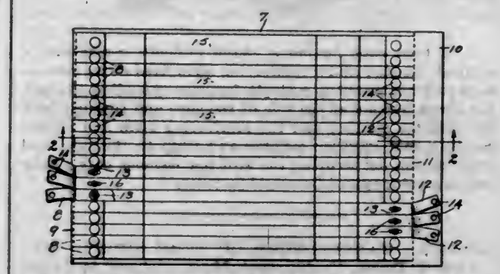
1,695,573. HOSE SUPPORTER. ABRAHAM D. BORENSTEIN, Brooklyn, N. Y. Filed Mar. 11, 1925. Serial No. 14,710. 2 Claims. (Cl. 24—245.)



1. In a hose supporter the combination of a lower strap, a stud frame supported by the strap, a thimble having flanges at its ends extending from said frame, one of the flanges of the thimble bearing against a face of the frame, a tapered stud encircling the thimble with its smaller end bearing against the frame, a washer encircling the thimble interposed between the larger end of the stud and the adjacent flange of the thimble and a suspended clasp coacting with said stud.

---

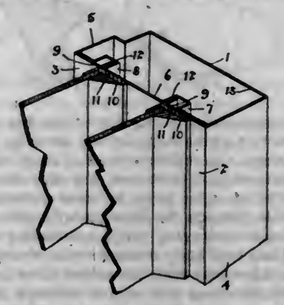
1,695,574. MUSICAL INSTRUMENT. CARLETON H. BULLIS, Cleveland, Ohio. Filed Apr. 27, 1922. Serial No. 556,910. 10 Claims. (Cl. 84—244.)



5. A self contained musical instrument for the purposes named, comprising a cabinet, a pneumatic action including a plurality of striker pneumatics within said cabinet, a manual and pedal keyboard attached to said cabinet, coupler mechanism for selectively placing said pneumatics in one

or more groups under the control of said keyboard, and stops for controlling the operation of said coupler mechanism.

---



1,695,575. SECTIONAL PAGE. LEON COHEN, St. Louis, Mo. Filed Dec. 21, 1926. Serial No. 156,115. 3 Claims. (Cl. 281—44.)

1. A sectional page comprising a backing member, a plurality of page sections composed of strips extending across one face thereof, means for detachably securing each of said strips adjacent their ends to said backing member in parallel and abutting relation to each other, and an extension formed along one edge of said page whereby a plurality of pages can be assembled and secured together in book form.

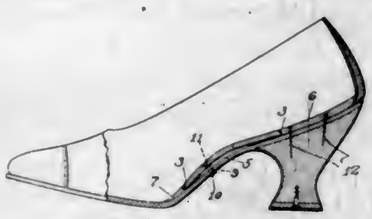
---

1,695,576. METAL-WINDOW CONSTRUCTION. JOHN EDWIN DENNIS, London, Ontario, Canada. Filed July 19, 1926. Serial No. 123,448. 2 Claims. (Cl. 189—72.)

1. A metal window, comprising a box frame formed of a single sheet of metal shaped into rectangular form and

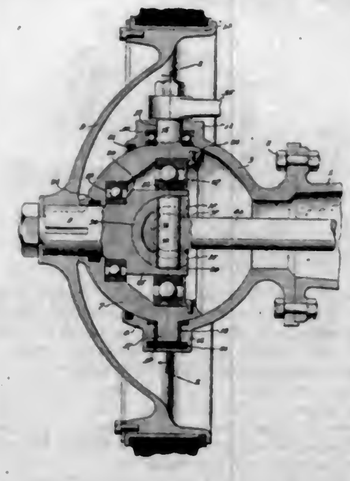
having inwardly turned free edges spaced apart, a separate sheet of metal secured inside and bridging the space between the free inturned edges of the frame and having a pair of longitudinal ribs with parallel and rectangularly arranged sides parallelly spaced therein, the free spaced edges of the frame overlapping a portion of the channels formed by said ribs leaving longitudinal slots, and sash members formed of T bars, the webs of which slidably engage the face of the box frame in flat contact and the outer flanges of which extend into the slots formed by the channels in said separate sheet and the overlapping free edges of the box structure, the flanges of the T bars having their faces right angularly arranged in relation to the webs engaging a longitudinal face of the channels formed in the single sheet.

---



1,695,577. TURN SHOE AND SHANK STIFFENER THEREFOR. WILLIAM G. DODGE, Newburyport, Mass., assignor to United Shank & Findings Company, Boston, Mass., a Corporation of Massachusetts. Filed May 4, 1921. Serial No. 466,682. 5 Claims. (Cl. 36—76.)

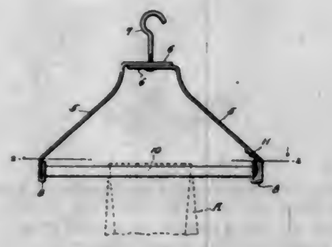
1. A turn shoe having a shank stiffener comprising a stiffener member and a reinforcing strip fixed at its ends to said stiffener member, a single fastener extending through the shank portion of the sole of the shoe and through both the stiffener member and the reinforcing strip and rigidly securing said stiffener member and strip to the sole, and other means for securing the stiffener member only to the sole at a point spaced from said fastener.



---

1,695,578. MANUFACTURE OF TURN SHOES. WILLIAM G. DODGE, Newburyport, Mass., assignor to United Shank & Findings Company, Boston, Mass., a Corporation of Massachusetts. Original application filed May 4, 1921, Serial No. 466,682. Divided and this application filed Apr. 26, 1927. Serial No. 186,739. 6 Claims. (Cl. 12—142.)

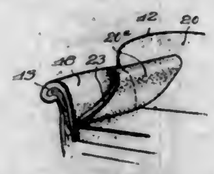
1. That improvement in the art of making turn shoes which consists in forming a filler piece, blanking and punching a hole through a metallic reinforcing strip, forming said strip to the longitudinal curvature of a shoe shank, attaching the strip to the filler piece to form a shank stiffener, punching a hole through the filler piece in alinement with the hole in the reinforcing strip, positioning the shank stiffener within a turn shoe, making a hole through the sole of the shoe in alinement with the alined holes in the shank stiffener, and fastening the shank stiffener in position by a rivet passed through the holes in the sole and the shank stiffener.



1,695,579. WHEEL ASSEMBLY. MAURICE G. DUSSEAU, Allston, Mass. Filed May 13, 1925. Serial No. 29,954. 2 Claims. (Cl. 180—48.)

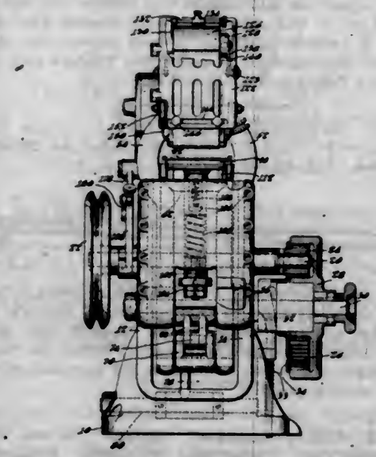
1. In a wheel assembly, inner and outer knuckle members, steering means for the inner knuckle member, an extension shaft journaled in the inner knuckle member, a wheel fixed on said shaft, a drive shaft extending through said outer knuckle member into said inner knuckle member, a universal joint in said inner knuckle member articulating said shafts, an annular ball bearing supporting said joint in said inner knuckle member, said ball bearing having an inner race member on said extension shaft, and means carried by said joint and projecting laterally through said extension shaft for engaging the inner race member of said bearing whereby said joint may withdraw said bearing from said inner knuckle member.

---



1,695,580. COMBINED COAT AND TROUSERS HANGER. RUBEN E. EDMUNDSON, St. Joseph, Mo. Filed Apr. 16, 1926. Serial No. 102,519. 2 Claims. (Cl. 223—62.)

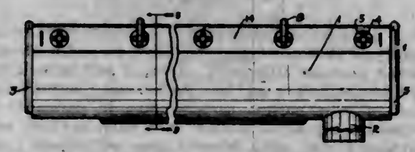
1. A combined coat and trousers hanger, a coat hanger comprising a substantially V-shaped body including downwardly and outwardly diverging members, a pair of spaced parallel trouser supporting bars disposed between the lower ends of said members, one of said bars being rigidly mounted and the other bar being movably mounted in order to permit disengagement from the aforesaid coat hanger, said last named bar being movable in an endwise direction, and spring means interposed between one end of said movable bar and the complemental member.



1,695,581. UPHOLSTERING. HAROLD P. FABIS, Chicago, Ill., assignor to Kroehler Manufacturing Company, Naperville, Ill., a Corporation of Illinois. Filed Feb. 27, 1928. Serial No. 257,131. 5 Claims. (Cl. 155—184.)

1. In combination with a piece of upholstered furniture, a cushion having relatively loose and light filling material extending across an upholstered face of said piece and secured to the latter along two opposite end edges of said cushion, but leaving the intermediate portions of said cushion unsecured so as to permit access between said cushion and said upholstered face.

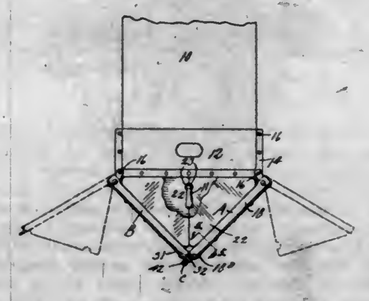
---



1,695,582. MARKING MACHINE. PERLEY R. GLASS, Wayland, and HARRY D. ELLIOTT, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 7, 1925. Serial No. 21,344. 14 Claims. (Cl. 41—7.)

1. In a marking machine, a frame, a work support on said frame, a die-carrying member slidably mounted on the frame, said member comprising an overhanging arm, an impression die carried by said overhanging arm, means for actuating said member comprising a toggle interposed between the frame and the lower end of the die-carrying member at a point directly underneath the point of contact between the die and a piece of work supported on the work support.

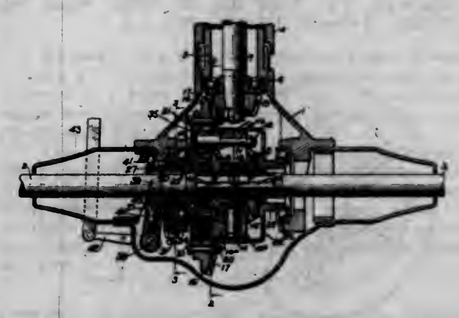
---



1,695,583. LIQUID RECEPTACLE. SAMUEL GOLDBERG and VICTOR GOLDBERG, Baltimore, Md.; said Victor Goldberg assignor to said Samuel Goldberg. Filed Oct. 17, 1927. Serial No. 226,706. 6 Claims. (Cl. 108—28.)

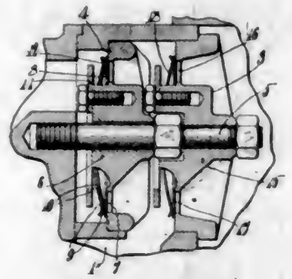
1. A conduit comprising layers of non-metallic material, backs of like non-metallic material formed with flaps secured to the open ends of said conduit, the flaps being inserted between the layers at the transverse ends thereof, said layers and flaps being intimately and securely joined together.

---



1,695,584. RADIATOR GUARD. CARL H. GUSTAFSON, Albert City, Iowa. Filed Feb. 27, 1928. Serial No. 257,270. 10 Claims. (Cl. 293—48.)

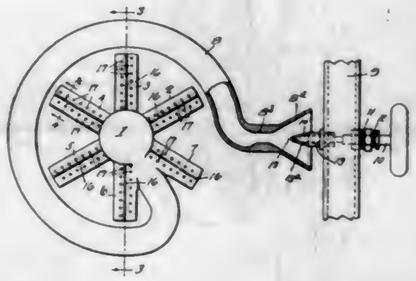
1. The combination with a radiator of a radiator guard comprising a pair of guard members each having one edge secured to a side of the radiator, said members extending forwardly and converging and having their free edges secured together and a bottom member between the lower ends of said guard members and said radiator.



---

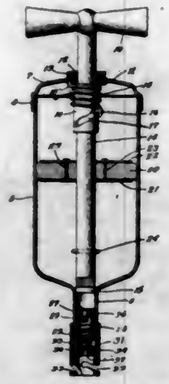
1,695,585. CHANGE-SPEED AXLE. ELBERT J. HALL, Berkeley, Calif., assignor to Rockstell Sales and Manufacturing Company, Berkeley, Calif., a Corporation of California. Filed Nov. 11, 1925. Serial No. 68,308. 2 Claims. (Cl. 74—99.)

1. A differential gear system and a planetary gear system comprising in combination, a pair of coaxial bevel gears, a spider surrounding the bevel gears and carrying a plurality of bevel pinions in mesh with both bevel gears, a plurality of bolts in the spider, the ends of the bolts projecting beyond one face of the spider, a ring gear, a sun gear coaxial with the bevel gears, a plurality of pinions each rotatably mounted on one of the said bolt projections and in mesh with the ring gear and sun gear, and means optionally operative to hold the sun gear against rotation or to lock the sun gear and ring gear and their cooperating pinions to rotate only as a unit, the spider being floatingly supported entirely by the bevel pinions and their supporting axles.



1,695,586. VALVE MECHANISM. FRANK A. HALLECK, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 9, 1924. Serial No. 691,622. 23 Claims. (Cl. 277—61.)

1. A valve mechanism comprising a member forming a ported valve seat, valve means on said seat, a stop member, and seating means for said valve means interposed between the latter and said stop member comprising a plurality of identical yieldable means having surfaces contacting with each other substantially over their entire areas when said valve means is seated.



8. A valve mechanism comprising inlet valve structure and exhaust valve structure each of which includes a ported valve seat and a reciprocable valve disposed thereon, stop members for each of said valves, and means for seating said valves interposed between the latter and said stop members, the means for seating the exhaust valve comprising a plurality of separate yieldable seating members having mating surfaces contacting with each other over substantially their entire areas when the exhaust valve is seated, while the means for seating the inlet valve comprises a lesser number of said yieldable seating members.

1,695,587. GASEOUS-FUEL BURNER. JOHN HARRIS, Cleveland, Ohio, assignor of one-half to James R. Rose, Edgeworth, Pa. Filed Mar. 21, 1927. Serial No. 176,907. 5 Claims. (Cl. 158—99.)

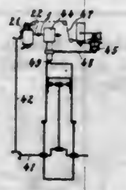
1. A burner comprising, in combination, a central receiving chamber, a plurality of radial burner arms extending therefrom, a combined mixing and expansion tube communicating with said chamber between a pair of said arms and extending approximately around the said chamber and arms and in close proximity to said arms, and means for delivering a mixture of fluid fuel and air into the receiving end of said tube, each of the said burner arms being provided with a V-shaped groove in the top thereof, and being provided with burner orifices on opposite sides of said groove, the orifices on one side of the groove being arranged to discharge in proximity to the part of the arm opposite thereto and being staggered with respect to the orifices on the opposite side of said groove.

1,695,588. LUBRICANT COMPRESSOR. OTTO J. HERR, Chicago, Ill., assignor to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 14, 1924. Serial No. 706,336. 10 Claims. (Cl. 221—47.4.)

8. A lubricant compressor, comprising a barrel having a closure at one end and a cylinder of small diameter at the other end, a plunger extending through said closure, coacting means on said closure and plunger for moving the inner end of said plunger into said cylinder when said plunger is rotated relatively to said barrel, and rigid means for effecting a sealed connection between said cylinder and a fitting to be lubricated.

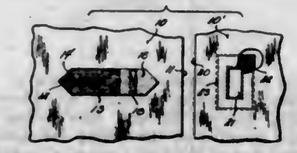
1,695,589. ROTATABLE SIGN. FRED L. HINKS, Fort Dodge, Iowa. Filed June 2, 1928. Serial No. 282,366. 4 Claims. (Cl. 40—39.)

1. In a sign structure, a sign board, a vertical supporting shaft having one end extending through the board from one edge thereof to an opposite edge, antifriction elements surrounding the shaft within the board and adjacent said edges, and means for maintaining the shaft in vertical position.

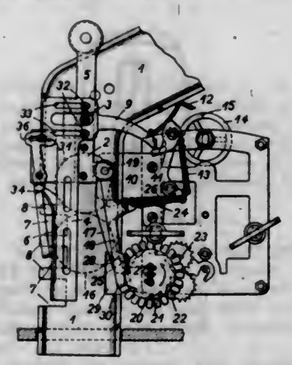


1,695,590. STAGE GARMENT. EDITH C. JENSEN, San Francisco, Calif. Filed Nov. 23, 1927. Serial No. 235,164. 3 Claims. (Cl. 2—74.)

3. A garment of the character described comprising a plurality of skirt portions, a belt portion, and a plurality of waist portions alternately arranged and secured with said skirt portions to said belt portion and adapted to each conceal a skirt portion corresponding in design to the next underlying waist portion, said waist portions being so arranged that when released they will expose a concealed skirt and then be concealed by the released skirt portion when the latter has assumed its normal position.



1,695,591. PRESSURE INDICATOR. KALMAN JUHASZ, Hamburg-Wandsbeck, Germany. Filed Oct. 1, 1923, Serial No. 665,844, and in Germany Feb. 15, 1923. 5 Claims. (Cl. 234—21.)



1. In a pressure indicator of the character described, a phase controller comprising a primary shaft driven by the engine under test, a secondary shaft for transmitting motion to a pressure controlling valve, gears on said shafts, a casing adjustable in an arc concentric with the shafts, a shaft journaled in the casing, gears carried by said shaft and meshing with the gears on the first-named shafts, and means for adjusting the casing and fixing it in adjusted position.

1,695,592. GARMENT FASTENER. GEORGE J. KROMER, Milwaukee, Wis. Filed May 24, 1928. Serial No. 280,357. 5 Claims. (Cl. 24—201.)

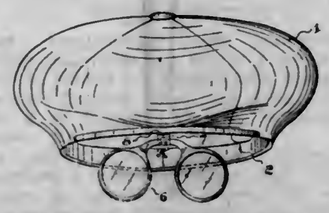
1. In a garment or the like having separable portions, the combination of a non-metallic fastener therefor comprising a flexible tongue attached at one end to one of said portions, a flexible elongated head applied lengthwise on said tongue, said head having a rearwardly extending end free from said tongue, and a head receiving opening on said other portion for coaction with the rear end of said head to lock said portions against accidental separation.

1,695,593. SAVINGS CLOCK. KURT LANDENBERGER, Schramberg, Germany, assignor to Hamburg-Amerikanische Uhrenfabrik, Schramberg, Germany. Filed Jan. 4, 1928, Serial No. 244,453, and in Germany Oct. 5, 1927. 4 Claims. (Cl. 194—19.)

1. In a savings clock, a coin channel, means for engaging the clock movement to prevent the clock from running, means actuated by the weight of a coin for moving said first mentioned means to permit the clock to run, two spring operated members for intercepting a coin in said channel, said members projecting a certain distance one above another into a lateral recess of said channel, and means actuated by the clock movement for moving said members into intercepting position alternatively.

1,695,594. STEEL AND METHOD OF MAKING THE SAME. FREDERICK C. LANGENBERG, New York, N. Y., and MARCUS A. GROSSMANN, Canton, Ohio. Filed June 1, 1927. Serial No. 195,859. 12 Claims. (Cl. 75—1.)

1. A non-hot-short steel containing carbon less than .05% and oxygen less than .03%.

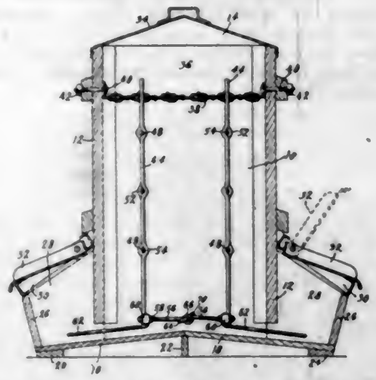


1,695,595. ELASTIC METAL STRINGING AND METHOD OF MAKING THE SAME. WILLIAM A. LARNED, Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed July 12, 1923. Serial No. 651,036. 4 Claims. (Cl. 29—173.)

1. An elastic metal stringing comprising groups of wires that are first wound together in a loose state, and then stretched to a point beyond which they will torsionally engage each other to provide maintained elasticity under the action of a force.

2. The method of making an elastic metal stringing, which consists, first, in winding individual wires into groups, then winding the latter into a larger group, and then stretching the latter to a point beyond which the individual groups comprising it will torsionally engage each other to give maintained elasticity under the action of a force.

1,695,596. MOTORING CAP. JACOB LEVINSKY, Toronto, Ontario, Canada, assignor to Capital Caps Limited, Toronto, Canada. Filed Apr. 1, 1927. Serial No. 180,285. 1 Claim. (Cl. 2—10.)



In a peaked cap the combination with its peak of a fastener comprising two parts adapted to be detachably

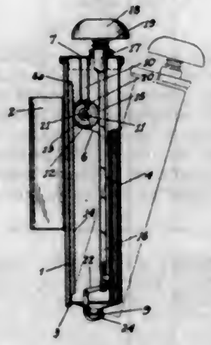
connected with one another, one of said parts being secured centrally to the underside of the peak, the eye glasses having their frame provided with a clip secured to the centre thereof, the complementary part of the fastener being secured to the clip, whereby the eye glasses may be detachably secured to the peak in front of the wearer's eyes, and the said clip being formed with a flat portion adapted to contact with the underside of the peak to level the eye glasses and prevent their twisting relative to the wearer's eyes.

---

1,695,597. AGITATOR FOR FEEDERS. PATRICK C. LYDON, Des Moines, Iowa, assignor to Des Moines Silo & Manufacturing Company, Des Moines, Iowa, a Corporation of Iowa. Filed June 20, 1927. Serial No. 199,987. 8 Claims. (Cl. 119—54.)

1. In a structure of the class described, a hopper, troughs communicating with the lower part of the hopper on opposite sides thereof, a chain, means for supporting said chain in substantially horizontal position in the hopper, a pair of upright members loosely supported in spaced relation on said chain, and opposite laterally projecting actuator elements at the lower ends of said members projecting into the respective troughs and having jointed connection with each other.

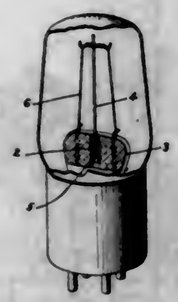
---



1,695,598. SAND WEDGE. EDWIN KERR MCCLAIN, Houston, Tex. Filed May 15, 1928. Serial No. 277,885. 3 Claims. (Cl. 273—77.)

1. A sand wedge including a shank, a blade thereon whose face is inclined upwardly toward the rear at a sharp angle, and a deflector or wing on the bottom side of the blade comprising a wing extending the length of the blade and separated from the rearward side of the blade by a cleft said wing being rounded at each end.

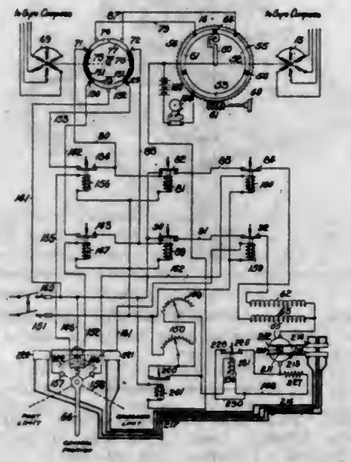
---



1,695,599. DISPENSER. EDWARD L. MEZOIAN, Porterville, Calif. Filed May 24, 1927. Serial No. 193,780. 8 Claims. (Cl. 221—60.)

1. A device for dispensing the contents of a flexible tube comprising a casing arranged to removably support the tube, one end of said tube having an open mouth, means mounted in the casing for squeezing the tube, operating means for said squeezing means movable in one direction to enable the squeezing means to be moved from the end of the tube opposite the mouth toward the mouth, a closure for the mouth, and means between the operating means and the closure for causing the latter to be moved clear of the mouth simultaneously with the movement of the operating means in said one direction.

---



1,695,600. VIBRATION DAMPENER FOR VACUUM TUBES. HERBERT E. METCALF, San Leandro, Calif., assignor to The Magnavox Company, San Francisco, Calif., a Corporation of Arizona. Filed Mar. 23, 1927. Serial No. 177,591. 6 Claims. (Cl. 250—27.5.)

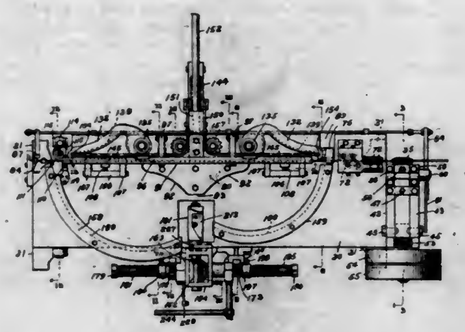
1. In a vacuum tube a hollow metal sleeve sealed into the stem of the tube and a filament support secured at a point adjacent the lower end of the sleeve.

1,695,601. AUTOMATIC STEERING FOR DIRIGIBLE CRAFT. CHESTER B. MILLS, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed June 19, 1922. Serial No. 569,295. 38 Claims. (Cl. 172—282.)

1. In an automatic steering mechanism, means responsive to the movement of a vessel off its course for opposing said movement and tending to return the vessel to its course, and means for rendering said first named means ineffective when said vessel starts on its return movement.

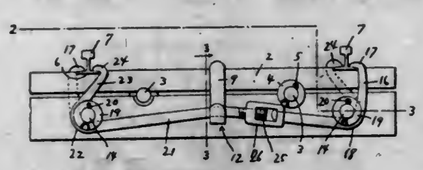
---

1,695,602. BUMPER MOUNTING. ALGOT W. NORDGREN, St. Paul, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed Feb. 16, 1928. Serial No. 254,687. 4 Claims. (Cl. 293—55.)



1. In combination with the chassis of an automobile having a recessed opening formed therein, of a bumper comprising a pair of spaced tubular bumper elements, a support having its ends connected at spaced points to said bumper elements, the intermediate portion of said support fitting into said recessed opening and means for clamping it therein.

---

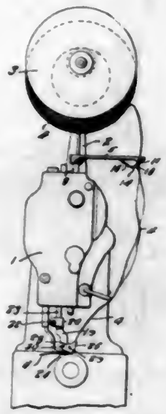


1,695,603. MACHINE FOR MANUFACTURING WIRE GARMENT HANGERS. FRANK MAGIDSON, Pittsburgh, Pa., assignor, by direct and mesne assignments, to Star Service Hanger Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 5, 1926. Serial No. 127,317. 18 Claims. (Cl. 140—71.)

1. In a machine for making wire garment hangers, means for feeding wire into the machine, simultaneously operating means for forming a hook on one end of the wire and severing the other end, a twister, means for bending the wire into the general form of a hanger and for forcing the ends thereof into said twister, means for rotating said twister to form a twist on the ends of the wire below the hook, hanger receiving means and means for swinging said twister from twisting position to discharging position and for discharging hangers onto said receiving means.

---

1,695,604. CONCRETE AND STEEL SPRING RAIL TIE. FRANK C. MISH, Greenville, Va. Filed May 10, 1928. Serial No. 276,621. 3 Claims. (Cl. 238—48.)

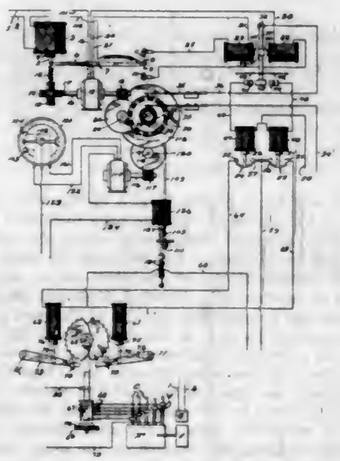


1. In a rail tie, a plastic base, a spring steel plate for disposition on top of the plastic base in spaced relation thereto, rails arranged transversely across the upper face of the steel plate, means for securing the rails against movement independently of the steel plate, said means including a substantially inverted U-shaped member arranged over the intermediate portion of the steel plate and the base, saddles formed on the free ends of the arms of the inverted U-shaped member, pins projecting transversely through the concrete base beneath the respective rails, rods arranged on opposite sides of the plastic base, the outer end portions of the rods being bent for disposition around the respective ends of the pins, laterally disposed base flange engaging feet formed on the upper end of the upwardly bent outer ends of the rods, the intermediate portions of the rods being adapted for rest within the respective saddles.

---

1,695,605. ATTACHMENT FOR UTILIZING SHOE-SEWING MACHINES TO STICK A COLD-PROCESS TAPE ON SHOES TO REENFORCE SAME. BAOSAR PASHIGIAN, Haverhill, Mass., and HUBERT J. GALLANT, Exeter, N. H. Filed July 27, 1927. Serial No. 208,775. 3 Claims. (Cl. 154—42.)

1. As a new article of manufacture for a machine of the type described, a device for guiding tape comprising an arm, means for fastening the shank of the arm to the reciprocating rod of a sewing machine, the arm having its free end bifurcated, and having a downwardly extending

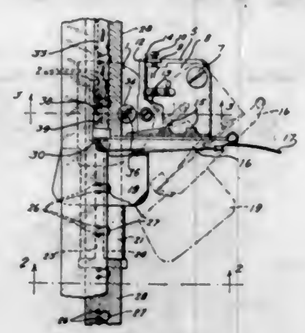


lip, and a flat finger mounted between the bifurcated portions of the end, a wire to which the finger is fastened, a spring fastened to the wire, and means for securing the

spring to the tape guide arm, whereby the finger will resiliently engage a strip of tape as it passes between the bifurcated portions of the arm to keep the tape smooth.

---

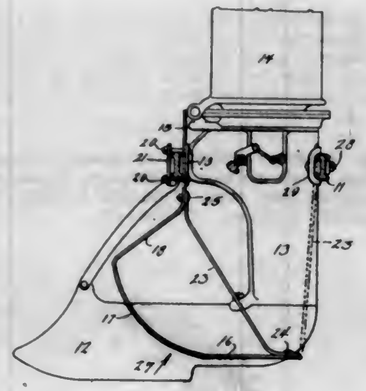
1,695,606. PRESSURE AND TEMPERATURE CHANGE RESPONSIVE FURNACE-CONTROL MEANS. CHARLES H. QUINN, San Francisco, Calif. Filed Dec. 16, 1924. Serial No. 756,320. 12 Claims. (Cl. 236—26.)



1. The combination with an electric means for controlling the feeding of fuel to a furnace, of pressure controlled electrically operated means responsive, to variations resulting from changes in the rate of fuel feeding to the furnace and to changes in the load on the furnace for operating the electric control means and correspondingly increasing or decreasing the fuel feed.

---

1,695,607. ATTACHMENT FOR SEWING MACHINES. LOUIS M. RABINOWITZ, New York, N. Y. Filed Apr. 22, 1924. Serial No. 708,136. 7 Claims. (Cl. 112—138.)



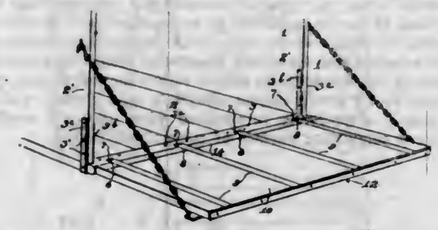
1. In a device of the class described, the combination with stitching means, of a table or platen adapted to support the work, a guide member carried by said table, said guide member being provided with a slot, and said guide member being adapted to receive a strip of hook or eye bearing fabric, with said hooks or eyes projecting through

said slot, a plate pivotally mounted upon said table, a binding folder mounted upon said plate, and a platform mounted upon said folder.

---

1,695,608. PLANTER DEPTH GAUGE. ALBA A. RESSEGUIE, Schaller, Iowa. Filed Aug. 11, 1927. Serial No. 212,286. 4 Claims. (Cl. 97—190.)

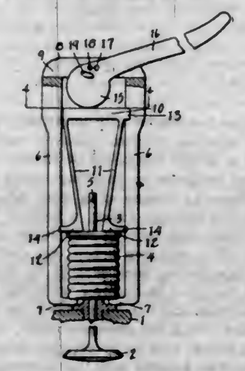
1. A depth gauge attachment for a corn planter having a transverse, horizontal member, comprising a flat sheet of metal, bent to form a vertical portion, an integral downwardly and forwardly extending nose, and an integral downwardly and rearwardly curved runner, a clamp adapted to embrace and to urge into frictional engagement with each other, the vertical portion and said member, and a brace secured to the vertical portion just below the horizontal member, extending rearwardly and downwardly, and secured to the runner near its rear end, said brace having a slotted connection with the vertical portion.



---

1,695,609. TAILBOARD AND TAILBOARD MOUNTING FOR TRUCKS AND THE LIKE. FRANK RICHTER, Union, N. J. Filed June 27, 1927. Serial No. 201,880. 4 Claims. (Cl. 296—57.)

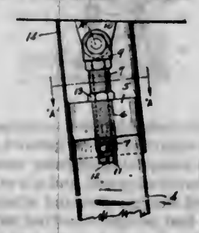
1. A tail-board and tail-board mounting embodying, in combination, a hinge member fastened at the edge of the tail of a truck and engaging upper and lower surfaces thereof, and another hinge member mounted at the edge of



the tail-board and likewise engaging opposite surfaces thereof, one of such hinge members being provided with knuckles and a notch between such knuckles and the other member having a projecting knuckle fitting within said notch, and a pivot member extending across said notch and within the knuckles to connect the two members together

and to provide a close and strong connection between the edge of the truck and the adjacent edge of the tail-board, the hinge member secured to the edge of the tail of the truck extending beyond the face of the tail-board when in vertical position to thereby constitute a bumper or protective means for the truck and tail-board.

---



1,695,610. VALVE-SPRING-COMPRESSING DEVICE. IRA EDMUND RITTER, Kalamazoo, Mich. Filed July 20, 1927. Serial No. 207,217. 3 Claims. (Cl. 29—86.3.)

2. A valve spring compressing device comprising a yoke-like body having parallel arms with opposed inwardly projecting spaced spring engaging fingers at their outer ends, the cross member of said body being longitudinally slotted, a bifurcated thrust member slidably engaging the arms of said body, the legs of said thrust member terminating in outwardly projecting spring engaging feet slidably engaging the arms of said body and an eccentric pivotally mounted in the said slot to coact with said thrust member.

---

1,695,611. ADJUSTABLE AIRPLANE STRUT TERMINAL. JOHN C. SANDERS, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash. Filed Dec. 8, 1927. Serial No. 238,519. 1 Claim. (Cl. 244—31.)

A strut terminal for air craft, comprising an internally threaded body member mounted within a strut extremity, a threaded tubular member adapted to be advanced or retarded within the internally threaded body member, means embraced by said threaded tubular member for engagement with a wing appendage, and means for compensating wear or end play between said tubular member and said means embraced by said tubular member, a means for locking said threaded tubular member in any of its advanced, retarded, or otherwise adjusted positions, and means of corresponding section to the strut 4 housing the terminal and preserving the continuity of the strut in any of its positions.

---

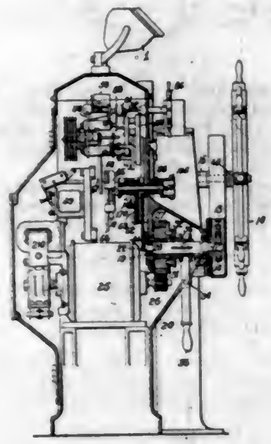
1,695,612. METHOD OF PRODUCING REMEDIES FROM GLANDULAR ORGANS. GEORG SCHRÖDER, Schomber, near Wildbad, Germany. Filed Nov. 29, 1926, Serial No. 151,614, and in Germany Dec. 16, 1925. 8 Claims. (Cl. 167—7.)

1. The method of producing protective preparations and remedies comprising causing the suspension of cells of a glandular organ to freeze, allowing it to thaw and filtering.

---

1,695,613. PELT STRETCHER. JOHN J. SMITH, Allston, Mass. Filed Aug. 7, 1926. Serial No. 127,938. 7 Claims. (Cl. 149—21.)

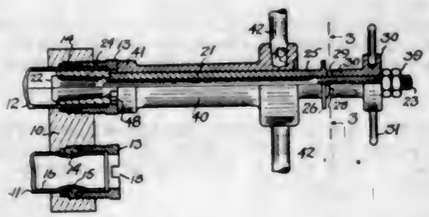
1. A pelt stretcher comprising a frame having spring arms and a spreader bar for connecting said arms, said bar being provided with notches to receive said arms, said notches having portions frictionally locking said arms when said bar is in one angular position with respect to the arms, and said arms being freely movable into and out of said notches when said bar is in another angular position.



---

1,695,614. APPARATUS FOR THE RECOVERY OF FINE VALUES FROM SAND. EDWIN A. SPERRY, Tientsin, China. Filed Mar. 4, 1927. Serial No. 172,724. 3 Claims. (Cl. 209—44.)

1. In a jig screen having a framework, a screen box having an open discharge end, means for supporting the screen box from the framework comprising straps normally inclined downwardly and forwardly, means for reciprocating the screen box, a panning and stratifying means comprising a plurality of alternate sections of imperforate and screen material located in the screen box and lying substantially in the same plane, and means for directing sprays of water against the upper surface of the screen sections.

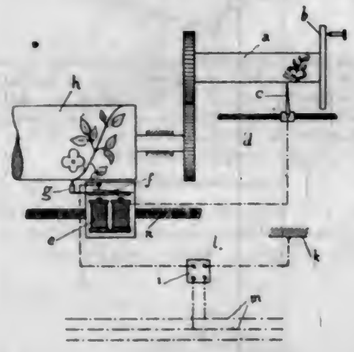


1,695,615. AUTOMATIC STEERING FOR DIRIGIBLE CRAFT. ELMER A. SPERRY, Jr., Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 9, 1923, Serial No. 630,853. Renewed Dec. 5, 1927. 35 Claims. (Cl. 172—282.)

1. In a ship's steering device, the combination with the rudder, of a controller for the rudder, compass actuated means therein, and variable speed gearing in the connections between the compass means and controller for causing a relatively greater movement of the rudder by a given movement of the ship when the rudder is near its central position than when it is displaced therefrom.

---

1,695,616. METHOD OF AND TOOL FOR PACKING CONDENSER TUBES OR THE LIKE. HORACE A. STAPLES, Plainfield, N. J., assignor to National Electric Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1927. Serial No. 175,355. 4 Claims. (Cl. 81—3.)



2. A tool of the class described in combination, an expanding mandrel with means to expand the mandrel, an independent wrench co-axial therewith and adapted to revolve and slide thereon without operating the mandrel.

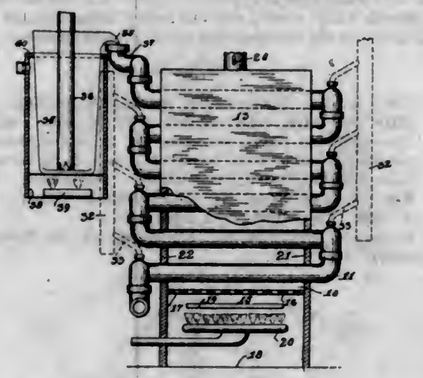
---

1,695,617. PROCESS OF AND APPARATUS FOR ENGRAVING PRINTING CYLINDERS. ALBERT TRISSÈRE and JEAN TRISSÈRE, St. Julien, France. Filed Sept. 18, 1925, Serial No. 57,178, and in France July 27, 1925. 2 Claims. (Cl. 78—13.1.)

1. The improved process of engraving printing rollers, consisting in providing a design composed of electric conducting and nonconducting surfaces upon a rotating pattern roller of conductive material, in causing a needle controlling a tool operating electrical circuit to travel lengthwise along the pattern roller in unison with its rotary movement, in positively rotating the roller to be engraved by means of a gear wheel transmission derived from the pattern roller, the ratio of transmission corresponding to the size of the reproduction to be obtained, and in reproducing the design on the roller to be engraved by means of a hammering tool travelling lengthwise along the printing roller in relation with its proper rotary movement and operated by an electromagnet placed in said circuit, which is closed, respectively interrupted when the said needle meets a conducting surface of the pattern design.

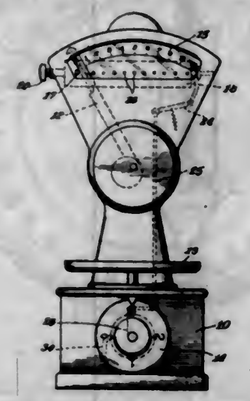
2. Apparatus for electrically engraving printing rollers, comprising a rotating pattern roller of conductive material and carrying a design composed of electric conducting and nonconducting surfaces, a rotating roller to be engraved positively driven by means of a gear wheel transmission derived from the pattern roller, a pointer in contact with the pattern roller and moving lengthwise along this roller under action of a rotating screw, an electromagnet with trembler, a hammering tool carried by the said trembler and adapted to enter in contact with the rotary printing roller, the electromagnet together with the said tool travelling lengthwise along the printing roller, under the action of a rotating screw, and an electrical circuit including the pattern roller, the pointer and the electromagnet, substantially as described.

---



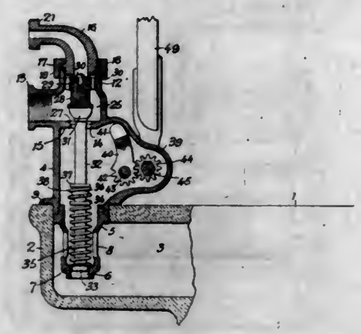
1,695,618. GLOVE-DISPLAY RACK. ROBERT E. THOMPSON, Des Moines, Iowa. Filed Dec. 5, 1927. Serial No. 237,733. 1 Claim. (Cl. 211—164.)

In a device of the class described, a support, a shaft, discs fixed thereto, rods adjacent the peripheries of said discs and indicating devices comprising angular members each having a portion mounted on a rod and a portion extended at right angles to said first portion and substantially parallel with its rod, said last portion coacting with the periphery of the disc to prevent pivotal movement of the indicating device on its rod.



1,695,619. ACID-CONCENTRATING CHAMBER. OTTO C. TRAUTMANN, New York, N. Y. Filed Apr. 15, 1927. Serial No. 184,066. 14 Claims. (Cl. 23—274.)

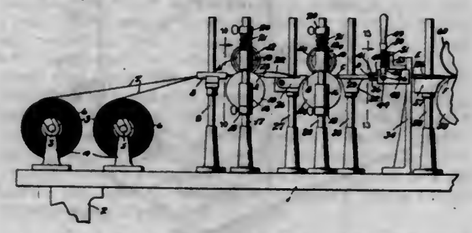
1. In an acid concentrating chamber having a fire box with a source of heat and an exit for the heating gases, provided with regulating means, the combination comprising an inclined flue, connecting said fire box and exit, a plurality of concentrating chambers, having horizontally extending tubular parts joined and arranged in stair-way fashion and having only said horizontal parts arranged in said flue so as to have the joints located outside of the same, means for preheating the acid, means connecting aforesaid preheating arrangement with the uppermost concentrating chamber, and an aperture in each concentrating chamber for the escape of the vapors.



---

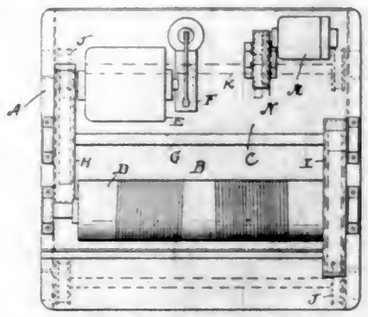
1,695,620. COMPUTING SCALE. CORNELIS FRANCISCUS MARIA VAN BERKEL, Wassenaar, Netherlands, assignor to Naamlooze Vennootschap Maatschappij tot Veraardiging van Snijmachines Volgens van Berkel's Patent en van andere Werktuigen, Rotterdam, Netherlands, a Limited Liability Company of the Netherlands. Filed July 13, 1927, Serial No. 205,299, and in the Netherlands Mar. 5, 1926. 8 Claims. (Cl. 265—37.)

1. A weighing scale having a device for adjusting the capacity of said scale, an indicating dial having a table thereon of various unit prices of commodities and a table having numerals thereon arranged according to varying weighing capacities of said scale, means for adjusting said dial for different unit prices, and means for adjusting said dial corresponding with the weighing capacity for which said scale is set.



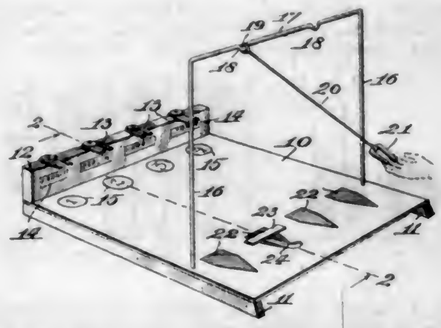
1,695,621. FLUSHING MECHANISM. JOSEPH A. VOGEL and ARTHUR J. JENNINGS, Wilmington, Del., assignors to Joseph A. Vogel Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 5, 1927. Serial No. 181,108. 14 Claims. (Cl. 4—21.)

1. In a flushing apparatus, a bowl, a valve casing extending vertically above the bowl and communicating at its lower end therewith, a valve device in said casing for controlling the flow of water from the casing to the bowl, a valve actuating rocker arm mounted in said casing, a rock shaft journaled in the casing, gearing between said rock shaft and rocker arm, and an actuating element connected to said rock shaft for imparting valve controlling movements through said gearing to the rocker arm.



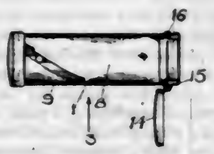
---

1,695,622. ARTIFICIAL CANE-MAKING APPARATUS. ALBERT J. WACHSMUTH, Muskegon, Mich. Filed Jan. 21, 1924. Serial No. 687,467. 6 Claims. (Cl. 154—1.)



6. A machine for making artificial cane comprising, means to guide a relatively narrow strip of paper into the machine in a horizontal plane, a pair of rollers rotatable on horizontal axes between which the strip passes, one roller having a V-groove in its periphery and the other roller having a corresponding V-shaped periphery, a fixed die having a V-shaped entry end and a flat shaped exit end arranged in a horizontal plane, a second pair of rollers rotatable on horizontal axes between which the strip passes one roller having an annular V-groove in its periphery and the other roller having a corresponding V-shaped periphery, a second fixed die through which the strip passes, said second die having a V-shaped entry end and a flat shaped exit end arranged in a vertical plane, a third pair of rollers rotatable on vertical axes between which the strip passes, one of said rollers having a V-groove in its periphery and the other roller having a corresponding V-shaped periphery, a third fixed die through which the strip passes, said die having a relatively open entry end and a relatively closed flat exit end arranged in a horizontal plane and means for drawing the strip through the machine comprising a pair of driven rollers between which the strip passes, one of said rollers having an annular groove with a concave bottom and the other roller having an annular tongue adapted to enter said groove and press the folded strip against said concave bottom, the members being located in the machine and acting upon the strip in the order named.

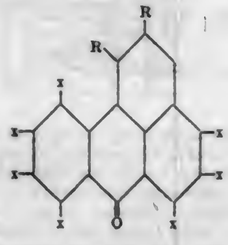
1,695,623. HOIST-TROLLEY FRAME. WILLIAM G. WEHR, East Cleveland, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed July 11, 1927. Serial No. 204,783. 16 Claims. (Cl. 105—135.)



1. A fabricated hoist trolley frame having side and cross members integrally united by welding, and plates integrally united by welding along opposite edges to said side members and welded to said cross members.

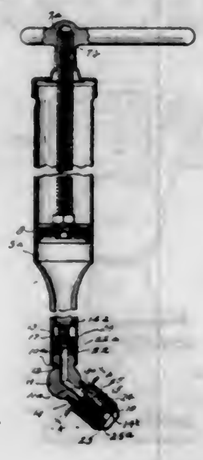
1,695,624. GAME APPARATUS. WALTER W. WELPLEY, Hawthorne, Calif., assignor of one-half to H. C. Proulx, Pasadena, Calif. Filed Nov. 9, 1927. Serial No. 232,048. 7 Claims. (Cl. 273—97.)

1. In a game apparatus, a permanent magnet suspended so as to swing through a vertical arc, a relatively fixed permanent magnet positioned adjacent to the path of movement of the swinging magnet, and a game piece that is adapted to be attracted by said magnets.



1,695,625. LIP-STICK CONTAINER. HENRY W. WILD, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 27, 1927. Serial No. 194,555. 4 Claims. (Cl. 206—56.)

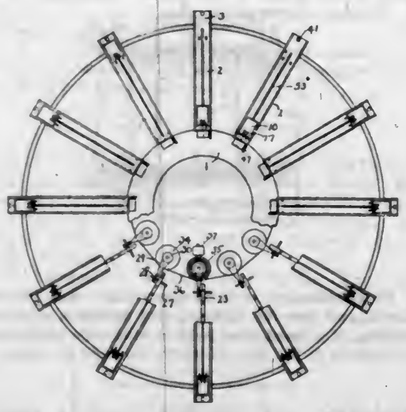
3. In a holder for cosmetics and the like, the combination of an outer casing, a cosmetic holder in the casing, means for propelling the holder longitudinally in the casing to protrude and withdraw the cosmetic, and a member in the casing having sets of similarly arranged stops so that the member may be assembled in the casing either end to, said stops acting to prevent rearward movement of the cosmetic holder during use, the holder being released from the stops on the manipulation of the propelling means.



1,695,626. BZ-METHYL BENZANTHRONES AND PROCESS FOR PREPARING THE SAME. ARTHUR WOLFRAM and HEINRICH GREUNE, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1925, Serial No. 72,033, and in Germany Dec. 4, 1924. 10 Claims. (Cl. 260—61.)

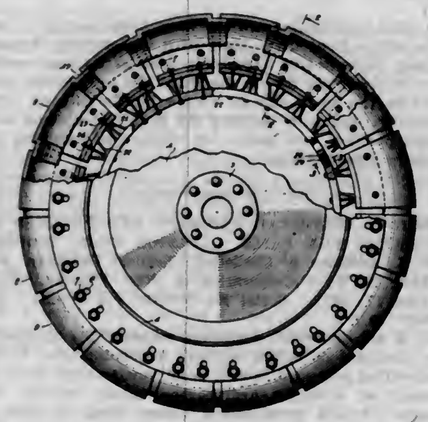
8. As new products the compounds of the following formula:

wherein x represents hydrogen or any substituent and one R stands for a methyl group and the other for hydrogen.

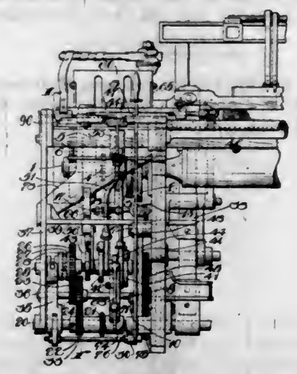


1,695,627. GREASE GUN. OSCAR ZERK, now, by judicial change of name, Oscar Ulysses Zerk, Cleveland, Ohio, assignor, by mesne assignments, to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 30, 1921. Serial No. 518,755. 2 Claims. (Cl. 221—47.4.)

1. In a lubricant compressor having a compressor barrel, a swivel member rotatably mounted coaxial with said compressor barrel, means for preventing leakage between the compressor barrel and said swivel member, and coupling means rigid with the latter and disposed at an obtuse angle to the axis thereof.



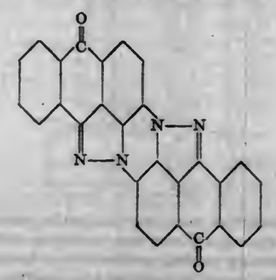
1,695,628. SERVING DEVICE. BENJAMIN HAWKINS ALLEN, Beaumont, Tex. Filed Apr. 16, 1926, Serial No. 102,455. Renewed Oct. 23, 1926. 10 Claims. (Cl. 186—1.)



1. In an apparatus of the character described, a central service stand, a plurality of slideways radiating from said stand, service trays on said slideways, means to move said trays from said stand to the outer end of said slideways and separate means to return said trays to said stand.

1,695,629. RESILIENT WHEEL. JACK ALLEN, Brooklyn, N. Y. Filed Mar. 30, 1928. Serial No. 265,951. 5 Claims. (Cl. 152—29.)

1. A resilient wheel, comprising a body, a tire member associated with the body, said tire member being formed with a plurality of separate sections, certain of said sections being formed with underlapping extensions underlapping the adjacent sections, springs for normally holding said sections in an outer position, a floating ring for supporting said springs, a disk on each side of the floating ring and overlapping part of said tire member and a radially slidable connection between said disks and said tire member.

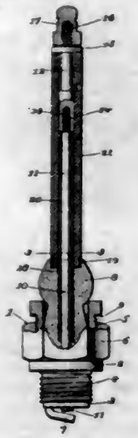


1,695,630. MECHANISM FOR AUTOMATICALLY REPLENISHING WEFT IN POWER LOOMS. HIKOSUKE ARIMA, Tokyo, Japan. Filed Apr. 14, 1925, Serial No. 22,989, and in Japan Apr. 24, 1924. 3 Claims. (Cl. 139—227.)

1. Mechanism for automatically replenishing the weft in a power loom, comprising, in combination, a main shaft, a driving pulley loosely mounted and slidable with a friction disc on the main shaft, a second friction disc fixed to the main shaft, a change-shaft, a clutch on the change-shaft a handle, links and levers connecting the handle with the aforesaid slidable pulley and disc on the main shaft, a clutch shifter connected to said handle for shifting one of the members of the aforesaid clutch of the change-shaft, means for transmitting motion from the driving pulley to the change-shaft through the clutch, means for moving the handle whenever the weft breaks or is missing to free the slidable disc to stop the weaving operation and let in the aforesaid clutch member to effect a change of shuttle, a cam rotatable from the change-shaft to reset the handle and restart the weaving operation, a shuttle box provided with a slidable board arranged to open and close the back of the box, a push rod adapted to move through the front wall of the box and push backward the shuttle in the box, cams on the change-shaft to actuate said slidable board and push rod, a reserve shuttle magazine, a shuttle transferrer and means on the change-shaft for moving the transferrer to carry a fresh shuttle from the magazine into the shuttle box upon the shuttle in the latter being ejected by means of the push rod.

1,695,631. VAT DYESTUFF DERIVED FROM 2-HALOGEN-1,9-PYRAZOLANTHRONE. ROBERT BERLINER, BERTHOLD STEIN, and WILLY TRAUTNER, Elberfeld, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 4, 1927, Serial No. 166,005, and in Germany Mar. 3, 1926. 7 Claims. (Cl. 260—29.)

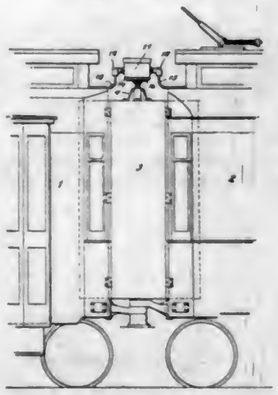
5. As a new product the vat dyestuff of the anthraquinone series having most probably the formula:



which dyestuff is in dry, purified form a reddish-brown powder only slightly soluble in the usual organic solvents,

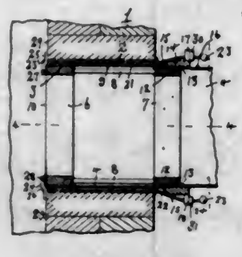
soluble in boiling nitrobenzol with a green fluorescence, crystallizing therefrom upon cooling in the form of fine, small brownish-red needles which are soluble in concentrated sulphuric acid with a deep blue color, and dyes cotton from a blue vat blue shades changing upon oxidation into a powerful clear red shade of excellent fastness properties.

---



1,695,632. SPARK PLUG. CHARLES C. CAMPBELL, Washington, D. C. Filed Mar. 8, 1927. Serial No. 173,720. 3 Claims. (Cl. 123—169.)

1. A spark plug comprising a metallic shell provided with an outer electrode, a core of insulation secured in the shell, a central electrode extending through the said core and projecting from the outer end thereof and formed with a flange adjacent to its outer end, a pair of concentrically arranged sleeves of insulation interposed between the flange and the core, the inner of the said sleeves having its inner end extended from the inner end of the outer sleeve and the outer end of the outer sleeves extending from the outer end of the inner sleeve.



---

1,695,633. JUNCTION-BOX MOUNTING. ALFRED T. CLARK, HENRY A. LEONHAUSER, and JOHN R. JESTER, Baltimore, Md. Filed June 6, 1925. Serial No. 35,474. 8 Claims. (Cl. 105—4.)

1. In combination with the conducting cables and conduits of an electric railway car including articulated sections each having its own conductors, a junction box for the conductors pivotally mounted at a position in line with the axis of the car with its axis in the axis of articulation of the car sections.

1,695,634. STOVEPIPE LOCK. EDWIN CORCORAN, Portland, Oreg. Filed Aug. 30, 1927. Serial No. 216,445. 7 Claims. (Cl. 126—318.)

1. In combination with a stove pipe, lock members, means in said pipe for carrying said members, said means consisting of a band ring held in said pipe and another ring clamped in the pipe to which the band is linked.

---

1,695,635. ROAD SCRAPER. THOMAS L. DUFFIELD, Orient, Wash. Filed May 25, 1927. Serial No. 194,084. 2 Claims. (Cl. 37—177.)

1. The combination with a drag beam having a rear shoe and a front draw head, of a transversely disposed scraper blade having a coupling head at its rear center, a clevis pivoted to the coupling head and to the draw head whereby the blade may be swung horizontally or tilted vertically, means for holding the blade in adjusted horizontal position, and means for tilting and retaining the blade in tilted position.

---

1,695,636. CHEMICAL PRODUCT AND PROCESS OF MAKING THE SAME. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed June 17, 1922. Serial No. 569,138. 3 Claims. (Cl. 106—23.)

3. A process which comprises substantially increasing the plasticity of rubber without dissolving same by incorporating with said rubber, in an unvulcanized state, an amount of aromatic hydrocarbon rubber solvent, the amount of said unvulcanized rubber being at least as great as the amount of said solvent, and then treating the plasticized material with chlorine under superatmospheric pressure until it is chlorinated to a stage above heptachlorcaoutchouc.

---

1,695,637. CEMENT. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, a Corporation of West Virginia. Filed Mar. 22, 1924. Serial No. 701,020. 5 Claims. (Cl. 87—17.)

3. An adhesive composition comprising a solution of chlorinated rubber in a solvent for chlorinated rubber, in such proportions as to form an adhesive composition.

1,695,638. COATING COMPOSITION AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 29, 1921. Serial No. 496,594. 23 Claims. (Cl. 134—17.)

6. A composition comprising a drying oil, a volatile solvent of a not readily inflammable character and chlorinated rubber.

15. A varnish comprising chlorinated rubber as an essential constituent of the total solids, incorporated with tung oil and a volatile thinner.

---

1,695,639. LIQUID COMPOSITION CONTAINING CHLORINATED RUBBER. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed May 5, 1923. Serial No. 636,987. Renewed Apr. 30, 1925. 6 Claims. (Cl. 134—17.)

3. A composition adapted for coating straw hats which comprises a solution of a chlorinated rubber containing substantially over 66⅔% chlorine, in a volatile solvent and coloring matter also soluble in said solvent.

---

1,695,640. CHLORINATED-RUBBER COMPOSITION CONTAINING LINSEED OIL. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, a Corporation of West Virginia. Filed Mar. 22, 1924. Serial No. 701,024. 2 Claims. (Cl. 134—17.)

2. A coating composition comprising a solution of chlorinated rubber and a drying oil in a volatile solvent, less of the drying oil being present than chlorinated rubber, such composition yielding a flat or dull finish.

---

1,695,641. STABILIZED CHLORINATED RUBBER. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, a Corporation of West Virginia. Filed Mar. 22, 1924. Serial No. 701,021. 3 Claims. (Cl. 134—17.)

3. A composition containing chlorinated rubber of not substantially below 67% of chlorine, and an organic amino antacid material, both being soluble in a common solvent.

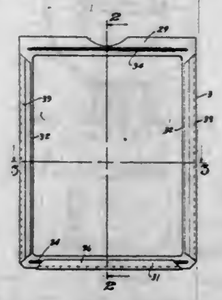
---

1,695,642. VARNISH. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, a Corporation of West Virginia. Filed Mar. 22, 1924, Serial No. 701,028. Renewed Sept. 10, 1927. 6 Claims. (Cl. 134—26.)

2. A composition adapted for use as a varnish reviver, comprising chlorinated gutta percha, a solvent therefor and a resinous homogenizing agent.

5. A composition, adapted for use as a varnish reviver, comprising chlorinated gutta percha, and aromatic solvent therefor, a resin and a phenolic phosphate.

---

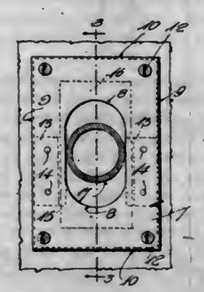


1,695,643. ARTIFICIAL FIBER AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, a Corporation of West Virginia. Filed Mar. 22, 1924, Serial No. 701,029. Renewed Oct. 9, 1926. 8 Claims. (Cl. 18—54.)

1. The process of making fibers which comprises forming a concentrated solution of chlorinated rubber into the shape of a fiber and removing the solvent therefrom.

4. As a new product an artificial thread comprising chlorinated rubber.

6. An artificial thread containing chlorinated rubber as an essential constituent of its composition.

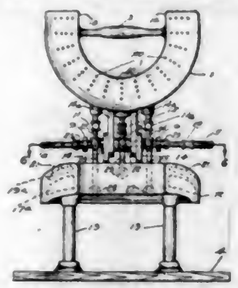


1,695,644. FRAME FOR PHOTOGRAPHIC FILMS. MERLE F. FABER, Daly City, and JOSEPH KUSBER, Jr., Colma, Calif. Filed Apr. 14, 1924. Serial No. 706,441. 1 Claim. (Cl. 95—100.)

In a device of the character described, a frame for holding a film comprising longitudinal and transverse frame members, marginal flanges of the longitudinal members turned upon the latter allowing the film to be slidably received between the flanges and the frame members and a flange on the remote transverse frame member formed to stop the film and to confine the upper edge thereof with beads projecting from the idle faces of the frame members for strengthening the structure of the frame, said beads being provided with inwardly extending flanges adapted to hold the film flat, said beads being adapted to hold adjacent portions of the frame members in spaced relation.

---

1,695,645. PLATE THIMBLE FOR PIPES. JOHN W. FARLEY, Cleveland, Ohio. Filed Oct. 24, 1927. Serial No. 228,329. 3 Claims. (Cl. 126—314.)

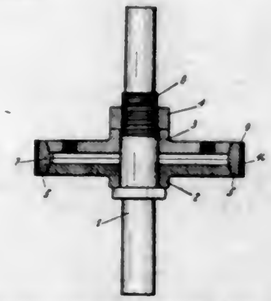


1. A device of the class described comprising a one-piece relatively large outer plate formed with a slot having its edges turned laterally in the same direction to provide side and end flanges, a one-piece relatively small inner resilient plate contacting slidably with the inner side of said outer plate within the confines of said flanges, said inner plate having an opening for registration with said slot, and guides for slidably mounting said inner plate, said guides being secured to said outer plate and lying against the inner side of said inner plate.

---

1,695,646. HAT-RENOVATING MACHINE. LOUIS FLICKER, Los Angeles, Calif.; Annie Flicker administratrix of said Louis Flicker, deceased. Filed Dec. 13, 1923. Serial No. 680,406. 2 Claims. (Cl. 223—31.)

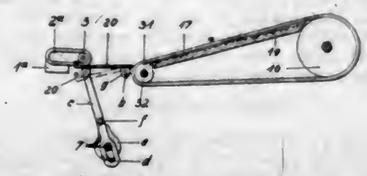
1. A hat renovating machine comprising superposed complemental steaming and pressing members shiftably mounted to occupy a renovating and a non-renovating position, each of the members having an arcuate portion designed to embrace approximately one-half of a hat brim,



each member having substantially straight extensions beyond the ends of its arcuate portion, the extensions being substantially parallel, the extensions and the arcuate por-

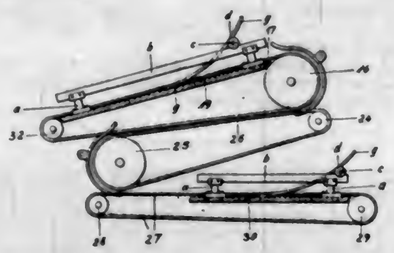
tion being adapted to receive a hat presented endwise therebetween and together embracing a portion of the hat brim greater than one-half thereof.

---



1,695,647. FILE, RASP, OR LIKE TOOL. EMIL FURLER, Zurich, Switzerland. Filed Nov. 4, 1926, Serial No. 146,217, and in Switzerland Nov. 15, 1925. 1 Claim. (Cl. 29—78.)

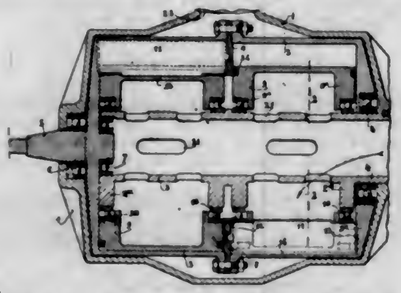
A tool of the class described comprising a file forming an open ring, an open ring on the periphery of which said file is arranged, a coupling piece between the ends of the open ring and to which the ends of the file are secured, a pair of discs on which said open ring is peripherally arranged, said discs being peripherally beveled in opposite directions and said ring being correspondingly beveled on its inner periphery so that movement of said discs toward each other causes said ring to be diametrically expanded, a shaft on which said discs are mounted and means coacting with the shafts to move the discs toward and from each other.



---

1,695,648. APPARATUS FOR FEEDING PAPER SHEETS. JULIUS GIESECKE and HERMANN GIESECKE, Leipzig-Leutzsch, Germany. Filed Sept. 24, 1927, Serial No. 221,834, and in Germany Nov. 8, 1926. 2 Claims. (Cl. 271—50.)

1. In an apparatus for feeding paper sheets, the combination of lateral frame parts having horizontal elongated slots therein, a suction-rod having trunnions slidably mounted in said slots, a table plate located underneath said suction-rod and turnably mounted on a fixed fulcrum, substantially as set forth.



1,695,649. APPARATUS FOR FEEDING PAPER SHEETS. JULIUS GIESECKE and HERMANN GIESECKE, Leipzig-Leutzsch, Germany. Filed Sept. 24, 1927, Serial No. 821,835, and in Germany Nov. 5, 1926. 5 Claims. (Cl. 271—37.)

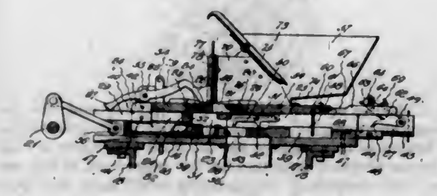
1. In an apparatus for feeding paper sheets, the combination with a conveyor ribbon and a table plate underneath its upper part, of fixed rails located on both sides of said table plate beyond said conveyor ribbon and directed parallel to the latter, a detachable weakly curved sheet-reception rake forming an inclined plane and during its use guided at its lower end on the conveyor ribbon and on the table plate respectively and at its upper end on said rails.

---

1,695,650. PUMP AND THE LIKE. EDOUARD GODILLOT, Paris, France, assignor to Roland Laraque, Paris, France. Filed Feb. 14, 1927, Serial No. 168,147, and in France Feb. 18, 1926. 4 Claims. (Cl. 103—121.)

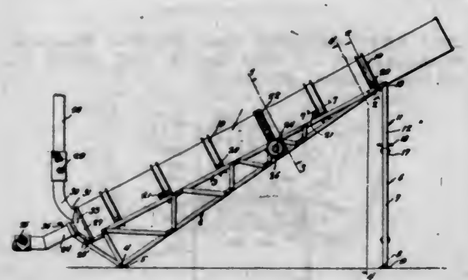
1. Apparatus of the class described comprising an outer cylinder having a port in its periphery, an inner cylinder arranged eccentrically in the outer cylinder and having a peripheral port, one of said cylinders being arranged for rotary movement with respect to the other and each of said cylinders having heads, a tubular element extending through the inner cylinder concentrically with the outer cylinder and having eccentrics on which said inner cylinder turns, said tubular element having ports, and a substantially radial vane bearing against the inner periphery of the outer cylinder and arranged in substantially radial recesses in the heads of the inner cylinder which recesses are of greater width than said vane to permit lateral play of said vane and packing means for said piston.

---



1,695,651. NUT-CRACKING MACHINE. WILEY NORTH GRADICK, Tyler, Tex., assignor to Alex Woldert Company, Tyler, Tex., a Corporation of Texas. Filed May 26, 1927. Serial No. 194,426. 27 Claims. (Cl. 146—12.)

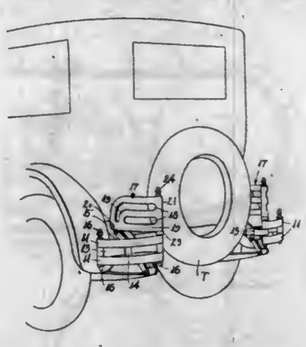
4. A nut cracking machine comprising a horizontally elongated body hollow from end to end, the upper side of said body having a nut inlet and the lower side thereof being formed with a nut outlet spaced forwardly from said inlet, the upper portion of said body being formed with one longitudinal slot in rear of said inlet and with a second longitudinal slot in front of said inlet, a nut-cracking plunger slidable in the rear portion of said body



and having a lug projecting upwardly through said one slot, a transverse crank shaft mounted at the rear end of said body and a pitman connecting said crank shaft with said plunger, a floating anvil slidable in the front portion of said body and having a longitudinal slot under the second named slot, said anvil being co-operable with said plunger in cracking a nut received between plunger and anvil from said inlet, the front portion of said anvil having longitudinally spaced teeth, a dog pivoted to said body and co-operable with said teeth to arrest forward movement of the anvil under influence of the nut and plunger as the nut approaches the aforesaid outlet, a nut

hopper mounted over said body, a feed slide resting slidably on said body for feeding nuts one at a time to said inlet, the rear end of said feed slide being directly connected to the aforesaid lug whereby plunger and feed slide must move bodily, means at the front end of said feed slide for controlling the above-named dog and releasing it after cracking of the nut, permitting dropping of the cracked nut through said outlet, and a rigid pin projecting downwardly from said feed slide through said second slot and into the slot of said anvil, this slot and said pin serving to return the anvil to its initial nut-engaging position as the plunger and slide again move rearwardly.

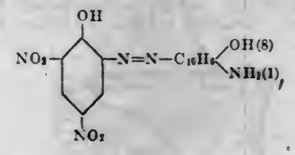
---



1,695,652. DRYING APPARATUS. SHERWOOD GREEN, Berkeley, Calif. Filed Jan. 13, 1928. Serial No. 246,568. 12 Claims. (Cl. 34—6.)

1. In drying apparatus, a rotary inclined drying chamber, means for delivering the material to be dried to the lower portion of the chamber, and means for delivering a blast of air into the chamber in a direction to provide for a current of air flowing longitudinally within the chamber toward the upper end thereof.

1,695,653. AUTOMOBILE BUMPER. JOHN N. HELTZEL, Warren, Ohio. Filed Oct. 28, 1925, Serial No. 65,358. Renewed Nov. 28, 1927. 16 Claims. (Cl. 293—55.)



1. The combination with an automobile bumper and its means for attachment to the frame of an automobile, of an attachment offset vertically out of the horizontal plane of the bumper comprising a plate adapted to be secured at one end to the frame and having means at its other end connected to the bumper.

---

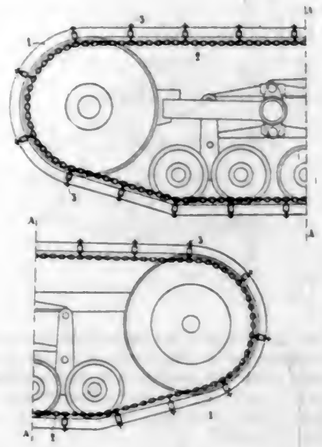
1,695,654. AZO DYESTUFF AND CELLULOSE DERIVATIVES DYED THEREWITH. WINFRID HENTRICH, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 4, 1927, Serial No. 166,013, and in Germany Feb. 26, 1926. 4 Claims. (Cl. 260—92.)

2. As a new product, a dyestuff substantially identical with a dyestuff obtainable by coupling the diazo-compound of 4.6-dinitro-2-amino-1-hydroxybenzol with 1-amino-8-hydroxynaphthalene having most probably the formula:

---

1,695,655. MATERIAL FOR TANNING AND PROCESS OF MAKING THE SAME. CLARENCE J. HERRLY and ARTHUR MARSHALL MATHESON, Niagara Falls, N. Y., assignors to Niacet Chemicals Corp., a Corporation of New York. Filed Mar. 7, 1928. Serial No. 259,917. 11 Claims. (Cl. 260—4.)

1. The process of making a tanning material which comprises condensing a phenolic body containing one hydroxyl group and an aldehyde containing one or more carbon atoms at a temperature of 40° to 65° C. in the presence of a small amount of a condensing agent, and adding the condensed material to an excess of sulphuric acid at said temperature to form a soluble product.

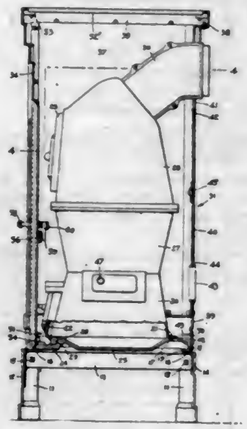


---

1,695,656. METHOD OF PRODUCING NARCOTICA. ERICH HESSE, Breslau, Germany, assignor to the Firm Gehe & Co. A.-G., Dresden, Germany. Filed Nov. 17, 1927, Serial No. 234,039, and in Germany Mar. 10, 1927. 5 Claims. (Cl. 167—7.)

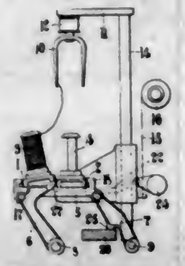
1. A method of producing anæsthetic remedies, consisting in treating cocaine-containing substances with adonidine.

5. As a commercial product, an anæsthetic remedy containing cocaine and adonidine.



**1,695,657. TRACTION-INCREASING DEVICE FOR ENDLESS FLEXIBLE TRACK BELTS.** ADOLPHE KEGRESSE, Paris, France. Filed Apr. 2, 1926, Serial No. 99,283, and in France Apr. 6, 1925. 1 Claim. (Cl. 305—10.)

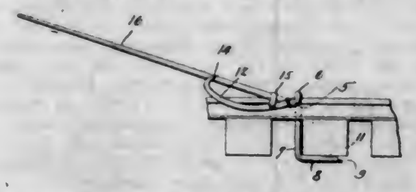
The combination of an endless, flexible track belt; and an endless, flexible non-skid device fitting around and conformably over the belt on the outside thereof and embodying spaced, longitudinal side members disposed inwardly of the belt between its stretches and cross-pieces connecting the same, said side members having a developed length which is appreciably less than that of the belt so as to produce a relative displacement of mathematically-determined extent betweeen the belt and the non-skid device at each complete revolution of the two.



---

**1,695,658. HEATER.** HENRY LANGE, Quincy, Ill. Filed Jan. 6, 1927. Serial No. 159,403. 3 Claims. (Cl. 126—67.)

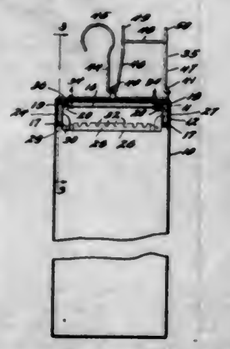
1. A heater comprising a stove having a fuel door and an ashpit door, a casing surrounding the stove and having an opening to expose said doors, a pair of doors hingedly mounted at the opposite side edges of said opening of the casing, a bar extending across said opening intermediate said fuel and ashpit doors and having its terminals secured to the casing behind the edge portions thereof at said opening, and means for latching said pair of doors to said bar.



**1,695,659. DOFFING MECHANISM FOR SPINNING, TWISTING, AND LIKE MACHINES.** JOHN PRINGLE MACKIE, commonly known as Jack P. Mackie, Belfast, Ireland, assignor to James Mackie and Sons, Limited, Belfast, Ireland, a British Company. Filed Apr. 30, 1927, Serial No. 187,945, and in Great Britain July 19, 1926. 7 Claims. (Cl. 118—18.)

1. A doffing motion for spinning, twisting and like machines, comprising in combination, a pair of interchangeable bobbin rails, a support for the same comprising a rocking frame pivotally mounted on the framework of the machine, and mechanism for swinging said frame into positions required during the transfer and doffing operations.

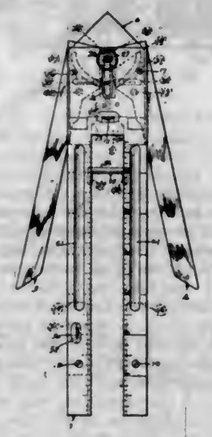
---



**1,695,660. TIE NIPPER.** WILLIAM W. MAJOR and JAMES C. CARPENTER, Jr., Clifton Forge, Va. Filed Aug. 9, 1927. Serial No. 211,750. 2 Claims. (Cl. 254—121.)

1. In a tool of the class described, a bar having a curved end portion, a right angled portion forming a continuation of the curved portion, a jaw forming a continuation of the right angled portion, said jaw embodying a downwardly and forwardly extended portion, said right angled portion adapted to rest on a railway rail, and said forwardly extended portion adapted to engage under a tie when the bar is swung downwardly, to move the tie into engagement with the rail.

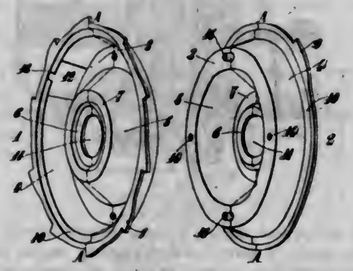
---



**1,695,661. GARMENT BAG.** HENRY C. MONTAGUE, Washington, D. C. Filed Mar. 1, 1927. Serial No. 171,840. 6 Claims. (Cl. 312—5.)

3. A clothing receptacle comprising a flexible envelope, a spreader inside the envelope, means connected thereto providing a pair of suspension apertures exterior of said bag and a wire passing through said apertures, one end of the wire forming a supporting hook, and the portion of the wire between said apertures forming a two-point suspension means.

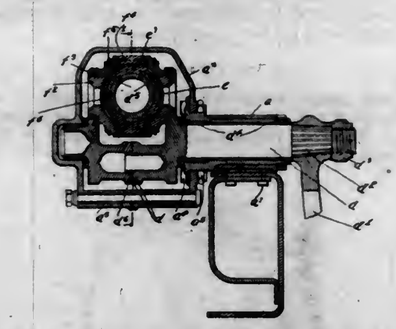
---



**1,695,662. COMBINATION TOOL.** EDGAR G. MORIN, Jr., San Francisco, Calif. Filed Feb. 12, 1927. Serial No. 167,794. 1 Claim. (Cl. 83—91.)

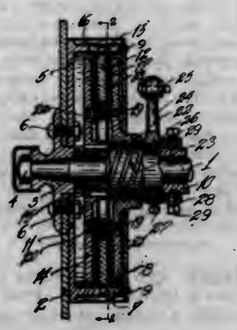
In a combination tool, a frame, a member having slots therein and being fixedly secured to said frame, an adjustable member slidable in said frame and having a slideway formed therein, a block disposed in said slideway, adjustable blades having their ends pivoted on said block, said adjustable member having arcuate slots formed therein, and pins secured to said blades and extending into said slots in both the fixedly secured and the adjustable members.

---



**1,695,663. REGISTER WHEEL.** CHARLES HILAIRE HENRI RODANET, Versailles, France, assignor to Societe Anonyme Etablissements Ed. Jaeger, Paris, France, a Company of France. Filed July 21, 1927, Serial No. 207,555, and in France July 30, 1926. 2 Claims. (Cl. 235—1.)

1. Register wheel comprising two pressed discs forming the side members, and a rim formed by a metal band the ends of which hook on the said side members characterized in that each disc is in the shape of a bowl having a flat bottom and a projecting central portion; the flat bottom of each disc fitting against the corresponding flat bottom of the other disc, while the plane face of central portion constitutes a driving friction surface, the ledges of the bowls respectively carrying ratchet teeth and a single tooth for carrying operations.



**1,695,664. STEERING MECHANISM FOR MECHANICALLY-DRIVEN ROAD VEHICLES.** FREDERICK HENRY ROYCE, West Wittering, near Chichester, England, assignor to Rolls-Royce Limited, Derby, England. Filed July 2, 1926, Serial No. 120,158, and in Great Britain July 10, 1925. 13 Claims. (Cl. 74—79.)

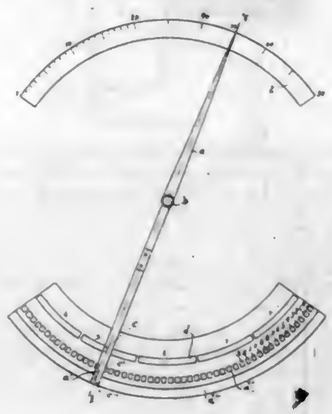
1. Steering mechanism for motor vehicles including a support, a steering shaft journaled in said support and provided with screw threads, a nut engaging said screw threads, a rock shaft journaled in said support and adapted to be operatively connected to the vehicle wheels, and means in which said nut is mounted to rotate about mutually perpendicular axes concurrent with the axis of said nut and operably connecting said rock shaft to said nut.

---

**1,695,665. BRAKE.** WALTER RUEPPEL and LORIS CONE, Princeton, Idaho, assignors, by mesne assignments, of one-sixth to Bennie M. Cone and one-sixth to Gifford A. Cone, Princeton, Idaho. Filed Nov. 17, 1926. Serial No. 148,866. 1 Claim. (Cl. 188—72.)

The combination with a drum having ribs and a friction ring having complementary notches, of an axle housing and a friction disk keyed thereon at one side of the ring, a disk located at the other side of the ring and laterally extending pins rigid therewith, said pins projecting into guide holes of the first disk and separating springs coiled about the pins between said disks, a threaded hub on one disk and a threaded sleeve within the hub mounted to turn on the housing, and a brake lever connected to said sleeve.

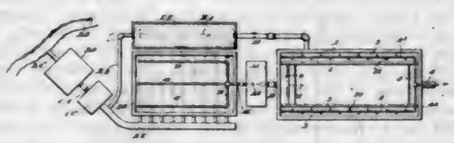
---



**1,695,666. PROCESS OF PRODUCING A NEW CATALYST.** KARL SCHIRMACHER and FRIEDRICH STOLZ, Hochst-on-the-Main, and HANS SCHLICHENMAIER and WALTER KROHS, Soden-on-the-Taunus, Germany, assignors to I. G. Farbenindustrie Aktien-Gesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 19, 1926, Serial No. 123,591, and in Germany July 22, 1925. 12 Claims. (Cl. 23—236.)

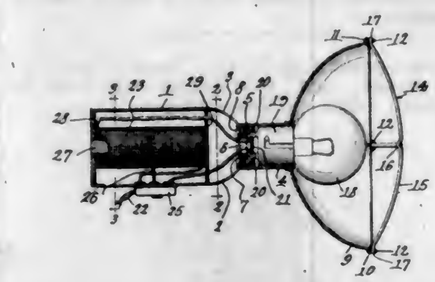
1. A process of making a highly active nickel catalyst which comprises subjecting to reduction a finely crystalline nickel compound associated with an inert substratum.

1,695,667. PROCESS FOR MAKING ELECTROLYTES. RICKARD SCHUSTER, Berlin-Halensee, Germany, Filed Nov. 13, 1923, Serial No. 674,578, and in Germany July 22, 1925. Renewed Aug. 8, 1928. 3 Claims. (Cl. 136—136.)



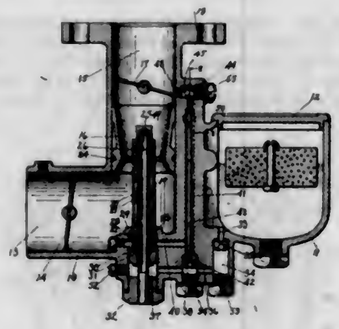
1. The process of making an electrolyte which comprises adding water and sulphuric acid and a silicate to a solution of bicromate of soda, and heating the same to evaporate enough water to produce a solid mass.

1,695,668. ELECTRICAL REGISTERING DEVICE. WILLIBALD SIEBERS, Amsterdam, Netherlands. Filed Sept. 7, 1926, Serial No. 134,090, and in Belgium Sept. 11, 1925. 2 Claims. (Cl. 234—1.)



1. An electrical recorder of different positions of a movable body, comprising in combination, said movable body, a plurality of series of fixed contact studs communicating electrically with the recording apparatus, two or more conductor members carried by said movable body and moving at the distance of a spark gap from the respective series of fixed contact studs, one of the studs of each series of fixed contact studs being selectively brought into an energized circuit at a time determined by the position of the conductor members carried by said movable body.

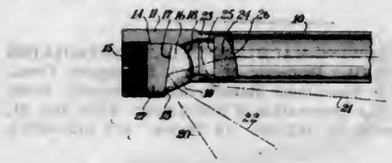
1,695,669. SYSTEM AND APPARATUS FOR SEWAGE. GEORGE G. SMITH, Littleton, Colo. Filed Mar. 24, 1925. Serial No. 18,028. 4 Claims. (Cl. 210—5.)



1. In a sewage disposal system, in combination, a main tank for the reception for the sewage, means therein for settling the scud of the sewage to the bottom of said tank, a filter tank containing a filter bed, connecting means between said tanks for passing the liquid sewage from the reception tank to the filter tank, said means including a spray device for distributing the liquid sewage substantially uniformly over the filter bed, and a scud tank connected to the main tank for periodically receiving the scud from said main tank.

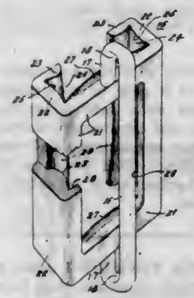
1,695,670. AUTO REPAIR LIGHT. EDWARD P. TABOR, Worcester, Mass. Filed Sept. 26, 1925. Serial No. 58,853. 1 Claim. (Cl. 240—8.18.)

In a light of the class described, a tubular lamp holder, a partition in the holder, a handle comprising a tubular shell provided with a convexed spherical terminal having an elongated opening, the holder having an end wall mounted to slide upon the outer surface of the aforesaid spherical terminal, the said end wall being concaved, a terminal on the partition, a conductor extended through the neck and connected to the terminal, the aforesaid neck being mounted on the end wall of the holder and being movable in the opening, a concaved washer on the neck and in slidable engagement with the inner surface of the convexed terminal of the shell, the neck having a flange which retains and overlaps the washer, the partition being located in front of the neck and closing the neck as to the outer end of the holder.

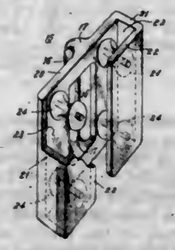


1,695,671. CARBURETOR. HARRY C. TILLOTSON, EARL A. RULLISON, and CHARLES W. MCKINLEY, Toledo, Ohio, assignors to The Tillotson Manufacturing Co., Toledo, Ohio, a Corporation of Ohio. Filed Mar. 31, 1922. Serial No. 548,271. 4 Claims. (Cl. 261—41.)

2. A carburetor having a main nozzle; a fuel supply for said nozzle; a main mixing chamber; means for throttling mixture flow to the engine; an auxiliary mixing passageway; a separate auxiliary liquid fuel delivery means from said fuel supply for said auxiliary mixing passageway; means for admitting air to said auxiliary liquid fuel; outlet means from said auxiliary passageway arranged to discharge into said mixing chamber when said throttle is in idling position; and additional outlet means from said auxiliary passageway, said latter means being substantially closed against intake therethrough, by said throttling means in said idling position, but opened to discharge from said auxiliary passageway when said throttle is opened from said idling position.

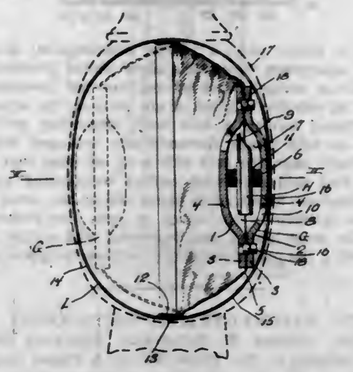


1,695,672. REARWARD-VISION SURGICAL TELESCOPE. REINHOLD H. WAPPLER, Yonkers, N. Y., assignor to American Cystoscope Makers, Inc., Long Island City, N. Y., a Corporation of New York. Filed July 22, 1927. Serial No. 207,608. 11 Claims. (Cl. 128—5.)



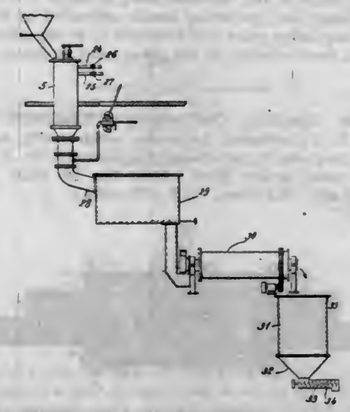
1. In a surgical telescope, a tube having a front enlarged end, said end having an opening in its exposed rear surface, and an objective system which comprises (1) a substantially hemispherical lens having a portion in said opening and being arranged and constructed to command a rearward field of vision and to direct the light rays by internal reflection obliquely rearwardly into the tube, and (2) auxiliary optical means back of said lens for receiving said rays and directing them longitudinally through the tube.

1,695,673. TRAVELING SAIL-SECURING DEVICE. PRESCOTT C. WILSON, Brooklyn, N. Y. Filed Feb. 10, 1927. Serial No. 167,346. 14 Claims. (Cl. 114—112.)



1. A traveler slide for securing devices having a plurality of angularly disposed faces, each provided with one or more dome-like projections providing point contact surfaces.

1,695,674. TRAVELER SLIDE FOR SAIL ATTACHMENTS. PRESCOTT C. WILSON, Brooklyn, N. Y. Filed May 24, 1927. Serial No. 193,775. 11 Claims. (Cl. 114—112.)



1. In a device of the character described, in combination, an elongated guideway mounted upon a mast, or the like, a runner adapted to be attached to a sail, and means for attaching said runner to said guideway for movement therealong in opposite directions, said attaching means including a pair of rollers mounted at each side of said runner and engaging said guideway at laterally spaced parts thereof, said rollers having wide open channels for receiving said guideways and permitting limited torsional or twisting movement of the runner relatively to the guideway so as to reduce binding and friction.

1,695,675. CRIER. JOHN H. WILHELM, Long Island, N. Y., assignor to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed July 3, 1926. Serial No. 120,341. 5 Claims. (Cl. 46—46.)

1. A doll comprising a body member consisting of a hollow shell, a gravity movable weight within said shell, a bellows cloth connected directly with said shell and weight to support the weight and to permit free movement of the weight within the shell to thereby displace air, the weight being hollow and having openings by which the displaced air may flow therethrough, and a reed mounted within the hollow of the weight arranged to be operated by the displaced air.

1,695,676. RECOVERY OF RUBBER. WILLIAM HENRY YEANDLE, Torreon, Mexico, assignor to Intercontinental Rubber Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 13, 1927. Serial No. 239,806. 10 Claims. (Cl. 18—50.)

10. The method of recovering rubber from plants in which the rubber is enclosed within the plant cells, which

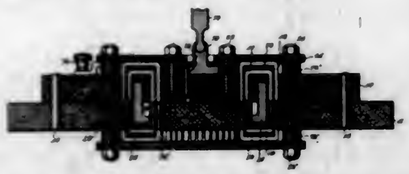
comprises permeating the plant material with steam, increasing the gaseous pressure to which the material is subjected, releasing the pressure substantially instantaneously to disintegrate the material and disrupt the cells and separating the rubber thus released from the plant material.

---

1,695,677. VANITY CASE. EDMUND R. BARANY, Brooklyn, N. Y. Filed Sept. 28, 1926. Serial No. 138,153. 4 Claims. (Cl. 132—83.)

1. In a vanity case, a powder compartment having a pair of superposed depressible cover plates provided with perforations normally out of registry but movable into registry by relative rotation of one plate on the other, said compartment having a side wall, depending peripheral flanges on said plates concentrically arranged with the outer flange engaging said side wall, at least one of the flanges and said side wall having cooperating pin and slot formations arranged to cause one of the cover plates to move relative to the other to open the perforations when the cover plates are depressed, and spring means for pressing the plates outwardly to close the perforations.

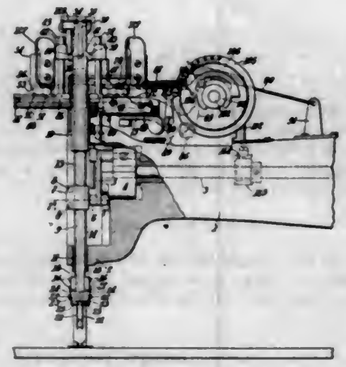
---



1,695,678. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. GEORGE W. BAUGHMAN, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 29, 1926, Serial No. 125,675. Renewed May 15, 1928. 24 Claims. (Cl. 246—63.)

4. Railway traffic controlling apparatus comprising a stretch of railway track, means for supplying the rails of the stretch with alternating current interrupted at different frequencies, a train carried relay controlled by current received from the trackway, a transformer having its primary controlled by the relay, a frequency selective relay and another relay in circuit with the transformer secondary, the frequency responsive relay having a plurality of contacts and the other relay having a front and a back contact, and governing means controlled by the frequency responsive relay and arranged to be energized only when the front contact of the other relay is closed.

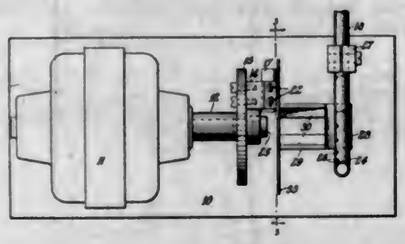
---



1,695,679. TESTING COIL. MAX E. BEALOWITZ, Belleville, N. J., assignor, by mesne assignments, to Magnetic Analysis Corporation, Long Island City, N. Y., a Corporation of New York. Filed Jan. 26, 1926. Serial No. 83,888. 6 Claims. (Cl. 175—183.)

4. In a magnetic testing device two supporting frames of insulating material, inner and outer sets of substantially U-shaped conductors carried by each frame, means for electrically connecting the legs of each set of inner and outer U-shaped conductors to the legs of another set of inner and outer U-shaped conductors respectively, the conductors of each set being angularly disposed with respect to the conductors of the other corresponding set to form a helix when the two sets are connected, and a conductor adapted to connect said inner and outer sets.

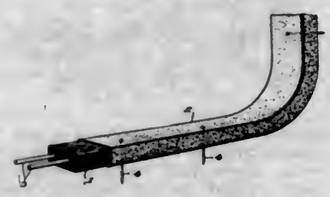
---



1,695,680. SEWING-MACHINE NEEDLE-CONTROLLING MECHANISM. FREDERIC M. CARD, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 21, 1927. Serial No. 162,609. 13 Claims. (Cl. 112—221.)

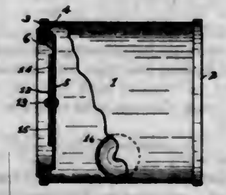
1. The combination with the actuating mechanism of a sewing machine, of a pair of reciprocatory needles disconnectibly coupled with said actuating mechanism, a member operable in one direction to uncouple either needle from said actuating mechanism, and means for at will selectively determining which needle is disconnected from its actuating mechanism upon actuation of said member in said one direction.

---



1,695,681. BOBBIN TRIMMING AND CLEANING MACHINE. SECONDO L. CASELLA, New York, N. Y., assignor to Yale Electric Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 6, 1927. Serial No. 211,106. 8 Claims. (Cl. 82—20.)

1. A battery bobbin trimming machine including a rotary cutter adapted to engage a corner of a bobbin and remove a portion of the depolarizing material from the bobbin in that vicinity, a support for supporting the bobbin as it is presented to said cutter, and fluid pressure means for removing loose particles of depolarizing material from the surface of the bobbin, said fluid pressure means including an annular perforated tube through which the bobbins are passed as they are presented to said cutter and through which the bobbins are withdrawn as they are retracted from said cutter.

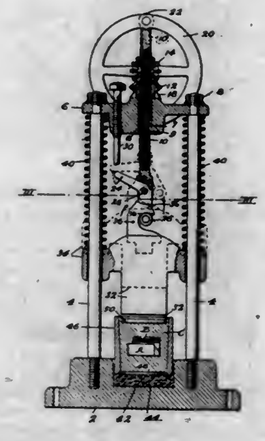


1,695,682. WINDOW MOLDING FOR AUTOMOBILES. EDGAR R. CREAMER, Connersville, Ind., assignor to The George R. Carter Company, Connersville, Ind., a Corporation of Indiana. Filed Mar. 24, 1927. Serial No. 177,874. 1 Claim. (Cl. 155—184.)

As a new article of manufacture, a finishing molding strip, the same consisting of a thick compact filler strip formed from paper, having a substantial amount of stretch, formed into a plurality of narrow folds, a plurality of independent metal members imbedded within the folds of papers and extending longitudinally through said strip, the said metal members having independent movement, one of the other, and independent of the paper strip whenever said strip is bent into an abnormal position.

---

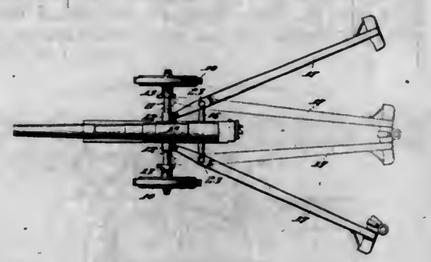
1,695,683. MECHANICAL GAME TOY. JOHN W. CULP, Johnstown, Pa. Filed Mar. 17, 1927. Serial No. 176,033. 2 Claims. (Cl. 273—143.)



1. In combination, a mechanical toy of the character described comprising a hollow cylindrical body portion provided with a fixed rear end plate, an inset cover plate detachably secured to the front end of said body portion, the front face of said cover plate provided with a dial divided into equal areas, each of said areas having a designating indicia, an indicator member pivotally connected to said cover plate at the diametric center of the latter, said indicator disposed flatly against the outer side of said cover plate, and embodying means for maintaining the same perpendicularly suspended by gravity, and a spherical weight member loosely disposed in said body portion.

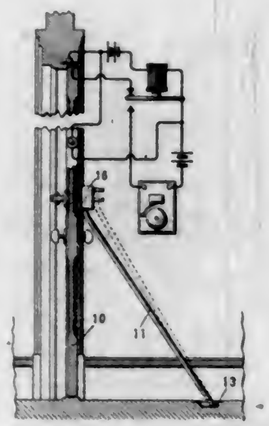
---

1,695,684. SWAGING MACHINE FOR ARTIFICIAL DENTURES. LESLIE E. EATON, Kansas City, Mo., assignor of one-half to Cedric E. Griffin, Kansas City, Mo. Filed Feb. 7, 1925. Serial No. 7,583. 7 Claims. (Cl. 78—25.)



1. A machine of the character described consisting of a base adapted to support articles, guides extending upwardly from said base, a yoke uniting the upper ends of said guides, a screw free to move vertically but held from rotary movement in said yoke, rotary mechanism for moving said screw up and down, a ram operably mounted on the guides, means connected to the screw for raising

said ram and means for disengaging said raising means from the ram so that the same may descend and deliver a blow to an article on the base of the machine.



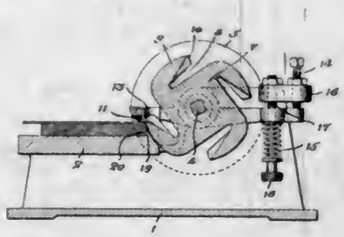
---

1,695,685. GUN CARRIAGE. CLARENCE HERVY FROELICH, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa. Filed Aug. 8, 1925. Serial No. 49,049. 15 Claims. (Cl. 89—40.)

5. In a wheeled gun carriage having an axle, the combination of a pair of anchoring members slidably mounted on the carriage axle, a cross member jointed to each of said members, and a base member supported on the axle and on said cross member.

**1,695,686. DOOR SECURER.** SIMON B. HESS, New York, N. Y. Original application filed Sept. 7, 1922, Serial No. 586,573. Divided and this application filed Apr. 2, 1926. Serial No. 99,202. 5 Claims. (Cl. 292—338.)

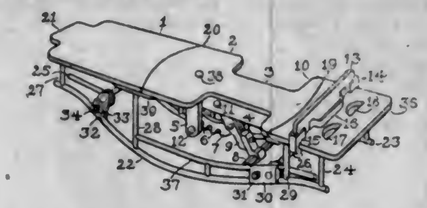
1. In apparatus of the character disclosed, securing means operatively connected to a door, lock-controlled means for moving said securing means to protective position, said securing means being arranged to allow a limited opening of the closure before becoming operative.



---

**1,695,687. FILAMENT.** FREDERICK HOLBORN, Hackensack, N. J., assignor to De Forest Radio Telephone & Telegraph Co., Jersey City, N. J., a Corporation of Delaware. Filed Jan. 9, 1924. Serial No. 685,182. 1 Claim. (Cl. 250—27.5.)

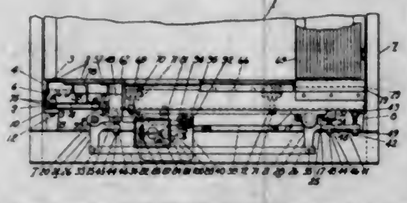
A cathode comprising a combination of iron and lithium.



---

**1,695,688. TRIMMING MACHINE.** PENROSE R. HOOPES, Hartford, Conn., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Aug. 30, 1923. Serial No. 660,075. 7 Claims. (Cl. 164—63.)

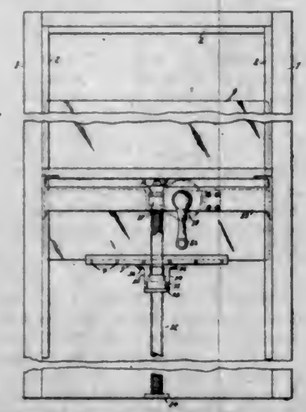
1. A trimming device, comprising, a rotary cutter, and a cooperating cutting edge mounted for rotary adjustment on an axis concentric with the axis of rotation of said cutter; a platform, and means to urge said cutting edge toward said platform.



**1,695,689. SPORT RIDER.** HENRY N. HULANDER, Brooklyn, N. Y. Filed Mar. 17, 1926. Serial No. 95,442. 9 Claims. (Cl. 272—57.)

4. A gymnastic apparatus comprising a pair of curved runners surmounted by a seat board having a relatively narrow section intermediate the extremities thereof, a pendant pedal support movably mounted beneath said narrow section, a pair of pedals on said support, a toothed member pivoted to said support and a cross bar adapted to be engaged by said toothed member in different positions.

---

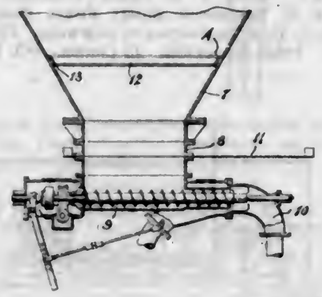


**1,695,690. ELEVATOR PLATFORM.** FREDERICK HYMANS, Yonkers, N. Y., and CARL T. WESTLIN, Westfield, N. J., assignors to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 22, 1927. Serial No. 185,794. 15 Claims. (Cl. 187—29.)

9. A platform for an elevator car comprising, a movable floor, a frame, self-aligning bearings carried by said frame, a shaft mounted in said bearings, and levers secured to said shaft and acting to support said movable floor, said floor, when moving, acting through said levers to turn said shaft in said bearings.

---

**1,695,691. WINDOW OPENER.** WALDO L. KRAEMER, Brooklyn, N. Y., assignor to Kearfott Engineering Company, Inc., a Corporation of New York. Filed Dec. 23, 1926. Serial No. 156,641. 2 Claims. (Cl. 268—133.)



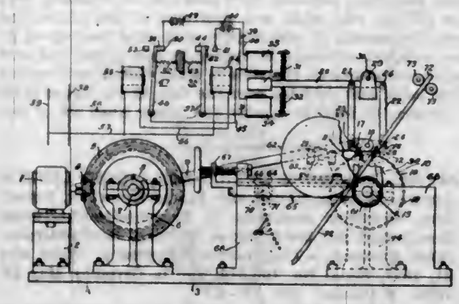
1. In a window opener, holding means adapted to receive the lower edge of the window pane, a travelling nut,

means for loosely connecting said nut with said holding means for operating the same in both upward and downward directions, a screw shaft for traversing said nut, a bearing for supporting the upper end of said shaft and sustaining the thrust thereof in both directions, a support rigid with said bearing, and means extending through said support and supported thereby for operating said shaft.

---

**1,695,692. PULVERIZED-FUEL-FEEDING APPARATUS.** HENRY KREISINGER, Piermont, N. Y., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1925. Serial No. 55,906. 5 Claims. (Cl. 221—118.)

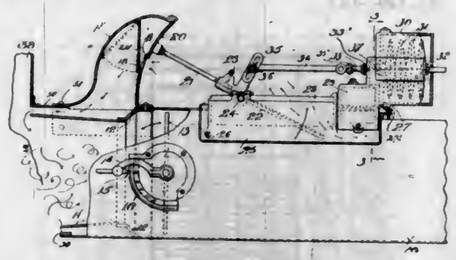
1. In coal handling apparatus, a gravity discharge bin or reservoir for pulverized coal, feeder mechanism therefor, and a grid in the bin above the feeder mechanism, said grid comprising a plurality of stationary spaced bars.



---

**1,695,693. COMPOSITION OF MATTER.** HENRY R. LADISLAUS, Los Angeles, Calif. Filed July 8, 1924. Serial No. 724,897. 1 Claim. (Cl. 87—5.)

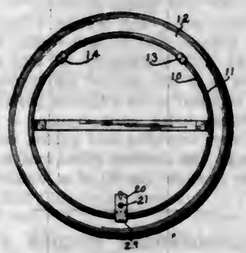
A cleaning composition consisting of hydrochloric acid, glycerine, pulverized antimony, oil of mirbane, vinegar, and machine oil.



---

**1,695,694. AUTOMATIC ELECTRIC WELDING APPARATUS.** ALLIS M. MACFARLAND, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1924. Serial No. 716,290. Renewed Nov. 3, 1928. 21 Claims. (Cl. 219—8.)

1. In an arc welding system including a fusible metal electrode, means for feeding the same to the work comprising a substantially constant speed motor device, a mechanism including a reciprocating element actuated by said device operatively connected to said electrode and means responsive to conditions in the arc for controlling the movement of the mechanism and electrode.



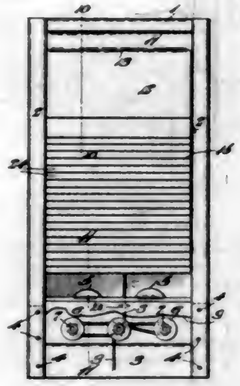
**1,695,695. FUEL ECONOMIZER.** GEORGE W. MEYERS, Rahway, N. J. Filed Jan. 3, 1922. Serial No. 526,724. 5 Claims. (Cl. 236—95.)

1. In an automatically controlled combustion mechanism having a combustion chamber, a member for conducting products of combustion from said chamber, means for conducting air over said member and into said chamber, said member and means being provided with a plurality of openings, independently controlled shutters for said openings, and means for operating said shutters in response to temperature changes.

---

**1,695,696. PADLOCK FOR TIRE CARRIERS AND THE LIKE.** HARRY B. PAGE, East Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Feb. 11, 1924. Serial No. 692,005. 3 Claims. (Cl. 70—90.)

1. In a tire lock, a case, a pair of cooperating members, one of said members consisting of a straight headless post permanently secured to the case and the other of said members comprising a headed bolt completely detachable from the lock body but adapted to be locked thereto in spaced parallel relation with said first member and on the same side of the case.

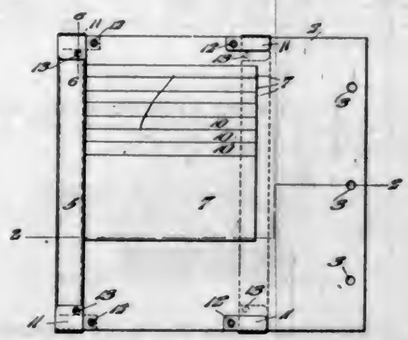


---

**1,695,697. STITCH-DOWN WELTLESS SHOE.** EDWARD J. RAMSEY, New York, N. Y. Filed Feb. 18, 1927. Serial No. 169,155. 5 Claims. (Cl. 36—16.)

1. A stitch-down weltless shoe having structural elements including an outsole, an insole and an upper outturned to have marginal portions overlying edge portions of the two soles, said shoe also including a structural element located between the upper and the insole, and a plurality of lines of stitches each going through a plurality of said elements, two of said stitches going through said marginal portions and the two soles.

1,695,698. VISIBLE INDEX-CARD SYSTEM. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to Globe-Wernicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 11, 1924. Serial No. 691,895. 26 Claims. (Cl. 129—16.)

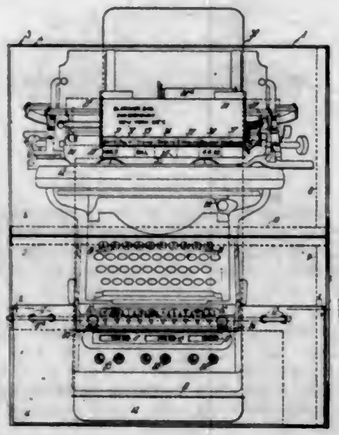


6. An index card having near one of its marginal edges a weakened line and a slit, substantially in alignment with said line, said slit forming a friction lip.

14. A plurality of card-holders arranged one above the other and having upwardly and forwardly projecting tongues, with the tongues of each card holder overhanging the tongues of the card holder above it.

18. In a visible index card syatem, a flat frame, a follower to move with respect to said frame, a cord secured to said follower, and a plurality of cord-engaging discs fixedly mounted near one end of the frame to cause the follower to be retained in its adjusted position.

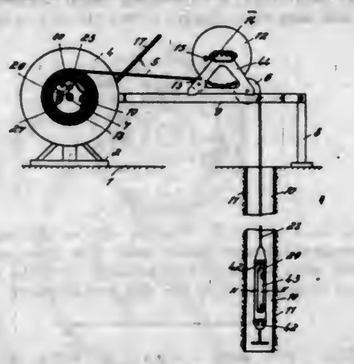
19. In a visible index card system, a frame having guides, card-holders engaging said guides, cards carried by said card-holders and having slits, and a stop member having a tongue to enter the slit of a juxtaposed card.



1,695,699. RECORD-SHEET HOLDER AND SHEETS THEREFOR. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to The Globe-Wernicke Co., a Corporation of Ohio. Filed May 12, 1924. Serial No. 712,602. 13 Claims. (Cl. 129—34.)

1. A plurality of record sheets, each consisting of a sheet of material having at one end a fold extending transversely of the sheet, and a securing clip for each sheet to retain its fold against the juxtaposed portion of its sheet and to determine the amount of visibility of its sheet whereby when the sheets are assembled by nesting their folds one within the other the top edge of the fold of one sheet will have its relative lateral adjustment with the sheet above it limited in one direction by the clip of said sheet above it and thus determine the visibility of the sheet above it.

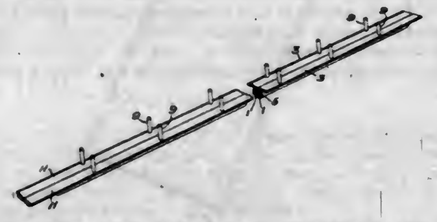
7. A holding device for record sheets including a holder sheet having each of two of its opposite margins folded over the sheet in opposite directions to form a holding flap on each of its opposite sides and having the free margin of each of said holding flaps folded under to form a locking flap of less width than the holding flap.



1,695,700. ACCOUNTING-MACHINE DEMONSTRATION CHART. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 20, 1925. Serial No. 44,682. 13 Claims. (Cl. 35—12.)

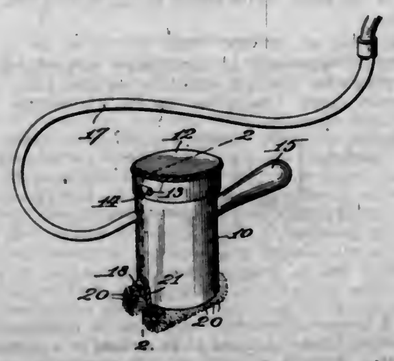
1. A demonstrating device for a bookkeeping machine including a frame having an upper layer and a second layer, said layers fastened together along one edge by a flexible fabric, to permit the second layer to fold under the upper layer, and a slide arranged between said layers, said upper layer having on its face a picture of said machine and being provided with elements for engaging with and guiding said slide, and apertures at the platen and register-elements of said picture, said slide bearing on its face numerals arranged to appear in said platen and said register-apertures as the slide is manipulated, said second layer being also foldable over the face of the upper layer to protect the same from wear and injury when out of use.

1,695,701. SOUNDING DEVICE FOR LIQUID LEVELS. LUDWIG STEINER, Berlin, and VICTOR GUTMANN, Nuremberg, Germany, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed May 31, 1927, Serial No. 195,514, and in Germany May 17, 1926. 8 Claims. (Cl. 73—5.)

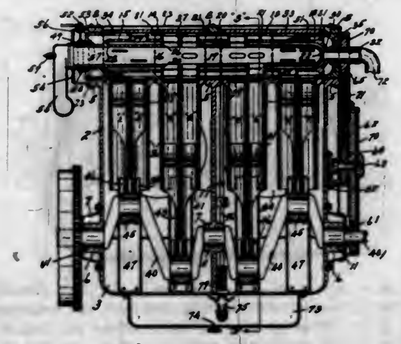


1. A sounding device for liquid levels, comprising in combination, a cable, a sounding weight attached to said cable, a member movably mounted on said sounding weight and adapted to be moved by the pressure of the liquid from a normal position into a deflected position, means for paying out said cable from a place above the level of the liquid, means for indicating the paid out length of said cable, an electric circuit containing a source of current, a switch connected with said movable member in such a manner that a switching operation takes place when said movable member is moved from one of its said positions

into the other, and a current indicating device, said parts of the circuit being connected together by the conductor or conductors of said cable.

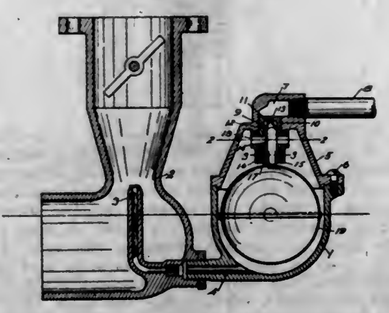


1,695,702. SHOE STICK. CLARENCE H. YOUNG, Boston, Mass. Filed Jan. 10, 1928. Serial No. 245,715. 6 Claims. (Cl. 211—34.)



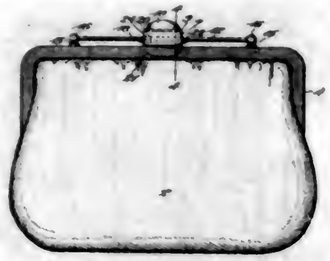
1. A shoe stick having, in combination, a pair of angle-irons secured to each other to present webs in substantially the same plane, the remaining webs at the end portions thereof being folded into parallelism with the end portions of the first mentioned webs, and means carried by said angle-irons for attaching lasts thereto.

1,695,703. DISHWASHING DEVICE. ALBERT M. AHERN, Santa Monica, Calif. Filed July 6, 1927. Serial No. 203,742. 4 Claims. (Cl. 15—129.)



1. In a dish washing device, a container provided with a perforated bottom, a rod secured to and passing through the lower portion of the body of said container, the ends of which rod project outwardly from the body of the container and a brush carrying frame positioned beneath the bottom of the container with its end detachably mounted on the projecting ends of the said rod.

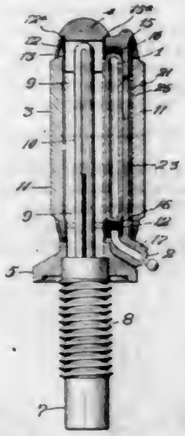
1,695,704. INTERNAL-COMBUSTION ENGINE. RAYMOND ARCHER, Redmond, Oreg. Filed Apr. 23, 1926. Serial No. 104,014. 5 Claims. (Cl. 123—42.)



1. In an internal combustion engine as described, the combination with the cylinders of said engines, a rotary valve provided with intake and exhaust ports arranged in such a manner as to charge the combustion cylinders of the engine with combustible material once in every four revolutions of the crank shaft, and means for communicating said valve with said cylinders, of a stationary terminal connected with a magneto or battery and mounted on said engine; an insulated terminal ring of insulation material mounted on said rotary valve; and spark plugs mounted on said rotary valve; said ring being connected with said spark plugs in said rotary valve and adapted for engagement with the stationary terminal for firing said combustible material in said cylinders.

1,695,705. CONSTANT-LEVEL DEVICE. FREDERICK O. BALL and THOMAS M. BALL, Detroit, Mich., assignors to Ball & Ball Carburetor Company, a Partnership composed of Frederick O. Ball and Cornelia M. Ball, Detroit, Mich. Filed May 10, 1926. Serial No. 108,197. 1 Claim. (Cl. 137—104.)

In a constant level device, the combination of a float chamber; a cover for the chamber; a valve controlling the inflow to the chamber, said valve being mounted in and removable with the cover; and a spherical float guided by the chamber walls and controlling the valve by direct contact of the walls of the float with the valve, the float being free to move to vary the point of contact, the cover being cup-shaped and the part between the cover and the chamber being below the top of the float.



1,695,706. FASTENER FOR BAG FRAMES. BENJAMIN BLACHER, Providence, R. I., assignor to Blacher Brothers, a Partnership composed of Benjamin Blacher and Harry Blacher, Providence, R. I. Filed July 9, 1927. Serial No. 204,605. 6 Claims. (Cl. 292—147.)

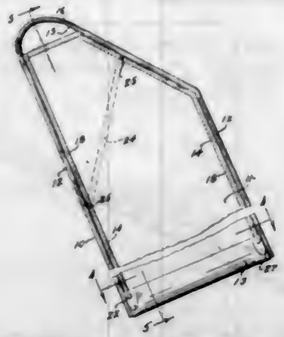
1. In a clasp or fastening-device for bag frames or the like having opposite mating members, the combination of a guide extending longitudinally above the top of one member, a lug projecting vertically from the top of the other member, and a slide slidable on the guide and formed with a slot for engaging the opposite sides of the lug to secure the two members in closed relation.

---

1,695,707. ILLUMINATING MEANS FOR MOTOR-HEAT INDICATORS. HARRISON H. BOYCE, Jericho, N. Y. Filed Sept. 27, 1923. Serial No. 665,254. 4 Claims. (Cl. 240—8.28.)

1. In combination, an instrument for indicating the heat of a vehicle motor, said instrument comprising a temperature indicator, a ring shaped casing enclosing said indicator, and an attachment including an elongated tube containing a rarefied gas adapted to glow when subjected to spark plug potential, a block, an open groove in the block for partially enclosing said tube, a rear crystal, a name plate interposed between said crystal and said block, and means passing through the block at a plurality of points for securing the block, the name plate and the crystal all to the rear wall of said casing.

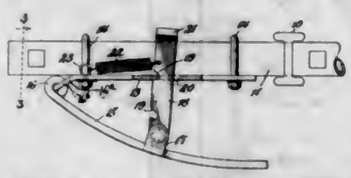
---



1,695,708. CONTACT DEVICE FOR MAGNETOS. ETTORE BUGATTI, Molsheim, France. Filed Jan. 8, 1925, Serial No. 1,259, and in France Jan. 19, 1924. 1 Claim. (Cl. 200—30.)

A make-and-break device for magnetos comprising a main supporting frame, a stationary contact which is slidable without rotation in a slot in the said frame, a two-arm swinging lever whose fulcrum has a cylindrical shape and is engaged in a recess of like shape which is formed in the said main frame, a movable contact disposed at the end of said lever, a cylindrical recess formed in said lever and adapted to receive a fibre cylinder, a spring urging the other arm of the lever, in such manner as to bring the two contacts into contact with each other, and a cam provided with bosses and cooperating with the said fibre cylinder in order to raise the said swinging lever.

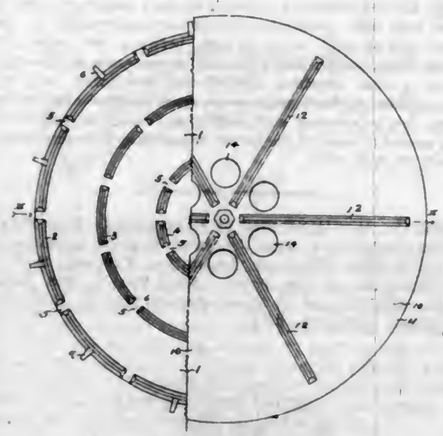
---



1,695,709. ICE RUG. FRANK H. FIELD, Jamestown, N. Y. Filed Sept. 26, 1927. Serial No. 221,905. 4 Claims. (Cl. 2—2.)

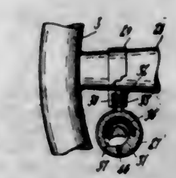
1. An ice rug comprising a body portion, rails formed from a flexible material enclosed within the seams of said body portion, the upper end of said rail forming a loop by which to grasp said rug and a trough formed along the lower edge of said rug, said trough being formed by doubling back upon itself the lower end of said body portion and a metal strip formed to engage said trough and having means by which to seal the vertical edges of said body portion and said metal strip whereby said trough may receive and retain water caused by the melting of a cake of ice.

---



1,695,710. RUNNER ATTACHMENT FOR FARM IMPLEMENTS. HENRY C. GEORGIUS, Manning, Iowa. Filed June 3, 1927. Serial No. 196,358. 3 Claims. (Cl. 55—3.)

1. A harrow attachment comprising, in combination, a supporting bracket adapted to be secured to a tooth-bar; a runner pivotally mounted on said supporting member and arranged to open in a plane substantially at right angles to the plane of the harrow teeth; a notched latch bar pivoted to the runner and extending through an opening provided in said bracket; the extension presenting a handle to release the notched portions from engagement with the bracket; and a spring connected to the bar normally to hold it in latched engagement.

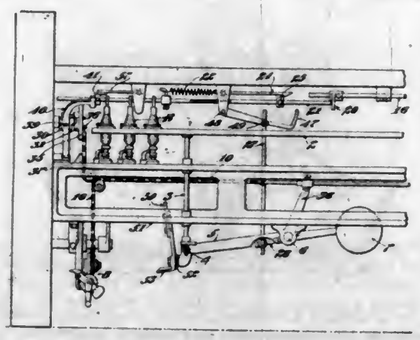


1,695,711. HOT PLATE. THOMAS JARBOE, San Francisco, Calif. Filed May 11, 1927. Serial No. 190,424. 3 Claims. (Cl. 126—215.)

1. A hot plate comprising a regenerative plate having a flat under surface; peripheral lugs extending beyond the edge of said plate; concentric segmental flanges extending above the top of said plate; a cover having openings in its center portion and a depending flange engaging said lugs.

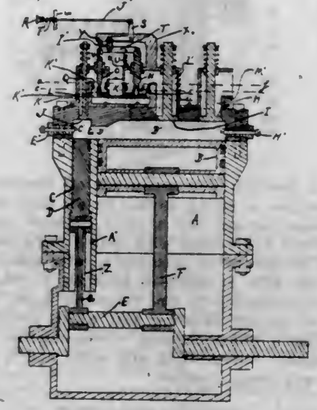
---

1,695,712. TRAFFIC SIGNAL. CHESTER W. JOHNSON, Allston, Mass., assignor, by mesne assignments, to The A. L. Smith Iron Works, Chelsea, Mass., a Corporation of Massachusetts. Filed Nov. 23, 1926. Serial No. 150,243. 13 Claims. (Cl. 177—339.)



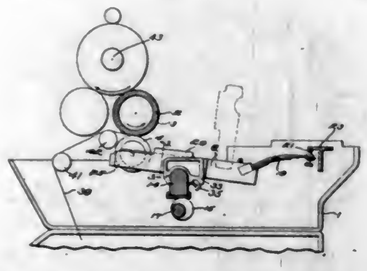
13. In an automobile signal system, the combination with the steering wheel shaft of the automobile having its axis in a position other than vertical, and an electric signal mounted on the automobile, of a circuit closer in electrical connection with said signal and a source of current, means mounting said circuit closer for movement with the steering wheel shaft in a plane substantially at right angles to the axis of said shaft, said circuit closer including a bent conductor, a movable gravity operated connector element normally out of contact therewith, and means for causing a gravity impelled movement of said connector element in a progressively curved path in contact with said conductor on movement of said shaft in one direction from normal and out of contact with said conductor on the movement of the shaft in the opposite direction.

---



1,695,713. WIND-DOWN MECHANISM FOR SPINNING FRAMES. JOSEPH H. LALIBERTE, Nashua, N. H., assignor to Nashua Manufacturing Company, Boston, Mass., a Corporation of New Hampshire. Filed Nov. 13, 1925. Serial No. 68,898. 5 Claims. (Cl. 118—5.)

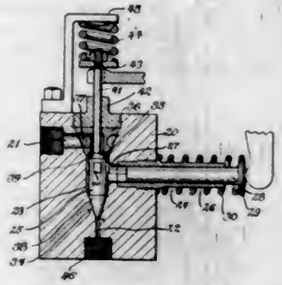
2. In a ring spinning machine, a mechanism for automatically winding down the ring rail comprising a part normally idle but mounted for rotary motion about an axis, a flexible connection between said part and the ring rail whereby the motion of said part may be utilized to lower said ring rail, a driven member rotatable about said axis, said member and part having cooperating clutch faces to engage each other, and mechanism operative automatically when the ring rail reaches a predetermined elevation to cause said clutch faces to engage each other.



---

1,695,714. CONSTANT-VOLUME AND CONSTANT-COMPRESSION ENGINE AND METHOD OF OPERATING SAME. JAMES HARRY KEIGHLEY MCCOLLUM, Long Branch, N. J., assignor of one-half to Bartley J. Wright, Long Branch, N. J., and one-fourth to Albert J. Baruth, Lawrence, N. Y. Filed Jan. 19, 1922, Serial No. 530,410. Renewed May 16, 1928. 16 Claims. (Cl. 123—53.)

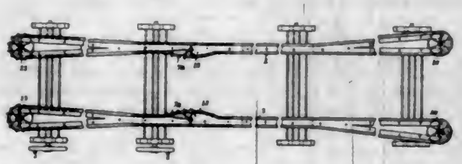
1. An internal combustion engine of the compression type having in combination a main cylinder and piston reciprocating therein, an ignition chamber separate from, but having a substantially unrestricted connection with, said main cylinder, means for admitting charges of air at substantially atmospheric pressure simultaneously to both said main cylinder and said chamber during each cycle of operation of the engine, mechanism separate from, but operating synchronously with, the piston in said main cylinder for giving substantially the same degree of compression to the charge in said chamber as is given to that in said cylinder by the piston in the latter, apparatus for feeding graduated quantities of fuel to said chamber and an ignition device located in said chamber.



1,695,715. SLITTING MACHINE. FRANK W. MERRICK, Dorchester, Mass., assignor to American Stay Co., East Boston, Mass., a Corporation of Massachusetts. Filed Sept. 14, 1926. Serial No. 135,299. 14 Claims. (Cl. 164—60.)

1. In a slitting machine, a series of slitters, a platen member for cooperating with said slitters, holders for said slitters, and unitary separating means for a series of said slitters arranged to be inserted between said slitter holders and to be supported thereby after the latter have been assembled in the machine.

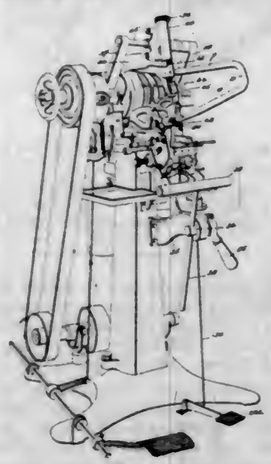
---



1,695,716. FUEL-OIL INJECTION PUMP. KRISTIAN RASMUSSEN, Buffalo, N. Y. Filed Aug. 31, 1927. Serial No. 216,619. 7 Claims. (Cl. 123—32.)

1. In a fuel injection pump for oil burning engines, in combination, a casing having an oil inlet passage, an oil discharge passage and a valve chamber intermediate said passages and formed with spaced seats communicating with the respective passages, a valve element in said chamber movable to different positions in which it has closing cooperation with the respective seats, said valve element having an operating part which projects beyond said casing, a pump chamber communicating with said valve chamber intermediate said seats and a pump element in said pump chamber.

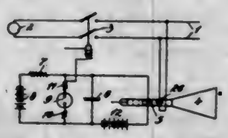
---



1,695,717. TENTERING MACHINE. EDMOND H. REYNIER, Passaic, N. J. Filed June 11, 1928. Serial No. 284,505. 2 Claims. (Cl. 26—57.)

1. A tentering machine comprising two side-by-side elongated structures having longitudinal spaced ways, tentering clips arranged to be guided by said ways and each adapted to undergo closing movement on each approach thereof to the corresponding way so as to hold the fabric while travelling along such way and to undergo fabric-releasing movement on each departure thereof from said way, means to control such movements of the clips one of said ways having, between the points at which said closing and releasing movements of the clips occur, a bend reaching toward the other way, and the clips guided by such ways being each adapted also to undergo fabric-releasing and closing movement at said bend, and means to control the latter releasing and closing movements of such clips.

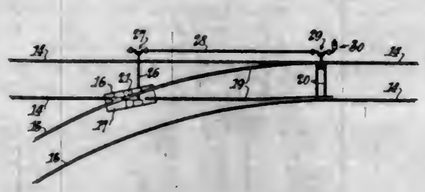
---



1,695,718. MACHINE FOR SEWING BAGS. FRED RICKS and ROBERT GOW. REID, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 8, 1923, Serial No. 617,702, and in Great Britain Mar. 2, 1922. 22 Claims. (Cl. 112—62.)

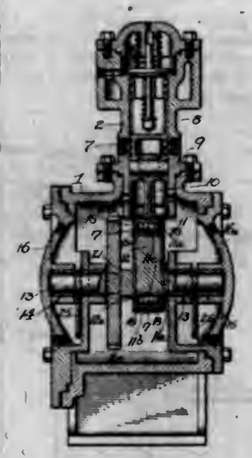
22. A machine for sewing bags or like articles having, in combination, stitch forming devices, means for externally supporting the work with both faces adjacent a corner at an inclination to and intersecting the needle path, an internal support past which the work is fed and means for retaining the support at the sewing point during the sewing of a straight edge while permitting it to shift to one side of the sewing point in the direction of feed as the seam approaches the end corner of the bag.

---



1,695,719. OSCILLOGRAPH. REINHOLD RÜDENBERG, Berlin-Grunewald, Germany, assignor to Siemens-schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Dec. 1, 1925. Serial No. 72,609, and in Germany Dec. 20, 1924. 11 Claims. (Cl. 171—95.)

1. An oscillograph for observing transient phenomena having means for slowly advancing and quickly returning the light spot, means for releasing the transient phenomena and means for jointly controlling the light spot movement and said releasing means.

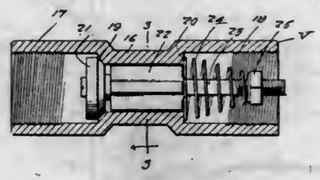


1,695,720. FROGLESS SWITCH. JOHN ASH SINGELLTON, Columbus, Ohio, assignor of one-fourth to Leland S. Dougan, Columbus, Ohio. Filed Feb. 17, 1928. Serial No. 255,100. 1 Claim. (Cl. 246—387.)

In railroad turnouts the combination with the intersecting rails and their extensions leading to switch points, of a pivoted rail section shiftable to align a selected intersecting rail with its extension, a longitudinal stop lug extending approximately the full length of the shiftable rail section and closely adjacent the said section at each side of its pivoted end and adapted to limit movement of the shiftable section at each rail extension aligning position, said lugs being reduced in height toward their ends adjacent the pivoted end of the shiftable rail section to permit free passage of wheel flanges thereover.

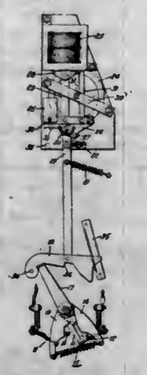
---

1,695,721. COMPRESSOR. DAVID FRANKLIN SMITH, Washington, D. C. Filed Aug. 27, 1927. Serial No. 215,971. 5 Claims. (Cl. 230—206.)



1. In combination in a compressor, a cylinder and piston, an eccentric drive for said piston, a shaft on which the eccentric drive is mounted, a casing enclosing said drive and having detachable heads having split bearings for said shaft, said heads having lubricant holding chambers, rings arranged in the split bearings and depending into the chambers, a pinion and gear connection for driving the shaft, a shaft carrying the pinion, a bearing for the said shaft integral with one of the heads, said bearing having a recess and a ring in said recess, and depending into the casing to lubricate the said bearing, substantially as described.

---

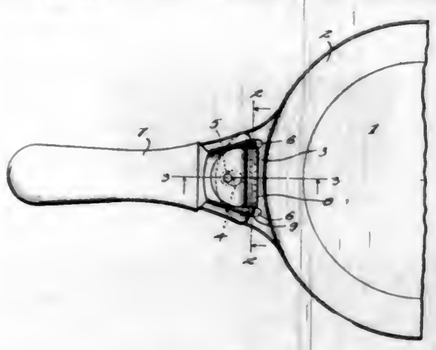


1,695,722. OIL-INJECTING APPARATUS FOR ASPHALT MIXERS. WALTER A. SMITH, Houston, Tex. Filed Nov. 29, 1927. Serial No. 236,435. 1 Claim. (Cl. 251—145.)

A valve structure of the class described including an elongated tubular casing having its bore reduced intermediate its ends to provide a pair of spaced shoulders, one of the shoulders forming a valve seat, a valve element closable against the seat and having a cruciform member connected thereto and slidable longitudinally in the reduced portion of the bore and terminating in a shank, a spring disposed about the shank abutting the other shoulder and means on the shank against which the spring impinges for normally holding the valve element closed.

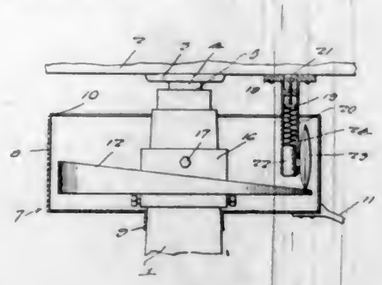
---

1,695,723. TIME-ELEMENT ELECTRORESPONSIVE DEVICE. GEORGE R. TOWNSEND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 14, 1925, Serial No. 56,102. Renewed May 4, 1928. 12 Claims. (Cl. 200—97.)



1. A time element electroresponsive device comprising a member movable in each of two directions, electroresponsive means for controlling the movement of the member, a movable inertia element, and connections between the inertia element and the member through which the inertia element resists both acceleration and deceleration of the member in one direction and permits unrestrained movement thereof in the other direction.

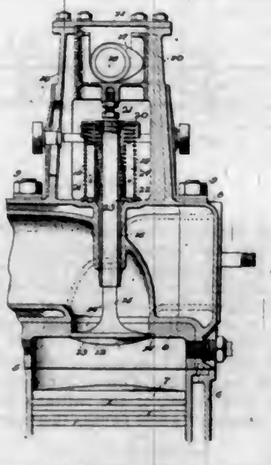
3. A time element electroresponsive device comprising a member movable between two positions, electroresponsive means for controlling the movement of the member, an inertia time delay element, and mechanism for automatically establishing a two-way driving connection between the member and the inertia element during movement of the member in one direction between said positions.



6. A time element electroresponsive device comprising an electromagnet, a member under the control of the electromagnet and operable to a predetermined position for effecting operation of the device responsive to a predetermined variation in the energization of the electromagnet, a movable inertia element, and mechanism controlled by the electromagnet for establishing a driving connection between the member and the inertia element to permit the inertia of the element to both retard the movement of the member to its operating position and supply energy to the member to operate the device.

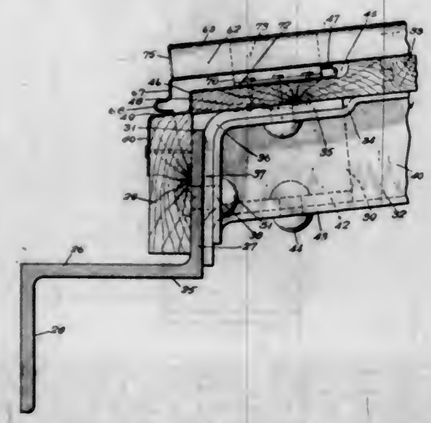
1,695,724. FOLDING HANDLE FOR FRYING PANS AND THE LIKE. HARLEY H. TRENT, Bozeman, Mont. Filed Jan. 31, 1928. Serial No. 250,905. 7 Claims. (Cl. 53—7.)

4. In a cooking utensil, a handle, means providing a sliding and swinging connection between the handle and utensil, and means for latching the handle in operative position upon shifting the same transversely of the utensil.



1,695,725. ROTARY CHAIR. OTTO L. WOLFE, San Francisco, Calif. Filed Apr. 30, 1926. Serial No. 105,772. 1 Claim. (Cl. 155—33.)

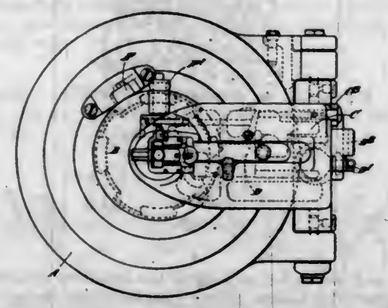
In a structure of the class described, in combination, a standard, a hollow form, a chair including a bottom, said bottom being provided on its under side with a bearing plate and a stub axle depending from the plate and slidably received in said standard, a beveled track ring surrounding the standard beneath the chair bottom and fastened to said standard, a casing also fastened to said standard and surrounding the track ring, spring pressed means carried by said chair bottom and engageable with the track and normally exerting an upward thrust upon the chair bottom to maintain said bearing in spaced relation to said standard, said casing being open at its top, and said means comprising a vertically disposed cylinder attached to the under side of the rotary chair bottom and disposed eccentrically with respect to the axis of rotation of said bottom, a plunger slidable in said cylinder, a spring in said cylinder cooperable with said plunger, and a roller carried by said plunger and rotatably contacting the upper side of said track ring.



1,695,726. VALVE-OPERATING MECHANISM. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 17, 1926. Serial No. 109,769. 30 Claims. (Cl. 251—132.)

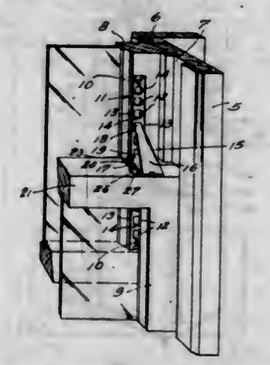
24. In a valve operating mechanism, means for opening the valve, a pair of spaced abutments mounted one on the valve stem and the other on a stationary part adjacent thereto, a plurality of inclined guide pins secured to one of said abutments and disposed about the valve stem ex-

teriorly of the same, and a plurality of valve rotating and closing springs interposed between said abutments and mounted on the inclined guide pins.

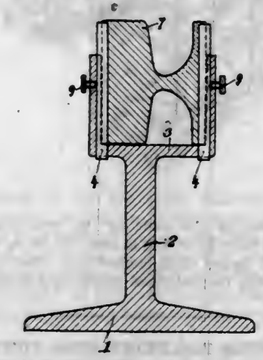


1,695,727. CAR ROOF. WILLIAM WRIGHT, Chicago, Ill., assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 18, 1924. Serial No. 744,301. 4 Claims. (Cl. 108—5.)

1. A car roof comprising, in combination, side plates, said side plates being connected by transversely extending carlines, a wooden inside roof secured to said carlines, the eaves edge of said inside roof being gained out longitudinally of the roof, a metallic flashing secured in the gained out portion, metallic roof sheets extending from ridge to eaves of the roof, one side of said roof sheets being flanged to provide an upwardly extending portion, said upwardly extending portion being rebent downwardly and inwardly over the sheet, an anchor having a base portion secured on the flashing in the gained out portion of the inside roof, the said base portion being in spaced relation to the general plane of the roof sheets, said anchor having a vertical transversely extending portion and having at its upper end a downwardly and outwardly extending hook engaging the side flange of the adjacent roof sheet, the other side of said sheets being flanged to provide an upwardly extending portion rebent at its upper end downwardly and outwardly away from the body of the sheet, said downwardly extending portion terminating in an inwardly and upwardly extending spaced hook, said last mentioned side flange fitting over the side flanging of the next adjacent sheet which is formed similar to the first mentioned side flange, the eaves edge of said roof sheets terminating in a depending flange.

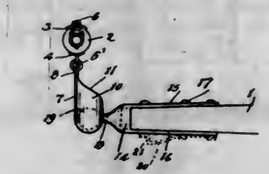


1,695,728. ORDNANCE BREECH MECHANISM. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed Sept. 3, 1926, Serial No. 133,402, and in Great Britain Sept. 15, 1925. 7 Claims. (Cl. 89—20.)



1. In power operated breech mechanism for guns, a hinged carrier, a breech screw mounted on the carrier, a transverse breech screw operating shaft mounted in the carrier, a cylinder and piston attached longitudinally to the gun on the same side as and forward of the carrier hinge, a crank pin on said shaft, and a swinging link mechanism through which the piston rod of said piston is connected to the crank pin.

1,695,729. WINDOW-SASH FASTENER. ARTHUR R. GLIDDEN, Seattle, Wash. Filed Dec. 9, 1925. Serial No. 74,271. 1 Claim. (Cl. 292—218.)

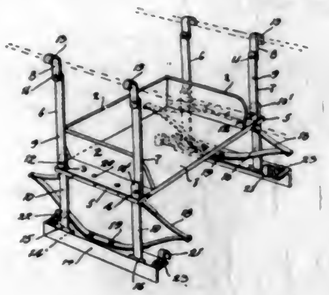


A sash-fastener comprising a strip member provided with a series of recesses, and means to secure said plate to the side rail of an upper sash, a plate member adapted to be secured to the parting rail of the lower sash, said plate being slotted to provide a tongue element therefor, a latch member mounted upon said plate, said latch being formed of a plate folded upon itself to provide two arm elements adapted for engagement in spaced apart recesses of the strip, a means for pivotally connecting the latch to said plate to turn about an axis in laterally offset relation with the strip whereby the latch is capable of being swung into and out of engaged relations with said strip, and a catch provided upon the tongue element of said plate for securing the latch in its engaged position and adapted to be disengaged from the latch by depressing said tongue element.

1,695,730. FIXATION DEVICE FOR RAILS WITH REMOVABLE HEADS. JOSEF GROHS, Vienna, Austria. Filed June 27, 1927, Serial No. 201,898, and in Austria July 2, 1926. 1 Claim. (Cl. 238—132.)

Fixation device for rails with interchangeable head, comprising in combination with the rail head having grooves, a rail consisting of a foot a web and a top portion and having grooves in said top portion alining with the above mentioned grooves, fixation bolts driven into said grooves of the rail head and the top portion of the rail and designed to be forced out in downward direction when said rail head has to be removed, and locking screws for securely holding said bolts in their position.

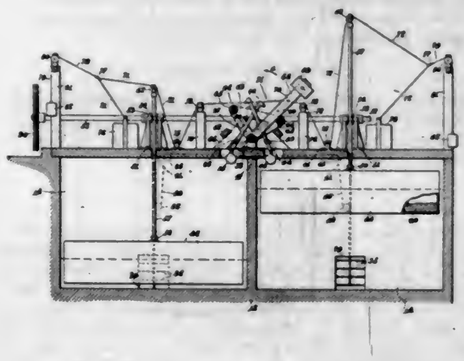
1,695,731. TONGUE AND NECK-YOKE COUPLING. ROBERT HAYDEN HOLLIS, Kamloops, British Columbia, Canada. Filed Mar. 26, 1926. Serial No. 97,690. 1 Claim. (Cl. 278—122.)



A tongue and neck yoke coupling comprising a socket-like member open at the upper end, the upper edge of said member being inclined downwardly from front to rear, the rear side thereof being provided with a vertical slot and the front side thereof being fitted at the upper end with spaced eyes, rings passing through the eyes, eye bolts passing through the rings and connecting the socket member centrally to the under side of the neck yoke and a head secured to the forward end of the tongue and presenting a horizontally extending neck terminating in a ball end, the ball being adapted to slidably enter the socket through the upper end thereof and the neck to pass downwardly through the slot.

1,695,732. WAGON SEAT. PETER HYNDMAN, Balcarres, Saskatchewan, Canada. Filed Nov. 26, 1926. Serial No. 150,981. 2 Claims. (Cl. 155—9.)

1. In combination, a wagon seat having slots in the corners thereof, elliptical springs underlying and secured to

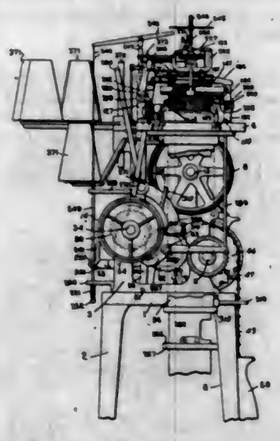


the ends of the seat, side bars underlying and secured to the springs, similar pairs of end hangers passing slidably

through the slots in the ends of the seat and slidably through aligned slots provided in the side bars, said hangers having their upper ends hooked and their lower ends enlarged and being formed from pivotally jointed sections.

---

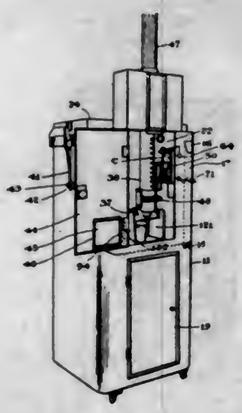
1,695,733. SYSTEM FOR DEVELOPING POWER FROM TIDES. JOHN A. KNOWLTON, Dorchester, Mass., assignor to said Knowlton, trustee for Universal Tide Power Co., Boston, Mass. Filed Feb. 25, 1926, Serial No. 90,557. Renewed May 17, 1928. 39 Claims. (Cl. 253—18.)



1. A system for utilizing the power of tides consisting of a pair of wells adapted to receive water from a high reservoir and subsequently discharge it into a low reservoir, an inlet gate to each well, an outlet gate from each well, means for simultaneously opening the inlet gate of one well and the outlet gate of the other well and subsequently closing said gates and opening the other gates, pistons in said wells adapted to operate independently of each other, and power creating mechanism actuated by said pistons only during the lowering thereof.

---

1,695,734. KNITTING MACHINE. PATRICK P. LA MONTAGNE, Bourbonnais, Ill., assignor, by mesne assignments, to Pope Machine Company, Kankakee, Ill., a Corporation of Illinois. Filed Aug. 19, 1921. Serial No. 493,595. 16 Claims. (Cl. 66—24.)



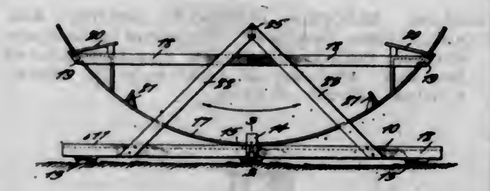
1. A circular knitting machine comprising two sets of needles, non-revoluble operating cams therefor, revoluble needle beds for said sets of needles and means for revolving them, means for causing the operation of said needles to produce either ribbed, plain circular or reciprocating work as desired, pattern controlled means for controlling the change from plain to ribbed work and from ribbed to plain

work, and means for suspending the operation of said pattern controlled means after a predetermined change from plain to ribbed work and for restoring the operation of said pattern controlled means upon the completion of the knitting of a predetermined measured length of ribbed work.

---

1,695,735. LIQUID-VENDING MACHINE. LYNN T. LEET, Montreal, Quebec, Canada. Filed Apr. 29, 1926. Serial No. 105,518. 2 Claims. (Cl. 225—21.)

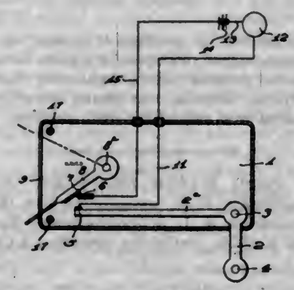
1. In a liquid vending machine, a sealed liquid reservoir, an agitating wheel rotatably mounted in said reservoir, paddles extending from the side of the wheel, a measuring bucket rotatably mounted on the side of the wheel, a toothed pinion secured to the bucket, a rack secured to the interior of the reservoir and adapted to contact with the toothed pinion to rotate the bucket through one complete revolution and means to rotate said agitating wheel.



1,695,736. MATTRESS AND METHOD OF SIDE STITCHING THE SAME. WILFRED B. MATHEWSON, North Weymouth, Mass., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Dec. 28, 1923. Serial No. 683,180. 8 Claims. (Cl. 45—138.)

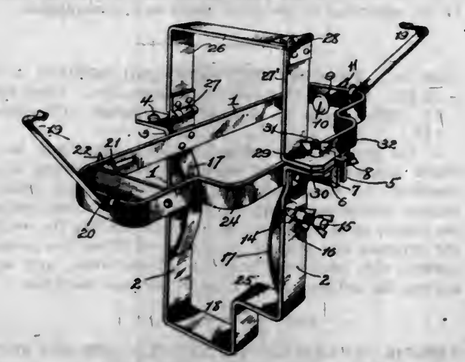
1. The process of side stitching a mattress which consists in indenting the side of a filled mattress at a plurality of separated points simultaneously so as to form a row of indentations and inserting a length of twine through the mattress body longitudinally of said row of indentations and in such position so as to cross each indentation near its inner end.

---



1,695,737. SEESAW. THEODORE C. MOLSDALE, Chattanooga, Tenn. Filed Dec. 18, 1926. Serial No. 155,614. 4 Claims. (Cl. 155—69.)

4. In an amusement device, an oscillatable element comprising a strip of material bowed to form a rocker, braces having their ends anchored to the said element near its end for holding the strip in a bowed shape, seats on the said oscillatable element, and a base narrower than the oscillatable element on which said oscillatable element is supported.



---

1,695,738. METHOD OF CONTROLLING THE PROCESSING OF MATERIALS. MORITZ L. MUELLER, Seattle, Wash., assignor to Northwest Blower Kiln Company, Portland, Oreg., a Corporation of Washington. Filed Nov. 9, 1927. Serial No. 232,094. 6 Claims. (Cl. 34—24.)

1. The herein described method of controlling the processing of material subject to shrinkage or swelling in its treatment, which consists of applying to said material, while under treatment an element operable under the influence of the variations in dimensions of the material, and varying the treatment accorded to said material in accordance with the movement of said element.

1,695,739. HOLDER FOR RECEPTACLES. EDWARD R. OWEN, Nyack, N. Y. Filed May 5, 1925. Serial No. 28,197. 3 Claims. (Cl. 224—29.)

1. A holder of the character described comprising a horizontal frame having an intermediate offset portion in one side, a yoke secured to and depending from the side members of the frame and provided with a horizontal shoulder below the offset portion of the frame, and clamping means carried by the yoke and the frame to engage a side and an end of a can supported by the yoke within the frame.

---

1,695,740. CATALYTIC AGENT AND PROCESS OF PREPARING THE SAME. WALTER A. PATRICK, Baltimore, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed May 5, 1921. Serial No. 466,998. 8 Claims. (Cl. 23—233.)

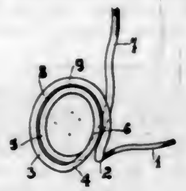
1. The method of preparing a catalytic agent, which comprises treating a hard porous material which at most has been only partially dried, said material having pores of a size to adsorb water vapor to such an extent as to contain at 30° C. at least 21% of its own weight of water when in equilibrium with water vapor at a partial pressure of substantially 22 mm. of mercury, with a composition capable of forming catalytic material, and treating to form such catalytic material.

---

1,695,741. WELL PACKER. JOHN P. PUGH and WILLIAM C. CLARK, Shreveport, La. Filed Mar. 19, 1927. Serial No. 176,646. 1 Claim. (Cl. 166—10.)

In a well packer, a bearing tube having upper and lower stops and perforations between said stops, a packer sleeve

slidable on the tube between said stops and arranged to normally uncover said perforations, and to cover the same when the sleeve is slid upwardly, and a frangible partition, at the upper end of the tube, above said perforations.

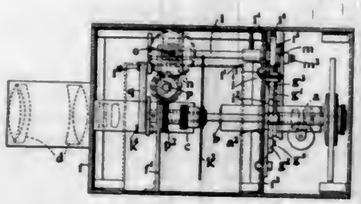


---

1,695,742. PROCESS OF PRODUCING SODIUM ACETATE. FRANCIS G. RAWLING, Madison, Wis. Filed May 11, 1927. Serial No. 190,646. 16 Claims. (Cl. 260—119.)

1. The process of preparing sodium acetates from wood which process comprises treating liquor remaining after treatment of woody material with substantially neutral sodium containing extractive compounds by concentrating the liquor, adding caustic soda and lime, heating the resultant mixture and thereby producing water-soluble sodium acetate and relatively insoluble calcium salts, and separating the sodium acetate from the calcium materials.

---



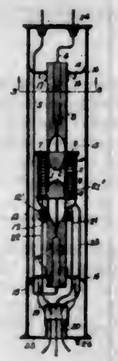
1,695,743. THREAD GUIDE AND CLEANER FOR SPINNING LOOMS AND THE LIKE MACHINES. JOSEPH AUGUSTE ROUGE, Remiremont, France. Filed July 28, 1927, Serial No. 209,125, and in France Aug. 4, 1926. 3 Claims. (Cl. 28—68.)

1. A guide and cleaner for threads comprising a member consisting of a length of wire shaped to form concentric and parallel convolutions in spaced relation to one another, the spaces between the said convolutions corresponding to the size of a thread to be guided and cleaned.

---

1,695,744. STEREOSCOPIC CINEMATOGRAPHY. LAWRENCE FRANCIS SAVAGE, London, England. Filed Jan. 25, 1927, Serial No. 163,353, and in Great Britain Feb. 6, 1926. 4 Claims. (Cl. 88—16.6.)

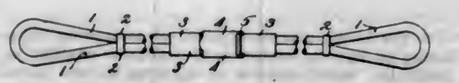
1. An optical system for the production of stereoscopic cinematographic effects comprising in combination a set of separated objective lenses of equal focal length, another set of lenses in alignment with the said set of objective lenses and disposed in the focal planes thereof, said lenses being adapted for the reception of aerial images produced on the respective focal planes of the said objective lenses, a set of re-photographing lenses in alignment with the lenses of the respective sets before referred to and at a determined distance from the aerial images, and a superimposing lens disposed adjacent to the set of re-photographing lenses, substantially as described.



1,695,745. HOSE PROTECTOR. GEORGE E. SKINKLE, Cleveland, Ohio. Filed July 18, 1927. Serial No. 206,497. 2 Claims. (Cl. 36—2.)

1. In a hose protector, the combination of an elongated integrally formed tubular body portion of thin highly resilient rubber adapted to be worn over the hose of the wearer, and a foot portion integrally united with the lower end of the body portion and shaped to fit over the upper portion of the shoe of the wearer, said foot portion having a band adapted to be stretched around the shoe to snugly engage the same and a band adapted to extend under the instep of the shoe, one of said bands being formed of detachably connected parts.

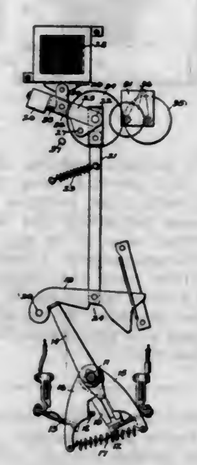
---



1,695,746. ELECTRON-DISCHARGE DEVICE. KIMBALL H. STARK, New York, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed May 13, 1919. Serial No. 296,846. 9 Claims. (Cl. 250—27.5.)

1. In combination, a gas-tight container, an anode element, a cathode element comprising a glass member having a photo-electric metallic coating sputtered thereon, a discharge-controlling element, and means comprising a spark gap for causing said cathode to emit electrons.

---

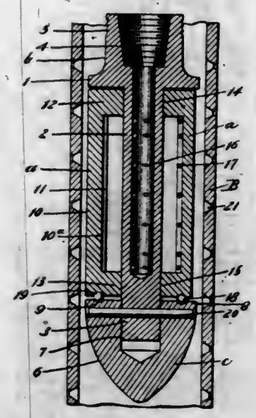


1,695,747. CORD WATCH BRACELET. CHARLES R. TOST, Centerdale, R. I., assignor to The Hadley Company, Providence, R. I., a Corporation of Rhode Island. Filed July 5, 1928. Serial No. 290,290. 4 Claims. (Cl. 24—123.)

1. A watch bracelet comprising a series of links pivoted together, the end links comprising oblong boxes substantially closed at the front and sides by the walls thereof and each substantially closed at its inner ends by the pivotal inter-connection with the next adjacent link, the outer ends of said end links being open respectively to receive the free ends of looped cords, a back pivoted to the sides of each end link near the outer end thereof and swinging toward the inner end to lock the ends of the cord near the outer end of the link, said backs closing the major portions of the rear openings in the end links approximately flush with the rear edges of said sides when in closed position, whereby the frayed ends of the cords are substantially enclosed and the cords are gripped at an appreciable distance from the tips of their frayed ends.

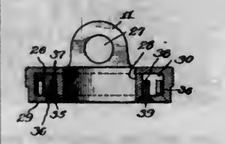
---

1,695,748. TIME-ELEMENT ELECTRORESPONSIVE DEVICE. GEORGE R. TOWNSEND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 5, 1925, Serial No. 48,422. Renewed July 20, 1928. 13 Claims. (Cl. 200—108.)



1. A time element electroresponsive device comprising a movable element biased to a predetermined position, means for holding the element in another position comprising a relatively movable member operable into the path of the element and arranged to be operated therefrom by movement of the element in accordance with its bias, means for locking the said relatively movable member against movement by the element, and electroresponsive means biased to render said locking means ineffective a time interval after a predetermined variation in the energization thereof.

13. In a potential starter the combination of a pivotally mounted switch member having an off position between a starting and a running position, said switch member being biased to the off position, a latch for holding the switch member in the running position and for preventing operation of the switch member to the running position before operation thereof to the starting position, a toggle connected to said latch and arranged when extended to hold the latch against movement when the said switch member is in the running position, a movable member normally biased to collapse said toggle, and an electro-magnet responsive to the voltage of the circuit controlled by the circuit in the running position for moving the said switch member to an inactive position when the voltage of the circuit is above a predetermined value, and time element means for delaying the return movement of said member to collapse said toggle for a time interval after a substantial reduction in the voltage of the controlled circuit.

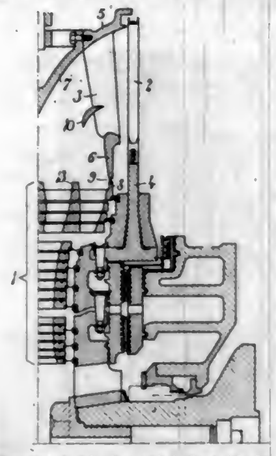


1,695,749. MEANS FOR CLEANING CASINGS. GEORGE D. WATSON, Torrance, Calif. Filed May 26, 1926. Serial No. 111,711. 2 Claims. (Cl. 166—20.)

2. In a well cleaning device, a box formed with a shaft, said box being provided with a flange, a head carried by the shaft, a rotor upon said shaft between the flange of the box and said head, the peripheral surface of said rotor being curved eccentrically relative to said shaft, and the maximum radius of said curved periphery lying in substantial alignment with the periphery of the flange and of the head.

---

1,695,750. LUBRICATING DEVICE. ROBERT H. WHITELEY, Oak Park, Ill., assignor to himself as trustee. Filed May 2, 1928. Serial No. 274,410. 4 Claims. (Cl. 192—98.)

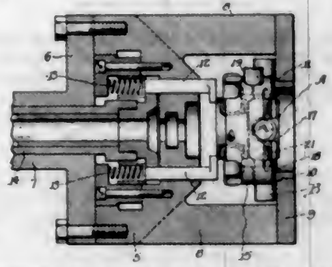


4. In a self lubricating clutch collar, the combination of a bearing member having a metallic body formed with a reservoir, a thrust bearing surface on said bearing member having conduits therein from said reservoir to said bearing surface, and lubricating members in said conduits consisting of initially plastic graphite compound pressed into said conduits in a plastic condition to conform to and fit within said conduits, said graphite compound being set in said conduit in intimate contact with the walls thereof, and said lubricating members being staggered and located to lubricate the bearing surface between said lubricating members.

---

1,695,751. RADIAL FLOW TURBINE. OSCAR ANTON WIBERG, Finspong, Sweden. Filed Aug. 20, 1927, Serial No. 214,322, and in Great Britain Aug. 30, 1926. 6 Claims. (Cl. 253—16.5.)

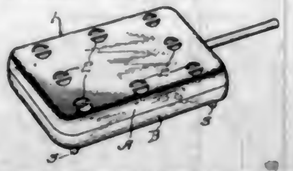
1. In a radial flow elastic fluid turbine, the combination with an axial flow rotary blade system to be operated by the driving fluid after it has left the radial flow blade system, of a non-rotary guide-blade system divided into a plurality of concentric sections so dimensioned that a sec-



tion of a smaller diameter has a greater proportional increase in effective cross section than the section of a greater diameter so that the velocities of the driving medium

at different diameters of the axial flow blade wheel will be proportional to the peripheral velocities at said diameters.

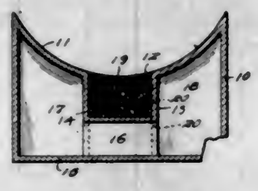
---



1,695,752. WORK HOLDER. RAYMOND M. WOTTICH, Fond du Lac, Wis., assignor, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1925, Serial No. 6,674. Renewed Oct. 11, 1928. 12 Claims. (Cl. 82—40.)

5. A shuttle for holding irregular work blanks comprising, in combination, a body adapted to receive the work blanks one in each end and having a plurality of notches in its ends adapted to receive projections on said blanks to square up said blanks in the shuttle, said notches being of such a depth that the blanks project slightly beyond the ends of said body to adapt them to be engaged by the opposed end clamping means of a chuck to square up and clamp the shuttle and blanks in the chuck, and means for yieldingly retaining said blanks in said body.

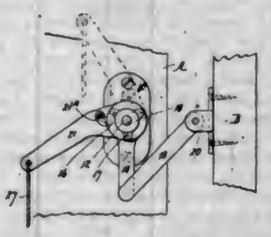
---



1,695,753. ELECTRICAL HEATER. JOHN M. BAKER, Columbus, Ohio. Filed Jan. 14, 1928. Serial No. 246,844. 2 Claims. (Cl. 219—41.)

1. An immersible water heater comprising a casing formed to include separable upper and lower sections, the walls of said sections being of perforate construction, registering bosses projecting inwardly from the walls of said sections, a plate of insulation clamped between the meeting surfaces of said bosses, a threaded connecting element arranged axially of said bosses for retaining said sections and plates in rigidly assembled relationship, and a plurality of electrically heated coils extending longitudinally across the upper and lower surfaces of said plate and spaced from the walls of said casing, said coils being arranged for direct contact with the liquid circulating through the casing.

---



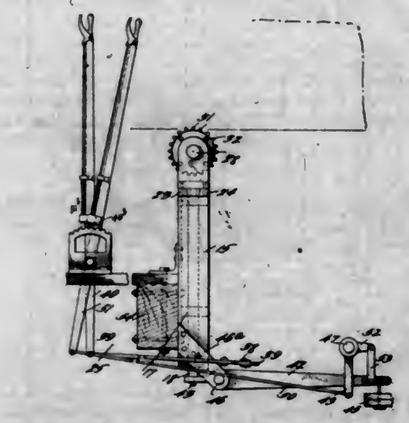
1,695,754. OIL CELLAR FOR JOURNAL BOXES. NOAH BENN, Anderson, Ind. Filed June 17, 1926. Serial No. 116,640. 1 Claim. (Cl. 308—83.)

An oil cellar for journals consisting of a casing having a top concaved wall provided along its median longitudinal dimension with a slot, partition walls located interiorly of the casing and joining with the top wall thereof at the longitudinal edges of the slot forming a recess packed with lubricating material, a conduit wall passing through the partition walls and bridging the space between them and located approximately midway between the ends of the slot and below the top wall, said partition walls being provided with perforations located beyond the sides of the conduit wall.

---

1,695,755. OPERATING MEANS FOR FANLIGHTS AND THE LIKE. FRANK BIRD, Hamilton, New Zealand, assignor to Bird's Patents Limited, Auckland, New Zealand. Filed Nov. 18, 1927. Serial No. 234,221. 4 Claims. (Cl. 208—102.)

1. Fanlight or other hinged-sash operating means comprising a journal pivot secured to the main frame of the sash, a crank lever mounted upon such journal and having a ratchet wheel combined therewith, a connecting rod extending between the crank lever and the sash and pivotally attached thereto, an operating lever structually separate from and movable relatively to the crank lever and journalled on the said journal, a pawl pivoted on such operating lever and adapted to engage the said ratchet wheel when the operating lever is turned in one direction, and spring means for normally turning said operating lever in the reverse direction.

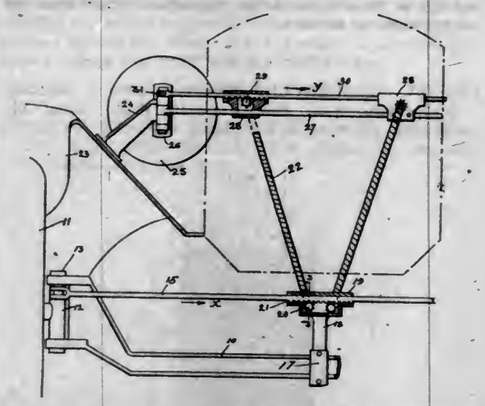


1,695,756. BLUISH SULPHURIZED INDOPHENOL DYES AND PROCESS OF MAKING THE SAME. HERMANN BOTS and ANDRÉ CATINEAU, Basel, Switzerland, assignors to the Firm Society of Chemical Industry in Basle, Basel, Switzerland. Filed Nov. 9, 1925, Serial No. 68,024, and in Switzerland Nov. 28, 1924. 8 Claims. (Cl. 260—19.)

1. The herein described process for the production of bluish sulphurized indophenol dyes by reducing the indophenols made from nitrosophenols and carbazole and sulphurizing the leucoderivative thus obtained in presence of aromatic aminocompounds corresponding to hydrocarbons having less than 12 carbon atoms at substantially 180°.

---

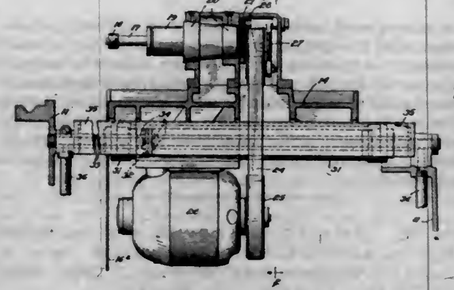
1,695,757. CANT SUPPORT AND GUIDE. TROY EARL CAMP, Stephenson, Miss. Filed Nov. 7, 1927. Serial No. 231,613. 6 Claims. (Cl. 143—157.)



5. In a cant support and guide, a rotatably mounted roller on which a cant may travel, bearings in which the roller is supported, a vertically disposed rotatable shaft connected to a bearing near one end of the roller, a rotatably mounted cam shaft near the opposite end of said bearing, means for communicating the rotary motion of the cam shaft to the last mentioned bearing for oscillating the last mentioned bearing, means for rotating the cam shaft, means for supporting the said shafts in the bearings, and means for moving the said shafts axially and for retaining them in different positions of adjustment.

---

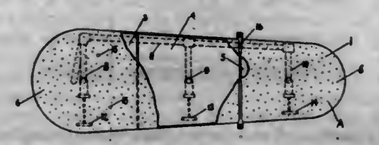
1,695,758. AUTOMATICALLY-DIRIGIBLE HEADLIGHT FOR VEHICLES. PIO CANTINI S., Bogota, Colombia. Filed Sept. 6, 1917. Serial No. 217,867. 2 Claims. (Cl. 240—62.)



1. In a motor vehicle provided with a pair of steering wheels and a steering rod having positive connection with the wheels; of brackets secured to the vehicle, headlights journaled on the brackets, ears on the headlights, a toothed bar having hinged connection with said ears, a connecting member between the brackets, gear housings secured on said member permitting reciprocation of the toothed bar therein, pinions mounted with their axes horizontally in said housings meshing with the bar teeth, another gear housing fixedly mounted on the vehicle permitting reciprocation of the steering rod therein, said bar running substantially parallel with said rod and transversely of the vehicle, a tooth rack on the steering rod, pinions mounted with their axes horizontally in the second housing meshing with the tooth rack, and flexible shafts connecting the pinions in said other housing with the corresponding pinions in the first housings, said gear housing adapted to permit a limited movement of the toothed bar and the steering rod in axial direc-

tion of the pinions, whereby the headlights are caused to swing with the wheels and substantially the same angle, substantially as set forth.

---

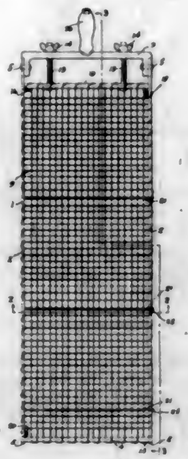


1,695,759. GRINDING MACHINE. PRENTICE CONRADSON, Evansville, Wis., assignor, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 15, 1923. Serial No. 619,124. 3 Claims. (Cl. 51—166.)

1. A machine of the character described having, in combination, a base, a carriage mounted for reciprocation on said base, a rotary spindle in said carriage, said carriage having a depending bracket extending into said base, a piston and cylinder unit having one element supported by said bracket and having the other element stationarily mounted on said base, a motor mounted on the under side of said bracket below said piston and cylinder unit, and means for supplying fluid to said cylinder and exhausting it therefrom to effect reciprocation of the carriage.

---

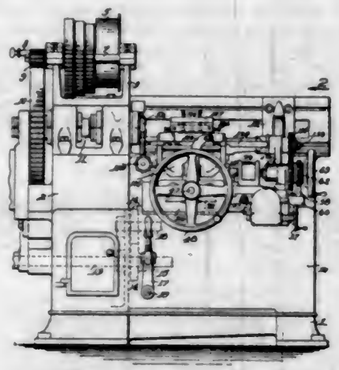
1,695,760. BUCK FOR CLOTHES-PRESSING MACHINES. JOHN HERBERT ELLIS, Vancouver, British Columbia, Canada. Filed Dec. 11, 1926. Serial No. 154,173. 1 Claim. (Cl. 68—9.)



In a pressing machine a hollow buck having a perforated top plate, a wall dividing the buck into compartments,

means for passing a fluid through any one of said compartments, a padding on said plate and means parallel to a dividing wall and directly thereover adapted to clamp the padding to the plate to prevent the spread of fluid from one compartment to another.

---

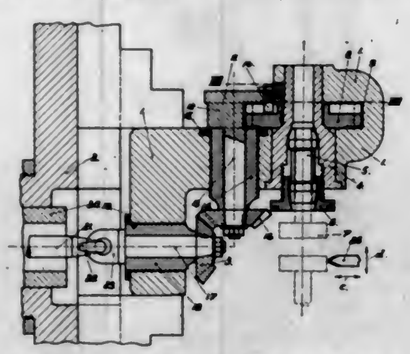


1,695,761. CHEESE-CURD KNIFE. JOHN H. HECKER, Gardnerville, Nev. Filed June 15, 1927. Serial No. 199,052. 1 Claim. (Cl. 31—48.)

A cheese curd knife comprising a rectangular portable frame, short in width and relatively long in length, a handle secured to the shorter end of said frame, and a wire wrapped transversely around said frame, and then longitudinally around said frame, the wires crossing each other for making squares, the squares on one side of the knife being staggered with respect to the squares on the opposite side for causing the knife to cut strips one-quarter of the area of said squares.

---

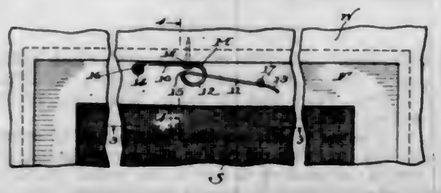
1,695,762. BACKING-OFF DEVICE FOR CUTTERS HAVING ANGULARLY-DISPOSED TEETH. FRANK O. HOAGLAND, Worcester, Mass. Filed Mar. 27, 1924. Serial No. 702,441. 37 Claims. (Cl. 82—19.)



1. In a backing-off attachment, the combination of a slide and means for reciprocating the slide to cause a tool rigidly carried thereby to cut a proper backing-off surface on the end of a tooth on a cutter due to the motion of the slide, with a tool holder supported on the slide, means for changing the elevation of the tool holder on the slide and at the same time shifting the tool holder in the direction of reciprocation of the slide so as to change the position of the tool longitudinally as well as vertically on the slide.

35. The method of making a form tool for backing-off a rotary cutter which consists in providing a master tool having an outline the same as the form to be produced on the cutter, mounting it in stationary position, providing a blank for a form tool of a corresponding outline, rolling or rocking it on a long radius along the edge of the master tool and causing a relative transverse motion between the master tool and form blank to shape the surface of the form tool blank while the latter is rocking along the master tool.

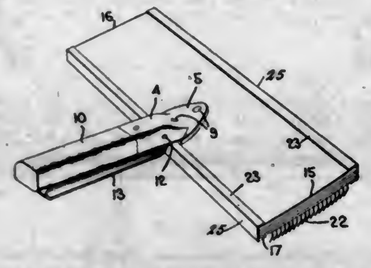
---



1,695,763. APPARATUS FOR MACHINING POLYGONAL PARTS ON ORDINARY LATHES. ALBERT CORNELIS HOFSTEE, The Hague, Netherlands. Filed Mar. 12, 1925, Serial No. 15,098, and in the Netherlands Mar. 25, 1924. 6 Claims. (Cl. 82—34.)

1. An apparatus for machining polygonal articles on an ordinary lathe comprising a work clamping device adapted to be rotated by a lathe spindle and to clamp the work in a position with its longitudinal axis perpendicularly intersecting the axis of rotation of the spindle, said clamping device being mounted to rotate with the work about the axis of the latter, and means for rotating the clamping device about the work axis in response to its rotation with the spindle about the lathe axis.

---



1,695,764. HANGING DEVICE FOR SCREENS. RUSSELL SIDNEY HOLCOMB, Los Angeles, Calif. Filed July 20, 1926. Serial No. 123,667. 5 Claims. (Cl. 156—14.)

3. A screen hanging device comprising a member having a pair of substantially oppositely disposed arms connected at their confronting ends by a curled resilient portion, the free end of one of the arms having an eye through which a fastening member is adapted to be extended to secure the device to a screen while said one of the arms is adapted to be engaged intermediate its ends with a projection secured to a window frame and the other of the arms with a projection secured to the screen, all in such manner that the screen will be hung by the device in the window frame and normally urged to closed position by the device.

1,695,765. HAND CARD. IRVING C. HOWES, North Andover, Mass., assignor to Davis & Furber Machine Company, North Andover, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1928. Serial No. 246,973. 5 Claims. (Cl. 119—93.)

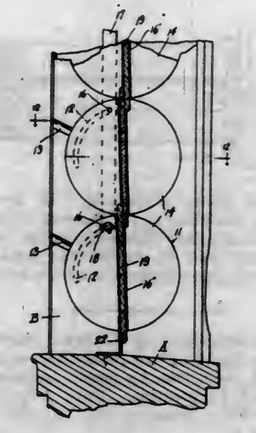
1. A hand card comprising a laterally tapered flexible sheet of card clothing, a correspondingly laterally tapered body, a handle projecting from the body and two metal slides each secured to an edge of the sheet and fitted to slide therewith laterally on the edges of the body whereby, when the slides and sheet are slid on to the body, the sheet is stretched taut against the face of the body and is firmly held in position and whereby the sheet is readily removable and replaceable.

---

1,695,766. PAPER-HANGER'S BOARD. EARLE S. JUDD and RALPH RUSSO, Southington, Conn. Filed Dec. 8, 1925. Serial No. 74,150. 19 Claims. (Cl. 304—38.)

1. A paper hanger's board comprising a main section, a guide section of appreciably less width than said main section, hinged by one of its edges to one of the edges of said main section, having a guide-edge for paper at the other free edge, and provided with an arm for overlying said paper that is connected to said other free edge of said guide section, and the parts being constructed and arranged so that said guide section can be opened out for serving as an extension of said main section.

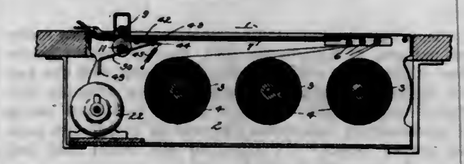
---



1,695,767. BOOKHOLDER. WILLIAM V. JOHNSON, Washington, D. C. Filed Sept. 1, 1927. Serial No. 216,979. 4 Claims. (Cl. 45—58.)

4. A book holder comprising two members having grooves in the opposed faces thereof, cross rods having enlargements slidably engaged within said grooves, a member pivotally connecting the crossed portions of the rods, an arm pivotally connected to said member for swinging movement in substantially a horizontal direction, a second arm connected to the outer portion of said first named arm, arms slidably disposed through the extremities of the second arm and provided with cross heads, means for slidably connecting said cross heads to the members, a supporting stand, and means for adjustably connecting the second named arm with said supporting stand.

---

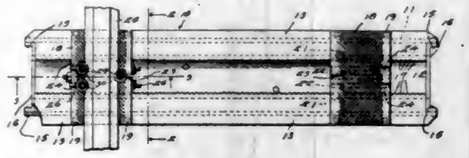


1,695,768. WINDOW SASH. RICHARD S. KELLY, Jersey City, N. J. Filed Mar. 10, 1928. Serial No. 260,629. 4 Claims. (Cl. 20—62.)

1. In a window sash of the character described, a pair of spaced parallel frame units, a plurality of longitudinally spaced members rotatably arranged within the inner faces of said frame units, horizontal glass panels arranged at their ends within said members, means whereby all of said members may be simultaneously rotated for moving the panels to open or closed position, the inner faces of said members being cross slotted for receiving the ends of the glass panels and said frame units being formed at their outer edges with slots whereby when the member channels are in alinement with said slots said panels may be removed therefrom.

---

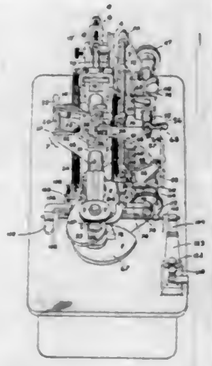
1,695,769. POWER-DRIVEN BILLING MACHINE. VIRGIL D. MANSFIELD, Columbus, Ohio. Filed Apr. 13, 1926. Serial No. 101,800. 4 Claims. (Cl. 192—127.)



2. In an autographic register, a casing comprising a table, frictional feeding rollers arranged adjacent to one end of said table and adapted to have placed between them a record sheet, said sheet being provided at spaced intervals with perforations, a shaft journaled in said casing, an electric motor, power transmission devices between said motor and said shaft, a disk loosely mounted on said shaft and provided with a conical bore, a conical clutch member rotatable and longitudinally movable with respect to said shaft, spring means normally maintaining said clutch in engagement with said disk to drive the latter with said shaft, a switch for governing the oper-

ation of said motor, and movable link means cooperative with said switch and said clutch member to close the circuit of said motor when the clutch member is in driving engagement with said disk and to permit of the opening of said switch when said clutch member is disengaged with said disk, said link means being further arranged for engagement with the perforations in said record sheet to complete the opening of said switch.

---

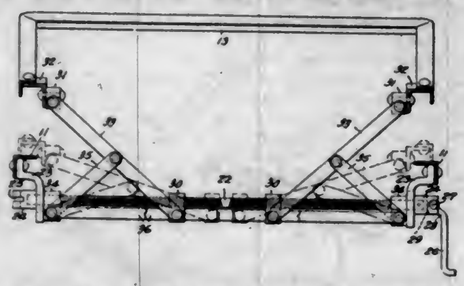


1,695,770. RAILWAY TIE. JOHN B. MASERANG, Belleville, Ill. Filed June 20, 1928. Serial No. 286,757. 3 Claims. (Cl. 238—79.)

1. A railway device comprising a tie having a channel, notches in the walls of the channel, a rail chair having teeth interchangeably engageable in the notches, means for securing the chair to the tie, and means carried by the chair for clamping engagement with a rail base.

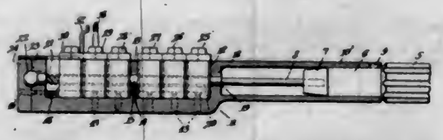
---

1,695,771. ENGRAVING MACHINE. SAMUEL C. MCKEOWN, New Rochelle, N. Y., and CHARLES C. BRUCKNER, Ironia, N. J., assignors, by mesne assignments, to The Engravograph Corporation. Filed July 14, 1922, Serial No. 574,977. Renewed July 13, 1928. 54 Claims. Cl. 90—24.4.)



1. In a reproducing machine, a relatively movable tracer and pattern, a reproducing tool, means whereby movement of the tracer caused by its engagement with the pattern during their relative movement in one direction electrically controls the operation of the tool, and means for mechanically supporting the tool in inoperative position during relative movement of the tracer and pattern in the opposite direction.

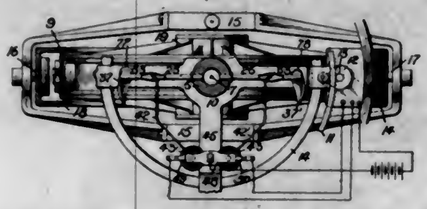
---



1,695,772. BED. WILLIAM MINGLE and HENRY M. JACKSON, Montreal, Quebec, Canada, assignors to Simmons Limited, Montreal, Quebec, Canada. Filed June 23, 1924. Serial No. 721,916. 3 Claims. (Cl. 5—77.)

1. In a bed, a main frame, an articulated bed bottom supported thereon, an adjusting gear for the bed bottom comprising a right- and left-hand screw disposed transversely of the bed, nuts thereon, linkage between said nuts and the sides of the bed bottom frame, thrust collars within which said screw turns, and further links half the length of said first links connected between the medial points of said first mentioned links and the thrust collars whereby the ends of said first links connected to the bottom frame are compelled to move vertically and the outward thrust of the nuts is transmitted to the collars, and links connecting the thrust collars on opposite sides of the bed.

---

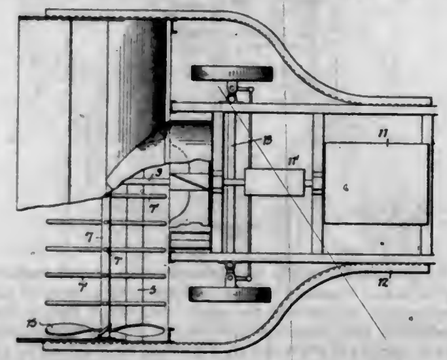


1,695,773. ATTACHMENT FOR DENTAL ENGINE HANDPIECES. WILLIAM C. MORGAN, Beeville, Tex., assignor of one-fourth to J. Sid Hall, Beeville, Tex. Filed Jan. 19, 1926. Serial No. 82,318. 23 Claims. (Cl. 32—11.)

6. A dental engine hand piece comprising a support, a pair of tool holders associated therewith and movable at substantially right angles to each other to vary the distance therebetween and the working depth of tools adapted to be mounted in said holders, and means carried by said support for rotating said tool holders.

---

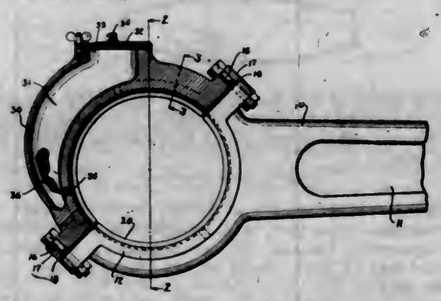
1,695,774. TRANSMISSION AND FOLLOW-UP SYSTEM FOR GYROCOMPASSES. THOMAS A. MORGAN and HERBERT H. THOMPSON, Brooklyn, N. Y., assignors to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 25, 1922. Serial No. 531,748. 9 Claims. (Cl. 23—226.)



2. In a gyro-compass, the combination with the sensitive element, of means for transmitting the readings thereof to a distance comprising a follow-up element, means for rotating the same, normally balanced air pressure means for controlling said rotating means to render the same effective when the balance is disturbed, means for disturbing said pressure balance upon relative rotation of said sensitive and follow-up elements, and transmitting means driven by said follow-up element.

3. In a gyroscopic compass, the combination with the sensitive element, of means for transmitting to a distance the readings thereof, comprising a power driven follow-up supporting element, a transmitter, there being a plurality of ports on one of said elements, means for drawing air through said ports, cooperating valves on the other of said elements to vary the relative amount of air flowing through the ports on relative rotation of the elements, means for rotating said transmitter and said second mentioned element, and means actuated by the variations in the flow of air for controlling said rotating means.

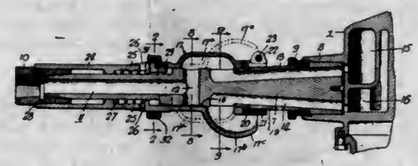
---



1,695,775. SNOWPLOW. JAMES MUSIL and DAVID HUTCHISON GILCHRIST, Olivia, Minn. Filed Sept. 27, 1927. Serial No. 222,339. 2 Claims. (Cl. 37—43.)

1. In a snow plow, in combination, a series of agitating arms, a rotatable shaft on which said arms are mounted, and fans mounted on said shaft at the ends thereof adapted to blow snow toward the central portion of the shaft, a casing within which the shaft, agitating arms and fans are mounted, means for rotating the shaft, agitating arms and fans, and means for conveying snow from the casing.

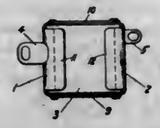
---



1,695,776. ECCENTRIC YOKE. FRED A. NEMEC, Brea, Calif. Filed Jan. 22, 1925. Serial No. 4,021. 1 Claim. (Cl. 308—125.)

In a device of the class described, an eccentric having a peripheral boss thereon, an eccentric bushing on said eccentric, said bushing having an inner peripheral recess corresponding to and fitting over the boss on said eccentric, a peripheral boss on said eccentric bushing, said eccentric bushing comprising a plurality of curved pieces of metal provided with anti-friction means, a yoke fitted about said eccentric bushing, said yoke having an inner peripheral recess adapted to fit over said peripheral boss on said eccentric bushing, said yoke comprising two portions, means to fasten said portions together to form a complete eccentric strap, one of said strap portions having a protuberance thereon, an oil cavity in said protuberance, a second bushing in said yoke, said yoke and said last named bushing having aligned apertures, an oil pipe in said apertures, a wick in said pipe, and means to prevent relative rotation between said last named bushing and said yoke.

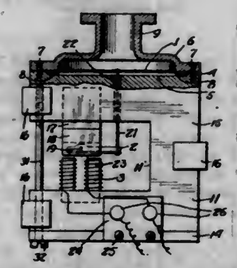
---



1,695,777. REVERSIBLE DRILL THROTTLE. REINHOLD A. NOALING, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 6, 1922. Serial No. 550,190. 10 Claims. (Cl. 121—35.)

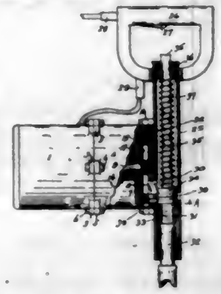
1. A reversible drill throttle, comprising a stem having a tapered portion between its ends and having supply and drill passages opening outward through said taper, a tubular valve member with a tapered bore fitting the taper of the stem over the open ends of said passages and having inlet and exhaust chambers for reversing the flow of air through the drill passages on turning the valve member, the taper of the stem and that of the bore being complementary and relatively slight so that the end areas of said valve chambers will be substantially the same, a relatively light spring at the smaller end of the taper for holding the valve member up on the same, and an end thrust bearing for the valve member at the larger end of the taper.

---



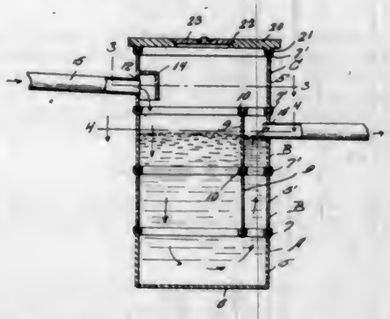
1,695,778. ELECTRICAL CONDENSER. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Jan. 2, 1925. Serial No. 269. 6 Claims. (Cl. 175—41.)

1. An electrical condenser comprising a stack of insulating and conducting sheets, a pair of clamps embracing opposite ends of said stack and in electrical connection with said conducting sheets at the respective ends and holding members of insulating material independent of any members embraced by said clamps connected between said clamps.



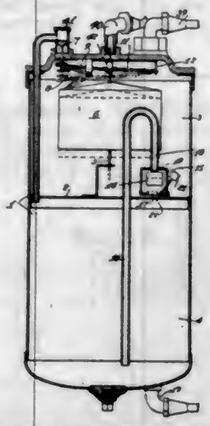
---

1,695,779. LOUD SPEAKER. ALEXANDER NYMAN, New York, N. Y. Filed Nov. 24, 1925. Serial No. 71,240. 16 Claims. (Cl. 179—119.)



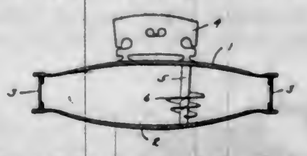
1. A loud speaker comprising a sound producing surface, a rocking armature connected thereto, a source of magnetic flux, means for providing additional magnetic flux, and a member under tension for controlling the effect of said flux and said means in the actuation of said surface.

1,695,780. ELECTRIC HAMMER. KONRAD OLSEN, Tacoma, Wash. Filed Aug. 16, 1926. Serial No. 129,545. 1 Claim. (Cl. 78—38.)



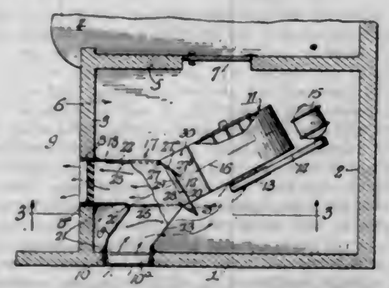
In an electric hammer, the combination of a main tube, having a handle attached to one end; a bushing in the other end of the tube and adapted to receive the tool; a bearing bushing adjacent said tool bushing; a second bearing bushing at the handle end of the tube; a hammer rod extending within said tube through both said bearing bushings, and adapted to reciprocate therein; a weight secured to said rod, between the bearing bushings and near the lower end thereof; a long helical spring mounted within said tube and surrounding said hammer rod and compressed between said upper bearing bushing and said weight, whereby said rod, with the weight, is actuated downward to engage the tool; a cam arranged adjacent said weight and rotating on an axis at right angles to the axis of said rod; and a pin secured to said weight and engaging said cam, whereby the weight is raised against the action of said spring and is released to be driven by said spring against said tool.

1,695,781. GREASE TRAP. JOHN EDWARD OTIS, West New York, N. J. Filed June 28, 1927. Serial No. 202,024. 6 Claims. (Cl. 210—56.)



1. A grease trap of the class described formed of concrete comprising a bottom section having a cylindrical wall provided with a channel bead for its upper edge and a bottom at its lower edge, intermediate portions comprising a cylindrical wall having its lower edge receivable in the channel bead of the bottom section and having a channel bead formed on its upper edge, an arcuate partition in the second section eccentrically thereof, a third section having a cylindrical wall with its lower edge received in the channel bead of the second section and formed with a channel bead at its upper edge, the wall of the third section formed with an opening, and a shield extending inwardly from the wall of the third section above the opening and then downwardly to terminate below the opening, a disc-like cover having an annular rib depending from its lower surface to be received in the channeled bead of the third section, said second section having an opening adapted to receive an outlet pipe.

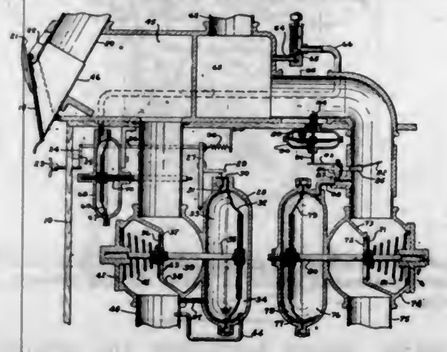
1,695,782. LIQUID-FEEDING DEVICE. VOLNEY A. SEARLES, Jackson, Mich., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 19, 1923. Serial No. 669,478. 3 Claims. (Cl. 103—236.)



1. In a device of the class described, an upper chamber and a lower chamber, means for alternating vacuum and atmospheric pressure in the upper chamber, a siphon tube connecting said chambers and having one leg terminating in the upper chamber and its other leg terminating in the lower chamber, a float valve controlling communication of said siphon with the upper chamber, and means for holding said float-valve open when the level of liquid in the upper chamber is below a predetermined point.

1,695,783. SOUND POST FOR VIOLINS. RALPH W. STEPHENSON, Davenport, Iowa. Filed Apr. 21, 1927. Serial No. 185,371. 3 Claims. (Cl. 84—277.)

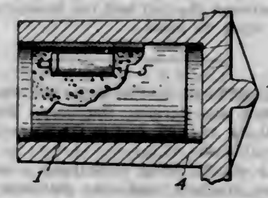
1. A device of the class described, comprising a soundpost adapted for support in the body of a stringed musical instrument, and a lamina wound in a continuous spiral on said post.



1,695,784. VENTILATING APPARATUS. IRVING C. STERNBERG, New York, N. Y., assignor to Arctic Nu-Air Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 27, 1927. Serial No. 194,620. 8 Claims. (Cl. 98—33.)

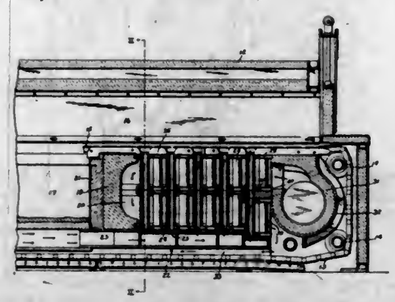
1. In combination with building walls defining a compartment and having apertures therein, one leading to atmosphere and another leading to a room in said building to be ventilated, a blower in said compartment having an inlet and a discharge and means connecting said discharge to either of said apertures, thus bringing the other aperture into the influence of the inlet of said blower.

1,695,785. PRESSURE-VACUUM SYSTEM OF PNEUMATIC DISPATCH. JOSEPH J. STOETZEL, Bellaire, N. Y., assignor to G. & G. Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed May 13, 1926. Serial No. 108,711. 3 Claims. (Cl. 243—2.)



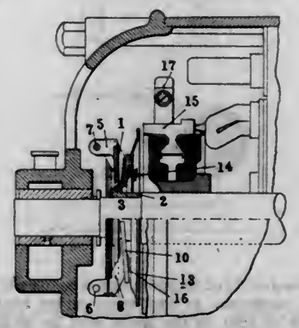
1. In pneumatic dispatch apparatus, a carrier transmitting line, means for causing a carrier-propelling flow of air under pressure through said line, a normally closed gate at the outlet of said line, a by-pass around said gate through which air in advance of a carrier being transmitted can escape, means actuated by the carrier as it approaches said outlet for temporarily cutting off said by-pass thereby causing a pressure surge in the line, and means operated by said pressure surge for cutting off said carrier-propelling flow.

1,695,786. BUMPER. GEORGE W. VEALE, Cleveland Heights, Ohio, assignor to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 22, 1927. Serial No. 214,534. 3 Claims. (Cl. 293—55.)



1. In a bumper for automobiles, a pair of substantially parallel impact bars spaced apart, each of said bars having a longitudinally extending groove in its outer face, and a clamp for said bars comprising a plate overlying the grooved surfaces of said bars, said plate being provided with bosses of a width to fit said grooves, a second plate overlying the opposite surfaces of said bars, and a bolt joining said plates between said bars.

1,695,787. METHOD OF MAKING PISTON RINGS. EDWARD M. WILLIAMS, Elyria, Ohio, assignor to Williams Alloy Products Company, Elyria, Ohio, a Corporation of Illinois. Filed Feb. 28, 1925. Serial No. 12,218. 1 Claim. (Cl. 29—156.6.)

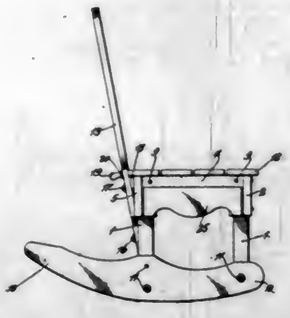


The method of manufacturing piston rings which consists in forming a metal cylinder, mounting the same for rotation, hammering the outer surface of the cylinder by imparting rapid blows to the cylinder while it is rotating upon the entire surface thereof, then taking the cylinder and mounting it for rotation so that the inside surface is exposed and subjecting the inside surface to a rapid hammering action over the entire surface while the cylinder is rotated, then removing the cylinder of metal and cutting it into individual rings and splitting the individual rings transversely of the ring.

1,695,788. GLASSWARE-ANNEALING LEER. PERCY Q. WILLIAMS, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 28, 1927. Serial No. 164,138. 18 Claims. (Cl. 49—47.)

18. A leer comprising an annealing tunnel, a heating unit below the forward end of the tunnel, a vertical tube recuperator associated with said unit and opening into said annealing tunnel through the floor of the latter, means causing continuous recirculation of atmospheric air through the recuperator and predetermined portions of the tunnel, and means including slide valves for eliminating certain of the recuperator tubes from the path of circulation of air.

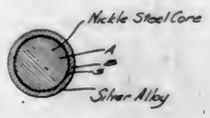
1,695,789. SHORT-CIRCUITING MECHANISM. CARL H. WOLFF, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 16, 1924. Serial No. 686,505. 9 Claims. (Cl. 200—80.)



1. Circuit changing mechanism comprising a pivoted centrifugal member, and a circuit-closing member supported by the centrifugal member by means of a pin and slot connection.

1,695,790. CHAIR. ISABELLE KERN WURDACK, Normandy, Mo. Filed Nov. 11, 1925. Serial No. 68,294. 1 Claim. (Cl. 155—188.)

A chair comprising two front and two rear legs, a seat supported at the upper end of said legs, a transverse slat and a transverse guide attached to the rear sides of the front legs below the seat and having their lower and upper

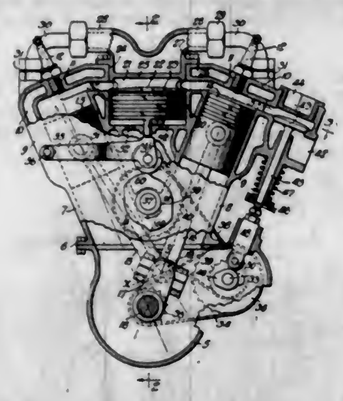


edges parallel and spaced apart, a transverse slat and a transverse guide attached to the rear sides of the rear legs below the seat and having their lower and upper edges parallel and spaced apart, a work support mounted on said guides for sliding movements, front and rear side walls for said support having their upper edges below and adjacent to the lower edges of and in the planes of said slats respectively, an outer end wall attached to said support and

having its ends extending beyond said side walls and arranged to extend across portions of the outer surfaces of said legs respectively and having its lower edge extending below said support and constituting a handle, and transverse members attached to the front sides of the front legs and rear sides of the rear legs respectively and having their ends extending laterally beyond said legs and terminating approximately in the plane of the outer surface of said outer end wall.

---

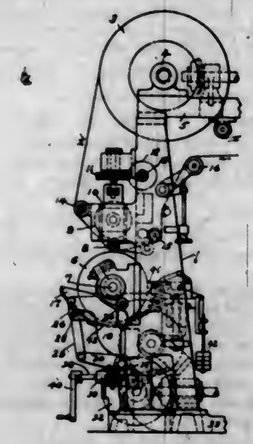
1,695,791. LEADING-IN WIRES FOR EVACUATED CONTAINERS AND PROCESS OF MAKING SAME. JOHN ADAM YUNCK, South Orange, N. J. Filed Aug. 6, 1927. Serial No. 211,252. 8 Claims. (Cl. 176—36.)



1. As a new article of manufacture, a composite wire having a mean coefficient of expansion under heat approximately equal to that of the glass used in making incandescent electric lamps, which wire comprises a core of approximately forty percent (40%) nickel and sixty percent (60%) iron, with a welded-on sheath formed of a silver alloy, the silver being the major constituent of said alloy.

---

1,695,792. INTERNAL-COMBUSTION ENGINE. ANTON ZEMAN, Chicago, Ill. Filed Aug. 2, 1926. Serial No. 126,372. 14 Claims. (Cl. 123—78.)



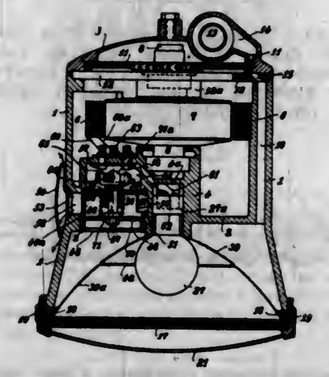
1. In a four-cycle internal combustion engine, a plurality of cylinders arranged in inclined relation, pistons working in said cylinders, and a shallow auxiliary compression member between pairs of said cylinders having connection with said cylinders to compress the gases therein when one of the pistons has moved over the dead-center

position on its working stroke and the other is in its dead center position to create an initial starting leverage on firing.

---

1,695,793. INKING MECHANISM FOR INTAGLIO-PRINTING MACHINES. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed July 25, 1925. Serial No. 46,021. 6 Claims. (Cl. 101—157.)

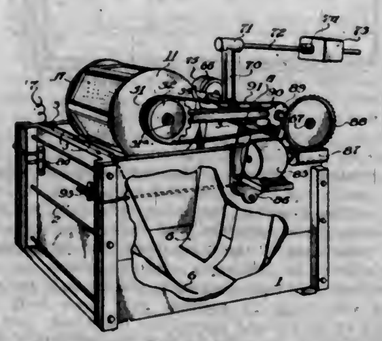
1. In an intaglio printing machine, the combination of a printing couple including an engraved form cylinder and cooperating impression means, an ink fountain in which the form cylinder runs, a pivot for the ink fountain about which the fountain may be rocked, a worm, means for rotating the worm, a roll engaging the worm, and operating connections between the roll and the fountain for rocking the fountain about its pivot.



---

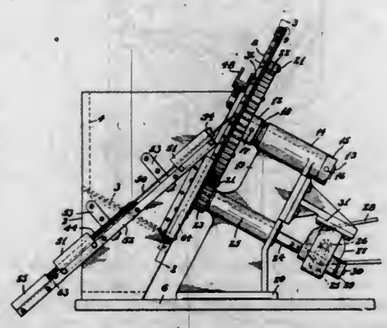
1,695,794. ELECTRIC SAFETY LAMP FOR MINERS. OTTO BECKER, Jr., Barmen, Germany. Filed Apr. 28, 1927, Serial No. 187,202, and in Germany Nov. 4, 1925. 5 Claims. (Cl. 240—17.5.)

1. A safety electric lamp comprising a casing having separate motor, generator and lamp chambers, an air inlet to the motor chamber, an air conducting passage between the motor and lamp chambers and a lateral final air outlet



in rear of the lamp chamber, a turbine in the motor chamber, a current generator in the generator chamber driven by said motor, a lamp in the lamp chamber supplied with current from the generator, a lens closing the front of the lamp chamber, a reflector partition subdividing the lamp chamber into front and rear compartments, with which

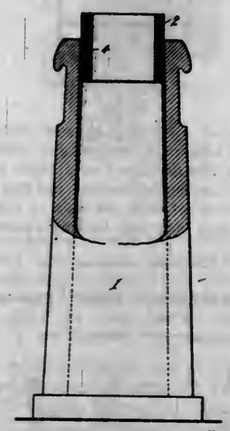
rear compartment the air passage communicates, said partition being provided with an air gap connecting the two compartments and surrounding the lamp, a throttling device arranged in the line of flow of the air from the rear compartment to the final air outlet, and a switch device controlling the supply of current to the lamp and governed in action by said throttling device.



---

1,695,795. PLATING TANK. WILLIAM E. BELKE, Chicago, Ill. Filed Apr. 14, 1927. Serial No. 183,731. 2 Claims. (Cl. 204—11.)

1. In an electroplating device, a tank for an electrolytic solution, an anode for contacting the solution, a pair of supporting arms each having a transverse shaft journaled thereto, a container for the pieces to be electroplated rotatably mounted on said shafts, an arbor having depending slotted ends adapted to be detachably supported by said shafts, a plurality of contact fingers depending from the arbor, means for immersing the container in the solution, and means for rotating the container.

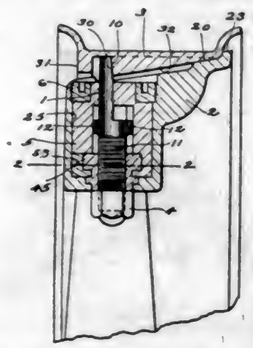


1,695,796. STRINGING MACHINE. EDWARD B. CARTER, Boston, Mass. Filed Apr. 23, 1927. Serial No. 186,125. 37 Claims. (Cl. 209—72.)

1. In a washer stringing machine, a washer carrying rotor, a wire associated with said rotor, and means to present the convex side of said washers to one end of said wire.

---

1,695,797. SHRINK-HEAD CASING. FRED H. CHAPIN, Cleveland Heights, Ohio, assignor to The Bourne-Fuller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 29, 1924. Serial No. 758,594. 13 Claims. (Cl. 22—147.)

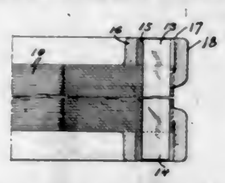


1. A shrink head casing for ingot molds comprising a mixture of cement and slag in the proportions of substantially four parts of slag to one part of cement.

---

1,695,798. MANUAL RIM LOCK. WILLIAM A. CLENCH, Vancouver, British Columbia, Canada. Filed Nov. 23, 1926. Serial No. 150,174. 2 Claims. (Cl. 301—21.)

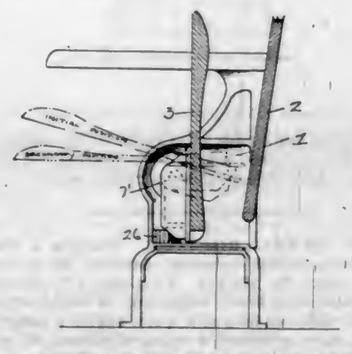
1. A rim-locking device comprising, in combination with a rim and with the felly of a wheel having a socket opening at its outer periphery, a casing shouldered at its outer end and receivable in said socket, a securing nut secured in the mouth of said socket and engageable with the shoulder of said casing to retain it in its socket and lying



beneath the rim, a clamping nut swiveled in the inner end of said casing, and engageable from the inner periphery of the felly, a bolt threaded in said clamping nut and pro-

jectable and retractable through said casing from the outer periphery of the felly, and radially thereof, upon manipulation of said clamping nut.

---



1,695,799. METHOD OF PRODUCING INTEGRAL BAR WINDINGS IN THE ROTORS OF ELECTRIC MOTORS. CARL L. DAUN, Milwaukee, Wis., assignor, by mesne assignments, to American Electric Motor Company, Milwaukee, Wis. Filed Aug. 14, 1923. Serial No. 657,374. 5 Claims. (Cl. 29—155.5.)

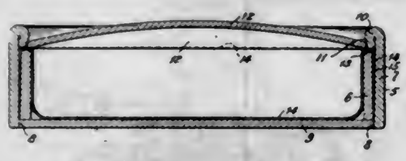
3. The method of producing a rotor with integral bar windings, which comprises, inserting a circular series of metal bars about the periphery of a rotor body with the ends of said bars projecting beyond the end of said body, and fusing the metal of said bar ends to form an integral ring connecting said bars and bearing against the end of said body.

---

1,695,800. SELF-RAISING SEAT. BERNARD J. DEVER, Oakland, Calif. Filed Dec. 13, 1926. Serial No. 154,456. 4 Claims. (Cl. 155—87.)

1. In combination a chair frame having a seat pivotally mounted thereon; a disc rotatably mounted on the seat pivot; a spiral spring around the seat pivot having one end thereof secured to said pivot and the other end secured to the disc; a jointed arm having one end pivotally secured to the chair frame and the other end pivotally secured to the disc; means on the chair seat to engage the jointed arm to move the arm and disc to wind the spring as the seat is swung from a vertical to a horizontal position; and means interposed between the wound spring and seat to swing the seat from a horizontal to a vertical position.

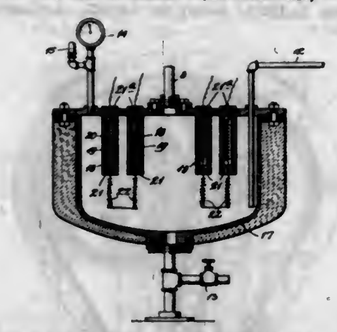
---



1,695,801. ELEMENT SUPPORT FOR ELECTRIC STOVES. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Nov. 18, 1926. Serial No. 149,025. 11 Claims. (Cl. 219—37.)

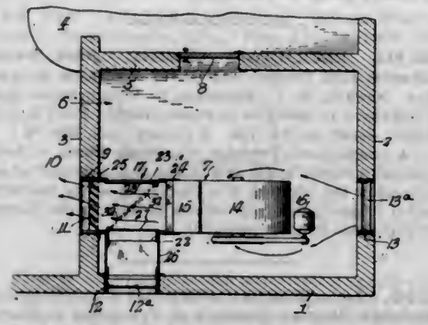
1. A heating element, comprising, a base member, a heating coil, and a plurality of supporting devices for supporting said heating coil on said base member, said supporting devices being formed to provide a tongue adapted to extend through the base member to receive a pin for securing the supporting devices to the base member and pins engaging said supporting devices.

---



1,695,802. CONTAINER. ALEXANDER H. DREUX, Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Toronto, Ontario, Canada, a Corporation. Filed May 18, 1926. Serial No. 109,846. 3 Claims. (Cl. 229—6.)

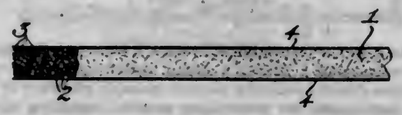
1. A container including, in combination, a body including outer and inner tubular body parts, a fabric lining positioned within the inner body part for lining the interior of the container, said lining overlapping the top or outer edge of the inner body part to provide a sealing member at said outer edge and having its edges lying between said outer and inner tubular body parts for securing the lining in position, said outer body part extending at its top end beyond the inner body part and being provided at the extended part thereof with a crimp or roll providing a closure retaining bead positioned adjacent said top edge of the inner body part and providing a closure seating groove between said bead and said sealing member, and a removable closure having edges positioned in said seating groove and adapted to engage yieldingly with the container whereby said closure can be snapped past said bead into or out of closing position, and said seating groove and closure having mutually engaging contact surfaces cooperating by virtue of the yielding engagement between the container and closure when the latter is in closing position to yieldingly press said closure into sealing contact with said sealing member.



1,695,803. ELECTRIC PRESSURE GENERATOR. AUGUST EIMER, New York, N. Y. Filed May 10, 1924. Serial No. 712,289. 1 Claim. (Cl. 219—38.)

A generator comprising a boiler adapted to contain a liquid of low conductive capacity, a closure for said boiler, tubes depending from said closure and extending into the liquid and electrical heating elements mounted within said tubes, insulated and sealed therein, a portion of said elements extending below said tubes and being exposed to contact with the liquid.

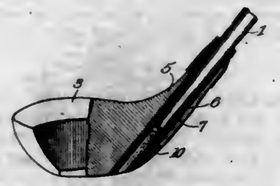
---



1,695,804. VENTILATING APPARATUS. ALLEN A. FEINBERG, Minneapolis, Minn., assignor to Arctic Nu-Air Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1927. Serial No. 195,955. 5 Claims. (Cl. 98—33.)

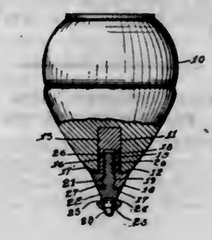
1. In combination with building walls, defining a compartment and having apertures therein, one leading to a room to be ventilated and other being closable and leading to atmosphere, a blower in said compartment and having a discharge neck, tubular means providing a continuation of said neck and connected to said first named aperture, said continuation having an opening in one said and a lateral extension on the other side connected to one of said other apertures, and a damper arrangement in said continuation and operable to either close off said opening and extension from said continuation or to connect said extension only with said neck through said continuation.

---



1,695,805. WADDING AND BAT. JOSEPH GATTI, New York, N. Y., assignor to Gatti Service Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1928. Serial No. 251,270. 2 Claims. (Cl. 19—146.)

1. A wadding composed of granular wood pulp intermixed with long cotton fiber, the latter being in the majority and forming a binder to make a substantial fabric.



1,695,806. GOLF CLUB. PAUL E. HELLER, Newark, N. J. Filed Mar. 22, 1927. Serial No. 177,254. 4 Claims. (Cl. 273—80.)

1. A golf club comprising a shaft and a head member mounted thereon, said head member being formed with a connecting portion having a bore to receive the shaft end, a rubber sleeve fitted within the bore and interposed between the wall of the bore and the shaft, said shaft being of tubular metal and a tapered wedge forced into the lower end portion of the shaft for expanding the shaft end for securing the parts and to effect compression of the sleeve, substantially as described.

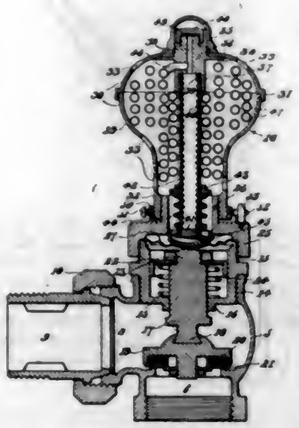
---

1,695,807. TOP. JACOB L. KLEINMAN, New York, N. Y. Filed July 28, 1926. Serial No. 125,344. 14 Claims. (Cl. 46—32.)

1. A top comprising a body portion having a centrally disposed opening therein, a peg mounted in said opening, a spinning member loosely mounted in said peg and shock absorbing means operatively connected to said body portion, and peg.

---

1,695,808. COMPOSITION TO BE ADDED TO CEMENT MIXINGS FOR COLD GLAZES OR THE LIKE. JOHN LANGBEIN, Hamburg, Germany. Filed May 20, 1925, Serial No. 31,707, and in France Feb. 18, 1925. 1 Claim. (Cl. 134—1.)

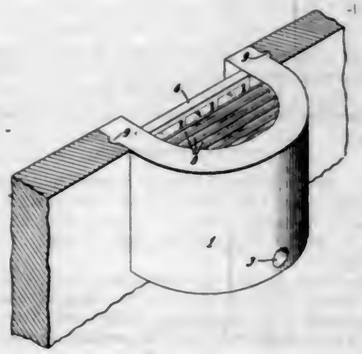


A composition of matter comprising a mixture of polymerized linseed oil, ammoniacal water, milk of lime, and infusorial earth in the proportions of 250 : 660 : 5750 : 1000 parts by weight respectively, for the purpose set forth.

---

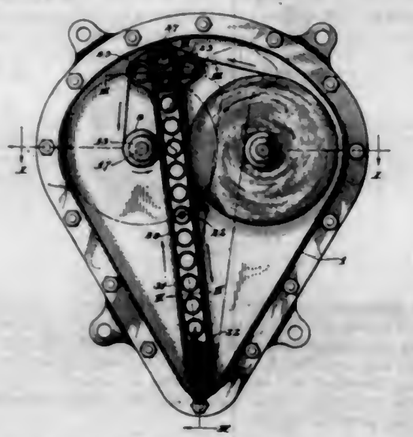
1,695,809. AUTOMATIC HEAT-CONTROLLING REGULATOR. JAMES J. LAWLER, Mount Vernon, N. Y., assignor to Direct-Control Valve Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 13, 1925. Serial No. 50,032. 13 Claims. (Cl. 236—42.)

1. In a device of the type described, a valve casing, a cage mounted in said casing, a reciprocating valve carried by the cage, a spring in the cage for opening the valve, a cap mounted on the cage and having a tubular stem in axial alinement with the valve, an actuator loosely posi-



tioned in the bore of the stem, and a thermostatic unit bodily adjustably carried by the stem on said cap in axial alinement with said valve and functioning when being adjusted,

to seat the valve or permit the spring to unseat the valve, the unit automatically functioning to close the valve without being adjusted.



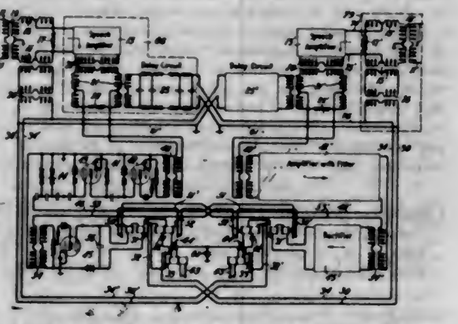
---

1,695,810. AREAWAY CONSTRUCTION. URWIN J. MAGILL, Rye, N. Y. Filed Jan. 20, 1928. Serial No. 248,042. 3 Claims. (Cl. 72—0.5.)

1. In the combination of a foundation wall, having an opening therein leading to an areaway, a unitary areaway structure adapted to be set into the said opening, and form an integral part of the wall, comprising a cast shell having side walls fitting in said opening and formed to receive a window frame, and a bottom wall having its forward portion projecting into the opening and forming a window sill.

1,695,811. MAGAZINE FILTER. FRED W. MANNING, Berkeley, Calif., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 1, 1925. Serial No. 59,787. 4 Claims. (Cl. 210—197.)

1. In a filter, an enclosed chamber containing a filter wall in the form of a belt, a supply spool and a storage spool for the belt, an endless flexible drainage member forming a support for the belt between said spools, and a frame supporting said drainage member and pivoted to move between and toward and from the spools.

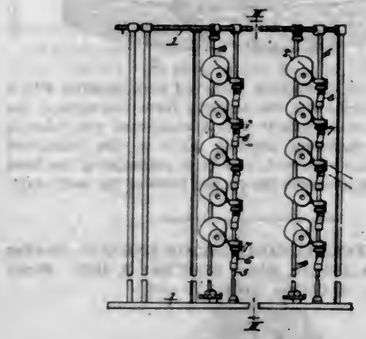


---

1,695,812. REFRACTORY CEMENT. JOHN WESLEY MARDEN, East Orange, and HENRY KNEELAND RICHARDSON, Newark, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed June 25, 1923. Serial No. 647,744. 4 Claims. (Cl. 106—9.)

1. A composition of matter comprising thoria, a double halide salt adapted to act as a binder and suspender of said thoria upon the addition of a liquid and a dry ingredient adapted to precipitate any colloids present in the composition and cause them to coagulate.

---



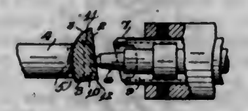
1,695,813. ELECTRIC-CURRENT TRANSMISSION. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1923. Serial No. 667,437. 38 Claims. (Cl. 178—44.)

2. In a signal transmission system, a signal transmission path comprising a normally closed switch contact in that condition directly reducing the transmission efficiency of the path, and means for translating received signaling variations into mechanical movement, and for directly mechanically employing the initial movement so produced, at its inception, to open said switch contact.

1,695,814. YARN-COMPENSATING DEVICE FOR CREELS. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Nov. 11, 1925. Serial No. 68,367. 2 Claims. (Cl. 242—131.)

1. A yarn supply, a yarn tension device located below the yarn supply and a vertically disposed rod around which the yarn is wrapped at least once as it passes from the yarn supply to the tension device, said rod operating to keep the yarn comparatively taut when the yarn is running and at rest, thereby tending to take out the kinks when running and to keep the yarn from kinking when at rest.

---



1,695,815. COLLAR FASTENER. ELWOOD BURTON NEWELL, Grand Rapids, Mich. Filed Jan. 14, 1928. Serial No. 246,691. 5 Claims. (Cl. 24—87.)

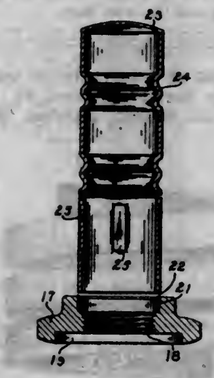
1. A collar comprising a neck band and a turned-over outer flap provided with keepers having their ends secured on the inner side of the adjacent edge portions respectively of the flap and having middle portions movable relatively to their secured ends into substantially the same plane by means for connecting said edge portions comprising hook members adapted to removably engage the middle portions of the keepers respectively.

---

1,695,816. PRODUCTION OR MANUFACTURE OF DISKS OR BLANKS FOR BUTTONS OR THE LIKE FROM IRREGULARLY-SHAPED PIECES OF MATERIAL. HENRY T. NOYES and RICHARD STANFORTH, Rochester, N. Y., assignors to Art in Buttons Incorporated, Rochester, N. Y., a Corporation of New York. Filed Dec. 29, 1922. Serial No. 609,707. 33 Claims. (Cl. 79—1.)

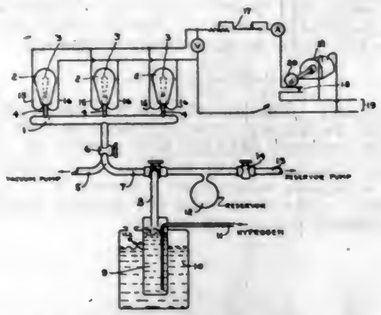
1. In a method of producing disks, buttons, or the like from irregularly shaped nut pieces, each having a skin surface thereon, the steps which consist in establishing a base plane roughly parallel to the skin side of each nut piece, severing from each irregularly shaped nut piece a blank having substantially circular characteristics and diameters of different lengths and still retaining the skin side, during such severing providing on the blank a finished button face on the side opposite the skin side, and, while maintaining diameters of different lengths in the blank, providing by a separate operation a finished button face on that side of the blank having the skin side.

---



1,695,817. PRODUCTION OR MANUFACTURE OF DISKS OR BLANKS FOR BUTTONS OR THE LIKE FROM IRREGULARLY-SHAPED PIECES OF MATERIAL. HENRY T. NOYES, Rochester, N. Y., assignor to Art in Buttons Incorporated, Rochester, N. Y., a Corporation of New York. Filed Dec. 29, 1922. Serial No. 609,715. 22 Claims. (Cl. 79—1.)

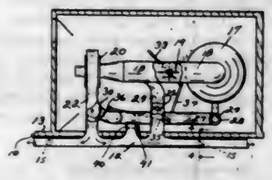
1. In a method of producing disks, or blanks for buttons, or the like, from irregularly shaped material, the steps which consist in severing from such material, pieces having substantially regular and cylindrical characteristics but with more or less incomplete cylindrical edges, separating such cylindrical pieces with incomplete cylindrical edges from those having complete cylindrical edges and recutting said cylindrical pieces with incomplete cylindrical edges to provide cylindrical pieces having complete cylindrical edges, the circumference of each of which will substantially intersect the edge of the incomplete piece from which it is formed at the point of the smallest diameter of such piece.



---

1,695,818. DUST CAP FOR TIRE VALVES. ERASTUS G. OAKLEY, Southport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn. Filed July 9, 1924. Serial No. 725,076. 5 Claims. (Cl. 152—12.)

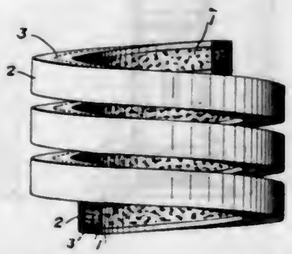
1. In combination, a valve stem, a resilient metal dust cap adapted to be placed thereon, the wall of said dust cap being depressed inwardly to provide non-resilient ribs projecting beyond the inner wall of the cap, said ribs being adapted to engage the valve stem and to distort the cap from its normal shape and thereby cause it to grip the stem, and a rim nut provided with an upwardly facing recess to receive the lower edge of the valve cap and urge it to its normal shape.



1,695,819. ACTIVATION OF FILAMENTS. GEORGE DEAN O'NEILL, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Apr. 1, 1927. Serial No. 180,252. 13 Claims. (Cl. 250—27.5.)

1. Method of activating thoriated tungsten filaments comprising intermittently incandescing said filaments in a carbon bearing atmosphere.

---



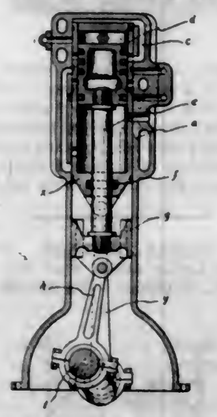
1,695,820. FORCED-VENTILATION SYSTEM. THOMAS JOSEPH POWER, Milwaukee, Wis. Filed June 29, 1925. Serial No. 40,233. 11 Claims. (Cl. 98—33.)

1. A ventilating system adapted for alternately delivering air into an apartment and withdrawing it therefrom, comprising the combination of an air forcing device having valved inlet and outlet ducts, a branch duct connected with said outlet duct, a main duct also connected with the outlet duct and a valved cross connection between the main duct and the inlet duct.

---

1,695,821. PACKING AND METHOD OF MAKING THE SAME. CLEMENT RESTEIN, Hatboro, Pa. Filed Mar. 18, 1924. Serial No. 700,182. 2 Claims. (Cl. 154—2.)

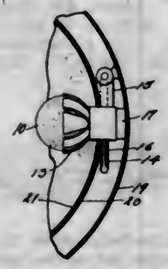
1. Means for imparting curved form to a packing consisting of a cork strip and a flexible channeled strip hugging the cork strip on three sides which comprise a line of stitching extending through both the cork strip and the confronting walls of the channeled strip whereby circular form can be imparted to the cork strip even in dry condition, and a vulcanizable component for the channeled strip whereby it can be set in curved form to hold the cork strip in the curved form imparted to it.



1,695,822. PACKING AND METHOD OF MAKING THE SAME. CLEMENT RESTEIN, Hatboro, Pa. Filed Mar. 18, 1924. Serial No. 700,183. 2 Claims. (Cl. 154—2.)

2. The method of making a curved cork packing which consists in distributing the bending force throughout the cork strip by reinforcing it with a connected vulcanizable flexible strip, applying bending force to the connected strips in the plane thereof, and then vulcanizing the bent flexible strips to preserve the curved form of the cork strip.

---



1,695,823. INTERNAL-COMBUSTION ENGINE. ROBERT A. REYNOLDS, Detroit, Mich. Filed Mar. 3, 1927. Serial No. 172,493. 6 Claims. (Cl. 123—50.)

1. In an internal combustion engine, the combination of a cylinder, a closed end sleeve and piston reciprocating in the cylinder at different speeds, the cylinder and sleeve provided with ports and by-passes arranged without valve control to take in a charge of air adjacent one end of the sleeve and a charge of fuel mixture adjacent the other end of the sleeve to compress one of these charges and by-pass the same into the combustion chamber to expel the burnt gases and by-pass the other charge into the combustion chamber to mix with the first-mentioned charge, and then compress the intermingled charges, fire the same and complete a two-cycle of operation.

---

1,695,824. DIMMING HEADLIGHTS FOR AUTOMOBILES. JOHN ROCHE, Hoboken, N. J. Filed Mar. 3, 1928. Serial No. 258,710. 3 Claims. (Cl. 240—45.)

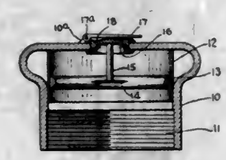
1. In a motor vehicle head light; a reflector; an electric lamp mounted at the center of said reflector, the bulb

of said lamp being partially coated with a light modifying substance; a shield for covering and uncovering the transparent portions of said bulb; an armature adapted to revolve said shield upon its axis; and a solenoid for operating said armature.

---

1,695,825. ELECTRIC FUSE. JULIUS SCHÜRMANN, Berlin-Zehlendorf, Germany. Filed Nov. 2, 1926, Serial No. 145,792, and in Germany Feb. 24, 1925. 1 Claim. (Cl. 102—10.)

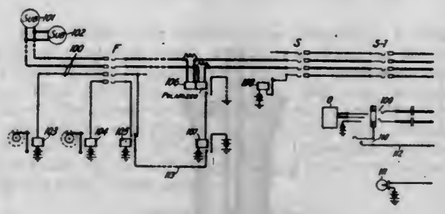
In an electric fuse of the type described, the combination with a non-combustible mass practically enclosing the inflammable fuse parts, of non-inflammable, non-combustible insulation enclosing the fuse-wires, a non-inflammable strip leading to and supporting the ignitible initial charge, conducting coatings covering the sides of said strip, and a conductor between said conducting coatings.



---

1,695,826. UMBRELLA. FRANK E. SINCERE, Mount Vernon, N. Y. Filed June 6, 1922. Serial No. 566,402. 6 Claims. (Cl. 135—20.)

6. An umbrella of the class described comprising, in combination, a stick, a top constructed by a plurality of gores united along their adjacent edges, and having metallic ribs disposed therein along the line of union of said gores, the inner ends of said ribs being angularly bent, a plurality of stretchers having one end mounted in a runner on said stick, the other end being attached to said ribs, reinforcing members disposed on either face of said top, and centrally thereof, and a flared collar disposed on said stick and having a portion lying in contact with one of said reinforcing members and another portion engaging the bent ends of said ribs whereby to prevent the movement of said top along said stick.

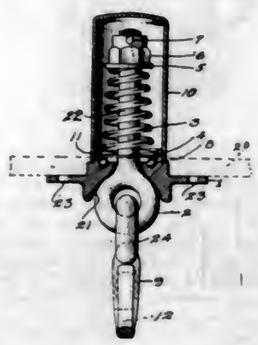


1,695,827. SIGNAL DEVICE. HARRY E. SIPE, New York, N. Y. Filed Dec. 1, 1927. Serial No. 236,954. 7 Claims. (Cl. 116—114.2.)

1. A signal device for radiator caps, said cap having a chamber opening into the chamber of the radiator and said device comprising a bimetallic member arranged in said chamber in a plane transversing the axis of said cap and actuated by the temperature conditions existing in the chamber of the radiator and extending into the chamber of said cap, a signal element in operative connection with said bimetallic member whereby when said member is exposed to predetermined degrees of heat, said signal element will be moved into operative position, the coupling of said element with said member being such as to automatically return the signal element into inoperative position when the temperature in said chambers is lowered, said signal element involving a member slidably engaging said radiator cap and means for forming a seal around said sliding member, said bimetallic member constituting a striplike body, and means involving a tube inserted into the cap for supporting one end of said striplike body.

---

1,695,828. TELEPHONE-EXCHANGE SYSTEM. RAY L. STOKELY, Floral Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1927. Serial No. 205,541. 5 Claims. (Cl. 179—10.)

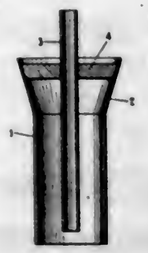


1. In a telephone system, a party line, a message register for each party, a revertive ringing machine, selector switches controlled by a subscriber on the party line for seizing said machine when a revertive call is made, an operator's position, means for signaling the operator if a connection is extended to said machine, and means controlled by the operator for selectively operating said message registers.

---

1,695,829. SUSPENSION DEVICE FOR PUNCHING BAGS. JOSEPH THEODORE TAUDVIN, New York, N. Y. Filed Oct. 21, 1926. Serial No. 143,285. 2 Claims. (Cl. 272—78.)

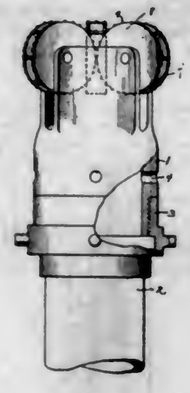
2. In combination, in a suspension for a rope suspended punching bag, a support, an axially movable rope suspending swivel-pin rotative on said support, and a spring disposed resiliently to restrain axial movement of said pin engendered by blows on said bag, a ball race on said sup-



port, a bearing washer resting on ball bearings in said race, said pin passing through said washer, a retaining washer, said spring disposed between said two washers

and resting on said bearing washers and comprising a helix through which said pin passes, and a nut threaded on said pin outside said retaining washer.

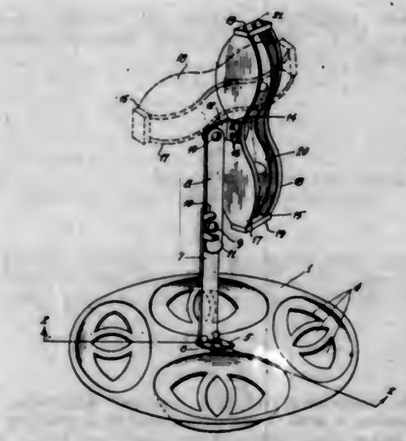
---



1,695,830. JOINT AND CONNECTION. GUY THÉODORE THURNEYSSEN, Paris, France. Filed Oct. 25, 1924, Serial No. 745,731, and in France Oct. 27, 1923. 4 Claims. (Cl. 49—92.)

1. In combination, a hollow metallic member having an enlarged portion with comparatively thin walls, a glass member of smaller external diameter than the internal diameter of said metallic member, an annular member of glass secured to said glass member and means for hermetically securing said annular glass member in the enlarged portion of said metallic member.

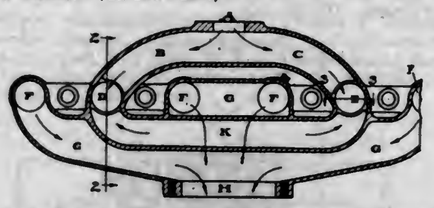
4. In a hermetically sealed vessel, a metallic member having a conical portion, an enamel coating applied to said conical portion and a cover plate fused to said enamel coating.



1,695,831. PIPE-CLEANING DEVICE. LEE R. TITCOMB, Brooklyn, and HARRY S. ASHMUN, New York, N. Y. Filed July 7, 1926. Serial No. 120,974. 5 Claims. (Cl. 15—104.12.)

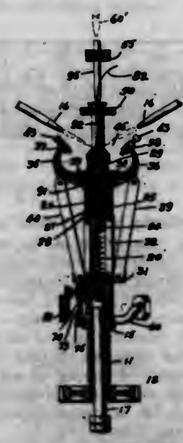
3. A pipe cleaning device comprising a nozzle having a plurality of paddle wheels associated with the front end thereof, the said nozzle being adapted to have a body of water forced through and out therefrom, the said nozzle being open adjacent the inner peripheries of the said paddle wheels.

---



1,695,832. EGG BOILER. HEINRICH HUBERT WEBER, Maspeth, N. Y. Filed Feb. 29, 1928. Serial No. 257,997. 3 Claims. (Cl. 53—1.)

2. An egg boiler embodying a plate provided with depressions therein forming seats for eggs, an hour-glass, a holder for said hour-glass a toggle embodying links pivoted together at the elbow of the toggle, means for pivotally connecting one terminal of the toggle to the center of the plate, and means for pivotally connecting the other end of the toggle to the hour-glass holder.

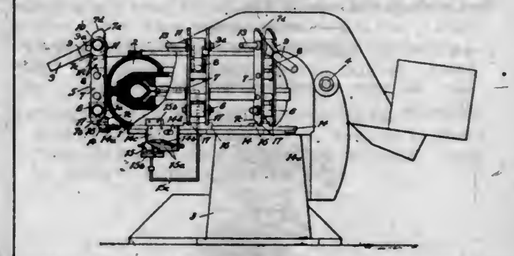


1,695,833. VAPORIZER. GEORGE R. WELCH, Detroit, Mich., assignor, by mesne assignments, to Handy Governor Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 25, 1924. Serial No. 694,995. 5 Claims. (Cl. 123—122.)

1. A vaporizer for a multicylinder internal combustion engine having external carbureting means, comprising a mixture entrance, an inlet manifold in the form of a loop, comprising an upper portion with which said mixture entrance communicates, a substantially horizontal lower portion into which liquid fuel is adapted to drain by gravity and in which the fuel mixture will oscillate, an exhaust manifold in heat relation with the lower portion of said manifold for vaporizing the fuel therein, a plurality of mixture outlets from said loop manifold located below said mixture entrance and above said heating passage.

---

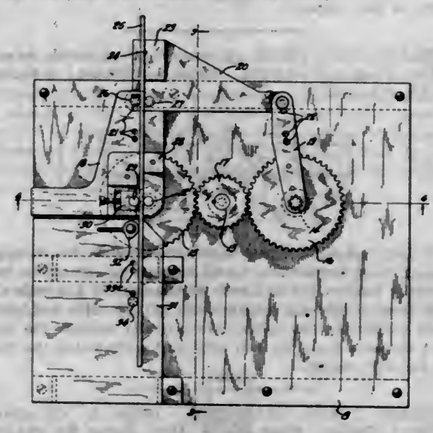
1,695,834. MACHINE FOR MANUFACTURING STEMS FOR TIPLESS LAMPS. JAMES BRYANT WHITMORE, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Apr. 9, 1924. Serial No. 705,322. 6 Claims. (Cl. 49—2.)



2. In an apparatus for the manufacture of incandescent lamp stems, the combination of a pair of arbor-holding jaws, a pair of flare-holding jaws, a temporary support for the arbor, the faces of the arbor-holding jaws having oppositely disposed grooves whereby the jaws, when closed, provide pockets to receive the ends of lead wires, and means for consolidating the work-parts to form a stem.

---

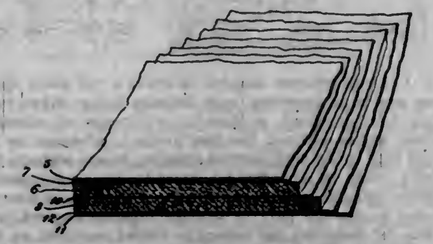
1,695,835. VULCANIZING APPARATUS. HARRY WILLSHAW, Birmingham, England, assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Mar. 16, 1927, Serial No. 175,749, and in Great Britain Mar. 22, 1926. 3 Claims. (Cl. 18—17.)



1. Vulcanizing apparatus of the character described including coacting mold chests one of which is movable relatively to the other, a valve operative to control the supply of fluid pressure to an inflatable member within the mold chests, actuating means for said valve, a locking member swingably mounted on one of said mold chests and carrying a clamping member adapted to coact with the other mold chest and co-operating parts carried by said

locking member and by said valve operating member whereby the actuation of one is dependent upon the position of the other.

---



1,695,836. MACHINE FOR BENDING BARS. VICTOR M. WITMER, Milwaukee, Wis. Filed Jan. 10, 1927. Serial No. 160,226. 5 Claims. (Cl. 153—20.)

1. A machine for bending bars, comprising a base, a pair of connected gears revolubly mounted on the base, a lever secured to each of said gears, an intermediate lever pivotally connected with each of said first mentioned levers, the intermediate lever and one of the other levers being formed with guide means to receive a bar, and means on said levers to engage a bar at intermediate points to bend said bar at said engaged points when said levers are moved from normal position.

---

1,695,837. BOX-BOARD OR CADDY STOCK. JAMES M. ANDREWS, Brooklyn, N. Y., assignor to Robert Gair Company, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1928. Serial No. 659,179. 7 Claims. (Cl. 154—45.9.)

3. In a stock for containers, in combination, a layer of kraft, a layer of chip cemented to the layer of kraft by

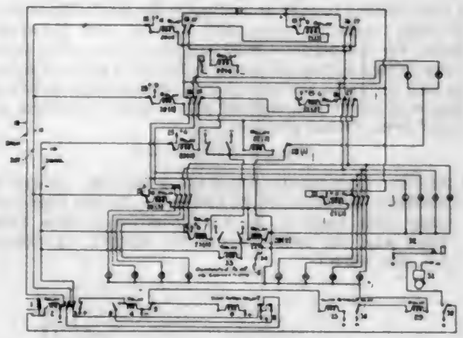
silicate of soda, a layer of news cemented to the layer of chip by silicate of soda, and a lining of hydrated highly calendered inelastic paper secured to the layer of news by flour paste having gum therein.

---

1,695,838. TEMPERATURE-INDICATING MECHANISM. STANLEY FORSYTH BARKER, Chicago, Ill. Filed Sept. 20, 1921. Serial No. 501,938. 6 Claims. (Cl. 116—114.)

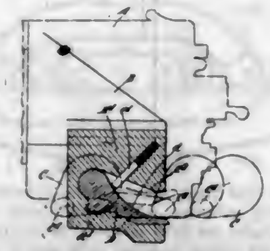
1. In a temperature indicating mechanism, a thermostatic element, a housing therefor, a vertically reciprocal signal in said housing, and a plurality of levers intermediate said signal and said element whereby the movement of said element is translated into a vertical displacement of said signal.

---



1,695,839. RAIL JOINT. EUGENE W. CARUTHERS, Secane, Pa. Filed July 26, 1928. Serial No. 295,401. 5 Claims. (Cl. 238—243.)

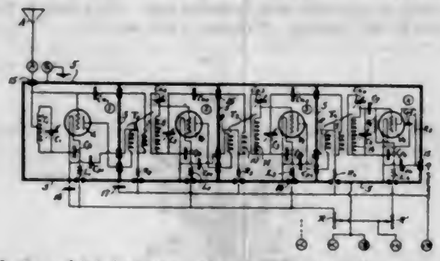
5. In a rail joint, a pair of rail ends, splice bars on opposite sides of these ends, a bolt supporting the splice bars laterally against the rail ends at the ends of the rails and free from transverse engagement by the rails and other bolts supporting the splice bars laterally against the rails at a distance from the rail ends and with which the rails tensionally engage.



---

1,695,840. CALL SELECTOR. LOUIS L. CHAUVEAU, Paris, France. Filed Jan. 8, 1923, Serial No. 611,538, and in France Jan. 19, 1922. 9 Claims. (Cl. 177—353.)

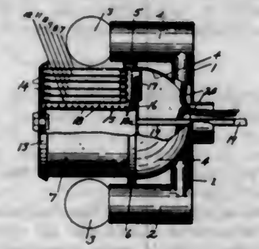
1. In a call selector adapted to select a call made up of from one to $n$ impulses, each impulse being either relatively long or short, a plurality of groups of selecting means, means whereby the first group is arranged to respond only to the first received impulse, means whereby the second group is arranged to respond only to the second received impulse, and means whereby the $n$th group is arranged to respond only to the $n$th impulse received, and means for restoring the system to initial condition on the receipt of the $n+1$ impulse within a predetermined time after the termination of the $n$th impulse.



1,695,841. BREECH-LOADING ORDNANCE. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Aug. 25, 1926, Serial No. 131,491, and in Great Britain Sept. 16, 1925. 8 Claims. (Cl. 89—4.)

1. In breech-loading ordnance of the semiautomatic type, a cradle for the gun, breech-actuating mechanism therefor, a crank connected to said mechanism, and means on said cradle and on said crank for giving said crank an initially slow and gentle opening movement, a gradually increasing angular acceleration, and a final high rate of angular movement, as and for the purposes specified.

---

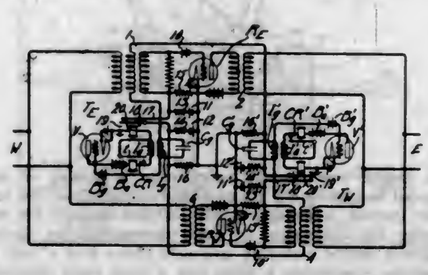


1,695,842. WAVE SIGNALING SYSTEM. JOHN F. DREYER, Jr., Brooklyn, N. Y., assignor to Hazeltine Corporation, a Corporation of Delaware. Filed Feb. 23, 1927. Serial No. 170,179. 5 Claims. (Cl. 179—171.)

2. In a high-frequency vacuum tube amplifier comprising more than two stages, means for coupling the first stage thereof to an antenna system, said first stage being designed to tune sharply to all frequencies within a predetermined band, individual means for tuning said first stage, means for successively coupling a plurality of the remaining stages in cascade, each of said plurality of remaining stages being designed to tune broadly (as compared to the sharpness of tuning of said first stage) at all of the frequencies within said predetermined band, and uni-controlled means for tuning simultaneously all of said plurality of remaining stages.

---

1,695,843. SIGNAL ARM FOR VEHICLES. MADISON L. GOFF, Los Angeles, Calif. Filed Dec. 7, 1925. Serial No. 73,940. 11 Claims. (Cl. 116—39.)



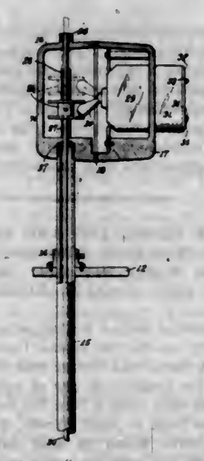
1. A signal arm adapted to be extended longitudinally and including a series of telescoping tubular members,

pneumatic means for intermittently extending the same at will, and lighting means adjacent and on the outside of said signal arm for illuminating the same from the outside.

---

1,695,844. SIGNALING SYSTEM. WILLIAM S. GORTON, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 21, 1923. Serial No. 658,514. 14 Claims. (Cl. 179—170.)

1. In a signaling system comprising a current transmission path and a circuit-controlling device therefor having movable operating parts of substantial inertia, the method of operation of said system which comprises causing said parts to so move in response to flow of signaling current in said path as to make the operation of said device substantially independent of said inertia, and increasing the transmitting efficiency of said path immediately upon the operation of said circuit-controlling device.

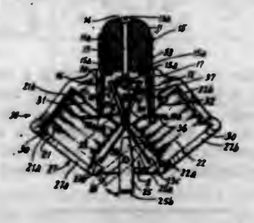


---

1,695,845. ALLOY BASE FOR OXIDE-COATED CATHODES. GEORGE W. HALLOCK, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 27, 1927. Serial No. 229,276. 4 Claims. (Cl. 250—27.5.)

1. An electrically conductive core for a thermionically active cathode comprising an alloy of nickel and silicon.

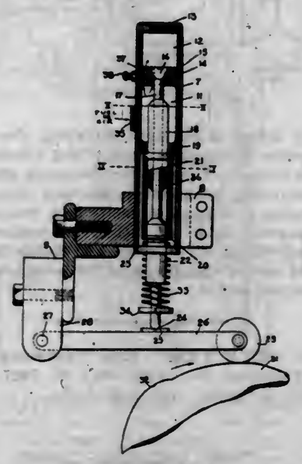
---



1,695,846. LIQUID-LEVEL CONTROL. LEONARD H. HARDING, Brooklyn, N. Y. Filed Sept. 21, 1926. Serial No. 136,782. 2 Claims. (Cl. 200—84.)

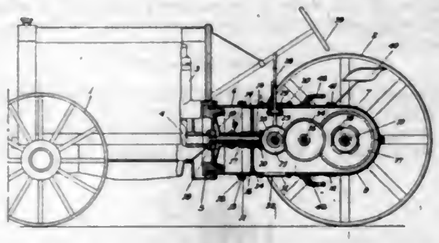
1. A liquid level control device comprising a casing, a height adjustable tube supporting the casing, a rod passing through said casing and tube packings in said casing for the tube, a snap switch in said casing, said switch having an oscillatable control lever, a flanged spool on said rod engaging said lever, adjustable stops on the lower exposed portion of said rod, a sleeve slidable on said rod to engage said stops and a float fixed intermediate the lengths of said sleeve.

---



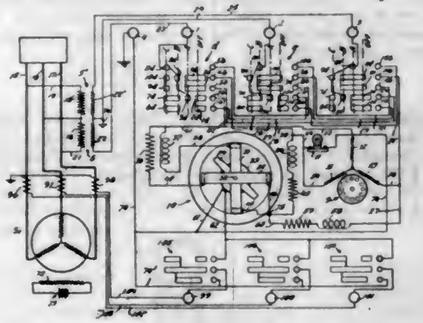
1,695,847. DETACHABLE ELECTRIC-PLUG FITTING. HARRY HERTZBERG, Brooklyn, N. Y., assignor to Morris Propp, New York, N. Y. Filed Aug. 11, 1926. Serial No. 128,544. 1 Claim. (Cl. 173—336.)

In an electric fitting, spaced current carrying receptacles, an electric switching mechanism mounted between said receptacles, said mechanism comprising a looped member having spring contact ends, each end being normally spaced from one of said receptacles, and a pair of levers positioned between said ends arranged so that each lever may be independently operated to flex one of said ends for contacting with a receptacle.



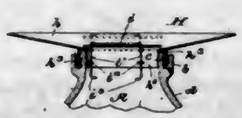
---

1,695,848. GAS ECONOMIZER. JOHN JOSEPH HIGGINS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Nov. 1, 1924. Serial No. 747,263. 4 Claims. (Cl. 251—132.)



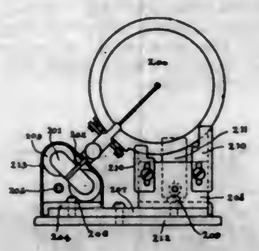
1. A fuel control device comprising a tubular member, a partition dividing said member to provide an inlet chamber and an outlet chamber, a valve seat in said partition, a valve stem within said member, a valve head on said stem for engagement with said valve seat, means for normally maintaining said head in contact with said seat, means for automatically lifting said head, a guide for said stem extending from said inlet chamber, means surrounding an end of said guide and a portion of said stem for sealing said inlet chamber from the atmosphere.

1,695,849. REVERSIBLE TRACTOR TRANSMISSION. BIRDDINE T. INSLEY, Stockton, Calif. Filed Aug. 2, 1927. Serial No. 210,053. 6 Claims. (Cl. 180—70.)



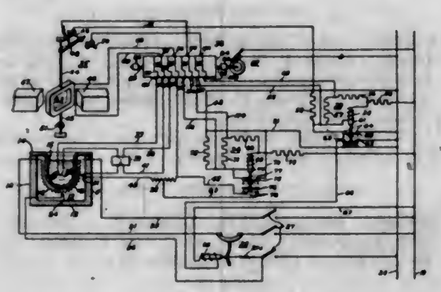
1. In a tractor, a power plant having a crank shaft, a rear wheel axle, a transmission mechanism from the crankshaft to the axle, and a housing in which said mechanism and axle are mounted arranged to be invertedly mounted in connection with the power plant without disturbing the positioning of the crank shaft and axle relative to each other.

1,695,850. PHASE INDICATOR AND METHOD OF DETERMINING THE PHASE RELATION OF ALTERNATING CURRENTS. WILLARD A. KATES, Philadelphia, Pa. Filed June 17, 1927. Serial No. 199,445. 14 Claims. (Cl. 172—245.)



7. In a device of the type described, the combination with a source of polyphase current and a second source of polyphase current, of means for indicating phase rotation, means electrically connected to the said indicating means for producing a rotating magnetic field, means responsive to this magnetic field, and including a magnetizable vane and a magnetizing coil therefor, and means for selectively connecting each of the phases of the second source to said last mentioned means.

1,695,851. SCUM TRAP. CARL CHRISTOPH EMIL KERSTEN, Columbus, Ga. Filed May 28, 1927. Serial No. 195,126. 8 Claims. (Cl. 215—100.)

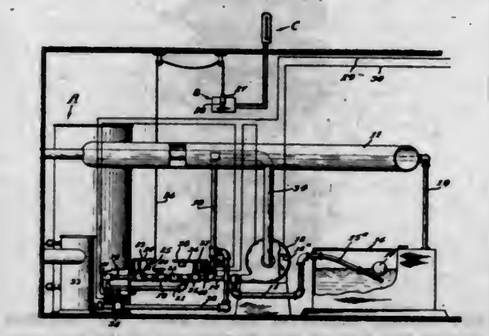


1. A scum-trap comprising an inwardly and downwardly sloping substantially conical plate formed with a central opening and inclined to a horizontal plane at an angle of substantially 15° or less, in combination with two substantially concentric vertical flanges extending downwardly from said conical plate, the slope of the plate extending to the central opening.

1,695,852. RADIO-PHONOGRAPH COMBINATION. WARD LEATHERS, Haworth, N. J., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed May 3, 1922. Serial No. 558,208. 1 Claim. (Cl. 179—100.1.)

A sound reproducing instrument comprising a base adapted to rest on the frame of a phonograph or the turn table thereof, adjustable means carried thereby for supporting the reproducer of such phonograph, an electromagnetic device including two pole pieces and a coil, an armature comprising a plate and a stem rigid therewith adapted to be clamped in place of the usual stylus by the stylus clamping means of the reproducer, and means for adjusting the distance between said pole pieces and the plate.

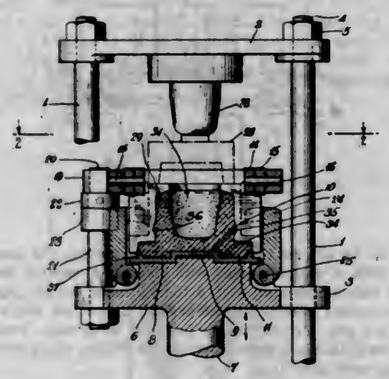
1,695,853. TEMPERATURE-CONTROL SYSTEM. ROLLO B. LINCOLN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 3, 1927. Serial No. 188,601. 9 Claims. (Cl. 236—15.)



1. In a temperature control system, the combination with a medium, a heating means therefor, a body disposed in the medium to be heated, a thermo-couple subjected to the temperature of the medium and means actuable thereby for controlling the energization of the heating means, of means responsive to the temperature of the body for varying the resistance of a thermo-couple circuit when said body departs from a temperature of a predetermined value.

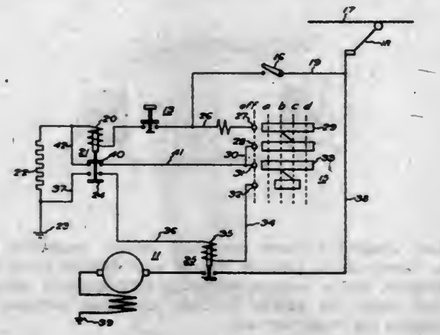
1,695,854. GAS PRODUCING AND HEATING APPLIANCE. JOHN MACKENZIE, Minneapolis, Minn., assignor of one-half to Walter Heynacher, Minneapolis, Minn. Filed May 22, 1925. Serial No. 32,125. 6 Claims. (Cl. 158—4.5.)

1. The combination with a heater, of a burner within the heater, a blower, an electric motor for driving the same, air pipes leading from said blower and dividing the output thereof, a tank for liquid fuel, one of said air pipe issuing into the liquid in said tank, a lead for conducting carbureted air from said tank to said burner, an electrically controlled safety valve fitted in said carbureted air lead and connected in the motor circuit, said valve being required to be opened manually, but adapted automatically to be held open during the maintenance of current in said circuit and automatically to close upon the interruption of



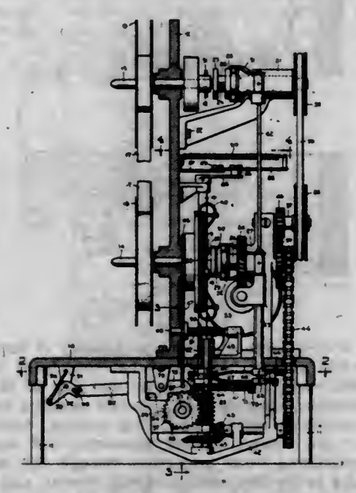
such current, the other of said air pipes being connected with said carbureted air lead at a point between said valve and burner, a check valve in the carbureted air lead between the safety valve and the junction of said second air pipe with said carbureted air lead, said check valve acting to permit only of the flow therethrough of carbureted air toward the

burner, a pilot lead taking off from the carbureted air lead at a point between the safety valve and said check valve, a cut-off valve fitted in the carbureted air lead between the burner and the junction of said second air pipe with said carbureted air lead, and means for opening and closing said cut-off valve to put the burner into and out of operation.



1,695,855. APPARATUS FOR MARKING PIPES. WILLIAM D. MOORE, JOSEPH B. LORING, and WILLIAM J. BOWERS, Birmingham, Ala., assignors to Sand Spun Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed June 3, 1926. Serial No. 113,411. 13 Claims. (Cl. 22—10.)

1. A mold for head cores for the bell ends of cast pipes of the bell and spigot type, including a hollow mold contoured to form at one end of the head core an annular marginal rib with a selected design on the face adjacent to the core, the mold sectional, the sections, relatively movable, means to impart relative movement to the sections to compress the rib, and independent means to move the sections apart to partially release the matrix from the design.

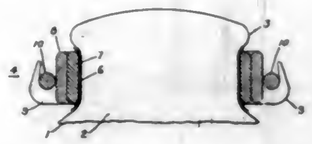


1,695,856. CONTROL SYSTEM. AMOS ALBERT PONSONBY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 21, 1927. Serial No. 169,964. 4 Claims. (Cl. 172—179.)

1. In a control system for a vehicle provided with a propelling motor, in combination, a line switch for controlling the operation of the motor, a line-switch-actuating circuit for operating the line switch, a drum for controlling the energization of the line-switch-actuating circuit, a relay disposed for interrupting the line-

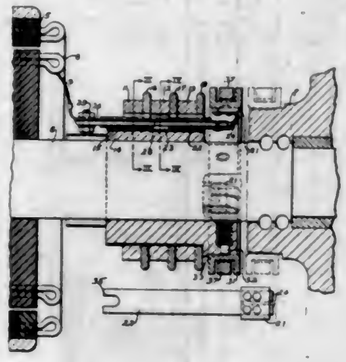
switch-actuating circuit, an actuating circuit for the relay, a safety switch for controlling the relay-actuating circuit, and a shunt connected to prevent the energization of the relay-actuating circuit by the closure of the safety switch when the drum is in an active position.

1,695,857. FILM-REVERSING MECHANISM. BARTON A. PROCTOR, New York, N. Y., assignor, by mesne assignments, to The Automatic Advertiser, Incorporated, New York, N. Y., a Corporation of Delaware. Filed July 25, 1925. Serial No. 45,963. 38 Claims. (Cl. 242—55.)



1. In mechanism for winding and rewinding film reels, actuating means for reversing the direction of winding, said means comprising two members constantly moving at different rates of speed, one of which initiates said reversal and the other of which controls the time intervals of said initiation.

1,695,858. INSULATOR. FRANZ REITER, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1925, Serial No. 69,054, and in Germany Jan. 28, 1925. 3 Claims. (Cl. 173—313.)

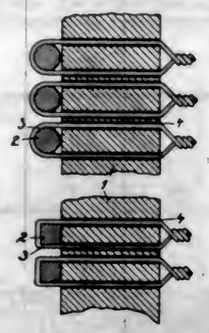


3. An insulator comprising a dielectric member including a body portion having a portion projecting there-

from and a portion projecting laterally from said projecting portion, and a composite structure including a divided inner ring element surrounding said first projecting portion, an outer element having a single integral ring portion adapted to pass over said lateral projection and to closely fit in position around said divided inner ring element, and a member extending longitudinally between said rings and having laterally extending portions for holding the rings together.

---

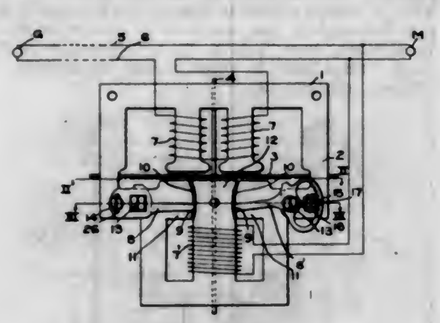
1,695,859. SLIP-RING ASSEMBLY WITH SHORT-CIRCUITING CONTACT. HANS RICHTER, Behringersdorf, near Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 1, 1926, Serial No. 138,911, and in Germany Oct. 8, 1925. 3 Claims. (Cl. 172—280.)



1. An electric machine having a plurality of slip-rings, a supporting member therefor, conducting leads for the several slip-rings, all extending to one side of the supporting member, short-circuiting contact members disposed at the other side of the supporting member, conducting leads for the several contact members, said last-mentioned conducting leads projecting through the supporting member to the first-mentioned side thereof, and means for removably connecting the slip-ring leads to the respective contact leads at said first-mentioned side of the supporting member.

---

1,695,860. ELECTRIC ANNEALING OR HEATING FURNACE. WILHELM ROHN, Hanau-on-the-Main, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, a Corporation of Germany. Filed Oct. 23, 1925, Serial No. 64,350, and in Germany Dec. 15, 1924. 2 Claims. (Cl. 266—1.5.)



1. In an electric annealing furnace, a heating element therein comprising a plurality of convolutions of electrical resistance material of such dimensions that the total surface area of the element is at least as great as the area of the furnace chamber walls, means for supporting said element in operative position within said furnace comprising wires of metallic refractory material looped over

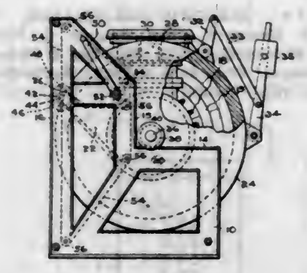
said heating element at spaced points and extending through the wall of said furnace and means for maintaining said wires in operative position.

---

1,695,861. ELECTRICAL MEASURING INSTRUMENT. ARGYLE R. RUTTER, Forest Hills, and WALTER G. MYLIUS, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 29, 1927. Serial No. 216,292. 2 Claims. (Cl. 171—264.)

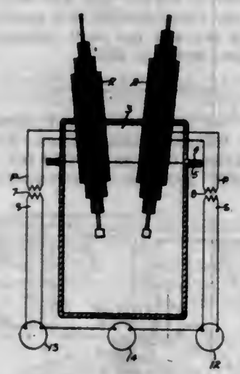
1. In an alternating-current-motor meter, the combination with a magnetisable core having a central member and a side member separated therefrom by an air gap, of a closed-circuit conductor comprising a portion movable in said air gap, an extension integral with said conductor and constituting a gear rack, and a pinion operatively engaging said gear rack.

---



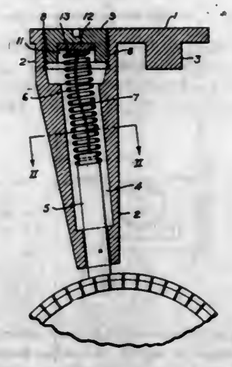
1,695,862. SLOT INSULATING CELL. MICHAEL SANDFIELD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1926. Serial No. 135,839. 3 Claims. (Cl. 171—206.)

1. A slot cell comprising a rectangular sheet of insulating material having two longitudinal bends forming the bottom of the cell and having end bends forming inwardly bent flaps which are wider at the bottom than at the tops.



1,695,863. TILTABLE FURNACE. GEORG SCHMITT, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 16, 1927, Serial No. 168,591, and in Germany Apr. 20, 1926. 2 Claims. (Cl. 263—32.)

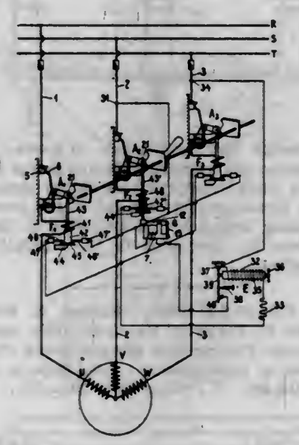
1. In a tiltable furnace, a base comprising spaced vertical members, a horizontally disposed bearing surface and a vertically disposed guiding surface formed on each of said members, a cylindrical furnace casing disposed between said spaced members, means carried by said casing on a horizontal line extending through the center of gravity thereof for supporting said casing upon said horisontally disposed bearing surfaces, means carried by said casing for engagement with said guiding surfaces, and means for tilting said casing about the center of gravity thereof.



---

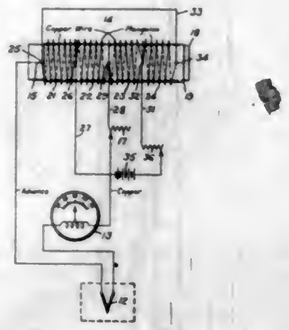
1,695,864. INSTRUMENT-TRANSFORMER MOUNTING. JOHANNES SESSINGHAUS, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1926, Serial No. 104,113, and in Germany Oct. 27, 1925. 4 Claims. (Cl. 175—358.)

1. The combination with a circuit interrupter casing comprising a tank, condenser terminal bushings on said tank and an instrument, transformer mounted on the tank and having its primary winding connected across layers of a terminal bushing.



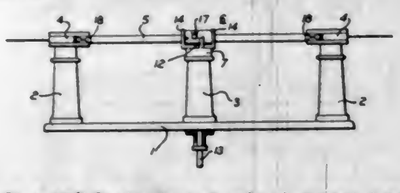
1,695,865. BRUSH HOLDER. HANS C. SPECHT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 10, 1927. Serial No. 174,107. 4 Claims. (Cl. 171—324.)

1. In a dynamo-electric machine, a machine frame having a plurality of openings therein, and a brush-holding device removably mounted in the said frame and having a plurality of projections arranged to fit in the said openings, whereby the device is maintained in any one of a plurality of positions.



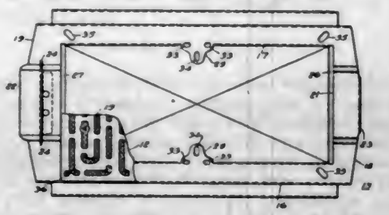
---

1,695,866. AUTOMATIC SAFETY SWITCH FOR INDUCTION MOTORS. GOTTLIEB SPEISER, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, New York, N. Y., a Corporation. Filed Aug. 1, 1925, Serial No. 47,611, and in Germany Feb. 5, 1924. 1 Claim. (Cl. 175—294.)



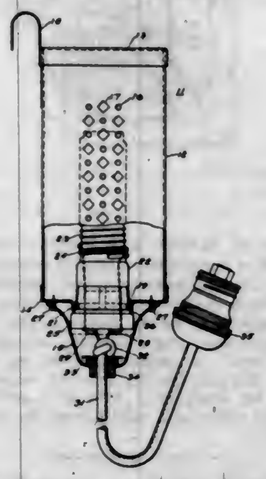
In an automatic switch of the class described, tripping mechanism, an electromagnet arranged to operate said tripping mechanism upon heavy overloads, contact members associated with said electromagnet, means including said electromagnet for operating said contact members at a lower current value than that required to operate the tripping mechanism, comprising a retarded relay connected to said contact members and a low-voltage magnet operated by said retarded relay and operative to control said tripping mechanism.

1,695,867. TEMPERATURE-MEASURING DEVICE. FERNALD S. STICKNEY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1927. Serial No. 181,317. 10 Claims. (Cl. 73—32.)



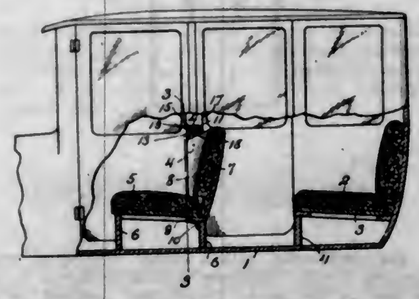
1. A temperature-measuring instrument comprising a Wheatstone bridge in which the sides have resistance elements of high and low temperature coefficients of resistance, respectively, a source of E. M. F. connected between two points of the bridge, a thermo-couple having its cold-junction connected to the bridge, an electrical instrument connected in circuit with the thermo-couple, and heat-storage means thermally associated with the bridge for rendering changes in temperature of the cold junction and the bridge sluggish.

1,695,868. DISCONNECTING SWITCH. JOSEPH STOLZ, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 1, 1925, Serial No. 59,844, and in Germany Nov. 1, 1924. 6 Claims. (Cl. 200—48.)



1. In a switch structure, a pair of contact jaws, an axially rotatable contact member having means for spreading the jaws when axially rotated during opening movement and a pivotal support for one of the contact members comprising means for turning one of the contact members about its axis prior to the separation of the contact members.

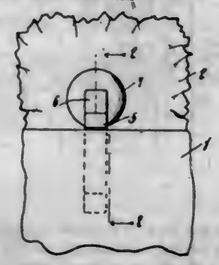
1,695,869. HEATING UNIT. ERNEST E. SUTHERLAND and FRANK F. FORSHEE, Mansfield, Ohio, assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 9, 1927. Serial No. 218,405. 3 Claims. (Cl. 219—37.)



1. An electric heating unit comprising a sheet-metal base plate bent to comprise two spaced side portions, an integral cross member at one end shaped to constitute a handle, an integral cross-member at the other end bent to channel-shape, slots in the side walls of said cross member of channel-shape, a terminal-supporting bar having its ends fitting into said slots, a resistor operatively supported by the two side portions only, and terminal pins in said terminal-supporting bar.

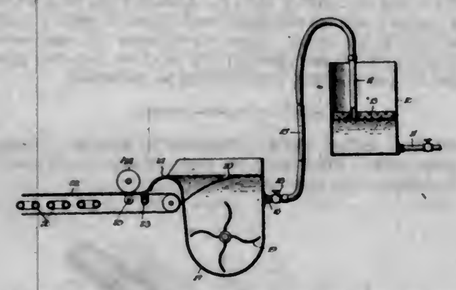
1,695,870. ELECTRIC AIR HEATER. VICTOR G. VAUGHAN, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 4, 1927. Serial No. 196,482. 1 Claim. (Cl. 219—34.)

In an air heater, in combination, a casing, an apertured end cap therefor, a refractory-supporting member having one portion extending through the aperture into the casing and an expanded end portion of larger diameter than the aperture of said end cap located outside the casing, an end cover member of cup-shape invertedly presented to said apertured end cap, said cover member being provided with a seat to receive the expanded end portion of the resistor-supporting member, and means for securing the end cover member to the end cap whereby the expanded end portion of the resistor-supporting member is clamped between the end cap and the cover member to hold the supporting member firmly in place.

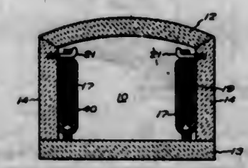


1,695,871. AUTOMOBILE SEAT CONSTRUCTION. CLARENCE J. WALKER, Salina, Kans., and GEORGE F. TRAUTWEIN, Kansas City, Mo. Filed Dec. 6, 1926. Serial No. 152,868. 4 Claims. (Cl. 155—7.)

1. The combination with an automobile body, of a seat back vertically slidably pivotally mounted therein, an attaching member fastened to the inner side of said body and having an inwardly extending threaded stud, a plate fastened to said seat back and having a transverse edge slot provided with an upwardly extending angular extension, said stud being adapted to enter said slot and to pass into said extension when the seat back is moved to an upright position and then lowered, and a nut adapted to be mounted on said stud and to bear against the inner side of said plate.

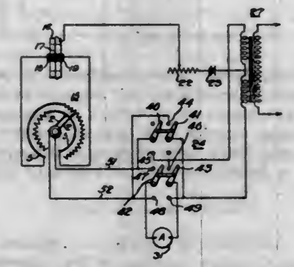


1,695,872. ANTIRATTLER FOR DOORS AND WINDOWS. HENRY WHITE, Jr., Buffalo, N. Y. Filed May 5, 1927. Serial No. 189,023. 4 Claims. (Cl. 292—343.)



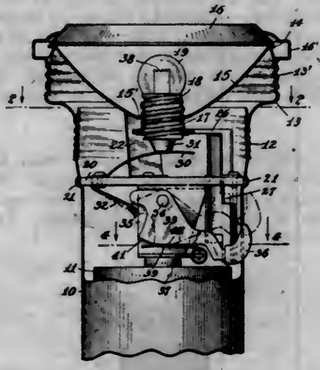
1. An anti-rattler comprising a rubber body having its outer side grooved to provide upwardly and outwardly extending lips and provided at its upper end with a vacuum cup extending beyond its outer side.

1,695,873. PAPER-MAKING MACHINE. HARRISON R. WILLIAMS, Chicago, Ill. Filed Mar. 24, 1926. Serial No. 96,912. 4 Claims. (Cl. 92—38.)



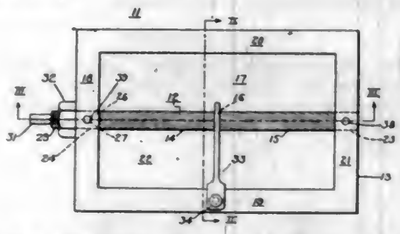
1. In a paper-making machine and the like, the combination of a movable reticulated conveyor, means to actuate said conveyor, a tank having a marginal curved lip over which the liquid in the tank may overflow on to said conveyor, an agitator in said tank, and a screen in said tank between said agitator and said lip.

1,695,874. ELECTRIC FURNACE. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1926. Serial No. 138,188. 5 Claims. (Cl. 266—1.5.)



1. In an electric furnace provided with resistors, in combination, a resistor support comprising a pair of metallic sections, each section having a recess, means for holding said sections in assembled relation, the recesses of the assembled sections constituting a receptacle, and insulating blocks positioned in said receptacle and adapted to support a resistor, and means for removably supporting said resistor support in said furnace.

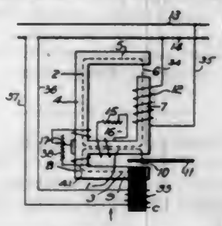
1,695,875. MICROPHONE SYSTEM. JOSEPH E. AIKEN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 2, 1925. Serial No. 41,179. 5 Claims. (Cl. 179—81.)



1. Regulating means for a differential microphone having an input terminal and output terminals comprising a rheostat connected to the input terminal, a duplex rheostat having two sections respectively connected to the output terminals of the microphone and being alternatively insertable in circuit therewith, and common control means for said rheostat.

1,695,876. ELECTRICAL HANDLAMP. EDMUND R. BARANY, Brooklyn, N. Y., assignor to French Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Jan. 31, 1925. Serial No. 5,943. 6 Claims. (Cl. 240—10.5.)

5. An electric hand lamp comprising a casing having one end equipped with a removable reflector, a dry cell in said casing, a lamp having a shank extending through said reflector, a partition member removably secured in said casing between said reflector and dry cell and equipped with a spacing-member engaging said dry cell, a switch pivotally mounted on said spacing member and having a thumb piece projecting laterally through a slot in said casing, and resilient means carried by said partition member and co-acting with said switch to establish electric connection from the central pole of said dry cell to the central terminal of said lamp.



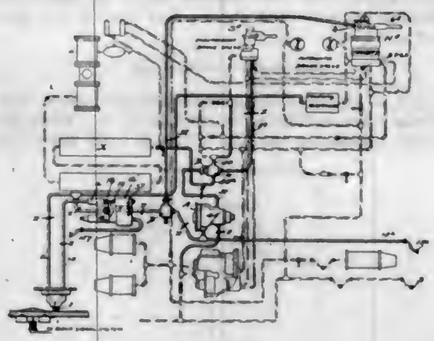
1,695,877. TEMPERATURE-RESPONSIVE DEVICE. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1925. Serial No. 76,133. 10 Claims. (Cl. 297—15.)

1. In a temperature responsive device, in combination, actuable means, a bimetal member disposed to actuate said actuable means, means for applying a predetermined torque to said bimetal member, said bimetal member being responsive to said torque upon changes in temperature thereof to cause a twisting action for actuating said actuable means.

---

1,695,878. INDUCTION METER. ALBERT CALLSEN, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 20, 1926, Serial No. 110,346, and in Germany May 22, 1925. 4 Claims. (Cl. 171—309.)

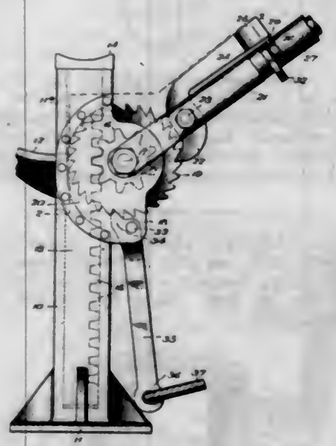
1. In an alternating current meter, a voltage magnet for adjusting the phase displacement between the line voltage and the voltage flux; comprising a magnetic circuit divided into two paths one of which is provided with an active air gap for a disc armature, the other of which carries a voltage exciter winding and a winding of variable impedance coupling the fluxes of the said paths of the magnetic circuit.



---

1,695,879. THERMOSTATIC DEVICE. EARL K. CLARK, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 8, 1926. Serial No. 153,265. 11 Claims. (Cl. 200—122.)

1. The combination with a bimetallic member, a heating coil disposed therearound, and means for maintaining said bimetallic member normally in engagement with a fixed contact member, of a second bimetallic member disposed in thermal relation with the heating coil for so actuating said maintaining means that said first named bimetallic member is disengaged from said stationary contact member when said bimetallic members have reached a predetermined temperature.

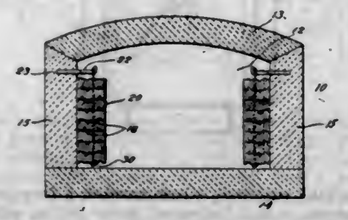


1,695,880. TRAIN-CONTROL APPARATUS. PATRICK J. CLIFFORD, Falls, Pa., assignor to Train Control Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Jan. 24, 1925, Serial No. 4,484. Renewed May 15, 1928. 3 Claims. (Cl. 246—190.)

1. In combination in an air brake apparatus, a main air reservoir, a train pipe, an automatic air release valve therefor, an engineer's disabling valve in the pipe leading from the main air reservoir to the engineer's automatic brake valve whereby the engineer will be prevented from recharging the train pipe but can make a further train pipe reduction when the automatic air release valve is operated, a valve for supplying air to the automatic air release valve and the engineer's disabling valve for operating them, an eliminating valve between said air supply valve and the automatic air release valve and engineer's disabling valve, an air pipe connection from the engineer's automatic brake valve to the eliminating valve for operating the same when the engineer sets his automatic brake valve in service position, and an air supply connection between the engineer's straight air valve and the disabling valve for restoring said valve to open position, substantially as described.

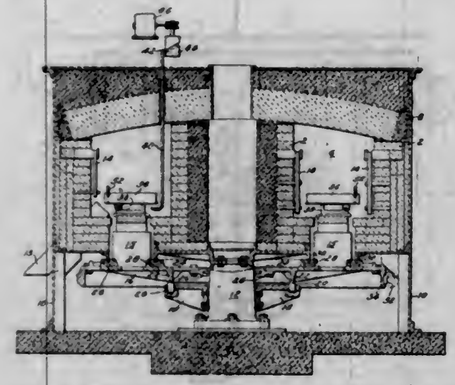
---

1,695,881. AUTO JACK. CHARLES M. COFFMAN, Gallipolis, Ohio. Filed July 14, 1927. Serial No. 205,569. 4 Claims. (Cl. 254—95.)



1. A lifting jack comprising a base, a sliding post mounted in the base and having a rack bar in one edge, a transverse shaft mounted at said edge of the base, a pinion on the shaft meshing with the rack bar, a ratchet wheel mounted on the shaft and connected to the pinion for turning therewith and having its teeth disposed in an anticlockwise direction, a locking pawl carried by the base and having a weight arm for normally urging the pawl into interlocking engagement with said ratchet wheel, a handle pivoted upon the base concentric to said ratchet wheel, a pawl pivotally mounted on the handle for interlocking engagement with the ratchet wheel and having a weight arm extending lengthwise of the handle for normally urging the pawl into interlocking engagement with the ratchet wheel, and a handle extension mounted on said handle for reciprocating the same and adapted to be turned, said handle extension having a cam thereon for engagement beneath the weight arm of said pawl on the handle to release the latter from the ratchet wheel.

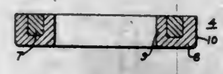
---



1,695,882. ELECTRIC FURNACE. ORA A. COLBY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 7, 1926. Serial No. 140,114. 7 Claims. (Cl. 266—15.)

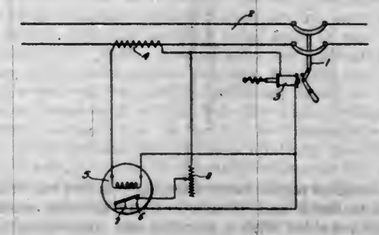
1. In an electric heating furnace having walls of refractory insulating material, the combination of a plurality of securing members secured to said walls, supporting rods removably supported upon said securing members, a plurality of blocks of refractory insulating material supported by each of said rods, each of said blocks having grooves therein, and a pair of looped resistor members positioned in said grooves.

---



1,695,883. ROTARY-HEARTH FURNACE. ORA A. COLBY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 14, 1927. Serial No. 205,552. 5 Claims. (Cl. 263—7.)

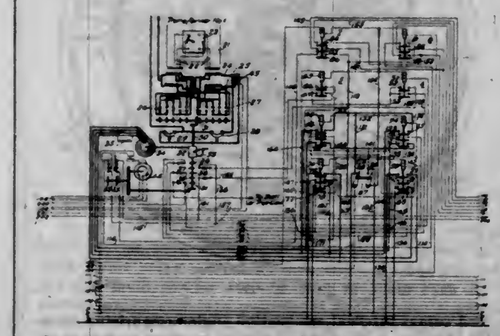
1. In a rotary-hearth furnace, the combination with a rotary hearth and a plurality of material-carrying trays pivotally mounted thereon, of a single means cooperating with a plurality of said trays for normally maintaining thereon material being heated, and means for tilting said trays to effect the discharge of said material.



1,695,884. COLLECTOR RING. DAVID J. CONANT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1927. Serial No. 179,762. 4 Claims. (Cl. 171—322.)

4. An extruded copper slip ring having an embedded iron core.

---



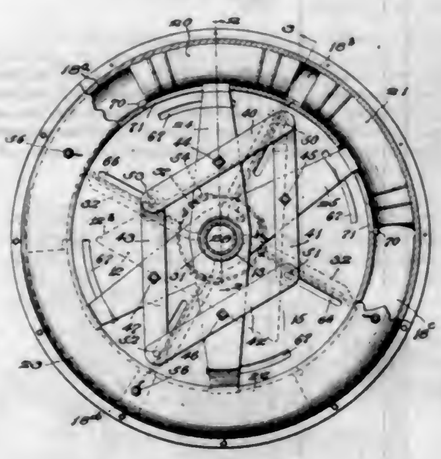
1,695,885. PROTECTIVE SYSTEM. LESLIE N. CRICHTON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 18, 1925. Serial No. 16,397. 1 Claim. (Cl. 175—294.)

The combination with a circuit to be protected and a circuit interrupter therefor provided with a trip coil, of an over-load-responsive relay having normally closed contacts, a shunt circuit for said trip coil comprising said contacts and an impedance device in series-circuit relation, said impedance device being so proportioned that, upon the occurrence of an abnormal over-load upon said circuit, said trip coil is operatively energized irrespective of the operation of said relay.

---

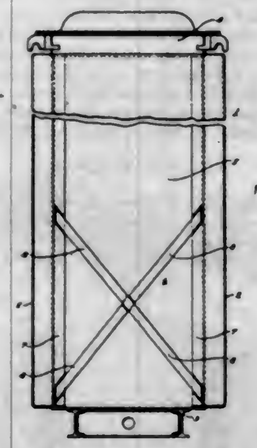
1,695,886. TAP-CHANGER SYSTEM. WALTER M. DANN and LELAND H. HILL, Sharon, and EDMUND F. SIPHER, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1926. Serial No. 98,826. 9 Claims. (Cl. 171—119.)

1. In a transformer tap-changing system, a plurality of groups of windings, each winding having a plurality of tap connections, separate mechanisms for changing the tap connections of each group of windings and controlling means for simultaneously initiating the operations of said mechanisms but permitting the separate operation of the several mechanisms after the simultaneous initiation of their operations.



1,695,887. SURGICAL NEEDLE. CHARLES T. DAVIS, Brooklyn, N. Y., assignor to Davis & Geck, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 30, 1927. Serial No. 187,839. 3 Claims. (Cl. 128—330.)

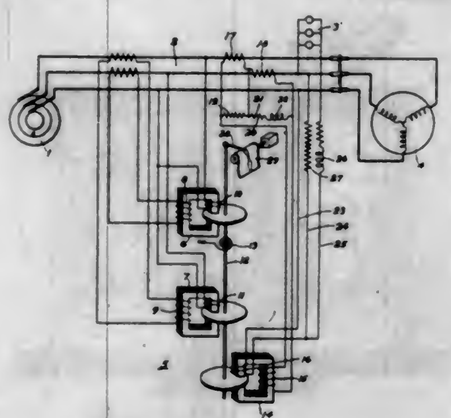
1. A surgical needle formed from a rounded rod of homogeneous material and of substantially uniform cross section, and provided with a piercing end constituted by the edge of a cutaway surface of oval contour intersecting the needle at an acute angle to the axis thereof.



---

1,695,888. ROTARY INTERNAL-COMBUSTION ENGINE. LANDON A. DOWDEY, Washington, D. C. Filed Dec. 13, 1927. Serial No. 239,791. 7 Claims. (Cl. 123—11.)

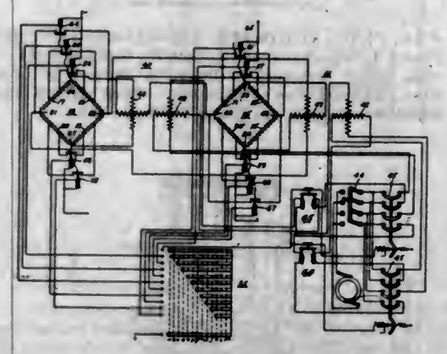
6. A rotary internal combustion engine comprising an annular chamber, a plurality of pistons movable in said chamber, means for causing an explosion between two adjacent pistons to cause one of said pistons to move away from the other, said means including an igniting device positioned intermediate said pistons, means for holding the other piston stationary during the explosion, and means for moving said igniting device in the same direction as the moving piston but at a speed one-half as great, whereby the igniting device remains equidistant from both pistons during the explosion.



1,695,889. TRANSFORMER. WILLIAM J. FINNEN, Sharon, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1926. Serial No. 98,669. 7 Claims. (Cl. 175—361.)

2. In a tank structure, a base member, a frame-work secured thereto, a fluid immersed device fitting within the frame-work without attachment thereto, a relatively thin tank wall mounted on the base member surrounding the frame-work without attachment thereto, and a header for the tank wall attached to the frame-work whereby the tank wall is protected by the frame-work from strains incidental to lifting the tank structure and to damage caused by shifting movements of the device within a tank.

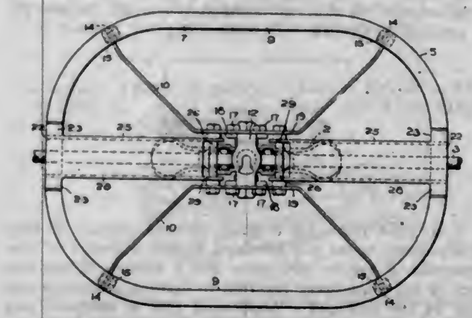
---



1,695,890. MEASURING INSTRUMENT. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 18, 1925. Serial No. 16,389. 10 Claims. (Cl. 171—34.)

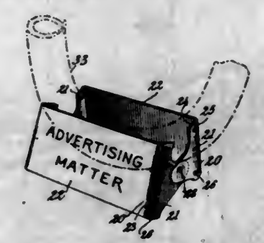
2. A measuring instrument comprising a polyphase wattmeter and phase-sequence meter mechanically connected in opposition, the torques of said meters being equal under balanced circuit conditions.

1,695,891. CONTROL SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, PA., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Feb. 5, 1921, Serial No. 442,764. Divided and this application filed Aug. 28, 1925. Serial No. 53,061. 6 Claims. (Cl. 172—274.)



4. In a system of control for polyphase induction motors having primary and secondary phase windings, in combination, a resistor connected to a plurality of the phase windings to provide a plurality of circuits with a common resistor, and means for alternately and progressively short-circuiting sections of the resistor located in the respective circuits to control the current flowing in the phase windings.

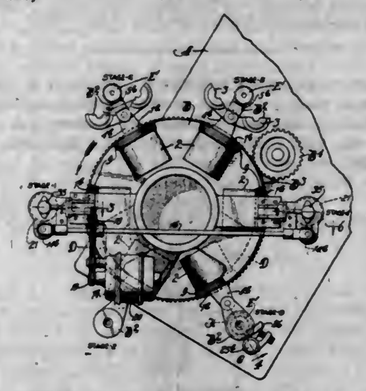
5. In a system of control for polyphase induction motors having primary and secondary phase windings, in combination, a loop resistor connected to a plurality of the phase windings to provide a plurality of circuits with a common resistor, and means for alternately and progressively short-circuiting sections of the resistor located in the respective circuits to control the flow of current in the secondary when released.



---

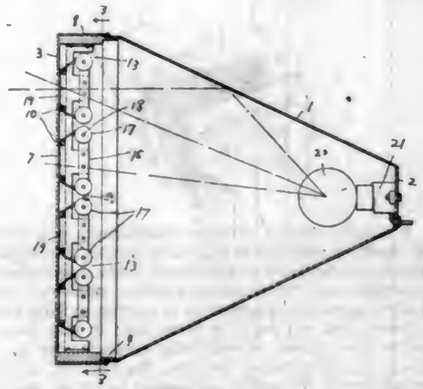
1,695,892. TRANSMISSION-LINE DEVICE. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 23, 1927. Serial No. 235,300. 14 Claims. (Cl. 173—318.)

13. A transmission-line device comprising an annular electrostatic-field-control element including movable sections over the conductor, side sections between said first sections, means for supporting the side sections and arms disposed over, and in substantially parallel relation to, the conductor beneath said element having inner ends pivotally mounted adjacent to the center of the device and curved outer end portions connected to said movable sections.



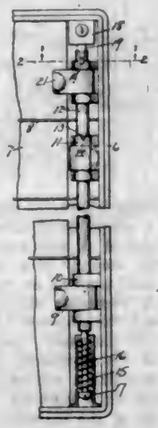
1,695,893. DISPLAY STAND. PHILIP GERMAIN, Jr., New York, N. Y. Filed June 3, 1926. Serial No. 113,364. 8 Claims. (Cl. 211—24.)

1. A foldable display pedestal comprising a pair of elements made of material having substantially the rigidity, toughness and flexibility of fibre-board, said elements having end portions and intermediate portions connected along lines of the material weakened, as by scoring, to form hinge-like joints, said end portions being bent at said lines of weakness into planes substantially perpendicular to the planes of the intermediate portions, the bent end portions being reinforced by having additional layers of material secured thereto and having their free ends overlapped and pivotally connected so as to form two oppositely-disposed sides of the pedestal having parts relatively movable about aligned axes, each of the pivotally-connected end portions being so formed as to provide a pair of upwardly-extending grippers and a pair of downwardly-directed widely separated supports, whereby the weight of an article supported in said grippers will tend to depress the unsupported pivoted portions of the pedestal elements and thereby cause the grippers to close and firmly grip the supported article.



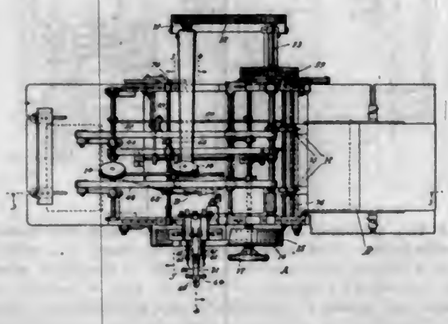
---

1,695,894. MACHINE FOR MAKING GLASS CONTAINERS. WARREN E. GLASPEY, Bridgeton, N. J., assignor to Spring Stopper Company, a Corporation of Delaware. Filed Dec. 9, 1927. Serial No. 238,936. 1 Claim. (Cl. 49—36.)



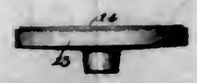
In a machine of the character set forth; a rotatable mold carrier with a plurality of invertible molds, one of such molds being located at each stage; means for rotating the mold carrier step by step to bring each of the molds successively into position at each stage; a mandrel with a threaded tip arranged above each mold; means at one stage to lower the mandrel to move the threaded tip into the neck of the mold; means to cause inversion of the mold in its movement toward a succeeding stage; means for inserting a charge of glass in the mold at a succeeding stage while inverted; means for unscrewing the threaded tip of the mandrel to loosen the same from the glass charge; means for righting the mold in its movement toward a succeeding stage; and means for raising the mandrel from the glass charge in the mold at a succeeding stage.

1,695,895. ELECTRIC SIGN. LOUIS GOLDSMITH, Altoona, Pa. Filed Feb. 18, 1928. Serial No. 255,353. 1 Claim. (Cl. 40—86.)



In a sign, a frame, a face plate at the front of the frame provided with displaying openings, a plurality of parallel spaced brackets arranged vertically in the frame on opposite sides of the aligned displaying openings, spring strips secured on opposite sides of the bracket and arranged in pairs, the free ends of the spring strips being flexed, upper and lower rotatable reels supported between each pair of spring strips above and below the displaying openings, an indicia carrying web operatively connected at the ends to the upper and lower reels of each pair, said web adapted to extend over the respective displaying openings, means for maintaining a portion of the web against the rear side of the face plate, said last mentioned means comprising a series of horizontally arranged rods extending across the vertical brackets directly above the upper and lower edges of the displaying openings and engaging with the inner side of the webs.

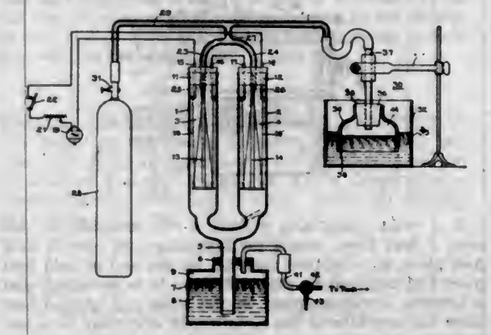
1,695,896. DRAWER FASTENER. BENEDICT M. HOLDEN, Hartford, Conn., assignor to The Gramarben Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 15, 1927. Serial No. 184,137. 8 Claims. (Cl. 45—94.)



4. A case having a plurality of drawers therein, cooperating members including a locking member for each drawer and a longitudinally movable retainer member for all of said locking members and upon which retainer member each of said locking members is pivotally mounted, and an interengaging pin and notch connection between said cooperating members to independently secure or release either of said locking members in or from their open or closed positions by endwise movement of said retainer.

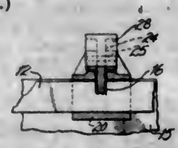
1,695,897. AUTOMATIC CALENDAR STITCHER. FRANK J. KRISTOFEK and OSCAR W. HAMMERQUIST, St. Paul, Minn., assignors to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Mar. 19, 1921. Serial No. 453,793. 14 Claims. (Cl. 1—7.)

1. A device of the class described comprising, a unit stitching head, a belt carrying means associated with said head in a manner to convey articles therebetween in a flat plane to be stitched by said stitching head and carried to and from said stitching head, a longitudinally extending stop gauge, and means for stopping the articles and simultaneously moving the same into engagement with said longitudinally extending stop gauge to hold the articles stationary momentarily in a set position when being stitched, said belt means continuing in operation to move said articles along said longitudinal stop gauge when released.



1,695,898. PLATE FOR MEAT-GRINDING MACHINES. CHARLES A. LAEMMEL, Brooklyn, N. Y., assignor to Atlantic Service Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 7, 1927. Serial No. 224,584. 2 Claims. (Cl. 146—189.)

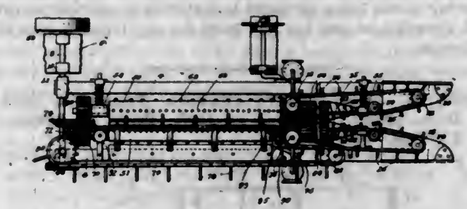
1. An end plate for a meat chopper formed of relatively cheap metal and provided with a plurality of perforations, a hub in said plate and a portion of one surface of the plate being removed to leave a projecting portion of the hub and a peripherial rim, a hardened tool steel disc provided with a plurality of perforations, said disc provided with an opening adapted to be forced over said hub and the circular edge of said disc fitting tightly within the rim of the plate, and its outer surface extending beyond the rim of the plate the disc and plate being scored at one place on their periphery and the plate provided with small cut-out portions adjacent the score, the said disc provided with ears fitting within said cut-out portions, whereby after the disc is forced into place they are substantially integral one with the other.



1,695,899. ELECTRON-EMITTING ELEMENT. LEON MCCULLOCH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,777. 16 Claims. (Cl. 250—27.5.)

1. The steps in a method of treating a conducting element which consist in coating said element with an aqueous solution of at least one compound of at least one metal of the alkaline-earth group and subsequently heating said element to ignition temperature in an atmosphere of carbon dioxide.

1,695,900. SWITCH-LOCK DEVICE. EDWARD W. POWELL, Chicago, Ill., assignor to Pettibone Mulliken Company, Chicago, Ill., a Corporation of New York. Filed Oct. 14, 1927. Serial No. 226,138. 4 Claims. (Cl. 246—448.)

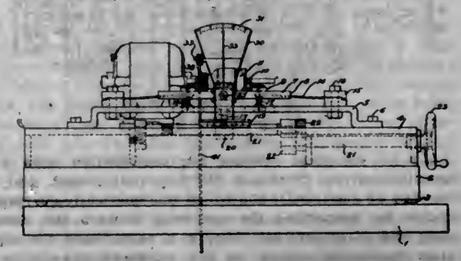


1. In a railway track, the combination with the point-rails of a switch therefor, of locking mechanism for said point-rails comprising a lock-rod operatively engaging said point-rails and provided with a notch, a stationary guide-member in which said rod is slidable longitudinally, and a pivoted locking member having a portion adapted to enter said notch and provided with flanges extending from its lateral edges laterally in opposite directions along the upper edge and the front edge of said member and overlapping said guide-member.

1,695,901. VEHICLE BRAKE. SVERRE QUISLING, Philadelphia, Pa. Filed June 6, 1924. Serial No. 718,361. 1 Claim. (Cl. 188—8.)

The combination with a sled having rigidly mounted runners provided with extensions at their rear ends capable of flexing, of a pair of links fixed to the flexing extensions and extending toward each other and pivoted substantially midway between the two runners, a bar connected to said pivoted ends of the links and etending forwardly and terminating in an up-turned part operating in a slot formed in the top of the sled, whereby upon movement of the bar forwardly, the links will pull the flexing extensions of the runners toward each other and thereby exert a braking action on the ground.

1,695,902. CORN MACHINE. WILLIAM H. SANDIFUR, Medaryville, Ind. Filed June 25, 1924. Serial No. 722,292. 2 Claims. (Cl. 56—104.)

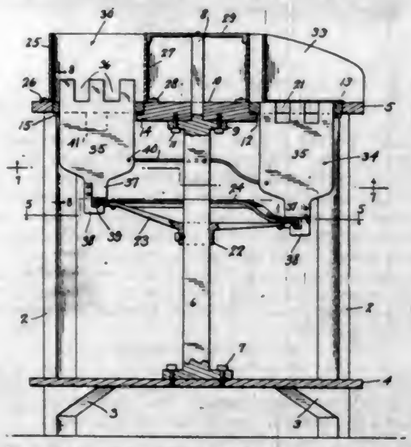


1. A corn harvester comprising a frame, rolls journaled thereon, a panel board located above the rolls and disposed longitudinally thereof, brackets mounted upon the panel boards, a guide bar carried by the bracket and having its lower edge spaced above the upper surface of the panel board, the guide bar being disposed in a plane at a right angle to the plane of the panel board, a chain mounted for movement upon the upper surface of the panel board, fingers carried at the side of the chain and resting directly upon the upper surface of the panel board, said fingers completely bridging the space between the upper surface of the panel board and the guide bar and said fingers passing through the space between the panel board and the guide bar.

1,695,903. WINDOW CONSTRUCTION. FRANK MCMURRAY SAWYER, Miami Beach, Fla. Filed Nov. 8, 1924. Serial No. 748,665. 2 Claims. (Cl. 72—99.)

1. In a window construction for concrete structures, an upper sashless pane fixed in position against movement, a lower sashless pane which extends into recesses at the sides of the window frame, a guide at each side of the window extending continuously the full height thereof and provided with a leg adapted to engage one face of the upper pane and press it against an abutment of the precast frame and said leg being also provided with a spring-tongue adapted to engage the full length of the adjacent vertical edge of the lower pane at all times, and precast side stops having flexible pads for engaging the face of the lower pane adjacent its vertical edges to retain the same in position.

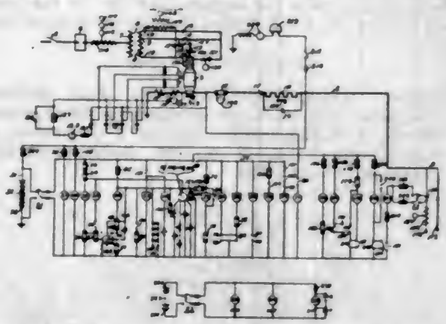
1,695,904. BALANCING MACHINE. CARL RICHARD SODERBERG, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1923. Serial No. 633,617. 17 Claims. (Cl. 73—51.)



1. A balancing machine comprising a base, an oscillatory bed mounted thereon, means on said bed for rotatably

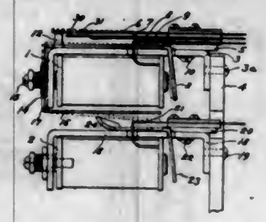
mounting a body to be balanced, spring means for yieldingly restraining said bed, and a movable fulcrum interposed between said bed and base with its axis in a plane at right angles to the axis of the body to be balanced, said spring means being arranged to maintain a constant period of vibration of said bed and body for any location of said fulcrum.

---



1,695,905. SEED-POTATO CUTTER. THOMAS A. TRUE, Declo, Idaho. Filed Apr. 11, 1928. Serial No. 269,038. 8 Claims. (Cl. 146—78.)

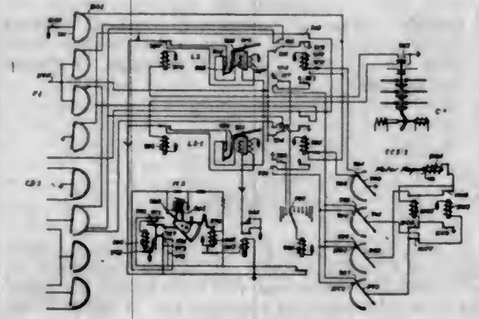
1. In a seed potato cutter, a stand, a rotatable potato receiving platform arranged on the stand, stationary spaced vertical cutting knives arranged above the platform, a vertically movable horizontal cutting knife disposed adjacent the stationary vertical cutting knives, means carried by the rotatable platform for feeding the potatoes one at a time to the cutting mechanism, and a potato engaging unit arranged forwardly of the cutting mechanism and being operatively connected with the horizontal cutting knife for actuating the same depending upon the size of the potato that is fed to the cutting mechanism.



---

1,695,906. PNEUMATICALLY-OPERATED STATION. ROY J. WENSLEY, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 1, 1923. Serial No. 665,842. 3 Claims. (Cl. 171—118.)

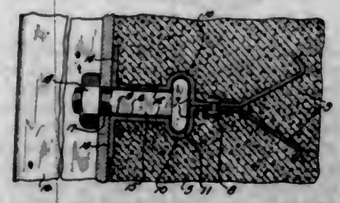
1. In an electrical system, the combination with an alternating-current circuit, a direct-current circuit, and a converter, of electrically-controlled pneumatically-operated switches for connecting the converter between the alternating and direct-current circuits, a compressor for supplying pneumatic energy to the pneumatically-operated switches and means connected to the direct-current circuit for operating the compressor.



1,695,907. ELECTRICAL RELAY. ROY J. WENSLEY, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 15, 1924. Serial No. 750,183. 7 Claims. (Cl. 200—106.)

1. A relay comprising a core, a coil mounted on said core, a heel piece, means for fastening said core to said heel piece, an armature mounted on one end of said heel piece and actuated by said coil when it is energized, and a latching device mounted on the other end of said heel piece for maintaining the armature of said relay in a predetermined position.

---

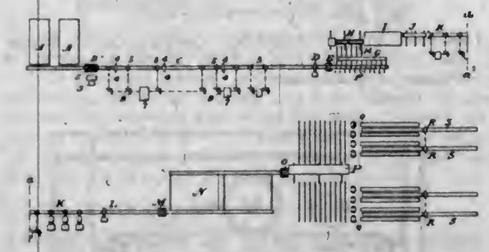


1,695,908. SUPERVISORY CONTROL SYSTEM. THOMAS U. WHITE, Pittsburgh, and JOHN E. GARDNER, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1924. Serial No. 707,806. 8 Claims. (Cl. 177—353.)

4. In an electrical control system, the combination with a station and three or more apparatus units in said station, automatic means for operating a plurality of apparatus units, said units being also operable from said office, of code-sending means operative upon the operation of one of said units for sending a code of impulses, and storing means for controlling the operation of said code-sending means so that codes of impulses are invariably sent out in accordance with the sequence in which said units operate irrespective of the time intervening between the operation of said units.

---

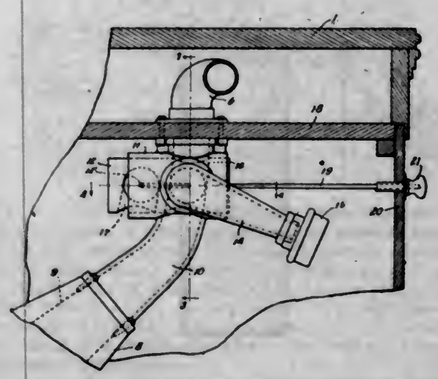
1,695,909. ADJUSTABLE METAL INSERT FOR CONCRETE WORK. CHARLES H. BAUER, Milwaukee, Wis. Filed May 4, 1927. Serial No. 188,747. 2 Claims. (Cl. 72—105.)



2. In a building construction, a concrete wall, a pair of insert members imbedded in said wall, each insert member

consisting of a pair of complementary plates secured together and having a slotted opening between portions of the same, the inner end portions of said plates being formed with angular diverging anchoring portions, a bolt vertically adjustably positioned within the slotted opening on each insert and projecting laterally therefrom exteriorly of the wall, and an angular shelf member secured on the projecting ends of a pair of bolts with its vertical flange immediately adjacent the outer surface of said wall.

---



1,695,910. CONTINUOUS-SHEET MILL AND METHOD OF MAKING FINISHED SHEETS. FLORENCE C. BIGGERT, Jr., Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 7, 1923. Serial No. 661,406. 20 Claims. (Cl. 29—17.)

1. In a mill, a support arranged to receive a pack of sheets, a clamping member, means for positioning said clamping member across an intermediate portion of said pack, means cooperating with said clamping member for automatically forcing the same into clamping engagement with said pack, and roller means for doubling said pack about said clamping member, substantially as described.

---

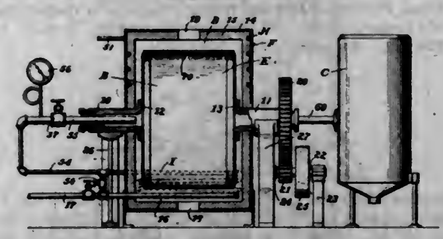
1,695,911. COMBINED PHONOGRAPH AND RADIO APPARATUS. JOSEPH W. BISHOP and BYRON C. BOOTH, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed June 30, 1924. Serial No. 723,104. 3 Claims. (Cl. 179—100.1.)

1. In a device of the character described, an oscillatory tone-arm, a fixed amplifying horn, a neck connecting said tone-arm to said amplifying horn, a radio loud speaker connected to said neck, a one piece valve slidable in said neck and having passageways to operatively connect said horn with either said tone-arm or said loud speaker, and means for limiting the movement of said valve, said means comprising a pin on said valve engaging a slot in said neck.

1,695,912. METHOD OF TREATING FIBROUS MATERIAL. ARTHUR L. BROWN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 16, 1923. Serial No. 625,621. 5 Claims. (Cl. 91—70.)

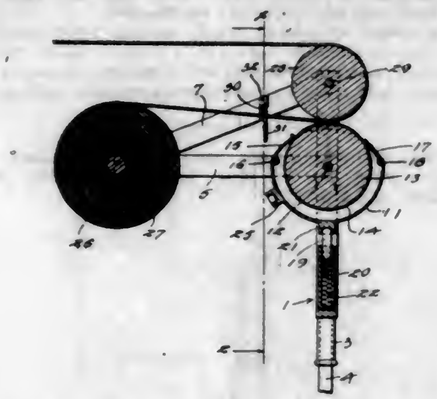
1. A method of treating fibrous material which comprises impregnating the same with a catalytic agent, impregnating the treated material with a mixture comprising a phenolic body and a polymerizable oil and then heating.

---



1,695,913. FOUNTAIN PEN. NORA T. BURKE, Stoneham, Mass. Filed Aug. 31, 1928. Serial No. 303,279. 3 Claims. (Cl. 120—52.)

1. A fountain pen having a casing, a finger piece at the end of the casing, a feeder piece and a pen point carried by and within the finger piece, the two latter being exposed from and beyond the end of the finger piece and a cast-in-place plug for sealing the joint between the pen point, feeder piece and finger piece.



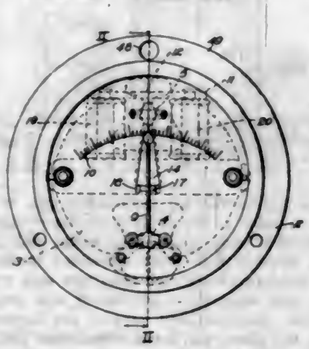
---

1,695,914. PROCESS FOR PRODUCING GAS. LINUS P. BURROWS, deceased, Erie, Pa., by Lenah B. Archer, executrix, now, by change of name, Lenah Burrows, Navarre, Ohio. Filed Nov. 13, 1922, Serial No. 600,727. Renewed Jan. 13, 1928. 1 Claim. (Cl. 48—202.)

A process for producing combustible gas, which comprises surrounding a retort in a furnace with a high temperature heat zone, generating steam and conducting said steam through iron pipes embedded in the furnace walls, the temperature of said zone and said walls being sufficiently high whereby a portion of said steam is decomposed into hydrogen and oxygen, the former passing on through the pipes, the latter combining with the iron to form iron oxide, and the remaining portion of said steam is superheated, conducting the hydrogen and superheated steam resulting from passage through the pipes into the retort, positively agitating coal in said retort while maintaining the heat and flow of superheated steam and hydrogen, thereby producing combustible gases, and removing said gases from said retort.

**1,695,915. MACHINE FOR HANGING WALL PAPER.** WILLIAM A. COLE, Belding, Mich. Filed Jan. 12, 1928. Serial No. 246,232. 8 Claims. (Cl. 216—6.)

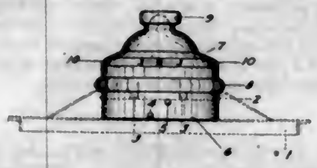
1. A machine for hanging wall paper, comprising a frame, a paste receptacle rockably supported within the frame, means to hold the receptacle against rocking movement, a pasting roller rotatably supported within the paste receptacle, a smoothing roller rotatively supported within the frame above the pasting roller, arms extending rearwardly from the sides of the frame, and a paper roll supporting spindle journaled in the rear ends of the arms.



---

1,695,916. ALLOY STEEL. GREGORY J. COMSTOCK, Pittsburgh, Pa., assignor to Firth-Sterling Steel Company, McKeesport, Pa., a Corporation of Pennsylvania. Filed June 30, 1927. Serial No. 202,762. 5 Claims. (Cl. 75—1.)

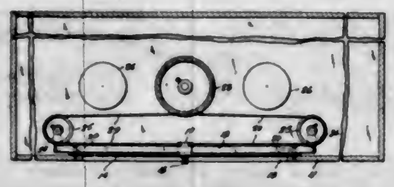
1. An alloy steel containing carbon about 1.20 to 1.80%, chromium about 10 to 14%, vanadium about .75 to 1.25%, and molybdenum about .50 to 1.25%, and having the capability for air hardening even in fairly large sections and the capability for being annealed sufficiently soft for easy machining.



---

1,695,917. ELECTRICAL MEASURING INSTRUMENT. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1921. Serial No. 526,232. 6 Claims. (Cl. 171—95.)

2. An electrical measuring instrument comprising a single homogeneous permanent magnet member having a plurality of portions of substantially C-shape, the ends of each of which are of opposite polarity, said portions having a common intermediate section, and indicating means cooperating with each of said portions.



**1,695,918. PERCOLATOR TOP.** WILLIAM F. CONRADT, Davenport, Iowa. Filed Mar. 5, 1928. Serial No. 259,164. 5 Claims. (Cl. 53—3.)

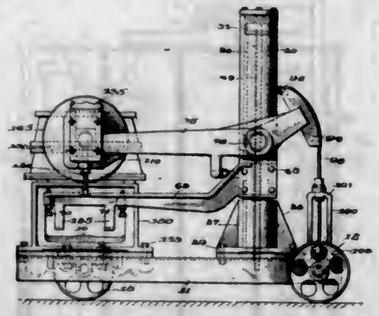
1. A percolator top having a flange for insertion into a percolator cover, said flange having holding lugs on its exterior surface, and said lugs being spaced longitudinally and transversely of the flange.

---

1,695,919. TUNING DEVICE. LESLIE A. GOULD, Bridgeport, Conn. Filed Aug. 7, 1925. Serial No. 48,775. 6 Claims. (Cl. 250—40.)

1. The combination with a radio receiving mechanism including a tuning device having a rotary element, a panel at one side of said device, a support in the rear of the panel, a member mounted to slide on said support, means accessible at the front of the panel for sliding said member on its support, and a driving connection from said member to the rotary element for adjusting the same by said sliding movement.

---

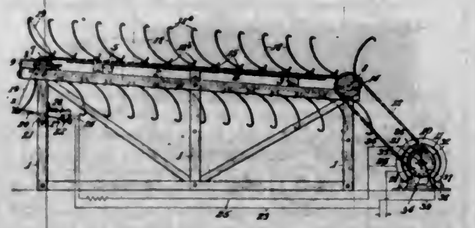


1,695,920. METALLIC MILK BOTTLE. THOMAS N. HARRISON, Jr., Littleton, N. C. Filed Feb. 25, 1926. Serial No. 90,568. 1 Claim. (Cl. 215—11.)

A metallic nursing bottle having a flat base portion, said flat base portion having secured thereto a second supporting base portion, the wall portions of the bottle and the base portion being connected to each other by a gradual curve and being integral with each other, the upper end of the bottle having its edges rolled outwardly until the upper edges of the bottle fit snugly against the outer wall portion to form a sanitary and smooth edge for the mouth of the bottle.

**1,695,921. MOLDING MACHINE.** EDWARD HARMES, Wilkinsburg, Pa., assignor to New Process Multi-Castings Company, a Corporation of New Jersey. Filed Apr. 9, 1927. Serial No. 182,261. 13 Claims. (Cl. 22—32.)

1. In a molding machine, a two-part flask, flask supporting means, means for moving said flask linearly, means cooperating therewith and called into action thereby for varying the path of travel of said flask, means for drawing a pattern from both flask parts, and means for assembling the two flask parts to close the mold.

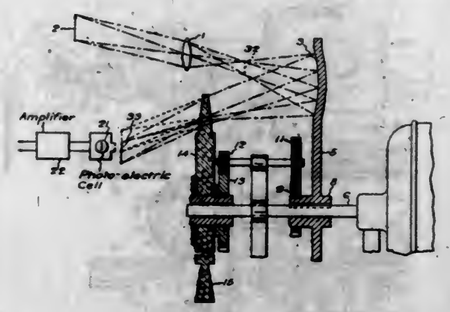


---

**1,695,922. PROCESS OF HEAT TREATING STEEL.** LE BARON W. KINNEY, Cleveland, and GEORGE H. BIERMAN, East Cleveland, Ohio, assignors to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 27, 1926. Serial No. 138,117. 3 Claims. (Cl. 148—1.)

2. A composition for preventing decarbonization during heat treatment consisting entirely of kieselguhr, water, and borax.

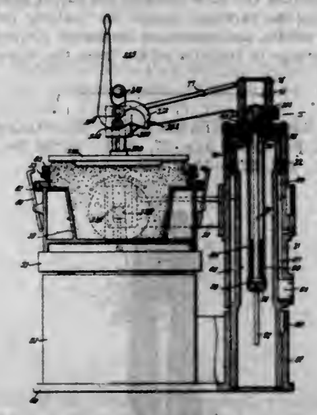
---



**1,695,923. PLATE REVERSING AND COOLING MECHANISM.** CHARLES W. KINTER and CHARLES H. MANION, Follansbee, W. Va., assignors to Follansbee Brothers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 20, 1927. Serial No. 193,044. 5 Claims. (Cl. 198—134.)

1. In a plate reversing and cooling mechanism, endless conveyor chains, a plurality of supporting members mounted on said chains in uniformly spaced relation, a pair of fingers constituting a plate carrier mounted on each supporting member in upstanding relation to the latter, each finger having at its opposite ends plate-edge-receiving terminals of hook-like form, and means for intermittently advancing said chains throughout the distance between successive plate carriers.

3. In a plate reversing and cooling mechanism, endless traveling chains, a plurality of plate carriers borne by said chains in uniformly spaced relation, each carrier comprising a suitable support and a pair of fingers, the latter having their lower end portions rigidly mounted on and occupying inclined upstanding relation to said support, each finger having at its opposite ends seats for the reception of opposite edges of a plate, and means for intermittently advancing said chains throughout the distance between successive carriers.

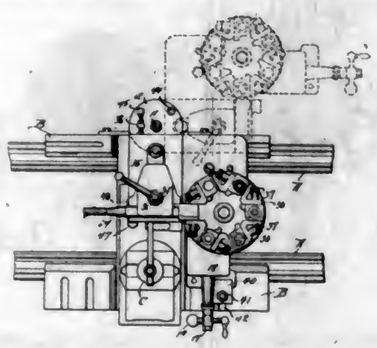


**1,695,924. TELEVISION APPARATUS.** SAMUEL M. KINTNER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1926. Serial No. 141,728. 9 Claims. (Cl. 178—6.)

1. In a translating device for picture transference, a rotatable member of approximately disc form and a series of reflecting devices disposed in rotative sequence on said rotatable member, each of said reflecting devices having its reflecting surface a surface of revolution, whereby each reflecting device is capable of producing a point focus.

---

1,695,925. MOLDING MACHINE. JOHN J. LAWLOR, Plainfield, N. J., assignor to New Process Multi-Castings Company, a Corporation of New Jersey. Filed Oct. 20, 1926. Serial No. 142,907. 5 Claims. (Cl. 22—43.)



1. In a molding machine, a jarring table for jarring a flask containing molding sand, relatively movable piston and cylinder members, a flask carried by one of said members and movable vertically with respect thereto, and a sand packing follower member carried by one of said members and freely vertically movable with respect thereto, for packing sand in said flask during jarring thereof.

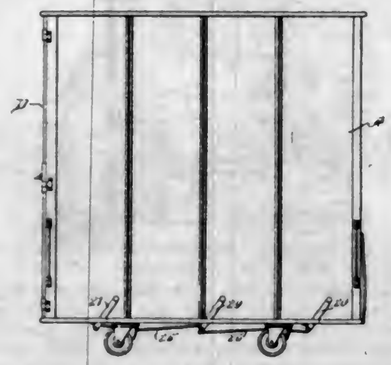
---

1,695,926. TURRET ATTACHMENT FOR LATHES. ARTHUR J. LIBERT, Green Bay, Wis. Filed Nov. 24, 1925, Serial No. 71,076. Renewed Aug. 24, 1928. 4 Claims. (Cl. 29—48.)

1. The combination of a bracket adapted to be secured to the carriage of a lathe, and having a horizontal base, a turret having a turn table portion pivotally connected with the base for the horisontal swinging of said turret on and from the carriage, a saddle adjustable on the turret

and having a platform, a swinging table eccentrically pivoted to the platform, a tool holder rotatable on the table, means for latching the latter in two positions on the platform, and means for clamping a selected tool from the tool holder on the saddle when the table is in one position on the platform.

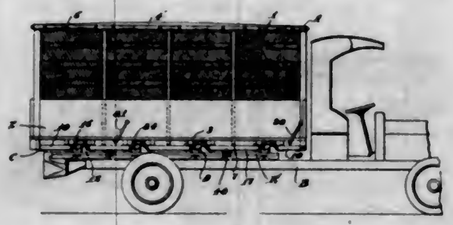
4. The combination of a bracket adapted to be secured to the carriage of a lathe, and having a horizontal base, a turret having a turn table portion pivotally connected with the base for the horizontal swinging of said turret on and from the carriage, a saddle adjustably engaged on the turret and having a platform, a swinging table eccentrically pivoted to the platform, a tool holder rotatable on the table, means for latching the latter in different positions on the platform, means for clamping a selected tool upon the saddle when said tool has been lowered from the holder and the table is in one position on the platform, means for locking the turn table of the turret when swung off of or onto the carriage, means for limiting the adjustment of the saddle, and means on the turret and engageable with the carriage to transfer strain from the turret to said carriage.



---

1,695,927. NECKTIE STRETCHER. WLADYSLAW LYJAK, Braddock, Pa. Filed Jan. 27, 1927. Serial No. 163,923. 2 Claims. (Cl. 223—19.)

1. In a necktie stretcher, a pair of relatively movable connected channel-like members, and a removable wedging member positioned within the stretcher body, said wedging member having a curved contacting channel engaging portion.

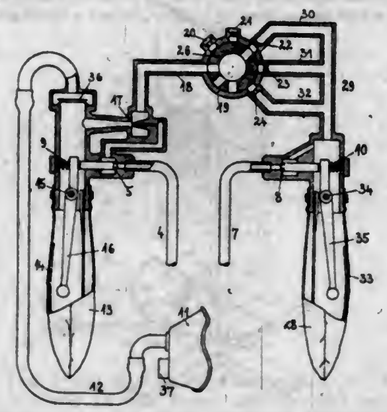


1,695,928. ROLLING CONTAINER. DONALD W. PERIN, Brookline, Mass., assignor to Perin-Walsh Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 18, 1924. Serial No. 738,395. 19 Claims. (Cl. 280—49.)

1. A container having a plurality of swivel rollers and means for positively locking a set of the rollers against swiveling when said rollers are in a predetermined position, said means comprising lugs, selectively operable linkage adapted to press said lugs in yieldable engagement with surfaces upon swiveling portions of the rollers, and recesses in said surfaces adapted to be engaged by said lugs when the rollers are swiveled to the predetermined positions, whereby one or more of the rollers in the set may be locked in position when swiveled to said predetermined position.

---

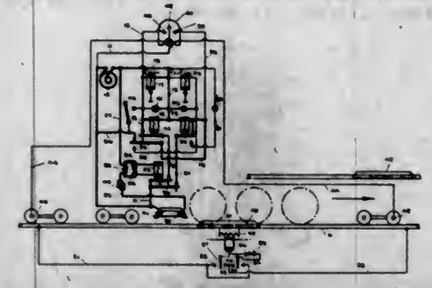
1,695,929. REMOVABLE CONTAINER FOR VEHICLES. DONALD W. PERIN, Brookline, Mass., assignor to Perin-Walsh Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 25, 1924. Serial No. 739,804. 6 Claims. (Cl. 280—49.)



1. A container having swivel rollers, means for locking said rollers against swiveling movement, and an actuator projecting from said means to engage a fixed stop when the container is rolled on a vehicle thereby automatically to lock the rollers.

---

1,695,930. INHALING DEVICE FOR ADMINISTERING GASES AND THE LIKE. HANS WILHELM CHRISTIAN SCHRÖDER, Lubeck, Germany, assignor to Alexander Bernhard Dräger, Finkenberg, Lubeck, Germany; Elfriede Dräger, née Stange, executrix of said Dräger, deceased. Filed Nov. 13, 1925, Serial No. 68,918, and in Germany Nov. 15, 1924. 5 Claims. (Cl. 128—203.)



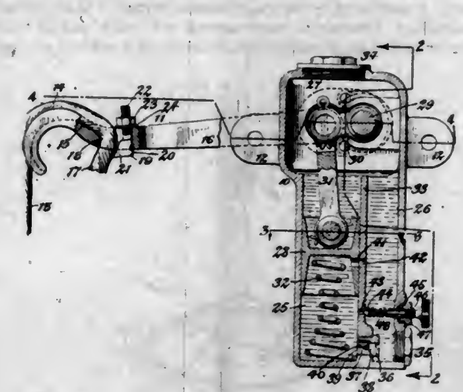
1. A breathing apparatus comprising an injector, a source supplying a gas under pressure to said injector to actuate it, a collapsible breathing bag adapted to receive gas from said injector, a valve mechanism coordinated with, and actuated by, the collapse of said bag for controlling the flow of said actuating gas to said injector, a conduit through which a second gas is drawn by the action of

said injector to be injected thereby into said breathing bag, and an adjustable valve in said conduit for determining the flow of said second gas.

---

1,695,931. TRAIN-CONTROLLING APPARATUS. DANIEL HERBERT SCHWEYER, Easton, Pa. Filed Aug. 13, 1923. Serial No. 657,229. 11 Claims. (Cl. 246—63.)

1. The combination of a vehicle track, a controlled track-side circuit at each control station including an electrically continuous portion of the track and having a source of electrical energy, and a vehicle equipment including a normally deenergized vehicle-carried partial circuit connected at its terminals to the track to cooperate with the trackside circuit in parallel with and shunting said portion of the track when passing the control station, means operable when said vehicle-carried circuit passes said portion of the track to produce danger vehicle controlling conditions, and means controlled by electrical energy flowing in said vehicle-carried circuit for obtaining other vehicle controlling conditions.



---

1,695,932. EXPLOSIVE. ALEXANDER CRUICKSHANK SCOTT, London, England, assignor to Mexico Limited, London, England, a British Company. Filed July 28, 1926, Serial No. 125,586, and in Great Britain Aug. 12, 1925. 14 Claims. (Cl. 52—12.)

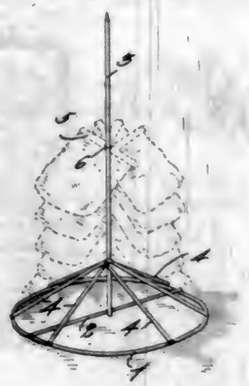
1. In a process for impregnating explosive cartridges of the kind described with a liquid nitro-body, effecting the impregnation of the cartridge by the aid of a liquid spreading agent, which agent has the property of assisting the nitro-body to creep over the surfaces of the crystals and thereby to become evenly disseminated throughout the mass of said crystals.

1,695,933. SHOCK ABSORBER. ALBERT B. SHULTZ, Buffalo, N. Y. Filed Dec. 5, 1921. Serial No. 519,839. 7 Claims. (Cl. 267—8.)

1. A shock absorber adapted to be arranged between two relatively movable members, comprising a cylinder adapted to be connected with one of said members, a piston arranged in said cylinder and adapted to be connected with the other member, and a liquid reservoir, said piston having a port and said cylinder having a port leading to said reservoir, said ports being adapted to register and place said cylinder and reservoir in communication with each other during the central part of the stroke of said piston in the cylinder but to cut off communication through these ports between the cylinder and reservoir when the piston is at either end of its stroke.

---

1,695,934. FURRING AND FASTENING DEVICE. SARAH B. SULLIVAN, Berkeley, Calif. Filed Jan. 16, 1926. Serial No. 81,639. 1 Claim. (Cl. 72—118.)

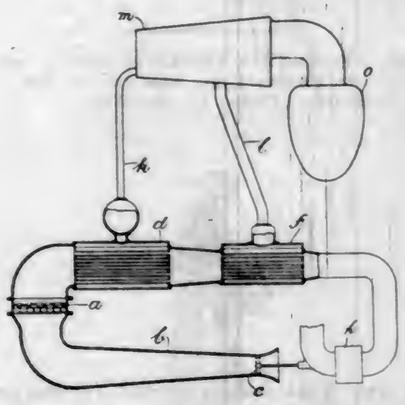


In a device of the character described, a spacing member comprising a triangular tube formed of a strip of sheet metal with the ends recessed and abutting at one of the corners, a fastener comprising a pointed and headed shank passing through the said spacer recesses and the side opposite said corner, said side being adjacent the pointed end of the shank whereby it may lie against the wall when the device is operatively disposed, and means incorporated with the spacer for holding the strip ends together.

---

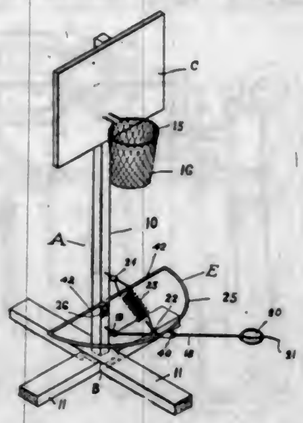
1,695,935. DISPLAY STAND. CHARLES J. VESLEY, Portland, Oreg. Filed May 18, 1927. Serial No. 192,362. 2 Claims. (Cl. 211—59.)

1. A display stand comprising a ring-like base, a brace rod extending diametrically across the ring-like base, an article receiving spindle having its lower end secured to the intermediate portion of the brace rod and extending upwardly therefrom, and a series of additional brace rods extending diametrically across the ring-like base, the free



ends of the additional brace rods being secured to the ring-like base at diametrically opposite points, the intermediate portions of the additional brace rods being bent and inter-

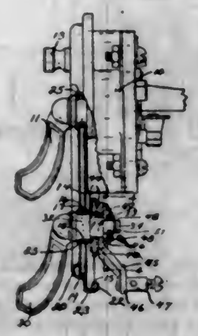
secting one another, the intersecting portions of the additional brace rods being secured to the spindle at a point above the lower end thereof.



---

1,695,936. POWER PLANT. JAMES GEORGE WEIR, Cathcart, Glasgow, Scotland, assignor to G. & J. Weir, Limited, Glasgow, Scotland. Filed Jan. 23, 1926, Serial No. 83,408, and in Great Britain Feb. 25, 1925. 6 Claims. (Cl. 122—1.)

1. In the employment for power production of the hot gases resulting from the combustion of fuel and comprising non-condensable gases and water vapour, the method of operation consisting in passing the said gases first through, and utilizing them in, an ordinary boiler and then passing them through, and further utilizing them in, a low-pressure boiler, burning the fuel at a pressure substantially above atmospheric and maintaining the hot gases at a pressure substantially above atmospheric in their passage through the two boilers, utilizing the energy due to the pressure of the said gases, after they have left the said low-pressure boiler, in a turbine placed in the discharge flue of said low-pressure boiler, said turbine acting to maintain the pressure of said gases in their passage through the two boilers, and operating the said low-pressure boiler at such a pressure of steam generation that the temperature is sufficiently low to allow of the condensation of the water vapour in the said hot gases.



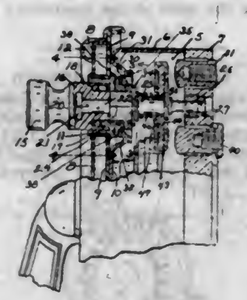
1,695,937. TOY GAME. FRANK M. WELCH, St. Paul, Minn. Filed Mar. 17, 1927. Serial No. 176,028. 12 Claims. (Cl. 273—101.)

9. A toy including, a standard, a separable base for supporting said standard, a tossing arm pivotally connected to said standard, and a stop shoulder for said tossing arms removably supported to said standard above said tossing arm.

---

1,695,938. CONTROL MECHANISM. ROBERT K. WINNING, Wauwatosa, Wis., assignor to Clum Manufacturing Co., Milwaukee, Wis. Filed June 1, 1925. Serial No. 34,064. 2 Claims. (Cl. 74—39.)

1. The combination with a face plate assembly provided with an aperture, of a shaft extending through said aperture and provided with a hand lever exteriorly thereof, a friction plate spaced interiorly of said assembly and having an aperture for said shaft, washers splined to said shaft and in frictional engagement with said friction plate, a spring confined between a portion of said shaft and one of said washers and acting thereon in a direction to force said washer toward said friction plate, and means upon said shaft adapted to transmit to the other of said washers the reaction of said spring, whereby said shaft is axially positioned with reference to said friction plate irrespective of said mounting plate assembly.



---

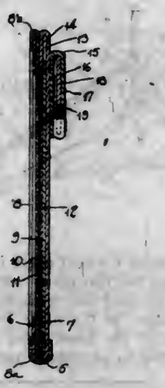
1,695,939. DASH SWITCH. ROBERT K. WINNING, Wauwatosa, Wis., assignor to Clum Manufacturing Company, Milwaukee, Wis. Filed June 25, 1925. Serial No. 39,470. 20 Claims. (Cl. 200—159.)

20. In a switch device, the combination with an apertured casing wall, of a bearing aligned with said aperture,

a handle reciprocably and rotatably mounted in said bearing, a shaft secured to said handle and extending through said aperture and into the exterior of said casing, a compression spring confined between said casing and handle, a cam comprising a portion carried by said casing and a portion carried by said shaft and arranged to move said shaft axially inwardly of said casing upon manual rotation thereof, contacts carried by said casing, and a circuit closer carried by said shaft and adapted to engage said contacts upon inward movement of said shaft.

---

1,695,940. ELECTRIC SWITCH. ROBERT K. WINNING, Wauwatosa, Wis., assignor to Clum Manufacturing Co., Milwaukee, Wis. Original application filed Dec. 18, 1922, Serial No. 607,563. Divided and this application filed Aug. 31, 1925. Serial No. 53,507. 26 Claims. (Cl. 200—14.)



8. In a device of the character described, the combination with a terminal head providing a plurality of arcuately equidistant stations, certain of which comprise terminals and certain of which do not, conductors connecting terminals in two separate pairs at four consecutive stations, a conductor connecting terminals at another pair of stations spaced from the stations aforesaid, and a movable switch contactor rotatable with respect to said terminal head and provided with contact elements complementary to said stations, certain of said elements being interconnected and adapted to establish a plurality of circuits between said terminals while maintaining certain of said terminals in electrical connection throughout a plurality of successive positions, two of said elements being arcuately spaced for a distance equivalent to the spacing between two consecutive stations and two others of said elements being arcuately spaced a distance equivalent to the distance between three consecutive stations.

---

1,695,941. AUTOMOBILE LICENSE-CERTIFICATE HOLDER. ORVILLE E. ABBEY, Corning, Iowa. Filed Aug. 1, 1927. Serial No. 209,862. 3 Claims. (Cl. 40—10.)

1. An automobile license certificate holder comprising a flat flexible envelope adapted to receive a license certificate and having an opening and a transparent sheet of material in the rear of said opening through which the certificate is visible, said envelope having an inlet at the top, a "sticker" adhesively secured to the upper portion of the back of the envelope and adapted to be adhesively secured to the automobile, said "sticker" embodying a sheet of adhesive material folded upon an intermediate transverse horizontal line to provide a front portion attached to the back of the

envelope and a back portion adapted to be secured to the automobile, and a stiffening sheet disposed between said front and back portions and having cut away lower corners, the lower corners of said back portion being folded around said corners and adhesively secured to said front portion.

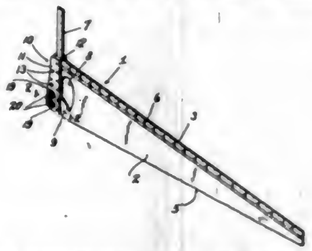
---

1,695,942. PROCESS FOR PROTECTING LAWNS. JOHN H. ATWATER, Jamestown, N. Y. Filed Jan. 7, 1927. Serial No. 159,744. 2 Claims. (Cl. 47—58.)

2. The process of making lawns consisting in preparing the ground, sowing seed thereon, covering the newly seeded ground with coarse textured fabric having moisture absorbing and retaining properties which rests directly on the ground, and which is woven to provide interstices between the warp and woof of a size to permit tender grass sprouts to freely pass therethrough, keeping said fabric moist, and allowing it to remain upon the ground until the seeds germinate.

---

1,695,943. SPRING SHACKLE. ALBERT C. BALLY, Toledo, Ohio. Filed June 29, 1925. Serial No. 40,183. 8 Claims. (Cl. 267—56.)

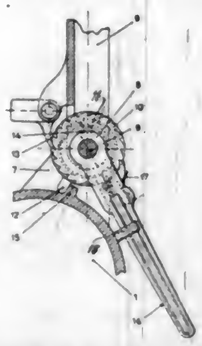


1. In a spring suspension for vehicles, a leaf spring having at one end thereof, a circular eye, a mounting bracket having therein a circular socket of less diameter than the normal diameter of the eye in which the eye of the spring is enclosed under compression for relative locking movement, said mounting bracket having closure heads at opposite sides of the spring, and serving to close the eye of such spring, and a compensating connection for the opposite end of the spring accommodating the extension and contraction of the spring under varying load tension.

---

1,695,944. CARPENTER'S COMBINATION TOOL. OSCAR W. BANE, Cumberland, Md. Filed Jan. 18, 1928. Serial No. 247,625. 2 Claims. (Cl. 7—13.)

1. In a carpenter's combination tool, a saw blade having an upper horizontal straight edge, one end of the blade



being disposed at right angles to said straight edge, an extension formed on said end of the blade and extending upwardly from the horizontal straight edge at right angles thereto, said end of the blade being formed with a hand hole, a handle employing a pair of complementary plate sections secured on the opposite sides of the said ends of

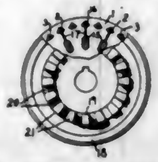
the blades, the inner vertical edges of said plates being disposed in the same vertical plane with the inner edge of the extension, said vertical inner edges of the extension, said vertical inner edges of the plate lying flush with the adjacent side edge of the hand hole, the outer edges of the plate being shaped to provide a hand grip.

---

1,695,945. SPRING-BELT STRETCHER. HENRI BENIT, Paris, France, assignor to Compagnie Generale d'Electricite, Paris, France. Filed July 19, 1926, Serial No. 123,533, and in France July 25, 1925. 2 Claims. (Cl. 308—11.)

1. A tension regulating device for driving belts comprising a support bracket, a pulley supporting member pivotally connected with the bracket, a ratchet rotatably mounted on the pivot including a cylindrical body and a toothed wheel fixed on one end of the body, a tension spring wound about the body having one end secured thereto and the opposite end attached to the pulley supporting member, means for securing the ratchet wheel against rotation in one direction, and a lever operatively associated with the pivot and ratchet wheel separated to permit rotation of the ratchet wheel in opposite direction to increase the tension of the spring.

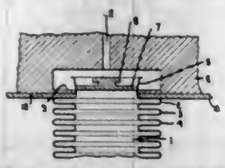
---



1,695,946. INDUCTION MOTOR. SVEN R. BERGMAN, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 29, 1924. Serial No. 752,993. 5 Claims. (Cl. 172—120.)

4. In an induction motor, a rotor having a circumferential row of inner openings, each opening having a long narrow portion extending radially outward therefrom, and having outer openings arranged near the periphery and arranged radially opposite the spaces between the inner openings, conductors in said openings, end rings of relatively low resistance connecting the ends of the conductors in the inner openings and end rings of relatively high resistance connecting the ends of the conductors in the outer openings.

---



1,695,947. METHOD OF FORMING INDUCTION MOTORS. SVEN R. BERGMAN, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Original application filed Nov. 29, 1924, Serial No. 752,993. Divided and this application filed Feb. 27, 1928. Serial No. 257,203. 2 Claims. (Cl. 29—155.5.)

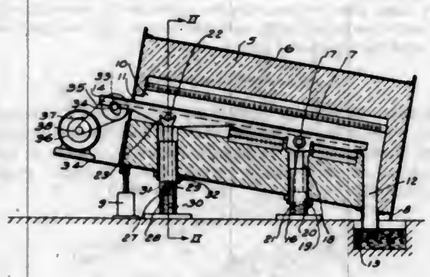
1. The method of forming an induction motor squirrel cage on a magnetic core having deep conductor receiving openings therethrough, which consists in casting conductors in said conductor receiving openings and integral end rings of large cross-section, one at each end of said core, and thereafter separating each of the end rings into separate rings, one formed with the portions of the conductors in the top of the conductor receiving openings and the other formed with the portions of the conductors in the bottom of the conductor receiving openings.

---

1,695,948. CLOSED METALLIC CORRUGATED WALL AND METHOD OF MAKING SAME. FRED K. BEZZENBERGER, Cleveland Heights, Ohio, assignor, by mesne assignments, to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Aug. 21, 1924. Serial No. 733,322. 3 Claims. (Cl. 22—203.)

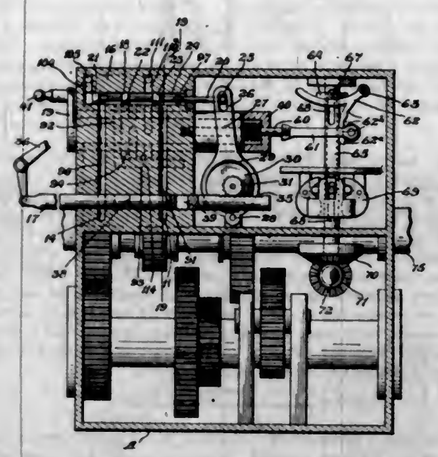
1. In a method of forming an integral closure about the end of a metal bellows, the steps which consist in snugly fitting within the projecting end portion of a bellows a metal plate, mounting such end within a mold chamber fitting snugly against the end portion of said tube adjacent a convolution therein, and then pouring molten metal within said chamber about said end while protecting the adjacent convolution of said bellows from the heat of the molten metal.

---



1,695,949. DUPLEX SCREW DRIVER. PETER E. BORKLUND, Spokane, Wash. Filed Jan. 16, 1928. Serial No. 247,082. 7 Claims. (Cl. 145—52.)

1. In a duplex screw driver; a bit bar having a bit on each end thereof, a sleeve encasing said bar and having a set of screw holding fingers on each end thereof and being slidable on said bar to dispose either set of fingers in coacting or retracted relation with the respective bit thereof, a forked holding shank, means pivoting said bar in the fork of said shank for end for end adjustment of said bar with respect to said shank to dispose either bit in projecting relation from said shank, and a ferrule slidable on said shank for locking said bar in its adjusted position.

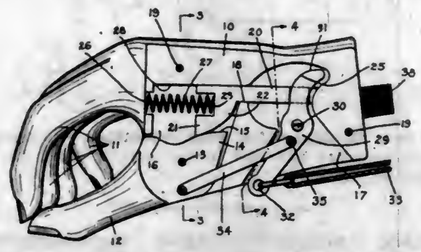


1,695,950. FURNACE. CRANSTON H. CARPENTER, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 17, 1926. Serial No. 123,218. 8 Claims. (Cl. 263—6.)

1. In a furnace, in combination, an inclined plate having corrugations forming article-receiving paths, and means to agitate said plate to cause the articles to travel along said paths.

---

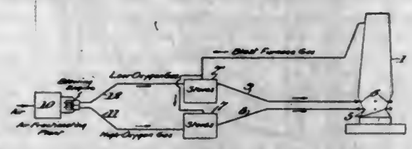
1,695,951. POWER TRANSMISSION. PHILIP JOHN CUNNINGHAM, New York, N. Y. Filed July 29, 1927. Serial No. 209,360. 12 Claims. (Cl. 74—97.)



1. A transmission unit for motor vehicles and the like, adapted to transmit power to motor vehicles at various speeds, comprising a casing, transmission gearing operatively mounted within the casing, including sliding gears, a solid block formed in the casing provided with a pair of cylinders, a series of bores, and a sereis of conducting passageways, pistons in said cylinders, and a series of intercommunicating valves in said bores, rod means connecting the pistons with the transmission sliding gears, operating means associated with said valves, and a master control lever adapted to control the operativeness of the transmission.

---

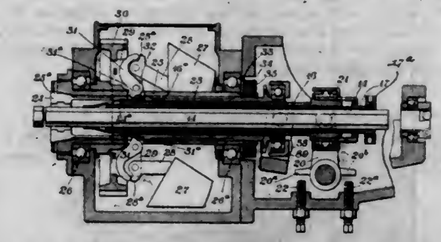
1,695,952. ARTIFICIAL HAND. DAVID W. DORRANCE, Minneapolis, Minn. Filed Feb. 5, 1926. Serial No. 86,214. 4 Claims. (Cl. 3—12.)



1. An artificial hand including a main portion provided with fingers and with a thumb pivoted thereon and formed with a cam surface, a traveler reciprocably mounted within said main portion and formed with a cam thereon adapted to coact with said cam surface to resist opening swinging movement of said thumb by extraneous force, also to impart closing swinging movement to the thumb upon movement of the traveler in one direction, an expansion spring

operating against said traveler to move the same in that direction, and an actuating lever pivoted on said main portion, one end of said lever co-operating with said traveler to shift the same against the action of said spring and thereby free the traveler from the thumb.

---

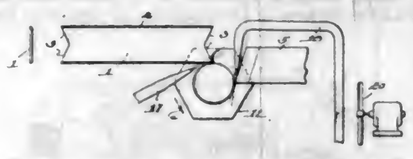


1,695,953. METHOD OF PREHEATING THE CHARGE IN SHAFT FURNACES. ALEXANDER L. FEILD, Jackson Heights, N. Y., assignor to The Linde Air Products Company, a Corporation of Ohio. Filed Apr. 25, 1924. Serial No. 709,012. 8 Claims. (Cl. 75—14.)

1. Process of preheating the charge in shaft furnaces, comprising passing a hot, non-smelting gas comprising an oxygen-nitrogen mixture in which the ratio of oxygen to nitrogen is less than that in atmospheric air into the furnace above the smelting zone.

---

1,695,954. CLUTCH MECHANISM FOR BAR MACHINES. LEE A. FRAYER, Columbus, Ohio. Filed Mar. 23, 1925. Serial No. 17,569. 8 Claims. (Cl. 29—62.)

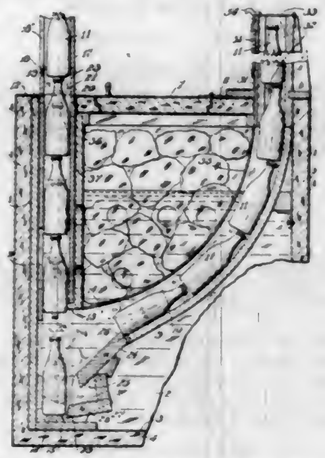


1. In a bar feeding machine, the combination, of bar feeding means, a chuck tube and chuck and rotating means therefor, a lever pivoted with the rotating means and engaging the chucking member and a centrifugal element to act on said lever to cause the chucking of the fed bar, said centrifugal element being movable independently of said lever.

---

1,695,955. METHOD OF BLANKING METALLIC ARTICLES. LEE A. FRAYER, Columbus, Ohio. Filed June 11, 1925. Serial No. 36,529. 4 Claims. (Cl. 29—1.)

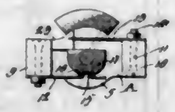
1. The method of cutting metal, which consists in producing a cut in a metallic body by a primary tool having a



V-shaped cutting edge, in finishing the cut by means of a secondary relatively wider cutting tool operating in the cut produced by the primary tool and simultaneously

therewith, the primary tool being so arranged with respect to the secondary tool that it can only cut along its V-shaped cutting edges.

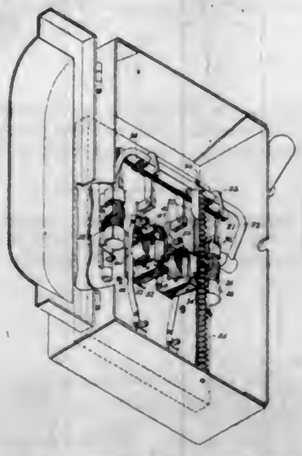
---



1,695,956. BOTTLE-DISPENSING REFRIGERATOR. CHESTER A. FRICK, Muncie, Ind., assignor to Glascock Brothers Mfg. Company, Muncie, Ind., a Corporation of Indiana. Filed Aug. 18, 1924. Serial No. 732,641. 9 Claims. (Cl. 312—36.)

1. In a bottle dispensing refrigerator, the combination with a refrigerating container, of a bottle lifting means reciprocally mounted to discharge the top-most of a stack of bottles vertically disposed in said container one on top of the other, said means having means for engaging the bottom bottle in said stack to lift the stack vertically, and means for delivering a bottle in a vertical position beneath the lifted stack.

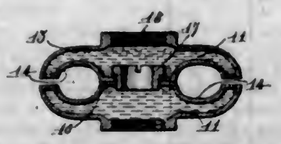
---



1,695,957. SWITCH. HUGO GERNSBACK, New York, N. Y. Filed Oct. 26, 1925. Serial No. 64,980. 4 Claims. (Cl. 200—155.)

1. A switch comprising a flat body of insulation, rearwardly projecting blocks having vertical bores therein formed on the rear face of the body at the opposite ends thereof, the body between said blocks being provided with an opening, a hub sleeve fitted in said opening and projecting forwardly from the front face of the block, a shaft rotatably mounted in said hub sleeve, and a manipulating crank at the front end of said shaft, a semicircular shaped bridge piece carried by the inner end of the shaft, a contact spring secured to the upper face of one block and projecting inwardly therefrom and arranged at the front of said bridge piece, a second switch contact secured to the lower face of the other block and extending inwardly therefrom, said last mentioned spring contact having an inwardly struck tit formed therein, the bridge piece having a notch formed therein for the reception of said tit, and a name plate having an axial opening for receiving said hub sleeve provided with suitable indicia for co-operation with said manipulating crank.

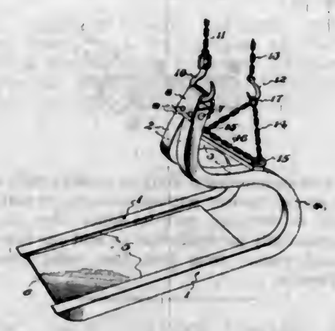
---



1,695,958. ELECTRIC SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Apr. 23, 1924. Serial No. 708,355. 3 Claims. (Cl. 175—294.)

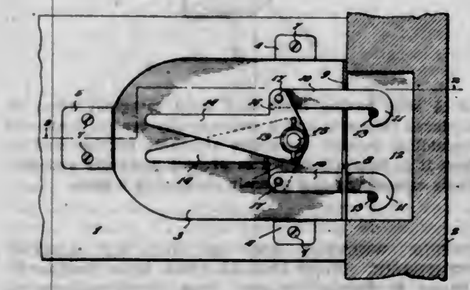
1. An enclosed switch comprising four movable switch members, a hand operable crank therefor, a spring tending to move said switch to open circuit position, an electromagnet in shunt with two of said switch members for holding all of said members in a closed circuit position, a supplemental switch in circuit with said magnet, a second electromagnet connected in shunt with the other two switch members for controlling said supplemental switch, an overload relay in series with each of two of said switch members, each relay having a heating element and a thermostatic member adapted to automatically open the circuits through one of said electromagnets.

---



1,695,959. RADIATOR. JOSEPH WILLIAM GUIMONT, Lachine, Quebec, Canada, assignor to Ludger Lemieux, Montreal, Canada. Filed Nov. 18, 1927. Serial No. 234,267. 3 Claims. (Cl. 257—151.)

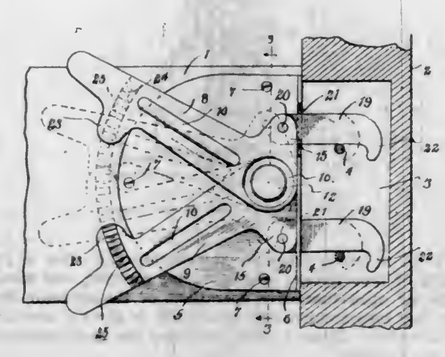
2. A radiator section comprising a pair of complementary longitudinally divided semi-sections, each semi-section including a rectangular shaped conduit having longitudinally directed inwardly projecting corrugations formed in the interior wall at the sides thereof, means for detachably connecting the semi-sections so that the corrugations will be arranged in opposed positions to form a circulating duct communicating with the atmosphere through a recess formed between the marginal interior sides of the semi-sections, and means for connecting the assembled sections to form a radiator unit.



1,695,960. DEVICE FOR HANDLING RAILROAD TIES. JESSE HACKWORTH and WILLIAM KUEHNE, Ironton, Ohio; said Hackworth assignor to said Kuehne. Filed Aug. 6, 1927. Serial No. 211,223. 1 Claim. (Cl. 294—67.)

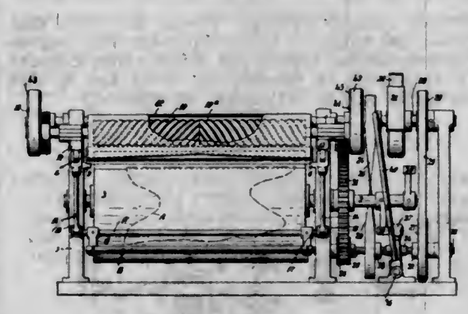
An article handling device comprising a hook consisting of bars joined at their upper ends and consisting of bars joined at their upper ends and bent rearwardly and then downwardly in spaced relation and forwardly to provide a vertical shank and horizontal tines projecting forwardly beyond the shank and adapted to extend beneath articles to be lifted, means for connecting the upper end of said hook with a suspending member, a cross bar extending between and secured to the rearwardly extending portions of said bars, adjacent the downwardly bent portion thereof, eyes being provided at the ends of the cross bar, and a flexible member threaded through the eyes of said cross bar and extending upwardly therefrom and adapted to be engaged with a suspending member.

---



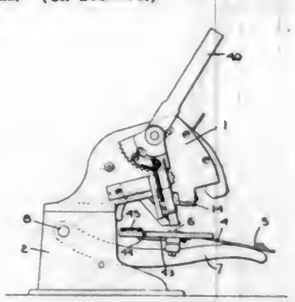
1,695,961. SIDE-RAIL FASTENER FOR BEDS. PHILIP M. HOWSE, Nashville, Tenn., assignor to Hol-Fast Bedlock Company, Nashville, Tenn., a Corporation of Tennessee. Filed May 5, 1927. Serial No. 189,055. 8 Claims. (Cl. 5—298.)

1. A fastener comprising a body adapted to be secured to an article to be supported, a flange extending transversely from said body and formed with slots, a stem extending from said body, levers pivotally carried by said stem and having handle portions movable towards and away from each other, arms pivotally connected with said levers and extending through said slots and having their outer end portions provided with support-engaging means, and means carried by said stem to releasably secure the levers in a set position.



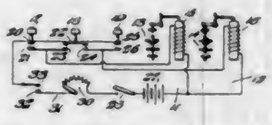
1,695,962. SIDE-RAIL FASTENER FOR BEDS. PHILIP M. HOWSE, Nashville, Tenn., assignor to Hol-Fast Bedlock Company, Nashville, Tenn., a Corporation of Tennessee. Filed June 8, 1927. Serial No. 197,395. 9 Claims. (Cl. 5—298.)

1. A bed rail fastener comprising a body adapted to be secured against a bed rail and having a flange at one end to bear against a bed post and formed with slots, levers disposed one against the other and at one end pivoted to said body about a common pivot, the pivoted ends of said levers having arcuate edges bearing against said flange, anchors pivoted to said levers and projecting from said flange, and the levers being formed with side extensions adjacent their free ends and stamped to form racks extending transversely across said levers and side extensions and having teeth to interlock and releasably retain the levers in a set position.



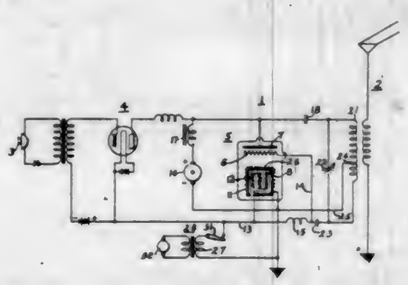
---

1,695,963. HIDE SETTING-OUT AND OILING MACHINE. KARL WILLIAM KOENIGER, Orange, N. J., assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Aug. 30, 1924. Serial No. 735,080. 28 Claims. (Cl. 149—20.)



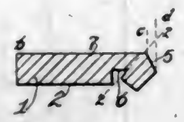
1. A machine of the character specified comprising a member to support hides, means to removably secure the hides to said member, means to set out the hides on said member, mechanism to actuate said member with respect to said setting out means, and means to apply oil to the set out hides.

1,695,964. PRINTING MACHINE. GEORGE H. LANO, Boston, Mass. Filed Nov. 7, 1925. Serial No. 67,503. 20 Claims. (Cl. 101—72.)



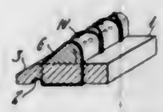
1. In a listing machine, the combination with a plurality of type wheels, of an actuator therefor, and means whereby upon successive operations of the actuator first one and then another type wheel will be given a plurality of successive forward steps, one step for each operation of the actuator.

1,695,965. CONTACT MECHANISM FOR TYPEWRITER-KEY PUNCHES. WILLIAM W. LASKER and CHARLES A. MEZGER, Brooklyn, N. Y., assignors, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 10, 1925. Serial No. 8,310. 12 Claims. (164—113.)



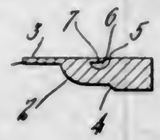
1. In a typewriter key punch mechanism, the combination of a punch, electrical means for operating said punch, a circuit including said means, keys for operating a typewriter, a contact means controlled by one of said keys for partially closing said circuit, and contact means automatically operated for completing the closing of said circuit.

1,695,966. RADIO SYSTEM. DONALD G. LITTLE, Edgewood, and ROBERT L. DAVIS, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1927. Serial No. 181,364. 11 Claims. (Cl. 250—27.)



1. In combination, a thermionic device having an electron-emissive cathode, a grid leak resistor, and means whereby energy dissipated in said resistor may be utilized to heat said cathode.

1,695,967. WELT AND METHOD OF MAKING. HARRY LYON, Brockton, Mass., assignor to John A. Barbour, Brookline, Mass., and Perley E. Barbour, Quincy, Mass., doing business as a Copartnership under the name and style of Barbour Welting Company, Brockton, Mass. Filed Aug. 14, 1924. Serial No. 731,932. 10 Claims. (Cl. 36—78.)



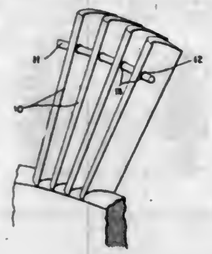
1. Welting comprising a strip of substantially rectangular cross section incised without removal of material longitudinally in one face near its inner edge, the incision being substantially perpendicular to said one face adjacent thereto and remote from that face being substantially parallel thereto.

1,695,968. BEADED WELTING. HARRY LYON, Holbrook, Mass., assignor to Perley E. Barbour, Quincy, Mass. Filed Oct. 7, 1925. Serial No. 61,064. 8 Claims. (Cl. 36—78.)

1. Welting comprising a base strip, and a bead fixed to one face and parallel to one edge of the base strip by a continuous strand fastening laced over said bead.

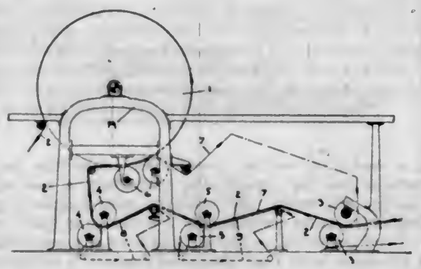
1,695,969. REVERSE WELTING AND METHOD OF MAKING. HARRY LYON, Holbrook, Mass., assignor to Perley E. Barbour, Quincy, Mass. Filed Oct. 7, 1925. Serial No. 61,065. 15 Claims. (Cl. 36—78.)

1. A welt having inner and outer marginal areas of unreduced thickness and a substantially central weakened longitudinal portion to receive attaching stitches and at which it is laterally folded to present upwardly and outwardly extending edges when in position in a shoe.



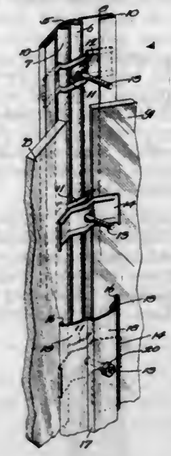
1,695,970. WELTING AND METHOD OF MAKING THE SAME. HARRY LYON, Holbrook, Mass., assignor to Perley E. Barbour, Quincy, Mass., doing business as Barbour Welting Company. Filed Dec. 23, 1926. Serial No. 156,712. 4 Claims. (Cl. 36—78.)

1. Welting for boots and shoes comprising a strip of grain leather having a grain corner removed at its inner edge, a longitudinal incision near said edge extending from the flesh side inwardly and then turning toward said edge, and having the marginal portion between said incision and inner edge displaced toward the grain side with the entire inner edge positioned oblique to the grain side and said incision opened to present a stitch-receiving groove.



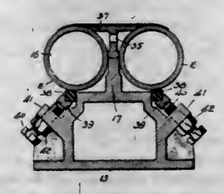
1,695,971. TURBINE-BLADE LASHING. NORMAN L. MOCHEL, Ridley Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 28, 1927. Serial No. 229,466. 2 Claims. (Cl. 253—77.)

1. In a turbine the combination of a group of turbine blades, made of relatively non-corrosive iron alloy and a substantially homogeneous nickel lashing member connected to the blades.



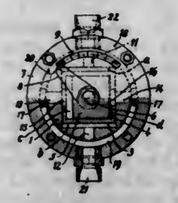
1,695,972. PAPER-MAKING MACHINERY. ÉRIK ALEXANDER ÖHLIN and FRANS OSKAR CARLSSON, Hyltebruk, Sweden. Filed Mar. 29, 1928, Serial No. 265,715, and in Sweden Apr. 9, 1927. 2 Claims. (Cl. 92—49.)

2. An improved paper making machinery comprising a single drying cylinder, a couching press, a plurality of intermediate presses between said couching press and said drying cylinder, a common upper drying felt and separate under felts for said intermediate presses, the felt for the intermediate press adjacent to the couching press being of comparatively loose stuff produced by hard-twisted yarn, and the felt for the intermediate press adjacent to the drying cylinder made by a more tight-woven felt material with a smooth surface.



1,695,973. ADJUSTABLE CORNER BAR FOR PLATE-GLASS WINDOWS. HARRY A. OLSSON, Chicago, Ill. Filed May 9, 1927. Serial No. 189,769. 14 Claims. (Cl. 189—78.)

1. In a device of the class described, a center strip having an outer face portion and tubular marginal portions, side wings for bracing glass panes from one side, said wings having marginal tubular portions swivelingly engaging the external surface of the tubular portions of the center strip, means at the outer extremities of the wings for



holding said wings to their work, means for bracing the glass from the opposite side, and means for holding said parts assembled.

1,695,974. ROLLER VACUUM EXTRACTOR. GEORGE PEEBLES, Elizabeth, N. J., assignor to Selbec, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 58,119. 11 Claims. (Cl. 92—51.)

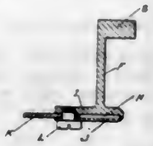
1. In a machine for extracting liquid from saturated fabric, in combination, a vacuum box having side and end walls, spaced rollers journalled in said end walls and each thereof having its upper surface tangent with the fabric sealing means arranged between each side wall and the adjacent surface of a roller comprising a strip of rectangular compressible section sealing material, a backing strip for the sealing material and adjustable means carried by the side walls of the box and engaged with the backing to hold the sealing material in contact with both the surfaces of the roller and side wall.

1,695,975. REVOLVING-CYLINDER AND RECIPROCATING-PISTON PUMP. EDUARD PELICH, Prague, Czechoslovakia. Filed Oct. 26, 1925, Serial No. 64,942, and in Czechoslovakia Oct. 27, 1924. 6 Claims. (Cl. 103—163.)

1. In a revolving piston pump with reciprocating prismatic pistons arranged slidably at right angles to each

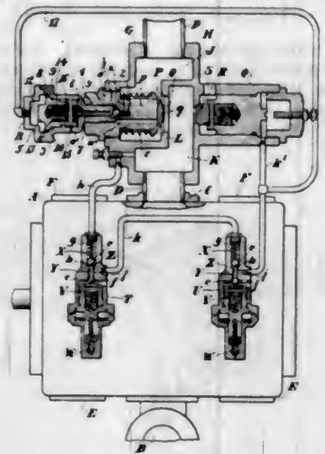
other in a driven disc rotatably mounted in an outer casing, the inner prismatic piston being rotatably arranged on a journal eccentrically mounted in the casing of the pump; the combination of distributing means on the outside of the rotatable disc, the suction and discharge passages of said distributing means being in communication with the suction and discharge passages of the casing; openings in the rotatable disc in front of the working faces of the prismatic piston sliding in said disc, and openings in the said rotatable disc and in the said prismatic piston in front of the second, inner prismatic piston sliding in the first named prismatic piston, said openings connecting the working spaces of both prismatic pistons with the passages of the distributing means.

---



1,695,976. CONTAINER FOR LUBRICANTS. HARRISON O. PRESTON, Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed July 31, 1924. Serial No. 729,241. 1 Claim. (Cl. 206—56.)

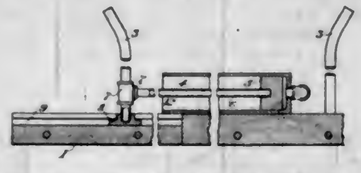
A grease gun cartridge comprising a shell having a cylindrical body portion adapted to be inserted substantially full length into a grease gun, an external annular flange at the lower end of the shell for preventing the further insertion of the same into said grease gun, a disk movable within the shell and an internal annular constriction at the lower end thereof for preventing movement of said disk in an outward direction.



---

1,695,977. FRENCH CORD BINDER. WILLIAM J. REAGAN, Lynn, Mass. Filed Aug. 5, 1927. Serial No. 210,972. 1 Claim. (Cl. 112—139.)

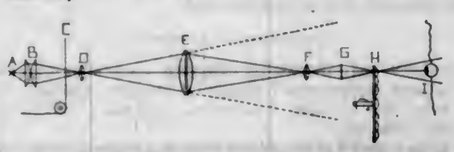
An attachment for sewing machines, comprising a bracket for mounting on the foot of a sewing machine, a part integral with and extending at an angle to the body of the bracket and having spaced apart relatively parallel portions forming a U-shaped, channeled construction in cross-section between which binding material is guided to the needle of the machine, and a filler member between the portions to adjust the width of the channel receiving the binding, said member being slotted to receive a holding screw for fixing it in adjusted position, and a handle portion integral with the filler member for manipulating the same.



1,695,978. DAMPER FOR CHECK VALVES. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 17, 1928. Serial No. 262,436. 11 Claims. (Cl. 230—27.)

1. In a compressor, the combination of a cylinder and a discharge line, a check valve controlling communication between the cylinder and the discharge line, and pressure actuated means to maintain the check valve closed during the acceleratiog, stopping and idle periods of the compressor and to enable said check valve to remain constantly open during the running period of the compressor.

---

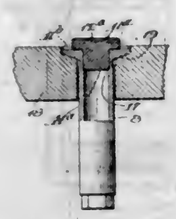


1,695,979. TUBE-TESTING MACHINE. MATTHEW REID, Vancouver, British Columbia, Canada. Filed Aug. 12, 1926. Serial No. 128,806. 1 Claim. (Cl. 73—51.)

In a device for testing a submersed inner tube for an automobile tire the combination comprising, a base member having two metal tubes forming right angularly projecting supports for and adapted to receive said inner tube, one of said projecting supports being fixed and one slidable in a direction to or from said fixed support, a cylinder of relatively thin metal, a piston engaging said cylinder, a rod secured to said piston, said rod being attached to said slidable support by a T-piece pipe fitting, means for admitting and releasing compressed air respectively to and from said cylinder, and means secured to the said base member for suitably guiding said slidable support.

---

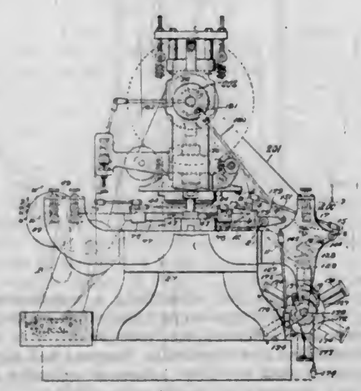
1,695,980. LIGHT-CONVERGING-LENS SYSTEM. CHARLES FRANCIS JENKINS, Washington, D. C. Filed June 5, 1925. Serial No. 35,118. 11 Claims. (Cl. 178—6.)



1. The continuation of means for forming an image of an object, means for giving linear movement to said image,

means for forming an image of said first image, means for giving linear movement to said second image a plurality of time and at approximately right angles to the movement of said first image, a light sensitive cell located to be swept by said second image, and a convex lens located in the plane of the first image, and being adapted to cause more of the imaging light to be projected through the second image forming means and to the light sensitive cell without affecting the focusing operation of the first and second image forming means.

---



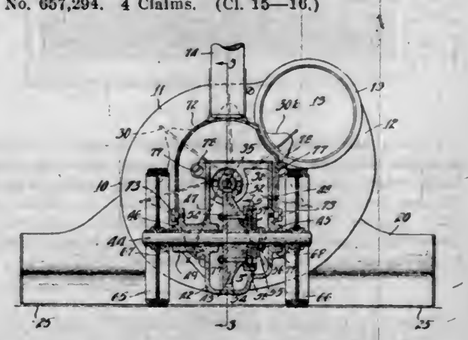
1,695,981. METHOD OF MAKING VALVE TAPPETS. GEORGE R. RICH, Battle Creek, Mich., assignor, by mesne assignments, to Wilcox-Rich Corporation, a Corporation of Michigan. Filed Oct. 8, 1927. Serial No. 224,999. 1 Claim. (Cl. 29—156.7.)

The method of producing hollow, composite metal headed valve tappets, which consists in boring out the shank of a headed tappet body, inserting the neck of a headed cast iron plug into the bore, and fusing the head of the plug to the head portion of the tappet body, said neck portion of the plug acting as a retainer for preventing the molten portion of the plug from escaping through the bore of the tappet body during the welding process.

---

1,695,982. MECHANISM FOR COUNTING AND STACKING ARTICLES. HARRY E. RUCKERT, Philadelphia, Pa., assignor to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Original application filed July 18, 1924, Serial No. 726,863. Divided and this application filed Mar. 30, 1927. Serial No. 179,670. 13 Claims. (Cl. 93—93.)

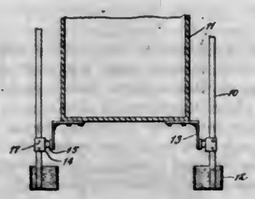
1. In a machine of the character described, the combination with mechanism for delivering articles, of a plurality of containers each having a cross-section corresponding to the outline of the articles to be stacked, automatic means for moving said containers successively into position to receive said articles as they are delivered, and means for packing said articles in said containers.



1,695,983. METHOD OF MAKING BOBBED-HAIR HOLDERS. HARUKO SAITO, Tokyo, Japan. Filed Sept. 24, 1925. Serial No. 58,331. 1 Claim. (Cl. 132—20.)

A method of making a comb consisting in forming it by bending a steel wire into M form with any desired space between two adjacent bendings, repeating the process until a desired length is reached, twisting all the bendings into teeth, leaving the two outer legs longer than the teeth, and tempering it.

---

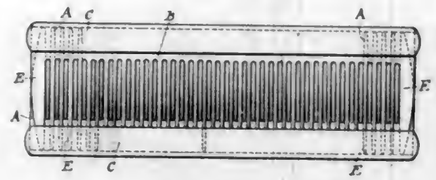


1,695,984. SUCTION CLEANER. WILLIAM E. SHERBONDY, Cleveland, Ohio. Filed Aug. 14, 1923. Serial No. 657,294. 4 Claims. (Cl. 15—16.)

3. In a suction cleaner, the combination with a fan casing and a suction nozzle communicating therewith, of a detachable plate forming the rear wall of the fan casing and provided with an opening surrounded by a rearwardly extending annular flange to make a discharge passage from the fan chamber, a gear casing secured to said removable closure plate, a fan shaft journalled in the gear casing and projecting into the fan chamber, a fan on the fan shaft within the fan chamber, and means for driving the fan shaft.

---

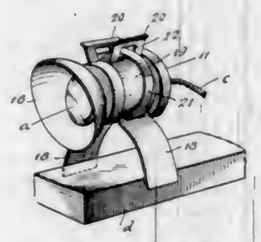
1,695,985. FRICTION-GUIDE LUBRICATOR. WILLIAM SPULLIES, Maywood, N. J. Filed July 1, 1927. Serial No. 202,892. 1 Claim. (Cl. 184—21.)



The combination of stationary lubricant containers with guide lubricators for elevators dipping into said containers at the end of the downward motion, said lubricators each comprising a chambered body adapted to be secured to the elevator car, means for supplying the chamber of said body with the lubricant, slidable blocks in said chamber having depressions on the inner faces of said blocks, communications between said depressions and said lubricant supply means, hollow pins in said body on which said blocks are

mounted, springs wound about said pins for pressing said blocks into frictional engagement with the elevator guide, on opposite sides thereof, a substantially centrally located chambered block in said chamber, means for pressing said center block into frictional engagement with the rear edge of the elevator guide bar for lubricating the same by lubricant from its channel communicating with the lubricant supplying means, and a plurality of vertically disposed screws in said lubricant supply means and said communications for allowing a thorough lubrication of three sides of the guide by a thin coat of lubricant and preventing smearing.

---

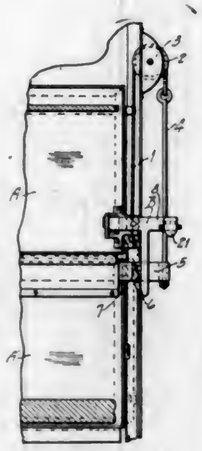


1,695,986. COMB SLIDE, BINDER, OR THE LIKE FOR LADIES' HAIR. CHARLES ERNEST STACEY, London, England, assignor to Du Pont Viscoloid Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 7, 1927, Serial No. 231,703, and in Great Britain Nov. 30, 1926. 6 Claims. (Cl. 132—21.)

1. In a hair waver, in combination, a pair of mating comb-like members adapted to lie the one upon the other tooth-to-back, one of said members having a portion upon its back overlying the body of the member, to receive the other member between said portion and body, and means upstanding from one of said members in proximity to said overlying portion, to engage the other member.

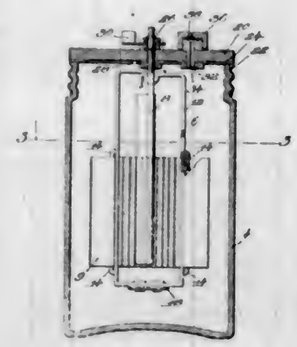
---

1,695,987. PORTABLE ELECTRIC LAMP. ULAICH F. L. STEINDORFF, New York, N. Y. Filed Oct. 20, 1924. Serial No. 744,687. 4 Claims. (Cl. 240—52.)



2. A portable electric lamp comprising in combination, a member arranged for detachable connection, at one end, with a source of electricity and, at its other end, to removably receive an electric lamp, a pair of opposed bearing members engaging said member and together constituting a bearing in which the latter is frictionally mounted, opposed clamping members extending from said bearing members and arranged to project outwardly from said first mentioned member, and a spring for developing a resilient clamping action in said clamping members and said bearing members.

---

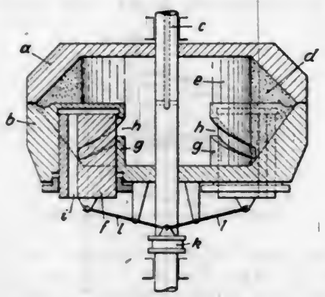


1,695,988. ELEVATOR-DOOR-OPERATING MECHANISM. HERMAN C. WALDMAN, St. Louis, Mo. Filed Aug. 4, 1927. Serial No. 210,562. 9 Claims. (Cl. 187—52.)

5. In an elevator structure, an elevator shaft provided with two doors located at opposite sides of the shaft at the same level or floor, a car that travels in said shaft, two separate and distinct door operating mechanisms on said car, each of which comprises a pair of door operating members, which, after being engaged with their co-operating door, will move in a direction to open the door, an electric motor on the car, and clutches by which the operator in charge of the car can connect said motor with either of said door operating mechanisms.

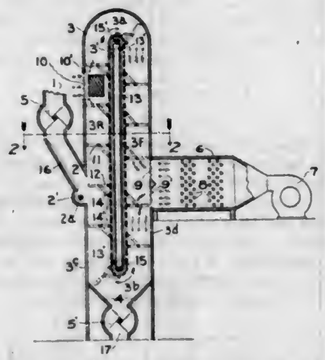
---

1,695,989. ELECTROLYTIC CELL. SAMUEL T. WOODHULL, Winchester, Mass., assignor to The Amrad Corporation, Medford, Mass., a Corporation of Ohio. Filed June 23, 1926. Serial No. 117,987. 5 Claims. (Cl. 175—315.)



2. An electrolytic cell comprising a non-filming electrode, a filming electrode support including a plurality of rigid arms, and a filming electrode including a unitary sheet surrounding and attached to the arms and connected together at its ends, the sheet having an extended surface formed by a plurality of closely spaced folds.

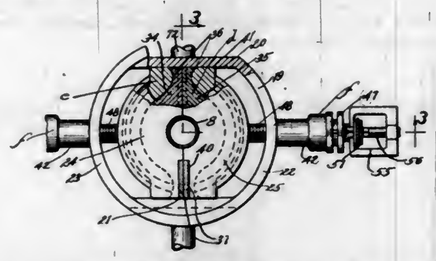
---



1,695,990. CENTRIFUGE. LUDWIG ALTPETER, Trier, Germany. Filed Jan. 26, 1927, Serial No. 163,603, and in Germany Jan. 30, 1926. 5 Claims. (Cl. 233—47.)

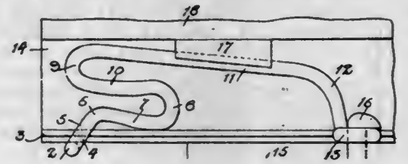
1. A centrifugal machine, comprising in combination, a two-part horizontally separable drum mounted for rotation, a movable member disposed in the lower part of said drum and having an outlet passage therethrough normally out of communication with the drum, and means for moving said member to carry its outlet passage into communication with the drum at varying distances from the center of said drum.

---



1,695,991. SEED-COTTON-DRYING APPARATUS. CHARLES ABEL BENNETT, Tallulah, La., dedicated, by assignment, to the Government and the People of the United States of America. Filed Mar. 22, 1928. Serial No. 263,811. 3 Claims. (Cl. 34—12.) (Granted under the act of Mar. 3, 1883.)

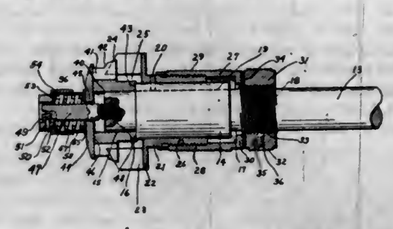
1. A cotton drying apparatus of the character described including an enclosed vertical cabinet with substantially air-tight means for introducing and discharging seed-cotton therefrom, endless conveyors arranged within said vertical cabinet and provided with a series of perforated trays or skeleton screened frames attached at substantially right angles to said endless conveyors, a partition or center division centrally located with respect to said vertical cabinet and located between the shafts of said endless conveyors, means for loading the series of skeleton screened frames or trays with seed-cotton, means for conveying said tray loads of seed-cotton from the cotton inlet to the cotton discharge outlet, a heated atmosphere generator or radiation elements, inlets and outlets for continuous passage of heated atmosphere through the several passages within the said vertical cabinet, means for introducing said heated atmosphere into said vertical cabinet and discharging heated atmosphere therefrom without loss of seed-cotton, means for rearranging and turning over of the seed-cotton during its passage through the said vertical cabinet, means for securing direct penetrating of the trays of seed-cotton by the currents of heated atmosphere so that the dryest heated atmosphere contacts with the dryest cotton, and means for dumping said trays at the conclusion of the drying exposure within the said vertical cabinet.



1,695,992. COMBINED CASING-HEAD PACKER AND BLOW-OUT PREVENTER. JOHN BERGSTEN, Redondo Beach, Calif., assignor of one-half to N. W. Hendershot, Lomita, Calif. Filed Oct. 27, 1924. Serial No. 745,974. 3 Claims. (Cl. 166—15.)

1. In a device of the character disclosed, a casing head formed with an enclosure, packing means formed of flexible material and constituting a split annulus within said enclosure, upper and lower slotted discs for said packing means, said upper and lower discs enclosing the said packing means, and further means received between said discs and adapted to bear against the periphery of said packing means to compress the same to in part force the packing means through the slotted portions of the discs into engagement with the casing head.

---

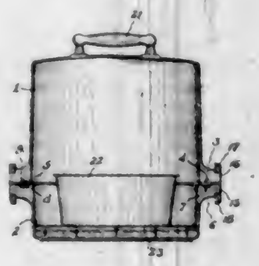


1,695,993. ANTI-RAIL-CREEPING DEVICE. JAMES B. BROWNRIDGE, Toronto, Ontario, Canada. Filed Aug. 6, 1928. Serial No. 297,667. 6 Claims. (Cl. 238—315.)

1. An anti-rail-creeping device, embracing a transverse bottom bar adapted to rest in contact with the underside of the bottom flange of a rail, and with each end of which is connected an inward-upward extending transverse section, the said sections being spaced above said bar; a longitudinally-disposed loop connected with each of the said sections and located one at each side of the vertical flange of a rail, and adapted to rest in contact with the top side of said bottom flange; a lever section connected with each of the said loops, and means whereby each of the said lever sections is coupled to a fixed support therefor pinching the bottom flange of said rail between said loops and said transverse bar.

---

1,695,994. CUTTER-GUARD CONSTRUCTION. FRANK CATANZARITE, Danville, Ind. Filed Dec. 23, 1927. Serial No. 242,146. 8 Claims. (Cl. 12—92.)



1. In combination with a rotatable driving shaft, a radially toothed guard rigid thereon for rotation there-

with and a radially toothed cutter-wheel carried by the shaft for rotation, means for longitudinally adjusting the guard on said shaft and relative to the cutter, means for locking the adjusting means in the adjusted position, means for clamping the cutter to the spindle, and other means having a quickly detachable and attachable connection with said shaft for securing the clamping means in clamping relation.

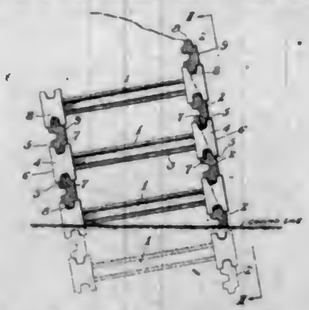
---

1,695,995. COOKING VESSEL. EARL V. COULSTON, Shaker Heights, Ohio. Filed Oct. 9, 1926. Serial No. 140,463. 7 Claims. (Cl. 53—1.)

1. A steam retaining vessel comprising upper and lower sections whose outer edges are provided with outwardly diverging surfaces, a gasket interposed between said outer edges and having surfaces engaging said diverging surfaces, said gasket having a coefficient of expansion less than the sections of the vessel, and means to secure the vessel sections together, the construction being such as to cause the deformation of the vessel sections, within elastic limits, at a predetermined pressure to permit the escape of steam at the joint formed by the gasket and the diverging surfaces.

---

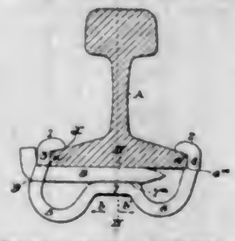
1,695,996. SHOE SHANK. ROBERT DAVIS and ISAAC TAPMAN, Brooklyn, N. Y. Filed May 13, 1927. Serial No. 190,977. 4 Claims. (Cl. 36—76.)



2. A shoe shank comprising separately constituted sections, one a leather heel seat arranged with the grain side of the same upward and the other a leather forepart arranged with the flesh side of the same upward, said parts being shaped and united to constitute one an extension of the other.

---

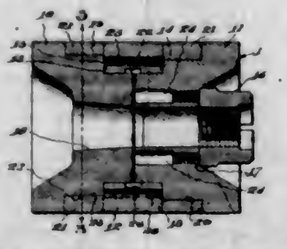
1,695,997. RETAINING-WALL STRUCTURE. WILLIAM H. EVERS and JOHN W. SHIMER, Lakewood, Ohio, assignors to the R. C. Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 2, 1925. Serial No. 20,038. 10 Claims. (Cl. 61—39.)



8. A retaining wall structure comprising upwardly and downwardly spaced stretchers and laterally spaced headers, the headers being laid between successively occurring stretchers; each stretcher being provided in its top and bottom with a longitudinal tongue; each header having

a portion provided with a top and bottom groove engaging the bottom and top tongues respectively of adjacent stretchers.

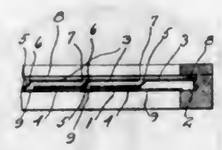
---



1,695,998. RAIL ANCHOR. FRANK G. FREESE, Aldan, and RUSSEL C. PAXSON, Llanerch, Pa. Filed Apr. 27, 1928. Serial No. 273,375. 6 Claims. (Cl. 238—324.)

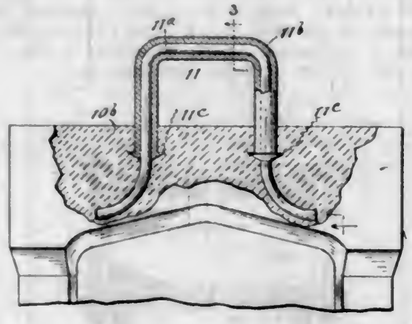
5. A rail anchor comprising a resilient member having inwardly turned terminal lips joined by an intermediate section made up of vertical-walled sections adjacent said lips, curved sections, and a section substantially straight underlying the base of the rail; said curved sections being adapted to flex under the pressure exerted by a key driven transversely of the rail between the bottom thereof and the intermediate portion of the anchor and said intermediate portion being slightly grooved to guide the key.

---



1,695,999. PUMP PISTON. WALTER C. GAGE, Holyoke, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 22, 1926. Serial No. 117,672. 2 Claims. (Cl. 74—109.)

1. A pump piston of composite construction comprising a pair of elements provided with annular recesses in their perimeters on their adjacent ends to form a groove, a centering ring in said groove overlapping the joint between the elements, each of said elements provided with an eccentric, annular groove adjacent the annular recesses therein, said grooves disposed whereby the shallowest portion of one groove will be opposed to the deepest portion of the other groove, and snap rings in said eccentric grooves.

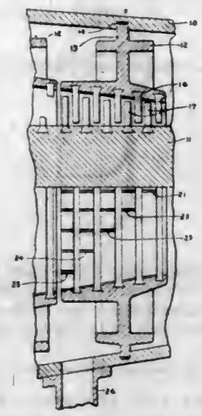


1,696,000. VENTILATOR. JOSEPH P. GLASER, Detroit, Mich., assignor to Chamberlin Metal Weather Strip Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 11, 1926. Serial No. 154,061. 2 Claims. (Cl. 98—101.)

1. A ventilator comprising a frame member practically L shaped in cross section and substantially rectangular in form, a second frame member rabbeted in one face at the inner edge to receive the first frame, means for holding the L shaped frame in the rabbet, the assembled frames providing a channel in the inner periphery, a series of metal plates each offset in substantially its central portion providing parallel spaced portions of substantially equal length, the series of plates being supported in the frame channel and so relatively arranged as to provide spaces between the plates, the edge of one plate being spaced relative to the aligned portion of an adjacent plate providing openings to the said spaces on opposite sides of the assembled plates, a third plate supported in the said frame channel on one side of the assembled plates and having apertures registerable with the said openings to said spaces, said third plate being slidable in the channel in face contact with the plate surfaces to bring the apertures into or out of registration with the said openings whereby the same may be opened or closed.

---

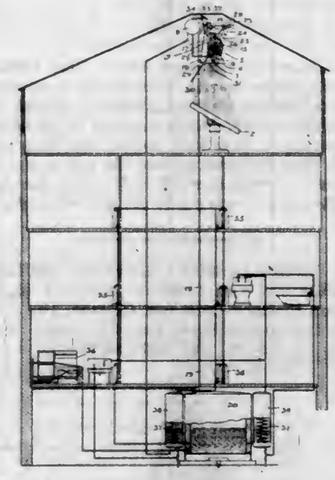
1,696,001. STORAGE-BATTERY CASE. PAUL O. GUNKEL, Welland, Ontario, Canada, assignor to Joseph Stokes Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Aug. 10, 1925. Serial No. 49,220. 7 Claims. (Cl. 206—2.)



1. A storage battery case having handles with portions wholly embedded in the end walls, the handles being formed of metal with a covering of acid resistant material similar to the case composition, the handle coverings extending down into the case composition united directly therewith.

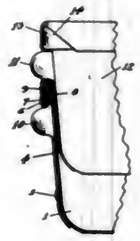
---

1,696,002. TURBINE. HENRY J. HANZLIK, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 1, 1925. Serial No. 47,578. 8 Claims. (Cl. 253—76.)



1. In a turbine, the combination with a casing, of a blade-carrying element having an inner axially-extending blade-carrying portion and an outer radially extending portion detachably connected to the casing, a plurality of rows of blades carried by the blade-carrying portion, and drain-

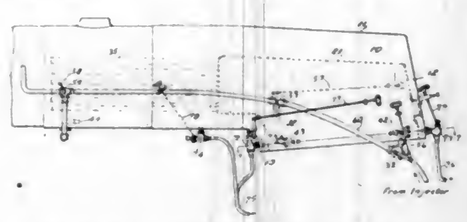
age means for each annular space between rows of blades and for the space at the leaving side of the last row of blades.



---

1,696,003. SOLAR-HEAT-ACCUMULATING SYSTEM. WALTER J. HARVEY, Toronto, Ontario, Canada. Filed Oct. 21, 1924. Serial No. 744,997. 2 Claims. (Cl. 126—271.)

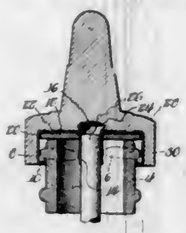
1. In a solar heat accumulating system, a diurnal reflector adapted to direct the sun's rays to a fixed point, a receiver adapted to contain a fluid heat absorbing medium, a circulating conduit connected with said receiver, a helically shaped tubular coil introduced in said conduit and arranged at said fixed point, a chamber connected with the upper end of said coil, tubes leading upwardly from said chamber, an annular chamber connected with the upper ends of said tubes, a pipe leading from the upper chamber and forming part of the circulating conduit, a pump arranged in said upper pipe, and means for operating said pump to effect the circulation of said heat absorbing fluid.



1,696,004. BAKING PAN. JOSEPH GEORGE JACKSON, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1927. Serial No. 196,612. 2 Claims. (Cl. 53—6.)

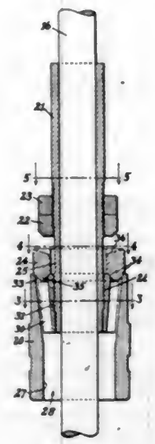
1. In a set of baking pans a side plate located adjacent to the outer wall of the outer pans of said set, said side plate carrying a substantially flat horizontally extending supporting projection, reaching beyond the upper edge of said pan.

---



1,696,005. MEANS FOR REMOVING SLUDGE FROM BOILERS. CHARLES A. KOTHÉ, Meadville, Pa. Filed Apr. 28, 1924. Serial No. 709,691. 8 Claims. (Cl. 122—382.)

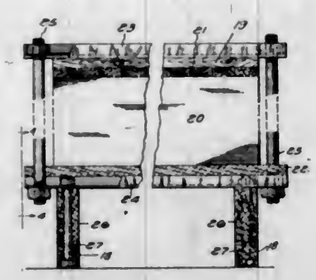
1. The method of removing sludge from boilers under pressure comprising heating a stream of water by passing it through a conduit disposed within the boiler, injecting the stream into a surrounding envelope of hot boiler water before releasing it from said conduit and then projecting the stream with its envelope into the region of the sludge and toward an open blow-off cock while the stream is heated sufficiently to not injure the hot boiler sheets.



---

1,696,006. STOPPER FOR INDIA-INK BOTTLES AND THE LIKE. ADOLPH LANGSNER, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 23, 1928. Serial No. 272,253. 11 Claims. (Cl. 215—58.)

7. A screw cap covering for india ink bottles having a separate metal sleeve passing through a central opening in the top of the cap with the upper portion of said sleeve peened in position, a washer of compressible material fitting around that portion of the cylinder lying within the cap, and a quill mounted on said cylinder with the top of the quill abutting said washer.



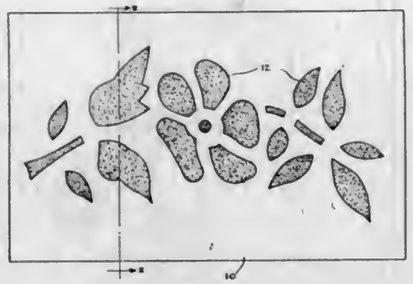
1,696,007. RELIEF VALVE FOR DEEP-WELL PUMPS. CHARLES B. LEWIS and EDGAR D. ROBERTSON, Los Angeles, Calif. Filed Sept. 20, 1926. Serial No. 136,516. 1 Claim. (Cl. 103—202.)

A relief valve for deep well pumps, comprising a fixed tubular member having a seat in its upper end, a central guide extending above said fixed member, said guide being adapted to receive the polish rod of a pump, and a vertically movable ring-flapper directed by said guide, said ring-flapper being adapted to seat on said seat, the upper end of said ring-flapper being provided with radial grooves, and a nut to limit the upper movement of said ring-flapper, said radial grooves equalizing the pressure on all sides of said ring-flapper when the latter is in contact with said nut.

---

1,696,008. APPARATUS AND METHOD FOR PACKAGING PAPER. WILLIAM C. LUDWIG, Chillicothe, Ohio, assignor to The Mead Pulp & Paper Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 4, 1924. Serial No. 735,894. 6 Claims. (Cl. 206—60.)

1. Apparatus of the character described for packaging and transporting a stack of sheet paper, comprising means for holding the sheets of paper together under heavy compression during shipment, said means including a substantially rigid metallic band encircling said stack of paper and adapted to bear upon the upper and lower faces of said stack, and skids secured to said metallic band whereby to maintain the lower part of said frame and said stack a sufficient distance above the ground to receive an elevating truck thereunder.

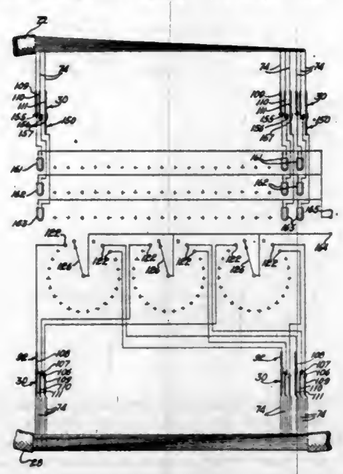


1,696,009. VEHICLE TIRE COVER. THOMAS J. MCCORMICK, Detroit, Mich. Filed July 15, 1927. Serial No. 205,986. 7 Claims. (Cl. 150—54.)

1. In a vehicle tire cover having a free edge adapted to be held contracted by means of an extensible and contractible element, a hem in said free edge, an extensible and contractible friction reducing bearing lining said hem, and an edge contracting element within said lining.

---

1,696,010. DEVICE FOR DECORATING WALLS AND SIMILAR SURFACES. GEORGE A. NEWMAN, St. Paul, Minn. Filed Dec. 13, 1926. Serial No. 154,441. 1 Claim. (Cl. 101—401.)

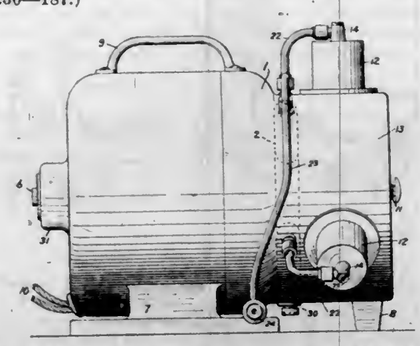


A device for decorating walls comprising a flat base member having a pattern outlined thereon and finely divided pieces of sponge secured by an adhesive to said base member, said pieces of sponge filling the space within the limits of said outlined pattern to produce a pattern in relief.

---

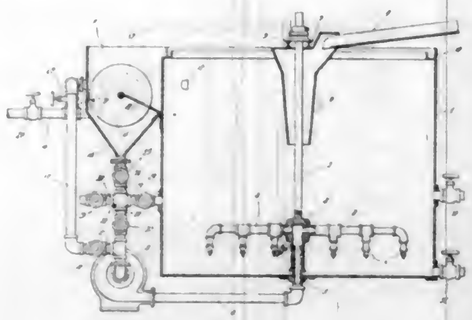
1,696,011. ARC-WELDING ELECTRODE. HARRY R. PENNINGTON, Chicago, Ill., and CHARLES H. HOLLUP, Milwaukee, Wis., assignors to C. H. Hollup Corporation, a Corporation of Illinois. Filed Sept. 8, 1924. Serial No. 736,624. 1 Claim. (Cl. 219—8.)

A coating for welding rods comprising a mixture of barium carbonate, and powdered carbon in substantially equal volumes and a diluted solution of sodium silicate.



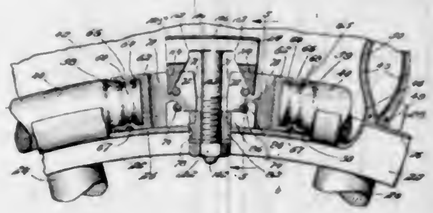
1,696,012. METHOD OF AND APPARATUS FOR INTERCONNECTING AND TESTING ELECTRICAL APPARATUS. WILLIAM HARRY RAY, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1926. Serial No. 101,052. 7 Claims. (Cl. 179—175.)

5. A method of interconnecting and testing a plurality of electrical parts, consisting in establishing test conditions for indicating the nature of interconnections therebetween, and permanently interconnecting the parts during the maintenance of the test conditions.



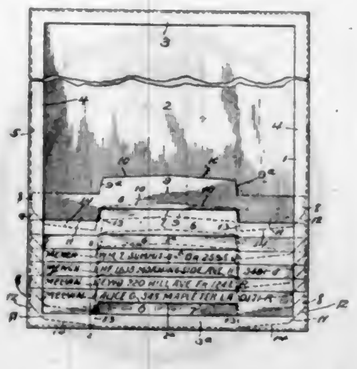
---

1,696,013. AIR COMPRESSOR FOR DENTAL AND OTHER PURPOSES. JAMES E. REID, Moorestown, N. J. Filed Nov. 11, 1926. Serial No. 147,702. 4 Claims. (Cl. 230—187.)



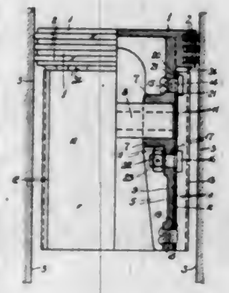
1. In an air compressor the combination of a generally cylindrical closed casing provided internally with a closed annular air chamber dividing it into motor and pump chambers and providing an opening for the passage of a motor shaft, a motor arranged in the motor chamber and having its shaft extending through said opening and into the pump chamber, a plurality of radially disposed immovable pump cylinders opening through the cylindrical wall of the pump chamber, crosshead guides radiating from said opening and arranged in the pump chamber and at the outside of one face of the air chamber, a crank pin, on the motor shaft and in the pump chamber, a disk on the crank pin, pump plungers having rigidly connected rods provided with crossheads working in said guides and riding on the disk, springs pressing the rods into following relation with the eccentric, valved pipe connections from the cylinders to the air chamber, and an air offtake pipe from the air chamber.

1,696,014. APPARATUS FOR THE TREATMENT OF SOLID-BEARING SOLUTIONS. WALTER L. REMICK, Philadelphia, Pa. Filed Sept. 17, 1925. Serial No. 56,917. 3 Claims. (Cl. 210—45.)



1. In an apparatus for the treatment of solid-bearing solutions, the combination of a tank; a filter so related to said tank as to receive material discharged from said tank and provided with a receptacle for the solids recovered by the filter; means adapted to convey the solids from the receptacle to said tank; and means adapted to return the filtered liquid discharged by the operation of said filter to said tank.

1,696,015. VEHICLE WHEEL RIM. WIRT RUSSELL ROBINSON, Providence, R. I. Filed June 10, 1924. Serial No. 719,156. 6 Claims. (Cl. 152—21.)

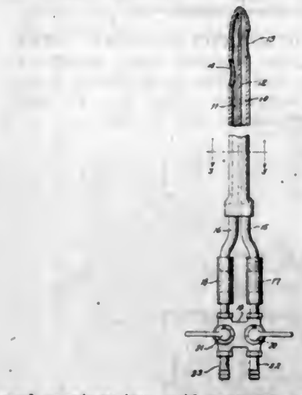


5. In a vehicle wheel, having a rim having a seating portion for a detachable flange having a hole therein, a detachable side flange for said rim having its ends longitudinally slotted and having outer and inner sets of rods extending transversely of said slots, a T-shaped locking bolt having lugs projecting downwardly from each end of the head thereof bevelled towards said head from the ends thereof adapted to contact said outer transverse rods to draw the ends of said flange together, grooves extending transversely of the lower inside portion of the head thereof adapted to receive said outer transverse rods to detachably lock the ends of said flange therein and a shank portion adapted to project through said hole in said flange seating portion of said rim to secure said detachable flange to said rim and a retaining member having a shank adapted to register in the hole in said groove around the shank of the T-bolt and an outer portion longitudinally slotted and having its outer side transversely grooved to receive the inner transverse rods of said flange to firmly retain the ends of the flange together before depression of the T-bolt and means to lock said bolt to said rim.

1,696,016. INDEX. ROBERT C. RUSSELL, Pittsburgh, Pa. Filed Mar. 5, 1926. Serial No. 92,489. 5 Claims. (Cl. 40—63.)

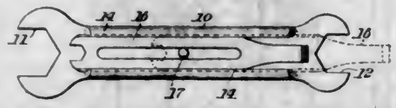
1. In an index, a series of index elements, each comprising a body portion, end members, a tongue above said body portion, and tongues depending from said end members to clear the first-mentioned tongue on a lower index element and pass behind the end members of said lower element to rest upon the same, said last mentioned tongues having beveled inner ends.

1,696,017. PISTON FOR USE IN THE CYLINDERS OF INTERNAL-COMBUSTION ENGINES. PHILIP KEITH SAUNDERS, Johannesburg, Transvaal, South Africa. Filed Oct. 7, 1926, Serial No. 140,019, and in the Union of South Africa Aug. 11, 1926. 4 Claims. (Cl. 74—108.)

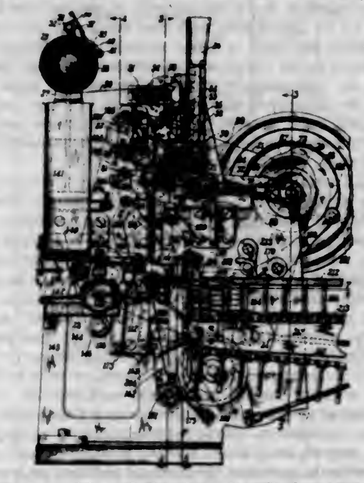


1. A piston for internal combustion engines, comprising a head portion made of a light metal or alloy and provided with projecting parts, piston rings arranged around said head, and a skirt, made of a hard and strong metal or alloy, arranged around and detachably connected to said head portion, the skirt being fashioned with inwardly directed longitudinal projections forming recesses at the outside and the projecting parts with grooves adapted to be engaged by said projections, the means for detachably connecting the skirt to the head being positioned in the recesses, as set forth.

1,696,018. COLONIC THERAPY APPARATUS. OSCAR BOTO SCHELLBERG, New York, N. Y. Filed July 10, 1926. Serial No. 121,585. 8 Claims. (Cl. 128—240.)

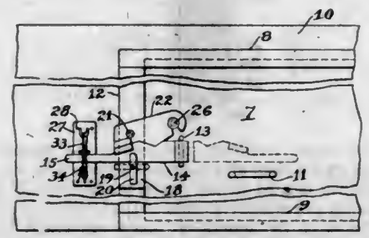


1. In an apparatus as characterized, a flexible tube elongated for extension through the colonic region of the intestinal tract, said tube having a plurality of passages extending lengthwise and open coincidently at the rear end thereof, said tube having a closed forward extremity,



and openings into said passages, said openings being arranged in spaced relation to said closed extremity, and in staggered relation to one another.

1,696,019. TOOL. FREDRICK SIEVERN, McKeesport, Pa. Filed Jan. 7, 1927. Serial No. 159,546. 3 Claims. (Cl. 81—119.)

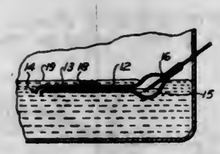


1. A tool comprising a bar having a nut-engaging recess in each end and serving as a grip member, the bar having a longitudinally-extending exposed channel in one side, and a second bar slidably supported in said channel and having a nut-engaging recess on each end, the second bar being of shorter length than the distance between the first-named recesses but movable to such positions that each of its ends will project beyond the adjacent ends of the first-named bar, and each of said nut-engaging recesses being complete in itself for the turning of a nut.

1,696,020. WRAPPING AND LABELING MACHINE. JOHN VAN BUREN, Brooklyn, N. Y. Filed Jan. 11, 1923. Serial No. 611,913. 18 Claims. (Cl. 93—2.)

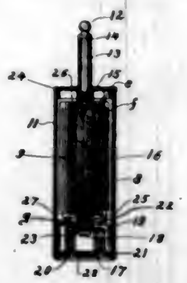
1. In a machine of the class described, means for feeding a wrapper, means for feeding an object to be wrapped in a direction at an angle to the wrapper and across the path thereof and oscillatory means disposed in the path of movement of the object for receiving the object and wrapper prior to the folding of the wrapper and for partially folding the wrapper around the object.

1,696,021. FASTENER FOR SLIDING DOORS. DE QUINCEY VINING, Manchester, Ga. Filed Nov. 8, 1926. Serial No. 147,055. 7 Claims. (Cl. 92—282.)



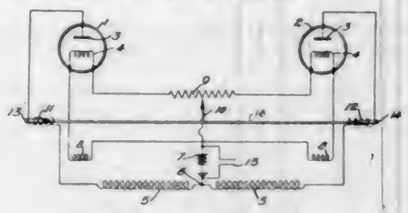
1. The combination, with a sliding door and a surface relative to which it is slidable of a hasp carried by said door, means for automatically securing said hasp to said surface by advancement of said door toward said securing means, and a seal adapted to be placed in position before the hasp is secured and automatically rendered effective by such advancement of the door to prevent release of the hasp until the seal is broken.

1,696,022. FERMENTATION PROCESS. ELLIOTT ROSS WEYER, Washington, Pa. Filed Mar. 4, 1927. Serial No. 172,934. 5 Claims. (Cl. 260—135.)



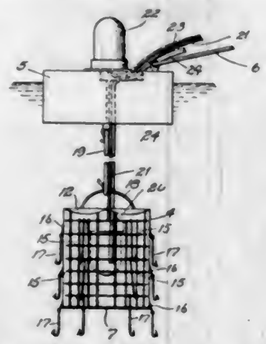
1. An improvement in the fermentation of carbohydrate mashes with selected cultures for the production of butyl alcohol and acetone, which comprises sterilizing the mash and treating the sterilized mash with an antiseptic non-toxic with respect to cultures active in this fermentation but toxic with respect to contaminating organisms.

1,696,023. MERCURY-ARC DEVICE. VLADIMIR K. ZWORYKIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 21, 1925. Serial No. 70,558. 3 Claims. (Cl. 176—45.)



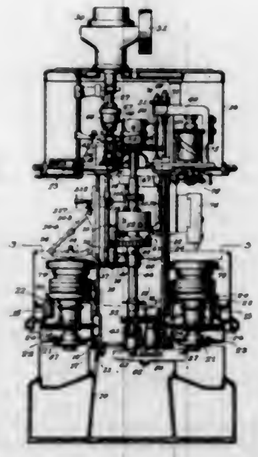
1. The combination with a mercury-arc discharge device comprising a vessel and a mercury electrode in said vessel, of a starting means for initiating electron emission upon the surface of the mercury, comprising a member of insulating material having a tubular perforation submerged in the mercury, said perforation being in communication with the body of mercury and so disposed that it is filled with a thread of mercury, an insulated lead-in connection for said member to provide a current path through said thread, said member having a portion opening above the surface of the mercury and communicating with said thread, whereby upon sending current through said thread, mercury is expelled through said opening and an arc is started on the mercury surface.

1,696,024. RECEPTION APPARATUS FOR TELEPHONE SYSTEMS. STRATFORD B. ALLEN, Cambridge, Mass. Filed Feb. 21, 1924. Serial No. 694,271. 6 Claims. (Cl. 250—16.)



1. A telephone appliance comprising the combination, with a telephone plug, of a container mounted on the plug; an impedance located in the container and connected between the tip and sleeve elements of the plug; output terminals mounted on the container; and a condenser, through which one of the output terminals is connected in series to one end of the impedance, the other output terminal being connected to the other end of the impedance; the said output terminals being adapted for the connection to them of an external portion of the output circuit.

1,695,025. BALANCING MEANS FOR HOT-CATHODE RECTIFIERS. ALFRED L. ATHERTON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1920. Serial No. 425,496. 15 Claims. (Cl. 175—363.)

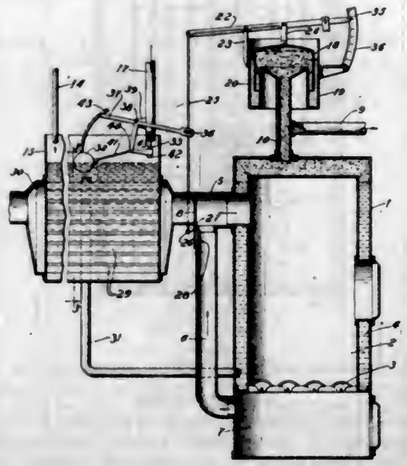


1. The combination with an A. C. source, a plurality of hot-cathode half-wave rectifiers supplying a common load connected between said rectifiers and the neutral of said source, of automatic means for varying the cathode heating currents upon the occurrence of differences in the bulb-potential-drops.

1,696,026. FISHING TACKLE. PETER J. BODE, St. Louis, Mo. Filed Oct. 5, 1927. Serial No. 224,066. 4 Claims. (Cl. 43—4.)

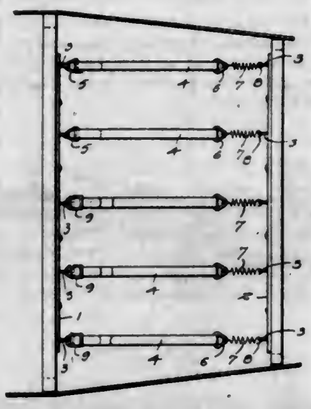
1. A bait element comprising a base plate and a top plate and garbage receptacles, the garbage receptacles having one end secured to the base plate and the other to the top plate, fish hooks secured to wires encircling the receptacles.

1,696,027. AUTOMATIC MULTIPLE-SPINDLE LATHE. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 13, 1924. Serial No. 755,626. 32 Claims. (Cl. 29—38.)

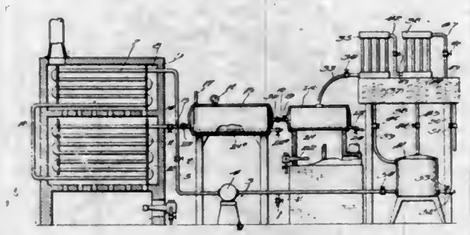


1. An automatic machine tool comprising a base, a rotary carrier mounted thereon, a series of rotary work carrying spindles supported in said carrier and each having a longitudinal opening extending therethrough and adapted to receive the work, indexing means for intermittently rotating said carrier to bring the spindles from one station to the next, tool slides including tools disposed at work stations adapted to move downwardly to engage the rotating work at its upper end, and tool means at one of the work stations adapted to move upwardly to engage the rotating work at its lower end simultaneously with its engagement by one of said downwardly moving tools and whereby the simultaneous operation of the downwardly and upwardly moving tools in relation to a single rotating work piece axially aligns and renders co-concentric the respective work thereon by said tools.

32. In an automatic machine tool of the character described, a work table, a work carrying spindle carried thereby adapted to receive the work, a chuck carried by said spindle adapted to secure and center the work, work seating means comprising a movably mounted member having a predetermined work seating position, adapted to be operated to press the work to a predetermined position with respect to said chuck, and to be moved from said seating position to inoperative position, cooperative mechanism associated with said work table, and locking means for said mechanism including a locking slide having a rack portion, a toothed segment meshing with said rack portion, and a lever connected to said seating member and adapted as said member is operated to rotate said segment to reciprocate said slide, and whereby in the seating position of said member said slide is operated to locking position to prevent operation of said mechanism and in the inoperative position is reciprocated to release said mechanism.

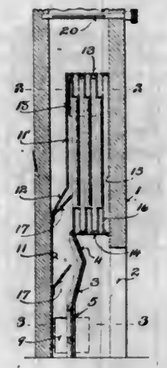


1,696,028. STEAM-HEATING SYSTEM. LOUIS W. CARROLL, Riverside, Ill., assignor of one-half to Glenn Muffly, Chicago, Ill. Original application filed Jan. 3, 1925, Serial No. 406. Divided and this application filed Dec. 23, 1926. Serial No. 156,080. 7 Claims. (Cl. 122—449.)



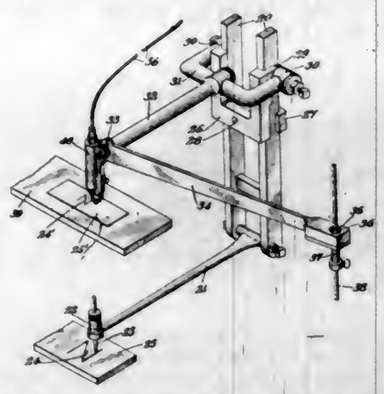
1. In combination, a furnace having a closed steam and water space, an open feed water tank connected to said space, means for supplying water to the tank and means operated by the pressure in the space to control said means for varying the water level in the feed water tank as the vapor pressure in the said space varies so as to maintain a constant water level in said space at different vapor pressures.

1,696,029. ARTICLE CARRIER. HARVEY V. CHANDLER, Sulphur Springs, Tex. Filed July 23, 1927. Serial No. 208,022. 3 Claims. (Cl. 224—29.)



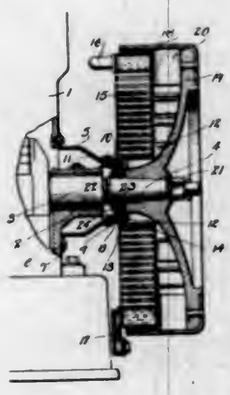
3. In an article carrier, parallel members having pairs of opposed hooks, a plurality of flexible loops each secured to a hook of one of the members and a spring slidably engaging each loop at one end and having its opposite end engaged with the hook of the pair which is secured to the other of the members.

1,696,030. PROCESS FOR TREATING PETROLEUM OILS. WALTER M. CROSS, Kansas City, Mo., assignor, by mesne assignments, to Gasoline Products Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Oct. 14, 1922. Serial No. 594,493. 5 Claims. (Cl. 196—65.)



1. A process for treating petroleum oil consisting in raising the oil to a conversion temperature in a heating stage, passing the oil to a reacting stage and maintaining a pressure from 400 to 750 pounds per square inch upon the heating and reacting stages, introducing a combustion supporting gas to the reacting stage to raise the temperature therein in excess of the temperature in the heating stage, passing the converted product from the reacting stage to a distillation stage maintained under reduced pressure, refluxing the evolved vapors in separate stages of dephlegmation and collecting the separated products.

1,696,031. HEATING APPARATUS. MICHAEL N. FREEMAN, Racine, Wis. Filed Dec. 16, 1926. Serial No. 155,188. 1 Claim. (Cl. 126—121.)

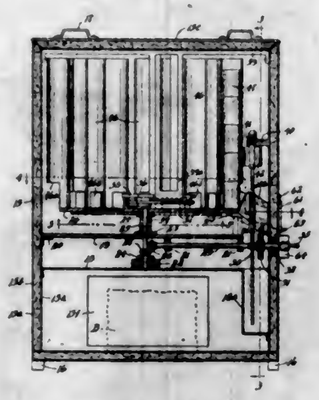


In a heating apparatus, the combination of a chimney, a fireplace adjacent the lower end of the chimney, said fireplace being spaced from and surrounded on three sides by the chimney allowing a free circulation of air around the three sides of the fireplace, a transverse plate adjoining the upper end of the fireplace with the front wall of the chimney, a plurality of tubes opening through said plate, an upper plate through which said tubes open, a casing joining said upper plate with said transverse plate and surrounding said tubes, said casing being spaced from the chimney walls on three sides and joining the rear wall of the chimney to form an air heating chamber, openings in the sides of said casing adjacent its upper end through which heated air may pass, said chimney having openings in its side walls adjacent its lower end through which the cool air may pass behind the walls of said fireplace, and a baffle plate positioned within and secured to the rear wall of the chimney to direct the cool air into contact with the casing of the fireplace.

1,696,032. ENGRAVING CUTTER HEAD AND DEPTH GAUGE. FRANK B. GLOVER, Brooklyn, N. Y. Filed Sept. 26, 1922. Serial No. 590,572. 7 Claims. (Cl. 90—13.2.)

1. In an engraving machine, a work support, a cutter head, a cutter carried by said head, means to guide the cutter over the work on the work support, a depth gauge carried by said cutter holder and adapted to bear on the work, means to adjust the head and depth gauge vertically independently, and means to lock the tool holder or gauge in adjusted positions.

1,696,033. RADIATOR AND FLYWHEEL. CLAIR R. GRANT, Clinton, Iowa, assignor to O. D. Collis, Clinton, Iowa. Filed Apr. 11, 1924. Serial No. 705,757. 2 Claims. (Cl. 123—170.)

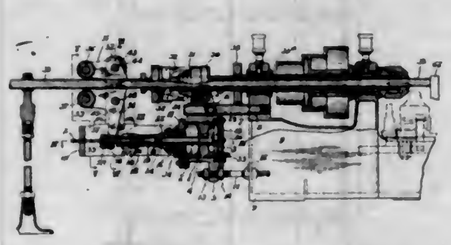


1. A mounting for the radiator of an engine having a crank shaft and a fan having a radiator-enclosing rim and an inwardly extending hub, comprising a cone-like cap supported by the engine block and provided with an external flange on its outer end, and an inwardly extending flange on the radiator for engagement with said cap flange for supporting the radiator and spacing the radiator from the shaft whereby the fan hub may be mounted on the shaft interiorly of the radiator.

1,696,034. PROCESS FOR PRODUCING OILED PIGMENTS. HAROLD GROSSMAN, Caldwell, N. J., assignor of one-fourth to William S. Pritchard, New York, N. Y. Filed Feb. 25, 1927. Serial No. 171,073. 14 Claims. (Cl. 134—39.)

1. The method of producing oiled pigments which comprises forming an emulsion of oil with a protective colloid, adding the emulsion to the pigment, and coagulating the colloid to break the emulsion and release the oil.

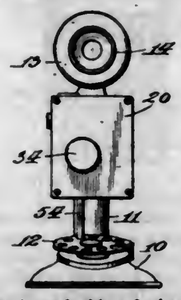
1,696,035. DISPENSING MACHINE FOR BOTTLED MILK. WALTER J. HAACK, Racine, Minn. Filed Aug. 28, 1925. Serial No. 53,172. 10 Claims. (Cl. 312—66.)



1. A dispensing machine of the character described, having in combination a casing, a rotatable table thereon, a plurality of magazines carried by said table, each of said magazines being adapted to contain a plurality of articles to be dispensed, a delivery chute, a mechanism for locking said table in fixed position, a rotatable disk normally adapted to close said delivery chute, but having an opening therein for the discharge of the articles to be dispensed when said disk and said table are rotated to a certain predetermined position, and means for rotating said table and disk and pushing an article from said mechanism into said chute.

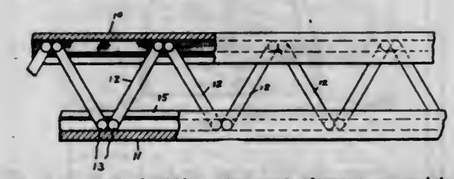
1,696,036. PROCESS FOR RECONDITIONING IRON AND STEEL DRUMS. ROBERT C. HEINZMAN, Cincinnati, Ohio. Filed Oct. 15, 1927. Serial No. 226,405. 3 Claims. (Cl. 148—6.)

1. That process of reconditioning interiorly rusted drums which consists in applying a solution of oxalic acid evenly over the interior surface of the drum, and then applying aluminum acetate to the treated surface.

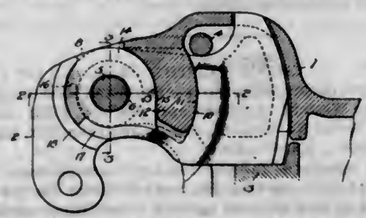


1,696,037. AUTOMATIC CHUCK AND ROLLER FEED. EARL J. HORNBERGER, Cleveland, Ohio, assignor to John G. Oliver, doing business as Bardons and Oliver, Cleveland, Ohio. Filed Dec. 6, 1926. Serial No. 152,880. 15 Claims. (Cl. 29—63.)

1. Stock-feeding and chucking apparatus comprising a chuck adapted to grip the stock, chuck-operating means, a driven stock-feeding roll adapted to engage the stock to feed it through the chuck, a fluid pressure cylinder, a source of supply of fluid under pressure, means controlling the flow of fluid into and out of said cylinder, a piston in said cylinder, connections between said piston, said stock-feeding roll and said chuck-operating means, comprising a piston rod, adjustable tappets on said rod, a lever pivoted to a fixed support, having one arm adapted to be engaged and moved by said tappets and the other arm adapted to move said stock-feeding roll into and out of engagement with the stock, a second lever pivoted to a fixed support having one arm connected to said piston rod and another arm connected to said chuck-operating means, and a spring interposed between one of said tappets and the arm of said roll operating lever.



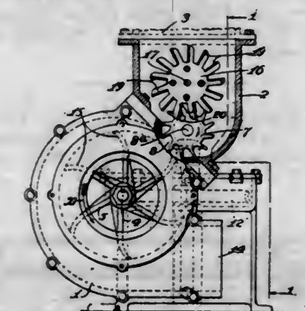
1,696,038. DIAL TELEPHONE LOCKING DEVICE. WILLIAM B. JAMES, Los Angeles, Calif., assignor to Alfred H. Aarons, Los Angeles, Calif. Filed May 31, 1928. Serial No. 281,999. 11 Claims. (Cl. 179—189.)



1. In a dial telephone locking device, a housing adapted to be positioned on a telephone above the dial thereof, a dial locking bolt arranged to move vertically within said housing and to swing rearwardly simultaneous with its upward movement, and coin controlled means within said housing and operable from the exterior thereof for controlling the movement of said dial locking bolt.

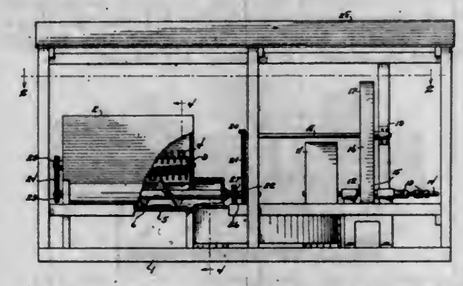
1,696,039. JOIST. THOMAS H. KANE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed June 29, 1925. Serial No. 40,171. 2 Claims. (Cl. 189—87.)

1. A metallic building structure element comprising a channel compression member, a channel tension member and a web composed of a plurality of similar bars each having cross heads formed on their ends, said cross heads being secured in said channels laterally of the channel, said bars being arranged diagonally and in zig-zag fashion and so that one end of each bar abuts an end of an adjacent bar.

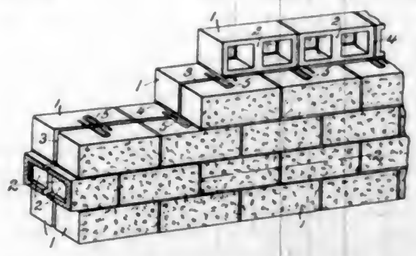


1,696,040. CAR COUPLER. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1925. Serial No. 52,645. 6 Claims. Cl. 213—152.)

1. A car coupler involving a coupler head, a knuckle, a lock for said knuckle, and a pivot pin for movably connecting said head and knuckle, said head and knuckle having openings for receiving said pivot pin, at least one of said openings being circular, said knuckle being adapted to move in the direction of length of the coupler as well as to rotate with respect to said head, said knuckle being provided with a circularly curved pulling shoulder concentric with said circular opening when the knuckle is in closed position and also being provided with a buffing shoulder, said head being provided with a shoulder curved to conform to said pulling shoulder and adapted to cooperate with the latter when the knuckle is subjected to draft forces, and said head also being provided with a shoulder conforming to said buffing shoulder and adapted to cooperate therewith when the knuckle is subjected to buffing forces, said pulling and buffing shoulders of the knuckle being spaced from each other and being intersected by a radial line extending from the center of said circular opening toward the knuckle engaging face of said lock when the parts are in coupled relation.



1,696,041. CARBURETOR FOR POWDERED COAL. OTTO A. KREUTZBERG, Lake Bluff, Ill. Filed Feb. 20, 1924. Serial No. 694,005. 3 Claims. (Cl. 110—104.)

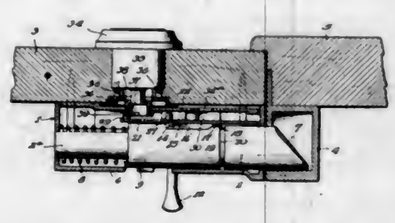


1. In an apparatus for mixing powdered fuel and air, an air blast wheel and a casing therefor having a tangential discharge mouth, a feed hopper for the fuel mounted adjacent the blast wheel casing and formed with an outlet positioned to direct the fuel toward the periphery of the blast wheel, and means for positively controlling the feed of fuel from the hopper in fixed relation to the speed of the blast wheel.

1,696,042. COTTONSEED-LOADING DEVICE. GEORGE H. KRISTEK, Ellinger, Tex. Filed Nov. 5, 1927. Serial No. 231,318. 1 Claim. (Cl. 302—50.)

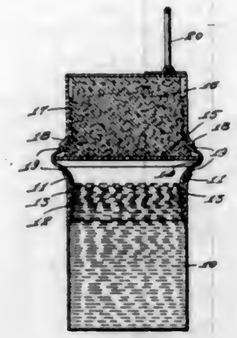
A loading device comprising a hopper, a conveyor casing below the same and in communication therewith, an agitator in the hopper, a conveyor in the casing, a discharge spout below the discharge end of the casing, a fan, a trunk connecting the fan with the discharge spout, means for intermittently permitting the material to pass from the conveyor into the discharge spout, such means comprising a downwardly opening gate, a cam member for opening and closing the same and means for operating the cam member from the conveyor.

1,696,043. WALL. FRANK KROPF, Wamego, Kans. Filed Mar. 28, 1927. Serial No. 178,925. 1 Claim. (Cl. 72—101.)



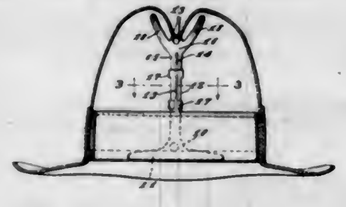
In a wall, two parallel vertical spaced tiers of hollow blocks, an air space between the tiers, each tier comprising horizontal rows of blocks cemented together one above the other, each block being open at the side next adjacent to the air space and closed at all of its other sides, the upper side of the bottom of each block inclining downwardly to said air space, each block being spaced throughout from the blocks in the opposite tier, and tying means across said air space connecting said tiers.

1,696,044. WINDSHIELD WIPER. DAVID KUSKIN, New York, N. Y., assignor to Full View Windshield Wiper, Inc., a Corporation. Filed July 1, 1927. Serial No. 202,873. 5 Claims. (Cl. 121—164.)



2. An operating mechanism for reciprocating windshield wipers including a pair of parallel cylinders each open at one end and closed at the other, the open end of each cylinder being arranged adjacent the closed end of the other, valve means for alternately admitting and exhausting air through the closed ends of the cylinders, a piston in each cylinder and a flexible device connecting the pistons, and pulleys at the open ends of the cylinders over which the flexible device is led.

1,696,045. LOCKING DEVICE. JOSEPH S. LACH, Bridgeport, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Aug. 19, 1925. Serial No. 51,215. 12 Claims. (Cl. 70—46.)

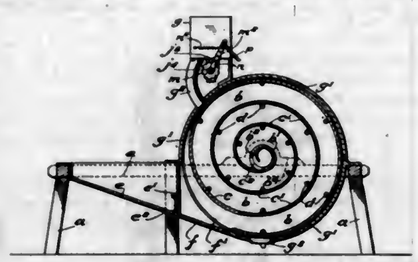


1. The combination of a manually operable bolt, means for deadlocking the same, outside key-controlled means, a slide mounted on the bolt and cooperating therewith to move the bolt to and from deadlocking position, longitudinally spaced pins on the slide, and a roll-back cam operated by said key-controlled means to successively engage the pins for unlocking and retracting the bolt.

1,696,046. DISTRIBUTOR ATTACHMENT FOR OIL CANS. FRANK W. LAWYER, Placerville, Calif. Filed June 10, 1927. Serial No. 197,919. 1 Claim. (Cl. 91—39.)

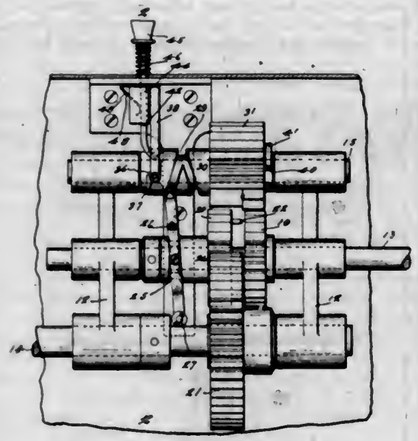
A device of the character described comprising a receptacle adapted to contain a liquid, a hollow tubular member threaded in and projecting from the open end of the receptacle, a perforated disk arranged within the tubular member, a wiping element comprising a coil of felt partly arranged within the tubular member and reposing upon said disk, and a cap normally covering said wiping element and removably associated with said tubular member.

1,696,047. HAT BRACE. HENRY MARTIN, Eddyville, Ky. Filed Aug. 24, 1927. Serial No. 215,209. 1 Claim. (Cl. 2—185.)



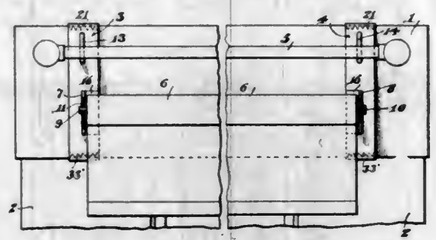
A brace device adapted for use within hats to retain the shapes of the crowns thereof comprising a brace member of substantially inverted T-shaped configuration adapted for reception within a pocket portion behind the sweat band, a crown engaging member having a depending portion disposed in juxtaposition to an upstanding portion of the brace member, the ends of said depending portion and upstanding portion of the brace member being adapted to be lapped one upon the other, arms outwardly converging from and carried by the crown engaging member being adapted to engage and conform to the configuration of hat crowns to retain the crease therein, and said depending portion and upstanding portion being depressed for interfitting engagement to prevent distortion of the device from a desired adjusted position.

1,696,048. MACHINE FOR THE PICKLING OF GRAIN. FRANCIS HENRY MCCORMICK and JAMES PATRICK DWYER, Perth, Western Australia, Australia. Filed Apr. 21, 1926, Serial No. 103,587, and in Australia Nov. 23, 1925. 8 Claims. (Cl. 83—28.)



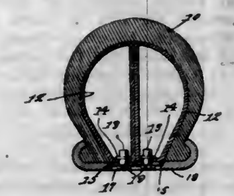
1. An apparatus for pickling grain, comprising a casing having an inlet opening for grain adjacent its lower portion and having an inlet opening for pickling agent at its upper portion, a hollow hub extending lengthwise of said casing and rotatable in the latter, said hub having an opening in its periphery and having one end open and its other end closed, a chamber surrounding said hub and rotatable therewith, said chamber having an opening in its

wall adapted, during the rotation of said chamber to successively register with the grain and pickling agent inlets of said casing.



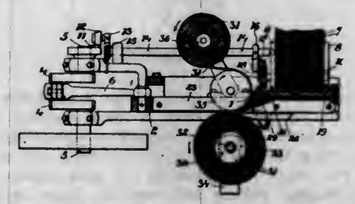
1,696,049. GEAR SHIFT. JAMES S. MILLER, Bedford, Ind. Filed Nov. 21, 1927. Serial No. 234,832. 4 Claims. (Cl. 74—7.)

1. In combination, a drive shaft, a driven shaft, an idler shaft, a normally inactive gear upon the idler shaft, means to lock the gear in inactive position, means to release the gear, a gear fast upon the drive shaft and normally disengaged from the gear upon the idler shaft, a gear fast upon the driven shaft, a second gear freely mounted upon the drive shaft and engaging a gear of the driven shaft and normally disengaged from the gear of the idler shaft, means to impart a positive initial rotary movement to the idler shaft gear to engage the latter with the gear fast upon the drive shaft to drive the idler gear, means operated by the idler gear to move the freely mounted gear of the drive shaft when the gear locking means is released and cause the idler gear to engage and rotate with the gear fast upon said drive shaft to operate the driven shaft, and means to lock the parts in position at the end of a complete revolution of the idler gear.



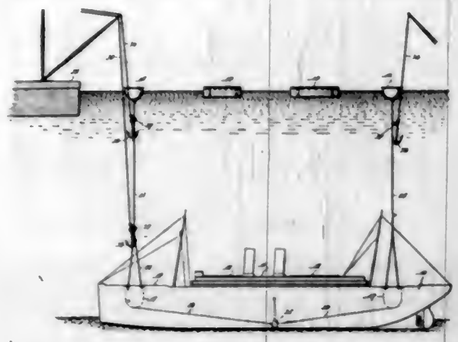
1,696,050. SHADE BRACKET. ADELARD MORIN, Nashua, N. H. Filed Nov. 1, 1927. Serial No. 230,282. 11 Claims. (Cl. 156—24.)

1. In a supporting bracket for the purpose set forth comprising a lengthwise adjustable body portion formed of inner and outer slidably connected telescopic sections of channel shaped cross section, the outer section closed at its top and the inner section closed at its bottom, a controlling spring common to said sections, arranged therein and having one end anchored to said top and its other end anchored to said bottom, said outer section having its top formed with a toothed flange to provide a clamping member, said inner section having its bottom



formed with a toothed flange providing a clamping member, said flanges extending inwardly at right angles with respect to said top and bottom, and a forwardly extending supporting arm carried by said outer section.

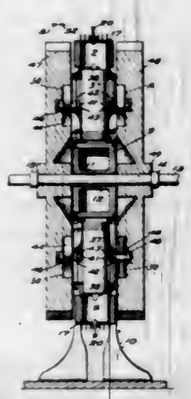
1,696,051. TIRE. LADISLAUS ORSZAG and PHILIP CURCURTO, Bronx, N. Y. Filed May 5, 1926. Serial No. 106,887. 1 Claim. (Cl. 152—22.)



A valve stem housing construction comprising a tire rim having a series of beveled circular openings, the larger diameter of the openings being on the outside circumference of the rim, pairs of semi-circular beveled plates fitting each of the said openings, a valve stem passing through and secured to each one of each pair of semi-circular plates whereby the air pressure forces the valve stems outward and the beveled plates engage the sides of the openings, the said plates being arranged in each pair so that one may be removed or both may be removed at the same time, thereby allowing one section of the tube to be removed without disturbing the other section.

1,696,052. MACHINE FOR MANUFACTURING AND PACKING MATCHES. ALEXANDER OVTSCHINNIKOFF, Arnstadt, Germany. Filed Feb. 18, 1927, Serial No. 169,311, and in Germany Feb. 18, 1926. 5 Claims. (Cl. 144—57.)

1. In a machine for manufacturing match sticks, a reciprocating cutter, and a device for receiving a pack of sheets of wood and alternately displacing the edges of said sheets prior to the presentation thereof to the cutter, and means for operating the cutter to sever a strip of sticks at a time from said sheets, one stick from each sheet, said displacing means including two rotary grooved cylinders and between which the pack of sheets is received, the grooves of the two cylinders being alternately opposed to receive and thus alternately displace the edges of the sheets of wood.

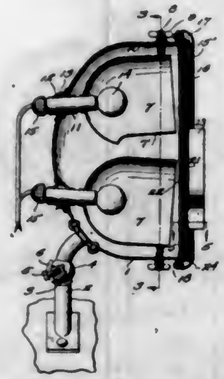


1,696,053. SHIP. JEROME PARINI, New York, N. Y. Filed June 3, 1927. Serial No. 196,312. 5 Claims. (Cl. 114—51.)

1. A ship having open-topped receptacles sunk in its deck, marking buoys received in said receptacles and normally lying flush with the deck, extended grooves in said deck for receiving chains, anchored at their ends to the ship, the intermediate portions of which are normally housed in the bottom of the compartment, and flexible devices connecting the buoys and the chains, said flexible devices adapted to serve as guiding means for guiding a grappling hook into engagement with the chains when salvaging the ship.

---

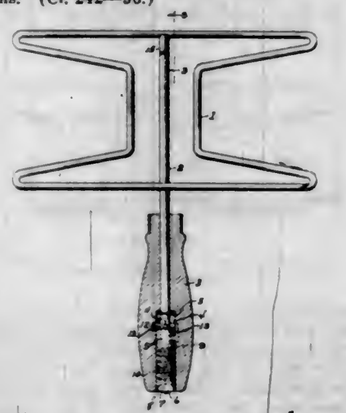
1,696,054. INTERNAL-COMBUSTION ENGINE. HARRY A. PALMER, Dorchester, Mass., assignor to Palmer Inventions, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Feb. 11, 1927. Serial No. 167,503. 5 Claims. (Cl. 173—55.)



1. In an internal combustion engine, a stationary cylinder, a piston operating therein, a rotor opposing the cylinder, means bodily carried by the piston, extending through and projecting laterally from the cylinder and traveling against the rotor for operating it, said means including anti-friction rollers adjacent its outer ends, and guiding means integral with said cylinder and including bearing surfaces for said rollers.

---

1,696,055. GLARELESS HEADLIGHT. BENJAMIN PORTER, Fullerton, N. Dak. Filed Jan. 31, 1927. Serial No. 164,907. 2 Claims. (Cl. 240—41.)



1. A lamp of the class described comprising a casing, transparent members covering the front of said casing, said members being arranged in pairs lying in spaced relation to each other, translucent means between the transparent members and said translucent means having portions cut away, one of said cut away portions being at the top and one at the bottom of the casing and a third at one side, a pair of reflectors within the casing mounted one

above the other and having ball and socket connection with said casing and means adjustably connecting said reflectors to said casing, one of said reflectors being cut away to permit the passage of light to said side opening.

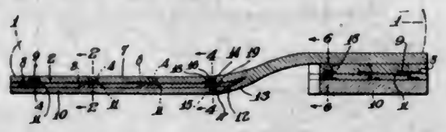
---

1,696,056. CLOTHESLINE HOLDER. JOHN W. PROCTOR, Pittsburgh, Pa. Filed Jan. 23, 1928. Serial No. 248,907. 3 Claims. (Cl. 242—96.)

1. A device of the class described comprising a reel having a stem, a handle rotatably mounted on the stem, means for locking the parts together when desired, such means comprising a pin on the stem and a slotted part in the handle having its slot adapted to receive the pin and spring means for normally holding the pin out of the slot.

---

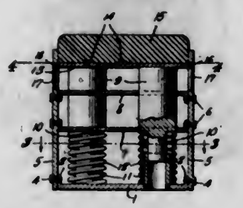
1,696,057. PROCESS FOR RESOLVING EMULSIONS OF TAR OR TAR OILS. HERBERT WILLIAM ROBINSON, Birmingham, and DERIC WILLIAM PARKES, West Bromwich, England. Filed Sept. 15, 1927, Serial No. 219,802, and in Great Britain Dec. 24, 1926. 6 Claims. (Cl. 196—4.)



1. The method of resolving an emulsion of tar oils which consists in rendering the emulsion faintly acid, adding thereto a quantity, greater than 10 per cent by weight of the oleaginous phase, of a solid hydrocarbon soluble in the oleaginous phase of the emulsion and having a melting point below 100° C., heating the mixture thus formed above the melting point of said hydrocarbon, rapidly cooling said mixture to precipitate said hydrocarbon in a finely divided state, and settling out the water from the resulting stiff agglomerate of said oleaginous phase and said hydrocarbon.

6. In a process of resolving an emulsion of tar oils containing a quantity of naphthalene in solid form greater than 10 per cent by weight of the oleaginous phase, the steps which consist in bringing the naphthalene in a finely divided state into intimate contact with the emulsion, and settling out the water from the resulting stiff agglomerate of said oleaginous phase and said naphthalene.

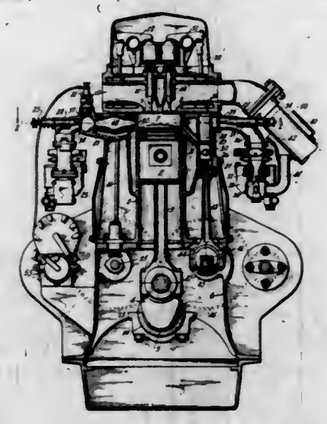
---



1,696,058. DETACHABLE TREAD MEMBER. BENJAMIN RUBIN, Philadelphia, Pa. Filed Aug. 29, 1927, Serial No. 216,188. 1 Claim. (Cl. 36—36.)

In a detachable tread member, a permanent base having on its under surface a plurality of grooves with their bottoms inclined slightly upwardly to provide deepened portions with adjoining shoulders at certain ends of the grooves, keepers with legs driven into the permanent base having transverse parts overlying across said deepened ends, certain edges of the transverse parts being immediately adjacent said shoulders, a tread member with angular tongues with said ends imbedded and fastened in one face of the tread member with their other ends tapered in thickness toward their extremities corresponding to the inclined bottoms of the grooves, one face of said tread member being grooved at points immediately under the tapered portions of the tongues to receive the transverse parts of the keepers, said second grooves at points beyond the extremities of the tapered parts of the tongues having their bottoms inclined, whereby the transverse parts of the keepers may enter the second grooves and the tapered portions of the tongue may cooperate with the under surface of the transverse part and the inclined bottoms of the first grooves to cause a wedging lock of the tongues with the keepers, said tongues and keepers cooperating to prevent movement of the tread member in one direction, and means for fastening the tread and base members together at one end to prevent movement in the opposite direction.

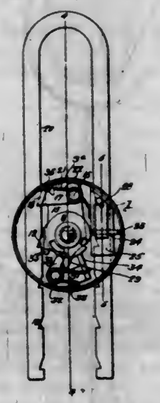
---



1,696,059. TIRE. JOHN SCHRANER, Tell City, Ind. Filed June 3, 1927. Serial No. 196,330. 2 Claims. (Cl. 152—8.)

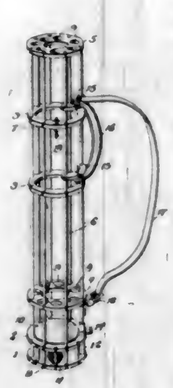
1. A tire for vehicle wheels, comprising a body member which is substantially U-shaped in cross section and which has outwardly extending sockets, transverse members connected to and bracing the sides of the tire, plunger members arranged in opposite staggeredly related series guided through said brace members, stems on the plungers received in the sockets, coil springs surrounding the sockets and urging the plungers in an outward direction, segmental plates fixed on the outer ends of the plungers, coengaging means between said plates and the inner sides of the tire for limiting the movement of the plates in both directions with respect to the tire and a solid rubber tread having its sides received between the sides of the tire and secured on said plates.

---



1,696,060. INTERNAL-COMBUSTION ENGINE. GEORGE W. SMITH, Jr., Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 21, 1925. Serial No. 76,909. 8 Claims. (Cl. 123—143.)

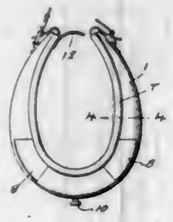
1. The method of introducing and firing a composite charge in the combustion chamber of an internal combustion engine, comprising the introduction and subsequent compression of a charge of atmospheric air, in then directing a stream of highly compressed over-rich mixture of hydrocarbon and air from one side of the compression chamber upwardly and inwardly toward the central portion of the head of the combustion chamber, in meanwhile providing a confined compressed minor charge of a more volatile mixture of hydrocarbon and air in communication with the compressed air being substantially unmixed therewith, and then igniting the said minor charge at a point remote from the chamber to introduce explosively the ignited volatile mixture to the mixture in the chamber.



---

1,696,061. COMBINATION PADLOCK. FRANK SOLEY, Philadelphia, Pa., assignor to the Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed July 20, 1926. Serial No. 123,647. 5 Claims. (Cl. 70—113.)

1. The combination of a padlock of a casing; a shackle adapted to the casing; a pivotally mounted bolt-carrying lever; a bolt pivotally mounted thereon; a dog arranged to hold the bolt in the locked position; tumblers acting in conjunction with the dog; and means for actuating the tumblers to move them into locked or unlocked position.

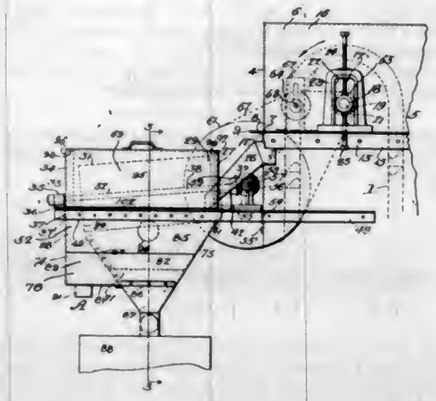


1,696,062. GOLF-CLUB CARRIER. LEWIS KELMUND THURLOW and JOHN P. AGNEW, Brooklyn, N. Y.; said Thurlow assignor to said Agnew. Filed Aug. 23, 1927. Serial No. 214,960. 3 Claims. (Cl. 150—1.5.)

1. A device of the character described, including a pair of spaced disks at the base thereof, a ring at the top thereof, rings intermediate the top and disks, and a circular series of rods connecting said disks and rings, said top ring and an intermediately positioned ring having circular series of openings adapted to receive golf clubs therein.

---

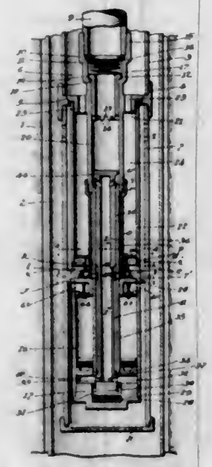
1,696,063. HORSE COLLAR. ORISON H. THORP, Sr., Trenton, N. J. Filed Aug. 24, 1927. Serial No. 215,196. 1 Claim. (Cl. 54—19.)



A draft animal collar of the character described comprising a hollow casing open its entire length, a hem formed by looping and sewing one of the edges of the casing upon itself, a bow arranged in said hem to provide a roll, a flap formed with said hem and adapted to receive the opposite edge of said casing in overlapped engagement therewith, said opposite edge being adapted to engage the roll to cooperate therewith to form a hames seat and being held accordingly by the engagement of hames with the said opposite edge and an elastic filler for said casing and being secured therein by said hames.

---

1,696,064. SAND CLEANING AND RECLAIMING UNIT. HARRY W. TITGEN, Philadelphia, Pa. Filed Aug. 7, 1926. Serial No. 127,940. 5 Claims. (Cl. 209—247.)

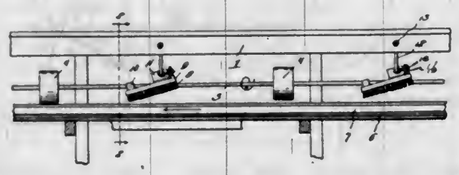


1. In a sand cleaning and reclaiming unit in combination, an elevator casing, a screen, a two-part housing therefor, one part of which comprises spaced side and end walls, and angles respectively secured to said side walls so that the flanges thereof provide elongated supporting

shoulders, at least one of said angles being extended to provide a supporting portion adapted to be secured to one wall of said elevator casing.

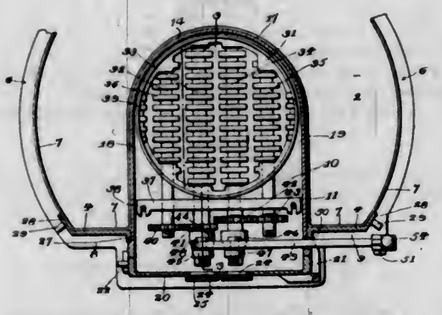
---

1,696,065. EXHAUST SLEEVE FOR DEEP-WELL AIR PUMPS. RALPH T. TUCKER, Los Angeles, Calif. Filed Oct. 2, 1924. Serial No. 741,242. 9 Claims. (Cl. 103—46.)



1. A pump of the class described, the combination with an oil tubing string and an air pipe string, of a coupling secured to the lower end of the oil tubing, an internal seat in the coupling, a housing extending downwardly from the coupling, a spider secured to the lower end of the air pipe and engaging the seat, a tubular cylinder extending from the air pipe through the spider, a cylinder supporting member extending from the spider downwardly, a cylinder head at the lower end of the supporting member and having inlet and outlet check valves, a piston cylinder extending downwardly from the cylinder head, means forming a head in the lower end of the cylinder, a spring buffer in the head, a piston in the piston cylinder, a hollow stem extending upwardly from the piston slidingly through the first cylinder head and slidingly into the air pipe cylinder, there being air outlet ports through the hollow stem above the first cylinder head, and a hollow valve closed at its upper end and extending slidingly through the hollow stem and adapted to be reciprocated in the stem by engagement with the buffers as the piston goes up and down, there being ports and port closing means operated by the reciprocation of the valve so as to let the air from the air pipe raise the piston and so as to exhaust the air to lower the piston, there being means for conducting the exhaust air to the open well outside of the pump mechanism.

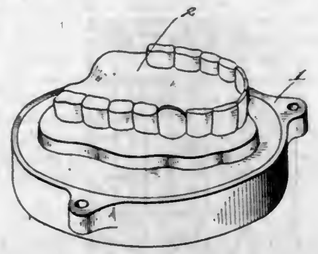
---



1,696,066. UPEDGING MEANS FOR FRUIT SIZERS. EDWIN M. WAYLAND, Covesville, Va. Filed Nov. 2, 1927. Serial No. 230,535. 15 Claims. (Cl. 209—91.)

1. In a fruit sizer, the combination of a trough, spaced gaging and ejecting means, a sizing belt, and means for engaging and bringing about spinning and up-edging apples and other fruit elements travelling on the sizing belt before such elements reach the gaging and ejecting means and insuring gaging and ejection of the apples or other fruit elements on the maximum diameters thereof.

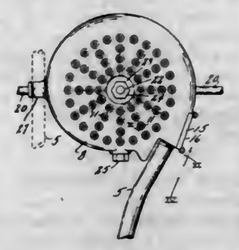
---



1,696,067. FURNACE. JOHN WILLIAM WESTWICK, Sr., Galena, Ill. Filed Apr. 18, 1927. Serial No. 184,648. 1 Claim. (Cl. 126—181.)

In a furnace means to provide a forwardly extending ash pit, a plurality of spaced pairs of intermeshing gears arranged in said means, each pair for connection with and for operating a pair of grate bars in opposite directions, a shiftable crank arm within said means for each pair of gears, a connecting bar pivotally attached to said arms for simultaneously operating them, said bar extending through and projecting outwardly from one side of said means, and an upstanding oscillatory lever pivotally connected at its lower end and further pivotally connected intermediate its ends to the outer end of said bar for the purpose of reciprocating it to provide for the shifting of said crank arm simultaneously.

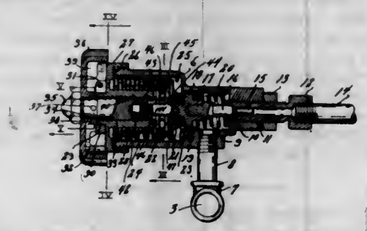
---



1,696,068. ARTIFICIAL DENTURE. ROBERT MORSE WITHYCOMBE, Sydney, New South Wales, Australia. Filed June 30, 1924. Serial No. 723,315. 3 Claims. (Cl. 32—4.)

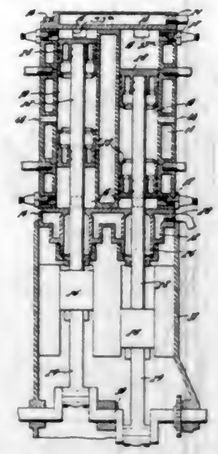
1. A denture comprising a plate of material having the characteristics of vulcanite and formed integrally with a layer composed of sulphur and copper oxide to form a tissue contacting surface of a material superior to vulcanite in hardness and resiliency, which material progressively changes to a state of homogeneity with the vulcanite of the plate in the deeper parts of said layer.

---



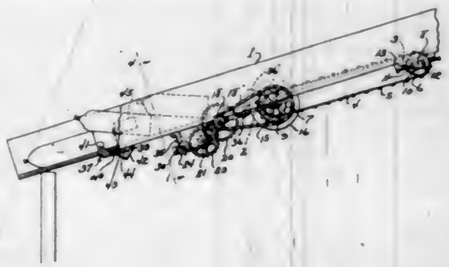
1,696,069. BURNER. JAMES A. WOOD, Toledo, Ohio, assignor to Liquo-Gas Company, Erie, Pa., a Corporation of Pennsylvania. Filed May 9, 1927. Serial No. 189,970. 6 Claims. (Cl. 158—108.)

1. A burner comprising as an integral structure a disk-shaped housing provided with a plurality of jet openings from upwardly extending cones in a plane, a circular chamber with which said openings communicate, the side of said housing below said openings having diametrically disposed pairs of burner-locating mounting lugs, a peripheral supply passage to said chamber extending in proximity to a plurality of jets for heating action therefrom, and a tangential leading-in fuel supply duct to said passage.



---

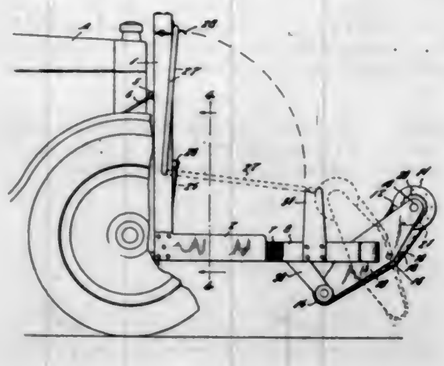
1,696,070. VALVE. JAMES A. WOOD, Toledo, Ohio, assignor to Liquo-Gas Company, Erie, Pa., a Corporation of Pennsylvania. Filed May 9, 1927. Serial No. 189,971. 7 Claims. (Cl. 251—43.)



1. A valve having supply and discharge ports, a seat carrying member adjustable in one of said ports for varying the relationship of said seat and valve, a closure coacting with said seat, and a differential actuator for the closure.

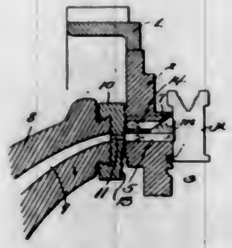
1,696,071. ENGINE. FRANK H. WOOD and FRED C. BARNARD, Ithaca, N. Y. Filed July 3, 1925. Serial No. 41,338. 1 Claim. (Cl. 123—63.)

In an internal combustion engine, a block, a head fitting the block, the said block having inlet and exhaust ports and spark plug openings in the sides of the block, a single piston rod in each cylinder, two separate pistons carried on each rod, one firing on the up-stroke and the other on the down-stroke, and a means connecting the piston rods with the crank shaft, the said valve mechanism intake and exhaust ports being carried entirely on the sides of the engine so that the head is entirely free of any encumbrance.



1,696,072. BRAKE FOR CONVEYERS. HOWARD ARMSTRONG, Humberstone, Ontario, Canada. Filed Jan. 31, 1927. Serial No. 164,937. 2 Claims. (Cl. 198—232.)

1. In a device for the purpose set forth, the combination with a chute having an endless conveyer therein and a fly wheel for the conveyer; of a brake for the conveyer comprising a shaft rotated by the movement of the conveyer, a weighted expansible governor on the shaft, a cable associated therewith, a pivoted brake shoe opposite the fly wheel connected with the cable and influenced into frictional engagement with the fly wheel when the cable is drawn taut by the expansion of the governor.

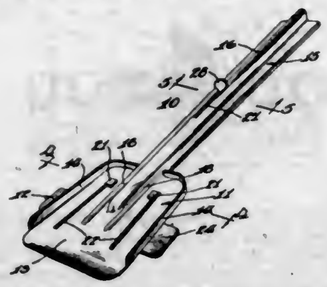


1,696,073. SAFETY DEVICE FOR VEHICLES. ANTON FRED AUGUST AUCHTER, Pittsburgh, Pa. Filed Feb. 8, 1928. Serial No. 252,854. 7 Claims. (Cl. 293—20.)

1. A safety device for motor vehicles comprising an upright frame, a horizontal frame secured to the upright frame, means for securing the frames to a motor vehicle, a pair of plates pivotally secured between the forward ends of the horizontal frame, a drum carried by one end of said plates, a belt trained about said drum, rollers receiving said belt, a seat loosely mounted and carried by the horizontal

frame, and a guard member carried by the upright frame and being moved to an operative position when weight is applied to said seat.

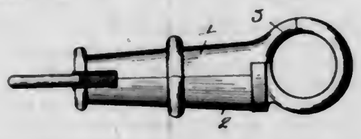
1,696,074. CASTING MEANS FOR TYPOGRAPHICAL MACHINES. FRANK E. BARBER, Brooklyn, N. Y., assignor to Intertype Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 10, 1928. Serial No. 260,769. 7 Claims. (Cl. 199—47.)



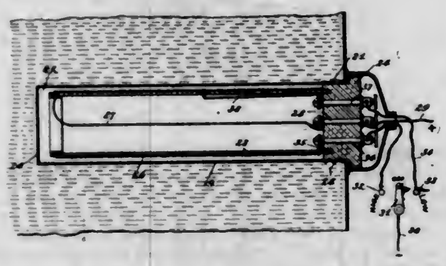
1. A mold for typographical machines having a cavity to receive metal and cast the body of a type bar therein, a recess to receive metal from said cavity, and a vent extending from said recess to the outside of the mold where it is non-communicative with the metal-receiving portion of said cavity.

1,696,075. METHOD OF MINING BORON COMPOUNDS. HENRY BLUMENBERG, Jr., Los Angeles, Calif. Filed Oct. 24, 1927. Serial No. 228,504. 3 Claims. (Cl. 262—3.)

1. A process of mining deposits of boron compounds containing kernite comprising subjecting the deposit to an alkaline solution of a compound of an alkali metal to convert the kernite to an easily soluble meta-borate and causing said meta-borate to go in solution, and removing said solution from the deposit.

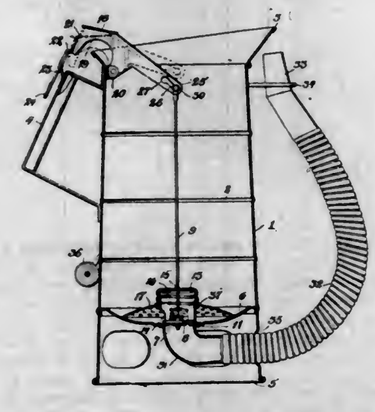


1,696,076. COMBINATION IMPLEMENT. PASQUALE BRUNI, Fort Lee, N. J. Filed Aug. 29, 1927. Serial No. 216,250. 3 Claims. (Cl. 15—105.)



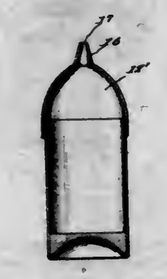
1. A combination implement comprising a shovel having a scoop, and handle extending therefrom, said scoop having converging slots therein, a holder slidably mounted on the underside of said shovel and provided with lugs passing through said slots, a flexible scraper carried by said holder, and manipulative means on said holder and operable from the said handle.

1,696,077. HOOK. HORACE DEAN, Laurier, Manitoba, Canada, assignor of one-half to Thomas Lloyd, Laurier, Manitoba, Canada. Filed Aug. 29, 1927, Serial No. 216,267, and in Canada Dec. 1, 1926. 1 Claim. (Cl. 24—239.)



A hook comprising a circular hollow casing split in two sections having a recess formed therein, a ring segment carried by one of said sections, a rod disposed inside the sections one end of which terminates into a buckle and the other end into a ring section complementing the ring segment to form a complete circle, a loose washer on the rod, a spring surrounding said rod having one end secured thereto and the other end bearing against the loose washer, said washer being normally in engagement with the shoulder formed by the sections recess to urge the ring segment in a closed position, and means around the said sections for keeping same in a closely related position.

1,696,078. HEATING APPARATUS. JOSEPH DE RUVO, New York, N. Y. Filed May 21, 1927. Serial No. 193,157. 1 Claim. (Cl. 219—38.)

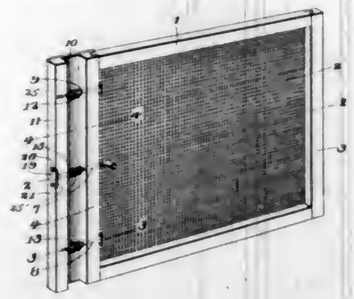


A water heater comprising a boiler, a tubular casing extending into the boiler from one of its ends, said casing having an open outer end and a closed inner end defining a heating chamber submerged in the water in the boiler, and an electric resistance heating device removably positioned within the casing and closing the outer end of the same to transmit the heat generated within the chamber through the chamber walls to the water in the boiler, the said electric resistance heating device including a base of insulating material constituting a plug having detachable threaded engagement within the outer open end of the casing for closing the same, a tubular inwardly projecting member of insulating material carried by said base, an electric resistance element helically wound upon said tubular member, a common feed conductor connected with said winding at the inner end, a pair of return conductors connected respectively to the outer end and to a point intermediate the ends of said winding, a common return conductor, and a switch including a pair of contacts and a movable switch arm.

1,696,079. MEASURING AND DISPENSING RECEPTACLE. CHARLES B. DOOLIN, San Antonio, Tex. Filed Apr. 30, 1927. Serial No. 188,005. 4 Claims. (Cl. 221—16.)

1. In a receptacle of the character described, a discharge outlet, a valve adapted to close said outlet, a spring adapted to resiliently hold said valve in operative position to prevent the flow of liquid through said outlet, a casing about the said spring and having openings in the bottom thereof through which the liquid may pass, a cap removably fitted on the top of said casing to hold the spring in position within the casing, a strainer for straining the liquid as it is being discharged the said strainer being positively held in operative position by an outwardly extending lip carried by the said cap which impinges against the upper surface of the strainer, thereby preventing disengagement of the strainer.

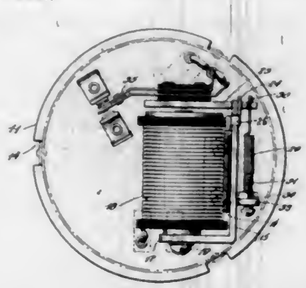
1,696,080. TOOTHPICK HOLDER. JOHN DRAGGIE, Pittsburgh, Pa. Filed Aug. 9, 1926. Serial No. 128,210. 1 Claim. (Cl. 312—73.)



A tooth pick holder comprising a container open at its upper end, a weight member reposing upon the bottom of

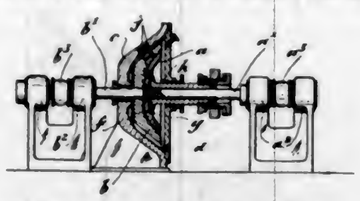
the container, a cap substantially dome-shaped and having its lower portion of uniform diameter to accommodate itself to the upper portion of the receptacle, said cap providing a curved body portion projecting an appreciable distance above the container, and a relatively short substantially cone-shaped projection extending centrally from the cap, whereby the curved walls gradually arrest the movements of the tooth picks in the direction of the extension to prevent the tooth picks from jamming.

---



1,696,081. SIDE EXTENSION FOR WINDOW SCREENS. HORACE RAYMOND ELLIS, Meadville, Pa. Filed June 21, 1927. Serial No. 200,422. 3 Claims. (Cl. 156—38.)

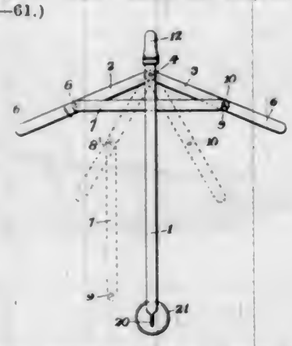
1. An extension for window screens comprising a plate adapted to have its inner portion slidably positioned against one face of the screen frame, a bar secured to the outer portion of the inner face of said plate and adapted to oppose a side rail of the screen frame, a pair of spaced, combined coupling and stop members fixedly secured at their outer ends in said bar and of a length to slidably extend through said rail and formed with heads at their inner ends to abut said rail, an adjusting element rotatably mounted in and extending through and projecting from the inner side of said bar and having a head at its outer end abutting in outer side of said bar and having a head at its outer end abutting in outer side of said bar, said element of a length to extend through said rail and having a portion thereof threaded for threaded engagement with the rail and further provided with a handle at its inner end, and means secured to said bar for anchoring said element thereto.



---

1,696,082. ELECTRIC RELAY. EDWARD E. FORSTROM, Stratford, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 30, 1927. Serial No. 243,710. 6 Claims. (Cl. 175—336.)

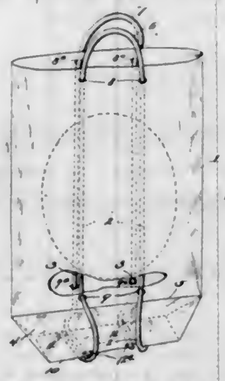
1. In a relay, a supporting frame having lugs at one end, an armature notched to receive said lugs and a locking-plate apertured to pass over the end of the armature and having lugs engaging notches in the edges of the supporting frame.



1,696,083. COLLOID MILL. ANDREW FRASER, Croyden, England. Filed Aug. 7, 1925, Serial No. 48,818, and in Great Britain Aug. 16, 1924. 5 Claims. (Cl. 83—13.)

2. A colloid mill comprising two co-operating disc members mounted on an axis common to both, a conduit to conduct material to the space between said faces and a conduit to conduct additional material to the said space at a point intermediate between the termination of the first conduit and periphery of said disc members, and means to admit light rays to the material passing through said space.

---

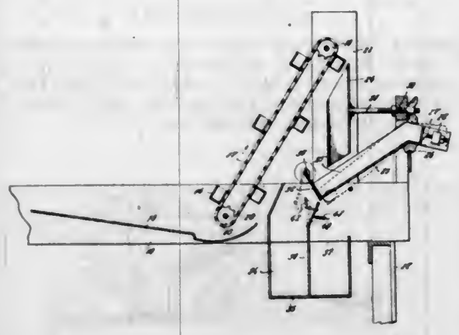


1,696,084. HANGER. FLORINDA GARDNER, Tampa, Fla., assignor of one-half to Mattie Nunn Mason, Tampa, Fla. Filed May 17, 1928. Serial No. 278,473. 2 Claims. (Cl. 223—61.)

1. A hanger comprising a pair of arms, a brace pivoted to one arm and adapted for removable connection with the other arm, and a supporting member for pivotally supporting the arms and for holding the brace in position.

---

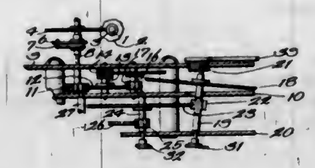
1,696,085. SHOPPING BAG. JAMES RALPH GIBSON, Brooklyn, and TRUE M. AVERY, Glens Falls, N. Y., assignors to Union Bag and Paper Corporation, New York, N. Y., a Corporation of New Jersey. Filed Dec. 6, 1926. Serial No. 152,966. 9 Claims. (Cl. 229—54.)



1. A bag of the class described having a flat bottom foldable along a line toward a side thereof, and load

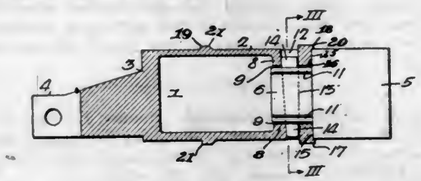
sustaining cord means arranged beneath the bag bottom and extending therefrom to the inside of the bag through said side of the bag at such a level with respect to said line of fold as to permit the bag bottom to unfold substantially without pulling said cord means while tensioned.

---



1,696,086. NUT GRADER AND SORTER. RALPH P. HARDY, Ocean Springs, Miss. Filed Oct. 24, 1927. Serial No. 228,403. 3 Claims. (Cl. 209—121.)

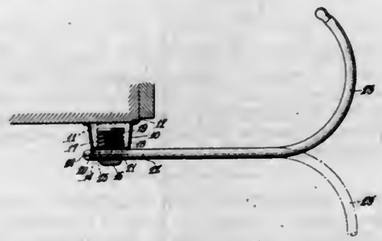
1. A machine of the character described comprising a trough, endless chains operating above the trough, buckets carried by each chain and adapted to singly receive nuts from the trough, a balanced beam arranged beneath each chain and upon which the nuts are singly deposited from said buckets, a gate normally closing the lower end of each beam, the heavy nuts tilting said beam to allow said nuts to fall therefrom, means for directing said nuts in a particular direction, and means for opening said gates at predetermined intervals to allow the lighter nuts to drop from said beams in a different direction from said heavy nuts.



---

1,696,087. TOTALIZING MECHANISM. JESSE HARRIS, La Fayette, Ind., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind., a Corporation of Illinois. Filed Aug. 12, 1926. Serial No. 128,845. 1 Claim. (Cl. 235—144.)

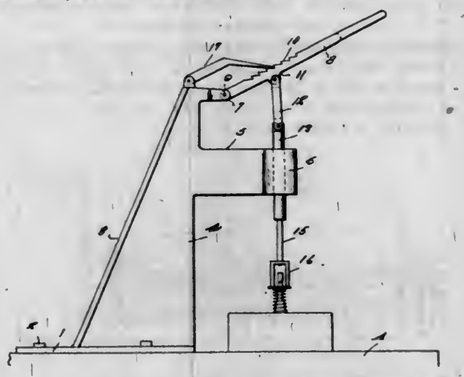
Totalizing mechanism including motion transmitting speed reducing gearing; a gear wheel in mesh with the final gear of said speed reducing gearing; an index upon the shaft of said gear wheel; and a bearing for said shaft and mounted to turn upon its own axis and upon which bearing this shaft is journaled excentrically to the axis of the bearing, said bearing and said gear wheel being relatively disposed to enable said gear wheel to be thrown out of connection with the aforesaid reducing gearing by suitably turning the aforesaid bearing, the axes of said bearing and gear wheel being substantially parallel when said gear wheel is in mesh.



1,696,088. STOKER PLUNGER. CLIFFORD E. HARRISON, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 19, 1925. Serial No. 16,717. 14 Claims. (Cl. 198—226.)

1. A plunger comprising a hollow main body portion provided with an end wall having a recess, an extension for said main body portion, said extension having a projecting shoulder disposed in said recess, said shoulder and said main body end wall being provided with registering borings, and a locking element positioned in said borings.

---



1,696,089. WINDOW-CURTAIN GUARD. HELEN T. HUEY, Stonehurst, Pa. Filed Mar. 31, 1926, Serial No. 98,775. Renewed Nov. 2, 1928. 3 Claims. (Cl. 156—33.)

1. In a window curtain guard, the combination with an inverted cup shaped base to be attached to a window frame, of a headed stud having a shank mounted in the end of the base, said shank provided with an opening in one of its ends and a head at its other end, a curtain engaging and holding member extending through said opening, spring means on the stud operable between said head and the end of the base, whereby sufficient tension is created to hold said member frictionally in engagement with the outer side of said end of the base either in a horizontal or a vertical position.

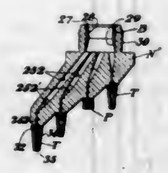
---

1,696,090. VALVE-SPRING COMPRESSOR. ALVIN JONES, Fort Benton, Mont. Filed Apr. 6, 1928. Serial No. 267,935. 3 Claims. (Cl. 29—86.3.)

1. A spring compressor of the character described comprising a base, an upright formed with said base, a web

formed with said base and upright respectively, an extension formed with said web, a bearing sleeve on said extension, a plunger mounted for movement in said bearing sleeve and being provided with a bore, a handle having pivotal connection with said web and with said plunger respectively, a substantially U-shaped member providing a spring tool, and a shank formed with said U-shaped member and being detachably secured in the bore of said plunger.

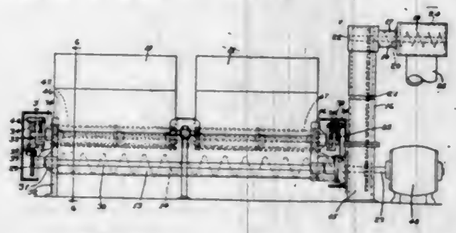
---



1,696,091. BLOWPIPE NOZZLE. ROBERT J. KEHL, Chicago, Ill., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed June 11, 1921. Serial No. 476,858. 4 Claims. (Cl. 158—274.)

1. A multiple flame blowpipe nozzle comprising a main gas passage, a series of outlet passages branching from said main passage, and tips and plugs having portions adapted and arranged to removably and interchangeably fit said outlet passages whereby the orifice arrangement of the nozzle may be varied.

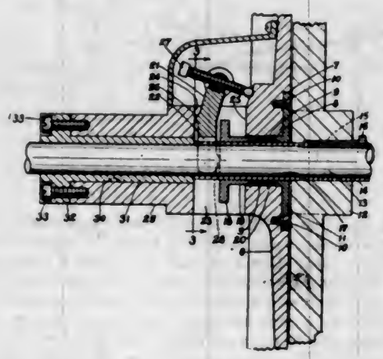
---



1,696,092. MULTIPLE-FLAME BLOWPIPE NOZZLE. ROBERT J. KEHL, Chicago, Ill., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed June 11, 1921. Serial No. 476,859. 6 Claims. (Cl. 158—27.4.)

1. A multiple flame blowpipe nozzle having an inlet cavity, outlet passages leading from said cavity, and a gas directing means in said cavity having a central passage therethrough tapering to a point intermediate its ends and then flaring to the entrances of said outlet passages.

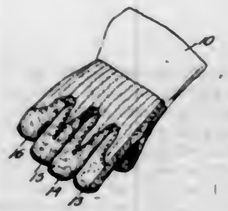
---



1,696,093. COMBINED BLENDING AND SIFTING DEVICE. WILLIAM G. KIRCHHOFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 14, 1924. Serial No. 732,072. 5 Claims. (Cl. 83—44.)

1. In a flour sifting and blending device the combination of a plurality of bins having relatively elongated discharge openings arranged in closely adjacent end to end relation, a trough extending beneath said opening, agitators in said bins, a shaft in the trough, a conveyor screw on said shaft, adjustable means operable from said shaft whereby to impart differential intermittent rotary movements to the several agitators for effecting discharge of substance over an extended portion of the conveyor screw, the several substances being subjected to mixing during and after discharge, an elevator for receiving the substance driven from and moving in synchronism with the conveyor shaft and a revolving screen member driven from the conveyor shaft whereby the substance from the elevator is uniformly sifted and aerated.

---

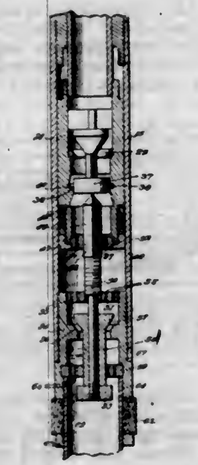


1,696,094. STUFFING BOX AND BEARING STRUCTURE. WILLIAM G. KIRCHHOFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 30, 1926. Serial No. 105,827. 3 Claims. (Cl. 308—134.)

1. In a stuffing box structure, the combination with a tank wall having a bore therethrough of a perforated plate of non-corroding metal having an annular flange extending into the bore in the tank wall, a steel shaft journaled exteriorly of the tank wall and extending through the bore therein, a sleeve of non-corroding metal carried by the shaft and terminating at its journaled bearing, a non-corroding hub on the sleeve adjacent the plate, means for securing the hub, sleeve and shaft against relative rotation and stuffing means comprising packing material and a gland, surrounding the sleeve in the bore in the wall for compressing the packing material against the annular flange.

---

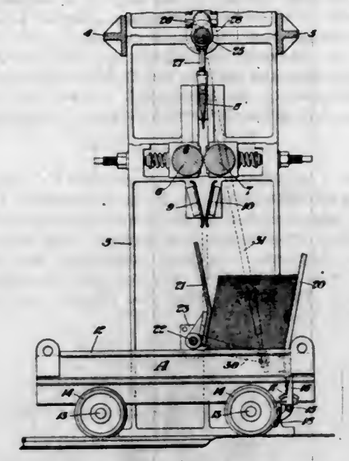
1,696,095. GLOVE. ARCH KYLE, Knoxville, Tenn., assignor to Knoxville Glove Company, Knoxville, Tenn., a Corporation. Filed Mar. 12, 1927. Serial No. 174,828. 1 Claim. (Cl. 2—161.)



A glove comprising a piece of fabric of a size sufficient to form the front and back of the glove and slit along its outer edge adjacent the palm portion to form individual linings for the fronts of the fingers and slit on the same edge at the back to form individual linings for the backs of the fingers, a leather reinforcing member formed to cover the palm of the glove and slit at its outer edge to form an individual covering for the front of each finger, leather reinforcing members for the backs of the fingers each formed with a cut-out portion to leave the fabric covering the knuckle-joints uncovered on the backs of the fingers but covering the tips and sides of the fingers and extending to the crotch between the adjacent fingers, said back members being stitched to each other at the crotch-forming points and to the fabric forming the backs of the fingers adjacent the edges of the cut-out portions, the leather tips for protecting the backs and sides of the fingers being stitched to the leather members protecting the fronts of the fingers along the meeting edges and outside the edges of the finger back linings which are joined in the seam at the finger tips only, whereby the seams along the sides of the fingers are thus made of a comparatively flexible and pliable character, substantially as set forth.

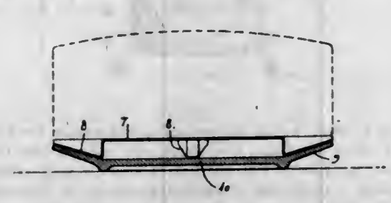
---

1,696,096. SAND-TESTER PUMP. GEORGE F. LE BUS, Electra, Tex. Filed Apr. 27, 1927. Serial No. 187,043. 7 Claims. (Cl. 103—221.)



1. In a sand tester pump, a shell, a plunger in said shell adapted to be reciprocated and provided with a valve seat, a valve adapted to engage the seat, and means adapted to be rotated and force the valve and maintain said valve off the seat.

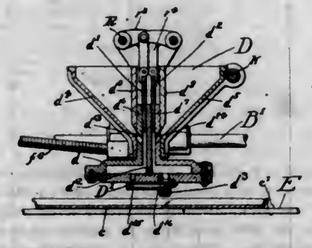
---



1,696,097. DOUBLING APPARATUS. ARTHUR R. MCARTHUR, Gary, Ind., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Jan. 14, 1928. Serial No. 246,876. 4 Claims. (Cl. 153—21.)

2. A doubling apparatus for sheets and plates comprising, in combination, a housing, a doubling mechanism mounted on said housing, said mechanism including a doubling knife and doubling rolls, and means including a crank-shaft for operating said doubling mechanism, a shaft journaled on said housing, a packing head secured on said shaft, said head being adapted to be rocked back and forth to pack the doubled sheets, a lever secured to said last-named shaft, a pin mounted eccentrically on said crank-shaft, and a link connecting said pin and said lever so that said lever will be rocked by each revolution of said crank-shaft.

---

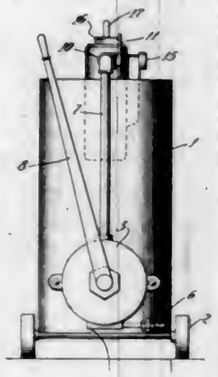


1,696,098. CAKE-PLATE LEVELER. JOHN R. MCGRANIGHAN, Philadelphia, Pa. Filed May 31, 1927. Serial No. 195,482. 1 Claim. (Cl. 65—53.)

A cake support comprising a sheet metal disk adapted to support a cake thereon and having integral depressed portions at spaced points of its margin, said portions extending inwardly from the edge of the dish and increasing in depth inwardly so that the bottoms of said portions are inclined to seat on the inclined rim of a dish.

---

1,696,099. CAKE FORMING AND DEPOSITING MACHINE. JOEL MOORES, Norwood, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 21, 1920. Serial No. 360,536. 36 Claims. (Cl. 107—1.)



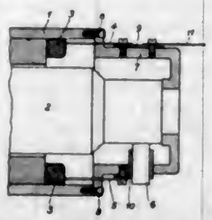
1. In a cake forming and depositing machine the combination of a hopper, a means for reciprocating the hopper,

a conveyor adapted to be fed continuously beneath the hopper, the hopper having in its bottom a die adapted to be moved from an upper to a lower position and vice versa through the bottom of the hopper, the hopper having a port in its wall opened in the upper and closed in the lower position of the die, plungers adapted to draw a charge of dough from the hopper through the port into the die and to discharge the charge upon the pan, means adapted to raise the die and the plungers upon the backward movement of the hopper and to lower the die and the plungers upon the forward movement of the hopper.

---

1,696,100. METHOD FOR CLEANING LUBRICANT CASES OF ENGINES. WILLIAM L. OSBORNE, Los Angeles, Calif., assignor, by direct and mesne assignments, to Osborne Process, Inc., Los Angeles, Calif., a Corporation of California. Original application filed July 3, 1924, Serial No. 724,089. Divided and this application filed Jan. 15, 1927. Serial No. 161,331. 10 Claims. (Cl. 184—1.5.)

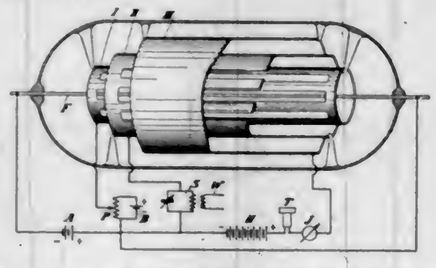
1. A process which comprises withdrawing used lubricant from a lubricant container, and preventing the return of any substantial portion thereof to said container, thereafter introducing a limited quantity of flushing liquid into said lubricant container, no substantial amount of which had heretofore been used in said container, maintaining a cyclic circulation of said limited quantity of flushing liquid from said container through a filtering medium and back to said container, and finally withdrawing said flushing liquid and thereafter preventing the return of any substantial portion thereof to said container.



---

1,696,101. LIFTING JACK. HENRY PERCIVAL SALSBURY, London, England. Filed Dec. 5, 1927, Serial No. 237,916, and in Great Britain Nov. 23, 1926. 1 Claim. (Cl. 254—113.)

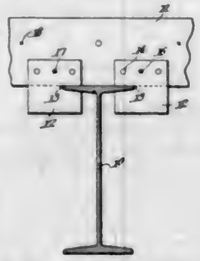
In combination a vehicle spring, an elongated channelled guiding member firmly secured at one end to the spring, a member on the jack movably engaged with said guiding member whereby the jack may be guided into operative position beneath the spring, and a wedge-shaped member inserted between the vehicle spring and the guide member inwardly of the opposite end of the latter.



1,696,102. CONTINUOUS-CURRENT DYNAMO-ELECTRIC MACHINE. ANTON SCHMID and ADOLF STOLL, Stuttgart, Germany, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Apr. 5, 1927, Serial No. 181,054, and in Germany Apr. 15, 1926. 4 Claims. (Cl. 172—36.)

1. A continuous-current dynamo-electric machine adapted for rotation in forward or reverse direction, said machine comprising a bearing support for the armature, a field winding, and connecting pieces for the ends of said field winding, said connecting pieces being provided on said armature bearing support and positioned diametrically relatively to each other and to the axis of rotation of said machine, and means for securing said connecting pieces in positions with respect to the field-winding which are displayed by 180° relatively to each other, whereby the field-winding connections may be reversed with respect to the armature.

---

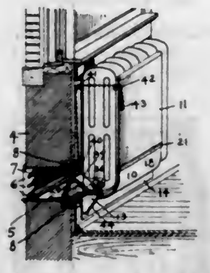


1,696,103. ELECTRIC DISCHARGE TUBE. GEORG SEIBT, Berlin-Schoneberg, Germany. Original application filed Aug. 26, 1921, Serial No. 495,504, and in Germany Oct. 24, 1913. Divided and this application filed Sept. 25, 1924. Serial No. 739,882. 4 Claims. (Cl. 250—27.5.)

4. An electron discharge device having an electron emitting cathode, a control electrode, an anode, and a cylindrical electrode made up of conducting slats said electrode being interposed between said cathode and said anode.

---

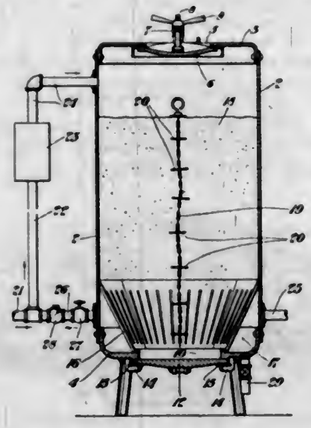
1,696,104. CLIP FOR SECURING WOOD TO IRON BEAMS. ROY R. SEWARD and JOHN A. BOOE, Indianapolis, Ind. Filed June 15, 1927. Serial No. 199,066. 1 Claim. (Cl. 185—35.)



The combination of a supporting metal member having a laterally extending tapered flange, transverse wooden

members extending across the flange, and means for securing said wooden members on said flange, comprising a stamped sheet metal plate having an elongated tapered recess for receiving the flange and for engaging opposite sides of the same to form a tight fit, said member having spaced apertures to receive nails for entering one of the wooden members and an intermediate oppositely disposed projection integrally formed on the metal plate adapted to pierce an adjacent wooden member when it is forced against said intermediate projection, substantially as set forth.

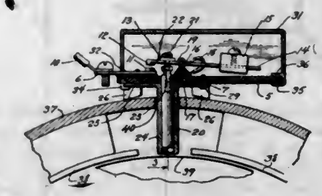
---



1,696,105. COMBINED BOX BASE AND DAMPER. CLARENCE C. SHIPP, Indianapolis, Ind. Filed Dec. 23, 1927. Serial No. 242,160. 9 Claims. (Cl. 257—135.)

4. The combination with a wall box, of a radiator box-base having a bottom opening and also having a lateral sleeve extension outside vertical flange on the sleeve extension, said sleeve extension telescopically assembled within the wall-box, into contact of the flange, means for fastening the flange to the wall, a door to close the opening hinged at its rear edge to the box-base, a valve seat in the sleeve extension, a hinged valve co-operating with the seat, a lever in the box-base pivoted at one end, means for elevating the free end of the lever, means connected with the lever for opening the hinged valve and means connected with the lever for closing the door when the valve is open.

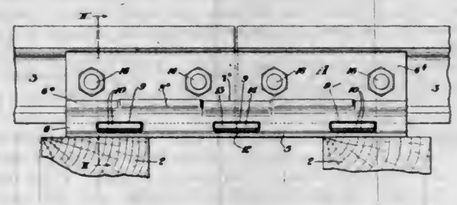
---



1,696,106. WATER-DEACTIVATING APPARATUS. FRANK N. SPELLER, Pittsburgh, Pa. Filed May 16, 1927. Serial No. 191,718. 5 Claims. (Cl. 210—16.)

1. A water deactivating apparatus comprising a tank having an inlet opening at one end for the admission of the deactivating material and an outlet opening at the other end for the discharge of the used deactivating material, removable closures for said openings, a frustoconical grid in the discharge end of said tank, said grid having its smaller end open and communicating with said outlet opening of asid tank and having the pefipheral edge of its larger end engaged with the side walls of said tank, thereby leaving a space between the side walls of said grid and said tank for the collection of deactivated water, an inlet at one end of said tank for water to be deactivated, and an outlet for the deactivated water at the other end of said tank and communicating with the space between the side walls of said grid and said tank.

---

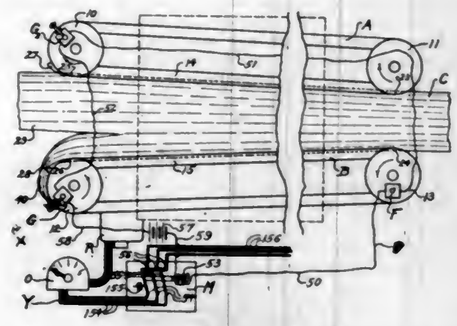


1,696,107. AUTOMATIC MAGNETIC SWITCH. RICHARD C. BIERBOWER, San Antonio, Tex. Filed Apr. 12, 1927. Serial No. 183,100. 7 Claims. (Cl. 171—313.)

4. The combination with a shunt-wound generator having an armature, a switch having contacts in the load circuit of the generator and including a magnetically-attractable member for closing the switch when attracted, said member being located in closely spaced relation with respect to the armature whereby the member will be attracted to close the switch by the direct magnetic action between said member and the armature.

---

1,696,108. RAIL JOINT. JAMES K. BOYD, Wilkinsburg, and FRANK F. SLICK, North Braddock, Pa. Filed June 28, 1928. Serial No. 288,891. 6 Claims. (Cl. 238—205.)

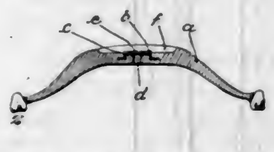


6. A rail joint comprising, in combination, a pair of rails, a fish-plate member connecting said rails, said fish-plate member having inwardly extending portions overlying the base flanges of said rails and upstanding web engaging portions, said inwardly extending portions of said fish-plate portions overlying the base flanges of said rails being provided with alternate projections and depressions so as to form definite points of contact and intermediate spaces of contraflexure for the rails.

---

1,696,109. ELECTRIC STOPPING DEVICE FOR STRETCHING MACHINES. WILLIAM DEWHURST, Methuen, Mass. Filed July 5, 1928. Serial No. 290,675. 2 Claims. (Cl. 26—57.)

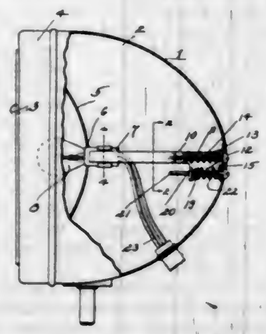
1. In a cloth stretching machine of a type wherein the cloth is carried along between endless chains of pincers, which pincers move around and away from the point where they normally release the cloth; the combination of two automatic electric stopping switches each positioned beyond said releasing point and each having a handle so



pivoted that it will be struck and thrown by any substantial piece of cloth which is carried away and around from said releasing point; a hand operable switch positioned at a third point on said machine; the automatic switches and said hand switch being interposed in a switch circuit from

a source of electric power, said circuit also passing through an electro-magnet which has an armature the operating member of a device for stopping and starting the cloth handling machine, the parts being so arranged that the machine is stopped when the switch circuit is open.

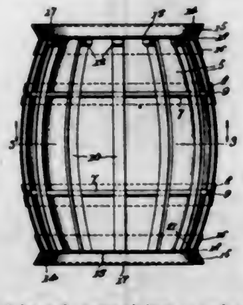
---



1,696,110. DENTAL PLATE WITH SUCKER. OTTO DÖBELE, Constance, Germany. Filed Oct. 7, 1927, Serial No. 224,682, and in Germany July 23, 1926. 2 Claims. (Cl. 32—4.)

1. In combination, a dental plate having a cavity, a membrane holder embedded in the plate, a suction membrane retained between the holder and plate, said holder having an opening therein, said membrane having a perforation in the portion exposed through the opening in the holder and said perforation being adapted to open to permit withdrawal of air from the cavity and being self-closing to prevent the subsequent return of air to said cavity.

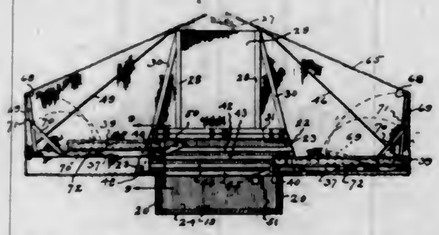
---



1,696,111. VEHICLE HEAD LAMP. HAROLD B. DONLEY, Columbus, Ohio, assignor to the John W. Brown Mfg. Co., Columbus, Ohio, a Corporation of Ohio. Filed Dec. 27, 1926. Serial No. 157,124. 1 Claim. (Cl. 240—44.)

In a lamp, a casing, a reflector mounted within said casing and provided with an axial opening, a bulb support freely movable within said opening and adapted to carry an incandescent bulb in advance of said reflector, an adjusting screw disposed axially within said casing between said reflector and the back wall of the casing, a connecting member having the forward end thereof secured to said support and the rear end thereof provided with a threaded bearing for the reception of the threaded shank of said screw, spring means for retaining said screw in its positions of adjustment, a member pivotally mounted contiguous to the rear wall of said casing and in horizontal alignment with said screw, the outer end of said pivoted member being associated with said bulb support to swing the latter vertically, a second screw engaged with a threaded bearing carried by said pivoted member, and sprag means for retaining said threaded screw in its various positions of adjustment.

---

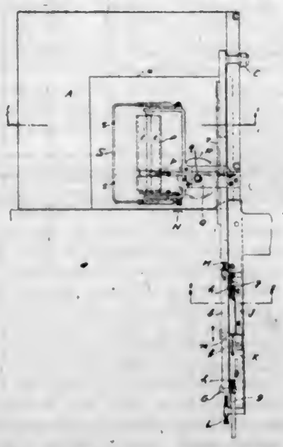


1,696,112. METALLIC BARREL. JAMES HENRY GEORGE, Orange, N. J. Filed Aug. 2, 1927. Serial No. 210,172. 1 Claim. (Cl. 220—73.)

An all metal barrel, comprising a series of staves having outwardly flared ends, and inwardly turned side flanges terminating short of said ends, locking strips of the same length as said flanges slidably engaging said flanges, pan shaped dished metal heads each having a flat base and sides flaring outward in the form of a truncated cone, with the circular angled edge of the head directly engaging the circular angled line of bend between the main body part and the flared out ends of the staves, each head having its base resting on the ends of said flanges, and its tapering sides fitting snugly between the flared out ends of said staves, with a cap for holding each head in position provided with an inwardly turned tapering portion having its free end abutting against the barrel head, said cap having its outer portion bent over the free ends of the staves and over the outer perimeter of the dished head and bent downwards to engage into and project below the groove formed at the base of the outward flare of the staves.

---

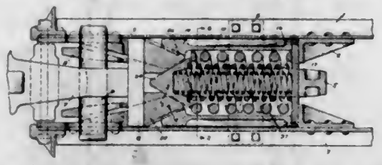
1,696,113. AUTO CAMP TRAILER. EDWARD RAY GILKISON, Terre Haute, Ind. Filed July 6, 1926. Serial No. 120,645. 11 Claims. (Cl. 296—23.)



1. In a camp trailer, a floor, fixed ends projecting from the floor, an upper end fixed to each of said fixed ends adapted to swing inwardly toward each other, a bed slidingly retained between said fixed ends whereby the bed may

be pulled horizontally out to extend beyond and give access to the floor, a support permanently extending from the floor to under the bed to maintain the bed in a horizontal position while being moved in or out from the floor, means of limiting the outward travel of the bed, and a woven covering secured to said fixed and hinged ends passed over, around, and under said bed to form a complete tent enclosure when the bed is extended beyond the floor, said covering being adapted to be folded over the bed when the bed is positioned over the floor and the hinged ends are swung downwardly onto the bed.

---

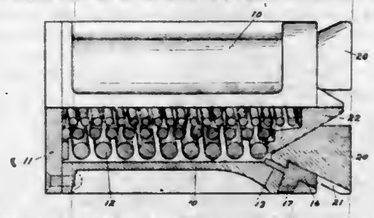


1,696,114. SHEET-FEEDING MECHANISM. SYDNEY FREDERICK HERBERT GOFFIN, St. Albans, England. Filed July 18, 1927, Serial No. 206,714, and in Great Britain July 27, 1926. 10 Claims. (Cl. 271—22.)

1. A sheet feeding mechanism comprising a reciprocating gripper, a spring-pressed guide for pressing the edge of a sheet against the gripper while it moves in one direction and hold-fast means for pressing said sheet against the guide and moving the sheet and guide out of contact with the gripper and holding the sheet stationary while the gripper returns.

---

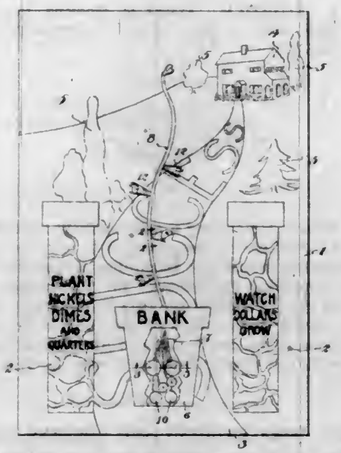
1,696,115. DRAFT GEAR. ERNEST G. GOODWIN, Pelham, N. Y., assignor to Standard Coupler Company, New York, N. Y., a Corporation of New Jersey. Filed July 11, 1924. Serial No. 725,447. 11 Claims. (Cl. 213—26.)



1. In a friction draft gear a spring barrel, a friction box, a block frictionally engaging said box, and a spring urged wedge frictionally engaging said block; said box and block having interengaging surfaces, one of said surfaces being concave while the other is convex, each curve having an average radius greater than the distance from the center of the gear to the outside surface of the spring barrel.

---

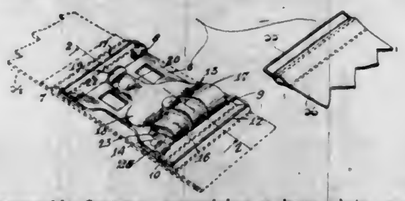
1,696,116. WEAR PLATE. ERNEST G. GOODWIN, Pelham, N. Y., assignor to Standard Coupler Company, New York, N. Y., a Corporation of New Jersey. Filed June 29, 1926. Serial No. 119,396. 4 Claims. (Cl. 213—26.)



1. In a draft gear, a spring barrel having two outwardly diverging walls at the open end, each wall having a recess therein, a pair of wear plates each having a lug fitting one of said recesses, a center wedge, a spring engaging said wedge and the closed end of said barrel, a plurality of side wedges in engagement with said center

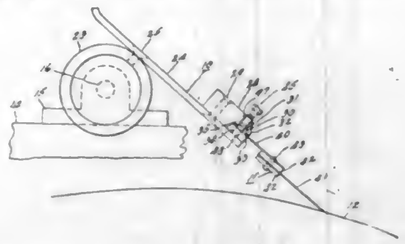
wedge each having a groove extending part-way only of its outer friction face, and a guiding rib on each plate opposite the lug for engaging said grooves to guide and limit movement of said side wedges.

---



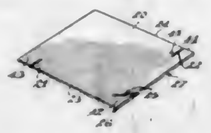
1,696,117. SIGN. JOSEPH E. GUY, Waynesboro, Pa. Filed Nov. 16, 1927. Serial No. 233,662. 2 Claims. (Cl. 40—126.)

1. An advertising device comprising a board having displayed thereon the representation of a potted plant and provided with coin-receiving pockets adjacent the representation of roots of the plant and being further provided along the representation of the stem of the plant with openings to receive currency.



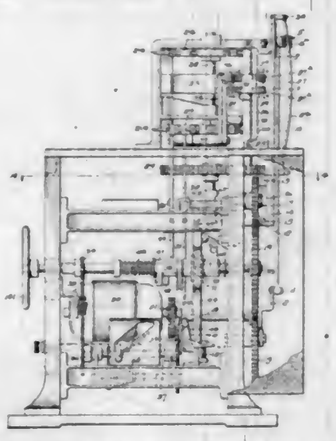
---

1,696,118. SEPARABLE FASTENER. EDITH R. HEINTZ, Cincinnati, Ohio. Filed Apr. 30, 1926. Serial No. 105,816. 1 Claim. (Cl. 24—69.)



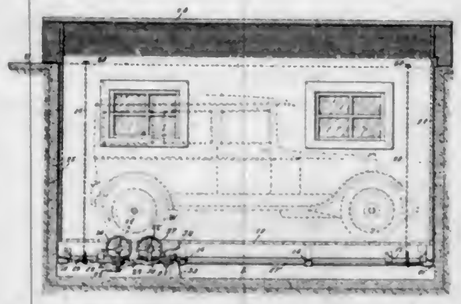
A separable fastener comprising a base plate, a substantially centrally positioned stationary hook at one end of the base plate, a forked clasp pivotally mounted at the hook end of the base plate with the hook between the branches of the fork, a spring adapted to move the clasp toward the base plate, and snap fastener elements on the base plate and clasp adapted to secure the clasp relatively to the base plate to prevent displacement of an article from the hook.

1,696,119. PAPER MACHINERY. RALPH E. HEISEL, Chillicothe, Ohio, assignor to the Mead Pulp & Paper Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 7, 1927. Serial No. 173,400. 9 Claims. (Cl. 92—74.)



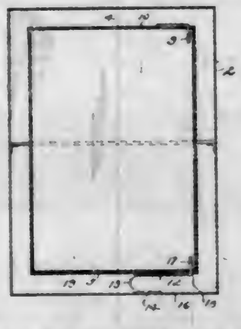
1. A doctor of the character described comprising a body portion, and a separate blade portion having interlocking engagement with an detachably connected to said body portion.

1,696,120. SHINGLE. JAMES E. HOOKER, Coral Gables, Fla. Filed Feb. 13, 1928. Serial No. 254,037. 2 Claims. (Cl. 108—7.)



1. A shingle comprising a substantially square sheet of roofing material cut at three corners to provide a plurality of interlocking means, the remaining corner which is free of a cut providing an indicator for positioning the shingle on the roof, certain of the cuts forming slits which are at right angles to the edges of the shingle, the other slit being located at an acute angle to an edge of the shingle and extending inwardly from said edge towards an adjacent edge.

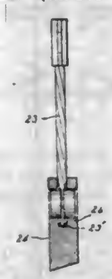
1,696,121. WIRE FOLDING AND CUTTING MACHINE. DANIEL D. HUYETT, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 4, 1925. Serial No. 48,108. 32 Claims. (Cl. 140—71.)



1. A machine of the character described, comprising a wire receiving support, a shuttle, a guide in which said shuttle is mounted, a reciprocatory connecting rod imparting vertical reciprocation to said shuttle along said guide, a cross-head, by which said guides are carried, a connecting rod for imparting horizontal reciprocation to said cross-head, outwardly bowed guides carried by and movable with the crosshead, and engaging a movable part of the shuttle to move said part outwardly with respect to the wire being wound, at substantially the central part of the vertical stroke of said shuttle.

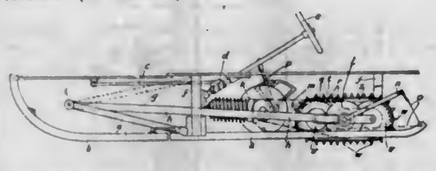
1,696,122. ELEVATOR. ALFRED NORDLAND, De Smet, S. Dak. Filed July 25, 1927. Serial No. 208,322. 6 Claims. (Cl. 187—17.)

3. In an elevator, a shaft carried by the elevator, cables wound upon the shaft and adapted to raise or lower the elevator when the shaft is rotated, spaced shafts carried by the elevator and disposed at right angles to the cable wound shaft, gearing connecting one of the spaced shafts with the cable wound shaft, means carried by the spaced shafts for engagement by the wheels of an automobile to drive said spaced shafts and rotate the cable wound shaft in accordance with the direction of rotation of said drive wheels and means operable when the elevator reaches a landing to cause the drive wheels of the automobile to disengage the spaced shaft carried means and provide a brake to stop the operation of the cable wound shaft.

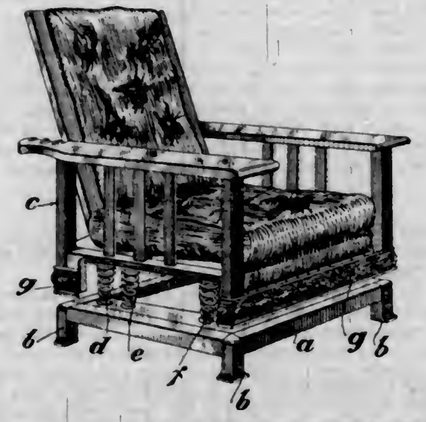


1,696,123. HINGE MOUNTING FOR CABINET DOORS. WILLIAM H. PACKER, Columbus, Ohio, assignor to Ohio State Stove Mfg. Co., Columbus, Ohio, a Corporation of Ohio. Filed Oct. 15, 1926. Serial No. 141,723. 4 Claims. (Cl. 312—141.)

1. In a cabinet of the character set forth, a casing structure having an opening in the front wall thereof, a door arranged in said opening, pivot means for supporting said door consisting of a fixed pintle and socket construction for one corner of said door, and a wire member for supporting the other corner of said door, said wire member being formed to include a pair of angularly disposed arms arranged within said casing structure and resiliently movable with respect to each other, one of said arms being provided at its outer end with a pintle arranged in registration with said first named pintle and removably positioned within a socket provided in one corner of said door.

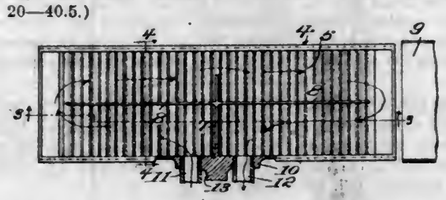


1,696,124. ELECTRICAL CONNECTION AND METHOD OF FORMING THE SAME. ALFRED G. PLIMMER, Cleveland, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Mar. 3, 1926. Serial No. 92,000. 4 Claims. (Cl. 171—326.)



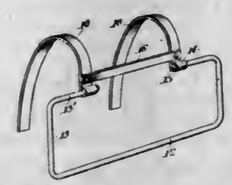
1. A conducting body having intersecting passages therein, a conductor in one of said passages, means in the other passage for gripping said conductor, said gripping means comprising a single piece of deformable material having opposed abutments gripping said conductor therebetween.

1,696,125. PROPELLING ARRARNGEMENT ON SLEIGHS. JAKOB RANTASA, Vienna, Austria. Filed Aug. 24, 1925, Serial No. 52,095, and in Austria Sept. 13, 1924. 5 Claims. (Cl. 180—5.)



1. A sleigh having its runners provided with forwardly and upwardly extending arms, a frame arranged between the runners and pivotally mounted at its front end between the front ends of said arms, a motor on said frames, and a traction unit mounted at the rear end of said frame and comprising traction wheels having wedge-shaped peripheral grooves, and an endless traction band connecting said wheels, said band being provided on its inner side with such wedge-shaped projections arranged to enter said grooves.

1,696,126. SPRING SUPPORT FOR CHAIRS, COUCHES, AND THE LIKE. ALBERT HARRY SALMON, Twickenham Park, England. Filed Mar. 31, 1926, Serial No. 98,894, and in Great Britain May 25, 1925. 1 Claim. (Cl. 155—50.)



A chair comprising an integral under-structure including side rails and end rails, an integral over-structure including seat and back, a set of conical coil springs arranged tandem fashion on each side rail of said under-structure with their smaller ends resting on said side rail and their larger ends supporting said over-structure, the springs supporting the front end of aid over-structure being less in number but of heavier gauge than those supporting the rear end of said over-structure and the several springs of the two sets constituting the sole means for limiting relative movement between said two structures in a horizontal sense in all directions.

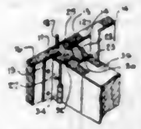
1,696,127. WINDSHIELD HEATER. DEVERE D. SAPPENFIELD and FRED M. SHEETS, Kansas City, Kans. Filed Sept. 23, 1927. Serial No. 221,544. 2 Claims. (Cl. 20—40.5.)

1. A windshield heater comprising a hollow body having one of its faces corrugated and having compressible strips frictionally received in the end corrugations and extending therethrough for contacting with the inner face of a windshield, means supporting the body, and means for directing heat through the body.

1,696,128. HANGER. PARKE E. SHEE, Lancaster, Pa. Filed Nov. 25, 1925. Serial No. 71,461. 4 Claims. (Cl. 211—123.)

1. A garment hanger of the class described, comprising a pair of substantially flat strap-like hooked arms adapted to be detachably connected to a seat back or door of a vehicle, and a cross bar pivotally connected to depending portions of said arms and movable about a substantially horizontal axis relative thereto said cross bar normally lying in substantially the same vertical plane as the depending portions of the hooked arms.

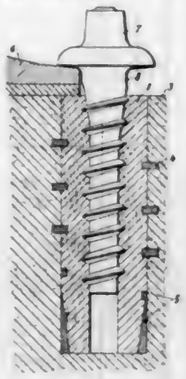
1,696,129. METHOD OF MAKING AUXILIARY HEEL LININGS. MYER S. SILVER, Boston, Mass. Filed Oct. 16, 1926. Serial No. 142,008. 3 Claims. (Cl. 12—146.)



1. The method of making auxiliary heel linings which comprises forming a sheet of sponge rubber between two pieces of fabric to which the rubber is vulcanized, cutting from such sheet blanks of the desired shape, and then splitting each blank to form a lining having a face of sponge rubber and a fabric backing.

1,696,130. WINDOW CONSTRUCTION. LOUIS JOSEPH TURCOTTE, Montreal, Quebec, Canada. Filed Oct. 10, 1927. Serial No. 225,247. 1 Claim. (Cl. 20—50.)

A window structure comprising a window frame having sash grooves in opposite sides and metal strips secured to



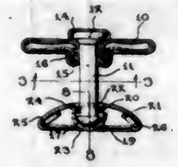
the frame partially closing in the grooves and forming guides, a sash having a vertical rabbet at one side, a wooden bracket forming a sash support and having metal facing strips forming vertical binding pieces running on said metal strips in the window frame and having a rabbet

registering with the vertical rabbet in said sash and completing a rabbet joint in the closed position and converging at the inner side to a neck, a runner forming a part of said wooden bracket and sliding in one of the window grooves and a hinged strip section having fasteners thereon locking the sash frame in the other of said window grooves.

---

1,696,131. WOODEN PLUG FOR ANCHORING RAILS ON CONCRETE SUPPORTS. EDMOND FRANÇOIS LEOPOLD VAGNEUX, Paris, France. Filed Nov. 11, 1926, Serial No. 147,769, and in Great Britain Nov. 16, 1925. 4 Claims. (Cl. 238—370.)

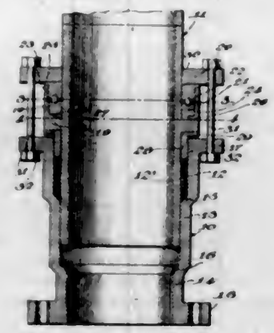
1. A device for anchoring rails on concrete sleepers comprising a steel spiral bush the outer part of which is securely held throughout its length in the wall of a cylindrical smooth-walled recess in the concrete and the inner part of which projects inside the said recess, a smooth walled wooden plug forced into the nut-shaped recess formed by the concrete of the sleeper and the steel of the bush and a rail clamping part adapted to engage said plug.



---

1,696,132. MEASURING INSTRUMENT. WERNER WERMEILLE, St.-Aubin, Switzerland. Filed Sept. 12, 1927, Serial No. 219,049, and in Switzerland Nov. 10, 1926. 1 Claim. (Cl. 172—284.)

In a measuring instrument for liquids comprising a driving mechanism transmitting its motion by means of a magnetic coupling to the indicating mechanism, the combination of two cylindrical magnets, of which the cross-section comprises two annular segments of like radius connected together by an annular segment of smaller radius, said cylindrical magnets adapted to cooperate with two magnets of semi-annular cross-section separated from the said cylindrical magnets by a liquid tight diaphragm.



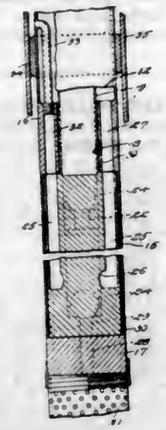
1,696,133. BUTTON. CHARLES E. YOUNG, Rochester, Minn. Filed Mar. 27, 1928. Serial No. 265,035. 1 Claim. (Cl. 24—108.)

A device of the kind described comprising a button, a stem connected at one end with the button, and a retainer detachable engaged with the remaining end of the stem, the stem having a tapered terminal and a shoulder just back of the same, and the retainer having a thimble in which the tapered terminal is received, and spring jaws engaging said shoulder, the spring jaws consisting of the free terminals of a spring carried by the retainer, and the thimble being slotted on diametrically opposite sides to provide clearance spaces for said jaws.

---

1,696,134. PIPE COUPLING. HARRY D. ALGYRE, Holdenville, Okla. Filed May 6, 1927. Serial No. 189,830. 1 Claim. (Cl. 285—96.)

A pipe coupling comprising a nipple having sectional reduced portions toward one end, a pipe section adapted to be extended into the larger end of the nipple and to closely fit within the intermediate of said reduced portions thereof, a packing surrounding said pipe section and partially filling the larger of the said reduced portions, an annular flange about the pipe section, a bushing surrounding said pipe section and seated within the open end of the larger of said sectional reduced portions to confine said packing within the latter, an annular flange at the outer end of said bushing interposed between the outer end section of the nipple and said annular flange on said pipe section, an annular ball retaining raceway surrounding said pipe section and seated against the outer side of the annular flange on the latter, an annular collar surrounding said pipe section and seated against the outer side of said raceway, and means engageable with the larger end of said nipple and said collar for securing the parts together.



---

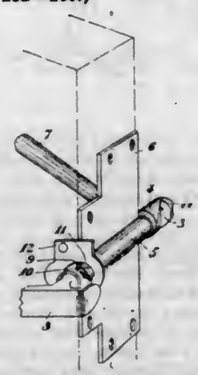
1,696,135. OIL-WELL PUMP. DONALD D. BUACH, Earlsboro, Okla. Filed Feb. 2, 1928. Serial No. 251,307. 5 Claims. (Cl. 103—234.)

1. In a deep well pump and in combination, an assemblage adapted to be disposed in the fluid contained in the well comprising a barrel having heads at its opposite ends and having a port in each head, the upper head having an axial opening and a combined cylinder and control valve element rotatable within the barrel and having a neck extending through the opening of the upper head, said element having cylinder bores each having at its lower end a check-valved opening adapted to align with the port of

the lower head and at its upper end a check-valved outlet communicating with the neck and ports in said element opening through the upper end of the element and each

communicating at its lower end with one of the cylinders, said ports during rotation of the element alternately aligning with the port of the upper head.

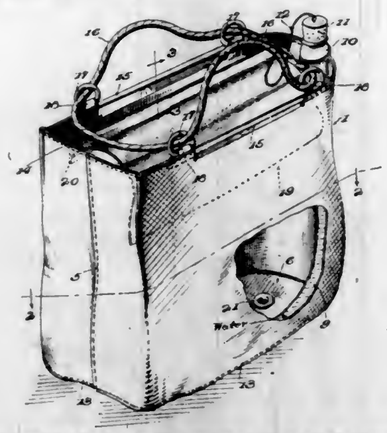
---



1,696,136. GOLF TEE. AZRO A. CONURN, Holyoke, Mass. Filed Apr. 12, 1928. Serial No. 269,561. 2 Claims. (Cl. 273—33.)

1. A golf tee having a transverse passage formed therethrough intermediate its top and bottom, a marker, and a cord doubled intermediate its length and having its doubled portion passed through the passage and formed with knots engaging the tee at opposite sides thereof, the free ends of the cord being secured to said marker and the doubled portion of the cord projecting from the opposite side of the tee from the marker forming a loop whereby the tee may be suspended from a support.

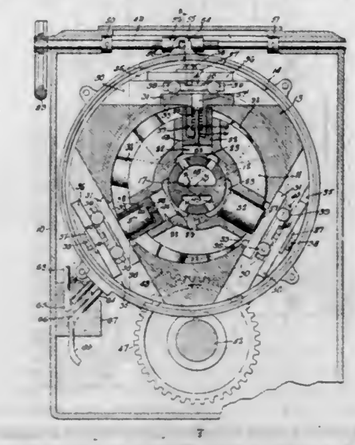
---



1,696,137. DOOR OR THE LIKE LATCHING DEVICE. VICTOR COLSON, Brussels, Belgium. Filed Nov. 14, 1925, Serial No. 69,106, and in Belgium Nov. 15, 1924. 2 Claims. (Cl. 292—169.)

1. Door latching devices comprising a keeper for attachment to a fixed supporting element and having an opening and a latch bolt to project into one side of said opening; a plate for attachment to the free edge of a door and having a bearing, a bolt operator mounted for rotation in said bearing and provided with means to prevent longitudinal movement of said bolt operator, said bolt operator having an end projecting from one side edge of said plate, arranged to enter the opening of said keeper and having a notch for engagement by the latch bolt of said keeper, and levers for turning said bolt and arranged substantially at the opposite ends thereof.

---

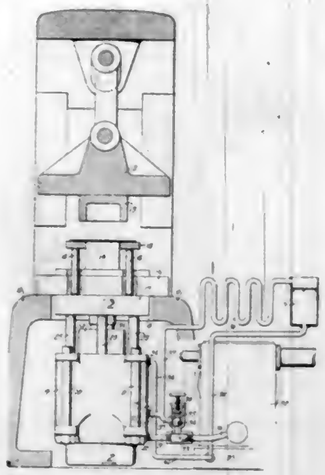


1,696,138. COMBINED WATER BAG AND FOOD COOLER. JOHN W. DAY and HAROLD K. DAY, Pocatello, Idaho. Filed Aug. 3, 1925. Serial No. 47,968. 3 Claims. (Cl. 150—48.)

1. A bag having a wall composed of a single length of fabric doubled upon itself and having the otherwise free ends connected at the place of doubling thereby to define a water space, a bottom, a seam connecting the bottom to the wall and closing the bottom of said space, a seam run along the top of the wall to completely close the water space, a spout appropriately incorporated in the wall at the top seam to permit filling the space with water, a flap connected to the wall at the inside providing a cover, and eyelets in the bottom providing for a circulation of air through the interior of the bag and out around the flap.

---

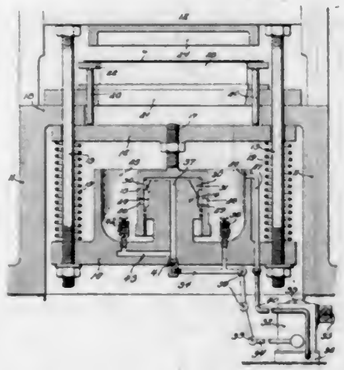
1,696,139. PUMP OR MOTOR. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1924. Serial No. 709,527. 17 Claims. (Cl. 103—161.)



2. In a pump or motor the combination of a pintle, a cylinder barrel rotatable thereon and having an odd num-

ber of cylinders radially disposed and equally spaced about the axis of rotation thereof, said cylinders being arranged in groups disposed in planes offset along said axis, a piston reciprocable in each cylinder, and an impelling member cooperating with said pistons and cylinders to effect relative reciprocation therebetween.

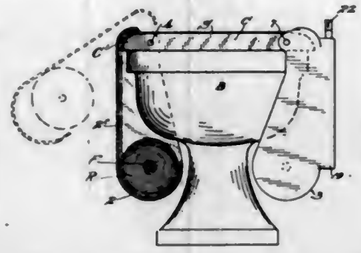
---



1,696,140. HYDRAULIC BLANK HOLDER. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 12, 1926. Serial No. 115,487. 19 Claims. (Cl. 113—46.)

1. A hydraulic pressure pad for draw presses and the like comprising a pressure member, pressure sustaining means including a piston and cylinder, means permitting the escape of liquid from said cylinder, and means controlled by movement of said piston for throttling said escape means.

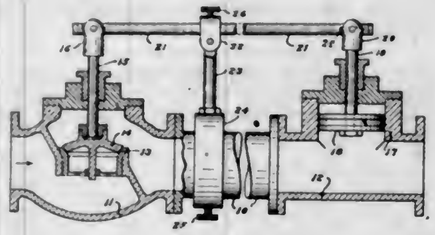
---



1,696,141. HYDRAULIC BLANK HOLDER. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 18, 1926. Serial No. 149,155. 10 Claims. (Cl. 113—46.)

1. In a draw press having cooperating dies a blank holder therefor comprising a blank holding and stripping member cooperating with one of the dies to grip the blank therebetween, a pressure sustaining member connected with the last mentioned die, hydraulic means for transmitting pressure between said members, means responsive to relative movement between the dies for controlling said pressure during the draw stroke, and means for effecting an increased pressure in said hydraulic means during the stripping operation.

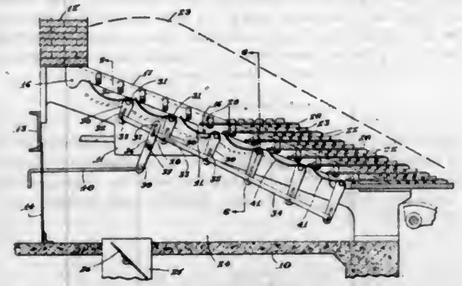
---



1,696,142. SANITARY TOILET SEAT. RAY O. HARPER and RALPH C. HITCHIN, Los Angeles, Calif. Filed Apr. 27, 1927. Serial No. 186,920. 5 Claims. (Cl. 4—247.)

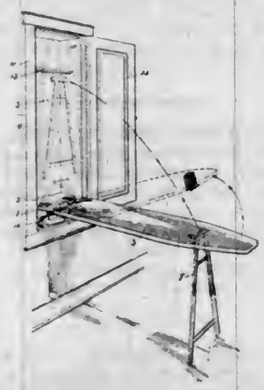
1. The combination with a toilet seat, of a pair of vertical sheet chambers pivotally suspended from the opposite sides of the seat; said chambers being open at their inner sides and having roll pockets at the bottom swinging in under the toilet bowl; one swinging pocket having a winding means to draw the sheet over the seat from the other chamber and having a gear box lying along its outer side, and said winding means including a feed mechanism in said box and a hand lever therefor extending above the gear box and oscillating between the front and rear ends of the gear box.

---



1,696,143. AUTOMATIC PRESSURE-REGULATOR VALVE. ALVA K. HINCHMAN, Gloucester City, N. J., assignor to J. H. Malone, Drexel Hill, Pa. Filed Sept. 18, 1922, Serial No. 588,946. Renewed May 11, 1928. 1 Claim. (Cl. 50—37.)

In an automatic pressure regulator valve, the combination with a steam line, of a plunger valve for controlling the passage of steam therethrough, a cylinder having communication with the steam line, a pressure operated piston movable in said cylinder, an upstanding stem on said plunger valve, an upstanding stem on said piston, a supporting yoke having a vertical standard thereon adjustably carried by said steam line for lateral movement from a point intermediate said valve and piston, means for holding the yoke in different position, a clevis bracket having a transverse opening in its upper end pivoted to the free end of said standard, a bar having slots adjacent its ends slidably and, extending through said opening, clevis brackets on said stems for slidably pivoting the stems to the slotted ends of the bar, and means carried by the first clevis bracket to retain such first bracket in adjusted relation to said bar.



1,696,144. STOKER AIR CONTROL. OSCAR O. NYGAARD, Saugus, Mass., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed July 31, 1925. Serial No. 47,265. 5 Claims. (Cl. 110—44.)

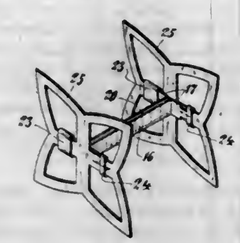
5. In an automatic stoker, a fuel trough, an air channel at each side thereof, frames mounted on the margins of said trough, tuyère forming blocks arranged in stacked relation mounted on said frames and capping said chambers, each of said blocks having a floor plate, dampers for closing said channels at will, and means located between adjacent floor plates for controlling the amount of air passing through the respective tuyères.

---

1,696,145. IRONING BOARD. SAMUEL O. WAGONER, Pasadena, Calif., assignor, by direct and mesne assignments, of one-half to H. E. Robinson, Los Angeles, Calif., and one-half to Kyle Howard, Los Angeles, Calif. Filed July 30, 1924. Serial No. 729,176. 1 Claim. (Cl. 68—10.)

A cabinet ironing table and mounting therefor including a support, a flat attaching member hingedly connected to said support and adapted to be moved from a horizontal position to a vertical position, a pivot element carried by said flat attaching member, an ironing board, means at the end of said ironing board at the middle thereof and means at opposite sides thereof to receive said pivot element for adjustably attaching said ironing board to said flat attaching member, whereby said board can be attached to said pivot element at a corner thereof with its side parallel with the axis of said hinged attaching member.

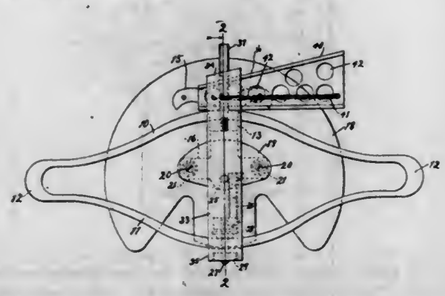
---



1,696,146. THERMOSTATICALLY-CONTROLLED HEATING PLUG. ERNST G. K. ANDERSON, Evanston, Ill., assignor to Appleton Electric Company, a Corporation of Illinois. Filed Apr. 14, 1927. Serial No. 183,826. 1 Claim. (Cl. 219—40.)

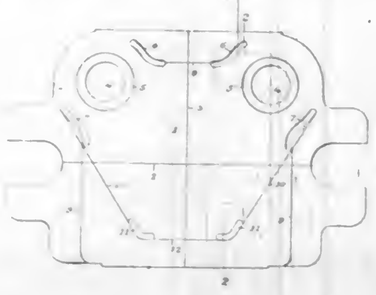
A heating stopper for a liquid container comprising a stopper body of insulating material, a tubular terminal projecting downwardly from said body, the material of the body being continued down around said terminal and underneath the free edge of the latter, a second terminal extending downwardly from said body at the center of the tubular terminal and having its lower end lying at a considerable distance above the lower end of the tubular terminal.

---



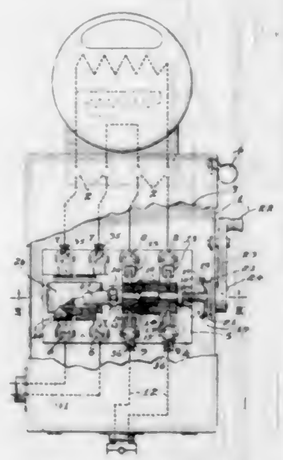
1,696,147. DISPENSING-TUBE BASE. BERTRAM F. BAKER, Tannersville, N. Y. Filed Jan. 19, 1927. Serial No. 161,995. 9 Claims. (Cl. 221—60.)

3. A base for collapsible tubes comprisnig a channel cross bar and means co-operating with the cross bar to hold the tube held thereby in erect position, the means cooperating with the cross bar being a pair of end pieces separable from the cross bar, the end pieces each having a plurality of symmetrical sides constituting selective supports.



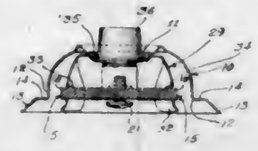
---

1,696,148. DYNAMOMETER. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed May 21, 1925. Serial No. 31,765. 5 Claims. (Cl. 265—19.)



1. In a dynamometer, the combination of a spring including two elements adapted to move relatively under the force to be measured, means indicating such movement in suitable units and an adjustable safety connection between the elements of the spring including a device moving as they move to take up the space represented by their movement and thereby provent sudden recovery of the spring.

1,696,149. DRAWING TEMPLATE FOR DIE SETS. PHILO H. DANLY, Chicago, Ill., assignor to Danly Machine Specialties, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1927. Serial No. 168,054. 5 Claims. (Cl. 33—174.)

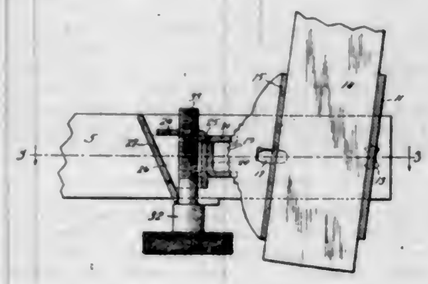


1. A template for use in making drawings of punch and die mountings, the same comprising a plate of transparent material having a border outline corresponding with the border outline of a standard die shoe, the plate being formed with orifices indicative of the position of the leader pins of said shoe, with a transverse guide line midway between said orifices, and with a longitudinal guide line in spaced relation to said orifices, said lines affording means for positioning the template on a drawing of a punch and die previous to the production on said drawing of the outlines of a suitable size of a die set and its orifices indicating the leader pins of said die set.

1,696,150. ELECTRIC SERVICE INSTALLATION. JOSEPH SACHS, Hartford, Conn. Filed July 28, 1922. Serial No. 578,125. 9 Claims. (Cl. 247—2.)

1. In a theft-proof electric meter service installation connectible between service and load wires, the combination of an enclosing cabinet having an openable cover adapted to be sealed in closed position, the said cabinet being provided with means for the protective association therewith of the terminal portion of an electric meter, circuit controlling means in the cabinet connectible in series with a meter protectively associated as aforesaid and including a movable circuit opening-and-closing member normally in circuit closing position, an automatic current responsive device in the cabinet connectible in series with the said controlling means and with the meter, means serving upon the passage of excessive current through the said current responsive device to move the said movable member to its circuit opening position, a handle outside of the cabinet accessible at all times for manual operation by the customer, and means enabling the handle to move the said movable member in the circuit closing direction, the last said means being inoperative to prevent movement of the said member in the circuit opening direction by the current responsive device.

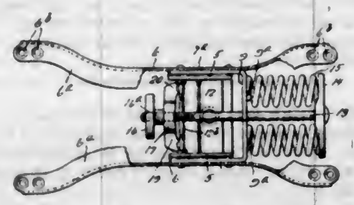
1,696,151. PUSH-BUTTON-SWITCH CONSTRUCTION. FELIX STAEDELI, New York, N. Y., assignor to Francis Kell & Son, Inc., a Corporation of New York. Filed Oct. 10, 1925. Serial No. 61,627. 12 Claims. (Cl. 200—159.)



1. In a device of the character described, in combination, a casing having means adapted to permit it to be secured to a wall and provided with an opening in the upper part thereof, a push button in said opening, an insulating member carrying connecting mechanism adapted to be actuated by said push button and having a pair of oppositely disposed end portions of substantially rectangular cross-section, and means within said casing and arranged in depending relation with respect thereto for holding said member within said casing, said means including a pair of oppositely disposed members, each provided with a substantially rectangularly shaped opening to receive an end portion of said insulating member and each made of spring material and yieldably urged one toward the other.

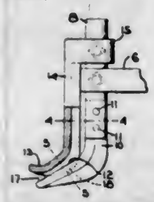
1,696,152. LUBRICATING MIXTURE. ARTHUR W. SWANBERG, Youngstown, Ohio, assignor of one-half to B. P. Higby, Youngstown, Ohio. Filed Aug. 16, 1926. Serial No. 129,661. 2 Claims. (Cl. 252—5.)

1. A viscous mixture for shock absorbers of the fluid type or similar devices, said mixture comprising a viscous stable suspension of castor oil, and finely divided plaster of Paris in amount approximating twenty-five percent by weight of the castor oil.

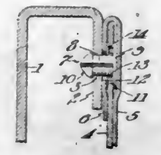


1,696,153. CHAIR. EDWARD D. BUMP, Lakewood, Ohio, assignor to The Bettcher Stamping & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 16, 1924. Serial No. 732,444. 13 Claims. (Cl. 155—157.)

1. In a chair, the combination, with opposite rearwardly-disposed arms, of a back post interposed between and vertically adjustable with respect to said arms, and means for securing the said post in adjusted position between said arms, the said means comprising a member adapted to engage the rear of said post and mounted to rock between said arms, a cooperating member pivotally supported by and between the said arms and adapted to engage the front of said post, and means for forcing one of the said members toward and from the other, thereby to secure the said post in adjusted position.

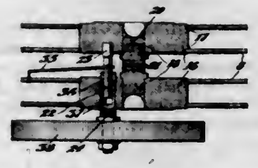


1,696,154. CHAIR-SEAT MOUNTING. SPENCER M. BUMP, Lakewood, Ohio, assignor to The Bettcher Stamping & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 15, 1926. Serial No. 141,732. 3 Claims. (Cl. 155—77.)



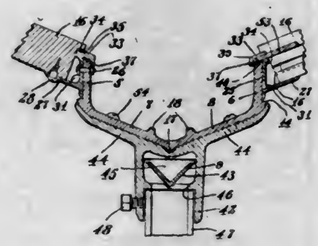
1. A rocking connecting member for use with one or more springs arranged to resist the backward movement of swivel chairs and with a bolt having a cross plate engaging such spring or springs and extending forwardly and beyond a cross member carried by the seat assembly, the said connecting member being formed from a single piece of metal having a forwardly projecting dome-shaped central portion provided with an aperture therethrough, the portion of such dome surrounding the said aperture, constituting an arch-supported thrust surface for engagement by an adjustable member on the front of said bolt, said connecting member having integral extensions adapted to bear against said cross member.

1,696,155. CLOTH-CUTTING ATTACHMENT FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 8, 1927. Serial No. 181,995. 1 Claim. (Cl. 164—38.)



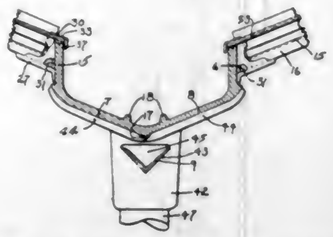
An attachment for looms for cutting the cloth longitudinally as it is woven comprising a knife blade adapted to be rigidly secured on a loom frame, having a forward and upward inclined cutting upper edge, the said knife blade standing vertical and parallel with the warps and with the cutting edge crossing, and at its rear end extending below, the plane of the cloth, and a guard presser foot rigidly secured upon the loom frame and extending rearward above, and up to the rear end of, the cutting edge of the knife blade, thus to protect the operative from any accidental engagement with the cutting edge, the rear end of said guard foot flaring upward to form with the knife blade beneath an open, forward converging mouth for guiding the cloth onto the cutting edge, the said guard foot having a depending rigid wing at each side of and spaced from the knife blade forwardly of said mouth, which wings act, as the cloth moves forward, to press the cloth down and thus stretch it taut as it rides against the cutting edge to insure the cloth being cut.

1,696,156. FLOATING-TRIM STUD. PAUL E. FENTON, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Nov. 14, 1927. Serial No. 233,194. 5 Claims. (Cl. 24—213.)



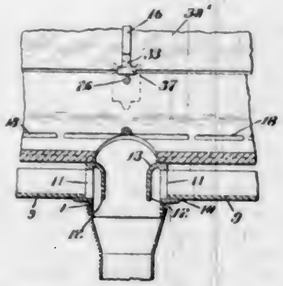
1. A floating trim stud, comprising a stud member having a base flange, a resilient shank and head rising therefrom, the head having a greater diameter than the diameter of the shank, and a spring washer adapted to be forced over the head and into resilient engagement with the shank while the shank is under compression and to hold the stud in floating position.

1,696,157. SPARK GAP. EDWIN S. FLARSHEIM, Cincinnati, Ohio, assignor to The Liebel-Flarsheim Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 18, 1927. Serial No. 161,931. 9 Claims. (Cl. 250—38.)



1. A spark gap comprising two electrodes, and an adjustable spacing member determining and controlling the gap between said electrodes, said spacing member exposed to the heat generated by the spark and adapted to expand and compensate for the electrode expansion thereby maintaining the gap relatively fixed over a wide temperature range.

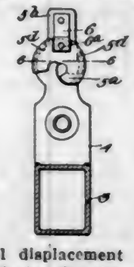
1,696,158. COMBINATION GUTTER SUPPORT FOR GREENHOUSES. STEPHEN H. HART, Irvington, N. Y., assignor to Lord & Burnham Company, Irvington, N. Y., a Corporation of New York. Original application filed Apr. 5, 1926, Serial No. 99,688. Divided and this application filed July 27, 1928. Serial No. 295,797. 2 Claims. (Cl. 189—4.)



1. A bracket adapted to support a main gutter having a concentrating bead on the under side thereof and a drip gutter, said bracket comprising a casing forming a hollow body portion, and a seat for the gutter above the hollow body said seat having a recess therein spaced from the concentrating bead when the gutter is supported in the seat of the bracket whereby a passage is formed through the bracket for water concentrated on the bead on the gutter bottom, and a seat formed on opposite sides of the hollow casing for supporting the drip gutter below the main gutter.

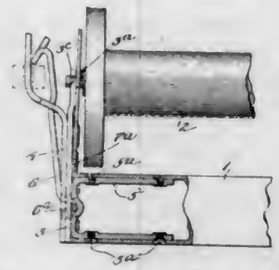
1,696,159. COMBINATION OUTLET AND GUTTER CONSTRUCTION FOR GREENHOUSES. STEPHEN H. HART, Irvington, N. Y., assignor to Lord & Burnham Company, Irvington, N. Y., a Corporation of New York. Filed Apr. 5, 1926. Serial No. 99,688. 6 Claims. (Cl. 108—25.)

1. A gutter comprising upstanding side portions, a V-shaped bottom and a means comprising a dispersing ridge portion on the outer sides of the gutter near the bottom of the side portions, said dispersing ridges serving to spread and break up the larger bodies of the water of condensation flowing downwardly on the outer surface of the upright sides over the dispersing ridges to the under side of the gutter bottom.



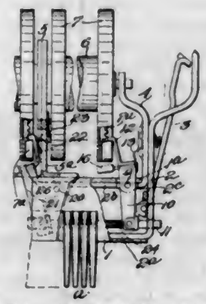
1,696,160. GREENHOUSE COMBINATION OUTLET. STEPHEN H. HART, Irvington, N. Y., assignor to Lord & Burnham Company, Irvington, N. Y., a Corporation of New York. Original application filed Apr. 5, 1926, Serial No. 99,688. Divided and this application filed July 27, 1928. Serial No. 295,796. 6 Claims. (Cl. 189—4.)

1. In the combination of main gutter and a supplemental gutter, a combination outlet adapted to carry off the water from both the main and supplemental gutters, said outlet forming a downspout and providing an unobstructed path from the main gutter to a point below the supplemental gutter, said downspout including walls forming an unobstructed central passage open at the top and in direct communication with the main gutter, and an outer chamber formed between the outer wall of the downspout and an inner wall forming the central passage for the outlet from the main gutter, said outer wall having an aperture communicating with said outer chamber through which the water from the supplemental gutter is discharged.



1,696,161. SPOOL-SUPPORTING MEANS FOR TUBE FRAMES. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1923. Serial No. 678,660. 2 Claims. (Cl. 308—24.)

1. Spool supporting means for a tube frame embracing in combination a spool bearing bracket provided with an open slot bearing recess for a spool journal, a partially rotatable keeper provided with peripheral means affording permanent interlocking exterior bearing engagement with the circular peripheral edge of the upper end of the bearing bracket whereby the keeper is retained by the bracket so as to permit rotative movement thereon and a detent mounted on the keeper and arranged to form yielding interlocking engagement with a cooperating recess of the bracket

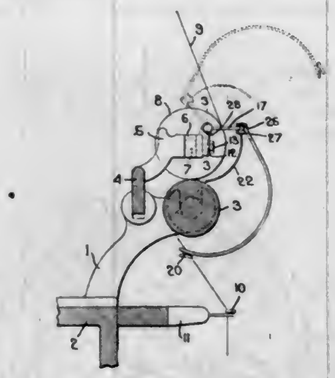


to prevent accidental displacement of the keeper, said detent being releasable by the circumferential thrust of the keeper when the operator rotates the keeper to open position.

1,696,162. TUBE FRAME. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1925. Serial No. 11,047. 2 Claims. (Cl. 308—24.)

1. A spool bearing bracket for a tuft tube frame embracing an arm adapted to be secured to a tube frame, a latch fulcrumed to swing transversely of the tube frame in close proximity to one face of said arm, said latch having its outer portion cut out to form a hook-like portion arranged to overhang a spool-journal, the corresponding portion of said arm being provided with an open bearing recess bounded by opposed jaws, the nearer jaw being offset to intersect the plane of movement of said latch and to interlockingly engage the hook-forming recess of the latch to positively retain the latch in journal overhanging position, substantially as described.

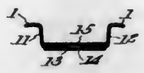
1,696,163. AXMINSTER TUBE FRAME. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1927. Serial No. 180,151. 8 Claims. (Cl. 139—10.)



1. In an Axminster tube-frame embracing spool-bearing brackets and chain-engaging suspension members, the combination with a rotatable yarn-spool, a spool-locking dog releasably held in spool-locking engagement therewith to prevent spool rotation while the tube-frame is traveling with the supporting carrier chains, and coordinated means for releasing the suspension members from the chain and for releasing the dog from locking engagement with the spool to permit rotation of the spool for the delivery of yarn after the tube-frame is withdrawn from its carrier chains.

1,696,164. USE OF SULPHOXYLATES FOR STRIPPING DYES. CHARLES S. HOLLANDER, Philadelphia, Pa., assignor to Rohm & Haas Company, a Corporation of Delaware. Filed Feb. 5, 1927. Serial No. 166,272. 4 Claims. (Cl. 8—2.)

1. The process of stripping dyes from fibres which comprises the step of soaking such fibres in a heated bath comprising dissolved substances in equilibrium, such substances comprising sodium sulphoxylate formaldehyde and a soluble zinc salt on the one hand and soluble zinc sulphoxylate formaldehyde and a soluble sodium salt on the other hand.

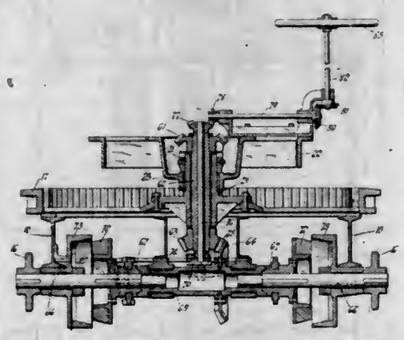


1,696,165. STOP MOTION FOR TWISTERS. RICHARD A. KEARSLEY, Milford, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 22, 1928. Serial No. 263,877. 6 claims. (Cl. 117—30.)

1. In a stop motion for twisters having top and bottom rolls and stands therefor, a guide pivotally mounted upon the top roll stand and normally supported at its lower end by the running yarn and having an intermediate open loop presenting narrowly spaced legs extending in parallelism with the axes of the rolls and an all sheet metal tongue formed at its upper end to present oppositely disposed parallel grooves to engage slidably and loosely the legs of the loop and be detachably retained thereby and presenting a free lower end adapted to enter between the rolls upon failure of the yarn to support the guide.

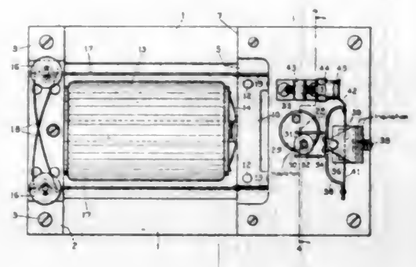
5. In a stop motion for twisters having top and bottom rolls and stands therefor, a guide pivotally mounted upon the top roll stand and normally supported at its lower end by the running yarn, a tongue loosely pivoted at its upper end in parallelism with the axes of the rolls on the guide and presenting a free lower end adapted to enter between said rolls upon failure of the yarn to support said guide and means for yieldingly locking the guide in an elevated inoperative position.

1,696,166. SLIDE BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Oct. 31, 1927. Serial No. 230,020. 3 Claims. (Cl. 24—194.)



1. A slide buckle, having a frame, and a cross-bar formed of separate parts depressed from the sides of the frame to any desired depth greater than is possible in drawing an integral bar, and a transverse sleeve connecting said separate parts.

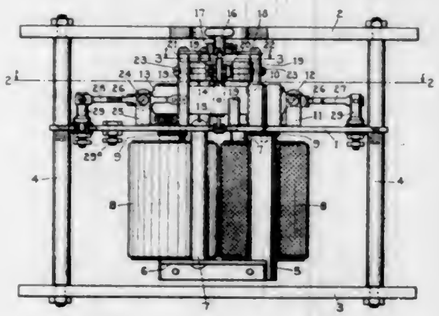
1,696,167. WATCH-BRACELET CLASP. RUFUS KING, Plainville, Mass., assignor to Bugbee & Niles Co., North Attleboro, Mass. Filed Dec. 8, 1927. Serial No. 238,544. 7 Claims. (Cl. 24—71.)



2. In a wrist watch bracelet clasp, a front member, means to connect one end of a bracelet to the front member, a back member, connecting means for said back member movably secured to said front member and to said back member so as to be foldable to lie between said members, means connecting the opposite end of the bracelet to the back member and also foldable to lie between said members, and means to latch the back member against movement.

1,696,168. TRACTOR STEERING CONTROL FOR REVOLVING EXCAVATORS OR CRANES. LEO A. KRUPP, Akron, Ohio, assignor to The Star Drilling Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 22, 1925. Serial No. 64,075. 7 Claims. (Cl. 180—9.2.)

7. Apparatus of the class described, comprising a carriage, including a frame, wheeels, one on each side thereof for driving and steering the carriage, a deck revoluble on the carriage, a prime mover on the deck, a power shaft in the axis of the deck and adapted to be driven by the prime mover, a two part wheel driving shaft on the frame, meshed gears respectively on the power shaft and the wheel driving shaft, clutches on the wheel driving shaft respectively for each wheel and adapted to be connected to the gear on the wheel driving shaft, and means for controlling the clutches comprising a shaft extending through the axis of the deck having a pinion on its lower end, a rack plate on the carriage movable substantially parallel and close to the wheel shaft gear and meshed with said pinion, and means connecting the rack to the clutches.

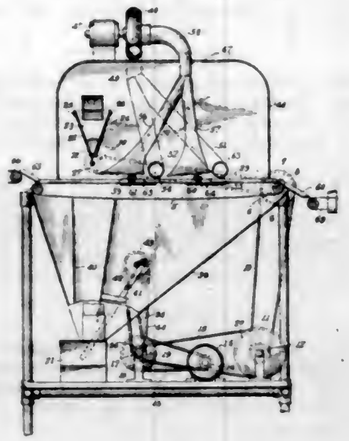


1,696,169. TRAIN-CONTROL RELAY. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Nov. 3, 1921. Serial No. 512,559. 19 Claims. (Cl. 200—103.)

1. A relay comprising a core, armatures balanced against each other and mechanically connected to move together, and mechanisms including pivotally mounted elements driven by said armatures and also balanced against each other, whereby the operation of the relay is unaffected by rectilinear or curvilinear vibratory disturbances.

---

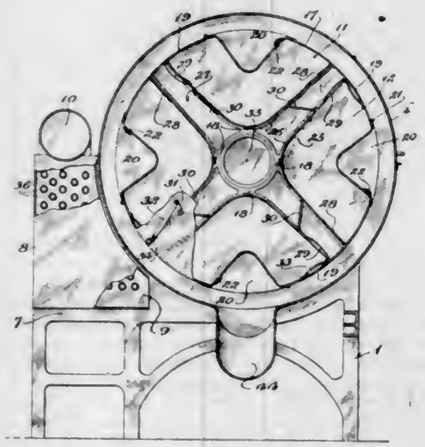
1,696,170. ENGINE RELAY. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Jan. 6, 1922. Serial No. 527,508. 20 Claims. (Cl. 200—87.)



1. A relay comprising, a U-shaped core having pole pieces, a coil on said core, an armature pivoted at its middle between said pole pieces, adjustable stops on both sides of said armature to engage the armature directly and to adjust the pick-up and drop-away characteristics of the relay, and means operated by said armature including spring contact fingers for closing a circuit when said relay is energized, said spring contact fingers being disposed with respect to said armature so that said circuit is not opened in spite of slight vibration of said armature.

---

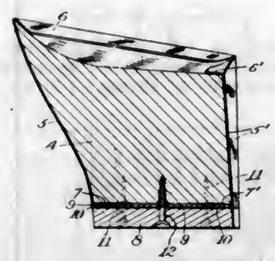
1,696,171. AUTOMATIC POWDERING MACHINE. SAMUEL LIPSIUS, New York, N. Y. Filed Aug. 6, 1926. Serial No. 127,506. 28 Claims. (Cl. 91—59.)



28. In a powdering machine, a foraminous travelling conveyer belt, a hopper having an outlet above the belt for depositing a thin layer of powder as sheets are carried under it by the conveyer, a blower having an outlet arranged close to the upper run of the conveyer for removing excess powder from the sheets, a suction pipe having an inlet immediately adjacent the blower outlet and

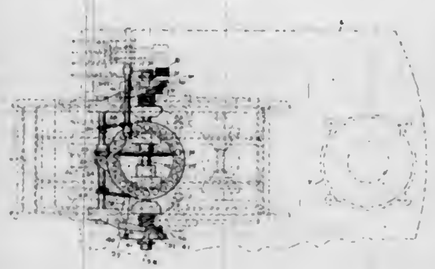
close to the conveyer, a hood surrounding the outlet of the hopper, the outlet of the blower and the inlet to the suction pipe, means for collecting the unused powder and means for returning the collected powder to the hopper.

---



1,696,172. DRIER. CHARLES FRANCIS MORRISON, Chattanooga, Tenn., assignor to Morrison-Mertins, Inc., a Corporation of Tennessee. Filed Nov. 2, 1927. Serial No. 230,598. 16 Claims. (Cl. 34—5.)

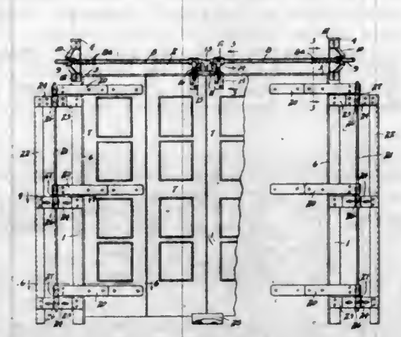
1. A drier comprising a housing having air inlet and outlet means, a rotary tumbler mounted therein having a plurality of individual compartments arranged within the same and equi-spaced with respect to each other, the arrangement of said compartments within said tumbler constituting a central and branch air conducting ways therebetween, said branch conducting means communicating with the compartments and adjustable valve means cooperable with said conducting means and compartments for selectively establishing a circular coursing of air through the compartments individually or in series.



1,696,173. COMPOSITE ELASTIC TOP LIFT FOR SHOE HEELS. MAUDE RUDMAN, Indianapolis, Ind., assignor to Mark Rudman, Indianapolis, Ind. Filed Aug. 16, 1926. Serial No. 129,451. 3 Claims. (Cl. 36—35.)

1. A composite elastic top lift for shoe heels comprising an elastic main part, a film of rupturable adhesive substance separably attached to the back of the main part, and a relatively hard non-stretching backing part separably attached to the film of adhesive substance.

---



1,696,174. PORTABLE CRANE. LAYTON S. SHAFFER, Ravenna, Ohio, assignor to The Byers Machine Company, Ravenna, Ohio, a Corporation of Ohio. Filed July 31, 1922. Serial No. 578,645. 2 Claims. (Cl. 180—9.2.)

1. In a machine of the character described, a combination of a frame, traction devices, supporting the same, a turntable pivotally mounted on said frame, separate means for driving each of said traction devices, a power shaft having normally engaged connections with each said driving means, a gear mounted adjacent said turntable about its pivotal axis, said gear having a series of circularly arranged holes formed therein, a manually operated pin carried by said turntable adapted to be received in one of said holes to connect said gear to the turntable, and connections between said gear and said normally engaged connections adapted to selectively disconnect the latter upon rotation of the gear.

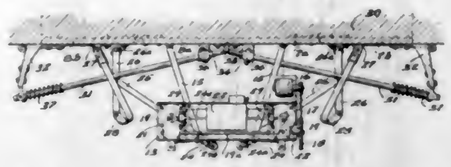
2. In a machine of the character described, the combination of a frame, traction devices supporting the same, a turntable pivotally mounted on said frame, separate means for driving each of said traction devices, means operable by said turntable adapted to disconnect one of said driving means from the device normally driven thereby irrespective of the position of said turntable, and means including a pivoted bell-crank having one arm thereof outwardly connected to said disconnecting means, and the other arm thereof actuated by said disconnecting means and adapted to lock the disconnected traction device against movement simultaneously with such disconnecting means.

1,696,175. DOOR-MOUNTING STRUCTURE. DAVID W. CAMPBELL, Minneapolis, Minn. Filed May 20, 1925. Serial No. 31,557. 18 Claims. (Cl. 189—46.)

1. A door mounting comprising spaced vertical members, a connecting top brace member, hinge pintles spaced outwardly of said vertical members and secured thereto to which the doors are hinged, means rigid with said frame for receiving said pintles and locating the same, and means adapted to be secured in a plurality of positions receiving said pintles for plumbing the same.

---

1,696,176. DOOR-OPERATING MECHANISM. DAVID W. CAMPBELL Minneapolis, Minn. Filed Sept. 23, 1925. Serial No. 58,046. 28 Claims. (Cl. 268—63.)

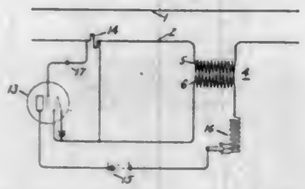


1. A door operating mechanism for a pair of swinging doors having in combination, a rotatable shaft for each door at the side of the door which it opens and rotating on an axis substantially parallel to the free edge of said door, a motor for driving both shafts through a belt, a reduction gearing, an arm on said shaft rotatable therewith, a link mechanism connecting each arm to its respective door, a switch for controlling said motor to stop the same, and an operating member for said switch actuated from both of said shafts.

5. A door operating mechanism for double doors comprising an arm for each door mounted for turning movement, said arms being movable in opposite directions about axes extending substantially parallel to the free edges of said doors toward which the doors open, articulated means connecting each arm to its respective door, a motor for driving said arms, a switch movable to position to start said motor, a cam movable with each of said arms, and a member engageable by both of said cams for moving said switch to position to stop said motor when said doors are in wide open and closed positions, respectively.

11. A door operating mechanism for opening and closing a folding door having in combination, a member pivoted about a fixed axis and adjacent the hinged edge of said door and closely adjacent the plane of said door when the door is closed, a driven arm turnable in a plane substantially at right angles to said axis and toward which the door opens, a track extending above said door toward its hinged end, means carried by said door adjacent the free edge thereof and movable on said track, a link connected to the end of said first mentioned member and to said door between the hinge thereof and said last mentioned means, and a link connecting said arm to an intermediate point on said last mentioned link, whereby when said arm is driven, said door is folded and opened.

18. A door operating mechanism for a hinged door having in combination, a driven shaft turnable about an axis toward which the door opens, an arm carried by said shaft and movable in a plane substantially at right angles to said axis, a member swinging about a fixed axis disposed between the free edge of the door and the hinged edge thereof when the door is closed, a member pivotally connected to said door between the free edge and hinged



edge thereof and pivotally connected to said last mentioned member, a link connected to said first mentioned member at an intermediate point therein and pivotally connected to said arm, a motor, a driving mechanism between said motor and said shaft, means for reversing said motor whereby said shaft is rotated through a certain angle to open said door and then rotated reversely to close said door, said shaft and arm being capable of rotation through 360° upon failure of any part of the control mechanism to stop the motor.

23. A door operating mechanism for a hinged door having in combination, a driven shaft turnable about an axis extending substantially parallel to the axis about which the door swings, an arm carried by said shaft and movable in a plane substantially at right angles to said axis, an arm pivotally connected about a fixed axis at one end, said last named axis being disposed adjacent the plane of the door when the door is in closed position, a link connected to the other end of said last named arm and pivotally connected to the door, said link extending substantially at right angles to said door when said door is in closed position, and a second link pivotally connected at one end to said first named link intermediate the ends thereof and connected at its other end to said first named arm.

---

1,696,177. SYSTEM OF DISTRIBUTION. EARL R. EVANS, Great Barrington, Mass. Filed Mar. 11, 1921. Serial No. 451,637. 27 Claims. (Cl. 171—242.)

1. A system of alternating current distribution comprising a source of alternating current, a line connected to said source, and reactive means in said line for instantaneously varying the reactance of said line from substantially zero to a relatively large value when an abnormal current flows therein.

---

Patents Nos. 1,696,178 to 1,696,896.

# THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 377—No. 4. TUESDAY, DECEMBER 25, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Reissue Pat. 16,589, A. K. Schaap, jr., Liquid-level gauge, decided October 31, 1928, claims 1 and 2.

Pat. 1,460,075, C. S. Oldroyd, Mining and quarrying machine, decided December 3, 1928, claim 8.

Pat. 1,460,076, C. S. Oldroyd, Mining and quarrying machine, decided December 3, 1928, claims 46, 47, 53, 54, 57, 59 to 63, inclusive.

Pat. 1,460,077, C. S. Oldroyd, Mining machine, decided December 3, 1928, claims 31, 34, 36, and 38.

Pat. 1,543,423, F. Coune, Hair-drying apparatus, decided November 12, 1928, claim 3.

Pat. 1,588,042, M. Morrell, Yarn winding, decided November 12, 1928, claims 9, 10, and 15.

## Adjudicated Patents.

(C. C. A. Pa.) Winters and Crampton patent, No. 1,385,102, for combination of door casing, keeper, and latch lever, *Held* not infringed, if valid. *Winters* v. *Dent Hardware Co.*, 28 F. (2d) 583.

(D. C. Minn.) Caesar patent, No. 1,668,490, for improvements in heating apparatus for automobiles, preliminary injunction granted. *Tropic-Aire, Inc.*, v. *Jumper*, 28 F. (2d) 631.

## Interference Notice.

U. S. PATENT OFFICE, *Washington, Dec. 6, 1928.*

*Standard Portland Cement Company, its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Missouri Portland Cement Company, of 1010 Pine Street, St. Louis, Mo., for registration of trade-mark and trade-mark registered October 20, 1914, No. 100,442, to Standard Portland Cement Company, of Charleston, S. C., and a notice of such declaration sent by registered mail to said Standard Portland Cement Company at the said address having been returned by the post office as undeliverable, and it being alleged that the Standard Portland Cement Company has been dissolved, notice is hereby given that unless said Standard Portland Cement Company, its assigns, or legal representatives shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

## Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Dec. 1, 1928.*

*Apex Steel Corporation, its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of Apex Steel Corporation, of 50 Church Street, New York, N. Y., No. 126,985, dated October 21, 1919, and the notice of such proceeding sent by registered mail to the said Apex Steel Corporation at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Apex Steel Corporation, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

## Condition of Applications Under Examination at Close of Business December 14, 1928.

| Room No. | (Total number of applications awaiting action, excluding Trade-Mark Division, 109,129; Trade-Mark Division, 1,914. Oldest new case, Feb. 11, 1928; oldest amended, Feb. 14, 1928. The dates given are 1928.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS. | Oldest new application and oldest action by applicant awaiting office action. # DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decision.

EX PARTE CHR. HANSEN'S LABORATORY, INC.

*Decided October 15, 1928.*

1. TRADE-MARKS—ACT OF 1920—WHAT MAY BE REGISTERED THEREUNDER.

The act of 1920 was intended to afford registration of descriptive terms not registrable under the 1905 act; but, to be registrable, such a term must have been used as a trade-mark and in a sense other than merely to name an article in common language.

2. SAME—"ICE CREAM RENNET"—NOT REGISTRABLE FOR EXTRACTS OF RENNET ENZYMES.

The term "Ice Cream Rennet" *Held* not registrable under the act of 1920, since it is merely a name of the preparation, and its use does not constitute trade-mark use.

ON APPEAL.

Application for registration of trade-mark for extracts of rennet enzymes filed May 28, 1925, Serial No. 215,008.

*Mr. Henry H. Snelling* for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiner of Trade-Marks denying registration, under the act of March 19, 1920, of the notation "Ice Cream Rennet" used upon extracts of rennet enzymes. The specimens filed show the notation used in connection with the explanatory statement that the product is—

a pure extract of rennet enzyme, in handy liquid form, especially prepared and packed for the ice cream trade.

The Examiner denied registration upon the ground the notation is merely the name of the goods and that its use is not of the character to support the claim that such notation is a trade-mark.

[1] The Trade-Mark Act, under which registration is here sought, was intended to afford registration of descriptive names or terms which were not registrable under the 1905 act, and this fact is made clear enough by the record of the proceedings leading up to the enactment of this law of March 19, 1920. It is believed, however, that trade-mark use is essential to registration under this act as well as under the 1905 act as amended. The definition of a trade-mark would seem to be the same in connection with both acts.

The applicant has contended that no one ever used this name upon this class of goods previous to its adoption by the applicant, and that the purchasing public recognizes the name as indicating the origin of the applicant's goods. The distinction between a descriptive mark, registrable under the 1920 act, and one which is not registrable because it is not a trade-mark and not used in any sense other than to name an article in common language such as the public either has used or would readily use in referring to the article is not very easily defined. Where preparations, including the extract of rennet, especially designed for use in making ice cream are upon the market, and this fact is well known to those engaged in the business of manufacturing ice cream, it is obvious enough these parties would refer to such special preparations by the name the applicant uses and seeks to register as a trade-mark. It does not seem important that no instance is revealed of such actual use of these words, as they constitute just the natural terms the public would use in referring to such preparations and no one can obtain a monopoly upon the right to use them.

In the publication entitled "Milk," by Paul G. Heineman, director of the laboratories of the United States Standard Serum Company, Woodworth, Kenosha County, Wis., published by W. B. Saunders Company, on page 634, appears the statement:

So-called "ice-cream powders" for producing a rich and smooth ice-cream are purchasable in the market. * * * Some ice-cream powders contain starchy substances as well, such as flour or cornstarch. Some even have powdered rennet mixed with other stabilizers.

It should be noted the foregoing states these "ice-cream powders * * * are purchasable in the market. This indicates that special ice-cream preparations including rennet are purchasable in the market and are known in the trade as ice-cream powders. It would seem but an obvious step for those in the trade to designate the powders which have rennet in them as ice-cream rennet, since they are specially prepared powders for the making of ice cream. This would indicate that the applicant's notation is merely the name of the goods.

The patent to Frederiksen, No. 1,046,766, issued December 10, 1912, class 99, subclass 11, describes and claims a special composition to be used in the manufacture of ice cream, and this composition comprises rennet ferment and sugar. In the patent to Sanna, No. 1,414,213, April 25, 1922, same class, another special preparation is described to be used in the manufacture of ice cream, and this preparation is referred to as including pulverized milk to which are added enzymes, such as pepsin or rennet. In the United States Dispensatory, 20th edition, page 1539, a composition is referred to as being marketed under the name of "pegnin" and is referred to as "milk-sugar rennet." Again, on page 1405, reference is made to a "cheese rennet" stated to be of vegetable origin, and, finally, on page 1667, a substance is described as a "vegetable rennet."

[2] In view of the foregoing it seems proper to hold that specially-prepared compositions including rennet or a rennet enzyme for use in making ice cream are well known to those engaged in this industry and that to refer to any one of these as an ice-cream rennet would be to employ but the obviously descriptive

words or the obvious name of the goods. Notwithstanding, therefore, that this Office is not aware of any instance where this name has actually been used in connection with goods of the character here under consideration, yet it is deemed clear such notation as applicant seeks to register as a trade-mark involves merely the name of the preparation, and the use of such name does not constitute trade-mark use.

The decision of the Examiner of Trade-Marks is affirmed.

## U. S. Circuit Court of Appeals—Sixth Circuit.

LAKEWOOD ENGINEERING CO. *v.* WALKER ET. AL.

*No. 4,780. Decided January 4, 1928.*

[23 F. (2d) 623.]

1. PATENTABILITY—ROAD-SURFACING DEVICE.

Claims for a road-surfacing device *Held* patentable over prior art devices which do not respond to the letter of the claims, "because they are not road-surfacing devices," nor to the spirit of the claims "because they are in fields too far away."

2. SAME—INVENTION—MAY LIE IN CONCEPTION OF NEW USE.

The quality of invention *Held* properly found "to be present in this conception that the old material could be employed for this new use, coupled with the (thereupon) rather obvious mechanical changes which were necessary to make practical the application of the thought."

APPEAL from the District Court of the United States for the Eastern District of Michigan; Arthur J. Tuttle, judge.

Suit in equity by George C. Walker and another against the Lakewood Engineering Company. Decree for complainants, and defendant appeals. Decree modified, and, as so modified, affirmed.

For opinion below, see 14 F. (2d) 333.

*Mr. Frank E. Dennett* for the appellant.

*Mr. Stuart C. Barnes*, (*Messrs. Lucking, Hanlon, Lucking & Van Auken* and *Mr. Howell Van Auken* on the brief) for the appellees.

Before DENISON, DONAHUE, and MOORMAN, Circuit Judges.

DENISON, *C. J.*:

The defendant below appeals from the usual interlocutory decree for injunction and accounting, based upon Patent No. 1,234,984, dated July 31, 1917, issued to appellee Walker for a float for concrete pavements. This consists of a strip of flexible heavy material, which he called a strap, carrying a handle at each end, and intended to be pulled back and forth transversely over the surface of a new and soft concrete pavement, thereby working in the coarser particles and smoothing and floating the surface, as a mason floats the surface of a plastered wall. The defense is that the patent was invalid for lack of invention.

The substantial utility of the device, as compared with the formerly known methods, can not be seriously questioned. Concrete pavements, whether sidewalk or street, were built by placing the wet mixture between side guards, which made a form, and, after sufficiently even distribution and tamping or otherwise packing down of the material, the surface was smoothed and perfected in one of two ways: One was to take a rigid board or bar resting upon the edge forms and move it back and forth transversely and diagonally of the pavement, with a smoothing and floating effect. The other was to throw across, from form to form, a bridge upon which the workman could stand while he used hand trowels and floats to perfect the surface.

The patented device got a result as good as or better than the hand-tool floating, and with much less time and expense, and it had some inherent advantages over the rigid-bar float. Its flexibility enabled it to accommodate itself to inequalities and hard or soft spots in the surface, and reduce them to uniformity more gradually and more prefectly, its weight being sufficient to cause it to drag down high spots, reducing them less abruptly than a rigid bar would do; and its flexibility also permitted that, as it was given forward progress longitudinally of the pavement, as secondary to its transverse reciprocating motion, the forward edge could yield upwardly, or could be turned upwardly, and pass over some high spots, so as to reduce them, instead of carrying them along and piling them up ahead of the float.

[1] We have little difficulty with the earlier patents and devices which are set up as anticipations or as inconsistent with the existence of any invention in what Walker did. They do not respond to the letter of the claims,[1] because they are not road-surfacing devices[2]; nor to its spirit, because they are in fields too far away. They are: a short thin strip for shining shoes; a similar one, preferably six inches long, three-fourths of an inch wide, and one-sixteenth of an inch thick, for rubbing filler into the pores of wooden spokes; a flesh-rubbing belt, made of coarse strands of hair and apparently two or three feet long; and a belt for rubbing and thereby cleaning horses' legs, which also was relatively short, small, and light. Between these devices and the one patented there is such a difference in size, strength, and weight, and in purpose and manner of use, that they furnish no effective suggestion of either the means or the result which Walker accomplished. They operated under tension, and they applied the pressure which the muscles of the operator furnished. Considered as supporting the defense that Walker's plan was a mere double use of what they show, they are so much less effective than the one which is now to be considered that they may be passed without further comment.

[1] 1. As a new article of manufacture, a road-surfacing strap having provision at the ends thereof, so that said strap may be manipulated upon the surface of the road.
2. A road-surfacing device, comprising a flat pliable strap, and handle bars at the ends thereof.

[2] Many a claim to a device or an article has been sustained, because its reference to its purpose or use was thought enough to distinguish it patentably from earlier devices, which would be covered by its otherwise too broad words of structural description—e. g., an old continuous cement lining claimed in a pulp digester, *Munsing v. American Co.* (C. C. A. 6) 228 F. 700; an old bituminous composition, claimed as a street pavement, *Warren v. Owosso* (C. C. A. 6) 166 F. 309; an old compound claimed as a resistance element, *General Electric Co. v. Hoskins Co.* (C. C. A. 7) 224 F. 464.

The patent gives instructions that the device may be made by taking a piece of flexible and pliable belting, heavy enough so that its weight will work the material into the roadway, and attaching a handle at each end so that two workmen can pull it back and forth. As the district judge suggests, it is familiar knowledge that used thrashing-machine belts or similar power belts were commonly lying about, and it follows that all Walker did was to take one of these existing belts, attach handles, and use it for the new purpose. From this aspect of double use, the question of invention becomes a close one. Of course, there is no inventive conception in merely attaching a handle to make the belt more controllable, after the thought of using the belt for this purpose was developed; but it may be said that the handles, like the scale marking in *Dunn v. Standard* (C. C. A. 6) 204 F. 617, 623, indicate and characterize the novelty of the use and so join in creating a patentable combination. It is apparent now that these old belts would have been useful, not only for floating concrete pavements, but for smoothing up soft ground or many similar purposes. This useful means had been at hand all the years, but no one had ever thought of using it; and indeed it is a far cry from a power conveyer to a mason's trowel. Further, the very flexibility of the belt, which has turned out to be its best characteristic in the new use, might well have seemed to forbid that use.

[2] Judged by the objective and subjective tests which are applicable, and by which we have been guided as well as may be in other cases, we conclude that the district judge was right in finding the quality of invention to be present in this conception that the old material could be employed for this new use, coupled with the (thereupon) rather obvious mechanical changes which were necessary to make practical the application of the thought. See *Western Electric v. La Rue*, 139 U. S. 601, 55 O. G. 571; *Potts v. Creager*, 155 U. S. 597, 70 O. G. 494; *General Co. v. Bullock* (C. C. A.) 152 F. 427; *Aiken v. Nat. Tube Co.* (C. C. A.) 163 F. 254; *Herman v. Youngstown* (C. C. A.) 191 F. 579; *Lyman v. Bassick* (C. C. A.) 18 F. (2d) 29, 35. See, also, *In re Carr*, 57 App. D. C. 112, 17 F. (2d) 959; 359 O. G. 4.

The supposed rule of the *Locomotive Truck Co. Case*, 110 U. S. 493, 4 S. Ct. 220, 28 L. Ed. 222, is much pressed upon us; but that case, as well as *Potts v. Creager*, and all that follow, recognize that the application to a new use may be invention, if there be a sufficient lack of analogy and if there be some adaptation. It is not without importance that the novel thought here involved might well have been expressed in terms of method, and courts will be slow to invalidate a product patent, only because the claim took that form, instead of the method form.

As to infringement, we observe only one substantial question. The defendant uses a strike board or form which shapes the surface roughly, and follows this by a tamping device, and this by the characteristic reciprocating and transverse dragging of a strip of canvas belting. It is set at a slight angle, so that the forward edge is raised and performs substantially the work contemplated by the patent. It is of relatively light weight, and defendant claims that it only wipes off the water, and does not float the material to a substantial extent. This claim is not sustained by the evidence. The device produces results different in degree from those which would be produced by a heavier leather belt, but we have no doubt it has a substantial reducing, smoothing, and floating effect.

The decree should therefore be affirmed. We think, however, it should be modified, as we are now directing in appropriate cases, by providing that the master upon the accounting should ascertain and report what a reasonable royalty would be, if it should later seem to the court proper to adopt, in whole or in part, that measure of damages.

The decree, as so modified, is affirmed.

## Patent Suits.

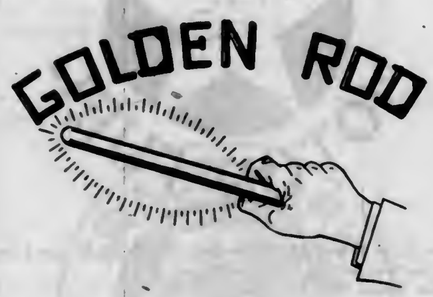
ARETAL



For Analgesic Synthetic Chemical for the Relief of Pain.
Claims use since Oct. 10, 1928.

Ser. No. 274,663. MIDLAND LABORATORIES, Cedar Rapids, Iowa. Fled Nov. 1, 1928.

CALATE

For Antacid Medicines.
Claims use since July 1, 1928.

Ser. No. 274,664. MINICK & GOWDY, New York, N. Y. Filed Nov. 1, 1928.

For Medicine for Rheumatism.
Claims use since Oct. 5, 1928.

Ser. No. 275,143. THE AMERICAN PRODUCTS COMPANY, doing business as Dentex Laboratories, Cincinnati, Ohio. Filed Nov. 12, 1928.

DENTEX

For Dentifrice.
Claims use since July 22, 1928.

## CLASS 9.

### Explosives, Firearms, Equipments, and Projectiles.

Ser. No. 274,681. UNEXCELLED MANUFACTURING COMPANY, New York, N. Y. Filed Nov. 1, 1928.

STORM KING

The letters of the word constituting the mark are bordered with red.
For Fireworks.
Claims use since May 1, 1928.

## CLASS 12.

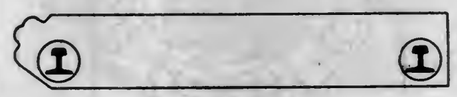
### Construction Materials.

Ser. No. 266,218. SCOTTISH CANADIAN MAGNESITE COMPANY, LIMITED, Magnesite, Quebec, Canada. Filed May 10, 1928.

BASIFRAX

For Refractory Cement for Lining Furnaces or Ladles or for Similar Purposes, Mortar, and Bricks.
Claims use since June, 1926.

Ser. No. 266,219. SCOTTISH CANADIAN MAGNESITE COMPANY, LIMITED, Magnesite, Quebec, Canada. Filed May 10, 1928.



MAGNIFRAX

For Refractory Cement for Lining Furnaces or Ladles or for Similar Purposes, Mortars, and Bricks.
Claims use since June, 1926.

## CLASS 14.

### Metals and Metal Castings and Forgings.

Ser. No. 272,839. THE WEST VIRGINIA RAIL COMPANY, Huntington, W. Va. Filed Sept. 22, 1928.

The representation of the rail ends is disclaimed apart from the mark shown on the drawing.
For Steel and Metal Railroad Ties and Rails, Steel and Metal Mine Ties and Rails, Special Railroad Track Sections and Special Railroad Tracks, Railroad Frogs, and Railroad Switches.
Claims use since March, 1917.

## CLASS 15.

### Oils and Greases.

Ser. No. 245,883. APPALINE OIL COMPANY, Clarksburg, W. Va. Filed Mar. 17, 1927.

Applicant disclaims exclusive use of the words "Oil, Gasoline, Greases," and "Brand" except as they appear in connection with said trade-mark.
For Fuel Oils and Lubricating Oils and Greases.
Claims use since July 1, 1915.

---

Ser. No. 256,521. GARLAND PETROLEUM COMPANY, INC., San Francisco, Calif. Filed Oct. 24, 1927.

GAROLINE

For Lubricating Oils and Greases, Kerosene, and Gasoline.
Claims use since May 1, 1926.

Ser. No. 265,813. SINCLAIR REFINING COMPANY, New York, N. Y. Filed May 2, 1928.

The word "Aircraft" is disclaimed apart from the mark as shown on the drawing.
For Gasoline.
Claims use since Apr. 3, 1928.

---

Ser. No. 266,023. THE DERBY OIL COMPANY, Wichita, Kans., and Kansas City, Mo. Filed May 7, 1928.

No claim is made to the words "Motor Fuel" apart from the mark shown in the drawing.
For Motor-Fuel Oils and Fuel Oil.
Claims use since Feb. 1, 1928.

---

Ser. No. 271,992. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

POCOLENE

For Hydrocarbon Motor Fuels, Lubricating Oils, Lubricating Greases; Engine, Dynamo, Sewing-Machine, Transformer, Spindle, and Separator Lubricating Oils.
Claims use since Nov. 15, 1924.

Ser. No. 272,577. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 17, 1928.

OPALUBE

For Hydrocarbon Motor-Fuel Oils, Lubricating Oils, Lubricating Greases; Engine, Dynamo, Gas-Engine, and Bearing Lubricants.
Claims since Sept. 10, 1924.

---

Ser. No. 274,015. THE PENNZOIL COMPANY, Oil City, Pa. Filed Oct. 19, 1928.

TRANZPORT

For Lubricating Oils and Greases.
Claims use since on or about July, 1928.

---

## CLASS 16.

### Paints and Painters' Materials.

Ser. No. 273,881. F. O. PIERCE COMPANY, New York, N. Y. Filed Oct. 16, 1928.

For Paint Enamel.
Claims use since about July 1, 1928.

---

Ser. No. 274,244. THE J. R. WATKINS COMPANY, Winona, Minn. Filed Oct. 24, 1928.

No claim is made to the words "Trade-Mark" apart from the mark as shown. The mark consists of the portrait and signature of J. R. Watkins, deceased, the founder of the J. R. Watkins Company.
For Furniture Polishes.
Claims use since Mar. 9, 1924.

GRANALITE

For Ready-Mixed Enamel Paint.
Claims use since Oct. 1, 1928.

---

Ser. No. 274,386. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Oct. 27, 1928.

DUOLITH

For Lithopone Pigment.
Claims use since Sept. 18, 1928.

---

Ser. No. 274,660. WILLIAM P. MAGEE, East Machias, Me. Filed Nov. 1, 1928.

No claim is made to the exclusive right to the words "Maine's Best Auto Polish" separate and apart from the mark as shown in the drawings.
For Automobile Polish.
Claims use since Sept. 24, 1928.

---

## CLASS 21.

### Electrical Apparatus, Machines, and Supplies.

Ser. No. 257,292. NICK KARMELE, Chicago, Ill. Filed Nov. 9, 1927.

No claim is made to the words "Quality, Service, Auto." and "Radio" apart from the mark as shown in the drawing.
For Automobile and Radio-Storage Batteries.
Claims use since Mar. 1, 1926.

Ser. No. 265,200. EDISON STORAGE BATTERY COMPANY, West Orange, N. J. Filed Apr. 21, 1928.

ESBACO

For Insulating Compound or Paint.
Claims use since Mar. 22, 1928.

---

Ser. No. 268,421. CASCO PRODUCTS CORPORATION, Bridgeport, Conn. Filed June 21, 1928.

WIRELESS

For Electric Cigar Lighters.
Claims use since about Apr. 15, 1928.

---

Ser. No. 270,542. FORD MOTOR COMPANY, Fordson, Mich. Filed Aug. 3, 1928.

Ford

Applicant is owner of trade-mark registrations Nos. 74,530, July 20, 1909; 74,765, Aug. 10, 1909; 115,500, Feb. 20, 1917; 119,602, Dec. 4, 1917; 119,956, Dec. 25, 1917; and 125,702, June 3, 1919.

---

Ser. No. 270,818. CHARLES L. BANKS, doing business as P-B Superior Inc., St. Louis, Mo. Filed Aug. 10, 1928.

P B
SUPERIOR

Applicant makes no claim to the word "Superior" apart from the mark "P-B Superior," as shown in the drawing.

For Electric Hair Clippers, Electric-Hair-Clipper Parts, Electric-Hair-Clipper Cutting Plates, Electric Clipper Motors.

Claims use since July 24, 1925.

Ser. No. 273,055. BENJAMIN F. KLEIN, doing business as The Kayline Company, Cleveland, Ohio. Filed Sept. 27, 1928.

Radiolier

For Electrical Apparatus, Machines, and Supplies, and Particularly a Combination Lighting Fixture and Support for Radio Loud-Speaker Unit.
Claims use since Sept. 18, 1928.

---

Ser. No. 273,761. THE CARBON PRODUCTS CO., Lancaster, Ohio. Filed Oct. 13, 1928.

ACE

For Flash Lights and Flash-Light Cases.
Claims use since November, 1927.

---

Ser. No. 273,946. SYLVANIA PRODUCTS COMPANY, Emporium, Pa. Filed Oct. 17, 1928.

Sylvania

For Incandescent Electric Lamps.
Claims use since June 19, 1928.

---

Ser. No. 273,965. HAROLD W. GROSS, doing business as Universal Electric Log Co., Chicago, Ill. Filed Oct. 18, 1928.

KOLOG

For Electric Logs Which are Adapted to be Used with or without Heating Elements Therein.
Claims use since Aug. 7, 1928.

Ser. No. 274,077. SPLITDORF RADIO CORPORATION, Newark, N. J. Filed Oct. 20, 1928.

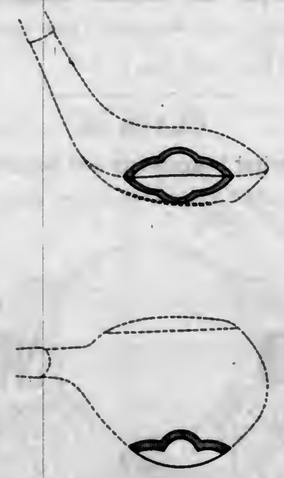
Splitdorf

For Radio Receiving Sets and Parts Thereof and Loud Speakers Built into the Sets.
Claims use since latter part of June, 1927.

---

Ser. No. 274,609. NOMA ELECTRIC CORPORATION, New York, N. Y. Filed Oct. 31, 1928.

CANDOLIER



For Decorative Lighting Fixtures.
Claims use since about Aug. 15, 1928.

---

## CLASS 22.

### Games, Toys, and Sporting Goods.

Ser. No. 257,210. WILSON-WESTERN SPORTING GOODS COMPANY, Chicago, Ill. Filed Nov. 7, 1927.

The mark is applied or affixed to the goods by arbitrarily applying a copper-colored or brass-colored strip or border to the outline of a white metal weight usually affixed to the trailing edge of the golf-club head. # REISSUES

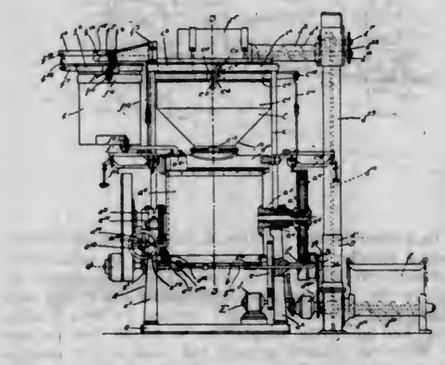
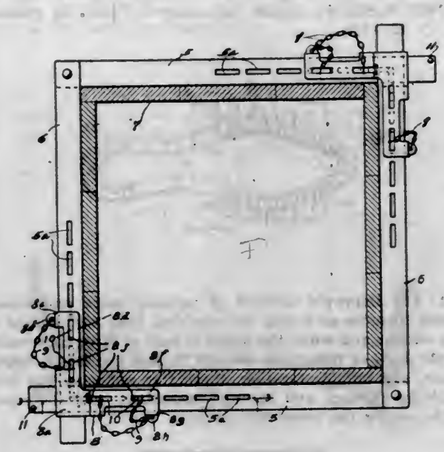
## DECEMBER 25, 1928.



17,168. OIL-DISPENSING DEVICE. HAROLD G. DAVIS, Denver, Colo., assignor to The Davis and Son Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Apr. 9, 1928. Serial No. 268,709. Original No. 1,601,200, dated Sept. 28, 1926, Serial No. 43,194, filed July 13, 1925. 5 Claims. (Cl. 221—69.)

1. An oil dispensing device comprising a drain board, means for supporting said board, said drain board having an elongated central opening, a flange surrounding said opening, lugs extending inwardly into said opening, supporting means secured to said lugs and projecting upwardly therefrom, a dispensing head secured to and supported by said supports, said dispensing head having a downwardly projecting flange corresponding in size and shape with the upwardly projecting flange on the drain board and side members secured to said flanges.

---

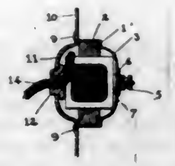


17,169. DOUGH MIXER. WILLIAM G. KIRCHHOFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,284. Original No. 1,481,556, dated Jan. 22, 1924, Serial No. 538,309, filed Feb. 21, 1922. 13 Claims. (Cl. 107—4.)

13. In a device of the class described the combination of a frame, a dough mixer carried by the frame, a flour weighing device carried by the frame above the mixer and adapted to discharge into the mixer, a sifter carried by the frame adapted to discharge into the flour weighing device, a flour bin, a conveyor for moving flour from the bin to the sifter, a fluid measuring device carried by the frame adapted to discharge into the mixer, and means for actuating the conveyor, the sifter and the mixer.

---

17,170. COLUMN CLAMP WITH CASTINGS. HOWARD O. MCMILLAN, Minneapolis, Minn. Filed Sept. 24, 1928. Serial No. 308,105. Original No. 1,636,143, dated July 19, 1927, Serial No. 112,752, filed June 1, 1926. 16 Claims. (Cl. 144—291.)



1. A clamp for a column form comprising two pairs of bars, the bars of each pair being pivoted together at one end, the pivoted ends of said bars being adapted to be disposed at opposite corners of said form with the bars extending along adjacent sides thereof, one bar of each pair overlapping a bar of the other pair at the other corners of said form, a member at each of said last mentioned corner having arms extending along the sides of the form embracing said overlapped bars and means acting on said arms and bars and disposed along the sides of said form for progressively drawing said bars toward said member and holding the same in clamping position.

---

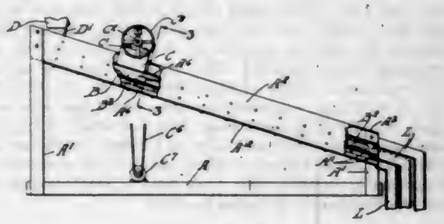
17,171. COMBINED TRANSFORMER AND CONDUIT-BOX COVER. ARTHUR E. RITTENHOUSE, Honeoye Falls, N. Y. Filed July 2, 1928. Serial No. 289,902. Original No. 1,661,268, dated Mar. 6, 1928, Serial No. 106,093, filed May 1, 1926. 12 Claims. (Cl. 247—20.)

12. The combination of a transformer having a core and windings, a flat cover plate for outlet boxes, said cover

plate having an aperture in the plane of the plate, the plate being adapted to receive and locate said transformer in a predetermined position on the plate by positive engage-

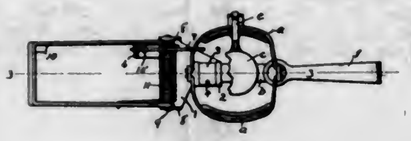
ment therewith with the core of the transformer resting on the rim of the aperture and means for clamping the transformer core in place on the plate in said predetermined position.

---



17,172. PROCESS OF SHOE MANUFACTURE. CHARLES B. SPALSBURY, St. Louis, Mo., assignor to Johnson, Stephens & Shinkle Shoe Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 2, 1927. Serial No. 230,671. Original No. 1,602,368, dated Oct. 5, 1926, Serial No. 41,998, filed July 7, 1925. 24 Claims. (Cl. 12—142.)

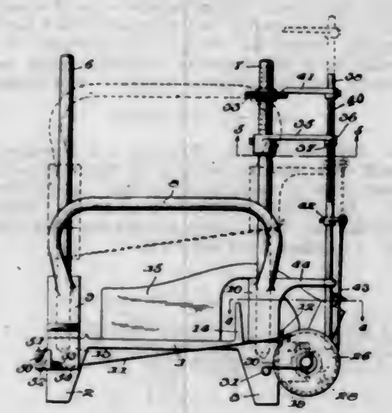
1. The improved method of making boots and shoes, which includes as a step the applying from the outside of the outsole and while the upper is held in close conformity to the last, of removable devices to hold the lasted upper, inner, and outsole together, thereafter removing the last, applying through and through fastenings, and thereupon withdrawing the removable devices.



---

17,173. SCREEN. JOHN BLAND, Tinton, S. Dak. Filed May 10, 1928. Serial No. 276,720. Original No. 1,610,353, dated Dec. 14, 1926, Serial No. 33,876, filed June 1, 1925. 21 Claims. (Cl. 209—347.)

1. In a screen, a screening member and a plurality of separated spring members each attached to said screen member throughout its length, and means for vibrating said spring members including an out-of-balance rotor adapted to act directly upon said spring members.

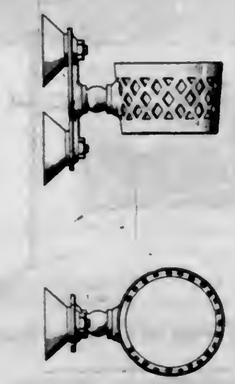


17,174. STRIKER ATTACHMENT FOR ANIMAL TRAPS. ARTHUR N. ARMSTRONG, Norwich, N. Y., assignor of one-half to Herman J. Sommers, Norwich, N. Y. Filed Sept. 12, 1928. Serial No. 305,546. Original No. 1,678,898, dated July 31, 1928, Serial No. 153,894, filed Dec. 10, 1926. 10 Claims. (Cl. 43—90.)

1. A striker attachment for animal traps of the twin jaw type, comprising a plate having at one end a loop open at one side for receiving a portion of the trap frame, movable means on the loop for locking it immovably to said frame, a spring-actuated striker pivoted to the plate, and means on the plate adapted to be controlled by one of the trap jaws for holding the striker against the action of its spring.

---

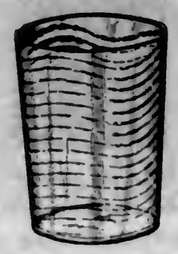
17,175. CHEESE SLICER. CHARLES H. VON GLAHN, Brooklyn, N. Y. Filed May 25, 1928. Serial No. 280,626. Original No. 1,611,965, dated Dec. 28, 1926, Serial No. 78,883, filed Jan. 2, 1926. 9 Claims. (Cl. 31—20.)



1. In a slicer having a frame, a cutter mounted thereon, a feeding member for advancing material to said cutter, a threaded rod journaled in said frame, and means operable by the movement of said cutter to rotate said threaded rod; a clutch member carried by said feeding member and normally adapted to be forced into engagement with the threads of said rod, said clutch member being movable out of engagement with said threads to permit retraction of said feeding member.

# DESIGNS

## DECEMBER 25, 1928.



77,280. FLOWER-VASE HOLDER. EDWARD DAVID ANSON, Willamette, Oreg. Filed Sept. 14, 1928. Serial No. 28,142. Term of patent 7 years.

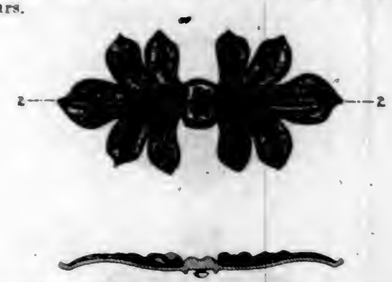
77,306. RADIATOR CAP. HENRY G. DIBELKA, Chicago, Ill., assignor to The Kingsley-Miller Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 5, 1928. Serial No. 28,375. Term of patent 7 years.

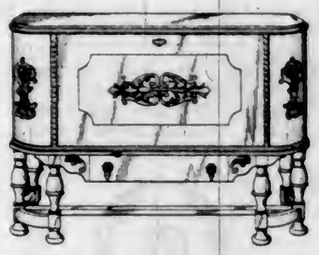
The ornamental design for a radiator cap, as shown.

77,307. RADIATOR CAP. HENRY G. DIBELKA, Chicago, Ill., assignor to The Kingsley-Miller Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 5, 1928. Serial No. 28,376. Term of patent 7 years.

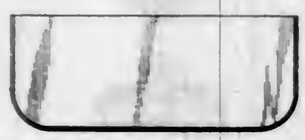


The ornamental design for a radiator cap, as shown.

77,308. PILE FABRIC. HUGO PAUL DICK, Lowell, Mass., assignor to Merrimack Manufacturing Company, Lowell, Mass., a Corporation of Massachusetts. Filed Nov. 26, 1926. Serial No. 19,855. Term of patent 3½ years.

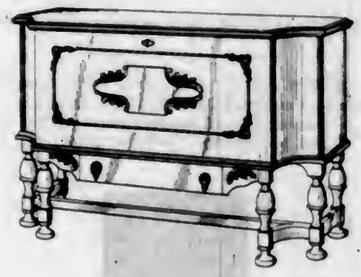


The ornamental design for a pile fabric as shown and described.



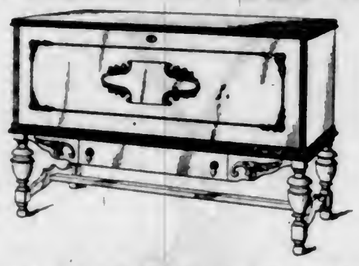
77,309. DRAPERY-POLE CENTER. AUGUST DLOUHY, Wallingford, Conn., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,218. Term of patent 3½ years.

The ornamental design for a drapery pole center, as shown.

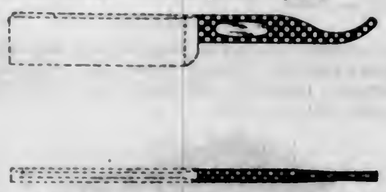


77,310. CEDAR CHEST. HYMAN DWORKIS, Chicago, Ill. Filed Sept. 24, 1928. Serial No. 28,260. Term of patent 7 years.

The ornamental design for a cedar chest, as shown.



77,311. CEDAR CHEST. HYMAN DWORKIS, Chicago, Ill. Filed Sept. 24, 1928. Serial No. 28,261. Term of patent 7 years.



The ornamental design for a cedar chest, as shown.

77,312. CEDAR CHEST. HYMAN DWORKIS, Chicago, Ill. Filed Sept. 24, 1928. Serial No. 28,262. Term of patent 7 years.

The ornamental design for a cedar chest, as shown.

77,313. RAZOR BLADE. AUGUST F. ERN, Scarsdale, N. Y., assignor to K. C. Sealbach Company, New York, N. Y., a Corporation of New York. Filed June 15, 1927. Serial No. 22,436. Term of patent 7 years.

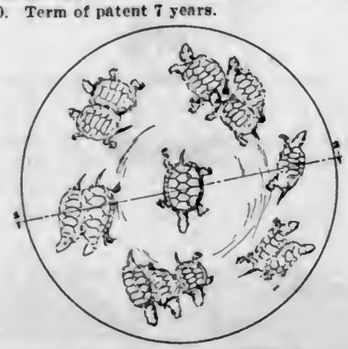
The ornamental design for a razor blade, as shown and described.

77,314. LIGHT FIXTURE. HERBERT M. FIRTH, Niles Center, Ill. Filed Mar. 8, 1928. Serial No. 25,762. Term of patent 7 years.

The ornamental design for a light fixture as shown.

77,315. TOBACCO-ASH RECEIVER. WILLIAM GORDON, New York, N. Y. Filed June 9, 1928. Serial No. 27,066. Term of patent 7 years.

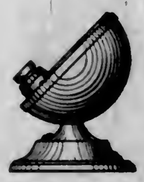
The ornamental design for a tobacco ash receiver, as shown and described.



77,316. VANITY CASE. SAMUEL E. GUINN, Johnson City, Tenn. Filed Feb. 7, 1928. Serial No. 25,255. Term of patent 3½ years.

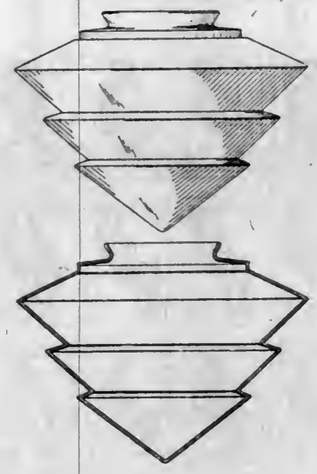
The ornamental design for a vanity case, as shown.

77,317. BOWL OR SIMILAR ARTICLE. EDWARD T. HURLEY, Cincinnati, Ohio. Filed Mar. 12, 1928. Serial No. 25,800. Term of patent 7 years.

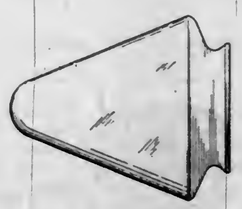


The ornamental design for a bowl or similar article as shown and described.

77,318. ADVERTISING CIGAR LIGHTER. ALDRICH L. JACKSON, St. Paul, Minn., assignor to Federal Manufacturing Company, a Copartnership consisting of Fred C. Nachtigall, Otto A. Blume, and Aldrich L. Jackson, St. Paul, Minn. Filed Mar. 16, 1927. Serial No. 21,158. Term of patent 3½ years.



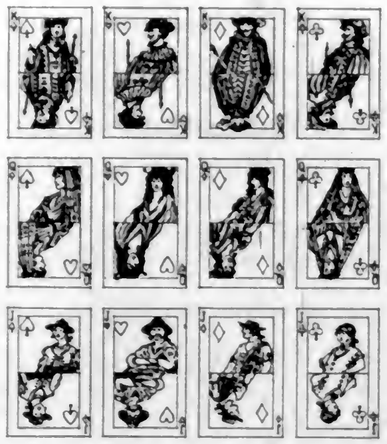
The ornamental design for an advertising cigar lighter, as shown.



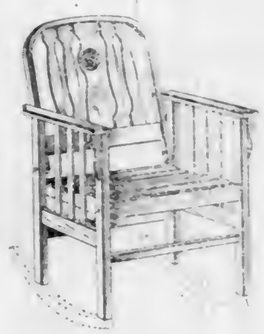
377 O. G.—52

77,319. LIGHTING-FIXTURE SHADE OR SIMILAR ARTICLE. NICHOLAS KOPP, Pittsburgh, Pa., assignor to Kopp Glass, Incorporated, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 12, 1928. Serial No. 25,802. Term of patent 14 years.

The ornamental design for a lighting fixture shade or similar article, as shown.



77,320. LIGHT SHADE OR SIMILAR ARTICLE. NICHOLAS KOPP, Pittsburgh, Pa., assignor to Kopp Glass, Inc., Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 22, 1928. Serial No. 25,946. Term of patent 14 years.



The ornamental design for a light shade or similar article as shown.

77,321. SET OF PLAYING CARDS. OTTO KUBATZKY, Tulsa, Okla., assignor to O. K. Playing Card Company, Tulsa, Okla., a Corporation of Delaware. Filed Aug. 5, 1927. Serial No. 23,007. Term of patent 14 years.

The ornamental design for a set of playing cards as shown.

77,322. CHAIR. ARTHUR J. LEHMAN, Cannelton, Ind. Filed Oct. 19, 1928. Serial No. 28,566. Term of patent 14 years.

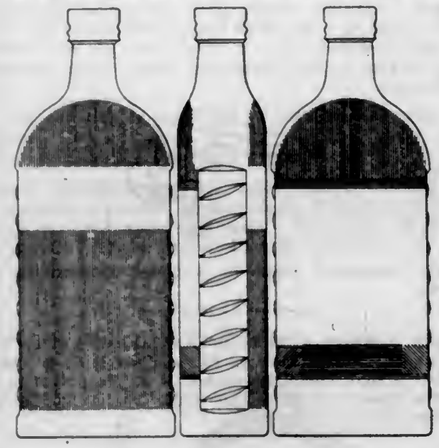
The ornamental design for a chair, as shown.

77,323. ASH RECEPTACLE OR SIMILAR ARTICLE. ERNEST C. LEWIS, Meriden, Conn., assignor to The Tubular Products Company, Southington, Conn., a Corporation of Ohio. Filed Sept. 22, 1928. Serial No. 28,248. Term of patent 14 years.

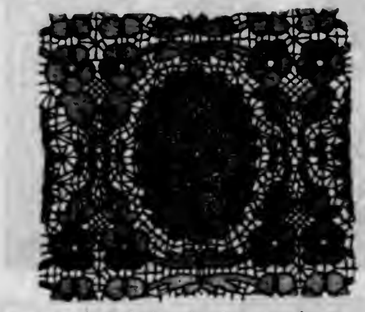
The ornamental design for an ash receptacle or similar article substantially as shown.

77,324. ASH RECEPTACLE OR ANALOGOUS ARTICLE. ERNEST C. LEWIS, Meriden, Conn., assignor to The Tubular Products Company, Southington, Conn., a Corporation of Ohio. Filed Sept. 22, 1928. Serial No. 28,249. Term of patent 14 years.

The ornamental design for an ash receptacle or analogous article substantially as shown.



77,325. DOLL. GRACE LOVAT FRASER and CYNTHIA THIMBELBYE KENT, London, England. Filed Sept. 29, 1927. Serial No. 23,578. Term of patent 7 years.

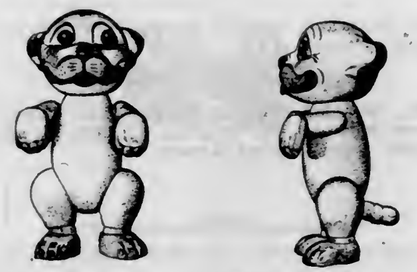


The ornamental design for a doll as shown.

77,326. BOTTLE. HARRY NEWMAN, Newark, N. J. Filed July 3, 1928. Serial No. 27,369. Term of patent 7 years.

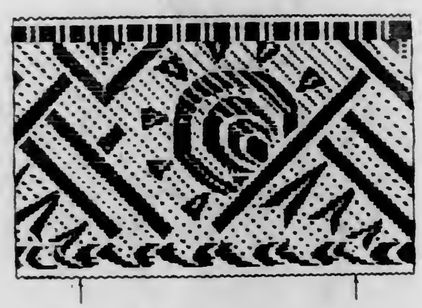
The ornamental design for a bottle as shown.

77,327. LACE. WINSLOW A. PARSONS, Wellesley, Mass., assignor to Richmond Lace Works, Inc., Alton, R. I., a Corporation of Massachusetts. Filed Oct. 17, 1928. Serial No. 28,518. Term of patent 7 years.



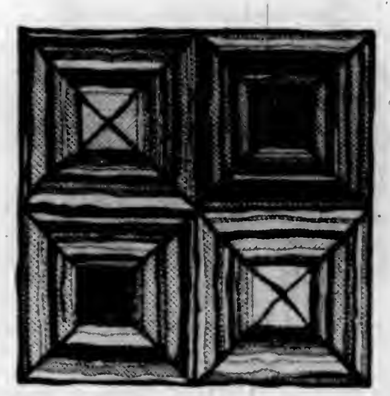
The ornamental design for lace as shown.

77,328. HEATER. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed May 3, 1928. Serial No. 26,551. Term of patent 7 years.



The ornamental design for a heater, substantially as shown.

77,329. TOY ANIMAL FIGURE. HARRY E. SCHOENHUT, Philadelphia, Pa., assignor to George E. Studdy, London, England. Filed Feb. 8, 1928. Serial No. 25,271. Term of patent 14 years.



The ornamental design for a toy animal figure substantially as shown.

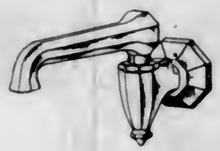
77,330. UPHOLSTERY BRAID. HERBERT O. SHULTS, Chicago, Ill., assignor to E. L. Mansure Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1928. Serial No. 27,429. Term of patent 7 years.

The ornamental design for upholstery braid as shown and described.

77,331. PRINTED TEXTILE FABRIC OR THE LIKE. LOUIS JOSEPH SIRACUSANO, Astoria, N. Y., assignor to National Fabric and Finishing Company, New York, N. Y., a Corporation of Massachusetts. Filed Aug. 30, 1928. Serial No. 27,993. Term of patent 3½ years.

The ornamental design for a printed textile fabric or the like, as shown.

77,332. GOBLET OR SIMILAR ARTICLE. EDWIN E. SLICK, Pittsburgh, Pa. Filed Aug. 22, 1928. Serial No. 27,908. Term of patent 14 years.



The ornamental design for a goblet or similar article, substantially as shown and described.

77,333. LEATHER OR SIMILAR ARTICLE. BERNARD STEMBER, New York, N. Y. Filed May 14, 1928. Serial No. 26,657. Term of patent 3½ years.

The ornamental design for leather or similar article, as shown and described.

77,334. FAUCET. WILLIAM O. THOMPSON, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 25,519. Term of patent 14 years.

The ornamental design for a faucet, substantially as shown.

77,335. TABLE COVER OR ANALOGOUS ARTICLE. EDWARD THORNE, Chicago, Ill., assignor to T. R. Goodlatte & Sons, (Inc.), Delawanna, N. J., a Corporation of New Jersey. Filed Jan. 9, 1928. Serial No. 24,791. Term of patent 3½ years.

The ornamental design for a table-cover or analogous article, substantially as shown.

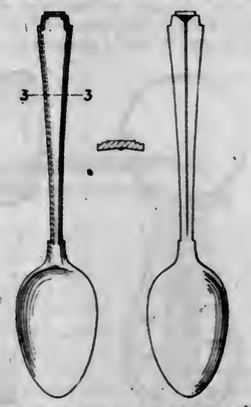
77,336. ELECTRIC FLOOR LAMP. JOSEF TISSLER, Philadelphia, Pa. Filed Aug. 9, 1928. Serial No. 27,753. Term of patent 3½ years.

The ornamental design for an electric floor lamp, as shown.

77,337. MIRROR FRAME. JACOB TURNER, Chicago, Ill., assignor to Turner Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 25, 1928. Serial No. 27,274. Term of patent 3½ years.

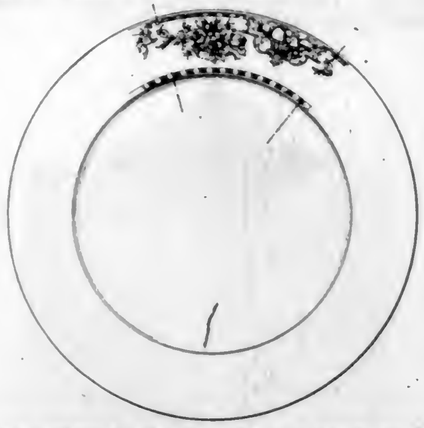
The ornamental design for a mirror frame, as shown.

77,338. DRAPERY-POLE CENTER. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,252. Term of patent 3½ years.



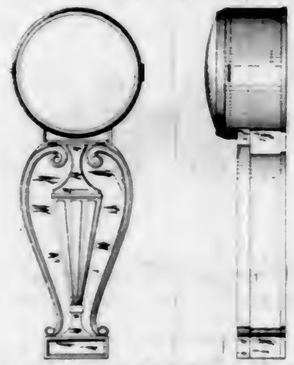
The ornamental design for a drapery pole center, as shown.

77,339. DRAPERY-POLE CENTER. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,250. Term of patent 3½ years.



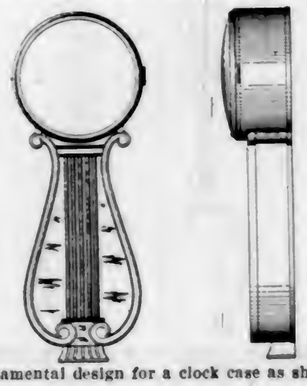
The ornamental design for a drapery pole center, as shown.

77,340. SPOON OR SIMILAR ARTICLE. WILLIAM S. WARREN, Meriden, Conn., assignor to R. Wallace & Sons Mfg. Co., Meriden, Conn., a Corporation. Filed Sept. 24, 1928. Serial No. 28,268. Term of patent 14 years.



The ornamental design for a spoon or similar article as shown.

77,341. PLATE OR SIMILAR ARTICLE. CHARLES WEISS, New York, N. Y. Filed Oct. 24, 1928. Serial No. 28,611. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

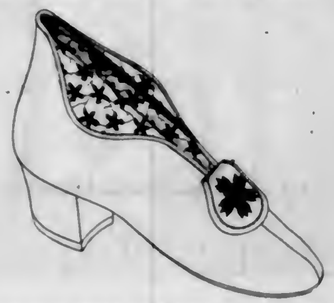
77,342. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed Oct. 2, 1928. Serial No. 28,350. Term of patent 14 years.

The ornamental design for a clock case as shown.

77,343. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed Oct. 2, 1928. Serial No. 28,351. Term of patent 14 years.

The ornamental design for a clock case as shown.

77,344. WHISK-BROOM HOLDER. ELIZABETH WIENER, New York, N. Y. Filed Mar. 30, 1928. Serial No. 26,079. Term of patent 3½ years.

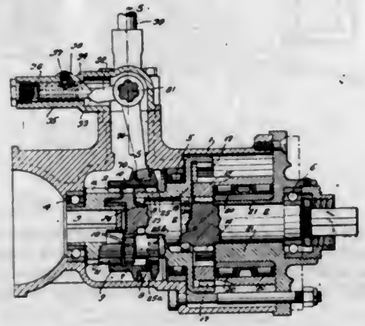


The ornamental design for a whisk-broom holder as shown.

77,345. SHOE. HERMAN WILHELM, New York, N. Y. Filed June 12, 1928. Serial No. 27,090. Term of patent 7 years.

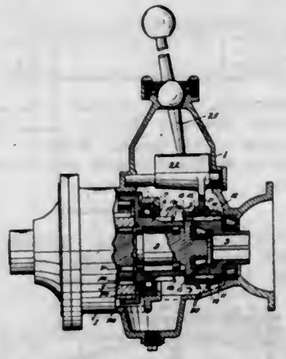
The ornamental design for a shoe, substantially as shown.

77,346. BOUDOIR SLIPPER. SIMON WROBEL, New York, N. Y., assignor to S. Wrobel Slipper Co., Inc., New York, N. Y., a Corporation of New York. Filed June 14, 1928. Serial No. 27,129. Term of patent 3½ years.



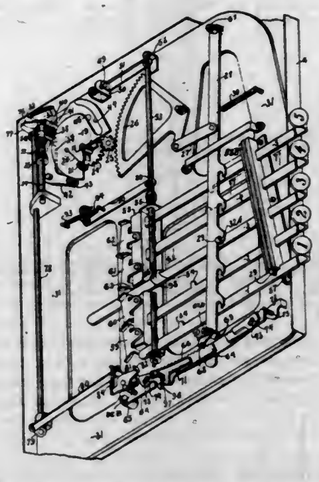
The ornamental design for a boudoir slipper, as shown.

# PATENTS



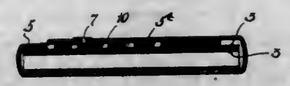
## GRANTED DECEMBER 25, 1928.

1,696,178. TRANSMISSION GEARING. CHARLES E. F. AHLM, Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Mar. 14, 1925. Serial No. 15,480. 8 Claims. (Cl. 74—39.)



6. Shifting mechanism comprising a movably mounted member adapted to be connected with an element to be shifted, resiliently stressed means arranged to force said member away from a central position to two extreme positions, an operating member and a two way lost motion resilient connection between the operating member and the movably mounted member.

1,696,179. GEAR AND CLUTCH MECHANISM. CHARLES E. F. AHLM, Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Original application filed Mar. 14, 1925, Serial No. 15,480. Divided and this application filed Feb. 21, 1927. Serial No. 169,728. 3 Claims. (Cl. 192—48.)

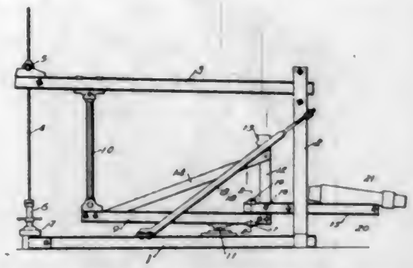


1. In a device of the character described, in combination two externally toothed members and a sleeve having two longitudinally separated sets of internal teeth of substantially identical contour and formed an equal pitch diameters, certain of the external teeth of each set extending longitudinally past others of the same set, each set of internal teeth on the sleeve being spaced circumferentially at least twice the distance of the external teeth, and a power transmitting member adapted to slidably engage one set of internal teeth as a spline, whereby such power transmitting member may be selectively connected with the externally toothed members through the other set of internal teeth.

1,696,180. TICKET-ISSUING MACHINE. JAMES S. ARCUS and ROBERT E. BEAUBIEN, Chicago, Ill.; said Beaubien assignor to said Arcus. Filed May 21, 1925. Serial No. 31,747. 18 Claims. (Cl. 164—42.)

1. In a ticket issuing machine, a plurality of reciprocable and interchangeably operable actuating members, and means for locking all except the selectively moved actuating member against movement until the selected one has returned to its starting position; the said means comprising pivoted latches disposed between the consecutive actuating members and behind the rear ends of all thereof when the actuating members are in their starting positions, the consecutive latches having arms abutting against one another, and stops for limiting the rocking movement of the latches about their pivots, the spread of the arms and the disposition of the stops being such that the separational movement of any two latches by the passing of a part of an actuating member between them will dispose the other latches so as to prevent the movement of any other latching member between any two of the said other latches.

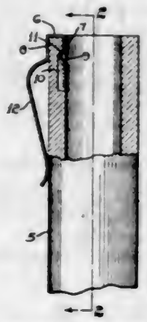
1,696,181. FASTENING AND RELEASING MEANS FOR DOCUMENT RECEPTACLES. LEIGH MILLICAN BALLOWE, Dallas, Tex., assignor to T. G. Smith, Dallas, Tex. Filed Dec. 7, 1926. Serial No. 153,083. 1 Claim. (Cl. 24—17.)



A receptacle of the character described, comprising overlying side flaps and end flaps, a grommet positioned within the body of one of said side flaps adjacent but spaced from the edge thereof, a hook comprising a base, a shank and an extremity, said base being formed as a hollow cylinder seated in said grommet, a portion of said cylinder being extended to form said shank and said extremity, a plurality of hook-receiving grommets seated in perforations spaced apart on the other of said side flaps, said shank being smooth and in substantial alignment with said cylindrical base portion, and said extremity extending at

substantially right angles to said shank for a distance less than the inner diameter of one of said hook-receiving grommets and in a direction away from the free edge of the flap carrying said hook to permit said hook with its shank and extremity to move freely through said hook-receiving grommet on pressure of the sides of said receptacle and to permit said extremity to engage under the edge of said hook receiving grommet to lock said hook in said hook-receiving grommet on release of said pressure.

---

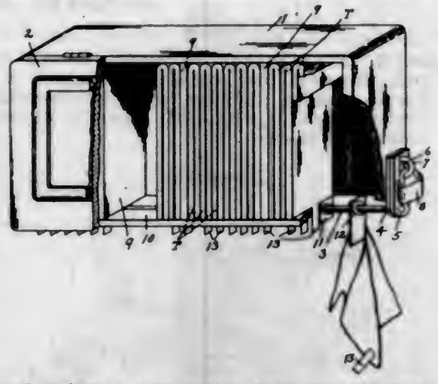


1,696,182. PUMPING JACK. WILLIAM R. BARNEY, Tulsa, Okla., assignor to Wilbur C. Norris, Tulsa, Okla. Filed Mar. 17, 1927. Serial No. 176,031. 2 Claims. (Cl. 74—5.)

1. In a pumping jack, the combination of a frame comprising a horizontal rocking member and a vertical member fixed therewith; a saddle on which the jack oscillates; means connecting the jack with a pumping rod; a counterbalance extension opposite the horizontal member, said horizontal member being formed of parallel bars and the counterbalance extension comprising parallel bars above and overlapping the bars of the horizontal member; and means securing the overlapping bars of the counterbalance extension to the horizontal member.

---

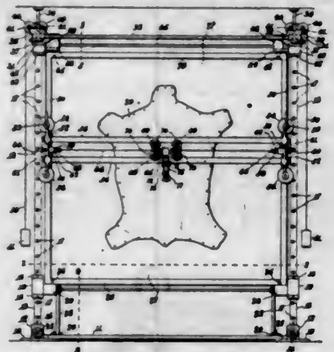
1,696,183. CLIP FOR PENCILS AND THE LIKE. GERALD L. BASSETT. Toledo, Ohio, assignor to The Conklin Pen Company, Toledo, Ohio, a Corporation of Ohio. Filed May 28, 1928. Serial No. 281,081. 6 Claims. (Cl. 24—11.)



1. The combination with a hollow barrel member, open at one end, of a clip at said open end having legs bearing against the inner and outer surface of the barrel, one of said legs having a spur, said spur being inclined toward the end of the barrel and toward the wall thereof to permit the clip to be easily applied to the barrel and to prevent its removal therefrom.

---

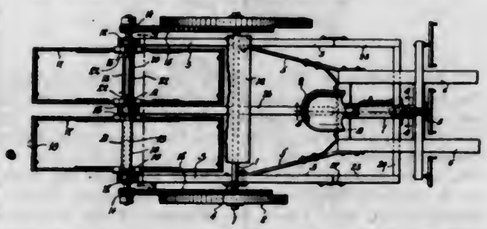
1,696,184. TOWEL HOLDING AND DISPENSING CABINET. CHARLES H. ASHLEY and LEIGH H. PHILLEO, Los Angeles, Calif. Filed Mar. 17, 1926. Serial No. 95,428. 2 Claims. (Cl. 312—37.)



2. A towel holding cabinet comprising a box with open bottom, a cross strip narrower than said open bottom across said bottom from one end to the other to support folded towels edgewise thereupon within said box, a cross rod across said open bottom near said cross strip from one end to the other, detachably held in place and

adapted to have a part of each towel threaded thereon, whereby said towel can be pulled from said cross strip, through said open bottom with its part attached to said cross rod, and means for locking said cross rod in place.

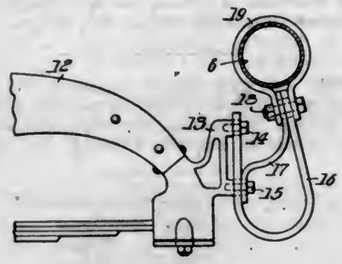
---



1,696,185. FRAME FOR LEATHER-SPRAYING DEVICES. PHILIP G. AULSON, Salem, Mass. Filed Aug 5, 1927. Serial No. 210,896. 28 Claims. (Cl. 91—60.)

1. The combination of two vertical guide members; a carriage movable vertically thereon; means for locking the opposite ends of said carriage directly to said guide members; and an air brush support movable horizontally on said carriage.

---

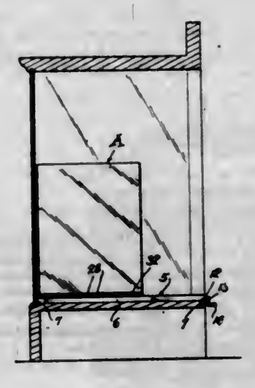


1,696,186. DOUBLE-ROW STALK CUTTER. PHYLANDER BLAKELY, Plano, Tex. Filed Apr. 23, 1927. Serial No. 186,036. 4 Claims. (Cl. 55—118.)

4. A stalk cutting machine of the character described and set forth in claim 3, a draft frame pivotally connected with said upper framework and a lever on the draft frame and connected to the lower framework by a connecting element on the forward part of the machine.

1,696,187. AUTOMOBILE BUMPER. FREDERICK G. BREMER, Pittsburgh, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 18, 1928. Serial No. 255,227. 8 Claims. (Cl. 293—55.)

1. Buffer spring structure comprising a yieldable member of yoke-like form, means for securing the inner end of said member to a vehicle frame, and means for connecting the outer end of said member to an impact bar, one of said securing means being adjustable in a direction longitudinally of said member.



---

1,696,188. PROCESS OF TREATING IRON ORES. THOMAS P. CAMPBELL, Denver, Colo. Filed May 19, 1927. Serial No. 192,804. 4 Claims. (Cl. 75—14.)

1. The process of treating ores containing iron, consisting of reducing comminuted ore to convert the iron into sponge, partially reoxidising the iron sponge and then passing the mixture over a magnetic separator.

---

1,696,189. WINDOW-DISPLAY DEVICE. CESARE F. CASTAGNA, Hurley, Wis. Filed Feb. 14, 1928. Serial No. 254,172. 1 Claim. (Cl. 20—40.4.)

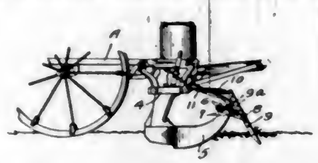
A window display device of the character set forth comprising grooved tracks, a sectional carriage slidably associated with the grooved tracks, a non-rotatable sleeve passing through the sections of the carriage and having a threaded interior bore and a substantially semi-circular pocket in the upper surface of each carriage section, a table associated with the carriage, a boss carried by the table and seated in the pockets of the carriage, a nut threaded on one end of the sleeve, a shaft threadedly associated with the bore of the sleeve, shaft supports carried by the tracks, a display device carried by the table and a crank secured to one end of the shaft.

1,696,190. FUSE-DISPENSING CABINET. MICHAEL J. CONNERY, Farley, Iowa. Filed Sept. 6, 1927. Serial No. 217,796. 4 Claims. (Cl. 312—42.)

1. In a cabinet of the kind described, a support, a series of spouts arranged in a row in spaced relation to each other upon the support, each spout having a closed lower end and an upper open end and also a forward elongated slot near the closed end of a length to permit free extraction of an article therethrough without endwise movement of the same, a head above the spouts, and tubes removably fitted in the head and telescoped in the upper open ends of the spouts.

---

1,696,191. PACK. HUGH GEOFFREY COULSON, Newcastle, Ontario, Canada. Filed Mar. 1, 1928. Serial No. 258,311. 1 Claim. (Cl. 224—12.)

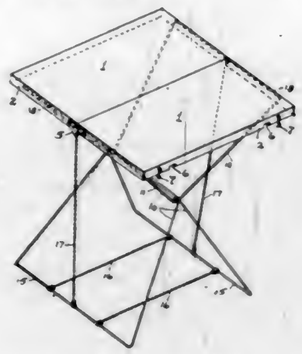


A suitcase attachment of the class described comprising a large ring disposed against one side of the suitcase intermediate of its width and at the top side of its longitudinal centre, a pair of straps extending therefrom and encompassing the suitcase, said straps being detachably connected together, a pair of diverging straps extending downwardly from said ring terminating short of the lower corners of the suitcase, small rings fitted to the divergent ends of the diverging straps, converging straps attached to said small rings and passed around the lower end of the suitcase and up the other side, a strap attached to the aforesaid large ring and passed over the upper end of the suitcase and detachably connected to the converging straps, means for holding the small rings in spaced relation, and shoulder straps attached to both the large and the small rings.

---

1,696,192. CLEARING GUARD FOR PLANTER SHOES. PAUL DASEN, Ottosen, Iowa, assignor to Harry J. Dorweiler, Hamel, Minn. Filed June 9, 1927. Serial No. 197,617. 4 Claims. (Cl. 97—194.)

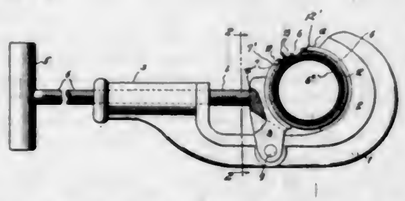
1. A clearing guard for planter shoes, comprising a clamp adapted to be secured to the forward end of a planter shoe, a tooth pivoted adjacent its medial portion in said clamp and having a portion adapted to extend downwardly



and forwardly therefrom into the ground in the path of said implement, said tooth having a portion projecting upwardly and rearwardly from said clamp, a coil spring con-

nected at one end with the upper end of said tooth member and a hook adapted to be adjustably connected at its one end with the frame of a planter and secured at its other end to the other end of said spring.

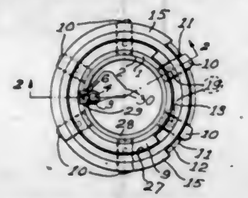
---



1,696,193. FOLDING TABLE. BENJAMIN DELAND, South Euclid, Ohio. Filed Oct. 23, 1924. Serial No. 745,369. 5 Claims. (Cl. 45—116.)

5. The combination of a folding table top consisting of two half members hinged together adapted to form a closed case when folded, each of said members having a depending flange around its edges and having complementary slots formed in two of said flanges, and a collapsible table support adapted to fit within said case with a portion of said support projecting through said slots to form a handle.

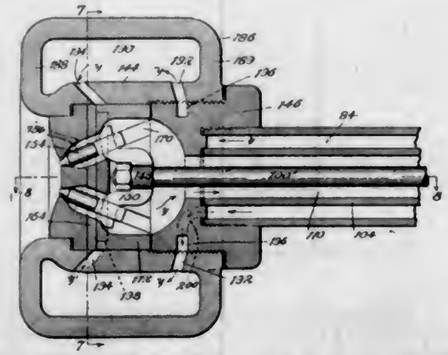
---



1,696,194. TOOL FOR APPLYING PATCHES TO FLEXIBLE HOSE. JOHN H. FOREMAN, Denison, Tex. Filed Nov. 26, 1926. Serial No. 150,733. 1 Claim. (Cl. 81—9.3.)

In a clamping tool for applying a strip to a hose the strip having lugs provided with notches, the combination with a body member, of a stationary jaw integral with said body member and curved to embrace a portion of said strip around said hose, a movable jaw pivoted to said body member and provided with an abutment, a shank integral with said body member and formed with a threaded opening therethrough, a rod in threaded engagement with said threaded opening and having its inner end abutting said abutment of said movable jaw and having its outer end provided with an operating handle, a reinforcing rib integral and coextensive with said body member and shank, said stationary jaw having an end portion extending beyond said body member and reinforcing rib, said end portion having its extreme end bevelled to engage in a notch in one of said lugs, said movable jaw having an end portion extending beyond said abutment and having its extreme end bevelled to engage in a notch in another of said lugs, whereby the ends of said strip are drawn together to clamp the same around the hose when the said handle is rotated to advance the said rod with its inner end in pressure-exerting contact with said movable jaw.

---



1,696,195. CUTTER HEAD. ALBERT F. FROUSSARD, St. Louis, Mo. Original application filed Feb. 6, 1922, Serial No. 534,466. Divided and this application filed Oct. 27, 1924. Serial No. 745,980. 4 Claims. (Cl. 77—58.)

1. A cutter head structure comprising an annular body having at its side an opening passing therethrough, the longitudinal dimension of said opening being disposed generally radially with relation to the body and pitched at an acute angle to the axis thereof, a plurality of cutters slidably insertible within said opening, each of said cutters having an inwardly directed projection presenting parallel top and bottom edges, a clamping ring having a downwardly directed bead for engaging the top edge of the projection on said cutter, a pin engaging the bottom edge of said projection, the points of engagement of said bead and said pin with the top and bottom edges of said projection being out of vertical alignment for forcing the cutter tightly in its respective opening and a collar mounted for sliding movement in the body in a direction parallel with the axis thereof and presenting a beveled end engaging the edge of said outer end portion of said cutter.

---

1,696,196. LIQUID-FUEL BURNER. JAMES H. GRAY, Nice, France. Original application filed Apr. 21, 1922, Serial No. 555,803. Divided and this application filed Aug. 4, 1927. Serial No. 210,648. 3 Claims. (Cl. 158—73.)

1. A burner for liquid fuel comprising a tubular casing, a spray nozzle secured thereto, a plurality of converging chambers formed in said spray nozzle through which the fuel is adapted to be discharged, a jacket encircling said spray nozzle to form a chamber, ports in said jacket for permitting a circulation from said casing through said jacket and to said converging chambers and needle valve pins for controlling the discharge of fuel from said converging chambers.

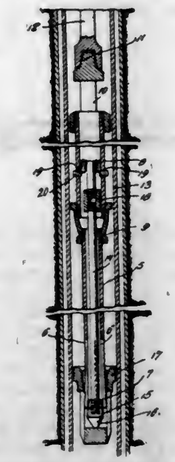
1,696,197. PRODUCTION OF SODIUM NITRATE. ROBERT GRIESSBACH, Ludwigshafen-on-the-Rhine, and KUAT RÖHRE, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Sept. 22, 1927, Serial No. 221,394, and in Germany Oct. 14, 1926. 1 Claim. (Cl. 23—102.)

The process of recovering sodium nitrate from aqueous solutions containing it, which consists in precipitating sodium nitrate as a difficultly soluble double salt, by adding sodium sulfate, and decomposing the said double salt, by heating it with about the amount of water required for dissolving the sodium nitrate contained therein, the residual sulfate being separated by hot filtration and the sodium nitrate recovered by cooling the solution.

---

1,696,198. COMBINATION CAP AND EYE SHIELD. OTTO GROSS, Dallas, Tex. Filed Feb. 18, 1928. Serial No. 255,269. 1 Claim. (Cl. 2—10.)

In a device of the class described, the combination with a cap provided with a vizor, protecting goggles provided with a frame pivotally connected with said vizor and and shaped to fit over the nose and to rest on the cheek, said goggles depending from said vizor in an operative position and being pivotally movable upward toward the front thereof to an inoperative position beneath said vizor, means for pivotally connecting said goggles with said vizor, said means comprising ears projecting downwardly from opposite sides of said vizor, rods extending outwardly from opposite ends of said frame, each of said rods having a pivot portion journaled in one of said ears, and a locking portion extending substantially at right angles to said pivot portion, a clip having an inner portion secured to said vizor adjacent each of said ears and an outer portion overhanging said locking portion of said rod, said outer portion of said clip being of resilient material and curved in the plane of movement of said locking portion for frictional engagement with the outer end of said locking portion to retain said goggles in operative position when swung upward beneath said vizor.

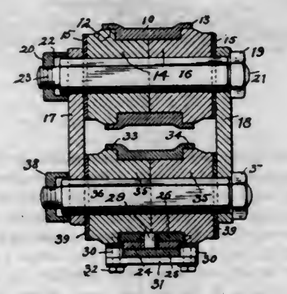


---

1,696,199. AROMATIC SULPHONIC ACID. FRITZ GÜNTHER, Ludwigshafen-on-the-Rhine, and ADOLF CANTZLER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 18, 1926, Serial No. 149,268, and in Germany Nov. 21, 1925. 5 Claims. (Cl. 260—2.)

1. As new articles of manufacture, sulphonic acids of high cleansing, wetting and emulsifying power which are not dyestuffs and which are derived from aromatic compounds containing at least two aromatic nuclei linked together by a bridge and in which at least one aromatic nucleus contains at least 1 hydrogen atom substituted by a hydrocarbon residue with at least two carbon atoms.

---



1,696,200. FISHING TOOL. GEORGE H. HAIFLEY, Eureka, Kans., assignor of one-half to George Bernard, Eureka, Kans. Filed Sept. 22, 1927. Serial No. 221,180. 3 Claims. (Cl. 294—94.)

1. A fishing tool for oil wells comprising a tubular body provided at its lower end with a plurality of gripping jaws, a cap removably applied to the upper end of the body and adapted for connection to a hoist line or the like, a rod freely longitudinally slidable in the body and projecting upwardly into the cap, a wedge rigid with the lower end of the rod adapted to be forced upwardly by impact with an object to expand the jaws, means to limit downward movement of the rod relative to the body, and a frangible member in the cap in the path of said rod to prevent accidental upward displacement of the wedge to jaw-extending position.

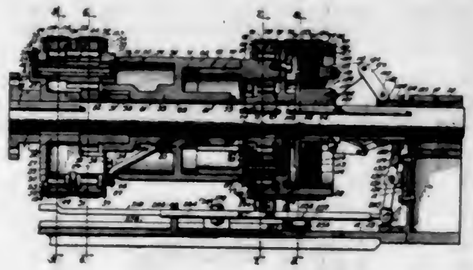
---

1,696,201. PIVOTAL CONNECTION. HOWARD C. HARRIS, Akron, Ohio. Filed Sept. 28, 1925. Serial No. 59,004. 7 Claims. (Cl. 267—54.)

1. In apparatus of the class described, the combination of two relatively oscillatable members one of which has an eye of non-circular cross-section and the other a pintle of non-circular cross-section extending through said eye

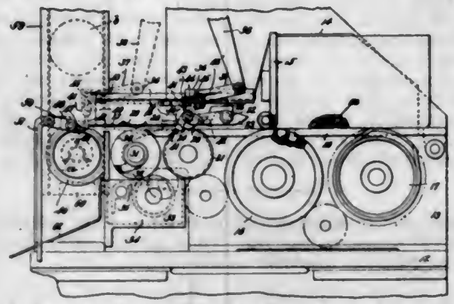
and carrying radially extending adjustable abutments spaced from the ends of said eye, and a rubber bushing fitting said eye and said pintle so as to be non-rotatably connected therewith and having enlarged flanges engaging said abutments and the ends of said eye.

---



1,696,202. MEANS FOR PROTECTING WINDOW GLASS IN WINDOWS AND DOORS OF MOTOR VEHICLES WHEN PAINT IS APPLIED. RICHARD M. HARRIS, Dallas, Tex. Filed Oct. 24, 1927. Serial No. 228,190. 1 Claim. (Cl. 91—65.)

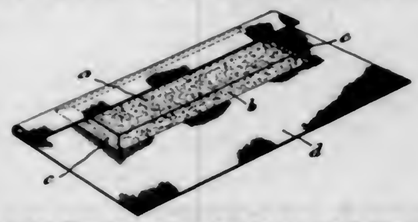
In a device of the class described the combination with a plate having a central upstanding longitudinal projection, said projection being hollow and having its upper surface provided with a slot, a second plate having a hollow central upstanding longitudinal projection, said last named projection adjacent one end thereof being provided with an opening in its upper side and having its under side open to straddle and ride upon said first named projection, and means for locking said plates together in adjusted position, comprising a lug having a head positioned within said first named projection and a shank extending through said opening and said slot, and a wing nut for engaging said shank to lock said plates together.



---

1,696,203. VARIABLE-SPEED TRANSMISSION. GEORGE KRELL and GUY M. MARTINET, Sapulpa, Okla.; said Martinet assignor to said Krell. Filed Aug. 25, 1927. Serial No. 215,454. 4 Claims. (Cl. 74—34.)

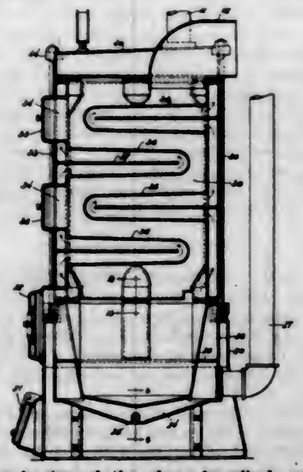
1. In combination with a transmission shaft, a driven member rotatable on the shaft, a sun gear wheel rotatable on the shaft and keyed to the driven member, a carrier keyed to the shaft, a plurality of sets of planet gear wheels rotatably mounted on the carrier, the gear wheels of one planet set meshing with those of the other set and with the sun gear wheel, an orbit gear member for each set of planet gear wheels, a second sun gear wheel fixed to said shaft, a carrier fixed to said driven member, an orbit gear wheel rotatably mounted on the second carrier and meshing with the second sun gear wheel, an orbit gear member for said last named planet gear wheel, and means for selectively locking the orbit gear members to determine speed and direction of travel of the driven member for constant speed of the shaft.



1,696,204. FEEDING AND FORMING BOX MACHINE. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1926. Serial No. 84,572. 8 Claims. (Cl. 93—39.)

1. In a machine of the character described; a hollow normally empty former having an opening, and means for pushing a blank through said opening to cause it to automatically partake of the shape of the inner wall of said former.

---

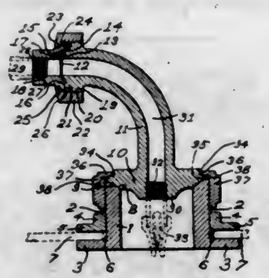


1,696,205. SANITARY NAPKIN. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Dec. 6, 1926. Serial No. 152,748. 2 Claims. (Cl. 128—290.)

1. A flat filler for sanitary napkin pads, said filler having side edges beveled to present upper and lower surfaces of different areas, all portions of the pad, including the said edges, being of uniform density.

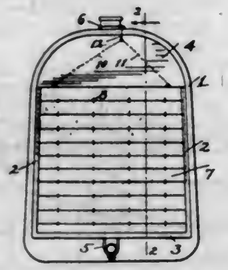
---

1,696,206. WATER HEATER. HENRY J. LANGE, Lorain, Ohio. Filed Sept. 30, 1927. Serial No. 223,181. 4 Claims. (Cl. 122—209.)



3. A water heater of the class described, comprising, in combination, a substantially rectangular base having an ash pit; a rectangular water fire-box section supported on the base and having water grate conduits cast integral therewith; separate front, rear and side water walls supported on the fire-box section communicating directly with the water space in said section through a plurality of separated openings; water baffles cast integral with the front and rear water walls and having partitions therein, said baffles on one wall being staggered with the baffles on the other wall to provide a zigzag gas pass; a horizontal dome section connected to said water walls and having an outlet flue therein; and means to secure all of said sections together.

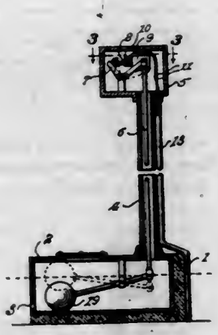
---



1,696,207. PIPE FITTING. DAVID LARKIN, St. Louis, Mo. Filed Mar. 13, 1925. Serial No. 15,377. 1 Claim. (Cl. 285—120.)

A pipe fitting structure of the class described comprising a flanged tubular member adapted for engagement with an apertured wall and terminating in an inclined seat portion, an elbow pipe provided at one end with a circumferential flange having a marginal inclined seat adapted to co-act with said inclined seat portion, the other end of said elbow pipe being adapted for removable connection with a pipe line, a boss projecting from the lower face of said circumferential flange and surrounding a centrally disposed threaded outlet somewhat smaller than the internal diameter of said tubular member and adapted to receive a projecting nozzle centrally spaced within said member, and means for clamping said tubular member to said elbow pipe.

---

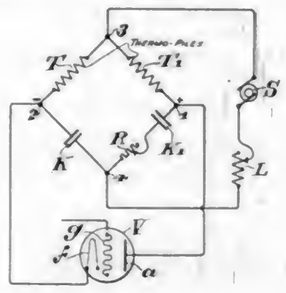


1,696,208. AIR-REGULATING DEVICE FOR AUTOMOBILE RADIATORS. GEORGE G. MARSHALL, Cleveland, Ohio. Filed Oct. 22, 1920. Serial No. 418,735. 1 Claim. (Cl. 20—58.)

An air regulating device for automobile radiators comprising a frame adapted to be secured upon the front of a radiator and having an opening, said frame having substantially vertical side members and a horizontal bottom member, said members being in the form of channels of uniform width with their open sides toward the opening, said side members having longitudinal guideways formed in the bottoms of the channels, a series of flexibly connected shutters mounted in the frame, each shutter being of a height less than the width of the channels, having its ends within the side channels and having pins projecting into the guideways in the bottoms of the side channels, flexible suspension members extending along the opposite ends of the shutters and connected to the pins projecting from the ends thereof, whereby the shutters may be suspended in vertical position one above the other to close the opening, or may fold into horizontal position one upon the other in the bottom channel.

---

1,696,209. RAILROAD-WASHOUT SAFETY DEVICE. WILLIAM R. POOL, Ennis, and EARL W. MEALER, Dallas, Tex. Filed Mar. 19, 1928. Serial No. 262,855. 1 Claim. (Cl. 246—121.)

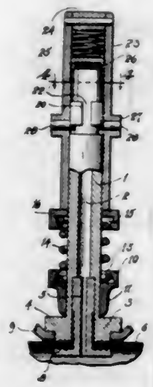


In a signal, the combination with a concrete box positioned at high-water level adjacent a railroad semaphore alongside track rails, of a hollow post supported on and extending upwardly from said box, a switch box mounted on the upper end of said post, a float arm pivoted intermediate its ends within said concrete box, said arm having one of its ends in the form of a float and its opposite end terminating below said post, a bell crank pivotally mounted in said switch box having legs extending at substantially right angles to each other, a switch comprising contact members and a pivoted handle mounted in said switch box for closing the circuit through said contact members, a roller bearing on said handle, a connecting rod projecting axially through said post having its lower end pivoted to the end of said float arm opposite said float, said connecting rod having its upper end pivoted to one of said legs, said roller bearing engaging the other of said legs to move said handle to close said switch when the bell crank is actuated by the float moving upwardly under the influence of water rising to a high-water level in said concrete box, said switch being in circuit with said rails and said semaphore, whereby the dangerous rise of water moving the said float to close said switch will automatically set the danger signal in said semaphore, said danger signal remaining in set position even after the float has dropped as a result of the dropping of the level of the water adjacent the signal, until said arm is manually moved to open said switch.

---

1,696,210. CURRENT-RECTIFYING SYSTEM. HARRY F. PORTER, Trenton, N. J., assignor of one-half to Cornelius D. Ehret, Philadelphia, Pa. Filed Feb. 16, 1925. Serial No. 9,446. 15 Claims. (Cl. 250—27.)

1. In a system for deriving direct from fluctuating or alternating current comprising capacities and thermo-couples, the method which comprises passing fluctuating or alternat-

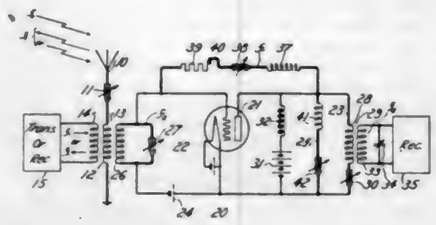


ing current through said capacities and thermo-couples while disposed in parallel paths with respect to the fluctuating or alternating current, effecting by said capacities zero

fluctuating or alternating potential differences between the remote terminals of the thermo-couple paths, and taking off direct current through said remote terminals.

---

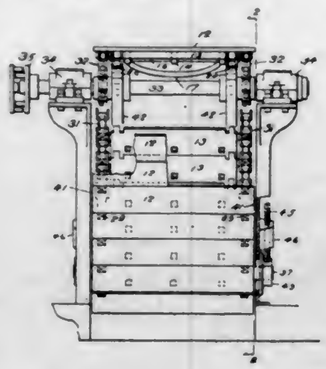
1,696,211. VALVE STEM FOR INNER TUBES OF PNEUMATIC TIRES. ARTHUR B. PREISSER, Dallas, Tex. Filed Aug. 26, 1927. Serial No. 215,676. 1 Claim. (Cl. 152—12.)



In mechanism adapted to be used with a valve cap for securing a valve stem formed with an enlarged base and a body portion to a tire rim provided with an aperture therethrough, the combination with upper and lower collars slidably fitting around said body portion, of a coiled spring interposed between said collars and having its upper and lower ends of larger diameter than its intermediate portion, the lower end of said upper collar provided with a centrally disposed dovetailed recess therein to detachably receive the enlarged upper end of said spring, the upper end of said lower collar provided with a centrally disposed dovetailed recess therein to detachably receive the enlarged lower end of said spring, said lower collar having its lower end tapered to seat in said tire rim aperture when said spring is compressed by the pressure exerted upon the upper end of said collar by said valve cap in position on said valve stem.

---

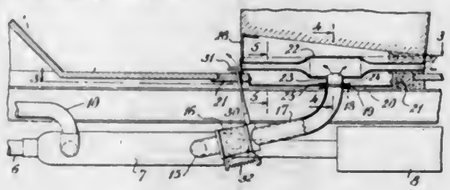
1,696,212. SELECTIVE-TRANSLATION SYSTEM. JOHN PETER SCHAFER, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1923. Serial No. 682,180. 8 Claims. (Cl. 250—9.)



1. In an electric circuit, a relay device having input and output circuits, an impedance element connected between said circuits to prevent the flow of waves of given frequency through said output circuit, and an impedance ele-

ment connected to said output circuit to prevent the flow of waves harmonic to said given frequency in said output circuit.

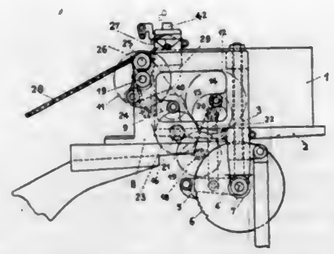
---



1,696,213. CRUSHER. HARRY J. SHELTON, University City, Mo. Filed Sept. 28, 1927. Serial No. 222,431. 16 Claims. (Cl. 83—11.)

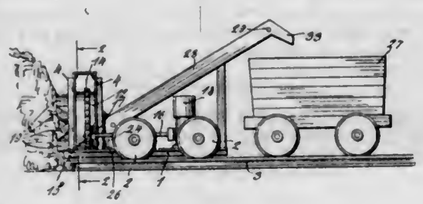
1. A crusher comprising an endless series of vertically inclined travelling impact plates provided with supporting rollers near their ends and end extensions adapted for chain engagement projecting beyond said rollers, track beams for said rollers, removable driving chains detachably connected to and supported by said extensions, and means to operate said chains.

---



1,696,214. HEATER FOR AUTOMOBILES. SAMUEL A. SNELL, Detroit, Mich., assignor to Frederick C. Matthael, Detroit, Mich. Filed July 30, 1926. Serial No. 125,881. 10 Claims. (Cl. 98—2.)

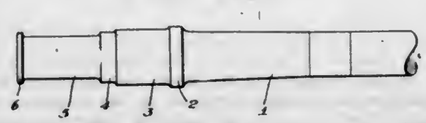
1. A register for use in a closed automobile divided into compartments and having an air heater beneath the floor thereof and a conduit leading upwardly from the heater, which comprises a conduit member connected to the conduit to receive heated air from the heater, and a branch disposed between compartments and connected to the member and having a plurality of outlet openings above the level of the floor and arranged to deliver heated air into the several compartments of the automobile body horizontally over the floor.



1,696,215. APPARATUS FOR REMOVING SHEETS FROM A PILE. GEORG SPIESS, Liepzig-Plagwitz, Germany. Filed May 28, 1927, Serial No. 195,094, and in Germany May 27, 1926. 14 Claims. (Cl. 271—27.)

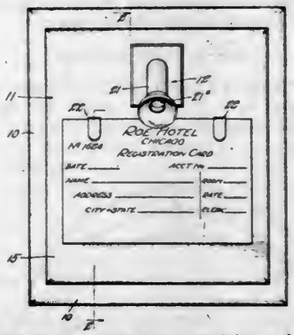
1. An apparatus for removing sheets from a pile by means of suction, comprising suction devices arranged at the sides of the pile on transversely adjustable pivoted carrier arms, and adapted to seize the front edges of the sheets, lift them and pull the sheets from the pile by a swinging movement of the arms.

---



1,696,216. SHOVELING MACHINE. BENJAMIN C. STANHOPE, Denver, Colo. Filed Dec. 13, 1927. Serial No. 239,634. 3 Claims. (Cl. 198—0.)

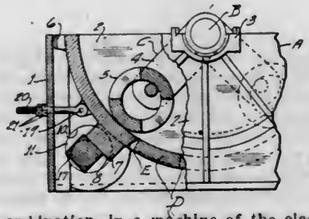
1. An apparatus of the class described, comprising, in combination, a supporting frame work, a cylinder rotatably supported thereon, a plurality of spiral shovels secured to the inner surface of said cylinder and projecting from one end thereof, that portion of the shovels within the cylinder being enclosed, a shield covering a portion of the lower end of the cylinder opposite from the end where the shovels project and means for rotating said cylinder.



---

1,696,217. METHOD OF RECLAIMING OF WORN CAR AXLES. WALTER H. STOCKING, Coraopolis, Pa., assignor to Pittsburgh Forgings Company, Coraopolis, Pa., a Corporation of Delaware. Filed Feb. 15, 1928. Serial No. 254,398. 2 Claims. (Cl. 29—105.)

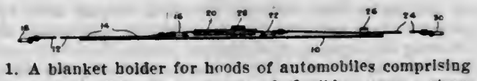
1. The method herein described of reclaiming worn car axles which consists in trimming away the end collars, heating to forging temperature and while so heated upsetting the end portions with new end collars, swedging the medial body throughout all its extent, and finally machining the ends.



1,696,218. FOUNTAIN-PEN DESK SET. GEORGE E. SWEETNAM and JAMES ORECK, Chicago, Ill., assignors to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a Corporation of Delaware. Filed Feb. 15, 1926. Serial No. 88,208. 5 Claims. (Cl. 120—108.)

1. A fountain pen desk set comprising a lower section, an upper section detachably secured to said lower section, a receptacle mounted in said upper section, and means secured to said upper section for securing said receptacle therein.

---

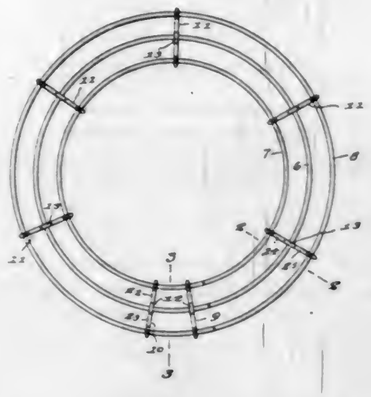


1,696,219. PULVERIZING MACHINE. JOSEPH TEIPEL, St. Louis, Mo., assignor to American Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 29, 1927. Serial No. 187,524. 2 Claims. (Cl. 83—11.)

1. In combination, in a machine of the class described, a casing, bosses oppositely presented outwardly from the side walls of the casing, said bosses having circular apertures aligned transversely of the machine, a hammer-mechanism mounted for operation within the casing, a grinding-plate mounted for adjustable movement pivotally within the casing in co-operative relation to the hammer-mechanism, and means for adjustably shifting the plate pivotally relatively to the hammer-mechanism, said means including cylindrical bushings mounted for rotatory movement in the apertures of the bosses and having openings aligned transversely of the machine and eccentrically disposed to the apertures of the bosses, spaced lugs projecting from the outer face of said plate, each of said lugs having a flat end-face obliquely disposed to the end wall of the casing, and a shaft extending transversely of and through the casing and having its ends disposed in the openings of the bushings, the shaft intermediate its ends being of non-circular section for flatwise plate-supporting engagement with the flat end-faces of said lugs, said shaft being shifted obliquely relatively to the lugs and said plate being shifted pivotally on rotatory actuation of said bushings.

---

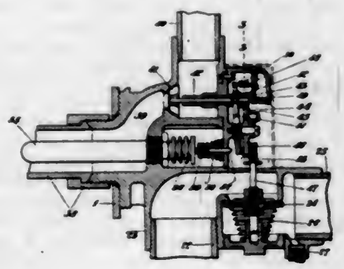
1,696,220. BLANKET HOLDER FOR HOODS OF AUTOMOBILES. HARRY A. TOWNSEND, Minneapolis, Minn. Filed Sept. 8, 1927. Serial No. 218,235. 2 Claims. (Cl. 24—73.)



1. A blanket holder for hoods of automobiles comprising a central flexible strap, a second flexible narrow strap

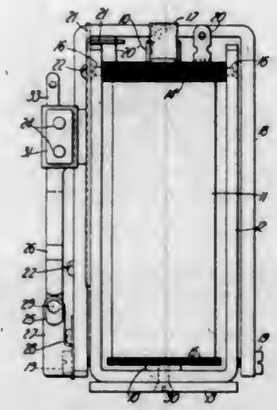
sewed to one end of said central strap, rings attached to both ends of said second strap, a coiled spring disposed on the outer surface of said central strap and attached at one end to the inner one of said rings, a third flexible narrow strap, and rings attached to both ends of said third strap, the other end of said spring being attached to the inner one of said last mentioned rings.

---



1,696,221. WREATH FORM. EARL D. TUBBS, New York, N. Y. Filed July 2, 1927. Serial No. 203,078. 2 Claims. (Cl. 41—12.)

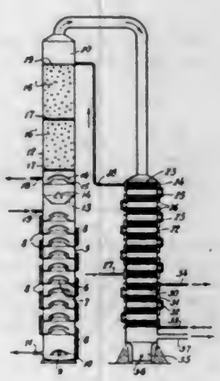
1. An article of the class described, comprising three wires disposed in circular formation and having their ends overlapping, one of said wires being disposed centrally and without the plane of the other two wires, and cross-stays having eye portions to receive said central wire and having angular disposed side portions provided with loops for engaging the other two wires, said cross-stays also serving for clamping the overlapping ends of all the wires together.



---

1,696,222. TEMPERATURE CONTROL FOR WATER HEATERS. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed May 19, 1923. Serial No. 640,079. 19 Claims. (Cl. 236—23.)

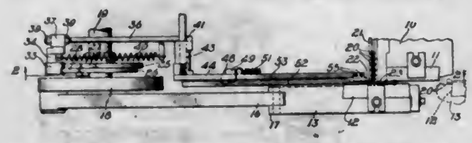
1. In a water heater the combination of a fuel burner, a heating unit positioned above said burner, a fuel control valve, a reciprocable rotor member positioned in the path of the water flow through the said heating unit and adapted to be actuated by the said flow, and means for effecting the opening and closing movements of the said fuel valve by a combination of the reciprocating and rotary movements of the said member.



1,696,223. ELECTROMAGNETIC DEVICE. JAMES A. WOTTON, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1924. Serial No. 714,996. 3 Claims. (Cl. 175—30.)

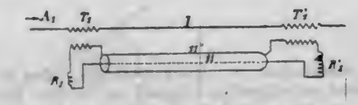
1. In an electromagnetic device, a winding, a metallic frame surrounding this winding, one end of said winding being connected to said frame, and a terminal mounted in close proximity to said frame so as to form an air gap between said terminal and said frame of a predetermined value such that the impedance of said air gap is less than the impedance of said winding.

---



1,696,224. METHOD FOR TREATING FILTER LIQUOR. HARALD AHLQVIST, Rye, N. Y. Filed Nov. 17, 1926. Serial No. 148,989. 5 Claims. (Cl. 203—1.)

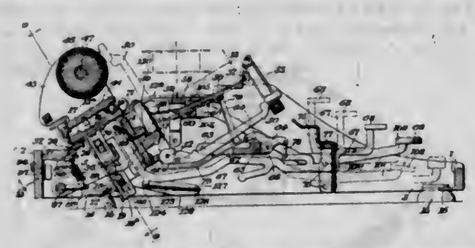
1. The improvement in the method of separating ammonia from filter liquor produced in the ammonia-soda process, which comprises distilling the liquor, preheating the liquor by direct contact with the vapors produced by distillation thereby causing further vaporization, conducting the vapors thereafter in countercurrent heat exchange with fresh liquor, causing the condensate from the vapors to follow the path thereof during the heat exchange and separately withdrawing the condensate consisting of weak ammonia liquor and the residual uncondensed vapors containing ammonia in the gaseous phase.



1,696,225. THREAD-FORMING MECHANISM. HAROLD LANGLEY BLOOD, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1925. Serial No. 28,865. 9 Claims. (Cl. 80—8.)

1. In a thread rolling mechanism, a pair of die members having cooperating die faces, means for causing an intermittent relative motion therebetween to form a screw thread on a blank interposed between said faces, and means for successively feeding a plurality of blanks from a common point to and between said members at predetermined intervals to effect a predetermined spaced relationship of the blanks between the members during each thread forming relative movement of the die members.

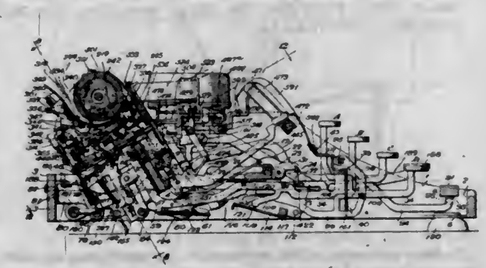
---



1,696,226. PROTECTIVE SYSTEM FOR ELECTRIC CABLES. FLORIMOND DOUCHET, Paris, France, assignor to Forges & Ateliers de Constructions Electriques de Jeumont Société Anonyme, Paris, France, a French Joint Stock Company. Filed Apr. 12, 1927, Serial No. 183,152, and in France May 7, 1926. 7 Claims. (Cl. 175—294.)

1. A protective system for electric cables, comprising a pair of transformers, said transformers having their primaries included in the circuit of one conductor of the cable to be protected, and having their secondaries connected in opposition by a pilot circuit, said pilot circuit comprising two conductors, one surrounding the other.

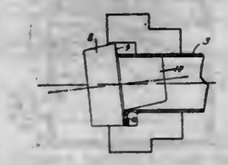
---



1,696,227. TYPEWRITING MACHINE. ALONZO B. ELY and EDWIN L. HARMON, Groton, N. Y., assignors, by mesne assignments, to L C Smith & Corona Typewriters Inc., Syracuse, N. Y., a Corporation of New York. Filed May 9, 1925. Serial No. 29,125. 48 Claims. (Cl. 197—73.)

1. In a typewriting machine, the combination of a main frame; a platen carriage; a platen on the carriage; a bed upon which the carriage is mounted to travel transversely of the main frame; key-actuated multiple-case printing instrumentalities on the main frame; a pair of resilient sheet metal members inside the main frame extending fore and aft of the machine and each rigidly secured adjacent one edge only thereof to the main frame to permit flexing of the free portion thereof transversely of the machine, said pair of resilient members being formed with raceways parallel with their rigidly secured edges facing inward toward opposite sides of the machine; a pair of rigid members rigidly held to the bed extending between the resilient members and formed with raceways facing outward toward opposite sides of the machine opposite the raceways on the resilient members; antifriction rolling elements in the races formed by the opposed raceways on each two adjacent resilient and rigid members; adjustable means on the main frame for flexing the free portions of said resilient members transversely of the machine and positively holding them in flexed position; and key-operated means for shifting the bed and the parts movable therewith to change case.

---



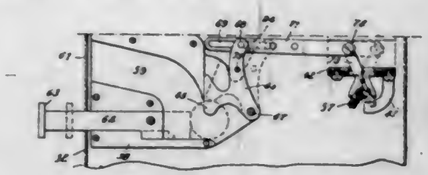
1,696,228. TYPEWRITING MACHINE. ALONZO B. ELY and EDWIN L. HARMON, Groton, N. Y., assignors, by mesne assignments, to L C Smith & Corona Typewriters Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 31, 1925. Serial No. 66,000. 82 Claims. (IC. 197—186.)

56. In a typewriting machine, a main frame; a platen carriage and a shift frame therefor both located forward of the rear of the main frame; a platen on the carriage; a type-bar action including type bars and key levers located entirely in the space between the shift frame and the front of the main frame and below the level of the top of the platen; carriage escapement mechanism under the carriage and in rear of the type bar action operable by the type bar action; ribbon spools and rotating devices therefor supported from the shift frame below the level of the platen and entirely forward of the shift frame; a rocking frame operable by the type action; and operating connections between the rocking frame and said rotating devices said rocking frame and operating connections being located entirely forward of the shift frame and escapement mechanism.

---

1,696,229. METHOD FOR FORMING FLANGES ON PIPES. FRED C. FANTZ, Webster Groves, Mo., assignor to Midwest Piping & Supply Company, Incorporated, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 17, 1926. Serial No. 129,742. 4 Claims. (Cl. 78—81.)

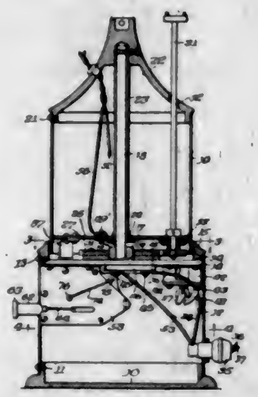
4. The method of upsetting a flange on a tubular article consisting in subjecting the edge of the article to a gradually increasing circumferential pressure increasing at the same rate and degree continuously around the circumference.



1,696,230. ELECTRICAL PILOTAGE. JOHN J. GILBERT, Fort Washington, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1923. Serial No. 648,689. 4 Claims. (Cl. 177—385.)

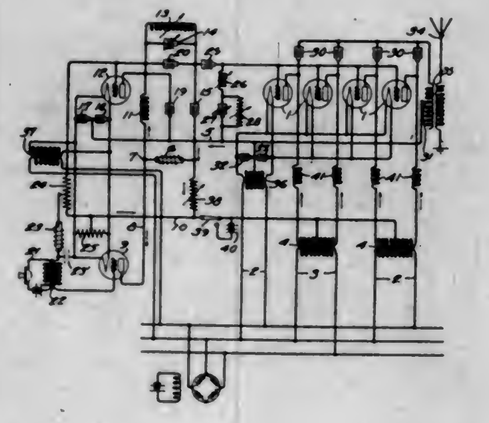
4. A piloting circuit comprising an electrical conductor continuously loaded with magnetic material throughout at least that portion of its length where it is desired to produce an external electromagnetic field.

---



1,696,231. COIN-CONTROLLED FAN. MYRON L. HANEY, Beloit, Wis. Filed Nov. 19, 1924. Serial No. 750,755. 5 Claims. (Cl. 194—74.)

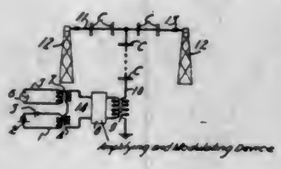
1. In a coin controlled mechanism for operating an electric switch, the combination of a coin chute, a trigger pivoted opposite the lower end of said chute, a pivoted switch member connected to said trigger through a lost motion connection, and a push bar operating through a coin in the bottom of said chute to swing said trigger and thereby actuate said switch member, said lost motion connection permitting said trigger to return to coin engaging position without actuating said switch member.



---

1,696,232. COIN-CONTROLLED FAN. MYRON L. HANEY, Chicago, Ill. Original application filed Nov. 19, 1924, Serial No. 750,755. Divided and this application filed June 10, 1927. Serial No. 197,780. 8 Claims. (Cl. 230—271.)

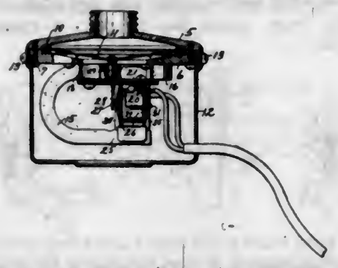
1. The combination with a revoluble supporting member, of a fan and an electric motor therefor mounted on said supporting member, means driven by said motor for effecting a turning movement of said supporting member, fan and motor, and automatic means for de-energizing said motor after a predetermined number of revolutions of said supporting member.



1,696,233. ENERGIZING VACUUM DISCHARGE DEVICE BY ALTERNATING CURRENT. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1922. Serial No. 599,206. 16 Claims. (Cl. 250—17.)

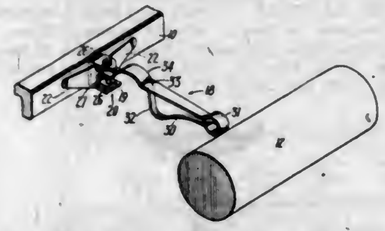
15. In combination two space discharge tubes in tandem whereby output waves supplied by the first tube are impressed upon the second tube and repeated thereby without change of frequency, a source of alternating current, and connections of the space paths of said tubes to said source, whereby the second tube serves to rectify alternating current from said source to supply uni-directional space current to the first tube.

---



1,696,234. ANTENNA. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1923. Serial No. 669,220. 2 Claims. (Cl. 250—33.)

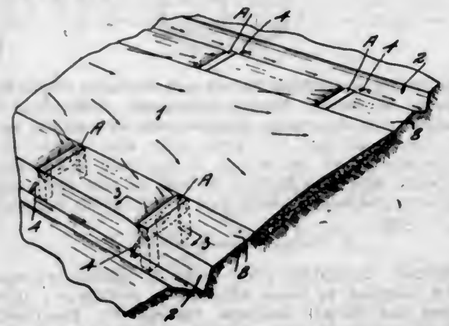
1. In an open radiating circuit for transmitting at short wave lengths, means for increasing the effective natural frequency of said circuit comprising a plurality of capacities included in series in said circuit and spaced apart from each other, the nductance and capacity of the portions of said circuit between said spaced capacities being too small to form an element which can be self-resonating at any wave length in the neighborhood of the short wave lengths employed.



1,696,235. LOUD-SPEAKER UNIT. HUGO HELLER and JOHN C. MITCHELL, Milwaukee, Wis., assignors to A. C. Kootz, Milwaukee, Wis. Filed Dec. 2, 1926. Serial No. 152,111. 11 Claims. (Cl. 179—114.)

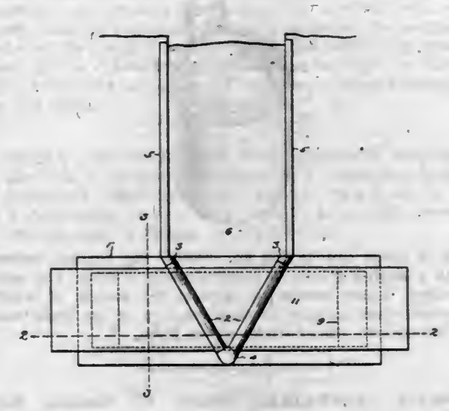
1. A device of the character described including a mounting plate provided with bosses, a magnet having a leg disposed between said bosses, and a strap spanning said leg from one boss to another and connected with said bosses, said leg being confined between said plate and strap, whereby to secure said magnet to said plate.

---



1,696,236. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 3, 1926. Serial No. 120,351. 11 Claims. (Cl. 197—139.)

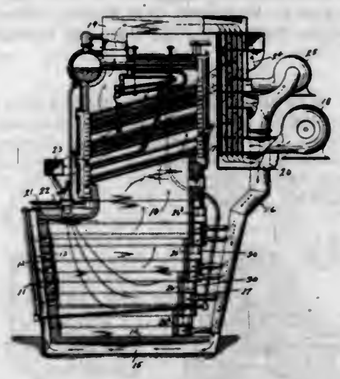
11. In a typewriting machine having a revoluble platen and a carriage therefor, a paper-finger mounted on said carriage, having means to contact with said platen, and means to deflect a leading edge of a work-web towards said platen, including an arcuate paper-deflector supported at both extremities by said finger.



---

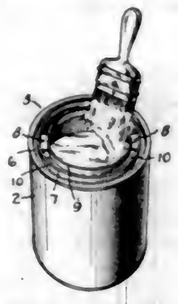
1,696,237. MEANS FOR PROTECTING PAVED ROADS AGAINST EROSION. OTTO V. HOUGH, Warrenton, Mo. Filed Aug. 24, 1925. Serial No. 51,944. 5 Claims. (Cl. 94—33.)

5. A concrete pavement, a drainage ditch extending along the edge of said pavement and spaced therefrom and a plurality of transversely disposed drain devices for carrying water from said pavement to said ditch.



1,696,238. APPARATUS FOR GUIDING AUTOMOBILES INTO POSITION FOR SERVICE. ARTHUR C. ISBELL, Ivoryton, Conn. Filed June 30, 1928. Serial No. 289,510. 7 Claims. (Cl. 238—3.)

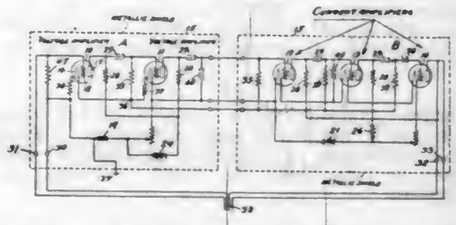
1. An apparatus for guiding an automobile into service position comprising a table mounted to move transversely across the service position and freely rotating rollers fixed in position and extending obliquely across said table.



---

1,696,239. FURNACE WALL. DAVID S. JACOBUS, Jersey City, N. J., assignor, by mesne assignments, to Fuller Lehigh Company, a Corporation of Delaware. Filed July 9, 1925. Serial No. 42,367. 6 Claims. (Cl. 110—1.)

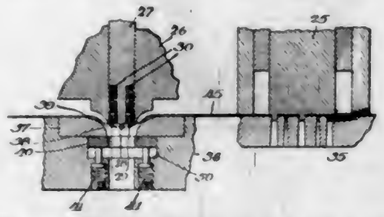
1. A furnace chamber having a wall thereof made up of a plurality of sections arranged in stepped relation, each section comprising an inner and an outer wall spaced apart to form an air duct therebetween, a fixed support beneath each section to support both said inner and said outer walls thereof, the inner wall of each section being extended upward into overlapping sliding engagement with the lower part of the inner face of the next higher section.



1,696,240. PAINT CAN. ALBERT G. KIRCHER, Jr., Jamaica, N. Y. Filed Nov. 5, 1926. Serial No. 146,295. 2 Claims. (Cl. 91—63.)

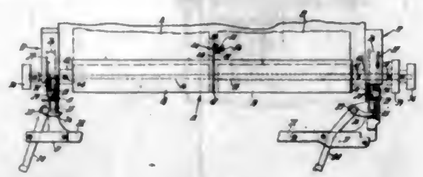
1. A paint can having an annular top portion formed with a sealing groove to cooperate with a cover, and with another, innner groove or channel the bottom of which is open, there being a brush-wiping lip at the inner side of this groove, substantially as set forth.

---



1,696,241. REPEATER. BURTON W. KENDALL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 23, 1919. Serial No. 272,627. 10 Claims. (Cl. 179—171.)

8. The method of operating an amplifier circuit which comprises arranging the input lines of said amplifier in close proximity to the output lines thereof, whereby said amplifier tends to generate oscillations and in suppressing said oscillation.



---

1,696,242. METHOD OF AND APPARATUS FOR FORMING ARTICLES. FREDERIC SHIELDS KOCHENDORFER, River Forest, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,282. 5 Claims. (Cl. 113—42.)

1. The method of forming an article from a sheet of material, which consists in producing concentric circles of graduated perforations in the sheet in which the outer perforations are larger than the inner perforations, preliminarily forming the perforated portion, severing the formed portion from the sheet, and further forming the severed portion into an article by contracting the area of the material in proportion to its distance from a central point.

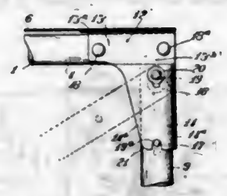
1,696,243. TYPEWRITING MACHINE. ALFRED G. F. KUKOWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Original application filed Sept. 22, 1924, Serial No. 739,020. Divided and this application filed July 31, 1926. Serial No. 126,132. 6 Claims. (Cl. 197—129.)

4. In a typewriting machine having a platen-frame, a platen-shaft and a platen mounted thereon, the combination with a second platen rotatably mounted on said shaft in alignment with the first platen, of a disk centered upon said shaft between both platens and secured to one of the same to rotate therewith, and an annulus stationarily supported on said platen-frame and enveloping the periphery of said disk in such manner as to provide a bearing for said disk and thereby intermediately support said platens and said shaft, there being means upon both platens to locate said annulus upon said disk and also means associated with the platens to rotate either platen at will.

---

1,696,244. LANTERN. DONALD E. LINDSAY, Springfield, Pa., assignor to Murlin Manufacturing Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 27, 1927. Serial No. 208,681. 1 Claim. (Cl. 240—11.)

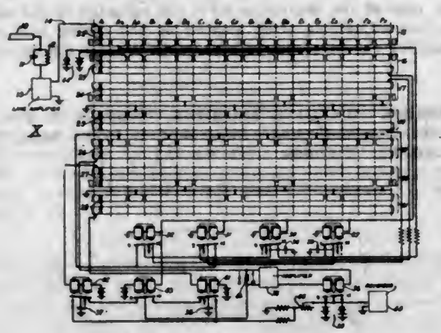
A lantern, comprising bottom and top members having sockets cast in the peripheries thereof, a plurality of resilient rods detachably engaging said sockets and having their ends bent to register with said sockets, and an annular band spot-welded to the rods intermediate the ends, said band holding the rods so that their ends will enter the sockets and be held therein by the resiliency of the rods.



---

1,696,245. FOLDING COT. FRED G. MANLY, Chicago, Ill., assignor, by mesne assignments, to George I. Goldwyn and Herman Goldwyn, Chicago, Ill., Copartners, doing business as Goldwyn Brothers. Filed Apr. 20, 1925. Serial No. 24,329. 2 Claims. (Cl. 5—314.)

1. In a folding cot, a side frame member, a substantially L-shaped bracket fixed to the frame member, said bracket being formed of a single piece of sheet metal shaped to



provide angularly arranged channel-shaped parts, the channels of which communicate, one of said parts being split longitudinally and the other part being unbroken and provided with oppositely disposed elongated slots and notches

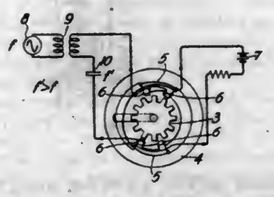
aligned with such slots, a supporting leg, a pivot pin passing through the supporting leg and through said slots, and a latching pin arranged parallel to the pivot pin and adapted to engage said notches for locking the leg in a position at right angles to the side frame member.

---

1,696,246. TELEGRAPH SYSTEM. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1928. Serial No. 245,647. 8 Claims. (Cl. 178—70.)

1. A telegraph system comprising a line terminating in a rotary distributor, a pair of condensers arranged to be alternately charged by line current impulses, a second pair of condensers arranged to be alternately charged during successive line impulse intervals and relaying or repeating means, characterized in this that the condensers of each pair are alternately discharged through a circuit common to the members of each pair, one condenser of each pair being discharged simultaneously and the predominating charge of the condensers discharging at the same time controlling the operation of said relaying or repeating means.

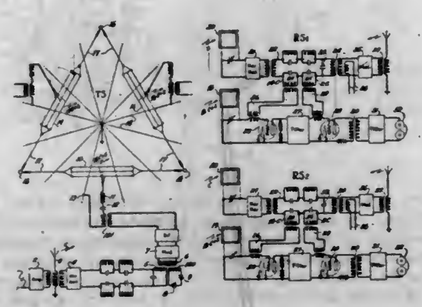
---



1,696,247. RAILROAD TIE. JOHN W. MCMANAMA, Waltham, Mass. Filed Mar. 1, 1928. Serial No. 258,201. 4 Claims. (Cl. 238—89.)

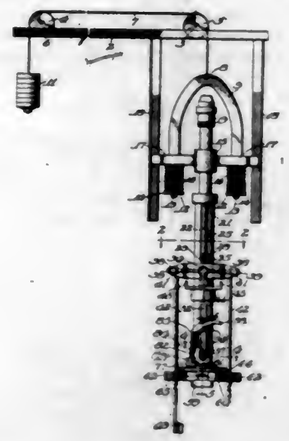
3. A railroad tie comprising a metal bar composed of an inverted railroad rail, the edge portions of the inverted base of the rail overhanging the inverted web and head thereof and having rail spike-receiving openings, vertical tubular bushings of compressible material, having lower ends seated on the inverted head, and upper ends seated on the overhanging portions of the inverted base, so that vertical displacement of the bushings in either direction is opposed by said head and base, the bores of the bushings registering with the spike-receiving openings in the base, and a molded concrete body enveloping the inverted web, the head, and the bushings, said body confining the bushings between the inverted base and head, and preventing expansion of the external surfaces of the bushings by spikes driven into the bores thereof, said bores being expansible by the spikes.

---



1,696,248. CIRCUITS FOR SYNCHRONOUS MOTORS. EDMUND R. MORTON, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1927. Serial No. 181,324. 8 Claims. (Cl. 172—275.)

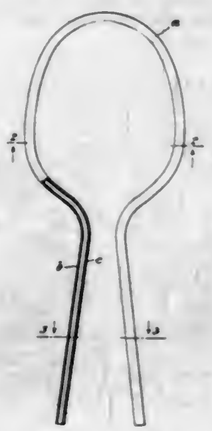
1. A synchronous motor system in which hunting is substantially absent, comprising means in series with the motor armature for tuning the armature circuit to a frequency above the frequency of the current supplied thereto and prevent hunting action, said means serving to give the armature circuit a capacitative reactance at the supply frequency.



---

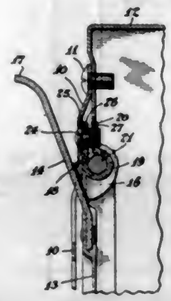
1,696,249. ANTENNA SYSTEM. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1924. Serial No. 686,472. 4 Claims. (Cl. 250—33.)

1. An antenna system comprising a plurality of antennæ, means for supporting said antennæ to constitute the sides of a regular geometric figure, means for holding said antennæ spaced apart to maintain the reactions between said antennæ at a low value, whereby the system possesses a number of impedance minima equal to the number of antennæ.



1,696,250. MACHINE FOR RAMMING MOLDS AND THE LIKE. ELAM D. PATTERSON, Coshocton, Ohio, assignor to James B. Clow and Sons, Chicago, Ill., a Corporation of Illinois. Filed Oct. 16, 1926. Serial No. 141,919. 26 Claims. (Cl. 22—41.)

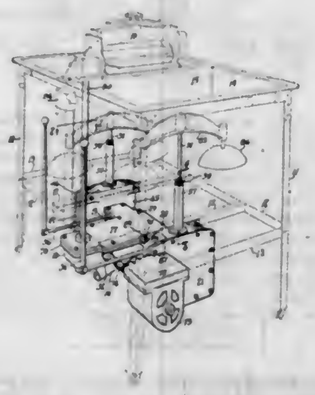
1. In a ramming machine, a ram rod, means independent of the mold for automatically imparting motion to said rod in two directions transverse to one another simultaneously, and means rendered operative by irregularities of the material being rammed for moving said rods in a third direction.



---

1,696,251. METHOD OF MANUFACTURING RACKET FRAMES. HAROLD D. PENNEY, Pelham, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Original application filed Feb. 16, 1923, Serial No. 619,413. Divided and this application filed Feb. 4, 1926. Serial No. 85,882. 2 Claims. (Cl. 153—32.)

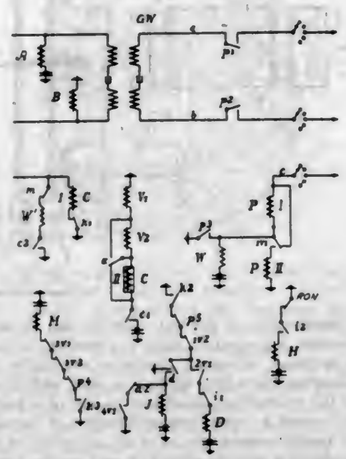
1. The method of making a striking implement comprising bending a length of tubing of substantially rectangular cross-sectional area to form the frame of the implement of desired shape, the tubing being of metal not susceptible of tempering by heat treatment, indenting the tubing on opposed sides to provide channels thereon, and flattening the other opposed sides of the tubing thereby working the metal to provide requisite stiffness.



1,696,252. REGISTER. JOSEPH V. PETRELLI, New Rochelle, N. Y., assignor to Tuttle & Bailey Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1926. Serial No. 101,880. 6 Claims. (Cl. 98—106.)

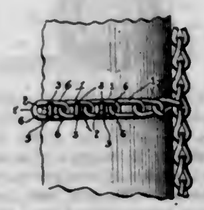
1. A register comprising a casing, a shutter, a pair of up-standing ears carried by the shutter near the center of one edge of the shutter, a pivot pin mounted in the ears, and an adjustable strap carried by the casing and surrounding the pivot pin to adjustably support the shutter.

---



1,696,253. WASHING MACHINE. WILLIAM E. PINCKNEY, Portland, Oreg. Filed Sept. 1, 1927. Serial No. 216,822. 5 Claims. (Cl. 74—7.)

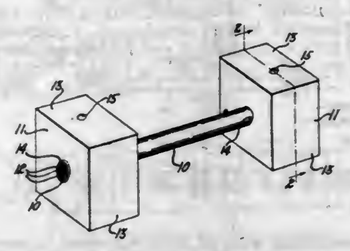
1. In a transmission for washing machines, the combination of an inclined countershaft having a bevel gear on the upper end thereof; a pair of bevel gears meshing with said first mentioned gear having a common horizontal axis, each of said last mentioned gears having a shaft upon which it is rotatably mounted, each of said shafts having a crank arm secured to its outer end; a yoke operably connected to each crank; clutches between said bevel gears and their respective cranks whereby said yokes can be operated in opposite directions or either yoke can remain stationary; a drive shaft positioned transversely across the lower end of said countershaft; a worm and wheel drive between said drive shaft and countershaft; and a housing operably supporting the above included elements.



1,696,254. AUTOMATIC TELEPHONE SYSTEM. WALTER PINELL, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemensstadt, near Berlin, Germany. Filed June 13, 1927, Serial No. 198,345, and in Germany Oct. 12, 1926. 6 Claims. (Cl. 179—18.)

1. In an automatic switch, a test relay, a switching device, and means controlled by said switching device for pre-magnetizing but not operating said test relay responsive to the seizure of said switch in order to assist said relay to operate when an idle line is encountered by said switch.

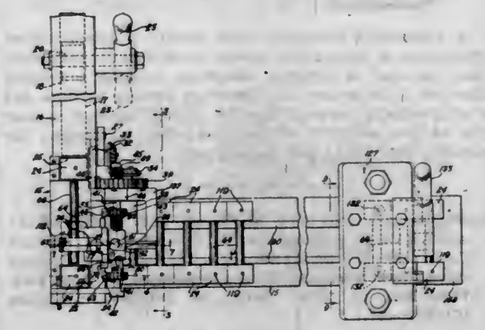
---



1,696,255. CROSS CHAIN FOR VEHICLE NONSKID DEVICES. JOHN R. REYBURN, Fairfield, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed July 8, 1925. Serial No. 42,137. 5 Claims. (Cl. 152—14.)

2. A non-skid chain provided with a transverse non-skid calk of sufficient length only to bridge the sides of the chain link and welded to the outer surface of each side.

5. In a cross-chain for non-skid devices for vehicle wheels, a twisted chain link, having salient road-engaging strand portions, and a bridging calk integrated metallically with said link whereby it is constituted a permanent element of the link and presenting sharp edges at substantially the same level as the salient strand portions, and in the direction in which the force of traction is exerted, said edges projecting in substantially opposite directions with respect to each other, said contact body being adapted to be turned with the cross-chain, as the latter rolls between the tire and road in use, into position to cause one or the other of said sharp edges to engage the road surface and afford traction in either of two directions.

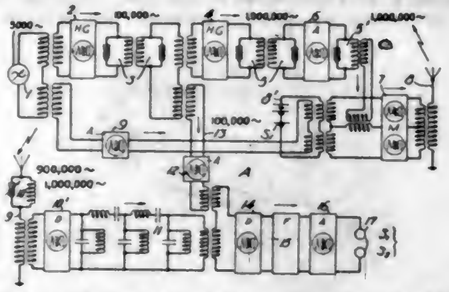


1,696,256. SPOOL AND METHOD OF MANUFACTURING SPOOLS. GEORGE LYNDEN ROCK, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 187,001. 2 Claims. (Cl. 242—124.)

1. The method of manufacturing spools having attached heads, which consists in forming an aperture in a head for the insertion of a core, forming a second aperture in the head at an angle to the longitudinal axis of the first aperture and extending only to the periphery of the first aperture and at one point thereof, inserting the core in the first aperture, inserting a member in the second aperture, and then causing the member to be driven in a direction at an angle to the longitudinal axis of the second aperture until it is wedged between abutting surfaces to thereby rigidly unite the head and the core.

---

1,696,257. APPARATUS FOR ASSEMBLING ELEMENTS OF ARTICLES. GEORGE LYNDEN ROCK, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1927. Serial No. 205,823. 12 Claims. (Cl. 1—1.)

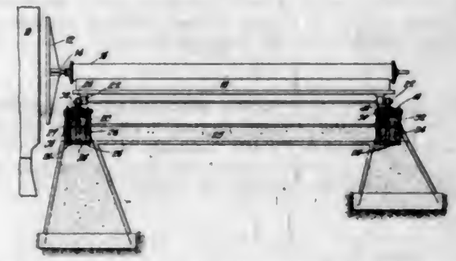


1. In an apparatus for assembling spool elements, means for positioning apertured spool heads and a connecting member in a predetermined relation, means for assembling the heads on the member, means for inserting a pin within a second aperture provided in each spool head, and means for staking the pins to rigidly attach the heads to the member.

---

1,696,258. CARRIER-WAVE COMMUNICATION. JAMES W. SCHMIED, West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 29, 1922. Serial No. 571,731. 13 Claims. (Cl. 250—9.)

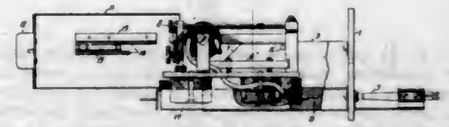
1. The method which consists in transmitting from each of two stations to the other on principal carrier waves, receiving said waves simultaneously at the receiver of each



station and demodulating each with the other, selecting the demodulation products corresponding to the difference frequency of said carrier waves, demodulating said products

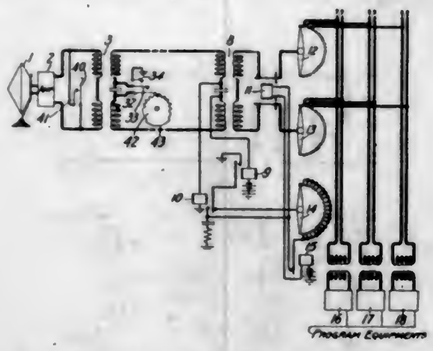
with a reinforcing wave of frequency equal to the difference of said carrier frequencies, and deriving said carrier waves and said reinforcing wave from the same source.

---



1,696,259. PUSHER TRACK FOR COKE OVENS. LLOYD F. SCHRADER, Richmond Hill, N. Y., assignor to Foundation Oven Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 31, 1926. Serial No. 132,773. 7 Claims. (Cl. 238—25.)

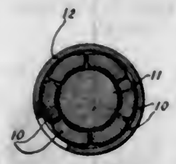
1. Supporting means for rails subject to lateral thrust comprising a foundation having substantially horizontal base portions at different elevations forming a vertical shoulder, a tie having complementary bearing portions and a substantially vertical shoulder portion adapted to abut the vertical shoulder of the foundation and means for securing said tie to said foundation.



---

1,696,260. CASING AND SUPPORT FOR ELECTRICAL APPARATUS. CARLETON F. SWASEY, New Canaan, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 11, 1922. Serial No. 560,069. 2 Claims. (Cl. 220—41.)

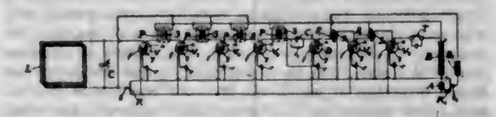
1. An apparatus mounting comprising a plate having mounted thereon a trough-like receptacle for supporting apparatus, said receptacle being provided with studs on the interior surface of its sides and an open-ended cover adapted to slide over said receptacle, said cover being provided with flanges and internally mounted resilient members cooperating with the said studs on said receptacle for securely holding said cover in place, said elements comprising the receptacle cover and fastening means being so constructed and arranged that when the cover is placed in position it will exert no strain on the apparatus placed in said receptacle.



1,696,261. TRANSMISSION SYSTEM. SAMUEL B. WILLIAMS, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1927. Serial No. 211,678. 7 Claims. (Cl. 179—16.)

1. In combination, a central office having an automatic switch therein arranged to take a plurality of successive settings without releasing, circuits selectable by said switch, a subscriber's line leading to said switch, a transmitter at the substation adjustable to any of a plurality of positions to send a corresponding number of impulses over the line, means responsive to said impulses to set said switch to select a desired circuit, a dial on the transmitter indicating the circuit selected, and means controlled by the transmitter once during a complete operation for restoring the automatic switch.

---



1,696,262. CONDUCTOR FOR THE TRANSMISSION OF ELECTRICAL ENERGY AND METHOD OF PRODUCING THE SAME. ADOLPH FRANCIS BANDUR, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1923. Serial No. 682,417. 13 Claims. (Cl. 178—45.)

1. A loaded signalling conductor comprising a composite metallic strand consisting of a metallic wire wrapped with metallic tape, the said tape being concave in cross section longitudinally of the tape, and a magnetic loading material wrapped around said composite strand and making only a line contact with said tape, said loading material requiring heat treatment to give it a desired electrical characteristic.

---

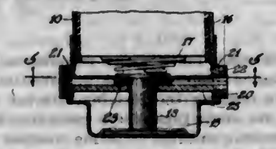
1,696,263. RADIO APPARATUS. CHARLES E. BONINE, Melrose Park, Pa. Filed Aug. 12, 1922. Serial No. 581,306. 17 Claims. (Cl. 179—171.)

1. In a multi-stage amplifying system, the combination with successive thermionic amplifiers, of inductive means for coupling said amplifiers, the inductance of the coupling means of a later stage being greater than the inductance of the coupling means of an earlier stage.

1,696,264. PHOTOGRAPHIC SHUTTER. THEODORE M. BAUECK, Rochester, N. Y., assignor to Ilex Optical Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 4, 1926. Serial No. 152,563. 10 Claims. (Cl. 95—63.)

1. In a photographic shutter, the combination with an exposure mechanism, a master member, a connection between the master member and the exposure mechanism for effecting the opening and the closing of the shutter by the movement of the master member in one direction, a pivoted detent for holding the exposure mechanism against closing, a latch pivoted to the detent, and an actuating lever controlling the movement of the master lever to bring the detent into detaining position, of means moved by the exposure mechanism for holding the latch out of cooperative relation with the actuating lever when the shuter is closed, so that the actuating lever may be moved to control the master member in order to bring the detent into detaining position, said latch controlling means being moved by the exposure mechanism to cause the latch to move into the path of the actuating lever upon the opening of the shutter, so that the detent may be moved out of detaining position through such latch upon the next movement of the actuating lever.

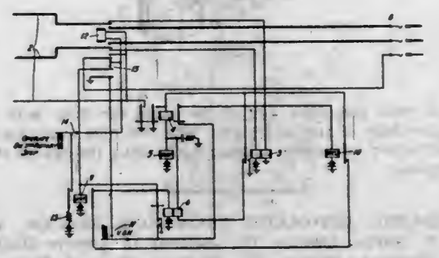
---



1,696,265. ACOUSTIC DEVICE. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1926. Serial No. 151,299. 14 Claims. (Cl. 200—81.)

1. An acoustically controlled device comprising constricted means for receiving acoustic waves, and means controlled thereby for producing a uni-directional flow of fluid toward said constricted means.

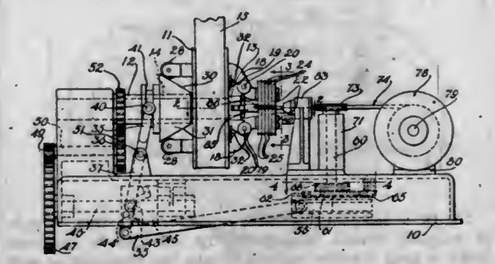
---



1,696,266. ELECTRICAL TESTING DEVICE. JOHN MAXWELL COOTE, Elizabeth, N. J., assignor, by direct and mesne assignments, to Coote Products Corporation, New York, N. Y., a Corporation of New York. Filed July 25, 1922. Serial No. 577,845. 8 Claims. (Cl. 175—183.)

1. A combined flash lamp and electrical testing device, comprising a casing, a lamp and battery for same contained within the casing, a receptacle member secured to the casing, a circuit controlling ring movably mounted thereon having a peripheral slit, and a contact member fitting therein and adapted to make contact with either end of the slit.

---

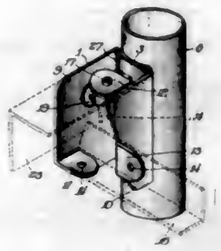


1,696,267. TELEPHONE SYSTEM. BERT G. DUNHAM, Hawthorne, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1927. Serial No. 198,487. 8 Claims. (Cl. 179—18.)

1, In a telephone system, a two movement switch, circuits therefor, and a relay in said circuits operated in one manner during the first movement of the switch and operated in another manner during the second movement of the switch to control said second movement.

---

1,696,268. APPARATUS FOR PRODUCING SOLDERING UNITS COMPRISING SOLDER AND FLUXING MATERIAL. JOSEPH WILLIAM FAY, Villa Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1924. Serial No. 736,844. 3 Claims. (Cl. 80—23.)

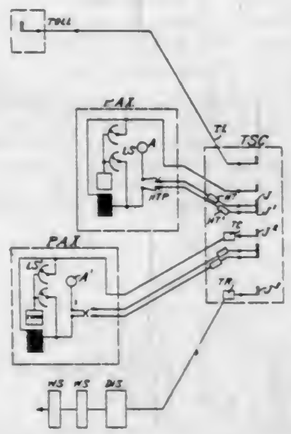


3. In an apparatus for forming cored solder units, forming rollers having cooperating edges, means for intermittently feeding solder having a core of fluxing material into a predetermined position with respect to the rollers, means cooperating with the intermittent feeding means to move the rollers into contact with a portion of the solder positioned by the feeding means, and means for revolving the rollers about the solder to form a spherical pellet of solder having a core of fluxing material sealed within a shell of solder.

---

1,696,269. CORNER LOCK. MARTIN FOX, Chicago, Ill., assignor to The Seng Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1923. Serial No. 630,756. 12 Claims. (Cl. 5—288.)

1. In a corner lock, a sheet metal housing having one side with an inside projection and its upper edge at a

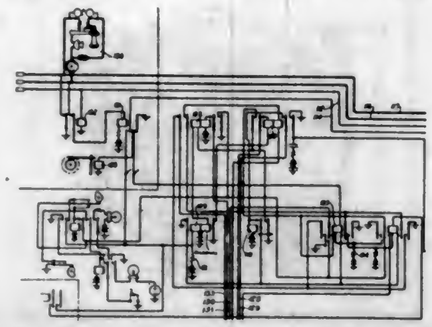


height slightly above and spaced from the other side, and an angle bar side rail having a notch in one edge for engagement with the projection at the side of the housing

and with the other web of the angle bar flush with the upper edge of the said higher side and also engaging the said other side of the housing for binding the spaced sides together.

---

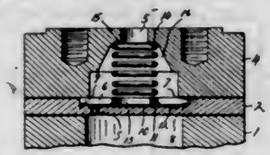
1,696,270. AUTOMATIC TELEPHONE SYSTEM. ROY F. GOULD, Chicago, Ill., assignor to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 1, 1926. Serial No. 151,907. 13 Claims. (Cl. 179—27.)



10. In a telephone system, a subscriber's line, a pair of hospital trunks terminating in one end in separate jacks, a plug common to said trunks for terminating said trunks at the other end, and a cord circuit adapted to complete a connection to said line through the medium of said plug when the line is called, said connection including the first of said trunks, said cord circuit, and the second of said trunks in series in the order named.

---

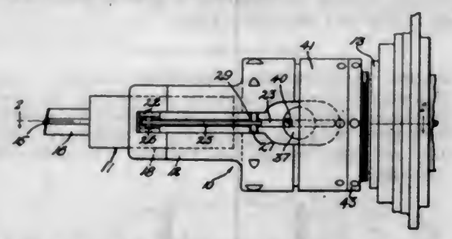
1,696,271. CALL-CHARGING TELEPHONE-EXCHANGE SYSTEM. ALFRED E. HAGUE, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 26, 1927. Serial No. 228,715. 10 Claims. (Cl. 179—9.)



1. In a telephone exchange system, a calling line, a plurality of called lines of different classes, selector switches for extending the calling line to said called lines, means for selectively operating said switches, means associated with one of said switches for altering circuits thereof in accordance with the class of the called line, a charging device for the calling line, a timing switch, means operative upon the response of the called subscriber to advance said timing switch through a plurality of positions, means controlled in the advance of said timing switch in accordance with the setting of said altering means to variably operate said charging device, an interrupter, and

means controlled by said interrupter to thereafter advance said timing switch slowly into normal position to measure off a predetermined conversational period, said timing switch advancing through similar cycles to repeatedly operate said charging device until said connection is released.

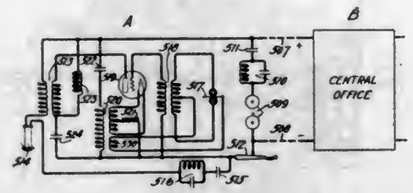
---



1,696,272. PUMP-VALVE ASSEMBLY. FRED J. HEIDEMAN, Detroit, Mich., assignor to Thomas C. Whitehead, Detroit, Mich. Filed Oct. 4, 1926. Serial No. 139,431. 14 Claims. (Cl. 251—119.)

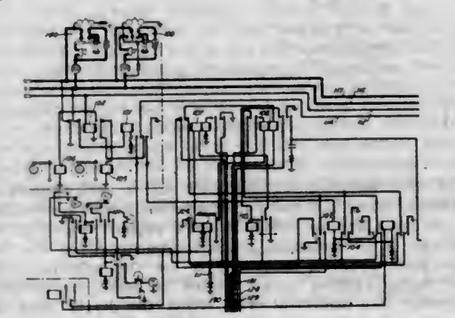
1. A valve assembly comprising a plate having a recess therein provided with openings in the base thereof, a ridge between said openings and the adjacent walls of said recess, and means for controlling the flow of fluid through said openings including a pair of superposed wafer valves, the upper valve having its marginal portions normally seated upon said ridge and the lower valve having its marginal portions normally resting against the base of said ridge and closing said openings.

---



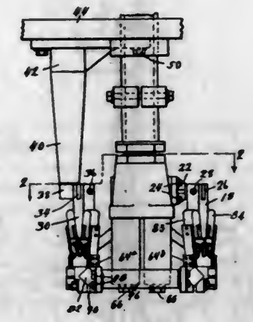
1,696,273. MECHANISM FOR WORKING PULPOUS MATERIAL. HELGO WIGGO JESPERSEN, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 713,704. Renewed June 14, 1928. 19 Claims. (Cl. 92—41.)

1. In a mechanism for working pulpous material on a core, a forming member mounted intermediate its ends, and means for rotating the forming member around the core to cause the centrifugal force generated by one portion of the forming member to bring another portion of the forming member into pressing engagement with the pulpous material.



1,696,274. SUBSTATION CIRCUITS. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,627. 12 Claims. (Cl. 179—81.)

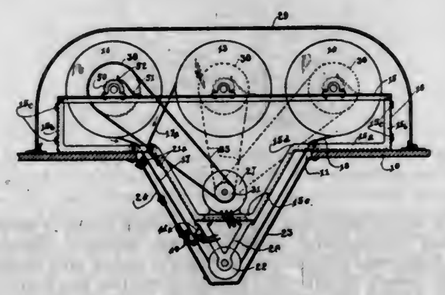
1. In a telephone exchange system, a central office, substation apparatus associated therewith including means to receive and produce speech currents, a space discharge amplifier at said substation in cooperative relation to said speech current receiving and producing means, a source of direct current and a source of alternating current at said central office, a common means to transmit current from said alternating current source to said amplifier and to apply a potential from said direct current source to said amplifier and means to transmit said speech currents from said producing means to said amplifier.



---

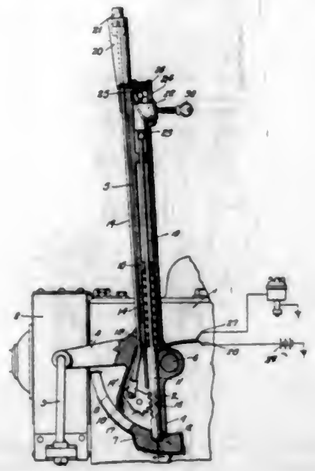
1,696,275. CALL-CHARGING TELEPHONE-EXCHANGE SYSTEM. LEWIS H. JOHNSON, Madison, and ALFRED E. HAGUE, West Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1927. Serial No. 227,396. 16 Claims. (Cl. 179—9.)

1. In a telephone exchange system, a calling line, a called line, means for extending said calling line to said called line, a call charging device for said calling line, means for measuring the number of unit periods of conversation elapsing from the time the called subscriber responds until the calling subscriber hangs up, a recording means operative by said last means, a circuit for operating said charging device, and means controlled by said measuring means to close said circuit a number of times in accordance with the record set up on said recording means.



1,696,276. MULTIBREAK ELECTRIC SWITCH. ARTHUR C. KELLE, Canton, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1925. Serial No. 19,988. 14 Claims. (Cl. 200—150.)

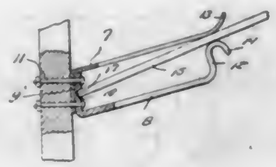
1. A movable switch member for a multibreak electric switch comprising a movable supporting structure having a pair of oppositely-directed arms, an insulating rod carried by each arm and extended transversely thereof and in opposite directions therebeyond, arcing members carried at both ends of said rods, and means carried by said movable structure arranged electrically to connect the arcing members on similar ends of said rods.



---

1,696,277. STREET-STOP SIGNAL FOR VEHICLES. CHARLES WALTER KLEMENT, Toronto, Ontario, Canada. Filed Oct. 31, 1927. Serial No. 230,003. 9 Claims. (Cl. 40—53.)

1. In a street stop indicator, a pair of spaced reels having a belt wound thereabout and extending therebetween, means including an electric motor for alternately driving one of said reels, a main electric circuit including said motor therein, a switch mechanism in said circuit co-acting with said belt and adapted for breaking said circuit at regular distance intervals travelled by said belt, a second circuit and a button therein for starting said motor when said main circuit is broken by said switch mechanism, and a third circuit and a switch mechanism therein co-acting with said belt and adapted for electrically connecting said motor to the source of electricity when said belt travels in a predetermined direction and when said first-mentioned switch mechanism breaks said first-mentioned circuit.

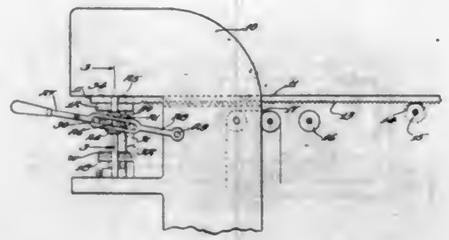


1,696,278. AUTOMOBILE LOCK. MALCOLM A. MCKAY, Kansas City, Mo., and EARL E. DOUDNA, Kansas City, Kans. Filed May 23, 1927. Serial No. 193,406. 6 Claims. (Cl. 70—127.)

6. In combination with the ignition circuit and the brake of an automobile, a brake-actuating lever, a keeper for holding the lever in set position, key-actuated means for locking the lever in set position, and means actuated by the key-actuated means for opening and closing the ignition circuit when the lever is in set position.

---

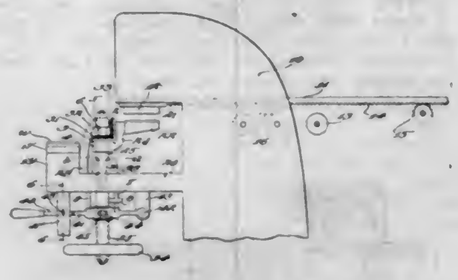
1,696,279. TRAIN-ORDER-HOOP HOLDER. GEORGE E. MADSEN, Weston, Iowa. Filed Dec. 2, 1927. Serial No. 237,206. 1 Claim. (Cl. 258—26.)



A handle supporting bracket comprising a pair of spaced apart substantially parallel bracket members disposed in superposed relation and having one end of each thereof bent toward the other in overlapping relation and provided with aligned bolt attaching openings, said end of the lower member having a recess formed therein adapted to receive the end of a handle, the other ends of said members being freely disposed with the lowermost member having its free end bent upwardly in proximity to said upper member and each of said members having the extremities of the free ends bent away from each other, whereby to facilitate the insertion of the handle therebetween.

---

1,696,280. PRINTING MACHINE. SKIDMORE O'HARA, Waltham, Mass., assignor to O'Hara Waltham Company, Waltham, Mass., a Corporation of Massachusetts. Filed July 8, 1927. Serial No. 204,272. 5 Claims. (Cl. 101—41.)



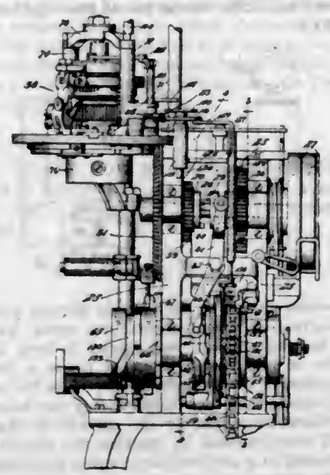
1. In a printing apparatus, a die, and a work support in vertical alinement with each other, a printing member mounted to rotate on a horizontal axis, a vertically slidable mount in which said printing member is journalled, a lever having operative connection with said slidable mount whereby the said slidable mount and the printing member may be moved up and down, and means whereby

the printing member is automatically turned at each stroke in either direction so that on one stroke its operative face will engage the die and on its reverse stroke it will engage the work.

---

1,696,281. PRINTING MACHINE. SKIDMORE O'HARA, Waltham, Mass., assignor to O'Hara Waltham Company, Waltham, Mass., a Corporation of Massachusetts. Filed July 8, 1927. Serial No. 204,273. 6 Claims. (Cl. 101—41.)

1. In a printing machine, a die and a work support at different elevations and out of alinement with each other, a printing member mounted on a support which is rotatable in a horizontal plane intermediate the die and the work support, said support for the printing member being adapted to be rotated to bring the printing memoer into alinement with either the die or with the work, means whereby when the printing member is shifted from its position in alinement with the die to the position in alinement with the work, the said printing member will be inverted to bring the printing face toward the work and when it is moved from alinement with the work to alinement with the die, the printing face will be reversed in position so as to face the die.



---

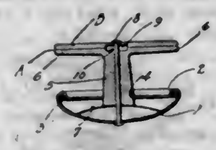
1,696,282. KNITTING MACHINE. NAPOLEON J. PERRY, Nashville, Tenn., assignor to May Hosiery Mills, Nashville, Tenn., a Corporation of Tennessee. Filed Feb. 6, 1917. Serial No. 146,917. Renewed Apr. 10, 1928. 50 Claims. (Cl. 66—24.)

1. In a knitting machine, a dial cap having a radially movable projecting cam for the needles, a retracting cam

and a guard cam, the projecting cam lying at one side of the path for the needle butts and the guard and retracting cams at the opposite side, and the latter cams being spaced

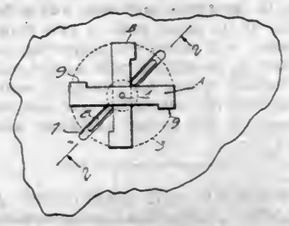
from each other, and means moving with the projecting cam to close the space between the other cams, substantially as set forth.

---



1,696,283. ANGLE COCK. BERT PRATT, Chicago, Ill. Filed Sept. 21, 1925. Serial No. 57,763. 4 Claims. (Cl. 251—165.)

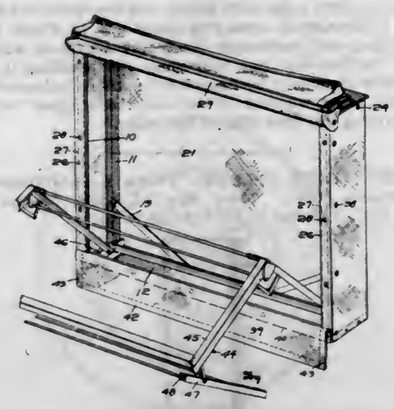
1. A device of the character described comprising a valve body, a valve rotatably mounted in said body, a rotatable cap connected to said valve, said cap being substantially equal in size to the upper end of and resting upon said valve body to be supported thereby, a handle having a portion surrounding said cap and pivotally connected thereto at one side thereof to swing in a vertical plane, means for locking said handle against horizontal movement when in its lower position, said handle being adapted to be raised to release said locking means to permit rotation of said cap, said cap extending upwardly from said valve body a greater distance than said handle when the latter is in lower position.



---

1,696,284. FASTENING DEVICE. FREDERICK C. RILE, Chicago, Ill. Filed Feb. 6, 1928. Serial No. 252,243. 6 Claims. (Cl. 24—109.)

1. A fastening device comprising a base, a stationary arm secured to the base, and a movable arm disposed between the base and said stationary arm for cooperating with said stationary arm.

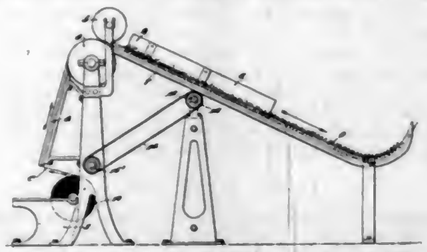


1,696,285. FASTENING DEVICE. FREDERICK C. RILE, Chicago, Ill. Filed Mar. 12, 1928. Serial No. 261,161. 5 Claims. (Cl. 24—109.)

1. A fastening device comprising a base, a stationary arm and a movable arm spaced away from the base, means for holding the stationary arm in spaced relation with respect to the base, sleeve means integral with said movable arm and rotatable about said first named means, housing means disposed between said movable and stationary arms and the base and closing a portion of said sleeve means, and spring means disposed within said housing means and bearing against said sleeve means for holding the movable arm in locked engagement with said stationary arm.

---

1,696,286. COMBINED TENT, BED, AND CASE. JOSEPH I. SMITH, Ogden, Utah. Filed Apr. 27, 1925. Serial No. 26,230. 5 Claims. (Cl. 5—119.)

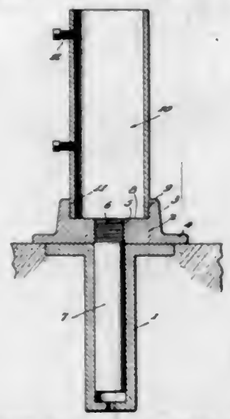


1. A relatively tall substantially vertical stationary case adapted to be mounted upon a portion of an automobile or the like, said case being closed except at its outer side, a folding bed embodying inner and outer bottom sections having their inner ends hinged together so that the outer bottom section may be swung vertically transversely with relation to the inner bottom section, means for pivotally connecting the inner end of the inner bottom section with the bottom of said case so that the inner bottom section may be swung vertically and transversely with relation to said case, said case projecting above the bottom sections when they are horizontally arranged and adapted to receive the bottom sections when they are in the vertical collapsed condition, means for supporting the outer bottom section when in the horizontal position, a substantially vertical support carried by the outer bottom section, and a tent to cover the bed, said tent including a top, sides, and end, said top having a pocket to detachably engage over the top of the substantially vertical case, said end engaging over the support, means for attaching the inner ends of the sides of the tent to the ends of the case, one side being movable to afford ready access to the bed.

3. A case comprising a base, a top formed of a sheet having its material at its edges bent downwardly and inwardly to provide horizontal flanges and then downwardly at the

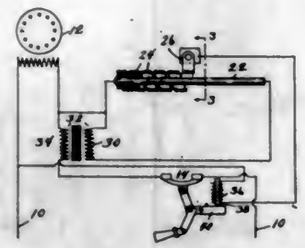
inner ends of the horizontal flanges to provide vertical flanges, said vertical flanges forming in effect a frame, posts connecting the base and said frame, a section of flexible material covering the back and ends of the case and attached to the frame and base, and a flexible front cover attached at its upper ends to said frame and provided at its sides with extensions projecting over the ends of the case and at its bottom with an extension projecting beneath the base, means for detachably connecting said side extensions with the ends of the case, and means for detachably connecting the bottom extension with the said base.

---



1,696,287. MACHINE FOR INSPECTING AND BUNDLING CLOTH. ALEXIS SOMMARIPA, Buffalo, N. Y., and LOUIS G. ROBERTS, Nashua, N. H. Filed Apr. 17, 1926. Serial No. 102,802. 11 Claims. (Cl. 26—70.)

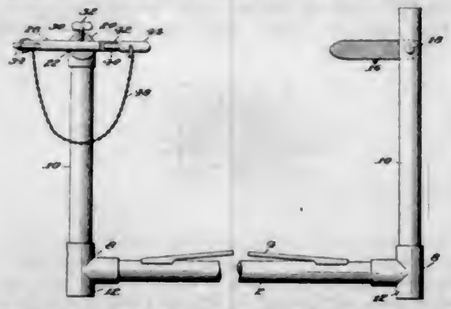
1. In a machine of the character described, the combination of a cloth inspection stand, a scray upon which the cloth is discharged from said stand and in which it accumulates, and mechanism for taking the cloth substantially continuously from said scray and bundling it, said inspection stand and mechanism being driven independently of each other whereby either may be stopped without interrupting the operation of the other.



---

1,696,288. TREE HOLDER. FRANK KARL UNDERWOOD, Oskaloosa, Iowa. Filed May 17, 1926. Serial No 109,710. 2 Claims. (Cl. 189—28.)

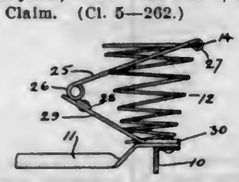
1. In a tree holder of the class described, the combination with a socket to be permanently anchored in situ and having its bottom formed with an outlet, of a base comprising a body having a recess in its upper face, the base having a flat under face to engage the surface of the material in which the socket is embedded and rest upon the upper end of the socket, a hollow stem carried by and projecting downwardly from the base and removably fitted into the socket, the upper end of said stem communicating with said recess whereby the stem constitutes a drain for the recess, and a tubular tree trunk-receiving socket member disposed vertically and having its lower end fitted into the said recess.



1,696,289. PROTECTIVE APPARATUS AND SYSTEM. JOSEPH D. WOOD, Wollaston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed July 24, 1925. Serial No. 45,930. 9 Claims. (Cl. 175—294.)

1. Protective apparatus for electric circuits including a thermally-actuated, circuit-controlling relay having an electrical heating element, and means to keep down the temperature of said heating element below a destructive value regardless of the strength of current in the circuit including a transformer to furnish energy for heating said heating element energized by the current in the electric circuit and characterized by limiting the current in the heating element at a predetermined value regardless of the degree of energization of the transformer.

---



1,696,290. WHEEL-ALIGNING GAUGE. CAPELLE HATCHER ARCHER, Tampa, Fla. Filed Aug. 27, 1927. Serial No. 215,869. 5 Claims. (Cl. 33—203.)

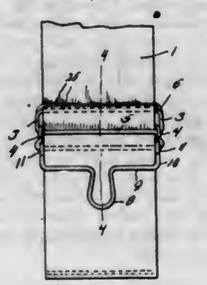
2. A device of the character described comprising a supporting base member, vertical standards arising form each end of said base member, one of said standards being provided with a stop for engaging the felloe of a vehicle's wheel, the other standard being provided with a transverse head, a plurality of members slidably mounted in said head towards and from the opposite wheel, a common connecting bar pivotally attached to the outer ends of said members, means retaining certain of said members in adjusted position in said head, and a gauging member adapted to be selectively positioned upon the inner ends of each of said members and brought into contact with the felloe of the wheel.

---

1,696,291. STABILIZER FOR BEDSPRINGS. JEROME T. ATKINSON, Bayside, N. Y. Filed Feb. 7, 1927. Serial No. 166,377. 1 Claim. (Cl. 5—262.)

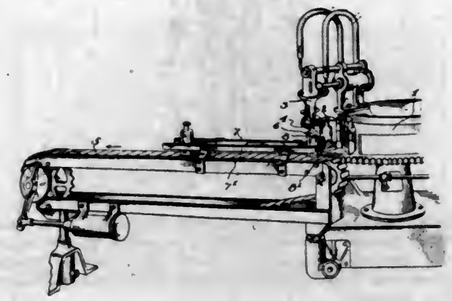
In a furniture spring having a bottom frame, a series of coiled springs seated thereon and reinforcing side rods connecting certain of the coiled springs, the combination with V-shaped stabilizers therefor; each of said stabilizers comprising a flat member and a round wire member, said wire member having an eye pivotally engaging one of the said rods, a loop formed on the wire member secured to one end of the flat member to form an elbow therewith, the other end of the flat member being bent to provide a foot secured to the bottom frame, said members being flexible, thereby permitting a vertical movement of the side rods when under a load, substantially as set forth.

---



1,696,292. CLASP FOR BRACELETS OR THE LIKE. CHARLES H. BATCHELDER, North Attleboro, Mass. Filed Feb. 8, 1927. Serial No. 166,776. 2 Claims. (Cl. 24—230.)

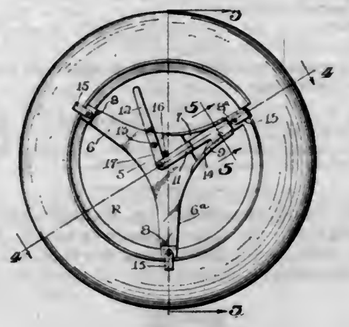
1. In a chain bracelet or neck chain, or the like, a clasp made up of cooperating end members, one member made up of a face plate of another, from which face plate a hook depends, the said other member comprising a box element having an opening in its upper outer wall to receive the hook and means to detachably secure the hook against accidental return movement of the hook.



---

1,696,293. BUCKLE. GEORGE W. BROWN, Bloomington, Ill. Filed May 25, 1928. Serial No. 280,445. 2 Claims. (Cl. 24—73.)

1. As a new article of manufacture, a buckle having an open rectangular body member, with intermediate eyes at the sides thereof, an open rectangular clamping member having a lower bar journaled in said eyes of the body member, and a pendent loop member including a loop shaped tab, arms reaching laterally in opposite directions from the ends of said tab, and upright portions reaching from the outer ends of said arms and terminating in eyes loosely receiving the lower bar of the body member whereby said pendent loop member is pivotally connected to the body member.

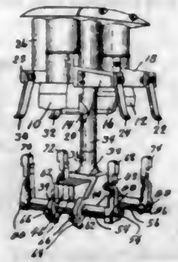


1,696,294. BOTTLE-TURNING MECHANISM. GEORGE C. CRAWFORD and JOHN R. BRIDGES, Zanesville, Ohio, assignors to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Dec. 21, 1925. Serial No. 76,772. 6 Claims. (Cl. 214—1.)

1. A device of the character described, including movable means for transporting a glass article from a forming machine to a conveyer, and means arranged to intercept the glass article and turn it through a desired angle while it is held by said movable transporting means.

---

1,696,295. COMBINATION SPARE-TIRE CARRIER AND RIM TOOL. REX JAMES DUNHAM, Oshkosh, Wis. Filed Nov. 17, 1926. Serial No. 148,879. 2 Claims. (Cl. 224—29.)



1. In a combined spare tire carrier and rim tool, a mounting plate provided with radial arms, one of said arms including a radially and laterally movable outer arm section having a rim seat on its outer end, further rim seats rigid with the outer ends of the remaining arms, and manually operable means for moving said movable outer arm section including an operating lever pivoted to the mounting plate, rim flange engaging hooks carried by the sides of the rim seats positionable to project outwardly for use in contracting a rim, and means associated with said lever for releasably holding the movable arm section in either its outer or inner limit of movement.

---

1,696,296. MULTIBREAK ELECTRIC SWITCH. WILLIAM S. EDSALL, Boston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1925. Serial No. 19,990. 22 Claims. (Cl. 200—150.)

1. An electric switch having a pair of spaced stationary switch members, a movable switch member including a rod

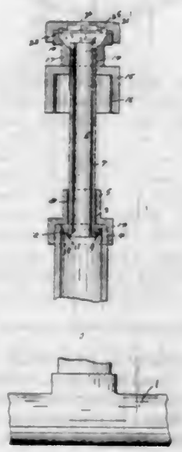
disposed between said stationary switch members, a bridging member carried by the lower end of said rod below said stationary switch members and adapted to bridge them, a plurality of arcing members carried by said rod and

disposed symmetrically about and insulated from said bridging member, a corresponding plurality of stationary arcing members cooperating with said movable arcing members and disposed symmetrically about said stationary switch members.

---

1,696,297. COMPOUND FOR TEMPERING TOOLS AND TOOL STEEL. JOHN F. EDWARDS, Warren, Ark. Filed Dec. 13, 1926. Serial No. 154,657. 1 Claim. (Cl. 148—28.)

A liquid bath for quenching tool steel, consisting of the following ingredients in the following approximate proportions:

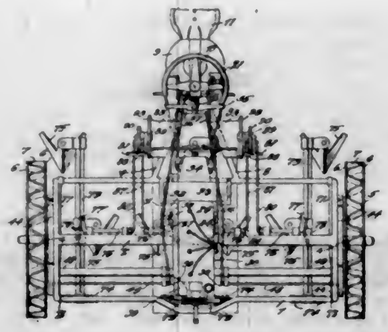


| | | Approximate metric equivalents. |
|---|---|---|
| Glycerin | 3 fluid ounces | 96 c. c. |
| Sweet spirit of nitre | 1½ fluid ounces | 48 c. c. |
| Ammonium chloride | 1½ ounces | 48 gm. |
| Zinc sulphate | 1½ ounces | 48 gm. |
| Aluminum and ammonium sulphate | 1½ ounces | 48 gm. |
| Water | ½ gallon | 2,000 c. c. |

of the foregoing two fluid ounces is added to one gallon of water containing:

| | | |
|---|---|---|
| Glycerin | 1 fluid ounce | 32 c. c. |
| Sodium chloride | ½ ounce | 16 gm. |
| Aluminum ammonium alum | ½ ounce | 16 gm. |
| Copper sulphate | ¼ ounce | 4 gm. |

---



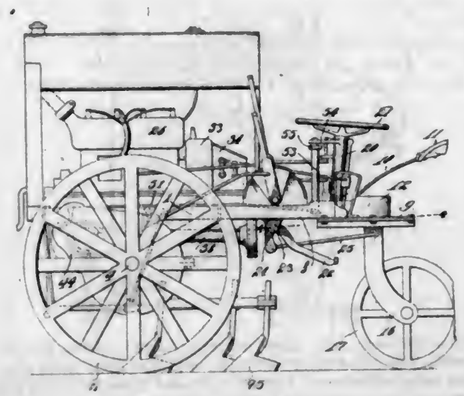
1,696,298. DISAPPEARING OR TELESCOPIC LAWN SPRINKLER. WILLIAM HERBERT GRAHAM, Oakland, Calif. Filed Dec. 7, 1925. Serial No. 73,571. 5 Claims. (Cl. 299—61.)

1. In a disappearing sprinkler, a vertical pipe connected to a controlled source of water pressure, an element slidable relative thereto having a sprinkler head at one end thereof and projecting upwardly when the pressure becomes active upon the sprinkler head and an operative connection between the said element and the pipe limiting the upward motion of the former and made to allow water to escape therethrough while the element moves relative to the pipe with a hood on the said element causing the escaped water to flow down the outside of the element and the pipe for cleaning both of them.

---

1,696,299. AGRICULTURAL MACHINE. HOWARD H. GREEN, Bardwell, Tex. Filed June 10, 1926. Serial No. 114,997. 1 Claim. (Cl. 97—240.)

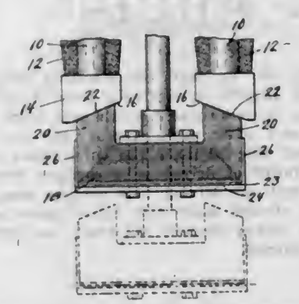
In an agricultural machine, a main frame, ground-engaging instrumentalities carried by the main frame and movable vertically into and out of engagement with the ground, rock shafts mounted over the respective instrumentalities and each connected at one end with one of said instrumentalities, a crank arm for each shaft, a bracket carried by said frame rearwardly from said rock shafts and having an upstanding portion constituting a rack, a pivot element carried by said bracket and extending transversely therefrom, a lever loose upon said pivot adjacent said bracket and having a tooth engageable with the rack to releasably hold the lever in a set position, said lever having a hub extension and a rack extending upwardly therefrom at the opposite side of the lever from the first rack, a second lever loose upon said pivot and having a tooth engageable with the second rack to releasably connect the levers for unitary movement and permit independent movement of the levers, and rods connecting said levers with the crank arms of said shafts whereby movement of the levers will rotate the shafts to vertically adjust the ground-engaging instrumentalities.



---

1,696,300. STEERING MECHANISM. HOWARD H. GREEN, Bardwell, Tex. Original application filed June 10, 1926, Serial No. 114,997. Divided and this application filed Nov. 26, 1926. Serial No. 150,983. 1 Claim. (Cl. 180—17.)

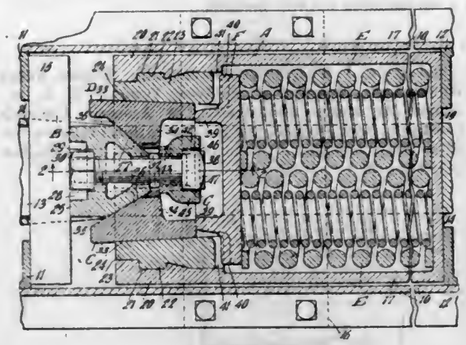
In an agricultural machine, a frame, a platform at the rear of said frame, traction wheels adjacent the front of the frame at opposite sides thereof, a steering wheel adjacent the rear of the frame rotatably mounted and pivotally connected with the frame beneath the platform, control means for the steering wheel including a steering column rising from the platform and a hand wheel at the upper end of the column, means for imparting rotary motion to said traction wheels including a differential and shafts extending therefrom, and brake means including



rocker shafts extending longitudinally of the differential shafts and each provided with a turning arm, rods extending longitudinally of said frame with their forward ends engaged with said arms, a post disposed vertically in front of said steering column with its lower end rotatably

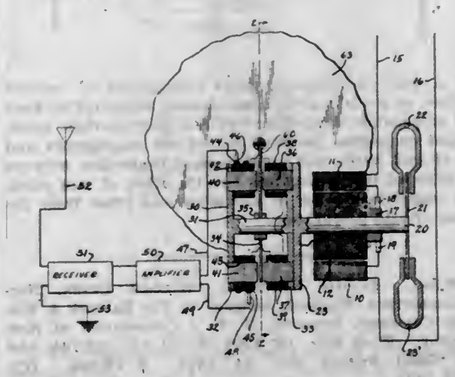
connected with the platform, a bearing for the upper end of the post extending from said column, a cross bar rigid with the post adjacent its lower end and extending from opposite sides thereof with its end engaged with the rear ends of said rods, and a handle bar rigid with the upper end of the post and projecting from opposite sides thereof.

---



1,696,301. CONTACT STRUCTURE FOR ELECTRIC SWITCHES. TALMA T. GREENWOOD, East Templeton, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed May 29, 1925. Serial No. 33,847. 7 Claims. (Cl. 200—165.)

5. An electric switch including a pair of stationary switch members terminated in fixed contact members provided with downwardly and outwardly inclined contact faces, and a movable switch member including a brush member disposed beneath said stationary switch members, and comprising in intermediate section and opposed uptsanding toe-sections arranged approximately at right angles with said intermediate section, said toe-sections having downwardly and outwardly inclined contact faces adapted to engage the contact faces of said fixed contact members approximately in the line of said stationary switch members, the inclined contact faces of said fixed contact members characterized by providing abutment faces against which the toe-sections of said brush member are pressed by the magnetic forces acting in said toe-portions.

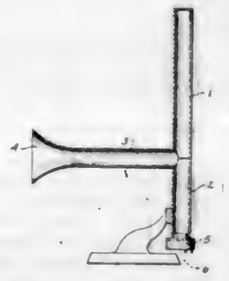


1,696,302. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 16, 1927. Serial No. 168,559. 1 Claim. (Cl. 213—32.)

In a friction shock absorbing mechanism, the combination with a friction shell, spring resistance, friction shoes, and wedge; of means for retaining the parts in assembled, desired overall length, said means comprising: a retainer bar disposed within the shell and having shouldered engagement with the latter to limit the outward movement of said bar, a bolt shank threaded in its outer end and extending outwardly from said bar, said bolt shank being maintained against rotation with respect to said bar and having its outer end received within the wedge, and a nut threaded on the outer end of said shank, said wedge having a relatively deep recess of greater diameter than the nut and within which a portion of the latter is normally contained, said wedge having also a relatively shallow socket at the bottom of said recess, said socket conforming to the shape and size of the nut and receiving a portion of the latter therein to prevent rotation of the nut; and means extending over the outer end of the nut to prevent the nut from accidentally becoming unseated from said socket.

---

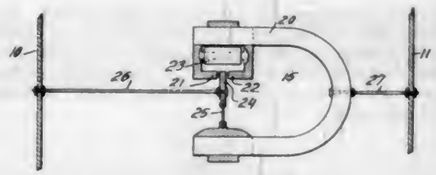
1,696,303. METHOD OF SOUND PROPAGATION. MILLER REESE HUTCHISON, Llewelyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 9, 1927. Serial No. 173,857. 8 Claims. (Cl. 179—108.)



7. In a loud speaker, a constant speed prime mover, a rotatable shaft driven thereby, a magnetically inert disc rotatably mounted on said shaft, means for positioning said disc in fixed longitudinal position with respect to said shaft, a magnet affixed to said shaft and rotatable there-

with for producing a magnetic field of force intercepting the periphery of said disc for exerting a torque of said disc during rotation of said shaft, an electric circuit arranged to modify the action of said magnetic field with respect to said disc in accordance with a signal, and a diaphragm controlled by said disc for producing compressional waves in a surrounding natural medium.

---

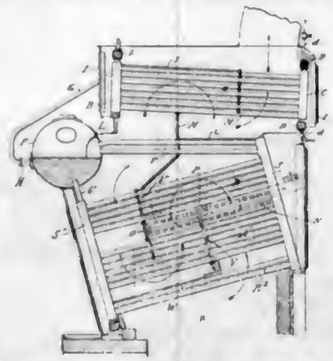


1,696,304. MULTITUNED HORN. MILLER REESE HUTCHISON, Llewelyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y., a Corporation of Delaware. Filed May 24, 1927. Serial No. 193,813. 10 Claims. (Cl. 181—27.)

1. A sound reproducing device comprising a plurality of resonating chambers, one of said chambers being tuned to a definite fundamental frequency, and the others of said chambers being tuned to overtones thereof, and means for imparting sound waves to each of said chambers.

---

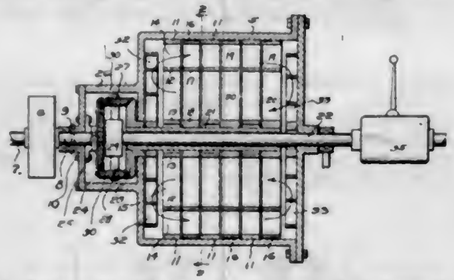
1,696,305. ELECTROMAGNETIC SOUNDING-BOARD ACTUATOR. MILLER REESE HUTCHISON, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 1, 1927. Serial No. 180,183. 6 Claims. (Cl. 179—116.)



3. A pair of vibratory sound propagators in opposed relation, an electromgangetic unit flexibly supported between said propagators comprising two relatively movable parts, a rigid connection between one of the propagators and one of said parts, and another rigid connection between the other of the propagators and the other of said parts, said connections being in alinement and offset from the center of said propagators.

---

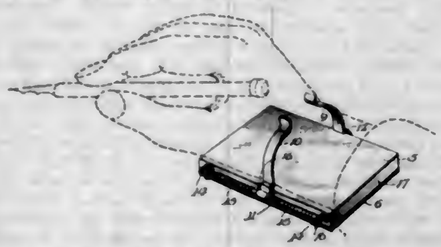
1,696,306. FLUID HEATER. WILLAM INNES, Northumberland, England, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Mar. 19, 1921, Serial No. 453,764, and in Great Britain Mar. 24, 1920. 3 Claims. (Cl. 122—444.)



1. The combination with a steam boiler, of an economizer heated by the gases leaving the boiler, said economizer having vertically extending headers at both ends thereof connected by horizontally disposed tubes, an inlet connection for feeding all of the water supplied to the boiler into the upper ends of all the inlet headers, an outlet connection for feeding to the boiler the water from the same ends of the outlet headers as it enters the inlet headers, said inlet and outlet headers being unconnected

except through said tubes, an economizer setting for receiving the gases from the boiler and directing them over said economizer tubes and in a general direction from the outlet of the economizer towards the inlet thereof.

---



1,696,307. HYDRAULIC POWER-TRANSMISSION DEVICE. CLAYTON D. JAMES, Lyon Village, Va. Filed Apr. 22, 1927. Serial No. 185,851. 6 Claims. (Cl. 60—54.)

1. A device of the character described comprising a driving drum adapted to receive a body of fluid, a plurality of vane carriers secured within said drum in spaced relation to each other, each of said vane carriers comprising radially aligned inner and outer vanes of reverse pitch, a plurality of driven vane carriers between and alternating with the driving vane carriers each comprising radially aligned inner and outer vanes of reverse pitch and a driven element by which the driven vane carriers are carried.

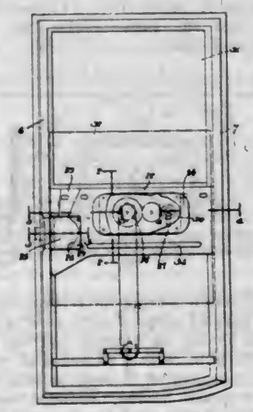
---

1,696,308. BLOTTING DEVICE. MARSHALL EDWARD KEIO, Chicago, Ill. Filed Feb. 12, 1926. Serial No. 87,757. 7 Claims. (Cl. 120—25.)

1. A blotting device comprising a back, means for holding a blotting sheet thereon, a clasp whereby the back

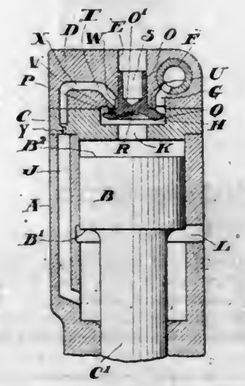
may be removably secured to the wrist comprising a pair of strips pivoted to the sides of the back, and springs applied to the strips to press them into their operative position.

---



1,696,309. ELEVATOR SYSTEM AND APPARATUS IN CONNECTION THEREWITH. FRANCIS LANE, Brierley Hill, and WILLIAM ARTHUR MACHIN, Birmingham, England. Filed Mar. 19, 1926, Serial No. 96,052, and in Great Britain Apr. 22, 1925. 2 Claims. (Cl. 214—103.)

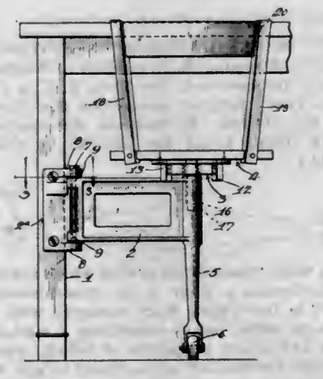
1. In combination with a trackway, an elevator system comprising a wheel truck adapted to be moved along said trackway by its wheels supporting said truck on said trackway, a cage carried by said truck and having cylindrical elements, rollers on said truck in engagement with said cylindrical elements enabling said cage to be rotated about an axis disposed transversely of said truck and said trackway, a container protruding from each side of said cage so as to overhang said trackway, said cage together with said containers being adapted to be lifted as a unit from said truck resting loosely thereon, and adjustable means for positively rotating said cage on said truck upon the latter reaching a predetermined position on said trackway for depositing on either side thereof the contents of said containers, said means automatically establishing an operative connection between said cage and said trackway as the movement of said truck along said trackway is continued beyond said predetermined position.



---

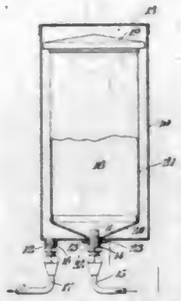
1,696,310. DOOR STRUCTURE FOR AUTOMOBILE BODIES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1924. Serial No. 738,784. 11 Claims. (Cl. 296—44.)

1. In an automobile door structure, vertically disposed side frame members having oppositely presenting vertically disposed shoulders or seatings on their opposed edges, in combination with a reinforcing and bracing plate or stamping extending transversely between said frame members and seated at its respective ends against the said shoulders.



1,696,311. VALVE FOR PERCUSSIVE TOOLS. GORDON LEE, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 17, 1927. Serial No. 161,592. 3 Claims. (Cl. 121—19.)

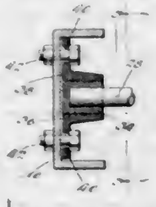
1. In a fluid actuated rock drill, the combination of a cylinder, a valve chest having a valve chamber, inlet passages leading from the valve chamber to the cylinder, a distributing valve in the chamber comprising a stem and a flange, an actuating face on the rearward side of the flange constantly exposed to live pressure fluid for throwing the valve forwardly to admit pressure fluid to the front end of the cylinder, and an actuating face of greater area than the first said actuating face at the front end of the flange intermittently exposed to air compressed by the piston for throwing the valve in position to admit pressure fluid to the rearward end of the cylinder.



---

1,696,312. SWINGING SEAT. OSCAR L. LETHANDER, Chicago, Ill. Filed Sept. 29, 1927. Serial No. 222,727. 4 Claims. (Cl. 155—81.)

1. The combination with a table top, of a horizontally swinging arm pivotally mounted adjacent said table top, a spider pivotally mounted on the swinging end of said arm for horizontal swinging movement with respect to said arm and a seat mounted on said spider, said spider having a plurality of arms, one of which is provided with a stop for engaging the swinging arm to limit the swinging movement of the seat with respect to the swinging arm.



1,696,313. FILTER. ROBERT P. F. LIDDELL, New York, N. Y., assignor, by mesne assignments, to Central Union Trust Company of New York, trustee. Filed Mar. 22, 1926. Serial No. 96,444. 4 Claims. (Cl. 210—178.)

1. A self-cleaning filter comprising a casing having an inlet and an outlet, and a filter unit within said casing, said unit being composed of substantially rigid end members and a flexible filtering medium extending therebetween, one of said end members being connected to the inlet of said casing.

---

1,696,314. BRAKE MECHANISM. KENNETH E. LYMAN, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 5, 1927. Serial No. 188,978. 8 Claims. (Cl. 188—204.)

1. Operating means comprising, in combination, a relatively long rockshaft, a support adjacent the end of the rockshaft, and rubber material bonded to the shaft and to the support and having the double function of serving as a bearing for the shaft and of yieldingly resisting angular movement of the shaft.

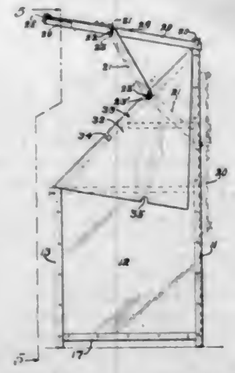
---

1,696,315. WAVE TRANSMISSION SYSTEM. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Nov. 1, 1924, Serial No. 747,164. Divided and this application filed Dec. 16, 1926. Serial No. 155,155. 4 Claims. (Cl. 178—44.)

1. In a wave transmission system which requires for its proper functioning a delay in the transmission of waves at a point in the system, large compared with the period of the waves, delay means comprising a mechanical line, the mass and elastic properties of which, together with the length of the line, are proportioned to give the desired delay, said line comprising a homogeneous medium having its mass and elastic properties continuously distributed along a substantial portion of its length.

---

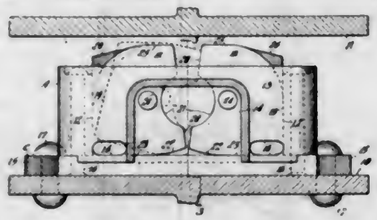
1,696,316. RAIL BOND. CHARLES G. MCCAULLEY, Jacksonville, Fla. Filed Dec. 12, 1923, Serial No. 680,097. Renewed May 16, 1928. 2 Claims. (Cl. 173—283.)



1. In combination with two rails and splice bars and bolts to connect their ends, a stiff strap bond of metal having an elongated section in engagement with the outer faces of the rails and clearing the tops of the splice bar and terminating at its ends in bends extending downwardly and

inwardly, means formed at the ends for engagement with the respective rails to support the elongated section above the splice bar, said bends serving to press the elongated section yieldingly against the face of the rails.

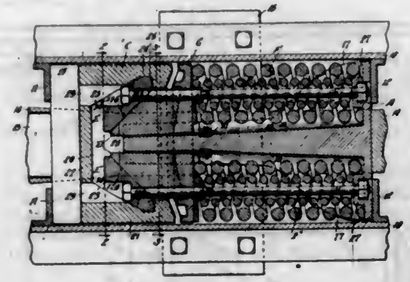
---



1,696,317. NEWS STAND WITH ADJUSTABLE TOP. WILLIAM O'BOYLE, Chicago, Ill. Filed Dec. 27, 1927. Serial No. 242,605. 10 Claims. (Cl. 312—100.)

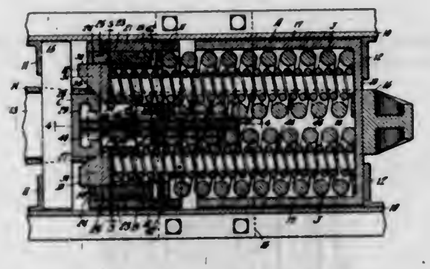
1. A stand having rear, front, and side walls, the top of the stand being open, covering means therefor, and link means for swingably mounting said covering means so as to retain it in various positions over said top openings as a roof, or to close said opening, or to swing it out of the way behind the rear wall.

---



1,696,318. SIDE BEARING FOR RAILWAY CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 3, 1924. Serial No. 703,900. 7 Claims. (Cl. 308—224.)

5. In an anti-friction bearing for railway cars, the combination with a housing adapted to be secured on a bolster or the like and having an interior bearing surface; of a pair of self-returning rockers arranged at opposite ends of said housing and adapted to rock on said bearing surface, each of said rockers having a rounded bearing surface engageable on said bearing surface of the housing, and also having a portion of its outer bearing surface normally parallel to the bearing surface of the cooperating opposed bolster and having another portion of the outer bearing surface adapted to be parallel to the opposed bearing surface of the last-mentioned bolster when the rocker is at the end of its rocking movement.

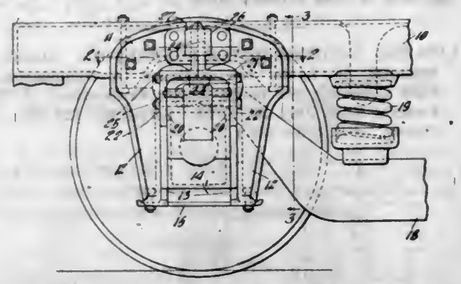


1,696,319. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 16, 1925, Serial No. 15,788. Renewed June 6, 1928. 4 Claims. (Cl. 213—36.)

1. In a friction shock absorbing mechanism, the combination with a follower acting element having a friction post thereon, said post having inwardly diverging friction surfaces; main spring resistance elements; opposed friction shoes cooperable with the friction surfaces of the post, said shoes having relatively blunt angle wedge faces; a pressure transmitting, relatively keen angled wedge element; and differential blocks between said wedge element and shoes and cooperable with the respective wedge faces thereof.

---

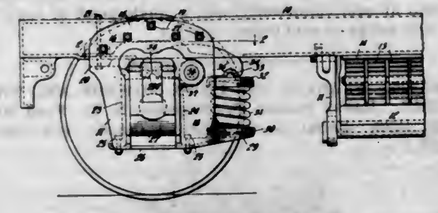
1,696,320. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 28, 1927. Serial No. 171,406. 9 Claims. (Cl. 213—24.)



1. In a friction shock absorbing mechanism, the combination with a spring cage; of a friction shell, said shell and cage being relatively movable; detachable means for connecting the cage to the shell, for limited relative movement; friction means co-operating with the shell, including a wedge member; means for anchoring the wedge member to the spring cage and maintaining said connecting means locked to the cage and shell, said anchoring means limiting outward movement of the wedge with respect to the friction shell; and spring resistance means opposing relative movement of the friction means and shell with respect to the cage, during a compression stroke.

---

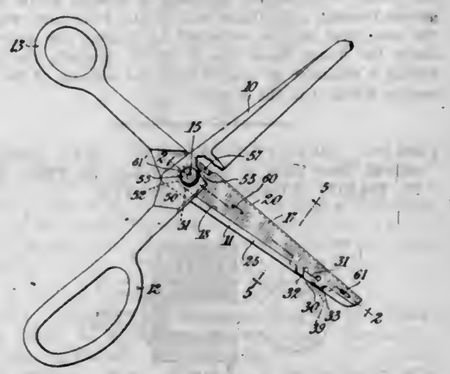
1,696,321. JOURNAL-BOX-ALIGNING DEVICE. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,341. 3 Claims. (Cl. 105—224.)



1. In a device of the character described, the combination with a truck having pedestal jaws, and a journal box mounted in said jaws for sliding movements; an equalizer bar bearing upon said journal box; elements rigidly connecting with said journal box and extending to a point

spaced from said pedestal jaws and said box; and means co-operating with the end portions of said elements to confine the same to vertical movement.

---

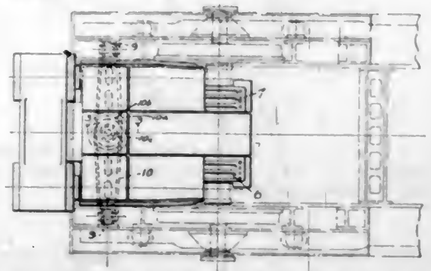


1,696,322. RAILWAY-CAR TRUCK. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,348. 4 Claims. (Cl. 105—224.)

1. In a truck of the character described, the combination with a frame having a pedestal member thereon; of a journal box vertically movable between the jaws of said pedestal; and a bar pivotally mounted on said pedestal and having one end bearing on and movably connected to said journal box; and yieldable means interposed between the opopsite end of said bar and a fixed abutment on said pedestal.

---

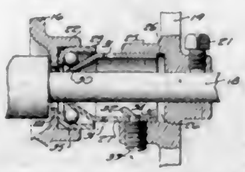
1,696,323. COMPOSITE BLADE FOR SCISSORS. ISAAC PATRICK, Jamaica, N. Y. Filed Apr. 16, 1925. Serial No. 23,505. 5 Claims. (Cl. 30—13.)



1. A composite blade comprising a cutter and a supporting part, and means for fastening said parts together, said cutter being a flat plate, and said fastening means comprising parts on said cutter lying in the planes of the faces of said plate, said fastening means comprising a dovetail joint in the plane of said cutter and supporting

part, a part of said dovetail joint having an incline with reference to a perpendicular to the face of said cutter, whereby said cutter is held against displacement in the direction of said perpendicular.

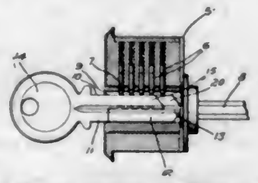
---



1,696,324. BOOSTER-MOTOR SUSPENSION. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 22, 1924. Serial No. 727,505. 26 Claims. (Cl. 105—138.)

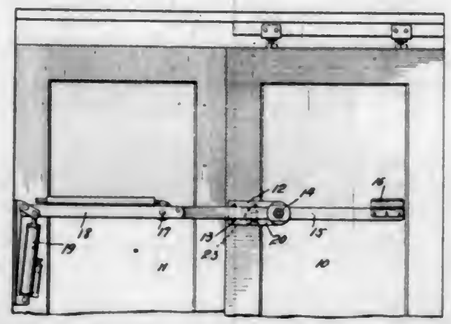
1. In a locomotive, a main frame, a trailer axle partially supporting said frame, a booster motor for the trailer axle, a transverse beam beneath said booster motor carried by said main frame, and a single point of support for said motor on said beam.

---



1,696,325. BEARING FOR LAWN MOWERS AND THE LIKE. HARRY PRIEST, Poughkeepsie, N. Y. Filed May 20, 1926. Serial No. 110,353. 1 Claim. (Cl. 308—189.)

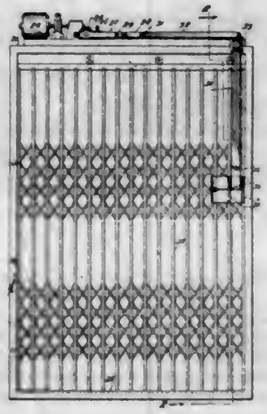
In a lawn mower, the combination with a stationary frame, a knife carrying cylinder including end flanges and a shaft on which the end flanges are mounted, of a bearing for supporting the cylinder and shaft from the frame, said bearing comprising a ball race carried by the frame, and means for releasably clamping the cone race to an end flange, said means including a locking screw which passes through an oblique slot in the cone race whereby the cone race may be adjusted by turning the cone race about the flange when the screw is loosened, the screw having a shoulder to engage with the outside of the cone race to clamp it in the flange.



---

1,696,326. MULTIPLE-PLUG KEY. EMIL ROETHLISBERGER, New York, N. Y. Filed Apr. 23, 1923. Serial No. 634,017. 5 Claims. (Cl. 70—47.)

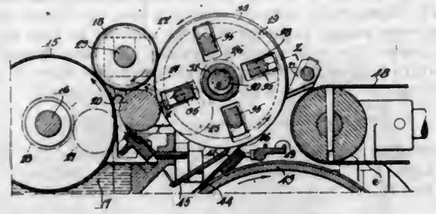
1. A plug key for tumbler locks, said key being composed of two interlocking and cooperative parts, both of which when placed one upon another and edge to edge cooperatively are of a cross section corresponding with the key aperture of a predetermined lock.



1,696,327. ELEVATOR-DOOR MECHANISM. ALBERT J. ROSENTRETER, Boonton, N. J., assignor to Edgar Zabriskie, Maplewood, N. J., and Frank E. Hutchins, New York, N. Y. Filed Feb. 12, 1926. Serial No. 87,768. 6 Claims. (Cl. 268—55.)

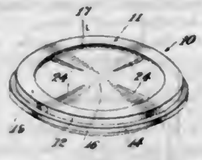
1. In a mechanism of the character described, the combination with a sliding door having means for moving the same to open or closed position, of means bodily movable with the door to prevent reversal of movement of the door in an intermediate position during its movement in either direction.

---



1,696,328. SAFETY MECHANISM FOR ELEVATOR-SHAFT DOORS. ALBERT J. ROSENTRETER, Boonton, N. J., assignor to Edgar Zabriskie, Maplewood, N. J., and Frank E. Hutchins, New York, N. Y. Filed June 17, 1926. Serial No. 116,538. 15 Claims. (Cl. 187—52.)

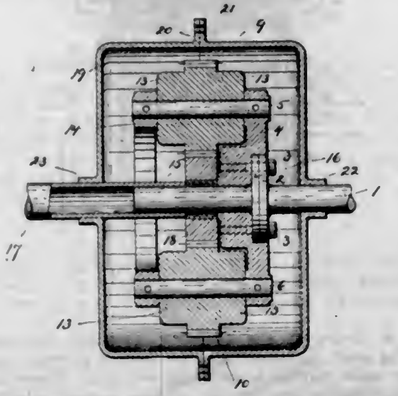
10. In combination with an elevator car and shaftway with doors at the floor landings, an operating mechanism for a shaft door which comprises an electric motor, a connection between the motor and the door, a hand switch for closing a circuit which initiates the operation of the motor, an automatically operated switch which holds the circuit closed after it has been closed by the hand switch, a limit switch which is automatically opened when the door has been fully opened, and a separate hand switch for opening the circuit and arresting the operation of the door when at an intermediate point of its movement.



1,696,329. GLUE-APPLYING ROLL. WALTER A. SAATMAN, Roslyn, Pa. Filed Mar. 12, 1026. Serial No. 94,150. 20 Claims. (Cl. 91—51.)

2. In gluing machines, the combination of a glue-applying roll, a squeeze roll and picker fingers, the glue-applying roll presenting an unbroken longitudinal contour free from depressions against the squeeze roll and continuously presenting depressions for the picker fingers.

---



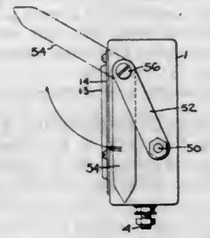
1,696,330. CAP AND PACKAGE. EDGAR SCOFIELD, New York, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed July 15, 1926. Serial No. 122,515. 10 Claims. (Cl. 215—38.)

1. As an article of manufacture, a closure cap comprising a cover portion and reinforcing means decreasing in size toward the center and extending through substantially the center of said cover portion to prevent flexing thereof.

---

1,696,331. TRANSMISSION GEAR. REINHOLD SCHOELL, Kelsey City, Fla. Filed Jan. 11, 1928. Serial No. 245,909. 4 Claims. (Cl. 74—34.)

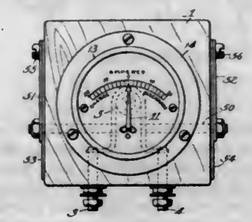
1. In combination with a driving member and a driven member, a central gear-wheel secured to said driven member, a supporting means secured to said driving member so as to rotate therewith, and substantially symmetrically balanced heavy gear-wheels comprising a central toothed portion and a weighted cylindrical extension on either side of said toothed portion rotatably carried by said supporting means near the circumference thereof and in mesh with said central gear wheel so as to produce a uniform rotating force of constant value.



1,696,332. UNDERFRAME FOR WELL CARS. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed June 25, 1926. Serial No. 118,550. 21 Claims. (Cl. 105—415.)

1. A car having an integrally formed frame including end sills, side sills, and center sills, and trucks adapted to carry said frame, said side sills being diminished in depth over said trucks to provide clearance.

---

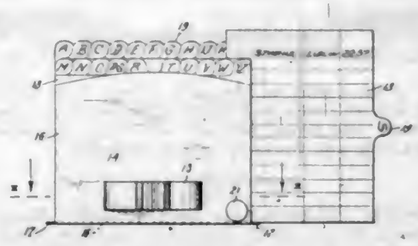


1,696,333. ELECTRICAL INSTRUMENT. HARRY I. SHIRE, Detroit, Mich. Filed Sept. 16, 1920, Serial No. 410,684. Renewed Feb. 4, 1927. 11 Claims. (Cl. 171—95.)

10. In an electrical testing device, a pair of contact making projections, an exposed conductor connected between said projections, and an indicating instrument having a movable element affected by the magnetic field created by a current passing through said conductor.

---

1,696,334. METHOD OF TESTING STORAGE BATTERIES. HARRY I. SHIRE, Detroit, Mich. Original application filed Sept. 16, 1920, Serial No. 410,684. Divided and this application filed Aug. 14, 1924. Serial No. 731,930. 7 Claims. (Cl. 175—183.)

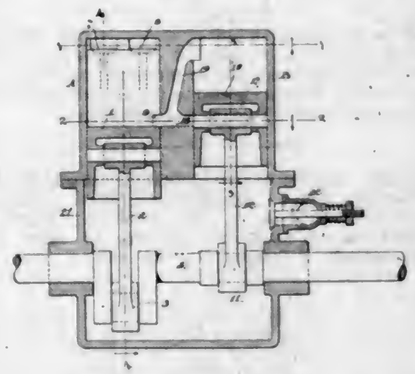


1. The method of testing the condition of charge of a storage battery which consists in passing current from one terminal to the other of said battery through a resistance less than the normal internal resistance of said battery and noting the effect of the current flowing between said terminals.

---

1,696,335. TELEPHONE INDEX. MORRIS M. SHORR, New York, N. Y. Filed Jan. 20, 1928. Serial No. 248,252. 2 Claims. (Cl. 40—10.5.)

1. A telephone index comprising a casing including a bottom and front and rear sides rising therefrom, a pin extending through said casing adjacent one of its lower corners, a plurality of index cards adapted to rest on the bottom of said casing between said sides, each card being provided with a slot through which said pin is extended whereby said cards are adapted to be swung around said



pin, an extension on said bottom adjacent said pin forming a ledge on which said cards are adapted to rest when swung out of said casing, and a clip on said casing for attaching the same to a telephone instrument, the slot in each card extending from that edge of the card which

rests on said bottom when the cards is disposed within the sides of said casing upwards at an acute angle to said edge, the slot in each card being provided with a contracted mouth portion to prevent accidental disengagement thereof from said pin.

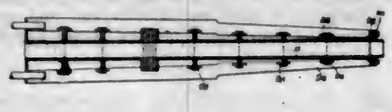
---

1,696,336. INTERNAL-COMBUSTION ENGINE. RICKARD STRINDBERG, New York, N. Y., assignor of one-third to John L. Lotsch, Brooklyn, N. Y. Filed Apr. 19, 1920. Serial No. 374,991. 4 Claims. (Cl. 60—15.)

2. In an internal combustion engine, an explosion cylinder and an expansion cylinder, each opening at its lower extremity into a common casing, a port connecting the mid sections of said cylinders, a branch extending from said port to the upper end of the expansion cylinder, an exhaust port in said expansion cylinder substantially alined with said cylinder connecting port, a fluid shunt opening into said expansion cylinder at a point substantially above and at a point substantially below said exhaust port, pistons in said cylinders each adapted to form a closure for said cylinder connecting port, said pistons being of such a length as to uncover said cylinder connecting port at both extremities of their stroke, and intake and exhaust ports in the upper end of the explosion cylinder.

---

1,696,337. METHOD OF PRODUCING ABIETIC ACID ESTERS OF POLYGLYCEROL. ERNEST M. SYMMES, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 12, 1927. Serial No. 232,950. 14 Claims. (Cl. 260—98.)

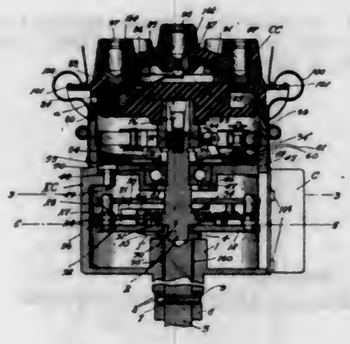


1. As a new composition of matter, the abietic acid ester of a polyglycerol.

1,696,338. PROCESS OF DECOLORIZING VEGETABLE OILS. HAROLD E. BIERCE, Pasadena, Calif. Filed June 29, 1925. Serial No. 40,458. 2 Claims. (Cl. 87—12.)

1. In the process of clarifying and decolorizing refined and substantially neutral vegetable oils, the steps which comprise adding sufficient alkaline solution to such an oil to render the same slightly alkaline, and then, before removal of the alkali and products of reaction thereof, subjecting the oil to the action of an adsorbent earth.

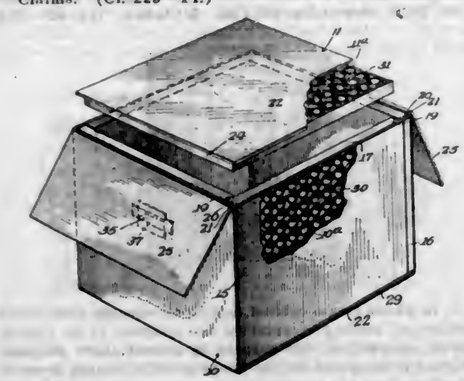
---



1,696,339. CANNON. EDWIN J. BLOOD, Chicago, Ill. Filed Sept. 9, 1926. Serial No. 134,558. 5 Claims. (Cl. 89—16.)

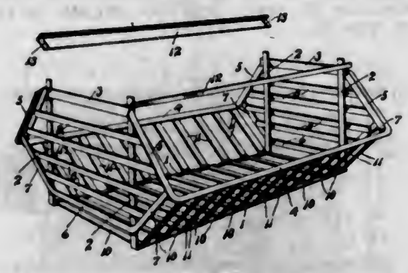
5. A cannon of the class described comprising a plurality of spools each spool having tubular body portions fitted one within another and having at opposite ends an outwardly extended flange, and ductile material such as white lead on the outer surface of the inner body portion of each spool.

---



1,696,340. DISTRIBUTOR. ERNEST A. BOHLMAN, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1924. Serial No. 725,337. 16 Claims. (Cl. 200—31.)

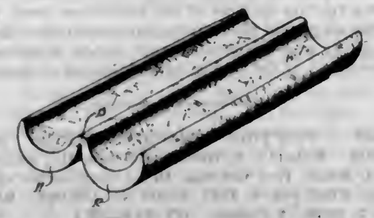
3. A device of the character described including a driving shaft, a control member secured thereto, an auxiliary shaft having a split end rotatable therewith but angularly adjustable thereto, a cam member adapted to fit over said split end, a screw adapted to enter said split end to expand the same to secure said cam member against movement relative to said shaft, centrifugally controlled means connecting said auxiliary shaft to said driving shaft, means formed integrally with said control member for limiting the movement of said centrifugally controlled means, and means whereby said auxiliary shaft may be angularly adjusted different amounts in response to movements of said centrifugally controlled means from its normal to its fully operated position.



1,696,341. SHIPPING BOX. JULIUS M. BLANCHARD, Oak Park, Ill., assignor of one-half to J. W. Mabbs, Chicago, Ill. Filed Mar. 11, 1927. Serial No. 174,435. 11 Claims. (Cl. 229—14.)

1. A shipping box comprising a top, bottom, and sides, each of said sides consisting of an inner and outer wall of sheet material, and separately formed reinforcing members between the walls, said members being closely arranged and substantially filling the space between the walls.

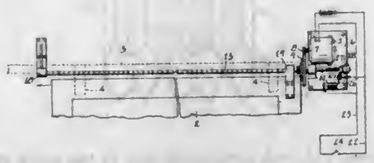
---



1,696,342. SECTIONAL DISPLAY DEVICE. ELVAH O. BULMAN, Grand Rapids, Mich. Filed Dec. 28, 1925. Serial No. 78,050. 5 Claims. (Cl. 211—126.)

1. A display rack comprising a series of super-imposed sections, each of said sections having a bottom, ends, and upwardly and outwardly inclined sides, each of the ends being provided with two spaced apart upwardly extending projections at its upper edges, and bars of angular shape located between said projections and having openings through which said projections pass, on which the next higher section may be supported and held.

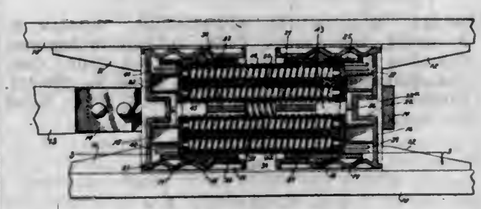
---



1,696,343. METHOD OF MAKING EDIBLE ROLLS. FREDERICK E. BURDICK, New London, Conn. Filed July 3, 1925. Serial No. 41,272. 3 Claims. (Cl. 107—54.)

2. The method of making tubular rolls for receiving frankfurters which comprises forming dough into a series of semi-tubular sections joined together along their side edges, separating the sections in pairs so as to leave two of them joined together along their side edges, baking the sections while held in said form, and folding one of the joined sections on to the other to form a tubular roll.

---

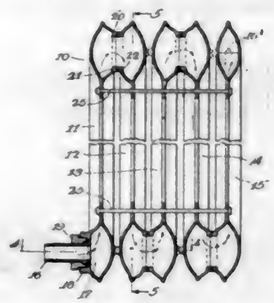


1,696,344. DOOR-OPERATING MECHANISM. FRANK J. CLARK, Battle Creek, Mich. Filed Oct. 27, 1925. Serial No. 65,158. 1 Claim. (Cl. 268—8.)

In a door operating mechanism, the combination with a motor, of a driving shaft having a reversely threaded part, driving connections for said driving shaft to said motor including a gear on said driving shaft provided with a driving clutch member, a reversely threaded driven shaft disposed in alinement with said driving shaft and provided with a yieldingly supported driven clutch member coacting with said driving clutch member, a traversing member on said driven shaft adapted to be connected to the door to be operated and provided with a pawl coacting with said driven shaft, a starting switch, a running switch comprising coacting relatively fixed and movable members, and actuating means for said movable member including a traversing member on said reversely threaded portion of said driving shaft, the stroke of said traversing member being such as to open the running switch at each end of its travel.

---

1,696,345. DRAFT GEAR. WALTER H. COTTON, Chicago, Ill., assignor to Union Draft Gear Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 7, 1923. Serial No. 661,375. 16 Claims. (Cl. 213—36.)

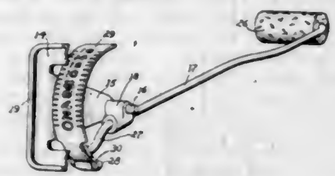


1. In a draft gear, a pair of oppositely arranged chambered followers having corrugated side walls, a group of friction plates within said followers, friction shoes having inclined faces engaging said corrugated walls for compressing said plates, and resilient means for resisting inward movement of said followers.

---

1,696,346. RADIATOR CONSTRUCTION. JOHN FRICHTER, Chicago, Ill. Filed Mar. 13, 1925. Serial No. 15,246. 4 Claims. (Cl. 257—151.)

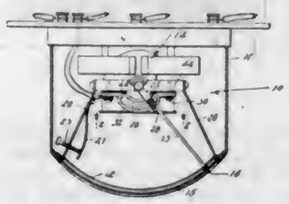
1. A radiator construction, the combination of a radiator having a plurality of sections connected together alternately at the top and bottom so that a continuous circulation



substantially the entire length of each section is obtained first through one section and then through the adjacent section, and means forming a partitional wall throughout the

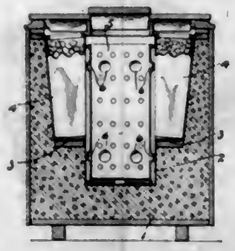
entire length of each section and also at the union of adjacent sections for providing a similar return circulation through said radiator.

---



1,696,347. LIUQID-LEVEL GAUGE. HENRY FORD, Dearborn, Mich. Filed Aug. 18, 1926. Serial No. 129,971. 3 Claims. (Cl. 73—82.)

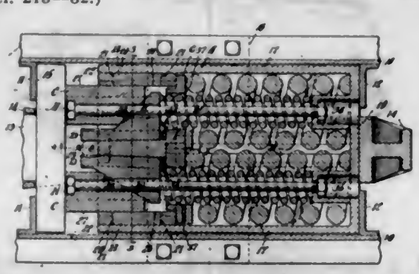
2. In a gauge structure a fuel tank having one wall with an opening therein, a gauge glass extended across said opening, a bracket member extending inwardly of the tank from said opening, an operating rod pivoted intermediate of its ends on said bracket, a float device at the one end of said rod, an arcuate dial member pivoted to the other end of said rod, and means for yieldingly urging the surface of the dial member into contact with the inner surface of the gauge glass.



---

1,696,348. ELECTRICAL APPARATUS. WILLIAM R. FRAMPTON, Los Angeles, Calif., assignor to Southern California Edison Company, Los Angeles, Calif. Original application filed Aug. 1, 1922, Serial No. 579,015. Divided and this application filed June 7, 1924. Serial No. 718,501. 1 Claim. (Cl. 200—56.)

In combination, an instrument having a horizontally movable indicating part, an open topped container arranged below the idicating part, the bottom of the container having a depression, a globule of mercury carried in the depression to project above the bottom of the container, fluid in the container covering the mercury, and a contact carried by the indicating part to extend into the container to clear the bottom of the container and cooperate with the mercury.



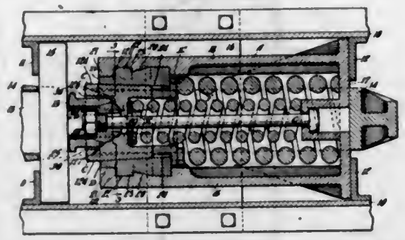
1,696,349. BRICK ICE-CREAM PACKING AND COOLING CABINET. EDWARD M. FRITZ, Grand Rapids, Mich., assignor to Grand Rapids Cabinet Company, Grand Rapids, Mich., a Corporation of Michigan. Filed July 25, 1927. Serial No. 208,222. 5 Claims. (Cl. 62—75.)

1. In an ice cream cabinet having an opening into which refrigerant holding receptacles are adapted to be placed, one at each side of the opening in spaced apart relation, a can of rectangular outline adapted to be located between the refrigerant holding receptacles and formed at its sides with outwardly pressed projections to engage against the adjacent sides of the refrigerant holding receptacles to thereby properly locate said receptacles and can with respect to each other and space the same from each other, said projections being spaced apart to permit vertical air circulation past and between them.

---

1,696,350. FRICTION SHOCK-ABSORBING MECHANISM. HENRY FUCHS, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 23, 1927. Serial No. 207,865. 5 Claims. (Cl. 213—32.)

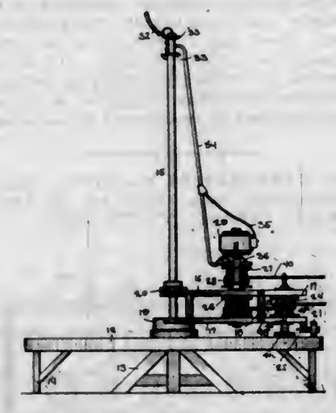
1. In a friction shock absorbing mechanism, the combination with a casing having a pair of longitudinally disposed interior friction surfaces; a central friction post within the casing; friction elements having friction surfaces cooperating with the friction surfaces of the casing, said elements being slidable lengthwise of the casing; additional friction elements having wedging engagement with the first named friction elements and frictional engagement with the post, said additional friction elements being movable relatively to the post lengthwise of the mechanism, the cooperating wedge faces of said first named and additional elements being such as to accommodate the relative displacement of the first named and additional elements vertically, said cooperating friction surfaces of the mechanism being formed to confine all of said elements to move longitudinally of the casing only; and spring resistance means opposing relative movement of the casing and additional elements.



---

1,696,351. FRICTION SHOCK-ABSORBING MECHANISM. WILLIAM A. GEIGER, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 5, 1927, Serial No. 166,058. Renewed Nov. 7, 1928. 8 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with a spring cage having a plurality of side walls, two

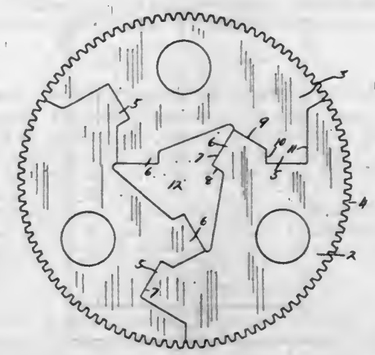


of said side walls being opposed; of a spring resistance within the cage; a pair of detachable liners mounted on said opposed side walls; means for preventing relative longitudinal movement of said liners and cage, said liners and side walls of the cage having interengaging faces thereon for holding the liners centered on said walls; a pair of friction shoes co-operating with the liners; a wedge block

engaging said shoes, said wedge block and shoes having interengaging shoulders thereon for confining relative movement of the shoes and wedge block to a direction longitudinal of the mechanism, and said shoes and liners being provided with interengaging means for holding all of said parts centered on said side walls and uniformly spaced from the remaining walls of the cage.

---

1,696,352. AUTOMATIC AGRICULTURAL MACHINE. ELMA EVERT GOUCHER, McMinnville, Oreg. Filed Dec. 2, 1926. Serial No. 152,293. 13 Claims. (Cl. 104—169.)

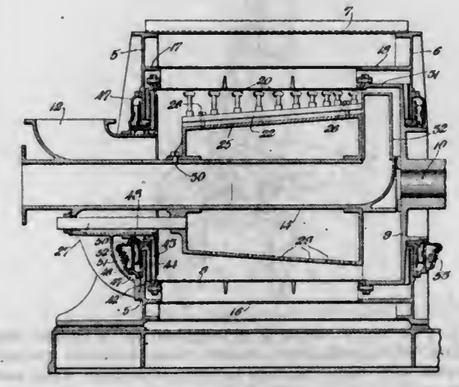


1. An apparatus of the character described comprising a frame mounted for rotary movement upon a stationary table, a pair of drums mounted for rotary movement on the frame, a cable connected to and wound over the drums adapted to extend radially outward for engagement with a machine, and mechanism operatively associated with one of the drums for automatically releasing the drums for predetermined rotary movement at intermittent periods.

---

1,696,353. MANUFACTURE OF WINDOW REGULATORS. HOWARD B. HASKINS, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed July 12, 1926, Serial No. 121,954. Renewed May 11, 1927. 10 Claims. (Cl. 29—148.)

1. In the manufacture of gear segments each having a series of teeth at one edge and anchoring portions at the opposite edge, the forming of a blank with teeth at its perphery and the severing of the blank into like gear segments with overlapping anchoring portions.

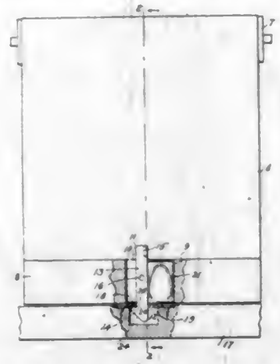


7. In a window regulator, the combination of a lifter arm and a gear segment having an arcuate series of teeth at one edge of a length to be included with an angle of 120 degrees having as its apex the central point about

which the teeth extend concentrically, said gear segment also having a plurality of anchoring portions at the opposite edge and near its ends set into and welded to said arm.

---

1,696,354. PULP-SCREENING MACHINE. ANTON JOSEPH HAUG, Nashua, N. H. Filed May 17, 1927. Serial No. 192,104. 14 Claims. (Cl. 92—35.)

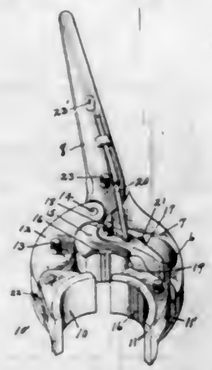


1. In a pulp screening machine, the combination of a rotary screen, means for conducting pulp into said screen, a stationary support in the screen and a series of members mounted on said support and adapted to advance the tailings step by step through the machine, said members having stock advancing portions located close to the surface of the screen and having their parts more remote from said surface shaped to avoid such advancing action.

---

1,696,355. SCREEN LATCH. FRANK D. HOBBS and CLARENCE HOBBS, Los Angeles, Calif. Filed Apr. 9, 1927. Serial No. 182,452. 1 Claim. (Cl. 292—128.)

The combination, with a vertically movable body, of a latch construction comprising a casing within said body, a latch member pivoted intermediate its ends in said casing and having its ends projecting through apertures therein; a hook on one of the ends of said latch member; a plate beneath said vertically movable body provided with a slot arranged in the path of said hook, and a flat detached hairpin shaped spring disposed in said casing having one

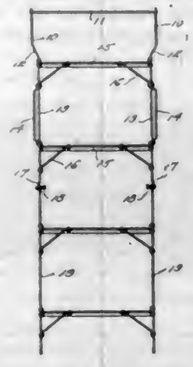


of its legs engaging with said latch and its other leg with a wall of said casing to keep the hook yieldingly pressed forwardly in engagement with the edge of the slot in said

plate, said casing being sufficiently narrow to maintain said spring in an inoperative position with relation to said latch member.

---

1,696,356. ROTARY PIPE TONGS. HALL H. HOLDAWAY, Long Beach, Calif. Filed Apr. 7, 1926. Serial No. 100,238. 3 Claims. (Cl. 81—91.)



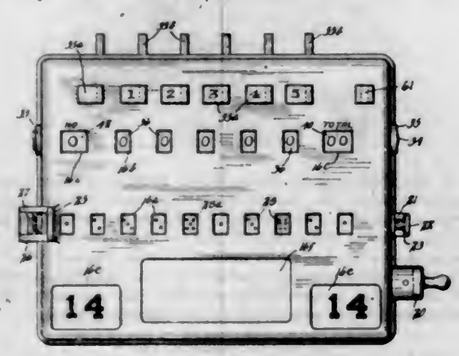
1. Pipe tongs including in combination, a handle, side plates of substantially crescent form attached to said handle with their openings in vertical register when said tongs are used on vertical pipe, said openings being at the outermost end of said handle, whereby when said handle is moved longitudinally to a pipe said openings pass over said pipe, pivoted jaw members in the opposite sides of said openings with semi-circular gripping faces opposite each other and opening outwardly and adapted to first engage a pipe as said tongs are moved endwise against a pipe, said pivoted jaws being adapted to move simultaneously together into said crescent shaped side plates and around opposite sides of said pipe as said tongs are thrust endwise against said pipe, latch means rearwardly of said jaws for holding them closed as they are moved back into said crescent shaped side plates, and operating connections from said handle with one of said jaws to press the same against said pipe as said handle is moved laterally in one direction.

---

1,696,357. FIRE ESCAPE. WILLIS W. JOHNSON, Dewittville, N. Y. Filed Nov. 2, 1927. Serial No. 230,648. 1 Claim. (Cl. 228—44.)

A fire escape comprising a plurality of pivotally connected sections, rungs carried by the sections, pivot pins for the connections being provided with spring members adapted to normally shift the same in one direction, the connected ends of the sections being provided with key-way

slots communicating with the apertured portions thereof, and keys carried by the pivot pins being adapted for reception within the key-way slots to rigidly hold the sections against displacement when called into active use.

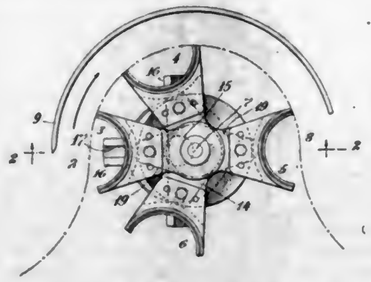


---

1,696,358. PROCESS FOR THE EXTRACTION AND DRYING OF JELLIES. WOLF JOHANNES MÜLLER, HANS CARSTENS, and JULIUS DRUCKER, Leverkusen, near Cologne-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Aug. 17, 1926, Serial No. 129,862, and in Germany Nov. 2, 1925. 4 Claims. (Cl. 23—182.)

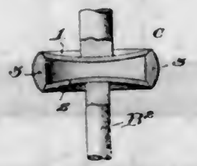
1. A process for extracting and drying inorganic jellies which comprises subjecting the jellies to the extraction and drying processes in the form of plates or sheets.

---



1,696,359. GAME-PLAYING MACHINE. CECIL O. NELSON, Minneapolis, Minn. Filed Feb. 21, 1927. Serial No. 169,845. 5 Claims. (Cl. 273—143.)

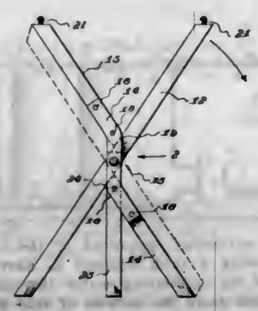
1. A machine of the class described having in combination a suitably mounted shaft, means for rotating said shaft, a plurality of drums journaled on said shaft, said drums each having various indicia on their periphery, engageable members carried by each of said drums, engaging members carried by said shaft, and means for longitudinally shifting said shaft in respect to said drums so that when the shaft is rotated by said means when said shaft is in one shifted position, respective engaging members will engage respective engageable members and spin said drums to expose various combinations of said indicia on said drums to view when said drums come to rest.



1,696,360. SPEED ACCELERATOR FOR TRAVELING CONTAINERS OR BODIES. JOSEPH PEYSER, Mount Vernon, N. Y. Filed Dec. 31, 1926. Serial No. 158,395. 3 Claims. (Cl. 198—22.)

1. A body accelerator comprising: a support, a plurality of shafts one within the other and rotatable around a common center, a body propelling element carried by each shaft above the support, a plurality of guides rotating about a common center eccentric with respect to that of the shafts, and a shoe carried by each shaft, extending into a guide and slidable therein.

---



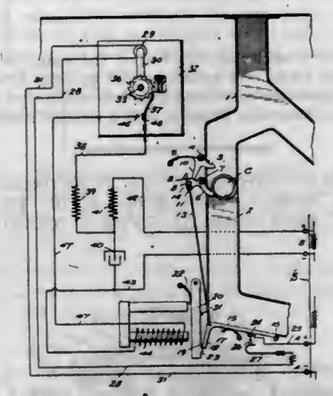
1,696,361. COMPENSATING MEANS FOR VALVE-OPERATING CONNECTIONS. FREDERICK REICH, Elizabeth, N. J. Filed Apr. 2, 1926. Serial No. 99,302. 6 Claims. (Cl. 123—90.)

1. In an internal combustion engine, the combination with a valve and the operating connections therefor, including a member having a predetermined minimum clearance from the valve, of a unit included in said operating connections and comprising two dished metallic members of different coefficients of expansion to preserve said predetermined minimum clearance under different temperature of the engine.

---

1,696,362. RECLINING MAT. BENJAMIN F. BROOKE SEWELL, Chula, Va. Filed May 12, 1925. Serial No. 29,726. 3 Claims. (Cl. 155—153.)

1. A reclining mat comprising crossed and foldable pivot legs, one of said legs being straight and the other composed of spaced sections laterally offset the width of the straight leg and rigidly connected in such relation that the proximate ends of the sections bear against the remote sides of the straight leg, a fabric engaging upon the opposite free ends of said legs and holding the crossed legs in said relation, and an easel leg attached adjustably at the pivot.



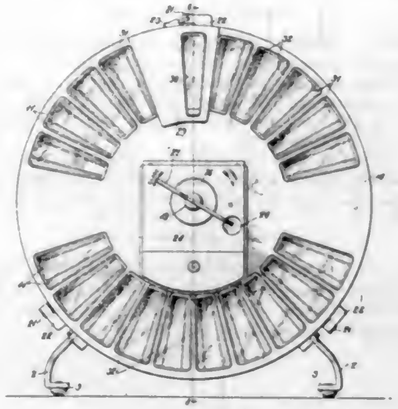
---

1,696,363. PURIFICATION OF ACETIC ANHYDRIDE. WILLIAM PEARSON SKERTCHLY, Spondon, near Derby, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed Mar. 25, 1926, Serial No. 97,448, and in Great Britain Feb. 13, 1926. 8 Claims. (Cl. 260—123.)

1. Process for the purification of acetic anhydride containing sulphur or sulphur compounds, comprising treating the same with chlorine and with at least one metallic acetate.

---

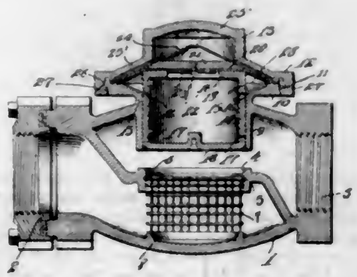
1,696,364. COIN-CONTROLLED TIME SWITCH. LEE D. SLUSSER, Ottawa, Ohio, assignor of one-half to G. F. Donart, Ottawa, Ohio. Filed Sept. 16, 1927. Serial No. 220,010. 3 Claims. (Cl. 194—9.)



1. A coin controlled attachment for radio receiving sets and the like, including a B power circuit having a magnet and a circuit closer, a wheel for intermittently actuating the circuit closer, and a driving mechanism, of a coin chute, a normally open A power circuit, means actuated by the impact of a coin for closing the A power circuit, a latch for engaging said means to hold the A power circuit closed, means controlled by the closing of said A power circuit for coupling the driving mechanism to the wheel, thereby to close the B power circuit after a predetermined time interval, a condenser, means for charging the condenser, and means actuated by the energizing of the magnet by discharge of the condenser when the B power circuit is closed, for actuating the latch to release the coin operated means and break the A power circuit.

---

1,696,365. COIN-CONTROLLED VENDING MACHINE. GOODWIN B. SMITH, New York, N. Y. Filed Oct. 6, 1925. Serial No. 60,822. 13 Claims. (Cl. 312—94.)

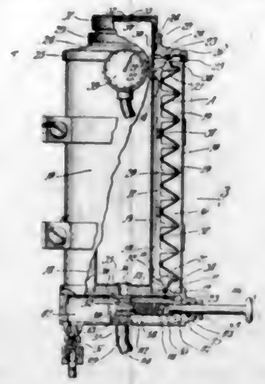


1. A vending machine comprising in combination: a frame, a drum having radially disposed compartments rotatably supported thereby, a casing, having a door aperture and a sliding door normally closing the same, adapted to be positioned on said frame to house said drum, means carried by said casing for progressively rotating said drum and actuating said door to successively align the radial

compartments of said drum with said door aperture, cooperating means carried by said casing and said drum to prevent the continued movement of the latter after a complete revolution, said cooperating means further preventing the door from being closed after the complete revolution of said drum, and means carried by said drum automatically operative after said complete revolution to visually indicate that said drum is locked against rotation.

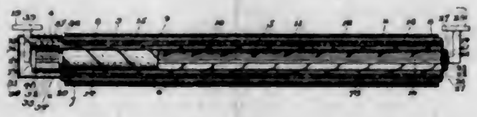
---

1,696,366. AUTOMATIC VACUUM-CONTROLLED VALVE. SCOTT V. SMITH, Bridgeport, Ill. Filed June 28, 1927. Serial No. 202,111. 5 Claims. (Cl. 251—127.)



1. A valve of the class described comprising a casing, a guide sleeve carried by the casing, a valve seat in the casing, a hollow valve slidable in the sleeve, said valve having upper and lower ducts in its wall communicating with the interior thereof, a cap carried by the casing and providing a chamber, the upper ducts serving to discharge moisture from the chamber into the valve while the lower duct discharges the moisture therefrom into the casing.

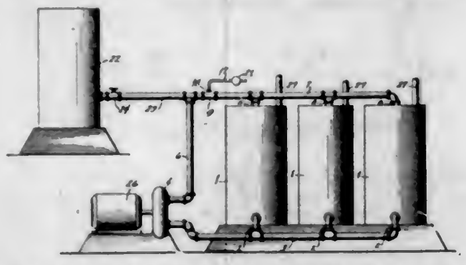
---



1,696,367. FILTER. ELTON S. STEPHENS, Chicago, Ill. Filed May 20, 1927. Serial No. 192,924. 12 Claims. (Cl. 210—183.)

1. In a filter, the combination of a casing provided with a centrally disposed well, a filter cage of generally cylindrical formation held in spaced relation to the center well, the cage being provided with outstanding ring shaped ribs and the wall of the cage being provided with longitudinally extending slots to provide communication between the spaces interior and exterior of the cage, a convoluted filter tube recurrently distended by contact with the edge of the ring shaped ribs, means for holding the tube contracted within the spaces intermediate between the space of the ring shaped ribs, the filter being provided with inlet and outlet passages, one of which opens into the space exterior of the filter tube and one interior thereof, substantially as described.

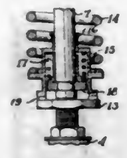
---



1,696,368. ELECTRICAL SHIFTING MECHANISM FOR CURTAINS. LOUIS V. STROUSE, Linwood, N. J. Filed Nov. 21, 1927. Serial No. 234,824. 17 Claims. (Cl. 156—28.)

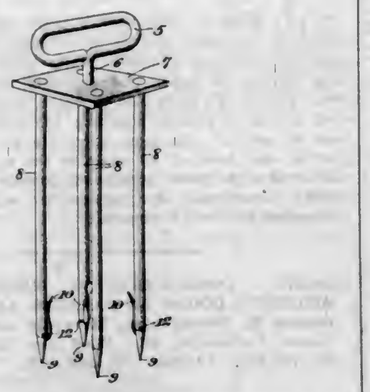
1. A shade shifting mechanism comprising a roller for the shade, a revoluble means bodily carrying the roller and connected therewith, an electrically operated travelling iron core positioned within and interengaging with said means for revolving it in a clockwise and in an anti-clockwise direction, and controlling means for said core.

---



1,696,369. WATER-SOFTENING APPARATUS. JAMES E. TREWHITT and PURLEY E. HILLERY, Oakland, Calif., assignors to Oakland California Towel Company, Oakland, Calif., a Corporation of California. Filed Nov. 8, 1926. Serial No. 146,875. 5 Claims. (Cl. 210—24.)

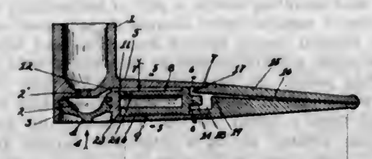
1. A water softening apparatus of the character described comprising a tank adapted to have a chemical therein, means for circulating water through said tank, means adjustable from the outside of said apparatus for building up localized pressure in said means and means allowing water to be withdrawn from the region of localized pressure.



1,696,370. VALVE-OPERATING MECHANISM AND THE LIKE. JOHN C. TURVENE, Dayton, Ohio. Filed Jan. 3, 1927. Serial No. 158,481. 10 Claims. (Cl. 123—90.)

1. Valve operating mechanism including in combination with a valve having an axially operable member for opening and closing the valve, an actuator for said member aligned axially therewith and acting positively thereon for opening the valve, a primary compressible element opposed direct to the actuator, and a secondary compressible element opposed to said member and to the primary element, whereby only a portion of the force of the primary element is exerted direct on the actuator.

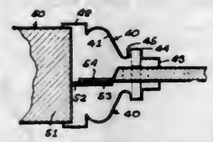
---



1,696,371. CLAM DIGGER. CLIFFORD E. WALLACE, Dallas, Oreg. Filed Feb. 6, 1928. Serial No. 252,218. 4 Claims. (Cl. 294—126.)

1. In a clam digger, the combination of a handle, a plurality of spaced tines connected to the handle and arranged in parallelism about a common center, inwardly extending barbs pivoted to the tines adjacent the ends thereof opposite the handle, the pivots of the barbs permitting the latter to swing upwardly into parallelism with the respective tines, and stops carried by the tines for cooperation with the barbs to limit their downward swinging movements to positions at substantially right angles to the central axis of the tines.

---



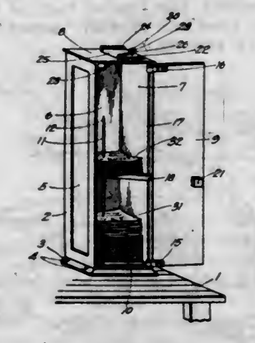
1,696,372. TOBACCO PIPE. STEPHEN E. WRIGHT, Los Angeles, Calif. Filed Dec. 23, 1925. Serial No. 77,219. 6 Claims. (Cl. 131—12.)

1. A pipe comprising in combination, a structure having a bowl and an integrally formed socket in alignment, separated by the base of the bowl, there being smoke vents from the bowl into the socket, a base plug screwed into the socket, a stem formed integral with the structure having the bowl and the socket, the stem having a chamber, a removable plug inserted in said chamber, with its end abutting against the wall structure of the socket, there being a smoke passage from the socket to the chamber of the stem, the plug having grooves forming a smoke passage, and a mouth piece with a smoke duct connected to the end of the stem.

---

1,696,373. METAL DOOR AND THE LIKE. OSCAR E. ZENKER, Brooklyn, N. Y., assignor to Reliance Fireproof Door Co., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 5, 1925. Serial No. 60,429. 3 Claims. (Cl. 189—46.)

1. A metal door comprising a metal panel member, surrounding metal stile members, means comprising welded cooperating flange members on said metal panel and surrounding metal stile members for attaching said metal panel member to said surrounding metal stile members, a plurality of metal lugs positioned within perforations in said metal panel member, and a plurality of opposed, cooperating metal trim members, one on each side of said metal panel member, attached to said metal lugs.



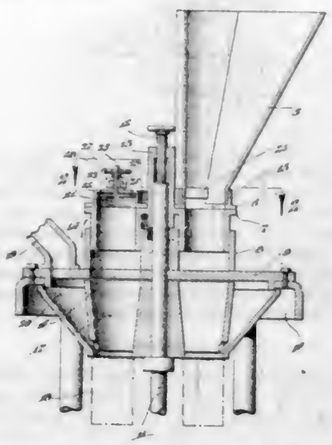
---

1,696,374. MANUFACTURE OF DISPERSE SYSTEMS. CARL ALEXANDER AGTHE, Zurich, Switzerland, assignor to the Firm J. R. Geigy S. A., Basel, Switzerland. Filed Nov. 22, 1927, Serial No. 235,124, and in Germany Apr. 19, 1926. 1 Claim. (Cl. 252—6.)

A manufacture of disperse systems, consisting in mixing the material to be emulsified by dispersion both with sulphite cellulose lye and colloidal silica.

---

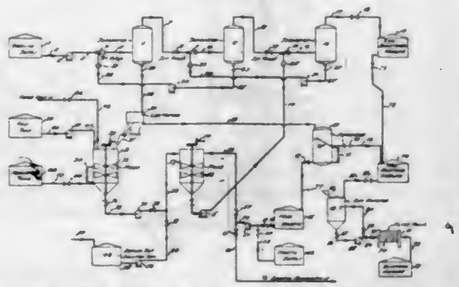
1,696,375. PRESCRIPTION-FILING CABINET AND THE LIKE. CLARENCE M. ANDERSON, Oklahoma City, Okla. Filed Aug. 2, 1927. Serial No. 210,158. 2 Claims. (Cl. 129—7.)



1. A cabinet of the character described, comprising an upright metallic case having walls, top, bottom; and a door, said door being adapted to be locked; said bottom being adapted to be fastened to a base, and having on its inside a plurality of upstanding tongues; a filing rod having its lower end bent so as to form a base and to be removably held in said tongues, its upper free end being pointed and adapted to be used through perforations in

prescriptions, and the like; a rod anchored at top and bottom adjacent one front edge of said cabinet and being adapted to hinge said door thereon, a slidable arm being adapted for movement and for positioning on said anchored rod for separating, holding and raising one portion of said prescriptions from the other portion; in combination with a suitable cutting perforator adapted to perforate papers for filing in said cabinet so as to make their filing therein uniform; said filing rod and the prescription and the like placed therein being adapted to be removed from said cabinet and retired to a suitable container.

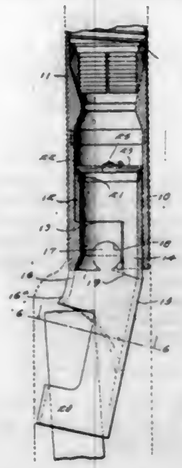
---



1,696,376. CAN-FILLING MACHINE. CHARLES H. AYANS, Salem, N. J. Filed Mar. 24, 1927. Serial No. 177,870. 6 Claims. (Cl. 226—102.)

1. In a can filling machine having a bed plate, measuring units movable on the bed plate, and a hopper above the measuring units; a hopper plate, having a relief channel formed therein, mounted between the measuring units and the hopper, and means for varying the depth of the channel.

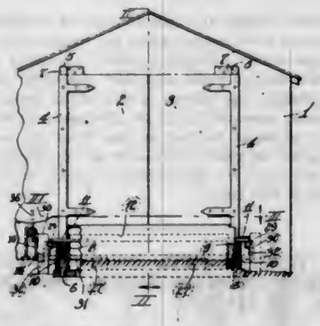
---



1,696,377. PROCESS OF PURIFYING HYDROCARBONS. JOHN C. BLACK, Los Angeles, and WILSON H. LOW, Long Beach, Calif., assignors to Pan American Petroleum Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 17, 1927. Serial No. 176,226. 11 Claims. (Cl. 196—32.)

1. The process of treating hydrocarbons, which comprises treating the same with cadmium hydroxide suspended in an aqueous solution in quantities sufficient to combine with sulphur bearing constituents to be separated, combining the same therein, and separating the treated hydrocarbons from the sulphur bearing constituents combined with the said cadmium hydroxide.

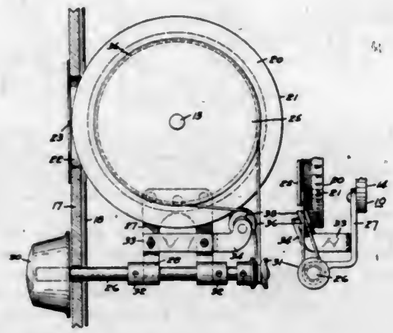
---



1,696,378. HYDRAULIC CASING HOOK. WALTER BRAUER, Seminole, Okla. Filed May 14, 1927. Serial No. 191,403. 9 Claims. (Cl. 294—86.)

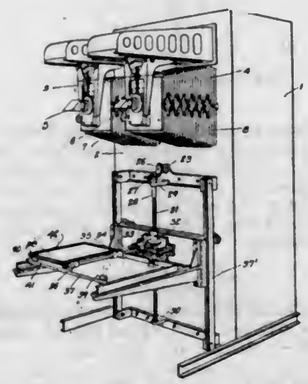
1. In a guide for overshots, a shell adapted to be connected to the lower end of an overshot and having an inwardly extending shoulder at its lower end, a casing hook having its upper end pivotally connected to the lower end of the shell and a sleeve slidable within the shell having a portion engaging the upper end of said hook to oscillate the same upon the pivot and thereby position said hook at an angle to the axis of the shell, said shell and sleeve permitting passage of a fish upwardly therethrough for engagement with an overshot from which the shell is supported.

---



1,696,379. DOOR-OPERATING MECHANISM FOR SWINGING DOORS OF GARAGES AND THE LIKE. GEORGE H. BRIDGEWATER, Maryville, and CHARLES M. GOBEN, Collinsville, Ill. Filed Nov. 21, 1924. Serial No. 751,381. 1 Claim. (Cl. 268—35.)

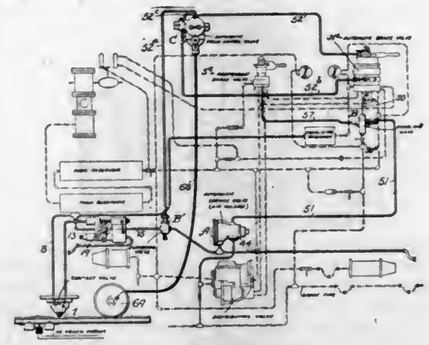
In a door operating device, a pair of horizontally swingable doors, a metallic strap secured to each door extending the vertical length thereof and above and below respective doors, a pintle formed at each end of said straps, supporting means for each pintle, the portions of said straps which extend below said doors each being twisted so as to form a spiral portion, a horizontally disposed depressible member having a bifurcated portion at each end for engagement with respective spiral portions of said straps, resilient means underengaging said depressible member, and a pair of oppositely arranged inclined platforms each having one end resting on said depressible member.



1,696,380. INSTRUMENT CONTROL. WILLIAM M. BROWER, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Mar. 29, 1926. Serial No. 98,308. 9 Claims. (Cl. 116—129.)

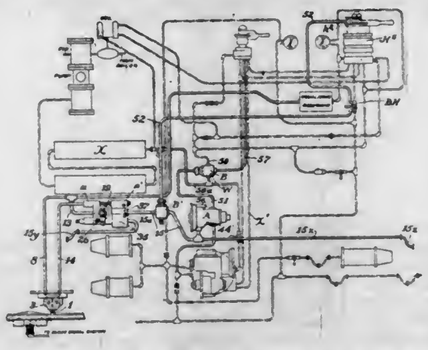
1. In a visual indicator of the class described the combination with a panel formed with an opening therein, a rotatable shaft, an indicator drum secured to said shaft and having graduations thereon visible through the opening in said panel, a rotatable control shaft in alignment with said indicator drum, and flexible means for operatively connecting said shafts, said means extending in planes substantially at right angles to each other.

---



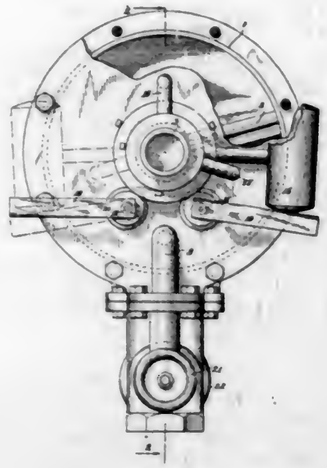
1,696,381. PHOTOGRAPHIC COPYING MACHINE. ARTHUR W. CAPS, Kansas City, Mo., assignor to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed June 26, 1925. Serial No. 39,752. 13 Claims. (Cl. 88—24.)

1. In a photographic copying machine, the combination with a camera body embodying a casing and a lens, and a reversible copyholder arranged outside of the casing in the focus of the lens, of a reversible sensitized sheet holder within the casing adapted to be moved into and out of the focal plane of the lens and gearing connecting the sheet holder and copyholder to effect joint movement thereof.



1,696,382. TRAIN-CONTROL APPARATUS. PATRICK J. CLIFFORD, Falls, Pa., assignor, by mesne assignments, to Train Control Corporation of America, a Corporation of Delaware. Substitute for abandoned application Serial No. 454,684, filed Mar. 23, 1921. This application filed Feb. 14, 1928. Serial No. 254,312. 25 Claims. (Cl. 246—182.)

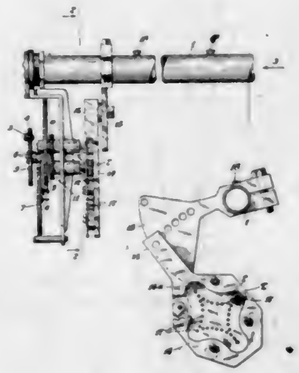
1. In a train controlling system, automatic brake applying means to be operated by air pressure, for applying the brakes, an eliminating valve for cutting off the supply of air to said automatic means to eliminate the function thereof when the engineer is attentive and operates his valve to effect application of the brakes, and controlling means for operating the eliminating valve by the engineer independently of the operation of the engineer's valve, to eliminate the function of the automatic brake applying means when the train is running at a prescribed reduced speed, substantially as described.



---

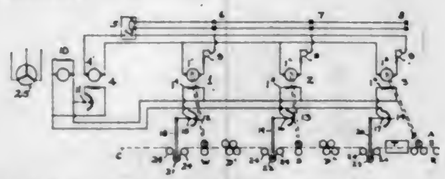
1,696,383. SYSTEM OF ELIMINATING AUTOMATIC TRAIN-CONTROL APPARATUS. PATRICK J. CLIFFORD, Falls, Pa., assignor to Train Control Corporation of America, Scranton, Pa., a Corporation of Delaware. Substitute for abandoned application Serial No. 667,722, filed Oct. 10, 1923. This application filed Jan. 27, 1928. Serial No. 250,035. 4 Claims. (Cl. 246—183.)

1. In combination in automatic train stop systems, automatic train stop apparatus on the vehicle or engine, means for eliminating the function of said automatic apparatus as a consequence of the engineer setting his brake valve in service position and thus retarding the train, a cut out valve to render the engine dead so far as braking is concerned, so that said engine may be coupled up with a first engine to assist the same with its motive power, said eliminating means being nullified when said cut out valve is closed, so that in case said valve is closed on the first engine, the automatic train stop means thereon will be effective, even though the engineer sets his automatic brake valve in braking position, substantially as described.



1,696,384. IRRIGATING APPARATUS. WALTER H. COLES, Troy, Ohio. Filed Oct. 26, 1921, Serial No. 510,635. Renewed Oct. 6, 1925. 8 Claims. (Cl. 299—66.)

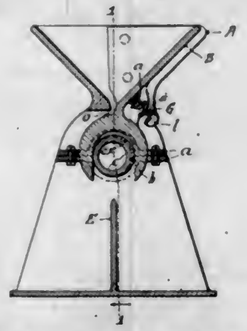
1. Irrigating apparatus including: a casing, an oscillatory sprinkler pipe extending through said casing, a paddle within said casing and mounted fast on said pipe, reversible valve mechanism for supplying and exhausting water to and from said casing alternately on opposite sides of the paddle, means for conducting exhaust water from said valve mechanism to said pipe, and means for supplying water to said valve mechanism and to said pipe independently of the valve mechanism.



---

1,696,385. IRRIGATING DEVICE. WALTER H. COLES, Troy, Ohio, assignor to The Skinner Irrigation Company, Troy, Ohio, a Corporation of Ohio. Filed June 4, 1926. Serial No. 113,636. 9 Claims. (Cl. 299—62.)

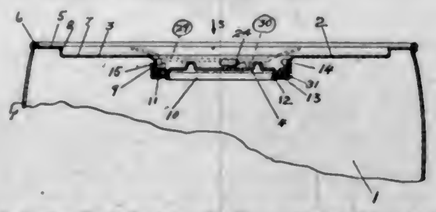
2. An irrigating device including: an oscillatory sprinkler pipe, a rotatable driving gear, a polygonal-sided gear meshing with and traveling about, the driving gear, and connections from the polygonal-sided gear to the pipe, to thereby oscillate the latter.



1,696,386. RANGE DRIVE. JAMES W. COREY, Cleveland Heights, Ohio, assignor to The Reliance Electric & Engineering Co., Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1925. Serial No. 64,585. 11 Claims. (Cl. 271—2.3.)

1. In apparatus for treating a continuous web of material, the combination of successive treating sections, a dancer roll engaging the web of material in advance of each such treating section, a separate electric motor for driving each treating section, separate rheostat means controlled by each said dancer roll and connected in series with the field of the following section drive motor, a direct current generator for supplying the armatures of said motors in parallel, an overload cut-out for each motor, a main switch between said generator and said armatures, means convenient to each motor for controlling said switch, a direct current exciter generator for supplying the fields of said motors and said generator, rheostat means connected in series with the field of said generator, and means for driving said generator and said exciter generator.

---

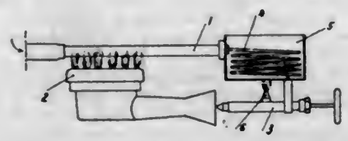


1,696,387. CRUSHING MACHINE. PAUL L. CROWE, Baltimore, Md. Filed Nov. 25, 1925. Serial No. 71,419. 4 Claims. (Cl. 83—53.)

1. In a crushing machine, the combination of two hopper-sections provided with opposite crusher-faces, one of said sections being pivotally connected to the other by means of a yielding elastically supported pivotal connection for the purpose specified, and means to oscillate the pivotally connected hopper-section with relation to the other one of said hopper-sections.

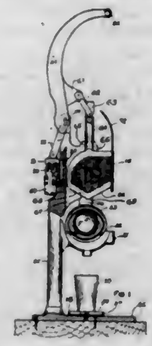
---

1,696,388. CLAMPING LID FOR CONTAINERS. DAVID W. CURTIS, Oakland, Calif. Filed May 20, 1925. Serial No. 31,503. 1 Claim. (Cl. 220—40.)



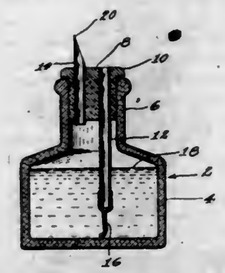
A closure for a drum or the like, comprising a top plate having an annular section of the same depressed to form an annular flange and a ledge extending inwardly from the edge thereof and terminating in an annular curl forming a seat, and an annular groove therearound, a gasket in said groove exceeding the curled seat in height, ribs extending inwardly from the flange, intermediate the height thereof, a closure cap formed with peripheral recesses allowing the same to be lowered past the ribs and with adjacent cams adapted for clamping introduction between the gasket and the bottom faces of the ribs on a turning motion; the closure cap being formed with an annular depression arranged to be pressed upon the curled seat when the cap is placed in position.

---



1,696,389. VAPOR BURNER. CHARLES EDMOND DE-BAECKER, Paris, France. Filed Sept. 14, 1926, Serial No. 135,391, and in Belgium Sept. 17, 1925. 3 Claims. (Cl. 158—53.)

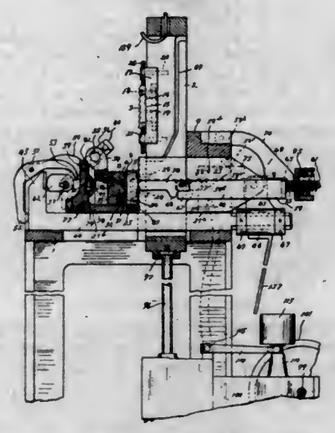
1. In a liquid fuel vapor burner, the combination of a fuel feeding pipe, a vaporizer connected with and forming a continuation of said pipe, a coil connected with the outer end of said vaporizer, heat storing material in which the coil is disposed, an auxiliary burner adapted to heat said coil and material, means for feeding the auxiliary burner with vapor passing out of the coil, and a main burner adapted to heat the vaporizer.



---

1,696,390. MACHINE FOR EXTRACTING JUICE FROM FRUIT. BRADFORD H. DIVINE, Utica, N. Y. Filed Apr. 30, 1926. Serial No. 105,854. 3 Claims. (Cl. 100—41.)

2. In a machine for extracting juice from fruit the combination of a standard, a fruit support, a knife slidingly mounted above said support for movement in a straight line towards and from said support and adapted to descend through said fruit, squeezing plates movably mounted at the opposite sides of said support and adapted to be brought towards each other against the fruit, an operating lever mounted upon said standard and operatively connected to said knife and said squeezing plates whereby a single operating stroke of the lever moves the knife downward through the fruit and presses the plates against the fruit and a single return stroke of said lever withdraws the plates and raises the knife.

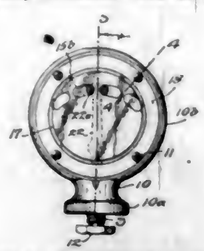


1,696,391. LIQUID DISPENSER. CURTIS RALSTON ECKBERG, Chicago, Ill. Filed May 28, 1928. Serial No. 281,154. 8 Claims. (Cl. 120—57.)

1. In a liquid dispensing device, a container having an opening to permit the discharge of liquid therefrom, and means which is responsive to the tilting of the container to effect an increase in pressure within the container, to thereby cause a predetermined amount of liquid to be dispensed through the discharge opening.

---

1,696,392. MACHINE FOR TRIMMING THE EDGES OF BEARINGS OR LIKE SECTIONS. CHARLES W. EOGENWEILER and WILLIAM J. FIEGEL, Detroit, Mich., assignors to Bohn Aluminum and Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 9, 1926. Serial No. 87,056. 12 Claims. (Cl. 90—33.)

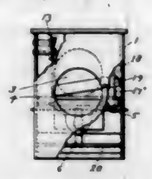


1. In a machine for trimming bearing or like sections, a reciprocable ram, cutters carried by the ram for operation on said section, means for clamping the section in position for the cutting operation, a source of power, a pull rod, a crank establishing a driving connection between said source of power and said pull rod for reciprocating the ram, means for rotating said crank including a clutch, a rotatable cam associated with the clutch and operable thereby, causing the application of the power to impart a single revolution to the crank and hence a single complete cycle of reciprocation to the ram, and braking means operable by said cam and automatically responsive to the completion of the said crank revolution for quickly bringing the crank and ram to rest.

---

1,696,393. MOTOR GAUGE. EDGAR D. FAGEROS, Minneapolis, Minn. Filed May 28, 1927. Serial No. 194,950. 5 Claims. (Cl. 116—114.)

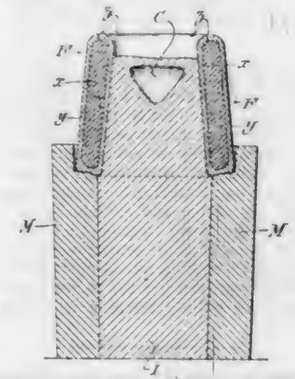
1. A motor gauge having in combination, spaced oppositely disposed disks, an oscillating indicator hand pivoted



to swing between said disks and parallel therewith, said disks having adjacent their upper edges a series of oblong openings having their longitudinal center lines arranged on a line substantially concentric with the pivot of said hand,

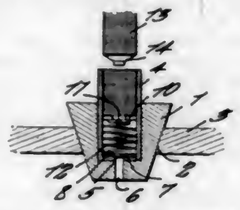
said hand having a portion movable into alinement with said openings, said hand having a portion moving in engagement with one of said disks to prevent undue vibration of said hand.

---



1,696,394. TRAP NEST. THEODORE P. GARANKIN, New York, N. Y., assignor of one-half to Bruno A. Mueller, New York, N. Y. Filed June 4, 1927. Serial No. 196,541. 4 Claims. (Cl. 119—47.)

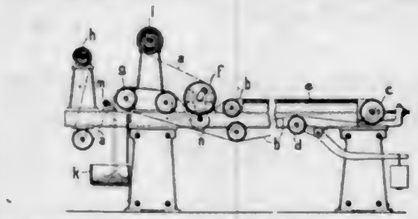
1. In a trap nest, the combination with a housing of a nest board, the opposite sides of said housing being provided with entrance and exit apertures, boards pivotally supported on the walls of said housing in a cooperative relation to said apertures, links connecting said boards with said nest board, said boards being arranged to stay in the lowered positions, one of said boards when in a lowered position being adapted to open said entrance aperture, and the other of said boards when in a lowered position being adapted to close said exit aperture, the weight of said boards tending to keep said nest board in a raised position, means to lock said nest board in its raised position, said locking means being adapted to be released by an egg laid by the hen.



---

1,696,395. SHRINK-HEAD CASING FOR INGOT MOLDS. EMIL GATHMANN, Baltimore, Md. Filed Oct. 28, 1926. Serial No. 144,800. 3 Claims. (Cl. 22—147.)

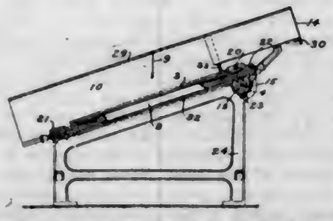
1. A shrink head casing for ingot molds comprising a self-supporting core consisting of slowly combustible material and a non-metallic self-supporting casing, which completely surrounds the core, composed of noncombustible material, but having vent holes at its upper end.



1,696,396. VALVE. LAWRENCE C. GERLINGER, Seattle, Wash. Filed May 25, 1927. Serial No. 194,186. 1 Claim. (Cl. 217—101.)

The combination with a cask, having a bung hole, of a stopper for the bung hole, said stopper having a central chamber and a central aperture in the bottom of the chamber, a tube fitting in the chamber, said tube having a bottom formed with an opening which registers with the aperture in the stopper, the bottom of the tube surrounding the opening therein forming a valve seat, spaced guide lugs formed on said seat on opposite sides of the central opening, a valve having apertures to fit over the lugs on the valve seat, said apertures being larger than the lugs to form exit openings when the valve is in open position, lugs projecting from the inner walls of the tube, a tension spring between the last mentioned lugs and the valve, and a removable plug for the tube.

---



1,696,397. APPARATUS FOR THE MANUFACTURE OF MICA-COATED FIBROUS MATERIAL. EMIL HAEFELY, Basel, Switzerland. Filed July 12, 1924, Serial No. 725,723, and in Switzerland July 28, 1923. 1 Claim. (Cl. 154—2.5.)

An apparatus for the manufacture of mica-coated fibrous material for electric insulating purposes, comprising an endless conveyor band with mica scales freely distributed thereon, tensioning means for said conveyor band, means to supply an agglutinating web of fibrous material and a combined pressure and heating roller arranged to serve first as guiding and preheating member for said agglutinating web and then to apply and press, while heating, said agglutinating web of fibrous material upon the mica carrying conveyor band substantially as and for the purpose described.

---

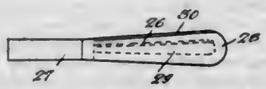
1,696,398. BEET TOPPER. OSWALD H. HANSEN, Port Washington, Wis., assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis., a Corporation of Wisconsin. Filed Aug. 18, 1924. Serial No. 732,875. 5 Claims. (Cl. 146—85.)

1. In combination, a pair of rotary inclined rolls having cooperating surfaces formed to remove appendages from

objects travelling therealong, gears associated with the upper ends of said rolls for rotating the same, a housing enclosing said gears, sealing means for preventing ingress of juice to and egress of lubricant from within said housing along said roll surfaces, and means for delivering said objects upon said rolls below said sealing means.

---

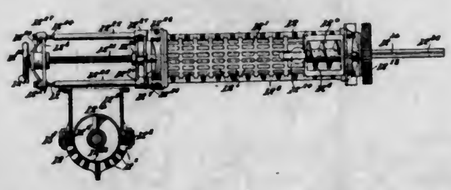
1,696,399. PROCESS OF AND APPARATUS FOR TREATING FRUIT. OSWALD H. HANSEN, Port Washington, Wis., assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis., a Corporation of Wisconsin. Filed Jan. 26, 1925. Serial No. 4,968. 9 Claims. (Cl. 99—11.)



3. In combination, a plurality of superposed plates having staggered discharge openings therein and forming a series of treating chambers, means for supplying fruit to the upper of said chambers, means for discharging treated fruit from the lower of said chambers, a plurality of radial conveyor arms movable through each of said chambers, and means for applying variable degrees of heat to different chambers of said series.

9. The process of treating fruit, which comprises, simultaneously rolling a limited number of the fruit berries along a surface in a confined chamber and applying heat thereto, subsequently rolling a limited number of the berries along another surface in a confined chamber and simultaneously applying higher temperature, and finally immersing the heated berries in hot syrup.

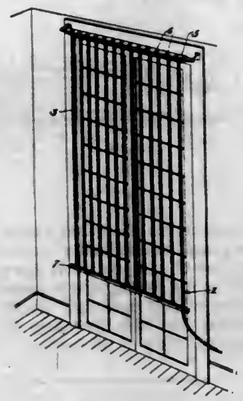
---



1,696,400. PROCESS FOR MAKING THERMOMETER TUBES. ALFRED T. HESPE, East Orange, N. J. Filed Dec. 29, 1923. Serial No. 683,406. 8 Claims. (Cl. 49—79.)

8. The method of making tubing which has a colored stripe forming part of the bore, which comprises the steps of attaching a piece of colored glass directly to the end of the blow-pipe in such a manner that the colored glass is adjacent to, and to one side only of the hole in the blow-pipe, gathering clear glass therearound, blowing a cavity in the glass on the pipe with the colored glass along one side of the cavity only, and forming the blank thus made into a tube.

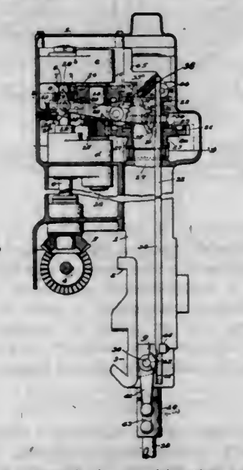
---



1,696,401. CONTINUOUS-SCREW PRESS. STANLEY HILLER, San Jose, Calif., assignor to Stanley Hiller, Inc., San Jose, Calif. Filed Nov. 14, 1922. Serial No. 600,913. 6 Claims. (Cl. 100—48.)

1. In a press having a shell into which the material to be pressed is introduced, said shell having openings substantially throughout its surface, a screen fitted within the shell, a screw conveyor within said screen, a feed opening at one end of the shell, means for withdrawing the screw out of the discharge end of the shell, comprising a shaft on the screw conveyor extending beyond the discharge end of the shell, and an out-rigger bearing head for said shaft; the combination of means for imparting a pull to the shaft for withdrawing the screw conveyor and a thrust to the shaft for returning the screw conveyor.

---



1,696,402. RADIOANTENNA. CHARLES A. HORTON, Providence, R. I., assignor to Hope Webbing Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed Aug. 7, 1924. Serial No. 730,651. 5 Claims. (Cl. 250—33.)

1. In combination with a roller support an antenna comprising a plurality of continuous non-insulated, uncovered conductor bands suspended from and spaced apart axially along said roller, each intermediate band having its opposite ends electrically connected alternately to the adjacent ends of the bands at opposite sides thereof, the rotation of the roller winding each band upon itself to shorten the effective length of the antenna as a whole.

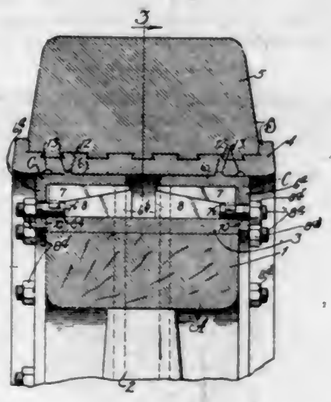
---

1,696,403. ACCESSIBLE TWIN-LEVER GEAR SHIFT FOR DRILL HEADS. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 18, 1924. Serial No. 738,440. 3 Claims. (Cl. 74—57.)

1. In a machine tool, in combination, a plurality of shiftable gear-units; a gear-shifter engaging each of said

gear-units; gear-shifting levers of the first and second class, respectively, journaled coaxially in said machine tool between said gear units, each of said levers being formed integral with a gear-segment and each lever wholly supporting one of said gear shifters; actuating hand-levers located remote from gear-shifting levers; and operative connections between said hand levers and said gear-shifting levers whereby the latter are actuated by the former, each of said connections including a rack-bar engaging the gear-segments on said gear-shifting levers and operative connections between said actuating levers and said rack bars.

---

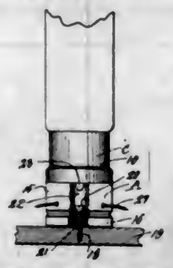


1,696,404. AEROPLANE. PETER G. KLUSE, Los Angeles, Calif. Filed Feb. 29, 1928. Serial No. 258,115. 5 Claims. (Cl. 244—18.)

1. In an aeroplane, an elongated casing having a plurality of superposed longitudinally extending air chambers, the uppermost of said chambers having air openings through the top of the casing, and a propeller adapted to entrain air through said openings, direct it toward the front of the casing and then discharge it in a rearward direction through the sides of the casing.

---

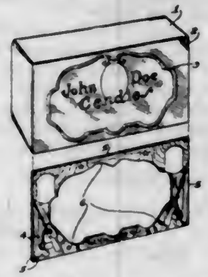
1,696,405. WHEEL CONSTRUCTION. WILLIAM C. MARTIN, Chicago, Ill., assignor of one-fifth to John H. Lee, Oak Park, Ill. Filed Feb. 18, 1928. Serial No. 255,345. 5 Claims. (Cl. 301—20.)



1. In combination, a wheel-center, an encircling tire having an annular base, a pair of channel-form rings interposed between the wheel-center and said annular base, and a series of wedge-devices associated with each ring, said wedge-devices comprising a pair of complemental wedge-members, one of which is provided with a bolt extending through the outer flange of the ring and equipped with a nut at the outer side of said flange.

---

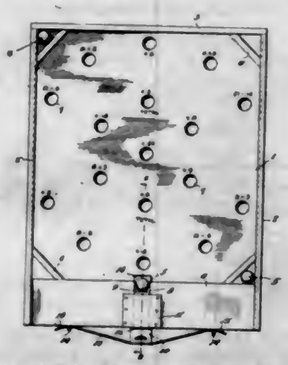
1,696,406. RADIO TUBE SOCKET. FRANK S. MASLEY and ALBERT P. WASIL, Homestead, Pa. Filed Apr. 28, 1924. Serial No. 709,558. 2 Claims. (Cl. 173—328.)



1. A radio tube socket comprising a pair of solid circular sections formed of insulation, the outer section having a plurality of socket pin openings formed therein, bearing sleeves carried by the outer section, the sleeves having radially extending openings formed therein communicating with radially extending openings formed in the outer section, means for clamping a conducting wire to said

sleeve, an electric conducting lug strap connected with said sleeve, socket sleeves formed on the lug straps and fitted in the socket pin openings, said lug straps being arranged between said sections, and means for connecting the sections together and to a support.

---



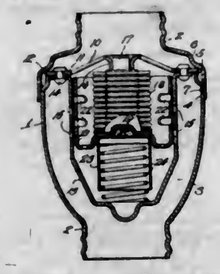
1,696,407. SEASON-GREETING FRAME. MALCOLM A. MCDONELL, Cincinnati, Ohio. Filed Mar. 24, 1928. Serial No. 264,479. 1 Claim. (Cl. 229—8.)

The combination with a package consisting of a box filled with gift articles, having an outer top adapted to be placed over the usual box cover and displaying information relative to some special occasion, said outer top having a section removed whereby the ordinary top will be exposed displaying suitable information to indicate the nature of the gift articles, whereby the package may be sold as a gift package with reference to special occasions with said auxiliary top in place, or as a standard staple package when the auxiliary top is removed.

---

1,696,408. GAME. WILLIAM SIDNEY MCMAHON, Malden, Mass. Filed Mar. 28, 1928. Serial No. 265,457. 2 Claims. (Cl. 273—119.)

1. A game board having its upper playing surface provided with pockets, and enclosed by guard members, and having an end guard member provided with a transverse opening which is exposed at its top inner end to receive a ball, a plunger slidable within the opening and headed at its outer end to provide stop means and a grip for the hand, a flat spring having opposite end portions reduced to provide stop shoulders, and engaging the outer end of the plunger midway of its ends, and retaining means engaging the reduced end portions of the spring between the stop shoulders and secured to the end member in which the plunger is mounted.

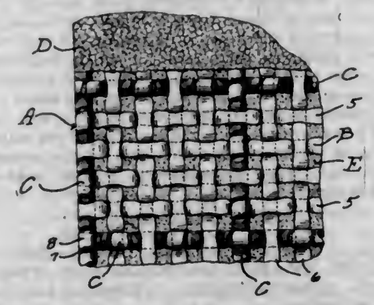


---

1,696,409. PROCESS FOR VULCANIZING RUBBER AND PRODUCTS OBTAINED THEREBY. IWAN OSTROMISLENSKY, New York, N. Y., assignor to Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Filed Mar. 24, 1925. Serial No. 18,056. 18 Claims. (Cl. 18—53.)

1. A process for accelerating the vulcanization of rubber without sulphur in the presence of organic nitro compounds which comprises combining rubber with a nitro benzol and an element of the carbon group, and vulcanizing the rubber.

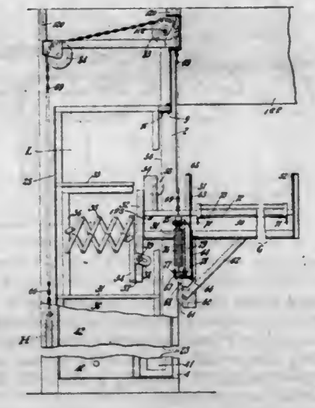
---



1,696,410. THERMOSTAT CONTROL VALVE FOR COOLING SYSTEMS. JOHN V. O. PALM, Cleveland, Ohio, assignor, by mesne assignments, to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 5, 1923. Serial No. 623,004. 10 Claims. (Cl. 236—34.)

1. In a control valve for cooling systems, a valve casing having high and low pressure sides and adapted to be mounted in the system, a double sleeve valve in said casing, said valve having a normal leakage, and a separate thermostatic bellows member attached to and located within the inner sleeve of said valve, said bellows being mounted on the low pressure side.

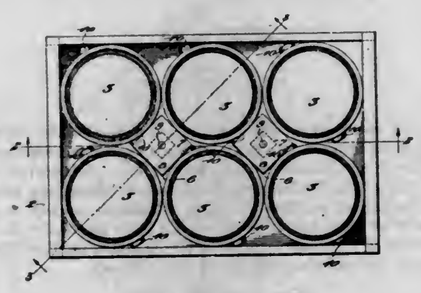
---



1,696,411. SHIELDING FOR RADIO APPARATUS. ADOLPH CROFTON PECK, Sandusky, Ohio. Filed Sept. 9, 1927. Serial No. 218,519. 15 Claims. (Cl. 250—16.)

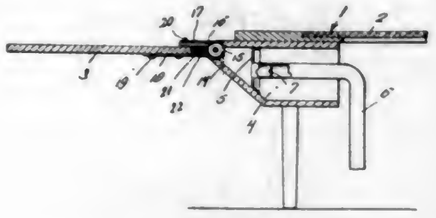
1. In a shield of the class described, a sheet like supporting base, a facing of fragmentitious material having electrical conductivity, affixed to said base, and a grounding conductor carried by the base and having electrical contact with the facing at spaced points throughout the area thereof.

---



1,696,412. CEILING BED. THORNTON W. PRICE, New Brunswick, N. J. Filed June 18, 1926. Serial No. 116,913. 8 Claims. (Cl. 5—10.)

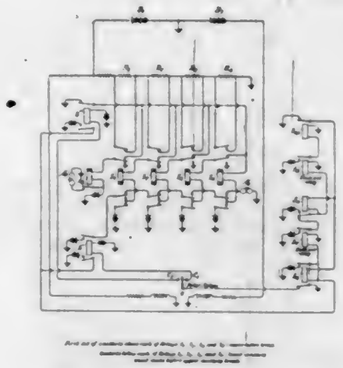
1. In a device of the class described, comprising a bed, means by which the bed is mounted for bodily up and down movement, a counter-weight for the bed, a cable device connecting the bed with the counter-weight and operating means engaging the cable by which to move the cable for thereby raising and lowering the bed, the combination therewith of parts comprised in said operating means effective to prevent lowering of the bed except as the result of an operation of said operating means, means to prevent downward movement of the counter-weight in the event of failure of the cable, and a portable support for all of said parts with the bed at one side thereof and the counter-weight at the opposite side thereof whereby the whole constitutes a unitary portable article of furniture.



---

1,696,413. PACKING CASE OR CRATE. WAYLAND W. RICE, Providence, R. I., assignor to United States Gutta Percha Paint Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 6, 1926. Serial No. 79,635. 3 Claims. (Cl. 217—52.)

1. A packing case or crate for cans and other containers provided with spool-shaped struts having enlarged heads at their ends, said struts extending between the cover and bottom of the case and abutting thereagainst to brace the case, and arranged between the cans with their heads bearing against the rims thereof to hold the cans from rubbing contact on their sides.

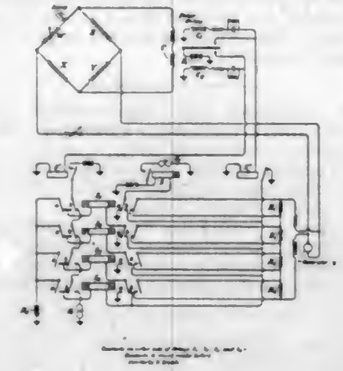


1,696,414. CLOTHES AND FABRIC CLEANING DEVICE. CARL W. ROBERTS, Parsons, Kans. Filed Apr. 16, 1926, Serial No. 102,600. Renewed Aug. 31, 1928. 13 Claims. (Cl. 8—8.)

1. In combination, means for maintaining a piece of clothes or fabric in spaced relation to supporting means, means for supplying a blast of fluid to the space between the supporting means and the piece of clothes or fabric, and means for detachably securing a piece of clothes or fabric on the blast supply means.

---

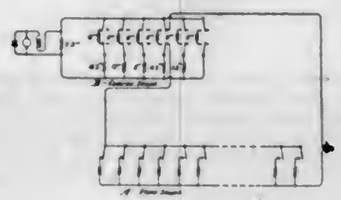
1,696,415. VOLTAGE-BALANCE REGULATOR. LELAND C. ROBERTS, Towaco, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 9, 1927. Serial No. 211,830. 11 Claims. (Cl. 171—229.)



1. In association with two sources of electric current subject to different average working drains, an automatic system for maintaining an approximate balance of the voltages of the two sources, said system comprising means for placing an auxiliary load on the source subject to the smaller average working drain and means responsive to unbalances of the source voltages for changing said auxiliary load to restore the balance of the voltages.

---

1,696,416. VOLTAGE REGULATOR. LELAND C. ROBERTS, Towaco, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 9, 1927. Serial No. 211,831. 2 Claims. (Cl. 171—229.)



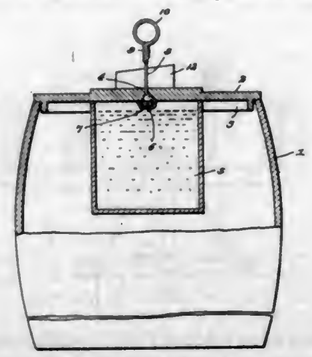
1. In association with a source of electric current having a resistance associated therewith and controlling the voltage thereof, a system for regulating the voltage of said source, said system comprising a sensitive polar relay, a balance bridge in circuit with the source and responsive by unbalance to variation of the voltage of the source, the unbalancing of said bridge operating said polar relay, means responsive to the operation of said polar relay for changing

said controlling resistance associated with the source, and means for giving an alarm if such change fails to restore the voltage level of the source.

---

1,696,417. VOLTAGE REGULATOR. LELAND C. ROBERTS, Towaco, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 3, 1927. Serial No. 217,519. 4 Claims. (Cl. 171—229.)

1. In association with a source of electric current having a resistance associated therewith and controlling the voltage thereof, a system for regulating the voltage of said source, said system comprising a voltmeter relay associated with the source, a resistance in shunt around said voltage controlling resistance, circuit-making means responsive to the operation of the voltmeter relay due to a deficiency of the voltage of the source for decreasing said shunt resistance by gradual steps until the level is restored, and circuit-breaking means responsive to the operation of the voltmeter relay due to an excess of the voltage of the source for increasing said shunt resistance by gradual steps until the level is restored.



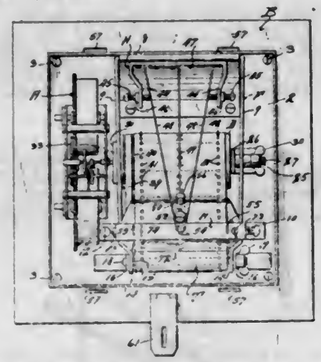
---

1,696,418. COMBINED BARREL COVER AND PAIL SUPPORT. EMIL E. SCHULZ, McConnell, Ill. Filed Mar. 15, 1928. Serial No. 261,815. 2 Claims. (Cl. 217—81.)

1. In combination, an open top barrel, a cover therefor, a relatively small receptacle open at its upper end for disposition in the barrel, a cross bar extending transversely across the top of the inner receptacle, and means carried by the cover for detachable engagement with the cross bars to secure the inner receptacle against the under side of the cover, whereby to hold the cover on the barrel against acci-

dental displacement therefrom, said last mentioned means comprising a member slidable through the cover, a hook formed on the lower end of the member for engagement

across the cross bar, and a wedge cooperating with said member and the cover to hold the hook in an operative position.

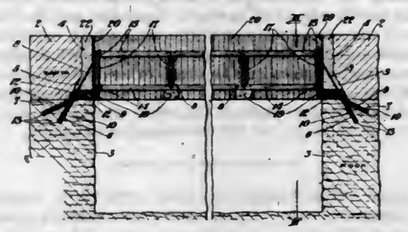


---

1,696,419. METHOD OF PRODUCING ARTIFICIAL COFFEE AROMA. HERMANN STAUDINGER, Freiburg, Germany, and THADEUS REICHSTEIN, Zurich, Switzerland, assignors to the Firm Internationale Nahrungs- und Genussmittel Aktiengesellschaft, Schaffhausen, Germany. Filed Oct. 15, 1926, Serial No. 141,873, and in Germany Nov. 4, 1925. 15 Claims. (Cl. 99—11.)

1. A method of producing artificial coffee aroma, comprising mixing fugitive mercaptans and sulphides derived therefrom and reacting therewith upon the oxygen-containing and nitrogen-containing and other compounds present in the natural coffee aroma.

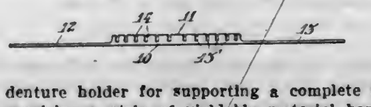
---



1,696,420. IMPACT RECORDER. EDWARD STOUT, Burlington, Iowa. Filed Feb. 26, 1925. Serial No. 11,792. 2 Claims. (Cl. 234—1.)

1. An impact recording device comprising, in combination, a base member, an outstanding plate secured thereto, said plate being continued by a returned plate inclined toward the base member in a direction away from the plate, means for connecting the returned plate to the base member, a substantially U-shaped frame secured between the outer end portions of the plates, a brace member substantially in the form of an inverted U having its side arms secured to the base member, the side members of the frame having their outer end portions secured to the side arms of the brace member, a platform supported by the side members of the frame at a point below the upper intermediate portion of the brace member, a tape for movement across the platform, and time operated means for imparting movement to the tape.

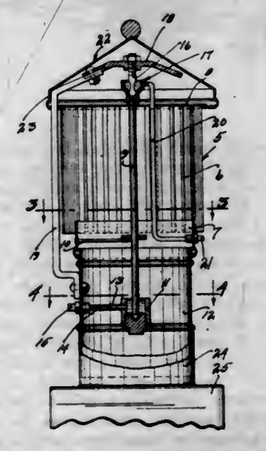
---



1,696,421. METHOD OF AND APPARATUS FOR SUPPORTING THE SIDE WALLS OF EXCAVATIONS. SAM HOUSTON SHOWELL, McKees Rocks, Pa. Filed Mar. 21, 1928. Serial No. 263,249. 8 Claims. (Cl. 61—41.)

1. The method of preventing the caving in of the side walls of excavations, which consists in removing the earth from the excavation for a predetermined depth, then forming holes downwardly and outwardly on an angle from the base of the preformed excavation at a plurality of spaced points along the sides thereof, then securing tie-rods in said holes, then positioning wale-members along the side walls of the preformed excavation and securing said wales to said rods, then driving sheeting home between the side walls of said excavation and said wales, and then continuing said excavation to the desired depth without further shoring or support.

---

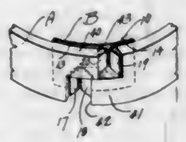


1,696,422. PROSTHETIC DENTISTRY. EUGENE A. THAYER, Urbana, Ill. Filed Aug. 25, 1924. Serial No. 733,867. 3 Claims. (Cl. 32—4.)

1. A denture holder for supporting a complete set of teeth comprising a strip of yieldable material having a center portion and end portions at the extremity of the center portion, the face of said center portion normally positioned vertical, and having tapered vertical slots formed therein for frictionally securing teeth thereto, and wires formed on the extremities of said strip for securing other teeth thereto.

---

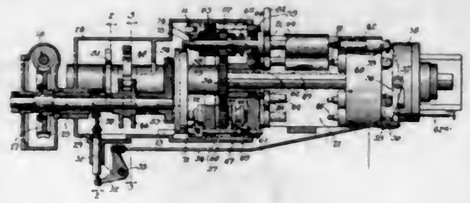
1,696,423. VENTILATOR. GEORGE G. TIERNEY, Minneapolis, Minn. Filed May 19, 1927. Serial No. 192,585. 1 Claim. (Cl. 98—75.)



In a ventilator, an upright tubular body, a cylindrical wind wheel having a vertical shaft axially aligned with the axis of the body, said wheel having a head completely clos-

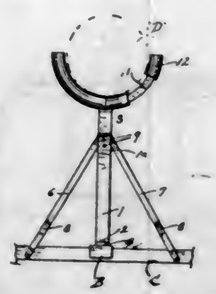
ing the upper end of the wheel, a plurality of circumferentially spaced upright supporting arms on the body extending outward of the wind wheel and above the same, said arms having inwardly and upwardly extended extensions overlying the head of the wind wheel a conical cap supported on the arms and having a depending annular flange capping the arms and head of the wind wheel, said cap being substantially closed by the head of the wind wheel, a tie member connecting the arm extensions within the closed cap, an upper bearing on the tie member within the closed cap for the shaft of the wind wheel, and a lower bearing on the body for the lower end of the shaft.

---



1,696,424. COMPRESSION AND SUCTION SAVING CONSTRUCTION FOR PISTON RINGS. JAMES HORACE THOMPSON, New Smyrna, Fla. Filed Sept. 18, 1924. Serial No. 738,428. 12 Claims. (Cl. 74—109.)

11. In combination with a piston ring having lapping groove a curved strip adapted to be placed in the piston groove in rear of the ring and having projections thereon for extending between the ends of the ring.



---

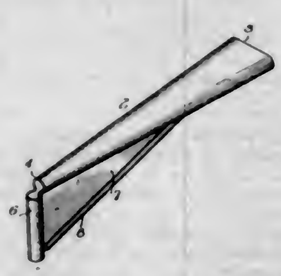
1,696,425. AUTOMATIC TURNING MACHINE. DAVID TURCOTT, Beloit, Wis., assignor to Yates-American Machine Company, Beloit, Wis., a Corporation of Delaware. Filed June 23, 1927. Serial No. 200,902. 1 Claim. (Cl. 142—3.)

In an automatic turning-machine, the combination of a plurality of pairs of work-holding centers, means to support said centers, means to revolve said support intermittently, means to rotate sad centers around their own axes, means to cause said rotating means to become operative and inoperative on the individual pairs of centers, means to bring successive pieces of work into a definite position, means to hold one center of each pair in a definite angular relation to the corresponding piece of work when in such specified position and while said center support is temporarily stationary, means to cause said centers to grasp such piece of work while such designated center of the pair is thus held, and to release the finished product, including a cam comprising stationary and movable sections, and means to operate said movable cam section to cause the centers to grasp the pieces of work, and cutting means through the field of action of which the successive pieces of work are transported during the rotation of such pieces by their centers.

1,696,426. WATERSPOUT HOLDER. JAMES M. WELLS, Salt Lake City, Utah. Filed Feb. 19, 1927. Serial No. 169,638. 1 Claim. (Cl. 248—30.)

In a water spout holder for use on railroad water tanks the combination of a three sided angled bracket adapted to be secured to said tank; and with adjustment holes in the bottom leg thereof; side braces having one end adapted to be secured to said tank and the other end secured to said angled bracket; a bolt to secure both of said side braces to said angled bracket by engagement through said holes; a semicircular spout retaining member secured to the middle leg of said bracket; and sections of hose cut and placed over said retaining member to protect the spout from side movement when held therein.

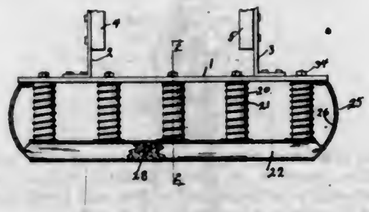
---



1,696,427. RAILWAY-BOX-CAR CARLINE. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill. Filed Feb. 8, 1926. Serial No. 86,817. 2 Claims. (Cl. 108—5.6.)

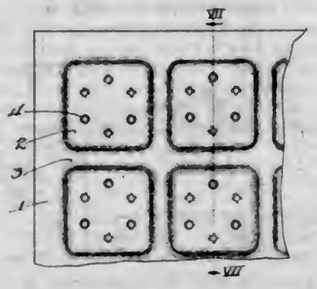
1. A carline of I-beam section with its web vertically arranged and having end portions of the lower flange and the web cut away leaving the upper margin downwardly curved, the upper flange extending beyond the lower flange and curved downwardly over said curved margin.

---



1,696,428. ATOMIZER. EDWARD C. BROWN, Rochester, N. Y., assignor to The E. C. Brown Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 26, 1925. Serial No. 58,799. 6 Claims. (Cl. 299—142.)

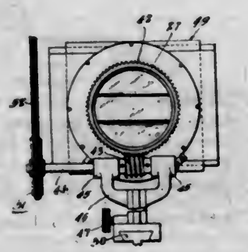
1. In an atomizer, the combination with a well tube, of a mouth piece having an atomizing relationship with the upper end of the tube, said mouth piece being formed of sheet material and provided at its seam with a flange having an extension embracing and connecting it to the well tube.



1,696,429. SHOCK ABSORBER. JOHN EBERHARD CHRISTEN, San Rafael, Calif. Filed July 10, 1928. Serial No. 291,582. 5 Claims. (Cl. 293—55.)

1. A bumper, a solid bar adapted to be secured to a movable vehicle or vessel, a plurality of studs extending therefrom, a plurality of cushion members one for each stud, and a cushion member connecting all of the first cushion members for preventing injury to the vehicle or vessel.

---

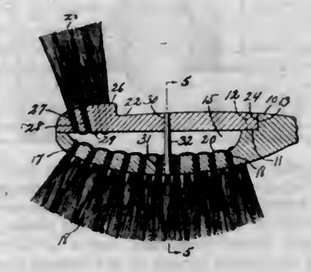


1,696,430. EGG-CASE FLAT. FREDERICK W. COLE, Chicago, Ill. Filed Sept. 23, 1926. Serial No. 137,208. 1 Claim. (Cl. 217—27.)

An egg case flat, having intersecting grooves formed therein for receiving a filler and raised portions defined by said grooves, oppositely extending punched projections being formed in said raised portions for contacting the eggs, said projections alternately extending in opposite directions.

---

1,696,431. CAMERA ATTACHMENT. ERNEST J. CROCKETT, Los Angeles, Calif., assignor to Mack Sennett Inc., Los Angeles, Calif., a Corporation of California. Filed Feb. 2, 1925. Serial No. 6,264. 4 Claims. (Cl. 88—16.)

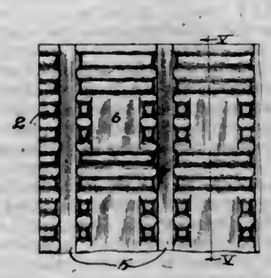


1. A camera attachment comprising a lens having multiplying facets, one of the facets being at the axis of the lens and parallel with the opposite face of the lens, another of the facets being at an angle to the opposite face, and means to rotate the lens in line with the objective lens of a camera.

1,696,432. PROCESS OF CONCENTRATING LOWER-ALIPHATIC-ACID SOLUTIONS. HENRY DREYFUS, London, and CLIFFORD IVAN HANEY, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Jan. 22, 1927, Serial No. 162,939, and in Great Britain Nov. 30, 1926. 18 Claims. (Cl. 260—122.)

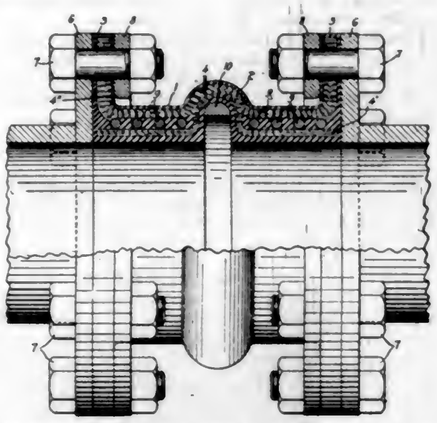
1. Process for concentrating aqueous solutions of lower aliphatic acids, comprising extracting the aqueous solutions with an extracting medium comprising a solvent for the acid and a normally liquid hydrocarbon, both of lower boiling point than the acid.

---



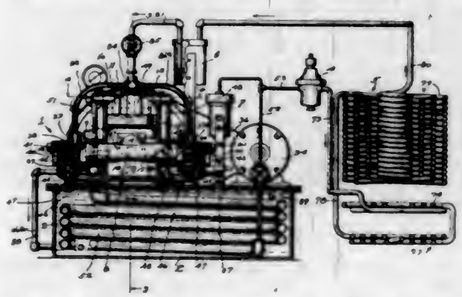
1,696,433. DENTURE BRUSH. HARRY W. FAUBERT and EDWARD E. WHEELOCK, Woonsocket, R. I. Filed Mar. 20, 1928. Serial No. 263,014. 2 Claims. (Cl. 15—167.)

1. In a denture brush, a handle, an elongated head comprising a portion continuous with the handle, and an adjoining flat offset portion, the front of the head being transversely and longitudinally convex, the offset portion being provided with an elongated recess curved transversely and longitudinally, the front of the head being provided with radially disposed holes communicating with the recess, tufts of bristles seated in the holes, a binding wire connecting the tufts and extending into the recess, a detachable housing plate resting upon the offset portion of the head with its rear face portion continuous with the handle closing the recess, said plate being provided at its outer end with a group of holes communicating with the recess for the reception of bristles, and means for detachably connecting the plate with the body.



---

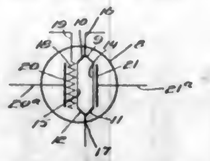
1,696,434. EGG-CASE FLAT. GEORGE A. FILER, Cornell, Wis. Filed Oct. 6, 1926. Serial No. 139,771. 1 Claim. (Cl. 217—26.)



As an article of manufacture, an egg case flat comprising a single corrugated sheet of fibrous material having filler positioning grooves extending transversely of said corrugations, portions of said corrugations between said grooves being crushed to define egg receiving spaces.

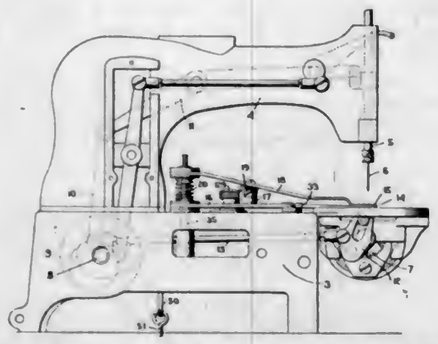
1,696,435. EXPANSION JOINT. CLIFFORD A. FRALEY, Belleville, N. J., assignor to Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Filed May 8, 1923. Serial No. 637,410. 1 Claim. (Cl. 285—90.)

An expansion joint comprising a tubular portion, an enlarged bulbous portion, and end connecting-flanges, formed of plies of fabric and rubber compound vulcanized thereto, metal reinforcing rings entirely enclosed within said plies of fabric and rubber compound, and a metal reinforcing ring within the hollow formed by the bulbous portion.



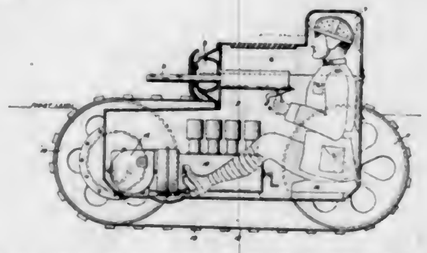
1,696,436. PUMP FOR REFRIGERATING APPARATUS. WILLIAM H. GRAY, Portland, Oreg. Filed Dec. 14, 1923. Serial No. 680,650. 2 Claims. (Cl. 230—185.)

1. In a refrigerating apparatus, a circulation pump element comprising a housing divided by a horizontal partition into upper and lower chambers, the upper chamber constituting a settling tank, the lower chamber constituting a lubricant receptacle, a pump cylinder opening through the wall of the lower chamber, a piston reciprocating in said cylinder, means located in said lower chamber for reciprocating said piston, valves controlling the inlet and outlet ports of said cylinder, respectively, the outlet port of said cylinder being connected by a conduit with said upper chamber, a stand pipe carried by and extending through said horizontal partition into said lower chamber, whereby the solid particles carried by the refrigerant are deposited in said settling tank and permitted to separate therein, and the lighter lubricant is returned through said stand pipe to the pump mechanism in said lower chamber.



1,696,437. RADIO RECEIVING APPARATUS. REGINALD B. HUMPHREY, Swanton, Vt. Filed Nov. 5, 1924. Serial No. 747,931. 1 Claim. (Cl. 250—27.5.)

An electron tube structure comprising in combination an evacuated vessel, a pair of Y-shaped conductive members extending into said evacuated vessel with the axes thereof centered one over the other and aligned with each other at opposite ends thereof, a pair of filamentary

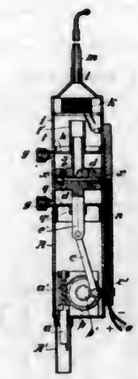


cathodes supported from the extremites of said Y-shaped conductive members, an anode mounted adjacent one of said filamentary cathodes, and a grid and anode mounted adjacent the other of said filamentary cathodes.

1,696,438. SEWING MACHINE. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Aug. 19, 1922. Serial No. 583,010. 19 Claims. (Cl. 112—70.)

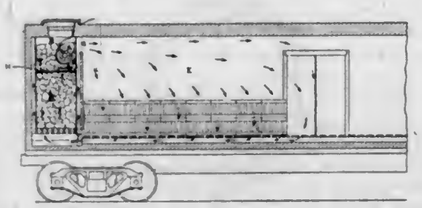
1. In a sewing machine, the combination with stitch-forming mechanism including a vertically-reciprocating needle operating in a fixed path, of work-holding means, means to vibrate the work-holding means in two different directions, thereby first to form a group of underlying stitches and then to form a group of overlying stitches, and means to vary the number of the overlying stitches without changing the length of the underlying stitches.

1,696,439. FIGHTING TANK. HARRY A. KNOX, Davenport, Iowa. Filed Feb. 3, 1926. Serial No. 85,783. 13 Claims. (Cl. 115—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

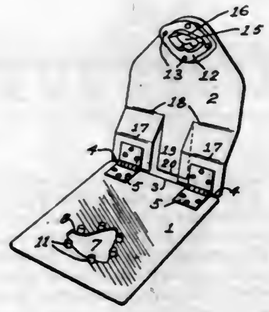


6. A track laying tank including a body, a motor therein, a transmission in front of the motor, a complete set of foot controls on each side of and at the front of the motor and an operator's seat in rear of the motor.

13. A tank including a body, a motor on the floor of the body, and a seat on the floor of the body arranged with respect to the motor so that the operator must straddle the motor.



1,696,440. AIR BLOWER FOR DENTAL PURPOSES. ALOYS LÜBKE, Altena, Germany. Filed Dec. 5, 1927, Serial No. 237,868, and in Germany Dec. 11, 1926. 6 Claims. (Cl. 128—257.)

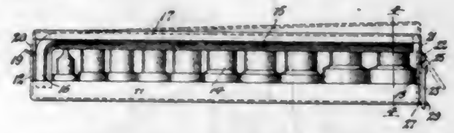


1. An air blower for dental purposes to be driven from the motor of a dental drill, said air blower having a casing, a revoluble worm, a worm wheel meshing with said worm, an air pump, a connecting rod for hingedly connecting said worm wheel with the piston rod of said air pump, all said parts being arranged within said casing, means for coupling said worm with the driving mechanism of a dental drill, said casing with said parts of the air blower arranged therein forming a compact structurally independent air blower, only connectible, for its drive, to the motor of a dental drill.

1,696,441. PROCESS FOR THE COOLING OF FRUITS AND VEGETABLES IN REFRIGERATOR CARS. CHARLES W. MANN, Los Angeles, Calif., and ALEXANDER GORDON GALLOWAY, Washington, D. C. Filed July 5, 1928. Serial No. 290,647. 1 Claim. (Cl. 62—24.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

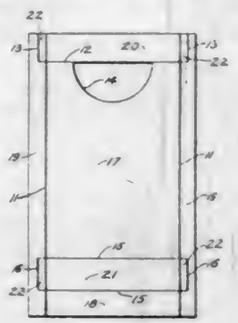
A process of cooling products stacked in a refrigerator car having an ice bunker, which consists in initially causing air by forced circulation to flow upwardly through the ice in the bunker, thus cooling the air, spreading said cold air over the top of the stacked products from whence it sinks down through the products, thereby cooling them and thence back again to the bunker to be again circulated, continuing the circulation until the proper low temperature has been reached; then discontinuing the forced circulation and then further cooling the products by natural circulation of air in the reverse direction.

1,696,442. DIE. CHARLES A. MESSMER, Jr., St. Louis, Mo. Filed Apr. 16, 1926. Serial No. 102,444. 4 Claims. (Cl. 164—29.)



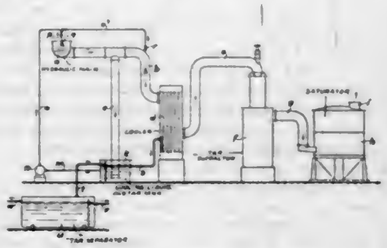
1. A device of the character described comprising a plate having an opening adapted to receive and locate a sheet of stock to be blanked, gauge pins projecting from the said plate along the outline of said opening to assist the said opening in locating the said stock, and a die-holding member connected to the said plate so as to be movable toward and away from the said opening.

1,696,443. WALL CONSTRUCTION FOR BATHROOMS. FREDERICK H. MICHAELIS, Kansas City, Mo. Filed June 6, 1927. Serial No. 196,753. 12 Claims. (Cl. 72—17.)



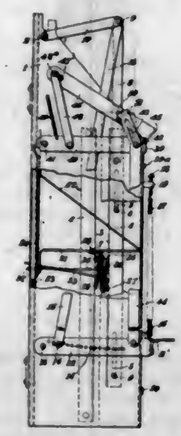
1. In a room wall, an upright plate member secured to the floor construction and spaced from the wall construction, and provided at its upper edge with an arm extending outwardly and secured to the wall construction and provided with a plurality of openings, a plate superimposed on the first-named plate and spaced from the wall construction and provided at its lower edge with an outwardly-projecting arm fitting flatwise on and interlocked with the outwardly-projecting arm of the first-named plate and provided with openings registering with the openings of said arm of the latter; said superimposed plate having at its upper end, an outwardly-projecting arm fastened to the wall construction and provided with one or more openings through which cementitious material may be introduced to fill the spaces between the wall construction and said plates and the openings in the arms of the latter.

1,696,444. HOLDER FOR SOCKET-WRENCH SETS. EDWIN S. MILLER and FOSTER A. HAIST, Buffalo, N. Y., assignors to The Keystone Mfg. Co., a Corporation of New York. Filed June 27, 1925. Serial No. 39,998. 1 Claim. (Cl. 220—56.)



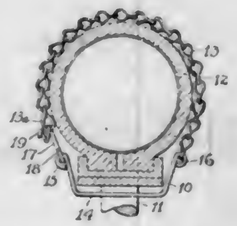
A container comprising a receptacle provided on its front end wall with a horizontal resilient locking lug which is struck out of the material of said end wall and has a downwardly turned outer end; a cover pivotally connected at its rear end with the corresponding end of the receptacle; and a vertically swinging locking bail pivoted on the front end of the cover and adapted to be sprung over the downwardly turned outer end of said lug and engage with the underside of the latter.

1,696,445. WRAPPER. HARRY G. NORWOOD, Baltimore, Md., assignor to American Dairy Supply Company, Washington, D. C., a Corporation of Maine. Filed Aug. 11, 1926. Serial No. 128,686. 5 Claims. (Cl. 229—87.)



1. A blank for apparel wrappers comprising a sheet of stiff material having parallel fold lines one adjacent each of two opposite margins of the sheet, strap defining slits extending across said sheet approximately perpendicular to said fold lines and terminating between the fold lines and the adjacent margins of the sheet, and shorter fold lines parallel with the first named fold lines and defining the ends of the straps at the terminations of said slits.

1,696,446. PROCESS FOR DIRECTLY PRODUCING AMMONIA. CARL OTTO, Essen-Ruhr, Germany. Filed Aug. 15, 1927, Serial No. 212,954, and in Germany Aug. 9, 1926. 2 Claims. (Cl. 23—196.)

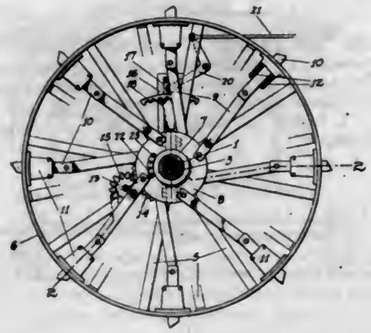


1. The steps in the described process for treating the distillation gases of coal gas producing furnaces for directly producing ammonia, which consist in feeding the distillation gases to a gas cooler, cooling them in the gas cooler so as to obtain a quantity of fresh condensate, feeding one part of the condensate to the hydraulic main, thus replacing the portion of the liquid evaporated therein, feeding another part of the condensate to the pipe leading to the cooler, so as to irrigate the gases, and returning the condensate to the cooler with a fresh supply of gas.

1,696,447. DELIVERY APPARATUS. CHARLES J. PAULSON, Brooklyn, N. Y. Filed Sept. 3, 1926. Serial No. 133,475. 15 Claims. (Cl. 312—70.)

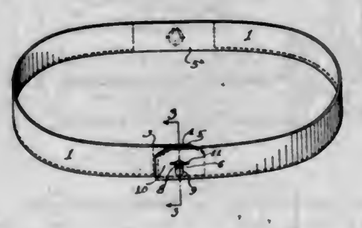
1. Delivery mechanism comprising containing means for a stack of articles, a vertically movable carriage for said stack, said carriage having a forwardly downward inclined top for the unconfined support of said stack and the gravity delivery of articles therefrom, forward guard means to restrain the topmost article, and means for moving said guard means to release said topmost article.

1,696,448. ANTISKID CHAIN. PHILIP H. PFEIL, Chicago Heights, Ill. Filed Mar. 8, 1927. Serial No. 173,643. 2 Claims. (Cl. 24—237.)



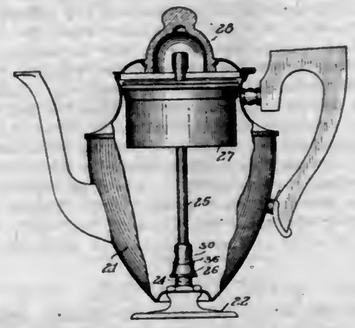
1. A fastening device for anti-skid chains of the type consisting of a single series of links consisting of a bar for attachment with one end of said chain and having an open helical formation of substantially one and one-half turns for removable engagement with the other end of said chain.

1,696,449. ADJUSTABLE GROUSER WHEEL. JOSEPH PHILLIPS, Guadalupe, Calif. Filed Mar. 26, 1927. Serial No. 178,584. 2 Claims. (Cl. 301—46.)



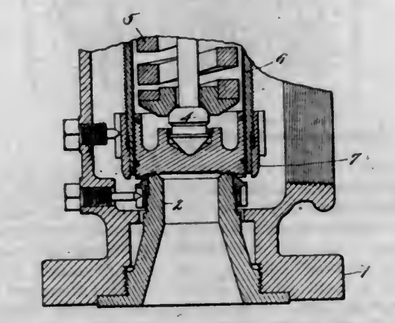
2. In combination with a wheel, grousers disposed radially of the wheel and arranged to project through the rim thereof, a sleeve member turnable on the hub of the wheel, links pivoted onto the sleeve and onto the inner ends of the grousers, a pinion mounted in connection with the hub, gear teeth on the sleeve member meshing with the pinion, another pinion mounted in connection with said first named pinion, radially spaced gear elements, mounted

separate from but concentric with the wheel for alternate engagement with said other pinion on opposite sides thereof, and means operable at will for shifting said gears radially to place either one in the path of the teeth of said other pinion with the rotation of the wheel.



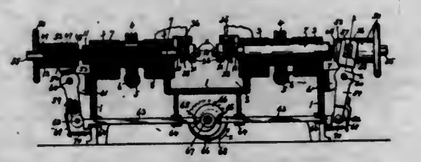
1,696,450. COLLAR BAND. HOWARD W. POTTS, San Francisco, Calif. Filed May 31, 1927. Serial No. 195,213. 1 Claim. (Cl. 2—127.)

A collar band provided at one of its ends with a plurality of separate flaps overlying one another, the forward flap provided with a button hole, said flaps secured together at their ends and along their top edge forming a pocket open along its bottom edge, a rubber collar button positioned within the pocket and provided with a head and shank projecting outwardly through the button hole, the other end of said band provided with a button hole for receiving the head and shank of said button for detachably securing the ends of said collar band together, said button provided with a rubber base provided with a plurality of apertures, stitching securing the base of the button to the forward face of the rear flap through said apertures, said open bottom edge of the pocket affording means for inverting the pocket for the securing of the button base to the rear flap.



1,696,451. PERCOLATOR. WILLIAM A. RANKIN, Rochester, N. Y., assignor to Robeson-Rochester Corporation, Rochester, N. Y., a Corporation of New York. Filed Jan. 20, 1928. Serial No. 248,078. 4 Claims. (Cl. 53—3.)

1. In a percolator having a liquid reservoir, a liquid heating chamber, and a fountain tube communicating with said chamber, the combination with an inlet opening in the side wall of said fountain tube, of a supporting member extending inwardly from said side wall, and a valve mounted within said fountain tube opposite said inlet opening, said valve having an oblique cam surface in contact with said supporting member, said cam surface being so shaped that

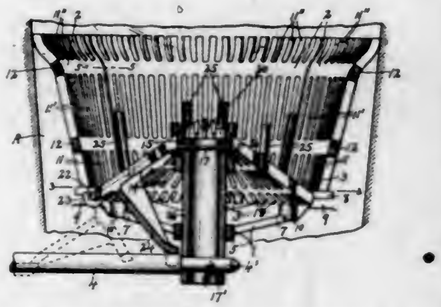


said valve is normally held by gravity in position to close said inlet opening and is capable of being moved by fluid pressure to a position in which said inlet opening is open.

1,696,452. VALVE. FAIRFIELD E. RAYMOND, Boston, Mass., assignor to Crosby Steam Gage and Valve Co., Boston, Mass., a Corporation of Massachusetts. Filed July 21, 1923, Serial No. 652,931. Renewed June 15, 1928. 2 Claims. (Cl. 137—53.)

1. In a valve of the character described, a throat tube terminating in a seat, a movable valve disc cooperating with the seat and providing a nozzle in conjunction with the seat, a blow-down ring adjustably connected to the throat tube, a deflector sleeve cooperating with the disc to cause a progressively increasing reactive force to be exerted on the face of the disc during the separation of the disc from the seat, and means for supporting the deflector sleeve having provision for adjustment while retaining the sleeve normally stationary during the opening movements of the disc.

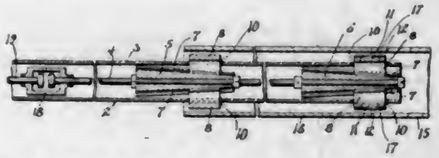
1,696,453. APPARATUS FOR MACHINING RADIATORS AND THE LIKE. JAMES REID, Syracuse, N. Y.; Emma F. Reid and Charles T. Reid administrators of said James Reid, deceased. Filed May 1, 1926. Serial No. 106,007. 2 Claims. (Cl. 10—128.)



1. In a device for machining radiators and the like, a rotary and axially movable tool holder, tapping members

slidable transversely of and upon the tool holder, a boring tool secured to the tool holder at one end of the tapping members, a facing tool mounted on the tool holder at the other end of the tapping members, a tapered member slidable lengthwise of and between the tapping members for moving the same outwardly when the tapered member is moved in one direction and for permitting inward movement of the tapping members when the tapered member is moved in the opposite direction, a collar reciprocally movable lengthwise of and upon the tool holder, means for transmitting reciprocal motion from the collar to the tapered member, means for stopping the axial movement of the collar as the tool holder is moved into the work to cause the tool holder to move the tapping members away from the tapered member, and automatic means for stopping the axial movement of the collar in the opposite direction as the tool holder is withdrawn from the work.

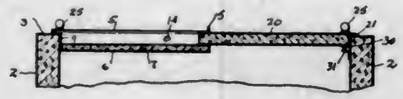
---



1,696,454. HEATER. WILLIAM W. RIDGELY, Syracuse, N. Y., assignor, by mesne assignments, to Ridgely Heater Company, Scranton, Pa., a Corporation of New Jersey. Filed Sept. 12, 1925. Serial No. 56,038. 4 Claims. (Cl. 126—146.)

4. In a heater, a grate-supporting base having a central hub and a series of sockets arranged in uniformly spaced relation circumferentially around the hub and equal distances from the axis thereof, a firebox composed of sections arranged edge to edge circumferentially around the hub with the meeting edges in vertical alinement with said sockets and provided with pendant lugs seated in adjacent sockets, a tubular post journaled in said hub for angular movement and extended some distance above and below the horizontal plane of the socketed portions of said base, a conical center grate having its apex secured to the upper end of the post and engaged with the upper end of the hub and its outer marginal edge disposed in approximately the horizontal plane of the socketed portions of the base, and means operatively connected to the lower end of the post for effecting angular movement of the post and center grate.

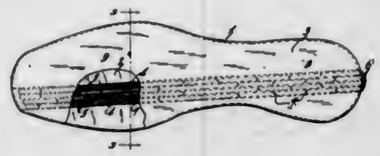
---



1,696,455. CIRCULAR-SEAM-WELDING APPARATUS. WILLIAM E. RUPLEY, Los Angeles, Calif., assignor to Western Pipe & Steel Company of California, San Francisco, Calif., a Corporation of California. Filed Apr. 18, 1925. Serial No. 22,833. 2 Claims. (Cl. 219—17.)

1. In an apparatus of the class described, the combination of a mandrel including a rod, a casing surrounding the rod, a tapered mandrel head secured to the said rod, a plurality of expanding members dove-tailed to said head and extending through slots formed in the outer casing, means for moving the said rod longitudinally in the said casing so as to move the mandrel head relative to the said expanding members, and means operably connected with the outer casing for rotating the said mandrel.

---

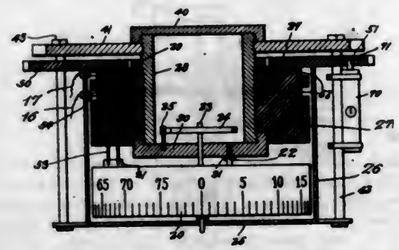


1,696,456. TELESCOPING CABINET COVER. JAMES A. SEBRING, Cleveland, Ohio, assignor, by mesne assignments, to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 3, 1925. Serial No. 6,537. 3 Claims. (Cl. 220—38.)

1. In a sliding top for cabinets, the combination of a half cover provided with an insulated box at the bottom, the sides of said cover being extended upwardly from said box and then outwardly and upwardly to form a flanged pocket above said box, a top for said half cover rigidly secured to said sides, and a second half cover comprising an insulated box slightly narrower than said first half cover and provided near its top with laterally projecting flanges, said second half cover being adapted to telescope into said first half cover with its flanges in the pocket flanges, said two half covers being adapted in their extended position to have their flanges rest on the cabinet top and overlap the compartment opening on every side so as to completely close the compartment.

---

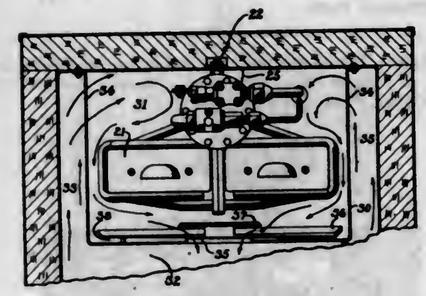
1,696,457. VENTILATING MEANS FOR BOOTS AND SHOES. MICHAEL A. SHANAHAN, Libby, Mont. Filed Mar. 15, 1928. Serial No. 261,766. 1 Claim. (Cl. 36—3.)



In a ventilating device for boots or shoes, an insole comprising an inner body, an outside casing therefor, said body being formed of two elongated portions disposed side by side in parallel spaced relation within the said outer casing and thereby forming a longitudinal channel, and a plurality of elongated elastic air tubes positioned within the said channel between the said spaced body portions, the said tubes being of a diameter somewhat greater than the thickness of the body portion so as to slightly elevate the upper side of the said casing along its medial longitudinal portion, while the marginal portions of the said upper side of the casing remain in contact with the said body portion.

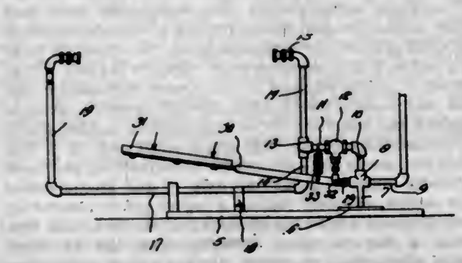
---

1,696,458. SPEEDOMETER-ACTUATED CIRCUIT CLOSER. JULIUS C. SOSNOWSKI, Long Beach, Calif. Filed Sept. 8, 1926. Serial No. 134,232. 2 Claims. (Cl. 200—56.)



1. The combination of a speedometer having a movable part and conductive means thereon, an adjustable dial having terminals adapted to be directly connected electrically by said conductive means when a predetermined speed is attained, and means for locking said dial in different positions; the said means comprising a flange on the dial and a circular series of apertures in said flange, and a fixed lock having a key controlled bolt movable into and out of engagement with the apertured flange.

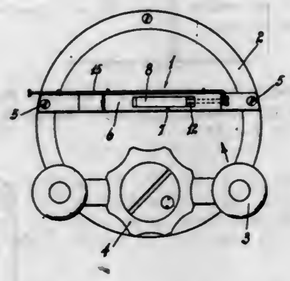
---



1,696,459. REFRIGERATING APPARATUS. OTTO M. SUMMERS, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Oct. 31, 1927. Serial No. 229,901. 7 Claims. (Cl. 62—95.)

1. A refrigerating element for refrigerating apparatus including a horizontal header forming a reservoir for liquid refrigerant, conduit means for circulating refrigerant connected to the header and including a pair of spaced substantially horizontal coils extending laterally from the header, and a compartment for an ice-making container disposed between the coils and thermally connected to both of the coils.

---



1,696,460. POULTRY-SPRAYING DEVICE. PETER TEYEN and ALFRED TEYEN, Pomeroy, Iowa. Filed May 10, 1927. Serial No. 190,212. 1 Claim. (Cl. 119—159.)

In a poultry spraying device of the character described, a U-shaped fluid conductor disposed in a vertical plane inwardly directed elbow couplings on the extremities of the U-shaped conductor, spray nozzles engaged in the elbow couplings to face each other, a pipe extending from one leg of the U-shaped conductor laterally of its plane, a second pipe coupled with the first pipe extending at right angles thereto and at right angles to the legs of the U-shaped conductor and away from said conductor, a valve in the second pipe, a vertical pipe depending downwardly from the second pipe, means for pivotally mounting a lever on the third pipe, a valve in the second pipe operatively connected with an intermediate portion of the lever, a spring attached to the second pipe and engaged with the lever to normally hold the valve closed, and a platform on the outer end of the lever extending through and laterally of the plane of the U-shaped conductor.

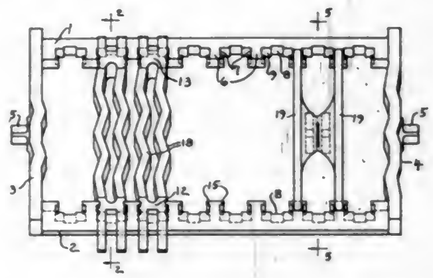
---

1,696,461. DRAG-HANDLE CATCH. JOSEPH B. TUCKER, Long Beach, Calif. Filed Aug. 24, 1927. Serial No. 215,065. 6 Claims. (Cl. 242—84.5.)

1. In a fishing reel having a drag handle thereon, a catch for the drag handle comprising a bar adapted to be secured to the reel, a dog pivotally mounted on the bar, and spring means urging the dog upwardly in position to engage the drag handle.

---

1,696,462. SPORTING IMPLEMENT. JOHN H. VICTOR, Chicago, Ill. Filed Sept. 9, 1927. Serial No. 218,475. 1 Claim. (Cl. 273—80.

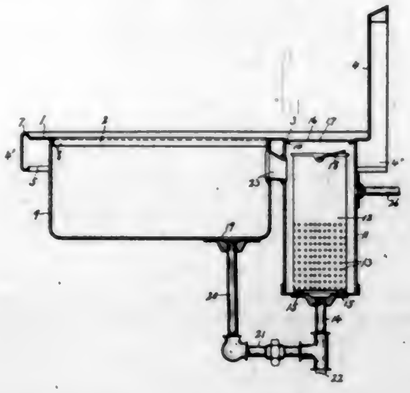


The combination with a handle of a sporting implement having a socket in the end thereof, of a weight having a stem fitting said socket and formed with a shoulder adapted to overlie the end of the implement, a bayonet joint connecting said stem and socket, and a resilient element between the shoulder and end of the implement holding the bayonet joint against displacement.

---

1,696,463. SHAKING, ROCKING, AND DUMPING GRATE. CALVIN R. WAID, Birmingham, Ala. Filed Oct. 23, 1925. Serial No. 64,291. 2 Claims. (Cl. 126—180.)

1. A grate unit comprising an assembly frame having end trunnions and spaced side walls, opposed shoulders pro-

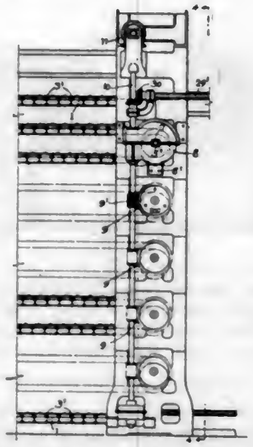


vided on the inner side of said side walls, grate segments adapted to interfit with said shoulders and to span the frame, and a rocking arm having its top side portions

notched and adapted to be received between the shoulders and by lateral movement to engage an opposite pair of shoulders in its notches.

---

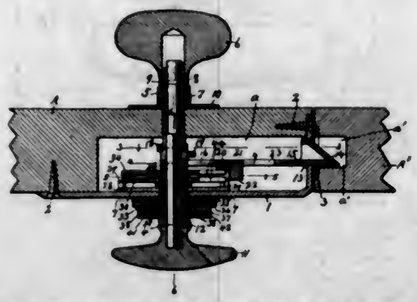
1,696,464. CULINARY FIXTURE. WILLARD R. WALKER, Syracuse, N. Y. Filed Oct. 31, 1927. Serial No. 229,989. 1 Claim. (Cl. 4—187.)



A culinary fixture comprising a shelf having a relatively large opening and a smaller opening at the rear of the larger opening, a sink secured to the underside of the shelf around the larger opening, a housing secured to the underside of the shelf around the smaller opening for receiving a refuse receptacle and provided with a drainage outlet in its bottom, and a vent opening in one side some distance above the bottom, and an overflow conduit connecting adjacent sides of the sink and housing.

---

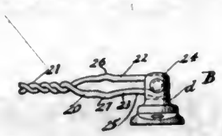
1,696,465. MEANS FOR DRIVING ENDLESS CONVEYERS. EARL P. WEBSTER, Niagara Falls, N. Y., assignor to The Shredded Wheat Company, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 18, 1923. Serial No. 669,394. 2 Claims. (Cl. 198—203.)



1. In conveying apparatus, the combination of a plurality of horizontal shafts disposed in a vertical row, each shaft carrying a sprocket wheel near each end thereof, a fixed bearing for each end of each shaft, a vertical drive shaft disposed adjacent the said row and provided with a driving connection with each shaft in the row, a second vertical row of horizontal shafts at a distance from the first row, each shaft in this row carrying a sprocket wheel near each end thereof, a bearing block at each end of each shaft in the second row mounted to slide horizontally, springs holding the bearing blocks in position, a self-aligning bearing for the end of the shaft mounted in each

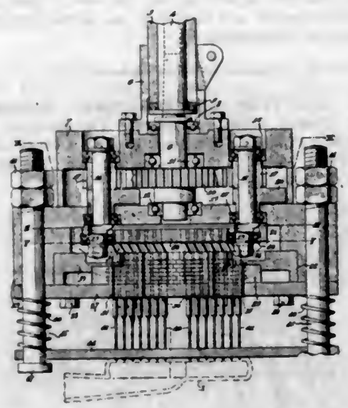
bearing block, and an endless conveyer comprising a pair of chains, this conveyer passing around the sprocket wheels in the two rows successively to provide a plurality of horizontal loops.

---



1,696,466. DOOR LOCK. JAY M. WESTCOTT, Syracuse, N. Y. Filed June 30, 1927. Serial No. 202,601. 2 Claims. (Cl. 70—53.)

1. The combination with a door having a lock-receiving recess and a casing having a keeper for the lock, of relatively rotatable coaxial shaft sections extending through registering openings in the door and across the recess therein and telescoping with each other within the recess, said shaft sections having their outer ends provided with handles for rotating the same, a bolt mounted on the door and movable into and out of engagement with the keeper and normally spring-pressed into engagement with said keeper, means actuated by the turning movement of one of said shaft sections for withdrawing the bolt from its locking position, a bolt-operating plate adjacent the bolt within said recess, means actuated by the turning movement of the other shaft section for actuating the bolt-operating plate to withdraw the bolt from its locking position independently of the operation of the first-named shaft section, a disk within said recess and adjacent the bolt-operating plate and adjustable rotarily about the axis of the second-named shaft section relatively thereto, a lug on the bolt-operating plate extending across the periphery of the disk, said disk having a slot extending inwardly from the periphery thereof and movable therewith into and out of registration with said lug for controlling the operation of the bolt-operating plate and preventing the turning movement of the second-named shaft section when the slot is out of registration with the lug.

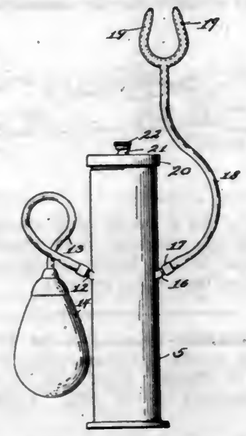


1,696,467. FASTENER. ALBERT BROMLEY ALLEN, Santa Monica, Calif. Filed June 30, 1927. Serial No. 202,489. 3 Claims. (Cl. 24—201.)

1. In a fastener for curtains and the like, comprising an eyelet adapted to be secured to the curtain and means secured to a further member for cooperation with said eyelet, said means comprising a stud, and a lever secured to said stud and slidable relative thereto; said lever being adapted to be passed through the eyelet for directing the eyelet on to said stud.

---

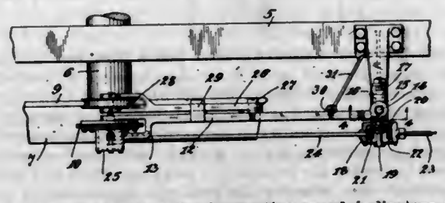
1,696,468. MULTIPLE-SPINDLE DRILL HEAD. JOSEPH F. BUHR, Detroit, Mich. Filed Oct. 6, 1924. Serial No. 741,820. 1 Claim. (Cl. 77—23.)



In a multiple drill head, a drive spindle, a casing, a holder attached to said casing, a counterbalanced crank shaft driven by said spindle and having its end journaled in said holder with the counterbalance of said shaft operatable in said casing, crank shafts journaled in said holder, drills connected to said crank shafts, a gyratory member about said crank shaft below the counterbalance portion thereof and bearing against said casing, said gyratory member being operatively connected to said crank shafts for individually rotating said crank shafts, crank members supported from said holder and supporting said gyratory member against said casing, and means carried by said gyratory member within said casing adapted for imparting a gyratory movement to said gyratory member from said crank shaft, said holder being composed of a plurality of sector parts assembled with the confronting faces thereof providing bearings for the drill crank shafts.

---

1,696,469. POWDERED-MEDICAMENT DISPENSER FOR LUNG TREATMENT. DAVID NEWTON E. CAMPBELL, Atlantic City, N. J. Filed July 26, 1927. Serial No. 208,631. 6 Claims. (Cl. 128—266.)



1. A powdered medicament dispenser, including a casing having a chamber divided by a perforated powder-sifting diaphragm into superposed air receiving and powder receiving compartments, and means for directing air diametrically through the lower compartment and exhausting it at a diametrically opposite point, the passage of the

air into and through the compartment producing a suction and a thorough commingling of the amorphous powder with the air.

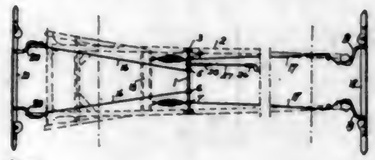
---

1,696,470. OPERATING MEANS FOR SPEED INDICATORS OR RECORDERS FOR LOCOMOTIVES. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y. Filed June 11, 1924. Serial No. 719,315. 12 Claims. (Cl. 74—7.)

1. Operating means for locomotive speed indicators including a revolution transmitting wheel frictionally engaged with the tread face of a traction wheel, a longitudinally extending support in which said friction wheel is mounted, means sustaining said support at one of its ends for movement about vertical and horizontal axes, means for preventing shifting movement of said friction wheel upon the tread face axially thereof, and means for transmitting rotation of said friction wheel to a speed indicating instrument.

---

1,696,471. PROCESS OF TREATING ORES WITH CHLORIDE SOLUTIONS. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed May 25, 1926. Serial No. 111,664. 9 Claims. (Cl. 75—18.)

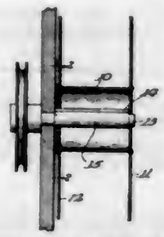


1. In the treatment of ores with acid chloride solutions, precipitating dissolved metal therefrom by means of a calcium compound so as to leave in said solutions as $CaCl_2$ the chlorine combined with said metals before precipitation and thereafter mixing said solution containing said $CaCl_2$ with comminuted ore and adding $H_2SO_4$ to said mixture to precipitate the calcium from said solution as $CaSO_4$ and to form HCl in said solution and thereby dissolving metals out of said ore in said solution.

---

1,696,472. SHOCK ARRESTER. EMILE CONTI, Alfortville, France. Filed Feb. 10, 1928, Serial No. 253,472, and in France Nov. 29, 1927. 10 Claims. (Cl. 293—55.)

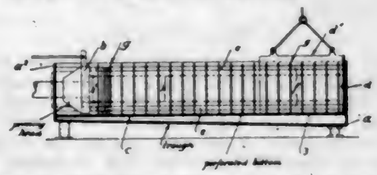
1. In a motor vehicle having a chassis and a buffer bar pivotally mounted on one end of said chassis, the combi-



nation of a plurality of levers carried by said chassis, a plurality of cables interconnecting certain of said levers and said buffer bar, shock absorbing means responsive to a slight movement of said buffer bar cooperating with cer-

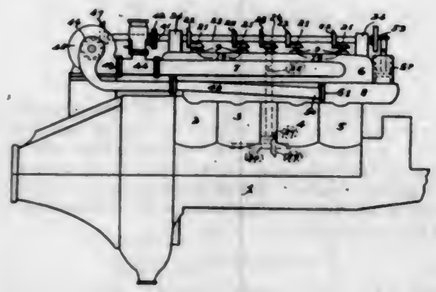
tain of said levers and a second shock absorbing means responsive to said first mentioned shock absorbing means when the movement of said buffer bar exceeds a predetermined amount for the purpose set forth.

---



1,696,473. FILM REEL. HERMAN A. DE VRY, Chicago, Ill., assignor to The De Vry Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 3, 1925, Serial No. 54,186. Renewed May 6, 1927. 2 Claims. (Cl. 242—70.)

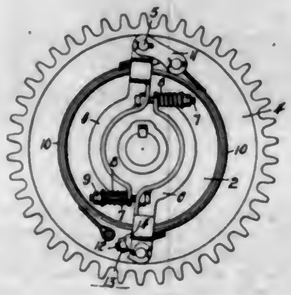
1. A film reel comprising sides and a hub, one of the sides being provided with a circular opening to receive the reduced end of a shaft, and the other with a circular opening to fit around a cylindrical shaft of a predetermined size and a plurality of outwardly extending notches adapted to receive a key on a shaft, said notches being formed to receive the corners of a polygonal shaft of a predetermined size, whereby the reel will be adapted to be driven by a cylindrical shaft with a key thereon or a polygonal shaft.



---

1,696,474. PRESS FOR TREATING BOARDS OF ALKALINE CELLULOSE AND THE LIKE. WILHELM DÜTSMANN, Neustadt, Germany. Filed Nov. 13, 1925, Serial No. 68,907, and in Germany Feb. 23, 1925. Renewed Oct. 11, 1928. 5 Claims. (Cl. 100—50.)

1. Horizontal press for treating articles in alkali solutions and acids having corrosive properties, more especially boards of alkali cellulose for the manufacture of artificial silk, comprising in combination with a horizontal press cylinder, piston rod and pressing head, a steeping trough receiving the pressing head and piston-rod, a perforated partitioning bottom within the trough, a collecting chest having its perforated bottom flush with the said partitioning bottom, metal sheets arranged within the trough and the said chest being open at the top and front end and adapted to receive all the metal sheets together with the boards when compressed, guiding ledges for the metal sheets and means for removing the collecting chest from the trough.



1,696,475. INTERNAL-COMBUSTION ENGINE. HENRY L. ELLIOTT and ROBERT A. CARROLL, Claysville, Pa. Filed Dec. 22, 1926. Serial No. 156,381. 5 Claims. (Cl. 123—23.)

1. In an internal combustion engine using a dust fuel mixture, means for animating the dust fuel charge in the combustion chamber of the engine, means for carbureting the dust fuel charge, and auxiliary means for exhausting the products of combustion.

---

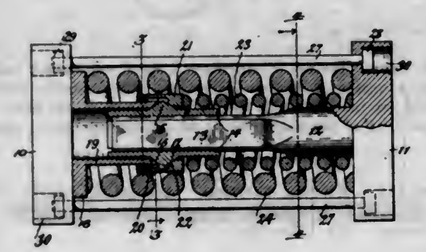
1,696,476. FRICTION DRIVE MEANS. CHARLES L. GEORGE, Findlay, Ohio, assignor to The Buckeye Traction Ditcher Company, Findlay, Ohio, a Corporation of Ohio. Filed May 19, 1927. Serial No. 192,508. 5 Claims. (Cl. 64—99.)

1. In a device of the class described, a drive member and a driven member, one constituting a friction drum, a plurality of friction bands engaging the friction drum and anchored to the other of said members to turn therewith, means connecting said bands including members connected to the free ends of the friction bands and extending from opposite sides substantially diametrically across said friction drum in lapping relation, and a yieldable connection between the inner end portion of each member and adjacent member, thereby to equalize the pressure of the bands on the drum.

---

1,696,477. CYLINDER HONE. ERNEST A. HALL and GERALD J. LINDROTH, Toledo, Ohio, assignors to The Hall Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 25, 1926. Serial No. 97,240. 17 Claims. (Cl. 51—206.)

1. In a tool of the class described, a rotatable body, an elongate abrading member carried by the body for outward

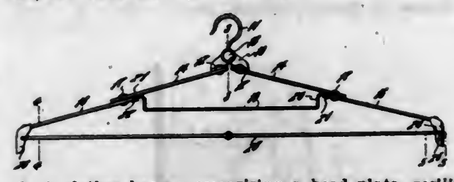


movements relative to its axis, and drive means movable lengthwise of the body and abrading member and having a fixed portion receiving the inward thrust of the abrading

member and, when moved in one direction lengthwise of the abrading member, causing an outward positive adjustment thereof.

---

1,696,478. SHOCK ABSORBER. JOSEPH M. HALL, Hamilton, Ontario, Canada. Filed June 5, 1925. Serial No. 35,099. 9 Claims. (Cl. 213—36.)

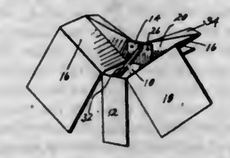


1. A shock absorber comprising two relatively movable followers, a longitudinal friction post movable with one of said followers and projecting toward the other follower and having longitudinal friction surfaces, friction shoes engaging said friction surfaces, a wedge collar having backward wedging engagement with said shoes, a thrust member moving with the other follower and having forward wedging engagement with said shoes, a wedge spring surrounding said post and bearing at its opposite ends against said wedge collar and the follower which carries said post, a thrust spring surrounding said wedge spring and operating to move said thrust member and the follower with which it engages in one direction, and said follower which carries said post in the opposite direction, and means for causing said wedge collar to move backwardly with that follower toward which said post projects.

---

1,696,479. MANUFACTURE OF ACETALDEHYDE. CARL NELSON HAND, Nitro, W. Va., assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Apr. 12, 1926. Serial No. 101,563. 10 Claims. (Cl. 260—139.)

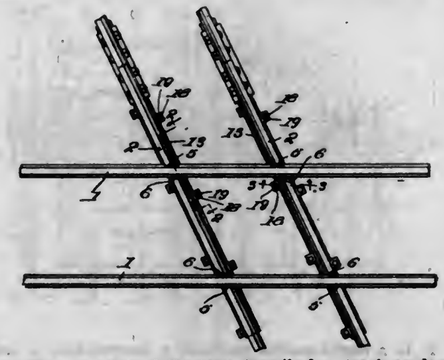
1. A process of separating acetaldehyde from a mixture of acetaldehyde and acetylene which comprises passing the said mixture through an aromatic organic compound that will chemically combine with the acetaldehyde present in the said mixture.



1,696,480. CLOTHES HANGER. NANNIE E. HAWKINS, Cincinnati, Ohio. Filed July 17, 1925. Serial No. 44,203. 2 Claims. (Cl. 223—68.)

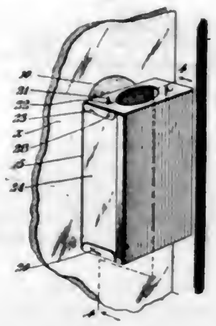
1. A clothes hanger comprising a head plate, resilient arms connected with the head plate and composed of pivotally connected elements, and supplemental garment supporting elements having detachable connections with the arms at the terminals and at the pivotal joints and relying on the resiliency of the arms to maintain them in connected positions.

---



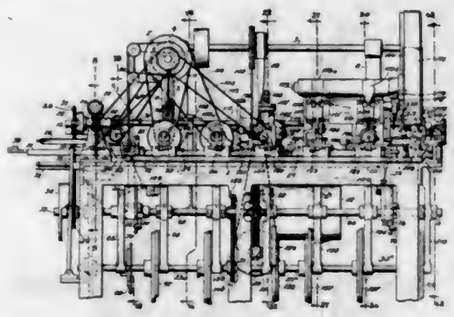
1,696,481. DRAIN-DITCH CHECK DEVICE. HJALMER B. HELSING, Moberly, Mo. Filed Oct. 12, 1927. Serial No. 225,695. 4 Claims. (Cl. 61—29.)

1. A device of the class described comprising a bottom, sides extending therefrom, a front wall comprising a central portion extending up from said bottom and side portions extending up from said sides, said side portions being bent to make the center portion lower than the outer ends of the side portions and a splash board secured to said device.



---

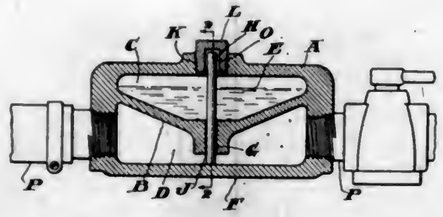
1,696,482. RAIL CROSSING. WILLIAM R. HESSKEW and JOSEPH J. NULTY, San Antonio, Tex. Filed Jan. 3, 1928. Serial No. 244,273. 2 Claims. (Cl. 246—457.)



1. In a crossing of the type described, a track made up of T-rails and a track made up of channel rails which crosses the T-rails, said channel rails above the base flanges thereof having openings which correspond in shape to the cross sectional contour of the T-rails and which receive the said T-rails therethrough to arrange the treads of the T-rails in a line or approximately in a line with the inner walls of the grooves of the channel rails, said channel rails having their heads notched transversely at points along the sides of the opening, and one of the notches being deeper and of a greater width than the other notch, plates on which the base flanges of the T-rails rest, said plates having their edges flanged outwardly and inwardly to engage with the base flanges of the said channel rails and to likewise afford a support for the base flanges of the T-rails and securing means for said plates.

1,696,483. METAL BOX. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Oct. 3, 1925. Serial No. 60,198. 1 Claim. (Cl. 224—29.)

An oblong rectangular box composed of sheet metal open at the top, a support plate at the rear, said plate having upper and lower forwardly extending elements to engage the top and bottom of the box, the upper element containing an ovoidal opening leading to the interior of the box and the lower element having an out-turned edge and being provided with a depression, a node on the bottom wall of said box to resiliently engage in the mentioned depression, flanges on both of said plate elements to embrace the sides of said box, the flanges on said upper elements having perforations, and corresponding projections on the side walls of said box to engage in the perforations of said flanges.

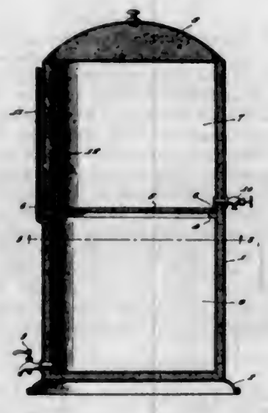


1,696,484. NEEDLE-MAKING MACHINE. ALFRED HOFMANN, Fort Lee, and OSWIN KANIS, Union City, N. J., assignors to Alfred Hofmann Needle Works, Inc., Union City, N. J., a Corporation of New Jersey. Filed Nov. 12, 1927. Serial No. 232,794. 35 Claims. (Cl. 163—2).

2. In a needle-making machine, a machine-base, a series of operating units disposed longitudinally thereof, a carrier having reciprocatory movement longitudinally of the base and adapted to transfer a needle-blank to each of the units successively, and means to operate the units successively to cut a blank, round the butt-end thereof, swage the beard-end, trim to length, point and buff, bend the butt-end, punch a groove in the beard-end, flatten the shank, and form the beard.

1,696,485. AIR-LINE OILER. GIDEON IHRMARK, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 3, 1925. Serial No. 66,515. 3 Claims. (Cl. 184—55.)

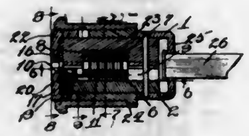
1. An air line oiler comprising a casing, a wall dividing the casing into a pressure fluid passageway and an oil reservoir, said wall having a single passage for conveying pressure fluid from the passageway into the reservoir and oil from the reservoir into the passageway, and a plain cylindrical pin extending through the passage and the top



of the casing, said pin being supported by the wall of the passageway and actuated transversely of the passage by the pulsations occurring in the pressure fluid for delivering oil from the reservoir to the passageway.

1,696,486. DENTAL IMPLEMENT. WILLIAM JEFFREYS, East Orange, N. J. Filed Sept. 2, 1927. Serial No. 217,204. 1 Claim. (Cl. 128—231.)

A dental syringe comprising a soft vulcanized rubber bulb, a nozzle of similar material, a thin metallic tubular lining for the nozzle forming a passage from the bulb, the front face of the nozzle being of convex triangular shape.



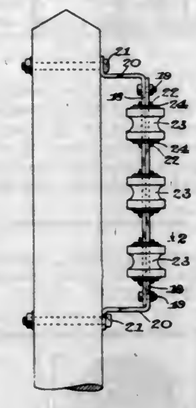
1,696,487. WATER FILTER. ALBERT E. JERVIS, Nappanee, Ind. Filed Jan. 3, 1928. Serial No. 244,256. 2 Claims. (Cl. 210—103.)

1. A filter comprising a reservoir divided by a filtering medium into an upper filtering compartment and into a lower compartment in which the filtered water is received, and means for introducing atmospheric air into the last mentioned compartment above the water level therein and for directing air from such compartment into the filtering compartment above the level of the water therein.

1,696,488. LOCK. JOHN JUNKUNC, Chicago, Ill. Filed Nov. 16, 1923. Serial No. 675,042. 1 Claim. (Cl. 70—16.)

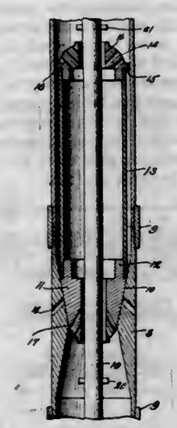
In a lock, a key barrel comprising two semicylindrical sections, a cap fitting over the interior end of said sections, an outer cap fitting over the exterior end of said sections, said cap being slotted to receive a key therethrough for engaging tumblers within the barrel and rotating said sections, one of said sections having a rabbet and a central recess, a spring in the recess supported by the exterior cap, the other section having a registering rabbet so that the assembled barrel has a rabbet at one end, a key-hole guard nested in the rabbet having a depending lug extending into said central recess and having an inturned flange engaging said spring.

1,696,489. DISPLAY SIGN AND THE LIKE. HERBERT KAHN, St. Louis, Mo., assignor to Kahn Mirror Plate Company, St. Louis, Mo., a Corporation of Missouri. Filed May 23, 1927. Serial No. 193,517. 2 Claims. (Cl. 40—135.)



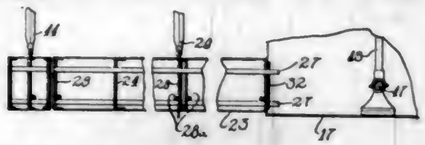
1. As a new article of manufacture, a display-sign including a rigid sheet-glass body-section, a display-member constructed of paper disposed flatwise directly upon a part of the rear face of the body-section, the body-section being of greater area than the display member, and a layer of reflecting material adhesively disposed upon and over the rear face of the display-member and upon and over that portion of the rear face of the body-section that surrounds the display-member, the display member being by the reflecting material fixed upon the body-section and being visible only when viewed from the front face of the body-member, the body-member surrounding the display-member having the characteristics of a mirror.

1,696,490. RESINOUS MATERIAL AND PROCESS OF MAKING SAME. PAUL KNAPP, Woodbury, N. J. Filed May 18, 1921, Serial No. 470,675. Renewed Feb. 18, 1926. 6 Claims. (Cl. 260—130.)



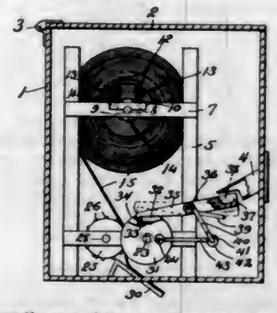
3. The process which comprises treating the distillate obtained in the distillation of substances containing pentoses and pentosans with mineral acids, with an amine in the presence of an acid, to form an insoluble resinous material, and separating such resinous material from the large volume of water in the distillate.

1,696,491. INSULATOR RACK. WILLIAM D. KYLE, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 24, 1923. Serial No. 664,475. 3 Claims. (Cl. 173—321.)



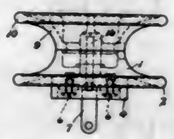
2. A secondary rack comprising a pair of relatively extensible complementary elements secured together in overlapping relation to form a U-shaped insulator-supporting member having spool insulators threaded on its transverse portion and insulator-retaining members passing through said overlapping complementary elements.

1,696,492. FLUID AND GAS TRAP. FRED A. LANGHERST, Wexford, Pa. Filed Jan. 23, 1928. Serial No. 248,857. 2 Claims. (Cl. 103—221.)



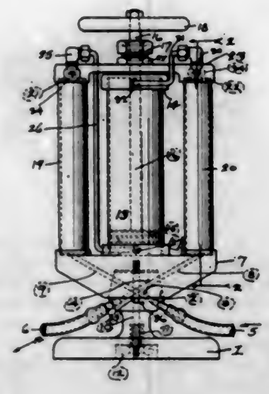
1. In combination with the well tubing and sucker rod of an oil well, a tubing section having an inclined valve seat formed interiorly thereof and having a plurality of openings extending to the valve seat, a relief valve including a vertically movable elongated member, the lower end of the relief valve having bores normally registering with the interior of the tubing in which the valve is positioned, means on the sucker rod for engaging the valve to move the valve from its seat, and means on the sucker rod for returning the valve to its seat.

1,696,493. AIRPLANE. WILLY LENERT, Chicago, Ill. Filed Mar. 27, 1926. Serial No. 97,823. 2 Claims. (Cl. 244—31.)



2. An airplane wing structure comprising flanged and apertured metal ribs, spaced tubular members forming front and rear spars and passing the aperture in said ribs, and transverse spacing members brazed to said tubes immediately adjacent the ribs, those spacing members adjacent the strut locations having projecting lugs for the attachment of said struts.

1,696,494. VENDING MACHINE. HENRY L. LOWRY, Morrill, Kans. Filed July 26, 1928. Serial No. 295,421. 3 Claims. (Cl. 194—26.)



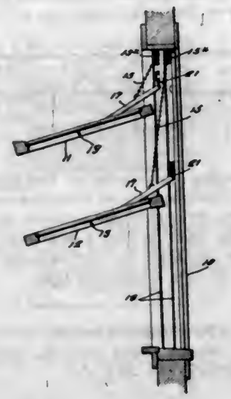
1. In a vending machine, a rotary member having a stop tooth, a pawl having means for engaging said tooth to hold said member from turning in one direction from an initial position, said pawl being automatically movable to said engaging position and having means for supporting a deposited coin and being movable by said coin from said engaging position to a position in which the coin will fall from said pawl, a lever movable to and from a position in which it will engage and hold said pawl from moving to the coin dropping position after the pawl has been released from said tooth, and means actuated by said rotary member, after the latter has been turned a predetermined distance from said initial position, for first swinging said lever from and then swinging it to said pawl holding position.

1,696,495. ELECTRIC APPLIANCE. MALTE J. MALLING, Grand Rapids, Mich. Filed July 11, 1927. Serial No. 204,818. 3 Claims. (Cl. 173—361.)

1. A device of the class described comprising, a body of suitable non-conducting material of substantially pulley-like shape, said body having a central longitudinal opening therethrough, a second opening extending from the outer side of the body substantially midway between its ends to connect with said central opening and a slot in one side and in the outer end portion of the body joining with said openings, a metallic contact member secured at the inner end of the ping with which an electric cord may have connection passing therefrom, through the central opening of said body, thence laterally through the second opening and thence wound around the body, its opposite end extending away from said body.

1,696,496. APPARATUS FOR SURGICAL USES. PERCY F. MCMURDO, San Francisco, Calif. Filed May 11, 1927. Serial No. 190,587. 10 Claims. (Cl. 128—214.)

1. An apparatus for surgical uses comprised of a base having a pair of independent passages therethrough; an intake member and a discharge member connected to each of said passages; a pair of independent fluid receptacles rotatably mounted on said base, each fluid receptacle being open to communication with either of the passages in the base; and means to create a less than atmospheric pressure of air in one receptacle to draw a charge of fluid through the intake member into the receptacle and to create an air pressure in the other receptacle to discharge fluid from said receptacle through the discharge member.

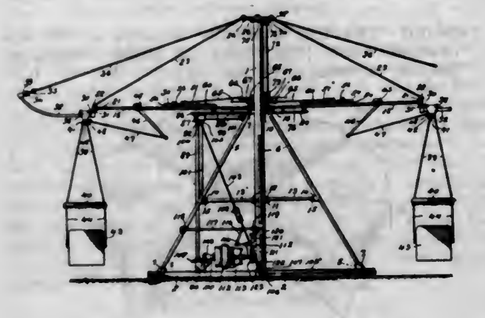


1,696,497. LUBRICATING GUN. CHARLES W. MANZEL, Buffalo, N. Y., assignor to Alemite Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 14, 1921. Serial No. 514,922. 9 Claims. (Cl. 221—47.4.)

7. A lubricating gun comprising a magazine for holding a quantity of lubricant, a cylinder communicating with said magazine, means for positively displacing lubricant from said magazine into said cylinder, means for expelling lubricant from said cylinder, means for making sealed contact with a lubricant receiving device, and a single handle for actuating said displacing means, said expelling means and said sealing means.

1,696,498. WINDOW. JOHN FREDERICK MASSEY, Chicago, Ill. Filed Sept. 22, 1926. Serial No. 137,030. 3 Claims. (Cl. 20—42.)

1. In combination, a frame having grooves in the inner sides of its side stiles, sashes, guides carried by the sashes and movable into and out of said grooves, means connected to said guides and carried by the sashes for the projections and retraction of said guides, movable latches carried by the side stiles of the frame, slidable and swingable hinge members pivotally connected to the sashes and apertured for detachable connection to said latches, pulleys carried by

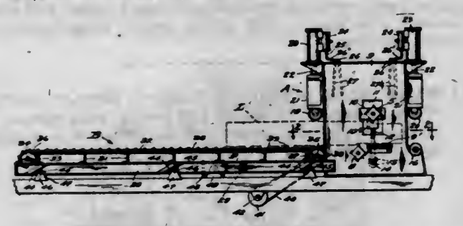


the side stiles of the frame, and cords for the support of the sashes connected to said hinge members and passed over said pulleys.

1,696,499. MONO-AMINO-DIPHTHALOYL ACRIDONES AND PROCESS OF PREPARING THE SAME. WALTER MIEG and ALBERT JOB, Elberfeld, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed May 23, 1927, Serial No. 193,721, and in Germany May 27, 1926. 4 Claims. (Cl. 260—37.)

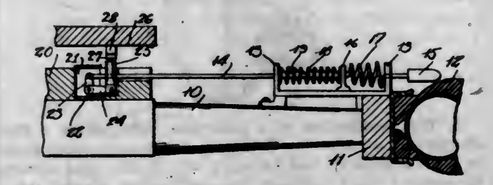
1. As new vat dyestuffs mono amino diphthaloyl acridones obtainable by reducing the corresponding mono nitro diphthaloyl acridone, being in dry state dark blue powders and dyeing from a hydrosulfite vat greyish-blue shades, soluble in concentrated sulfuric acid with yellow to yellowish brown shades.

1,696,500. CARROUSEL. CHARLES E. MORRIS, Leavenworth, Kans. Filed July 26, 1926. Serial No. 124,935. 26 Claims. (Cl. 272—41.)



1. In a carrousel, a revolving support, supporting means therefor, a passenger carrying device movable outwardly by natural force on said support, and means connecting said device with said supporting means by which said device, during the revolutions of said support, is periodically forced inwardly and is then released and permitted to move freely outwardly.

1,696,501. DIELECTRIC SUBSTANCE AND PROCESS FOR MANUFACTURING SAME. ANDRÉ MOUILLEFARINE, Paris, France. Filed Feb. 18, 1927, Serial No. 169,420, and in France Feb. 18, 1926. 1 Claim. (Cl. 91—70.)



The herein described process of rendering wood dielectric, which consists first in dyeing the wood to resemble ebonite, comprising the step of immersing the wood in a liquid mass composed of basic black, acetic acid and sodium chloride for substantially twenty-four hours, the first four hours of which the mass is heated to 100° C. and for the remaining time the mass is permitted to cool, thereafter submitting the wood to a heat treatment, then to the action of an insulating mass consisting of bituminous shales which first opens up the pores of the wood by removing all conductive substances therefrom and then replaces the discharged conductive substances, the action taking place during a change in temperature of the mass from 150° C. to 300° C. or more, thereafter drying the impregnated wood and finally finishing its surface with shellac bearing varnish.

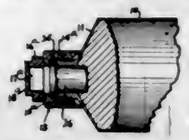
1,696,502. LOG-SIZING MECHANISM. THOMAS A. PETERSON, Onalaska, Wash. Filed June 9, 1926. Serial No. 114,615. 5 Claims. (Cl. 144—114.)

1. The combination with a planer having a cutter-head, of a vertically movable work supporting table, means rendered operative by horizontal movement of the table to effect vertical movement of the table, power actuated means to impart horizontal movement to the work supporting table for effecting vertical movement of said table with respect to the cutting circle of said cutter-head, and manually controlled devices for regulating said power actuated means.

1,696,503. TUBE AND TIRE SAVER. THOMAS P. ROTH, Louisville, Ky. Filed Apr. 6, 1926. Serial No. 100,135. 2 Claims. (Cl. 200—58.)

1. In a tire deflation signal, circuit closing means including a wheel having a pneumatic tire thereon, guides on said wheel alined radially with respect to the axis of the wheel, a rod extending through said guides and having ratchet teeth thereon facing toward the outer end of the rod and engageable with one of said guides upon the rod being moved inwardly, spring means normally holding said rod in outwardly protruded position, a plurality of fixed contacts adjacent one side of the wheel and projecting toward the wheel to terminate at graduated distances from the wheel, a movable contact carried by the wheel and projecting from one side thereof to move toward and from the side of the wheel and out of position to engage the fixed contacts independently and successively, and operative means connecting the rod and movable contact.

1,696,504. YIELDABLE BULB-SOCKET SUPPORT. JOHN M. PETTUS, Bell, Calif. Filed Nov. 3, 1927. Serial No. 230,786. 4 Claims. (Cl. 240—90.)

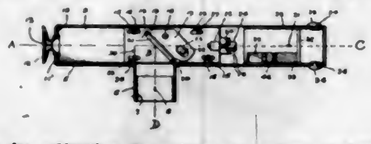


1. A yieldable support for a bulb socket, comprising two spaced disks having central openings through which to pass current-conducting wires, a yieldable sleeve between said disks having its ends disposed in contact therewith around said openings, and spring means between said disks around said sleeve, said spring means being connected with said disks.

1,696,505. SINK STRAINER. SIMON G. SETTLES, Seattle, Wash., assignor, by direct and mesne assignments, to Herbert W. Barden, Seattle, Wash. Filed Nov. 4, 1926. Serial No. 146,114. 6 Claims. (Cl. 4—291.)

1. A strainer adapted to be used in the drain opening of a sink and extends downwardly below the bottom of the sink, said strainer having a bail hingedly connected thereto, said bail serving as a carrier for the strainer and also as a latch for detachably securing the strainer to the sink.

1,696,506. CLOSURE FOR COLLAPSIBLE TUBES. ARTHUR E. SMITH, Los Angeles, Calif. Filed June 21, 1926. Serial No. 117,295. 7 Claims. (Cl. 221—60.)



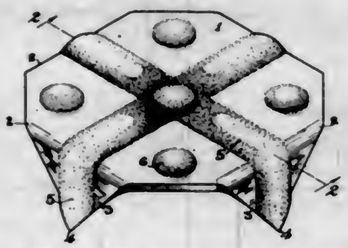
1. The combination of a collapsible tube having a discharge end, a closure for said end, said closure being made of flexible material and having a slit therein, said closure including a skirt engaging the end portion of said tube, the transverse section of said skirt being normally elliptical in shape.

1,696,507. FOAM-PRODUCING COMPOSITION. ERICH MAX ALFRED STHAMER, Hamburg, Germany. Filed Mar. 29, 1928, Serial No. 265,813, and in Germany Apr. 4, 1927. 2 Claims. (Cl. 23—11.)

1. Foam producing means consisting of a mixture of saponin and milk sugar.

1,696,508. HAND LEVEL AND ANGLING DEVICE. WALTER THORBURN, Seattle, Wash. Filed Jan. 9, 1928. Serial No. 245,395. 4 Claims. (Cl. 88—2.3.)

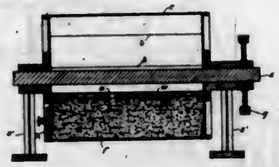
1. A combination level and angling device, with a view tube provided with a peep sight opening at one end, and cross wires at the other end, an offset tube opening from one side with a removable sleeve therein carrying a vertical wire; a horizontal mirror mounted above a plate the plate adjustably held on a slide, a slide frictionally held within and along the bottom of the first mentioned tube, bifurcated ends on the slide turned up to form a fulcrum,



means for adjusting the mirror at various angles across the tubes, and a threaded lug on the outer end of the plate, a screw threaded into the lug, a collar on the screw at the inside of the fulcrum and a head on the outer side thereof, whereby the plate may be adjusted longitudinally on the slide in the first mentioned tube.

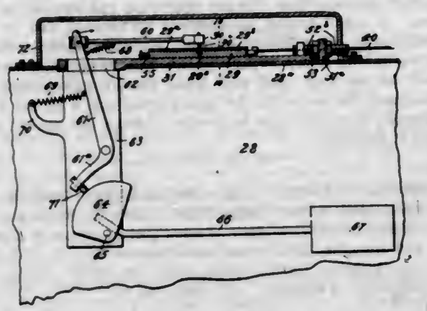
1,696,509. POTATO-PICKING BELT. RAYMOND B. TRESNER, Mabton, Wash. Filed Jan. 22, 1927. Serial No. 162,904. 2 Claims. (Cl. 224—5.)

2. A device of the character described comprising a belt, straps attached to the sides of the belt and depending therefrom, a cross bar detachably connected with the lower ends of said straps, said bar being extended beyond its point of connection with said straps with said extending portions being adapted to bear against the legs of the wearer directly above the knees, and hooks carried by the bar for supporting a sack.



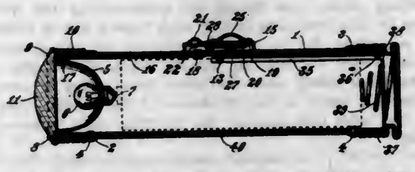
1,696,510. TRAFFIC MARKER. WILLIAM A. WALLACE, Oakland, Calif. Filed July 26, 1927. Serial No. 208,526. 1 Claim. (Cl. 94—1.5.)

A traffic marker comprising a top plate, a plurality of legs extending downwardly from the top plate, a plurality of outwardly pressed corrugations located in the top plate and the legs, each of which said corrugations commences at the end of one of the legs and extends upwardly along the said leg and across the top plate, which said corrugations when struck on the corrugations at a point where the legs and top plate meet swing the legs outwardly so the legs become embedded in a material.



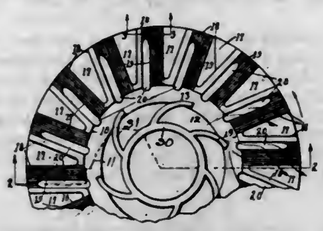
1,696,511. METHOD OF TREATING ARTIFICIAL FUELS. HERBERT E. WETHERBEE, Cleveland, Ohio, assignor of one-third to Richard F. Grant and one-third to Howard M. Hanna, Cleveland, Ohio. Filed Oct. 22, 1925. Serial No 64,125. 17 Claims. (Cl. 44—25.)

1. In a method for treating comminuted materials preliminary to briquetting the same, the step of subjecting the particles thereof while in moistened condition to the action of a moisture displacing filming oil binder, substantially as set forth.



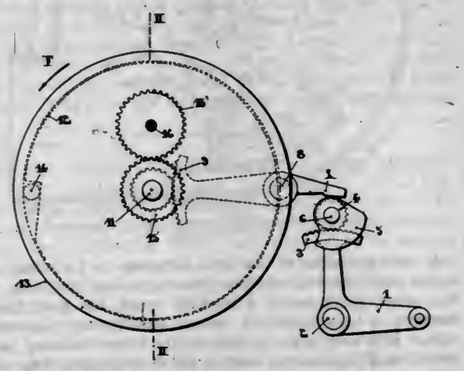
1,696,512. INDICATING MECHANISM. LOUIS A. WHITE, Brooklyn, N. Y. Filed Dec. 20, 1924. Serial No. 757,276. 10 Claims. (Cl. 177—351.)

7. The combination with a fuel tank of indicator mechanism including a float in the tank, an indicator device rotatable in opposite directions, a reversible rotary electric motor for operating the indicator device, and automatic switch mechanism for reversing and controlling the operation of the motor, said switch mechanism including cooperating relatively movable switch members, one of said switch members comprising a supporting base supported to slide rectilinearly and having separate contact plates thereon, said switch member being connected with the motor to be actuated thereby, and the other switch member comprising a brush movable longitudinally above said base and adapted to slidably engage said contact plates, and a connection between said brush and the float comprising a vertically swinging lever connected at one end to the float to be actuated thereby and having a cam at its other end, a second lever pivoted intermediate its ends, one end of said second lever engaging said cam, a horizontally disposed link member pivotally connected at one end to the other end of said second lever and carrying said brush at its free end, and resilient means for pressing the outer end of the link downwardly to maintain said brush in operative relation with the other switch member.



1,696,513. BATTERY HAND LAMP. ERNEST ALSCHULER, St. Louis, Mo., assignor, by direct and mesne assignments, of one-half to National Carbon Company, Inc., New York, N. Y., a Corporation of New York, and one-half to Henry Hyman, New York, N. Y. Filed Jan. 4, 1919, Serial No. 269,705. Renewed Feb. 7, 1928. 2 Claims. (Cl. 240—10.5)

1. In a battery hand lamp, the combination of a tubular casing, a battery therein, a metallic reflector at one end of the casing, a lamp mounted in the reflector with one terminal electrically connected thereto, and the other terminal connected to one terminal of the battery, a lens associated with the reflector, metallic fittings insulated from said reflector for holding said lens in place, circuit connections between the other terminal of the battery

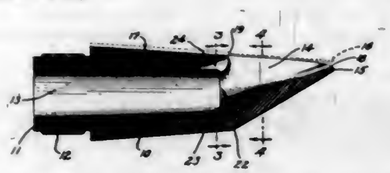


and said reflector, said connections including two conductors fixed in position upon the inside of the casing and two switch mechanisms arranged in series, one of said switch mechanisms being adapted to establish a circuit between the said conductors, and the other mechanism including a conducting cap for holding the battery in place and included in the circuit through one of said conductors.

1,696,514. BURR FOR GRISTMILLS. DAVID S. ANTHONY, San Antonio, Tex. Filed June 17, 1925. Serial No. 37,788. 5 Claims. (Cl. 83—3.)

1. A burr for grist mills comprising a substantially disk shaped body portion, the upper face of said body portion being provided with a series of outwardly extending recesses to form a series of outwardly extending lugs, the upper face of each of said lugs being provided with a group of outwardly extending teeth, the teeth of each group being parallel to each other and extending from the outer to the inner end of said lug.

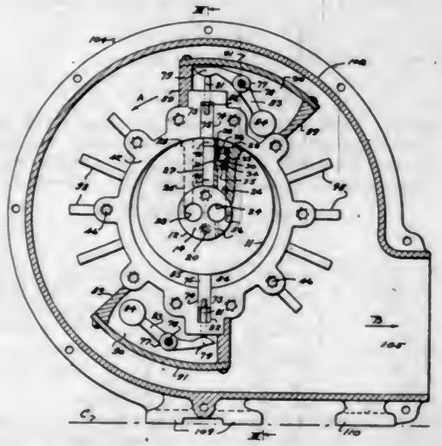
1,696,515. COMPOSING APPARATUS FOR TYPE-SETTING MACHINES. ROBERT BARENNES, Bordeaux, France. Filed Dec. 1, 1926, Serial No. 152,016, and in France Aug. 23, 1926. 21 Claims. (Cl. 199—51.)



1. A composing apparatus for a type setting machine, comprising a cam shaft, cams mounted so as to be free to turn on said shaft, and corresponding in number to

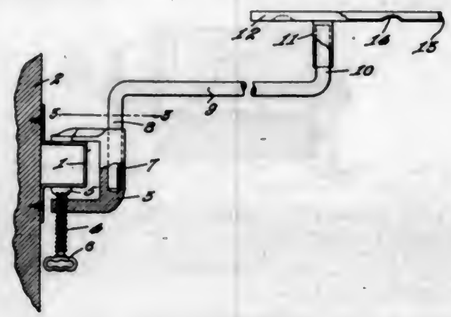
the number of matrices and consequently to the number of keys on the keyboard, of each cam representing a matrix and the lift of each cam being proportional to the thickness of the matrix it represents, means for producing the lift of the corresponding cam when a key is pressed in order to put into use a matrix, a continuous recording device and means for transmitting the lift of a cam to this recording device each time a key is pressed, the recording device being graduated in typographical measurements representing the thickness of matrices, the arrangement being such that each time a key is pressed a record is made of the thickness of the matrix used so that the total thickness of the matrices used is recorded visibly.

---



1,696,516. MOUTHPIECE FOR MUSICAL WIND INSTRUMENTS. EUGENE PERCIOUX, New York, N. Y. Filed Apr. 15, 1927. Serial No. 184,087. 7 Claims. (Cl. 84—383.)

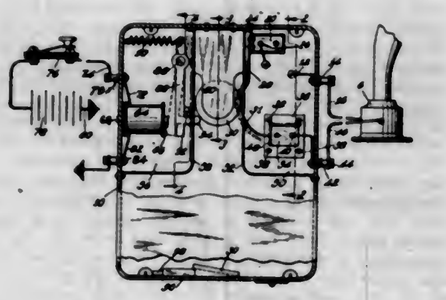
3. A mouthpiece for clarinets and the like, comprising a shell having a substantially central passageway extending inwardly from its discharge end, and having an inclined chamber extending from the inlet end of the mouthpiece into communication with said central passageway, the entrance end of said chamber being substantially trapezoidal in outline, and the discharge end of said chamber being defined by overlapped circles in cross-section.



---

1,696,517. ROTARY PUMP OR COMPRESSOR. GUSTAF BERGGREN, Brooklyn, N. Y., assignor to Berggren Engineering Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 7, 1925. Serial No. 61,014. 11 Claims. (Cl. 103—121.)

1. An apparatus of the class referred to, including internal and external members revolvable one relatively to the other, there being a working space for fluid intermediate of said members, means establishing communication with said space, a gate in the latter coacting with one of said members to control the flow of fluid thru said means, and preponderant centrifugal means acting against said gate to overcome a like force inherent to its weight in conjunction with the rotative speed of the revolving member.

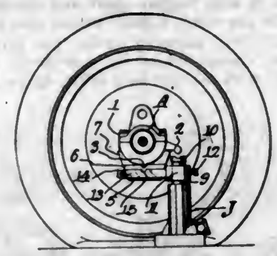


1,696,518. IRON HOLDER. FRED E. BOWMAN and GUY F. CAMERON, Anchorage, Territory of Alaska. Filed Sept. 20, 1926. Serial No. 136,618. 1 Claim. (Cl. 68—27.)

A device for the purpose set forth, comprising a C-shaped clamp adapted to be fixed upon a support and having a socket entering from the top thereof, a rod having its ends bent at right angles in opposite directions, one of said angle ends being adapted to be received in said socket, a plate having a continuous upstanding flange to provide a rest for an iron, and said plate having upstanding lugs integrally formed with the base thereof and a socket which depends from the base to receive therein the second angle end of the rod.

---

1,696,519. DEVICE FOR COMMERCIAL RADIO RECEPTION AND OPERATION. LEE M. BOWMAN, Los Angeles, Calif., assignor of one-third to Julian B. Primm, Los Angeles, Calif., and one-third to Tom L. Shepherd, Los Angeles, Calif. Filed Sept. 29, 1926. Serial No. 138,387. 4 Claims. (Cl. 194—9.)



1. In a radio mechanism whereby a master radio set is adapted to operate one or more individual subsidiary radio sets, a pair of electrodes for establishing an electric circuit between said master set and said subsidiary set, a set of appliances whereby a coin may coact with one of said electrodes to bring the latter into electrical contact with the other of said electrodes, and means for releasing said coin and breaking the contact between said electrodes.

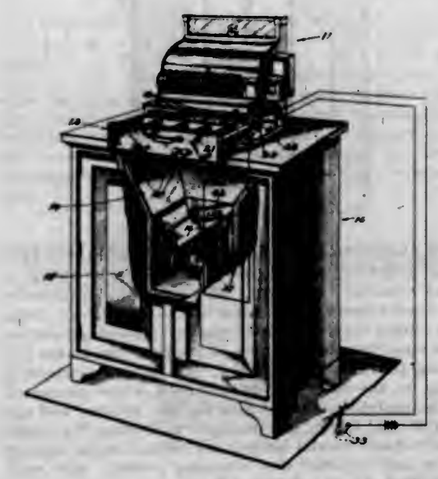
---

1,696,520. JACK. CURTIS E. BRADBURN, Garden City, Kans. Filed Dec. 6, 1926, Serial No. 153,018. Renewed Feb. 21, 1928. 3 Claims. (Cl. 254—133.)

1. The combination with an axle, a jack lug extending therefrom, and a guide having an opening, of a jack including a movable head for engagement with the lug, a supplemental member extending from the jack and slidable therewith along a supporting surface for insertion into the

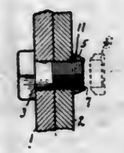
guide opening, and a guide rod extending from said member in the direction of movement thereof for insertion into the guide opening in advance of said member.

---



1,696,521. RETRACTABLE LANDING LIGHT. WILLIAM H. CAPELL, Aberdeen, Md. Filed Feb. 3, 1928. Serial No. 251,617. 5 Claims. (Cl. 240—7.1.)

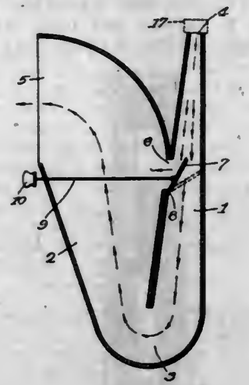
5. A device of the character described including a lamp, means for mounting the same in an aerofoil of an aircraft in such manner that the lens thereof is in substantial continuation of the lower surface of the aerofoil, and means for extending the lamp out of its retracted position.



---

1,696,522. SAFETY MONEY CONTAINER. WILLIAM F. CLEGG and ALICE E. CLEGG, Oakland, Calif. Filed Apr. 5, 1926. Serial No. 99,766. 11 Claims. (Cl. 109—1.)

1. A device of the character described including a safety box, a drawer adapted under normal operation to retain its contents, lock means normally maintaining the drawer closed, and means adapted to be actuated by an attempt to open the drawer without releasing the lock means to permit the contents of the drawer to automatically transfer to the safety box.

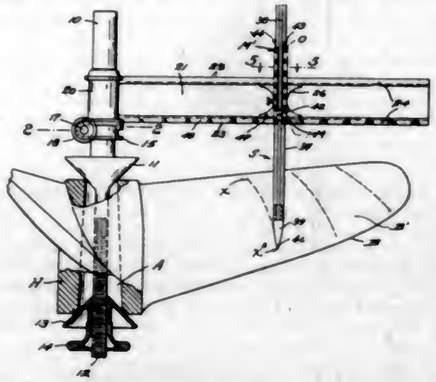


1,696,523. LOCK NUT. WILLIAM F. COCHRAN, Los Angeles, Calif., assignor to Raymond H. Osbrink, Los Angeles, Calif. Filed Feb. 9, 1926. Serial No. 87,103. 2 Claims. (Cl. 151—21.)

1. A nut having a threaded bore adapted to engage a bolt and comprising an inner end having a frusto-conical surface and an outer end forming a polygonal head connected to the inner end by a restricted neck which reduces the thickness of the material between the threaded bore and the exterior of the neck so that the polygonal head may be readily twisted on the bolt in order to bend the broken ends of the threads of the bore over the end of the bolt and leave the inner end of the nut having its exterior surface non-parallel to its axis fixed on the bolt.

---

1,696,524. RESONATOR. ELLIS PRENTICE COLE, Chicago, Ill. Filed Sept. 30, 1926. Serial No. 138,659. 3 Claims. (Cl. 181—27.)



1. In a resonator or sound amplifier, the combination of a passage for the sound waves, of gradually increasing cross sectional area, an opening at one side of said passage, and a deflector disposed in position to control said opening, adapted in one position to close said opening and adapted in another position to deflect the sound waves through said opening, together with means for adjusting said deflector, the resonator having a single expanded sound outlet for both the sound waves traversing the outer passage thereof and for those passing through said opening.

---

1,696,525. PROPELLER-BLADE-MEASURING INSTRUMENT. LEIGH H. COOLIDGE, Seattle, Wash. Filed Dec. 9, 1925. Serial No. 74,259. 1 Claim. (Cl. 33—174.)

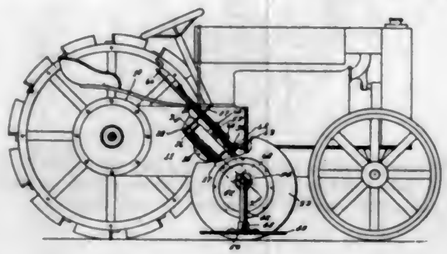
In an instrument for measuring the pitch of a propeller blade, the combination with a post adapted to be secured axially to a propeller hub, a beam connected to said post for a predetermined arcuate movement, said beam being provided in its front face with a recess between two ridges disposed longitudinally of the beam, a carriage positioned in the recess of said beam and connected to the latter for movement radial of said post, a spring actuated clutch comprising two brake blocks engageable with the ribs of said beam for securing said carriage at selected positions to said beam, and a slide mounted in the car-

riage for movement at right angles to said beam, said carriage being provided with a scale of marks, and a runner slidably connected to said slide for movement at right angles to said beam with and independently of the slide,

said runner being provided with a mark adapted to be used in cooperation with the scale marks on the carriage for regulating the relative positions of the slide with respect to the carriage.

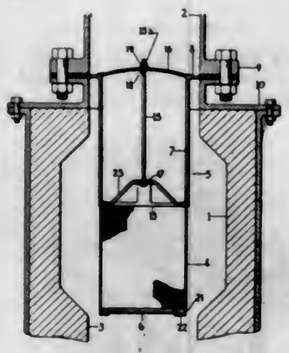
---

1,696,526. APPARATUS FOR HANDLING WELL CASINGS. CARL R. CROSSEN, Bell, Calif. Filed Jan. 26, 1927. Serial No. 163,770. 8 Claims. (Cl. 294—95.)



1. An apparatus of the character described comprising an instrument capable of occupying either of two extreme positions, means for actuating the instrument, rotary means for operating the means in one direction or the other to move the instrument to one extreme position or the other, and means by which the rotary means is adapted for operative connection to a rotary drill pipe in a manner to be driven thereby in one direction or the other in response to unidirectional rotation of the drill pipe.

---

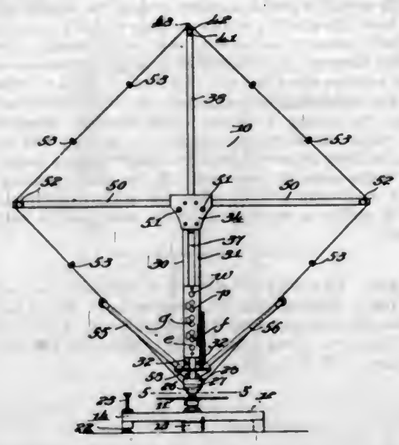


1,696,527. SAW ATTACHMENT FOR TRACTORS. OWEN M. CRUMLY, Carlisle, Iowa. Filed June 14, 1927. Serial No. 198,791. 5 Claims. (Cl. 143—43.)

4. In a saw device, the combination of a supporting frame having a power shaft, a gear casing secured to said frame for receiving said shaft and adapted to be adjusted rotatively about said shaft, a second gear casing rotatively mounted on the first gear casing on an axis perpendicular to the power shaft, a tubular shaft rotatively mounted in said second gear casing perpendicular to the pivotal movement of said second gear casing, the outer end of said tubular shaft being provided with a perpendicular portion, a saw shaft rotatively mounted in said perpendicular portion, a saw blade for said shaft, a shaft rotatively mounted in said tubular shaft and operatively connected with said saw shaft, a shaft within said second gear casing and rotatively mounted within the pivot axis of said second gear casing, means for operatively connecting the power shaft with the last said shaft, means for operatively connecting the last said shaft with the shaft rotatively mounted within said tubular shaft, a supporting sleeve rotatively mounted on said tubular shaft, the outer end of said sleeve being provided with an eccentric, a gauge wheel rotatively mounted on said eccentric, means for rotating said supporting sleeve, means for rotating said tubular shaft, and means for rotating said second gear casing.

---

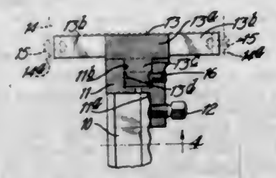
1,696,528. CONTACT-SCREEN HOLDER. CLARK W. DAVIS, Swarthmore, Pa., and GUY B. TAYLOR, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 15, 1927. Serial No. 184,051. 5 Claims. (Cl. 23—288.)



1. In a screen holder, an open-ended cylindrical shell having the peripheral edge of one end interiorly tapered, a circular member exteriorly peripherally cooperatively tapered and adapted for reception within the said end of the shell to place the tapers in cooperative clamping relation for the reception and clamping of a screen, and means for clamping the members together; such means comprising a bridge at the other end of said shell, a rod connected with the central portion of said circular member and extending to said bridge, and means at said bridge for drawing said rod and circular member toward said bridge thereby to move said member into clamping position with said tapered edge of said cylindrical shell.

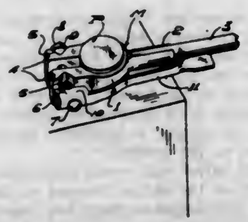
---

1,696,529. LOOP ANTENNA. TOBE C. DEUTSCHMANN, Boston, Mass. Filed Jan. 24, 1924. Serial No. 688,820. 5 Claims. (Cl. 250—33.)



5. A collapsible loop antenna frame comprising diagonal supporting members, one of which comprises two telescoping parts adapted to telescope one within the other substantially throughout their entire length, a second diagonal member comprising two arms hinged to one end of one of the telescoping parts and adapted to be folded in the plane of the loop parallel to the telescoping parts.

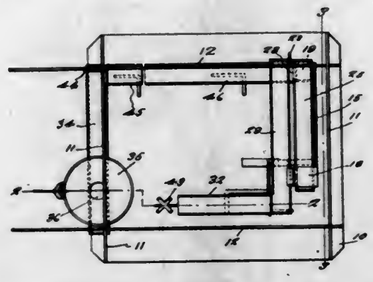
---



1,696,530. MAIL-BOX SUPPORT. JAMES E. DUNCAN, De Kalb, Ill. Filed June 27, 1927. Serial No. 201,782. 1 Claim. (Cl. 232—40.)

In combination with a standard metal post substantially T-shaped in cross section; a cap member substantially triangular in shape in cross section and adapted to fit over the end of said post and provided with slots to receive the flanges of said post, the upper surface of said cap member being provided with a socket therein adapted to receive the pivot shaft of a mail box support; and a set screw threaded into one flat face of said cap member and adapted to engage the center of one of the webs of the post.

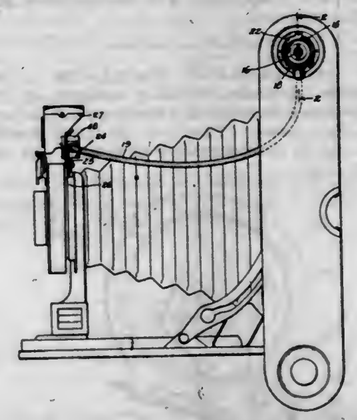
---



1,696,531. TERMINAL CONNECTION. JAMES H. EATON, Colby, Kans. Filed Sept. 24, 1927. Serial No. 221,766. 3 Claims. (Cl. 173—259.)

1. A terminal connection comprising a pair of jaws adapted to receive a terminal post therebetween, blocks carried by the outer ends of the jaws, a shank freely disposed through the blocks, a transversely disposed groove provided in the outer face of each of the blocks, said shank being disposed through said grooves, means carried by the shank for contact with the outer face of one of the blocks, an enlargement carried by the opposite end portion of the shank, a head freely mounted on the shank between the enlargement of the shank and the second block, said head when in one position extending within the groove of the adjacent block to permit separating movement of the blocks and jaws, said head when turned to a position angular to the groove forcing the blocks and jaws one toward the other.

---

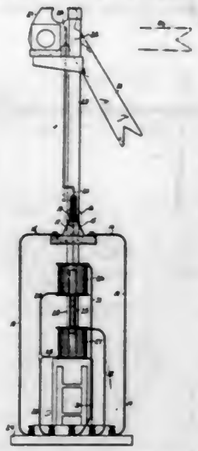


1,696,532. TOY. THOMAS B. ENLOE, Little Rock, Ark. Filed Oct. 12, 1927. Serial No. 225,719. 6 Claims. (Cl. 46—37.)

1. A toy comprising, a rotatable arm, means for rotating said arm, buckets on the ends of said arm having trip levers pivoted therein, an obstruction in the path of revolution of said levers, tongues within the buckets forming a part of said levers and being adapted to receive balls for tripping the levers to dispose them out of engagement with said obstruction, a series of troughs forming a gravitational course for the balls, the upper end of said course being in position to receive the balls discharged by said buckets at the upper limit of their revolution and the lower end of said course being arranged to dispose the balls in said buckets.

---

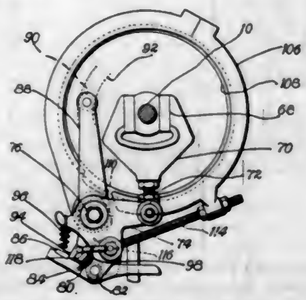
1,696,533. FILM SIGNALING DEVICE FOR CAMERAS. FRED W. GAGE, Los Angeles, and ALBERT W. TONDREAU, Glendale, Calif. Filed Apr. 20, 1926. Serial No. 103,328. 7 Claims. (Cl. 95—31.)



1. A film signal device for cameras comprising a signal element movable to occupy two signaling positions, yieldable means for urging the signal element to one signaling position, means for moving the signal element to and maintaining it in the other signaling position, means adapt-

ed for operation by a shutter mechanism for rendering the second means ineffective to maintain the signal element in the other signaling position, and means adapted for operation by a film winding means for actuating the second means to return the signal element to the other signaling position, the second means being capable of lateral movement by the third means to render the second means ineffective, and capable of rotary movement by the fourth means to return the signal element to the other signaling position.

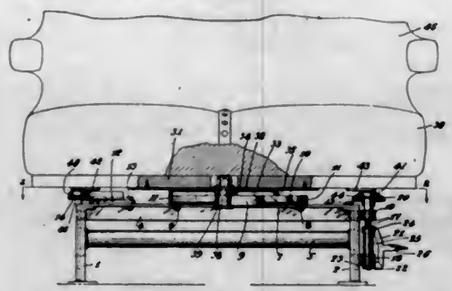
---



1,696,534. TOY ELECTRIC-RAILWAY CONTROL DEVICE. AARON H. GILL, West Haven, Conn. Filed July 14, 1926. Serial No. 122,355. 3 Claims. (Cl. 246—31.)

1. A toy electric-railway control-device, comprising a visual indicating-signal; a standard therefor; a solenoid for moving said signal into its danger-indicating position; a second solenoid for moving the said signal into its clear-track-indicating position and arranged axially in line with the first-mentioned solenoid; an armature axially arranged within and extending between both of said solenoids; a signal-operating rod axially in line with and forming an extension of said armature; a movable switch-member connected to the said armature for operation thereby; and a complementary stationary switch-member carried by the said standard; whereby a train-control circuit may be made or broken concurrently with the operation of said visual indicating-signal.

---



1,696,535. CONTROLLING MECHANISM. JOSEPH GOULDBOURN, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 26, 1926, Serial No. 144,363, and in Great Britain Nov. 6, 1925. 13 Claims. (Cl. 192—144.)

1. Clutch mechanism comprising a shaft, a clutch member fixed upon the shaft, a driven member slidably mounted upon the shaft and provided with a clutch surface arranged for movement into and out of engagement with the clutch member fast upon the shaft, a spring tending to urge the slidably mounted clutch member toward the clutch member fixed upon the shaft, a wedge member slidably mounted on the shaft, connections between said wedge member and the slidably mounted clutch member whereby movement of the wedge member along the shaft operates to force the slidably mounted clutch member away from the other clutch member against the spring, a second wedge member engaging the first wedge member, and means for moving the second wedge member transversely of the shaft thereby forcing the first wedge member lengthwise of the shaft against said spring to disconnect the clutch and permitting its return by said spring to render the clutch operative to transmit power.

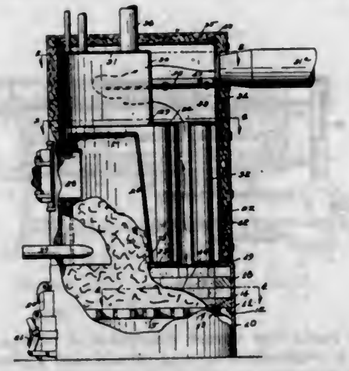
---

1,696,536. CAR SEAT. CONRAD T. HANSEN and ALFRED B. BELL, Philadelphia, Pa., assignors to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Aug. 7, 1926. Serial No. 127,756. 16 Claims. (Cl. 155—96.)

1. In a seat of the character described, in combination, a supporting frame, a seat cushion supported for rotation and shifting on said frame, and means adapted to shift said cushion on said frame in a predetermined manner when the cushion is rotated thereon, said means including a cam track disposed at one end of the supporting frame and members mounted adjacent opposite ends of the seat cushion for movement therewith, said members adapted to enter and leave said cam track and to coact therewith at predetermined times during rotation of the cushion.

---

1,696,537. AUTOMATIC FIREARM. JOHN T. KEWISH, New York, N. Y. Filed Apr. 13, 1927. Serial No. 183,390. 51 Claims. (Cl. 42—3.)



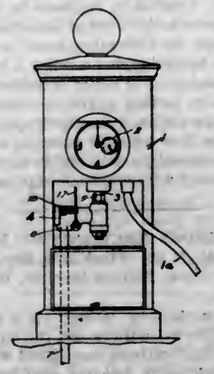
1. In a gun, a receiver having guideways for a breech lock and locking grooves in which a breech cover is slidably locked and provided with depending portions adapted to support a trigger and associated parts and to carry a magazine and provided at its forward end with a sectionally threaded projecting head adapted to receive a barrel on the inside and to receive a rotatable, barrel-detachable, coupling member on the outside.

8. In a gun, a barrel and means positioned in and surrounding a part of the firing chamber of the barrel for lubricating the cartridges as they are inserted into the barrel.

20. In a gun, an actuator provided with an interior projection, a bolt rotatably and slidably mounted on said projection, means for rotating said bolt and means for locking said bolt on said projection.

1,696,538. FURNACE. VIRGIL BALLOU, Des Moines, Iowa. Filed Dec. 24, 1925. Serial No. 77,486. 2 Claims. (Cl. 122—117.)

1. A furnace comprising a base member including a fire pot, a boiler member detachably mounted above said base member, said boiler member being provided with a vertically arranged magazine having its lower end communicating with the top of the chamber within said fire pot and its top end closed, said magazine being eccentrically mounted within said fire pot and provided with a fuel opening near its upper end, the space between said magazine and the vertical walls of said boiler being provided with vertically arranged flues, a cap member on the upper end of said boiler, and a steam dome for said boiler and arranged eccentrically in said cap and directly above said magazine, said cap member having horizontally arranged baffle plates mounted in the larger portion of the space between said dome and the inner wall of said cap, said cap being provided with a flue opening above said baffle plates.

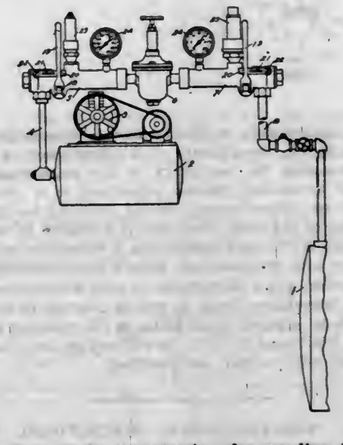


---

1,696,539. PURIFICATION OF ORGANIC COMPOUNDS. DONALD B. BRADNER, Gordon Heights, Del. Filed June 25, 1925. Serial No. 39,880. 3 Claims. (Cl. 260—14.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. In a process of making diphenylaminechlorarsine, introducing crude, molten diphenylaminechlorarsine into water and agitating the mass until the diphenylaminechlorarsine has solidified.

---



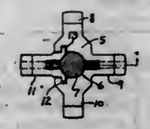
1,696,540. SAFETY DEVICE FOR GASOLINE FILLING STATIONS. NELSON A. CARLSON, Erie, Pa., assignor to Erie Meter Systems, Inc., Erie, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1927. Serial No. 211,175. 2 Claims. (Cl. 221—95.)

1. In a safety device for gasoline filling stations, the combination of a conduit; a self-closing valve in the conduit comprising a body, a valve seat in the body, an arm operating to open the valve, a stem on the arm extending to without the body, and a handle pivotally mounted on the stem, the axis of the pivot being crosswise of the stem; and a fusible link having a shoulder engaging the handle and locking the valve in open position, the handle being free to swing on its axis clear of the shoulder.

---

1,696,541. CONTROLLING MECHANISM FOR GASOLINE TANKS. NELSON A. CARLSON, Erie, Pa., assignor to Erie Meter Systems, Inc., Erie, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1927. Serial No. 211,176. 2 Claims. (Cl. 221—74.)

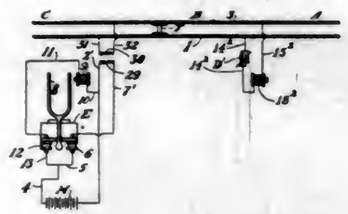
1. In a controlling mechanism for gasoline tanks, the combination of a pressure fluid supply means; a conduit leading from the means to the tank; a self-closing valve in the conduit; and thermally controlled devices securing the valve in open position and releasing the same under abnormal heat.



---

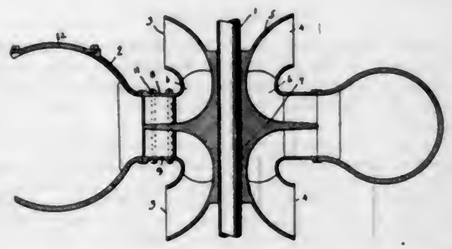
1,696,542. PROCESS FOR EVAPORATING BRINES. GEORGE B. BURNHAM, Reno, Nev., assignor to Burnham Chemical Company, Reno, Nev., a Corporation of Nevada. Filed Nov. 16, 1925. Serial No. 69,273. 1 Claim. (Cl. 23—41.)

The process of evaporating Searles Lake brine which comprises pumping the brine from its normal subterranean position, and exposing the pumped brine in an open pond of sufficient extent and depth to be conductive to wave action in the brine under the influence of the wind, whereby the formation of a salt crust is prevented.



---

1,696,543. DETACHABLE SUCKER-ROD GUIDE. JOHN C. GARROTT, Houston, Tex. Filed July 5, 1927. Serial No. 203,376. 5 Claims. (Cl. 308—4.)

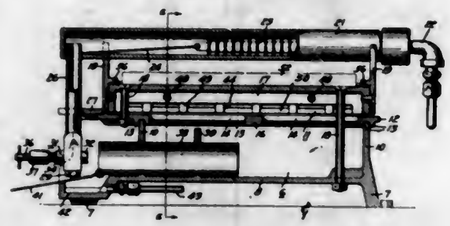


1. A sucker rod guide comprising a body with a central longitudinal channel for a sucker rod, four symmetrical ribs extending radially from the body to engage the tubing, said body being divided transversely through two opposite ribs, the other ribs being formed integrally with a section of said body and adapted to interfit with the adjacent body portion, to clamp the parts upon a rod.

1,696,544. SIGNALLING SYSTEM OR THE LIKE. NEWMAN H. HOLLAND, East Orange, N. J., assignor, by mesne assignments, to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Original application filed July 13, 1920, Serial No. 395,897. Divided and this application filed May 10, 1924. Serial No. 712,180. 4 Claims. (Cl. 175—373.)

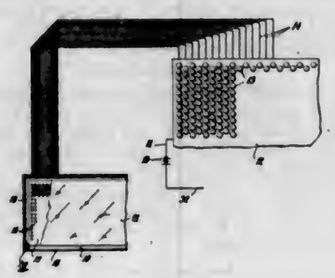
1. In combination, a direct-current constantly closed circuit including the primary of a transformer, a second circuit including the secondary of the transformer, and means for producing current pulsations of a given frequency in the direct-current circuit whereby an alternating current of the same frequency is produced in said second circuit, said means comprising a vibratory reed independent of said directcurrent circuit and vibrated at its natural period and a microphone in said direct-current circuit, said microphone being in spaced relation to said reed so as not to be engaged by the latter in the vibration thereof, but being positioned so as to be affected by the vibrations of the reed, substantially as described.

1,696,545. VARIABLE-HEAD CENTRIFUGAL PUMP. ALADAR HOLLANDER, Berkeley, Calif., assignor, by mesne assignments, to Byron Jackson Pump Co., a Corporation of Delaware. Filed Apr. 23, 1928. Serial No. 271,999. 5 Claims. (Cl. 103—111.)



1. In a centrifugal pump, a volute casing, an impeller mounted to rotate in said casing and having fixed vanes and a pair of disc sides extending to a greater diameter than said vanes, a plurality of removable members adapted to be detachably fixed between said disc sides and forming extensions to said vanes.

1,696,546. CATALYTIC OXIDATION OF SURPHUR DIOXIDE. ALPHONS O. JAEGER and JOHANN A. BERTSCH, St. Louis, Mo.; said Jaeger assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 15, 1926. Serial No. 88,488. 14 Claims. (Cl. 23—175.)

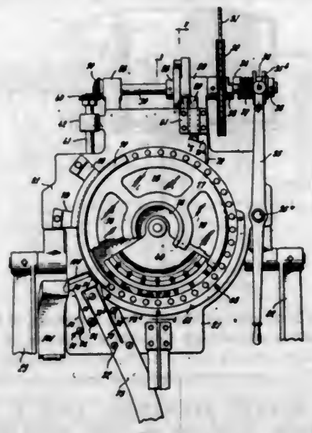


1. The process of catalytically oxidizing sulphur dioxide which comprises passing gases containing sulphur dioxide and oxygen at an elevated temperature over a catalyst comprising a zeolite which contains at least one catalytically active element in non-exchangeable form and is combined with a catalytically active acid radical.

1,696,547. LIQUID-FUEL BURNER. JESSE E. KRESKY, Petaluma, Calif. Filed Apr. 11, 1927. Serial No. 182,632. 4 Claims. (Cl. 158—63.)

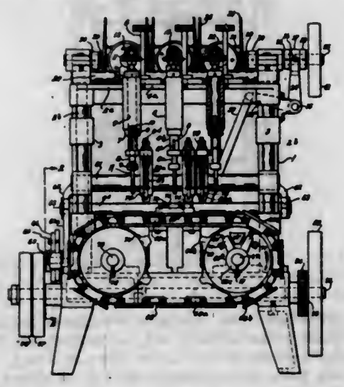
1. A liquid fuel burner comprising a mixing chamber having a longitudinal opening therein, and a closure overlying said opening and having a longitudinal conduit forming an extension of said mixing chamber, said closure including a plurality of juxtaposed burner bars forming fuel release apertures therebetween and providing transverse channels connecting said apertures to said longitudinal conduit.

1,696,548. ELECTRICALLY-DISPLAYED WRITING APPARATUS. CARMELO LAURIA, New York, N. Y. Filed Sept. 21, 1926. Serial No. 136,788. 5 Claims. (Cl. 177—350.)



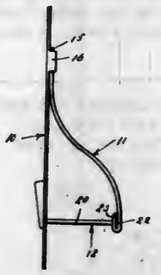
1. An electrical writing display device comprising in combination with a source of electric energy, a field of electric lamps having a comon ground in circuit with said electrical source, a series of contacts in circuit with said lamps, a yieldable plastic cover of non-conductive material over said contacts, an insulating plate in which said contacts are set, a hollow stylus having a point adapted to generate a channel in said cover extending to contacts in its path, the point having a groove communicating with the interior of the stylus, a conductive substance supplied by said stylus to flow into the channel as formed by its point, and an electrode in said stylus in circuit with said electrical source and with the conductive material therein.

1,696,549. FEEDING MECHANISM. MICHAEL J. MAGUTH, Carlstadt, N. J. Filed July 23, 1925. Serial No. 45,485, and in Great Britain Mar. 23, 1925. 12 Claims. (Cl. 112—106.)



1. A feeding mechanism embodying a hopper provided with spaced peripheral outlets for the articles contained therein, a chute cooperatively associated with said hopper, means for intermittently rotating said hopper to sequentially bring said outlets to delivery position with relation to said chute whereby articles disposed in a predetermined position within said outlets will enter said chute, means actuatable for releasably retaining within said outlets those articles which are not in such predeter-

mined delivery position, and mechanically actuated means timed to enter each of said outlets when said hopper is at rest to clear the same of obstructions.

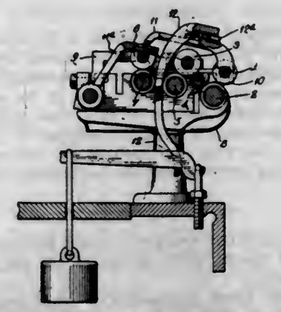


1,696,550. MACHINE FOR DRILLING, TAPPING, AND THE LIKE. PETER MEYER, Newark, N. J. Filed Apr. 7, 1927. Serial No. 181,636. 1 Claim. (Cl. 10—128.)

A machine of the character described comprising a reciprocative tool carrier, means to reciprocate the carrier, spaced spindles for tools supported by the carrier, means to rotate the spindles in opposite directions in accordance with the reciprocations of the carrier, a resilient presser associated with each spindle, the pressers including a support adjustably carried by the carrier, a bushing on the support, a rod slidable in the bushing, a spring operative with the rod to normally press the latter toward the work, and means to limit movement of the presser rods toward the work, the bushings being adjustably carried by the supports, the presser rods having stops opposing the springs, the springs opposing the bushings.

1,696,551. BAG HOLDER. GEORGE W. MORDEN and MARTIN WEBER, Los Angeles, Calif. Filed Jan. 9, 1925. Serial No. 1,409. 1 Claim. (Cl. 211—57.)

A bag holder comprising a base, an arm having one end adapted to be connected to the base and the other end to be spaced from the base, means for attachably connecting the arm and base including a wedge shaped head on the arm and ears on the base to receive and hold the head, a socket in the base, and a pin permanently carried by the end of the arm spaced from the base to extend from the

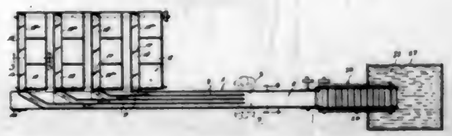


arm into the socket in the base, the pin being in the form of a nail, the head of the nail being permanently connected to the arm and the point of the nail extending into the base.

1,696,552. CARPENTER'S PLANE. HANS L. OSC, New York, N. Y. Filed Jan. 26, 1927. Serial No. 163,687. 5 Claims. (Cl. 145—5.)

1. In a device of the class described, the combination with a frame having a supporting surface, a cutting blade secured to said frame with its cutting edge projecting from the edge of said frame to cut surfaces extending at an angle to the supporting surface of said frame, there being a pocket in said frame disposed adjacent to the cutting blade, and a deflector plate having an upper surface inclining upwardly from the supporting surface to deflect the chips or shavings upwardly, the frame having a deflecting lip with its outer surface curving away from the cutting blade to form one wall of said pocket and serving to deflect the chips or shavings away from said blade.

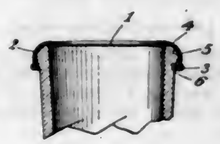
1,696,553. DRAFTING SYSTEM. HENRY A. OWEN, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Nov. 26, 1926. Serial No. 150,681. 6 Claims. (Cl. 19—130.)



1. In a drafting roll system for roving, the combination of front and back pairs of rolls operating under pressure whereby they are non-slipping in relation to the roving, and a group of intermediate rolls two of which are positively-driven rolls and a third of which rests in the crotch

of the other two being driven by them, one of said positively-driven intermediate rolls being of relatively small diameter, as compared to said front and back rolls, and located close to said front rolls whereby its nip line is spaced less than the staple length from the nip line of said front rolls, the intermediate top roll being adapted to permit the roving to pull through beneath it under the draft exerted by said front rolls.

---

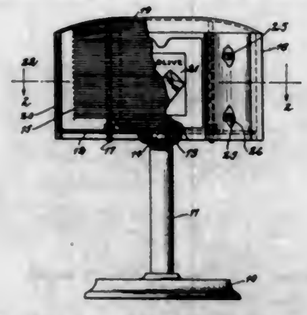


1,696,554. SIZING APPARATUS FOR FRUIT, MELONS, VEGETABLES, AND THE LIKE. ALBERT W. PHELPS, Heber, Calif. Filed Oct. 4, 1926. Serial No. 139,278. 5 Claims. (Cl. 209—75.)

1. In an apparatus for sizing fruit or melons, the combination of a hand-sorting table with conveyor means for advancing the fruit, said table having rails extending part of the length of the conveying means from its delivery end toward its receiving end, and dividing the same into a plurality of open runways adapted to receive the fruit or melons of different grades moved about on the same by the hands of operators located beside the table, and a plurality of laterally extending mechanical sizing tables corresponding respectively to the different runways and receiving the fruit or melons therefrom, each of said lateral sizing tables having a belt for advancing the fruit, bins for the different sizes of fruit alongside of the lateral sorting tables, and gauge devices for sorting the fruit of different sizes into the bins.

---

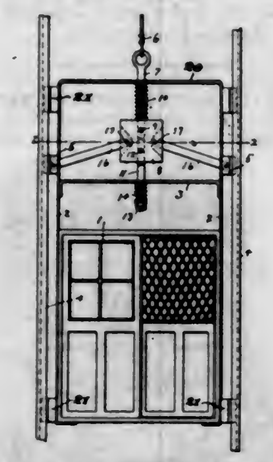
1,696,555. CLOSURE AND METHOD OF SEALING. ABRAHAM PODEL, Long Island City, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Mar. 18, 1925. Serial No. 16,274. 13 Claims. (Cl. 215—38.)



1. As an article of manufacture a closure cap comprising a cover portion; a skirt of curved cross section adapted to cooperate with a curved zone contiguous to the mouth of a container; and a wire edge at the extremity of said skirt, the lower portion of said skirt being adapted to be interlocked with a suitable container by mere bodily movement of the wire edge radially of the cap and the wire edge being cut at intervals to facilitate such radial movement.

---

1,696,556. NAPKIN STAND. FRED SCHOFER, Bronx, N. Y. Filed Apr. 21, 1927. Serial No. 185,497. 4 Claims. (Cl. 312—61.)



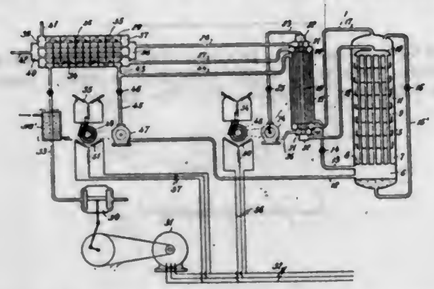
1. A napkin stand comprising a plate supporting a stack of napkins thereon, a means for supporting said plate, a hood having a dome-shaped top adapted to rest upon the stack of napkins to hold the same down by its weight and to be gradually lowered with the diminishing size of the napkin stack during the use of the napkins, said top having a circular, centrally located opening allowing the ready removal of the napkins, and a plurality of depending frames formed with said hood, means for

guiding said hood during the gradual lowering of the same, and a means for permitting the ready rotation of the hood and plate.

---

1,696,557. SAFETY ELEVATOR. LEON A. TOMLIN, Baltimore, Md. Filed Apr. 28, 1925. Serial No. 26,325. 1 Claim. (Cl. 187—85.)

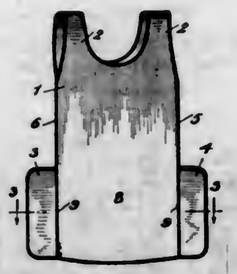
The combination of an elevator, a frame secured to the elevator, guide rails on each side of said elevator, guide shoes rigidly secured to the upper and lower ends of said frame, a rod projecting through the top of said frame, a cable having one end secured to the upper end of said rod, a block into which the lower end of said rod is secured, a coiled spring between the upper cross piece of the frame and said block, a second rod having its upper end secured to said block and provided with a head on its lower end, a second cross piece secured to said frame between said first named cross piece and the elevator, a coiled spring surrounding the last named rod between the said head and said second cross piece, rods projecting from opposite sides of said block and having their outer ends projecting through the sides of said frame, and a brake shoe pivoted to the end of each of said last named rods and projecting into the guide rails.



---

1,696,558. REFRIGERATION. CLAUDE C. VAN NUYS, Cranford, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 15,486. 3 Claims. (Cl. 62—175.)

1. A method of refrigeration, which comprises compressing a gas with expenditure of electrical power from

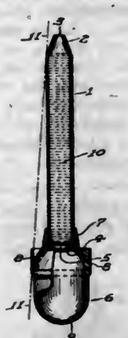


an external source, cooling and expanding the gas to recover energy therefrom, thereby further reducing the temperature of the gas, converting the recovered energy into electrical power having the same characteristics as the power which is utilized in compressing the gas, supplement-

ing the external power with the power thus developed, and regulating the rate and degree of expansion by adjusting the conversion to produce the desired electrical current while expansion is conducted at maximum efficiency under given conditions of pressure and volume of the gas.

---

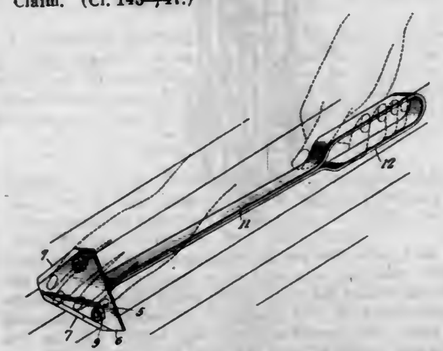
1,696,559. CHILD'S GARMENT. DAISY S. WARD, Brooklyn, N. Y. Filed Jan. 18, 1928. Serial No. 247,608. 1 Claim. (Cl. 2—111.)



A child's undergarment provided with means for attaching to and supporting a diaper, said means consisting of several tabs of substantial width secured to the body of the garment and extending out laterally from the sides thereof and permitting the diaper to be attached at any desired point on said tabs and thus held in a higher or lower position of adjustment on the body according to the size of the child, the lower edges of said tabs beginning near the lower edge of the garment body, and lines of stitching located between the tabs and the body of the garment to permit the severance of said tabs from said body without interrupting the continuity of the garment body.

---

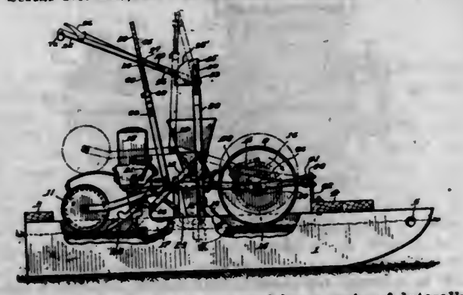
1,696,560. SYRINGE AND MEDICINE DROPPER. WALTER F. WARE, Haddonfield, N. J., assignor to The Walter F. Ware Company, a Corporation of New Jersey. Filed Aug. 12, 1927. Serial No. 212,418. 5 Claims. (Cl. 128—233.)



1. In a device of the character described, the combination of a hollow glass barrel provided with a glass nozzle at one end and an integral glass wall at the other end, and a resilient bulb tightly fitting around the outer surface of said barrel at the end thereof which is provided with said wall, said wall being provided with an aperture therethrough located substantially coaxial with said barrel and of so small a size that a liquid in said barrel will not flow through said aperture after said bulb is fully expanded and the device is thereafter inverted to bring the nozzle end of the barrel uppermost, the cubical capacity of said bulb, when fully expanded, being slightly less than that of said barrel and operative, when expanding, to

draw liquid into said barrel through said nozzle and when being compressed, to eject liquid from said barrel through said nozzle.

---

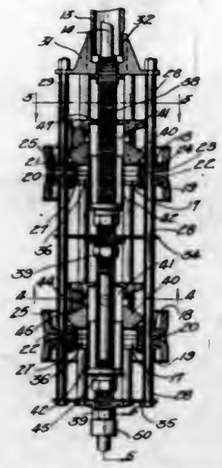


1,696,561. SCRAPER. SAMUEL ALEXANDER, New York, N. Y. Filed June 30, 1928. Serial No. 289,353. 1 Claim. (Cl. 145—47.)

A scraping device comprising a scraping blade having two cutting edges inclined towards each other, a handle formed from a flat strip of metal bent upon itself and looped at one end to form a hand grip, the free ends of the strip being bent outwardly and twisted, and means for attaching the blade to the arms so that the plane of the blade will be inclined to the axis of the handle with the plane of the metal strips forming the handle bisecting the angle between the cutting edges.

---

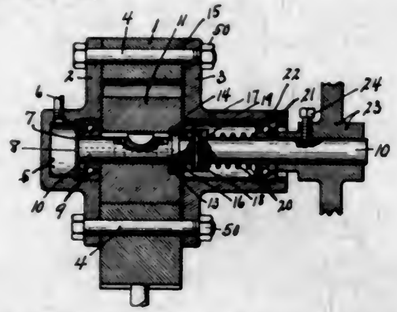
1,696,562. SEEDING IMPLEMENT. CHARLES J. ALLEN, Moorestown, N. J., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed Nov. 4, 1926. Serial No. 146,127. 3 Claims. (Cl. 97—63.)



1. A seeding implement comprising a pair of laterally spaced parallel interconnected runners forming a sled

adapted to straddle a hill, a plurality of seeders disposed between the runners in parallel relation, means connecting the forward end of each seeder to the sled and forming a horizontally disposed axis about which the seeders can independently turn, a frame secured to the runners and extending across the seeders, an operating lever carried by said frame and rotatable on a horizontal axis, a yoke pivotally connected adjacent the rear end of each seeder, and means connecting each of said yokes with said lever whereby movement of said lever is operative to raise and lower all of said seeders simultaneously with respect to the runners.

---



1,696,563. PUMP PLUNGER. DAVIS BARNARD, Apple Valley, Calif. Filed Feb. 14, 1923, Serial No. 618,918. Renewed Mar. 24, 1928. 15 Claims. (Cl. 103—225.)

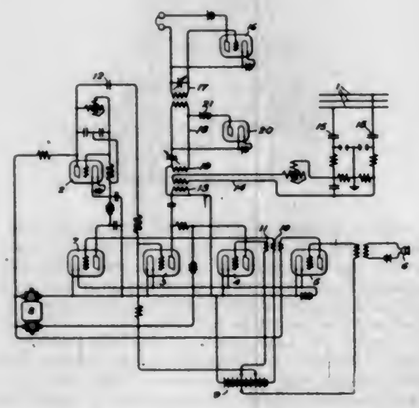
1. In a pump plunger, the combination of: a valve seat; a valve co-acting with said valve seat; an upwardly disposed cup gasket for scraping the pump barrel wall on the upward stroke of said plungeer; a downwardly disposed cup gasket for scraping the pump barrel wall on the downward stroke of said plunger; means for rigidly securing said cups together adjacent said valve seat, both of said cup gaskets being in communication with the valve seat opening when the valve is in open position; and means for rotating said valve on each downward stroke of said plunger.

---

1,696,564. COMPRESSOR. EUGENE L. BARNES, Watertown, N. Y., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed May 22, 1925. Serial No. 32,174. 2 Claims. (Cl. 286—11.)

2. In a rotary compressor, the combination with a compressor casing having a lateral bearing housing and a shouldered rotary shaft in said casing with a bearing in said housing, of a flexible diaphragm around the shaft between shoulder and bearing, a collar on the shaft between diaphragm and bearing, and spring means between said bearing and collar urging the latter toward said diaphragm and shoulder.

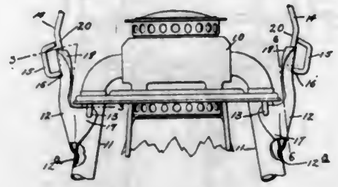
---



1,696,565. ACOUSTIC DIAPHRAGM. CHARLES BLIEBERGER, New York, N. Y. Filed Sept. 4, 1926. Serial No. 133,723. 10 Claims. (Cl. 181—32.)

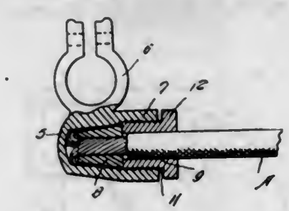
1. An acoustic diaphragm having two zones of wedge-shaped cross section extending across the disk, and a zone of approximately uniform thickness and uniform width extending chordally across the disk between the wedge-shaped zones.

---



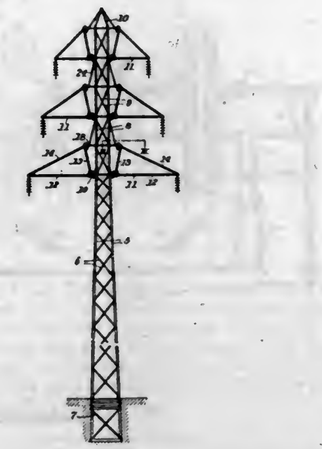
1,696,566. HIGH-FREQUENCY DUPLEX SIGNALING SYSTEM. EMMETT F. CARTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 25, 1924. Serial No. 752,243. 12 Claims. (Cl. 179—15.)

1. The combination in a high frequency signaling system of a signaling circuit having normally inoperative transmitting apparatus including electron discharge devices and receiving apparatus simultaneously coupled thereto, said receiving apparatus being tuned to respond to currents of the frequency supplied to the signaling circuit by the transmitting apparatus, and the transmitting apparatus being so arranged that it supplies high frequency current to the signaling circuit independently of the cathode heating current of any of said discharge devices and substantially simultaneously with the application of signalling potential thereto, and means operating independently of signaling potentials for protecting said receiving apparatus from injury due to the current supplied from said transmitting apparatus.



1,696,567. BAIL CONSTRUCTION FOR LANTERNS AND THE LIKE. ROBERT A. CURRIE, Syracuse, N. Y., assignor to R. E. Dietz Company, New York, N. Y. Filed Oct. 18, 1926. Serial No. 142,270. 7 Claims. (Cl. 240—52.)

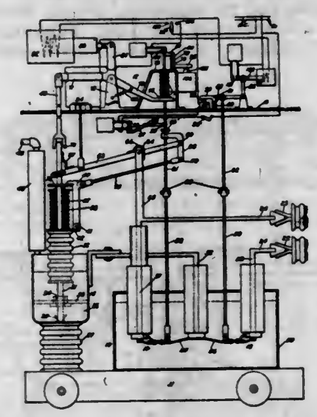
1. The combination of a bail and fixed bail ears to which said bail is pivotally connected, said ears consisting of trough-like sheet metal pieces having their side portions extending inwardly and holes in which the bail is pivoted, said side portions of the ears extending upwardly above the bail pivots and having upper parts which are rigid with said side portions and extend transversely inward substantially parallel with each other at opposite sides of the legs of the bail, whereby said upper parts are adapted to engage opposite sides of the legs of the bail and positively hold the bail from pivotal movement on the ears.



---

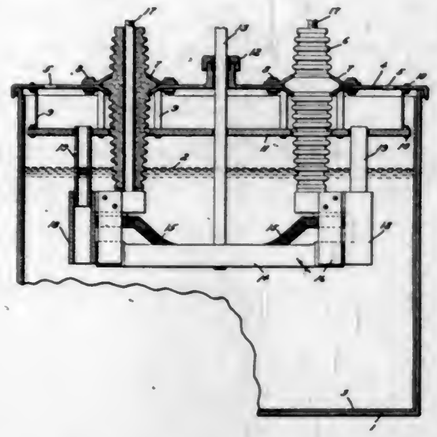
1,696,568. BATTERY TERMINAL. FRED F. FOGEL, Hawarden, Iowa. Filed July 6, 1926. Serial No. 120,727. 1 Claim. (Cl. 173—259.)

A battery terminal comprising a post engaging clamp and a body associated therewith provided with a socket having inwardly tapered walls, the inner end of said socket being closed and its outer end being internally screw-threaded, an externally tapered sleeve loosely disposed in said socket and having a single longitudinal split whereby it is made resilient, an electrical conductor formed of a series of strands disposed through the sleeve and having the free ends of the strands reversely bent over the inner edge of the sleeve and disposed to lie for a substantial distance between and to be engaged by the tapered surfaces of the sleeve and socket, and a second sleeve disposed over the conductor and having external screw-threads engaging with the screw-threads of the socket, the inner edge of the last named sleeve being adapted to engage the outer edge of the split sleeve to force the latter inwardly, whereby to bind the periphery of the conductor and to grip the free ends of the strands between the periphery of the split sleeve and the inner circumferential wall of the socket.



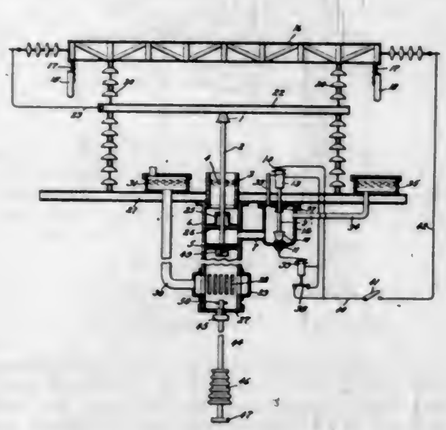
1,696,569. TRANSMISSION TOWER. HAROLD O. HILL, Aspinwall, Pa., assignor to Riter-Conley Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1926. Serial No. 156,422. 7 Claims. (Cl. 189—33.)

1. A transmission tower having a revoluble cross-arm pivotally mounted on the tower for movement in the direction of the line when subjected to unbalanced longitudinal loading, said cross-arm having its axis of rotation inclined with respect to the vertical axis of the tower.



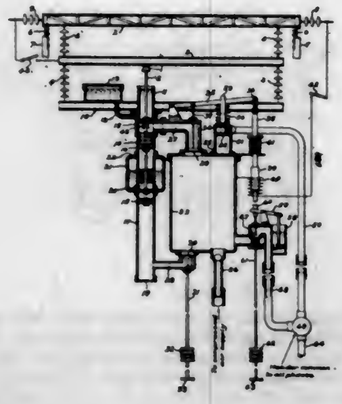
---

1,696,570. OIL SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 30, 1922. Serial No. 548,155. 4 Claims. (Cl. 175—375.)



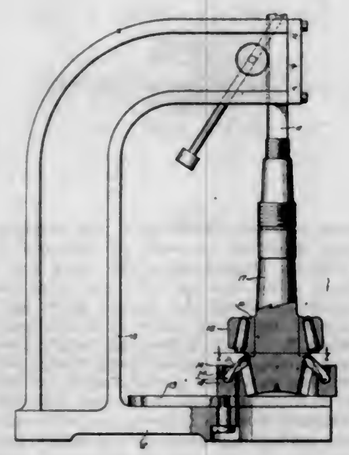
4. An electric switch comprising a pair of cooperating circuit opening contacts, a pair of cooperating circuit closing contacts arranged in series with said first pair, a third pair of cooperating auxiliary circuit opening contacts arranged in shunt with said first pair, a spring for accelerating the opening movement of the auxiliary contacts, a latch for retaining the auxiliary contacts in closed circuit position, switch operating means comprising a member arranged to separate the opening contacts, means responsive to a predetermined movement of said operating means for releasing said latch, said operating means being subsequently operable to cause the opening of the closing contacts.

1,696,571. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 6, 1923. Serial No. 611,153. 2 Claims. (Cl. 200—150.)



1. An electric switch comprising a closed tank containing an insulating liquid the level of which is spaced below the top of the tank, switch contacts adapted to be separated beneath the surface of said liquid, a baffle arranged above the level of the liquid and spaced below the top of the tank, a separating chamber arranged above the tank, and means for conducting gas and liquid from the vicinity of the contacts through the baffle and space above the liquid to the separating chamber.

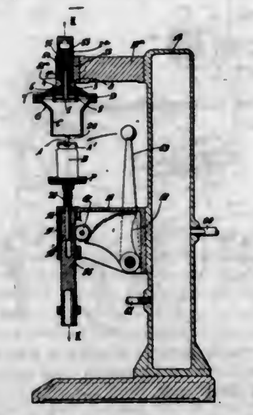
1,696,572. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 2, 1924. Serial No. 684,003. 7 Claims. (Cl. 200—150.)



1. A high potential switch comprising an elevated supporting structure, stationary and movable cooperating contacts, fluid pressure actuated operating means therefor, flexible insulating means connected at its lower end with the movable contact and the operating means for freely suspending the same from said structure and means secured to the flexible insulating means at a point intermediate its ends for supporting the stationary contact.

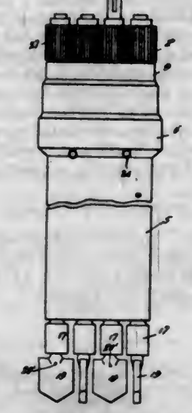
1,696,573. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 27, 1924. Serial No. 716,271. 5 Claims. (Cl. 200—82.)

1. A multiphase switch comprising cooperating stationary and movable contacts, a separate fluid pressure operated contact actuating mechanism and a separate fluid pressure reservoir for each phase, a header connecting the mechanisms of the several phases, means for varying the pressure in said header and means responsive to pressure change therein for admitting pressure from each of the several reservoirs to the corresponding contact actuating mechanism.

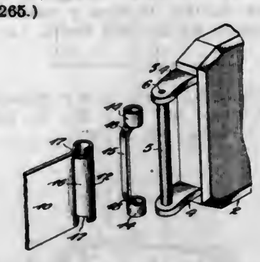


1,696,574. TOOL. JAMES W. HOWELL, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 17, 1926. Serial No. 148,858. 5 Claims. (Cl. 29—88.2.)

1. A tool comprising a body member having a circular groove in its upper face, there being an inwardly extending circumferential flange contiguous one of upper edges of said groove, and fingers within said groove retained therein by said flange.

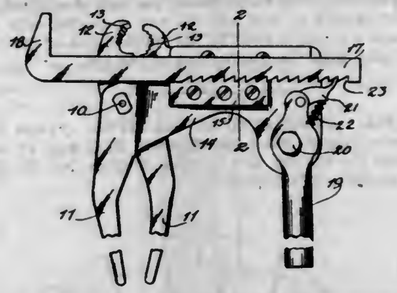


1,696,575. SEALING MACHINE. JOSEPH H. HUXLEY, Chelsea, and WILLIAM A. STEPHENS, Shepherds Bush, London, England. Filed Oct. 3, 1928, Serial No. 309,982, and in Great Britain May 5, 1927. 7 Claims. (Cl. 226—82.)



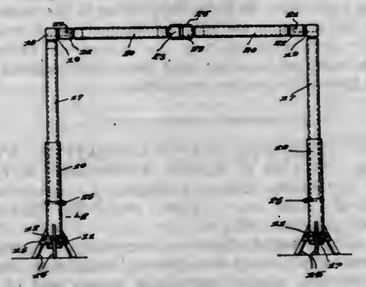
1. In a vacuum sealing machine comprising a sealing chest and a chamber separated therefrom by a flexible member carrying a presser member, separate valves for controlling the pressures in the chamber and in the chest, means for supplying containers to the chest, a gear means operating said supply means, and adjustable actuating means for said valves carried by said gear means.

1,696,576. STONE-CHANNELING MACHINE. CLYDE W. JONES, Bloomington, Ind. Filed July 26, 1927. Serial No. 208,626. 2 Claims. (Cl. 262—22.)



1. An apparatus of the class described comprising a casing, a plurality of shafts journaled in the casing longitudinally thereof and in spaced relation to each other, the lower ends of the shafts projecting beyond the lower end of the casing, said lower ends of the shafts being formed with longitudinal bores merging into transverse openings inwardly of the casing, the lower portions of the bores forming sockets, tools having shanks fitting into the sockets, said shanks being hollow and merging into lateral openings exteriorly of the sockets, pipes extending longitudinally of the casing between the shafts, and means in the casing communicating each pipe with the transverse openings in the shafts next adjacent, so that each pipe functions as a common supply for a plurality of the shafts and tools.

1,696,577. CONNECTER FOR WRIST-WATCH STRAP, BAND, OR BRACELET. CHARLES H. KESTENMAN, Providence, R. I., assignor to Kestenman Bros. Mfg. Co., Providence, R. I., a Corporation of Rhode Island. Filed Jan. 14, 1928. Serial No. 246,787. 6 Claims. (Cl. 24—265.)

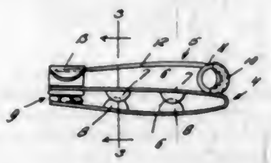


6. The combination of a wrist watch having a pair of lugs to receive a pin, a bracelet wrist band having a loop of a width less than the distance between said lugs, a pin extending through said loop and lugs to hold the loop in position and an end piece having means for mounting the same on said band and a portion positioned between said band loop and one of said lugs to limit lateral movement of the loop between said lugs.

1,696,578. TOOL FOR ASSEMBLING CHAIN LINKS. LEO W. LIPPERT, Chippewa Falls, Wis. Filed Jan. 5, 1928. Serial No. 244,685. 4 Claims. (Cl. 29—84.)

1. In combination, a pair of tongs having pivotally connected jaws, one of said jaws having a guide extension projecting from the jaw in a plane at right angles to the pivotal axis, an arm carried by said guide extension to move thereslong, and a third jaw carried by said arm to move across the end of an object gripped by said tongs.

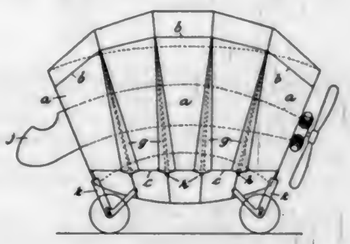
1,696,579. GARMENT HANGER CONTINUOUS SUPPORT. WILLIAM E. MILLER, Yonkers, N. Y. Filed Jan. 31, 1928. Serial No. 250,839. 3 Claims. (Cl. 211—178.)



1. A device of the character described embodying tubular standards, telescopic members associated with said

standards, means for locking said members in extended position with respect to said standards, a pair of cross-pieces hingedly mounted with respect to said telescopic members and adapted to be swung to end abutting horizontal position and means for locking the free ends of said cross-pieces together to form a continuous alined horizontally disposed top for said device.

---

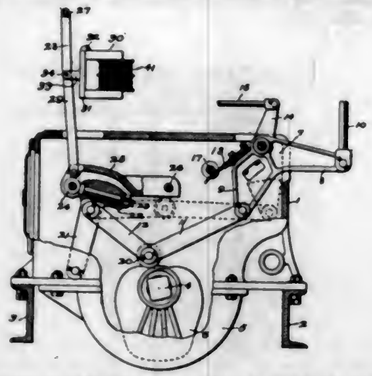


1,696,580. LINGERIE CLASP. LON P. MORGAN and MAE C. MORGAN, Chicago, Ill. Filed Apr. 19, 1928. Serial No. 271,246. 1 Claim. (Cl. 24—85.)

As a new product of manufacture, a fastener of the class described, comprising a clasp formed from a strip of resilient metal bent upon itself to provide spaced arms adapted to normally spring apart, the intermediate portions of the arms having retaining tongues struck out therefrom and into cooperative relationship, a snap fastener carried by the free end portions of said arms, a safety pin comprising a pin portion and retention coil, said coil being disposed adjacent one end of said clasp, a bracket carried by said one end and connected with said coil, and a keeper carried by the opposite end of the clasp cooperable with the pointed end of the pin.

---

1,696,581. AERONAUTICAL MACHINE. JAMES ROBERTSON PORTER, Wantage, England. Filed Aug. 16, 1927. Serial No. 213,239, and in Great Britain Dec. 30, 1926. 10 Claims. (Cl. 244—21.)



1. In an aeronautical machine of the type provided with a body having convex sides the combination of oppositely extending parachute surfaces conforming in the closed position to the shape of the sides of the body part, resilient extensible devices connecting the oppositely extending parachute surfaces together, and means for securing said resilient extensible devices in position.

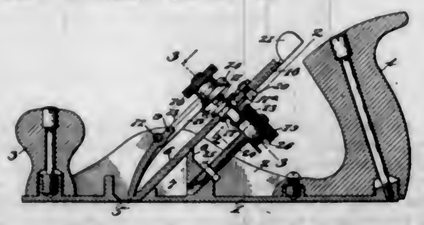
---

1,696,582. ELECTRIC-SWITCH-OPERATING MECHANISM. WILLIAM K. RANKIN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 1, 1923. Serial No. 655,134. 3 Claims. (Cl. 200—89.)

1. An electric switch operating mechanism comprising a toggle mechanism, means for operating said mechanism, a switch actuating member connected to one end of said mechanism, a movable member connected to the opposite end of said mechanism for transmitting the end thrust thereof, a movable abutment for said movable member, said member and said abutment having cooperating faces disposed to cause the abutment to be displaced out of the path

of movement of said movable member, a toggle for preventing displacement of said abutment, and an electromagnet for controlling said toggle.

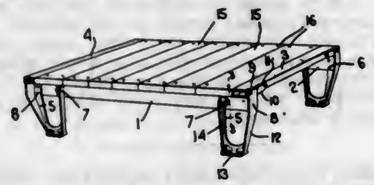
---



1,696,583. COUPLING FOR ELECTRIC CIRCUITS. HOWARD R. SARGENT and FRANK C. DE REAMER, Bridgeport, Conn., assignors to General Electric Company, a Corporation of New York. Filed May 10, 1927. Serial No. 190,323. 6 Claims. (Cl. 173—338.)

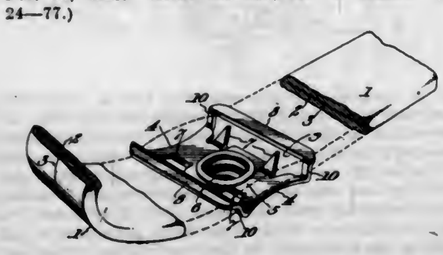
1. In combination with a socket, a plug, means in the socket for joining a wire with the plug through the socket, said means consisting of a lever in the form of a spring pivoted in the socket, one arm of the lever serving to connect with the wire, the other end of the lever serving to connect with the plug and a cap for the socket for clamping the wire against the spring and for producing a bias in the spring about the pivot to maintain the said other arm of the lever in proper position in the socket whereby the plug may be readily inserted and effective connection insured in the socket.

---



1,696,584. PLANE. WILBERT G. SCHWER, Sandusky, Ohio, assignor to Sandusky Tool Corporation, Sandusky, Ohio, a Corporation of Ohio. Filed Oct. 14, 1925. Serial No. 62,404. 11 Claims. (Cl. 145—5.)

1. In a plane, in combination, a plane body, a plane iron, the body having seats for the support of the iron, and means for securing the iron in position comprising a cap iron, the body having a fulcrum bearing for the cap iron, a stud having a flange and a fetaining nut mounted on the stud and also having a flange, one of said flanges bearing against the cap iron above said fulcrum bearing and the other bearing against the plane iron and the cap iron engaging the plane iron below said fulcrum bearing.



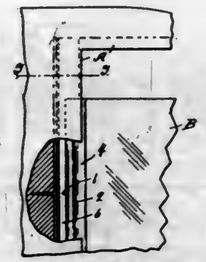
1,696,585. PLATFORM FOR USE WITH ELEVATING TRUCKS. FREDERICK J. SHEPARD, Jr., Auburndale, and NATHANIEL WARSHAW, Boston, Mass., assignors to Lewis-Shepard Company, Watertown, Mass., a Corporation of Massachusetts. Filed Feb. 8, 1926. Serial No. 86,821. 5 Claims. (Cl. 248—41.)

5. A platform comprising a frame having side girders of angle iron with the horizontal members thereof extending respectively outwardly toward or to the edges of the platform, transverse end girders superimposed upon the ends of said side girders, integral U-shaped metallic legs each comprising a skeletonized web secured to the outside of the vertical member of a side girder adjacent the end thereof and at a distance therefrom and provided with a marginal reenforcing flange having an upper portion overlying the end of said side girder and secured to the end girder and a downwardly tapering portion inclined rearwardly with respect to the adjacent end of the platform and a portion providing a foot for the leg.

---

1,696,586. FASTENER SLIDE. ERNEST D. SIMONS, Cheshire, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 29, 1928. Serial No. 257,973. 2 Claims. (Cl. 24—77.)

1. A fastener slide, having side and end bars, a center bar spaced from the end bars to provide roomy slots for the substantially flat passage of a strap on which the slide is mounted, a fastener element on the center bar, and a plurality of upstanding prongs projecting from opposite sides of the center bar and in opposite directions and toward the opposite ends of the slide, so as to engage the strap whichever way the slide may be applied to the strap.



---

1,696,587. STOKER. WILLIAM A. YARWOOD, Buffalo, N. Y. Filed Sept. 14, 1926. Serial No. 135,336. 3 Claims. (Cl. 110—115.)

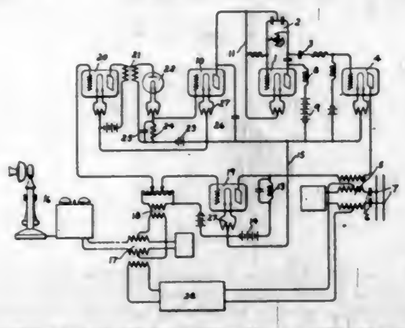
1. A stoker comprising a delivery chamber having an inlet and an outlet for granular fuel, and a paddle wheel rotatable in said chamber and having a longitudinal blade adapted to throw the fuel stright ahead and two oblique blades which are arranged in the same plane and on opposite sides of the axis of rotation and are adapted to throw the fuel obliquely in opposite directions.

1,696,588. SLIDING WINDOW-GLASS SUPPORT. EDWIN W. M. BAILEY, Amesbury, Mass. Filed Apr. 3, 1924. Serial No. 703,934. 15 Claims. (Cl. 296—445.)

1. In combination with a slidable window glass plate and a window casing having oppositely disposed guide ways mounted therein, an edge molding for said plate consisting of a groove shaped strip of resilient sheet metal arranged to embrace the edge portion of the plate throughout its length and to provide oppositely disposed clamping members and an intermediate resilient portion for holding said members engaged with the sides of the plate, said resilient portion comprising a cylindrically shaped portion at the middle of the strip and an inwardly curved portion, forming oppositely disposed transversely concave external grooves between said cylindrically shaped portion and said clamping members, said guide ways having correspondingly formed faces slidably engaged with the surfaces of said resilient portion to guide the sheet in its sliding movements.

---

1,696,589. WINDOW-GLASS CHANNEL. EDWIN W. M. BAILEY, Amesbury, Mass. Filed July 7, 1927. Serial No. 203,943. 6 Claims. (Cl. 296—44.5.)

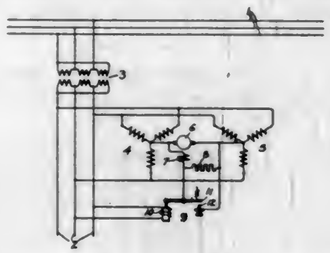


1. In combination with a casing, a sheet metal window glass channel composed of a base and two sides and having one or more tongues cut from each side and bent outward in position to project laterally therefrom adjacent the base and a guideway secured to the casing having oppositely disposed grooves arranged to receive said tongues.

---

1,696,590. SIGNALING SYSTEM. LESTER F. BIRD, Irvington, N. J., assignor to General Electric Company, a Corporation of New York. Filed Oct. 21, 1927. Serial No. 227,821. 4 Claims. (Cl. 179—171.)

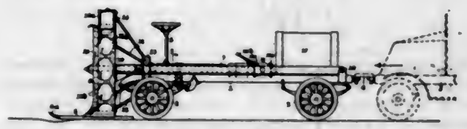
1. In a signaling system, an electron discharge oscillator, an electron discharge device connected in the anode-



cathode circuit of said oscillator and having impedance sufficiently high normally to prevent the production of oscillations by said oscillator, a source of signal current, means for rectifying said signal current and means for

supplying a potential resulting from rectification of said signaling currents to said discharge device to reduce the impedance thereof and thereby to control the operation of said oscillator.

---

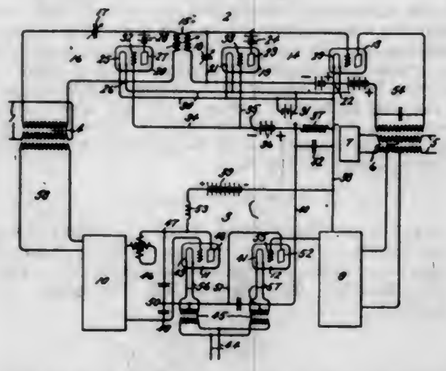


1,696,591. SYSTEM OF DISTRIBUTION. LOUIS F. BLUME, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 29, 1927. Serial No. 202,450. 7 Claims. (Cl. 172—246.)

1. In combination, an alternating current circuit, inductive means comprising a plurality of polyphase magnetic core-type inductive devices having interconnected electrical neutrals and connected in parallel with said circuit, an independent source of electrical energy for controlling the degree of saturation of said inductive means, and means for controlling an electrical characteristic of said independent source in accordance with an electrical characteristic of said alternating current circuit.

---

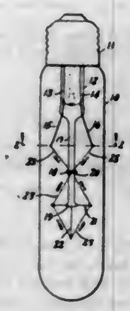
1,696,592. SNOW-REMOVING MACHINE. THOMAS CARLESS, Haledon, N. J. Filed Aug. 19, 1926. Serial No. 130,193. 5 Claims. (Cl. 37—43.)



1. A machine of the class described including a portable supporting means, an ejector rotatable on a fore and aft axis therein, a casing open at the front and housing the ejector and having a lateral delivery opening, and an inverted trough-like deflector exterior of the casing including a deflecting wall sloping gradually downwardly from approximately the top of said opening, said deflector having its lateral edges normally resting on the casing.

4. A plowing machine comprising a dirigible vehicle having front and rear wheels, a structure pivotally and freely movable up and down with respect to the vehicle and including, with a portion ahead of the vehicle having runner means to travel on the ground, a relatively long shank rigidly projecting rearward from said portion and pivoted to the vehicle on a transverse substantially horizontal axis at the rear part of the vehicle, said vehicle having forward means to guide said structure up and down, and ejector means movable in said structure ahead of the vehicle, said portion and runner means together forming a plow proper and such plow proper being close to the front wheels of the vehicle and having its front-to-rear dimension a relatively small extent of the front-to-rear dimension of the machine.

---

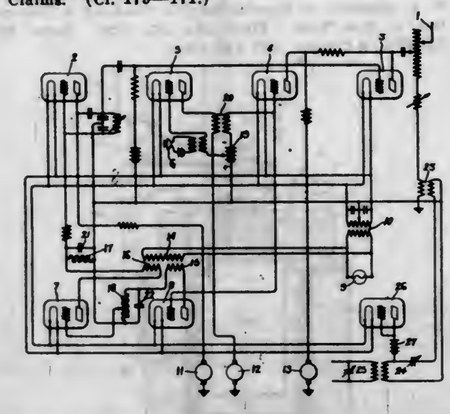


1,696,593. HIGH-FREQUENCY SIGNALING SYSTEM. EMMETT F. CARTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 14, 1927. Serial No. 161,189. 16 Claims. (Cl. 179—15.)

1. In a signaling system employing both a transmitting circuit and a receiving circuit, means for protecting said receiving circuit from said transmitting circuit, said means comprising an electron discharge device having an anode, a cathode and a control element, said anode being associated with one side of said receiving circuit, said cathode being associated with the other side of said receiving circuit and a source of potential which is variable responsively to the functioning of said transmitting circuit, said control element being associated with said source of potential.

---

1,696,594. ELECTRIC INCANDESCENT LAMP. PAUL O. CARTUN, Cleveland Heights, Ohio, assignor to General Electric Company, a Corporation of New York. Filed June 9, 1925. Serial No. 36,053. 2 Claims. (Cl. 176—39.)



1. In an electric incandescent lamp comprising a base and a bulb, the combination of a stem sealed into said bulb

at the base end thereof, a rod extending longitudinally of said bulb and united to the said stem, a pair of leading-in wires extending through said stem and having their ends located adjacent to the junction between said stem and rod, a pair of support wires extending in opposite directions from said rod at an intermediate point thereof and in a plane substantially normal to that of said leading-in wires, another support wire extending from the end of said rod longitudinally thereof, and a filament draped so as to have substantially straight portions extending from each of the ends of said leading-in wires through the ends of the first-mentioned support wires, and having a portion also engaged by said longitudinally extending support wire.

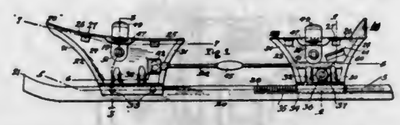
---

1,696,595. HIGH-FREQUENCY DUPLEX SIGNALING SYSTEM. EMMETT F. CARTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 27, 1925. Serial No. 5,148. 8 Claims. (Cl. 179—171.)

1. In a transmitting apparatus for a high frequency signaling system comprising an electron discharge oscillator, a control device for said oscillator comprising means for normally providing a negative bias on the grid of said oscillator sufficient to prevent the production of oscillations and means responsive to an audio frequency signaling current for reducing the negative bias to a value at which oscillations will be produced, the bias potential being sufficiently smoothed substantially to prevent modulation by voice currents of the oscillations produced.

---

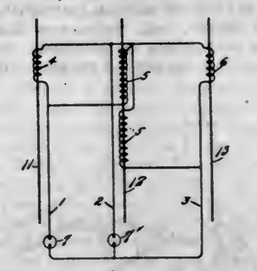
1,696,596. RESISTANCE UNIT. CHRISTIAN DANTSIZEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 5, 1926. Serial No. 99,778. 4 Claims. (Cl. 201—76.)



1. A method of constructing a resistance unit which comprises etching the surface of a rod of vitreous material, sealing conductors into the ends of the rod, applying a conducting coating to a portion of said conductors and to the ends of said rod, and drawing one or more conducting lines on the roughened vitreous surface to electrically connect said conducting coatings.

---

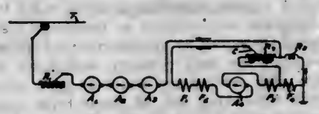
1,696,597. ICE SKATE. ALAN R. FERGUSSON, Buffalo, N. Y., assignor to A. R. Fergusson Mfg. Corp., Buffalo, N. Y., a Corporation of New York. Filed Jan. 18, 1927. Serial No. 161,920. 14 Claims. (Cl. 208—167.)



1. An ice skate comprising a runner, shoe supporting means including L-shaped members having vertical parts engaging their lower ends with opposite sides of the runner and horizontal parts projecting laterally from the upper ends of said vertical parts, said horizontal parts being provided at their outer ends with downwardly pro-

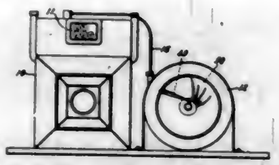
jecting guide ears, and means for clamping the shoe to said supporting means including clamping bars guided in said ears and provided at their outer ends with jaws adapted to engage opposite sides of the shoe, and adjusting means connecting said bars.

---



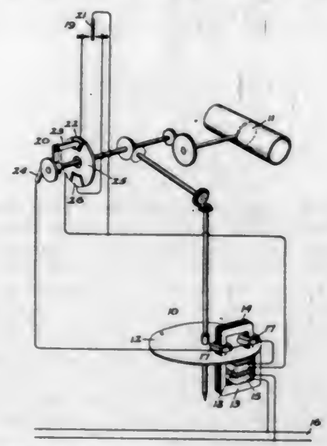
1,696,598. PROTECTIVE SYSTEM. ALAN STEWART FITZ GERALD, London, England, assignor to General Electric Company, a Corporation of New York. Filed Apr. 19, 1922, Serial No. 555,620, and in Great Britain Apr. 22, 1921. 5 Claims. (Cl. 175—294.)

1. In a protective arrangement for a three phase alternating current system, current transforming means in each of the three conductors of the system, a secondary circuit including the secondaries of the current transforming means in two of said conductors interconnected with the secondaries of the current transforming means in one of said conductors and the third conductor and arranged to tend to circulate a current in said circuit, a device connected to be responsive to the current in said circuit for protection against phase faults, and a device connected across said secondary circuit to be responsive to the difference in current between conductors of said system for protection against ground faults.



---

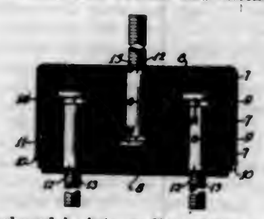
1,696,599. REGENERATIVE BRAKING. PETER W. FORSBERG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1925. Serial No. 66,620. 3 Claims. (Cl. 172—179.)



1. A regenerative braking system comprising a plurality of dynamo electric machines, a resistor connected so that one portion of the armatures of said machines and the said resistor form a braking circuit and another portion of the armatures of the machines and the field windings of all the machines and the said resistor form an excitation circuit, the said resistor having an appreciable inductance whereby sudden variations in the current in the braking circuit induce variations in the current in the exciting circuit in the opposite direction and in accordance with the rate of variation of the braking current.

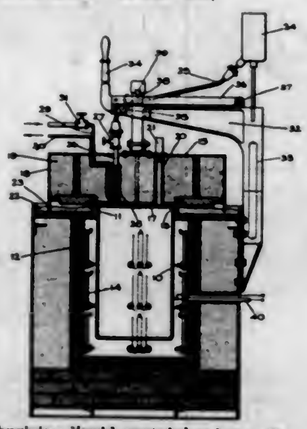
1,696,600. DEMAND-METER ATTACHMENT FOR FLUID METERS. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Feb. 11, 1925. Serial No. 8,553. 1 Claim. (Cl. 234—5.5.)

In a meter installation, an oscillating arm, a ratchet wheel and a mechanical driving connection between said arm and wheel comprising a ratchet lever and pawl for said ratchet wheel, a tube extending from the proximity of said arm to the proximity of said lever, a flexible rod extending through said tube adapted to be moved back and forth through said tube by the oscillations of said arm and a lost motion driving connection between said rod and ratchet lever.



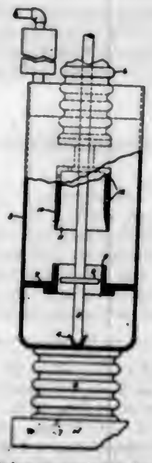
1,696,601. SYSTEM OF MOTOR CONTROL. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Sept. 13, 1926. Serial No. 134,993. 3 Claims. (Cl. 172—278.)

1. In combination, an electric induction motor having an induction disc armature, a magnetic field structure located on one side of said disc armature having a primary winding thereon connectible permanently to a relatively high voltage source of supply, a second winding on said field structure, a cooperating magnetic field structure located on the opposite side of said disc armature and having a polar winding thereon arranged to be included in a local circuit and supplied with current at relatively low voltage from said second winding by transformer action with said primary winding, the said primary and polar windings being provided for setting up fluxes in said cooperating magnetic field structures out of phase with each other which co-operate with said induction disc armature to effect rotation thereof, and controlling means for establishing and interrupting the local circuit for said polar winding to effect starting and stopping of said motor.



1,696,602. MOUNTING MEANS FOR VEHICLE ENGINES. DELMER S. HARDER and FRANK W. VROOMAN, Oakland, Calif., assignors to Durant Motor Co., Oakland, Calif., a Corporation of California. Filed Nov. 19, 1925. Serial No. 70,087. 4 Claims. (Cl. 180—64.)

1. Vibration absorbing means of the character described, comprising strata of rubber-like material alternating with sheets of rigid material, and vertical fastening members projecting from top and bottom and extending inwardly



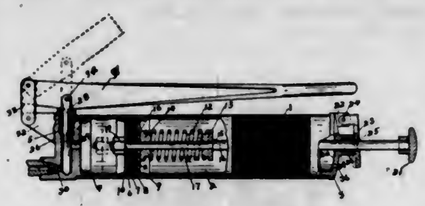
and being anchored in intermediate rigid sheets so as not to interfere with vertical movement of the rubber-like strata.

1,696,603. CARBURIZATION OF METALS. GEORGE W. HEBEL, Schenectady, and GERALD R. BROPHY, Niskayuna, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Aug. 26, 1926. Serial No. 131,772. 8 Claims. (Cl. 148—30.)

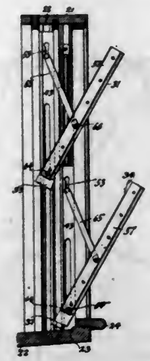
4. A carburizing liquid containing bone oil.

1,696,604. FLUID-BREAK SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Mar. 30, 1922, Serial No. 548,155. Divided and this application filed July 1, 1925. Serial No. 40,937. 6 Claims. (Cl. 200—150.)

1. A switch comprising a casing adapted to contain insulating liquid, a fixed contact mounted at one end of the casing, a contact rod mounted to slide in the opposite end of the casing and having an enlarged intermediate portion, and a partition in the casing having a cylindrical opening for receiving the enlarged portion of the contact rod.

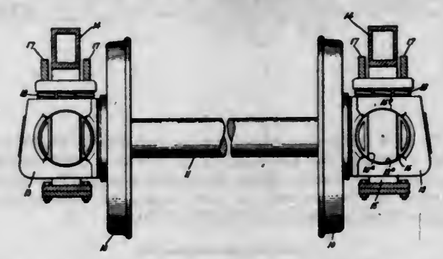


1,696,605. COMBINED RESISTOR AND FUSE. HERBERT P. HOLLNAGEL, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 6, 1926. Serial No. 79,683. 4 Claims. (Cl. 200—120.)



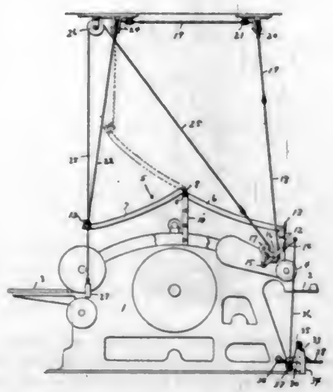
1. The combination of an electric fuse, spaced metallic vanes, and a reversely wound resistance coil connected in series with said fuse and having its convolutions distributed in the spaces between said vanes.

1,696,606. BOOSTER GREASE GUN AND METHOD OF GREASING BEARINGS. WALTER F. HUNDEMER, Alameda, Calif., assignor to Gat Gun Lubricating Corporation, Oakland, Calif., a Corporation of California. Filed June 1, 1925. Serial No. 33,998. 1 Claim. (Cl. 221—47.3.)



In combination, a cylinder adapted to contain grease and having a booster pump associated with the front end thereof, a head on the rear end of the cylinder and provided with a breathing aperture, a rod extending slidably through said head into the cylinder, a piston slidable on said rod and comprising a pair of flexible cups in back-to-back relation, an abutment on said rod, a coiled spring having its ends bearing respectively on said abutment and on the piston so as to urge the latter forwardly, and a locking means for the rod associated with the rear end of the cylinder, said locking means being arranged to allow the rod to be pushed forwardly but to resist rearward movement of the rod, and comprising a lever having one end pivoted to said head, extending transversely thereof, and provided with an aperture which receives the piston rod, a spring urging the free end of said lever rearwardly, and a cup on said head housing said last mentioned spring.

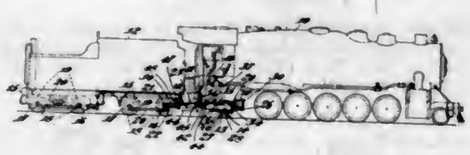
1,696,607. REVERSIBLE WINDOW. ROBERT E. HYBERT, Buffalo, N. Y., assignor of one-half to Edwin R. Dempsey, New York, N. Y. Filed Sept. 12, 1924. Serial No. 737,406. 9 Claims. (Cl. 20—49.)



1. A window comprising a frame having vertical stiles on its opposite sides, mounting bars arranged in front of the stiles of said frame and each provided on its lower end with a vertical sash guide slot and on its upper end with a brace guide slot having a narrow lower part and an enlarged upper end and a vertical weather channel at its outer edge which opens inwardly, a sash arranged within said frame, weather strips arranged on opposite vertical edges of said sash and each having an outwardly projecting outer edge forming a vertical fin which is adapted in the normal position of the sash to engage with the respective channel, pivot pins arranged on the lower parts of the weather strips and engaging with said sash guide slots, brace bars adapted normally to be arranged between the weather strips and said mounting bars and each pivotally connected at its lower end with the central part of the adjacent weather strip, and coupling pins arranged at the upper ends of the brace bars and each having a reduced neck adapted to move in the brace guide slots of one of said mounting bars and an enlarged head adapted to engage with the rear side of said mounting bar and to pass through the enlarged upper end of the brace guide slot.

1,696,608. RAILWAY TRUCK. OLE K. KJOLSETH, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 12, 1927. Serial No. 212,591. 1 Claim. (Cl. 105—223.)

A locomotive or car truck comprising wheels and wheel axles, boxes for receiving the journals of said wheel axles, side frames having pedestal yokes extending about said boxes, means including springs for supporting said side frames on said boxes, said boxes having cylindrical recesses therein, cylindrical guide members extending into the recesses in said boxes and having a grooved portion projecting therebeyond, said pedestal yokes being arranged to slidably engage the grooves in said guide members so as to permit tilting of said frame transversely relative to said axles.

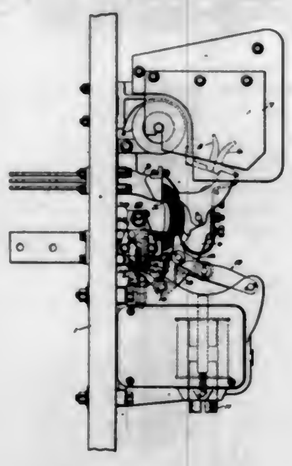


1,696,609. CLOTHES RETURNER FOR IRONING MACHINES. ARCADE MARCOUX, New Bedford, Mass. Filed Mar. 22, 1928. Serial No. 263,675. 4 Claims. (Cl. 68—9.)

1. In combination with an ironing machine, a clothes receiving unit mounted thereon, said unit including a stationary downwardly inclined front section, a vertically swinging rear section, and means for tilting the rear section to an operative position with respect to the forward section, whereby the clothes placed on the rear section will, by gravity, be delivered to the front of the machine.

---

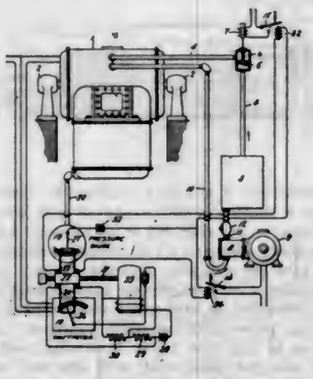
1,696,610. AUXILIARY LOCOMOTIVE. RICHARD J. MCCARTY, Jr., Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Apr. 19, 1926. Serial No. 102,916. 10 Claims. (Cl. 105—48.)



2. In a locomotive arrangement including a locomotive and a tender, the combination of a tender truck having wheeled load-bearing axles, an auxiliary propulsion motor carried by the locomotive, and means for transmitting motion from the motor to one of said axles.

---

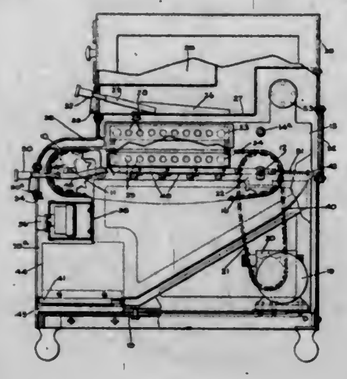
1,696,611. PROTECTIVE DEVICE. GORDON R. MCDONALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 28, 1925, Serial No. 33,584. Renewed Sept. 5, 1928. 5 Claims. (Cl. 175—336.)



1. In combination with a circuit breaker and a latching mechanism for holding the circuit breaker closed, means for releasing the latching mechanism on the occurrence of abnormal circuit conditions comprising an armature having a portion arranged on movement of the armature in one direction to engage the latching mechanism whereby to release the same, an energizing winding, a magnetizable member comprising two branches arranged to form parallel magnetic paths for the flux through the armature, one of said branches being arranged magnetically to saturate on the occurrence of a slowly increasing continuous current in said winding whereby to effect movement of the armature in said direction when the

current has reached a predetermined value, and means for effecting movement of the armature in said direction on the occurrence of a rapidly increasing continuous current in said winding before the current reaches said predetermined value comprising a closed circuit winding on the branch arranged to saturate for controlling the distribution of the flux of said member in the branches thereof.

---

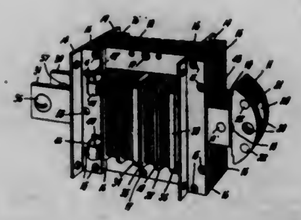


1,696,612. COOLING SYSTEM FOR DYNAMO-ELECTRIC MACHINES. CHESTER W. RICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 17, 1925. Serial No. 63,153. 5 Claims. (Cl. 171—252.)

1. In combination, a dynamo electric machine comprising a closed casing, means for circulating a cooling gas therethrough, and means responsive to a decrease in load on the machine for withdrawing a portion of the gas to lower the pressure in said casing.

1,696,613. TOASTER. JACOB L. SHROYER, Oak Park, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Aug. 16, 1926. Serial No. 129,336. 11 Claims. (Cl. 126—41.)

1. A toaster comprising a conveyor, means for driving said conveyor, heating means for toasting a slice of bread as it is moved on said conveyor from one end to the other, and means at the discharge end of said conveyor for receiving the toast and for returning the toast to the starting end of said conveyor.

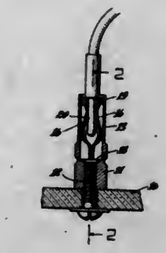


---

1,696,614. HEAT-RESISTANT COMPOSITION SUITABLE FOR ARC DEFLECTORS. WILLARD R. STEELE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 20, 1926. Serial No. 110,465. 11 Claims. (Cl. 106—9.)

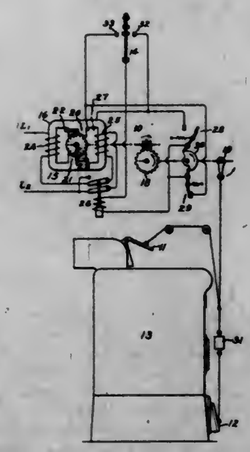
11. A composition of matter containing about 65% zirconia, about 5% slaked lime, and about 30% asbestos.

---



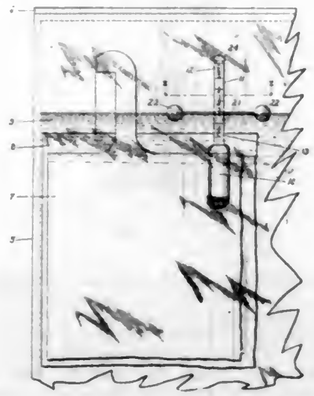
1,696,615. ELECTROMAGNET. PANFILO TROMBETTA, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 9, 1927. Serial No. 189,878. 24 Claims. (Cl. 175—338.)

1. An alternating current electromagnet comprising magnetizing windings, relatively movable magnetic members operable into engagement under the influence of said windings, said members having engaging surfaces of such shape that the engaging surface of one member is enveloped within the engaging surface of the other member, and a pole shading winding located on one of said members so as to encircle the enveloped and enveloping engaging surfaces of said members.



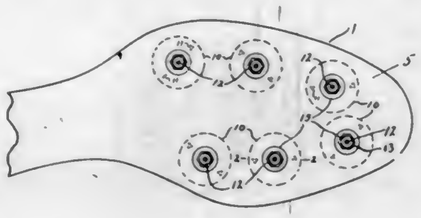
1,696,616. BINDING POST. FREDERICK CHARLES WAPPLER, New York, N. Y. Filed Mar. 16, 1927. Serial No. 175,688. 8 Claims. (Cl. 173—363.)

6. In a binding post, a tube, and a set of complementary clamping members therein; each clamping member comprising a longitudinally arranged resilient tongue narrow enough to permit transverse adjustment thereof, and a non-resilient rear end; said rear ends being of such widths, with respect to the inside tube diameter that when the clamping members are mutually associated in operative relationship said ends may be frictionally jammed into and retained in said tube.



---

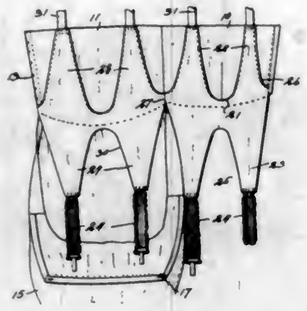
1,696,617. ELECTRORESPONSIVE CONTROLLING DEVICE. ALFRED F. WELCH, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Mar. 29, 1927. Serial No. 179,231. 13 Claims. (Cl. 172—239.)



1. An alternating current electroresponsive controlling device comprising an induction motor having a short-circuited rotatable armature and a normally energized magnetic field structure having pole adjacent said armature and providing a closed flux path independent of said armature to prevent inducing operating current therein, and means comprising a winding associated with said magnetic structure for forcing the field flux through said poles into inductive relation with the armature, and pole shading windings associated with said poles to effect rotation of the armature.

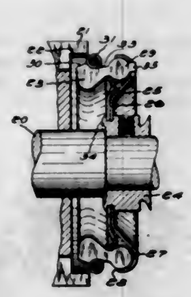
1,696,618. HYDROMETER DEVICE. SAMUEL P. WILBUR, Toledo, Ohio, assignor, by mesne assignments, to U S L Battery Corporation, a Corporation of New York. Filed May 26, 1920. Serial No. 384,405. Renewed Jan. 16, 1928. 9 Claims. (Cl. 265—45.)

1. In combination a specific gravity responsive device having a vertically projecting stem, said stem having a zone of a distinctive appearance, a float adapted to cooperate with said stem and present a contrast with said zone.



1,696,619. SPIKE BASE FOR ATHLETIC SHOES. GEORGE WESTBROOK BELL, Galt, Ontario, Canada, assignor to Messrs. Getty and Scott Limited, Galt, Ontario, Canada. Filed Sept. 13, 1927. Serial No. 219,284. 1 Claim. (Cl. 36—59.)

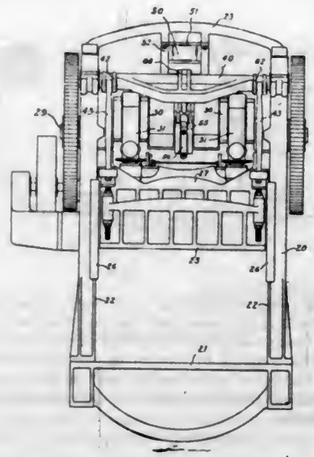
In an athletic shoe, in combination, an outsole formed of two superimposed layers, aligned orifices in said layers, a spike base comprising an internally threaded sleeve, a flange projecting outwardly from the periphery thereof and positioned intermediately of the length of the sleeve, the plane of the flange being perpendicular to the axis of the sleeve, said base mounted within the outsole so that the flange lies between the two layers thereof and the sleeve extends into the aforesaid aligned orifices in the two layers of the outsole, the ends of the sleeve being flush with the top and bottom faces of the outsole.



1,696,620. COMBINATION GARMENT. HAZEL E. BREWER, Seattle, Wash. Filed Dec. 15, 1927. Serial No. 240,261. 2 Claims. (Cl. 2—78.)

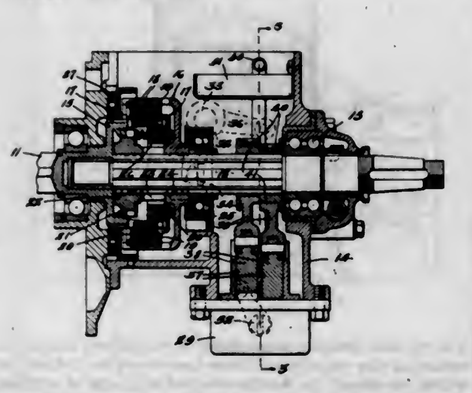
2. A body garment comprising a waist portion constituting a brassière and terminating at the waist, bloomers attached to the waist portion and having a seat section partly separated at the sides from the front of the bloomers and entirely separated at the top from the waist section, and suspender elements attached to the inside of the front and back of the waist and having a width at the waist line equal to the waist line of the waist, said suspender elements being formed to provide two upwardly extending webs for the front section and two upwardly extending webs for the back section of the waist, the webs being stitched to the waist throughout their entire extent, said suspender elements being further

formed to provide two pairs of depending webs, one pair at the front and one at the back of the waist, the webs of each pair being separated from each other by a cut-away portion, the cut-away portion between the rear webs being shorter than the cut-away portions between the front webs whereby the seat of the bloomers may overlap the suspending element at the rear of the waist.

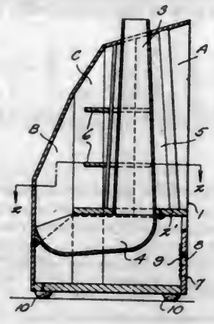


1,696,621. CENTRIFUGAL SWITCH. HERBERT L. BRUMP, Dayton, Ohio, assignor to The Day-Fan Electric Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 7, 1924. Serial No. 730,717. 14 Claims. (Cl. 172—279.)

12. In a short circuiter for motors, a series of oscillatory arms arranged in annular series in proximity to the lateral face of the motor commutator and subject to oscillation by centrifugal influence radially in relation with the axis of rotation of the commutator, a fulcrum mounting for the arms located in fixed spaced relation with the commutator, and an annular spring band circumferentially surrounding the annular series of oscillatory arms, and capable of shifting movement thereon, relative to their fulcrums to vary the yielding resistance of the spring member as said arms swing outward against the tension of said spring member under centrifugal influence to effect the electrical interconnection of said bars one with another.

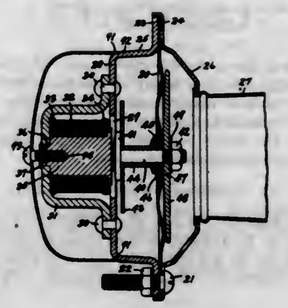


1,696,622. TOGGLE PRESS. ARTHUR A. BYERLEIN, Detroit, Mich. Filed Apr. 3, 1926. Serial No. 99,585. 15 Claims. (Cl. 113—38.)



1. A drawing press comprising a frame, a plunger, and a blank holder, and means provided at the transverse center of the press for reciprocating said blank holder with a dwell in its movement, said means comprising an actuating member guided to slide back and forth in a direction inclined to the direction of movement of said blank holder, and a driving connection between said actuating member and said blank holder.

1,696,623. MOTION-TRANSMITTING MECHANISM. GEORGE C. CARHART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed May 28, 1926. Serial No. 112,359. 6 Claims. (Cl. 192—85.)

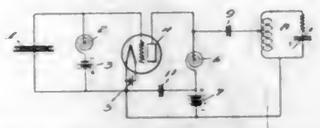


2. In a motion transmitting mechanism, the combination of driving and driven shafts, a normally engaged clutch connecting the shafts including a shiftable section, a housing enclosing the clutch sections, and having an oil reservoir, one of the shafts extending into the housing, a pump in the housing connected to the reservoir and including a movable member, connections located in the housing between the movable pump member and one of the shafts, a hydraulic motor located in the housing and connected to the pump to receive oil therefrom, connections between the motor and shiftable clutch section, an outlet leading from the motor, and an operator-controlled, normally-open valve in said outlet.

1,696,624. SOUND AMPLIFIER. NATHANIEL A. CLARK, Clinton, Iowa. Filed Sept. 9, 1927. Serial No. 218,523. 3 Claims. (Cl. 181—27.)

1. A device of the class described comprising a casing having a rear section of little width with a flaring front section, the front of which is open, conducting means for conducting the sound waves from the top of the casing into the rear section and horizontally arranged deflector plates in the flaring front section.

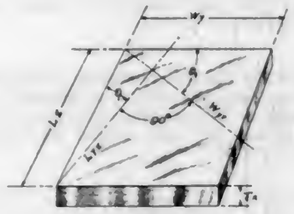
1,696,625. SOUND SIGNAL. ROBERT M. CRITCHFIELD, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 28, 1926. Serial No. 112,269. 5 Claims. (Cl. 177—7.)



4. A signal device comprising in combination, a frame including an apertured, magnetizable plate; an electromagnet frame mounted on said plate; a core supported by said frame and magnetically connected with the plate and having a surface facing the aperture in the plate; a winding about the core; a diaphragm supported by the frame, in spaced relation to the plate; an armature carried by the diaphragm so as to be coaxial of the core and so that one surface thereof lies adjacent the surface of the core facing the apertures in the plate, one of said adjacent surfaces being provided with a protuberant portion adjacent the inner surface, to concentrate the magnetic flux passing from one to the other within a region concentric with respect to the mutual axis of the core and armature; and a magnetizable flange extending from the armature beyond the edge of but in spaced relation to the aperture in the plate.

1,696,626. CONTROL CIRCUIT FOR ELECTRON TUBES. ALFRED CROSSLEY, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 30, 1925. Serial No. 26,968. 3 Claims. (Cl. 250—36.)

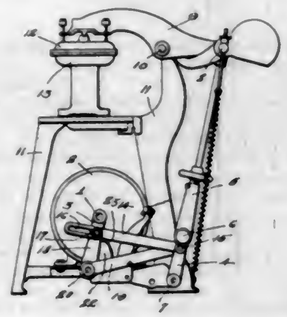
1. In a piezo electric crystal oscillating circuit, a crystal, a pair of metal contact plates on each side thereof, said



plates being connected respectively to the grid and filament terminals of a vacuum tube, a choke coil, one end of which is connected to the negative terminal of a source of potential and so arranged that the opposite terminal of choke coil is connected to the grid of the vacuum tube while the posi-

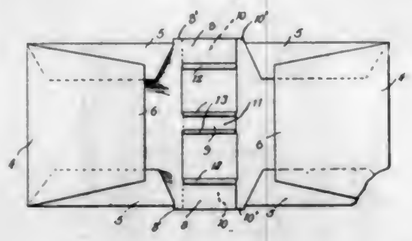
tive terminal of said source of potential is connected direct to the filament of said tube, and a plate oscillating system which comprises the plate of the vacuum tube, a choke coil, a radio frequency by-pass condenser, a high potential source and a resonant circuit consisting of an inductance, a capacity and a resistance.

---



1,696,627. PIEZO-ELECTRIC CRYSTAL. ALFRED CROSSLEY, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1925. Serial No. 62,200. 5 Claims. (Cl. 171—327.)

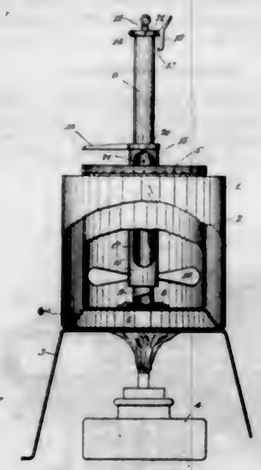
1. An off angle piezo electric quartz crystal comprising a parallelopiped having a pair of its sides cut at an angle to the optical axis thereof and the other pair of its sides ground to a dimension directly proportional to the cosine function of the angle between the optical axis and one of said first mentioned sides.



---

1,696,628. MECHANICAL MOVEMENT. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 6, 1927. Serial No. 159,281. 5 Claims. (Cl. 74—14.)

1. A mechanical movement comprising a prime mover movable about an axis and having a crank associated therewith and a driven element, a reciprocable link connecting the crank and the driven element and additional connections between the prime mover and the driven element, a cam to actuate the latter when the crank is at the end of its throw, the additional connection having a follower arranged to be brought into engagement with the cam when the crank approaches the end of its effective throw.

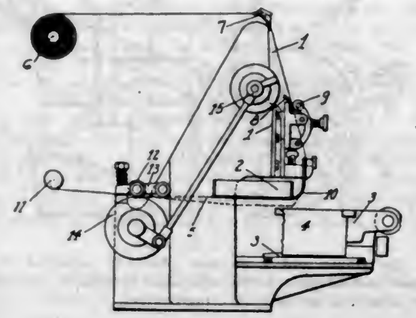


1,696,629. BOOK-COVER FILE. GRACE LEE FENNO, Palos Park, Ill. Filed Apr. 16, 1928. Serial No. 270,449. 3 Claims. (Cl. 281—34.)

2. A book cover comprising cover sections adapted to fit upon the backs of a book and having tongues projecting from their inner side edges to extend across the binding of the book, the tongues of one cover section overlying the tongues of the other cover section and secured thereto and having marginal portions folded to embrace the same and secured thereto.

---

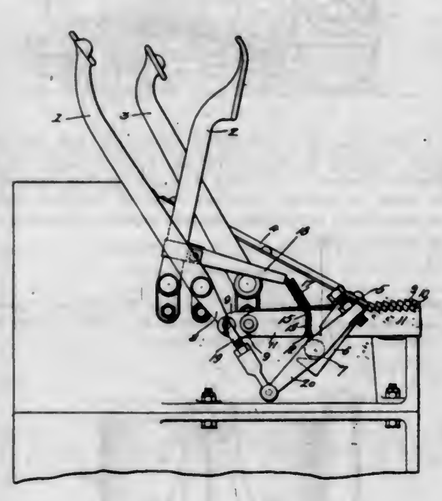
1,696,630. DIRECT-READING VISCOSIMETER. FRANCIS ELLERY FITCH, Philadelphia, Pa., and MAYSON WHITE TORBET, Jackson, Mich. Filed July 15, 1924. Serial No. 726,191. 9 Claims. (Cl. 265—11.)



4. A viscosimeter comprising a propeller, means for mounting the propeller to have free rotary movement and bodily movement in the direction of the axis of rotation, means for limiting the extent of axial movement and means for indicating the extent of rotary movement relatively to a definite point of reference.

---

1,696,631. SHOE-ORNAMENTING MACHINERY. BENJAMIN W. FREEMAN, Cincinnati, Ohio. Filed May 29, 1926. Serial No. 112,708. 13 Claims. (Cl. 164—93.)



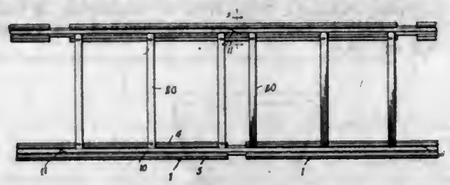
1. In combination with a shoe ornamenting machine having cutting instrumentalities, having a reciprocating platen and having work receiving space therebetween, a backing web, a support on which said web is mounted, means for advancing said web with such relation to said work receiving space as to provide a fresh backing surface for the cutting instrumentalities in each successive cutting operation, and means effective only during the return stroke of said

platen for transporting from said work space to a position clear of the work the excess of said web carried into said work space by the downward movement of said platen.

---

1,696,632. POWER-TRANSMISSION DEVICE. WILLIAM HENRY, Philadelphia, Pa. Filed Apr. 23, 1927. Serial No. 186,052. 5 Claims. (Cl. 74—81.)

1. In a power transmission device, the combination with a pivoted clutch lever adapted normally to be retained resiliently in a retracted position, of a plurality of notched levers pivotally attached to said clutch lever, and a relatively fixed abutment adapted to engage in said notches whereby the clutch lever is retained in an advanced position, the notches in each of said levers being staggered with respect to the notches of the other levers whereby the levers are effective individually to retain the said clutch lever in the advanced position.



---

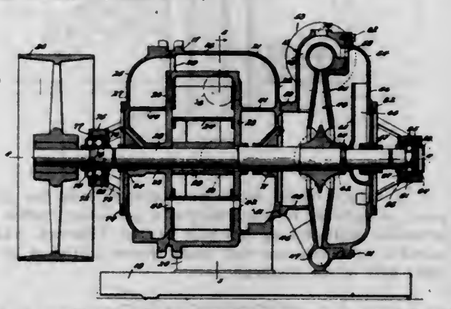
1,696,633. RAILWAY TRACK. JOEL D. HUGHES, Roseberry, Idaho. Filed Dec. 7, 1927. Serial No. 238,439. 3 Claims. (Cl. 238—26.)

1. A railway track comprising a series of alined sills, said sills having vertically disposed laterally spaced

flanges carried thereby, rails disposed between the flanges and engaged upon the sills, said flanges being provided

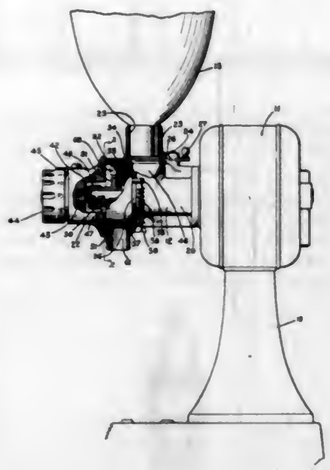
respectively, with grooves and terminal flanges, and clamping members engaged with the webs of the rails and terminal flanges.

---



1,696,634. SPARK PLUG. CARL JOHAN ELIGIUS ISAKSSON, Spanga, Sweden, assignor of one-half to Hugo Theodore Tillquist, Stockholm, Sweden. Filed Aug. 13, 1925, Serial No. 50,102, and in Sweden May 22, 1925. 1 Claim. (Cl. 123—169.)

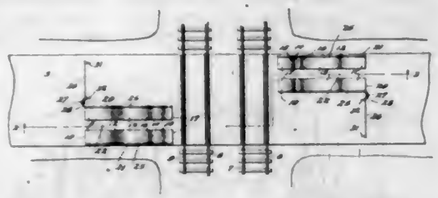
A spark plug comprising a metal sleeve adapted to be screwed into the cylinder head of an engine, an insulated body positioned within said sleeve forming a chamber therebetween, a flange formed with the lower end of said metal sleeve having a concentric opening therein through which passes the lower end of said insulated body, electrodes carried by the lower ends of said insulated body and metal sleeve, and said flange having an eccentrically positioned opening therein communicating with said chamber and arranged in vertical alignment with said electrodes.



---

1,696,635. AIR AND WATER PUMP IN COMBINATION. IRVING C. JENNINGS, South Norwalk, Conn., assignor to Nash Engineering Company, South Norwalk, Conn., a Corporation of Connecticut. Filed July 9, 1923, Serial No. 650,519. Renewed Apr. 12, 1928. 21 Claims. (Cl. 103—4.)

1. A combined unit for installation in a gas and liquid system which requires gas and liquid to be simultaneously pumped, comprising in combination, a rotary gas pump, a rotary liquid pump, separate housings for each of said pumps, means for removably connecting said housings respectively to said system, said housings being provided with mating surfaces whereby said housings may be removably and directly secured together end to end, permitting the housings to be separated and another gas or liquid pump substituted, and a common shaft for both of said pumps, whereas both of said pumps operate at the same speed.

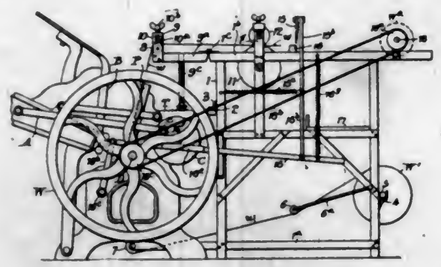


**1,696,636. GRINDING APPARATUS.** HERBERT L. JOHNSTON, Troy, Ohio, assignor to The Hobart Manufacturing Company, Troy, Ohio, a Corporation of Ohio. Filed Aug. 1, 1927. Serial No. 209,915. 9 Claims. (Cl. 83—18.)

1. In a machine of the class described, a casing, grinding means in said casing, a motor for operating said grinding means, said casing having a discharge orifice normally closed against the insertion of the operator's finger, and means actuated upon initial grinding action of said grinding means for opening said discharge orifice.

---

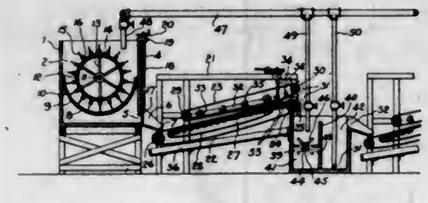
**1,696,637. SAFETY ARRANGEMENT FOR RAILROAD CROSSINGS.** GEORGE E. JORDAN, Perry, Ga. Filed May 1, 1928. Serial No. 274,287. 10 Claims. (Cl. 238—3.)



1. A safety traffic speed control apparatus for highways, comprising in combination, a permanent speed obstruction stationed in one-half of the highway, and a portable automatic one-way traffic device stationed in the other half of the highway.

---

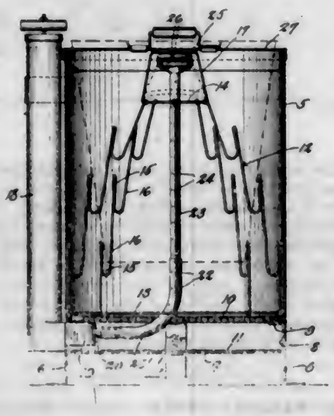
**1,696,638. WEB-FEEDING ATTACHMENT FOR JOB PRINTING PRESSES.** SAMUEL E. KALLENBAUGH, Manchester, Ga., assignor to Kallenbaugh Corporation. Filed July 11, 1927. Serial No. 204,957. 12 Claims. (Cl. 101—288.)



1. In combination with a bed and platen job press having rotatable cranks and pitmen for oscillating the platen; a frame, web guiding rollers mounted upon said frame whereby a web may be led to and through the job press to be printed thereby; a web feed roll mounted on said frame, means operable by one of the cranks for operating the feed roll whereby the web may be fed forward after each operation of the press; web severing devices mounted

on the frame and a member pivotally mounted on the press and adapted to be oscillated by one of the cranks for actuating the web severing devices.

---

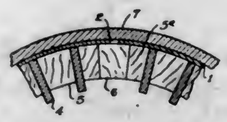


**1,696,639. DEINKING PROCESS AND MEANS FOR PERFORMING SAME.** WILLIAM LEWIS, Vancouver, British Columbia, Canada. Filed Sept. 6, 1927. Serial No. 217,736. 9 Claims. (Cl. 92—13.)

1. The process of de-inking newspaper and the like which consists of saturating the printed paper in an alkaline solution, of reducing it to a pulp then subjecting the pulp to pressure between opposing surfaces which are impervious to the pulp but are capable of passing the ink and the solution.

---

**1,696,640. DISHWASHER.** JAMES WILSON LOWTHORP, Lawrenceburg, Tenn. Filed Feb. 17, 1927. Serial No. 169,057. 1 Claim. (Cl. 141—9.)



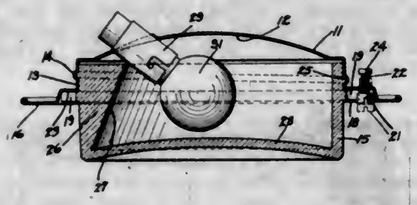
In a dish washer, a body portion, bracket members secured within the body portion adjacent to the bottom

thereof, a removable bottom formed of wire mesh material, supported on the bracket members and dividing the body portion into an upper and a lower compartment, a dish rack in the body portion and resting on the removable bottom, said dish rack including a lower circular member and an upper circular member, rods having loops formed therein and connecting the circular members, the loops defining recesses to support dishes therein, a spraying pipe extending through the lower compartment and extending upwardly through the central portion of the body portion, said spray pipe having openings formed throughout the length thereof and adapted to spray water laterally onto dishes supported on the rack, said pipe terminating at a point adjacent to the upper end of the body portion, a nozzle on the free end of the pipe for spraying water passing through the pipe, and means for drawing liquid from the lower compartment and forcing liquid through the spray pipe.

---

**1,696,641. JORDAN-ENGINE-SHELL LINING.** HOMER D. MARTINDALE, Middletown, Ohio, assignor, by mesne assignments, to The Black-Clawson Company, Hamilton, Ohio, a Corporation of Ohio. Filed Apr. 13, 1925. Serial No. 22,567. 5 Claims. (Cl. 92—27.)

1. A shell lining for a Jordan engine including in combination, an expandible jacket shaped to conform to an inner section of the shell and having a yieldable joint adapted normally to prevent expansion of said jacket, a plurality of blades and blade spacing elements adapted to be assembled and expanded in said jacket in its normal relation to effect a shell lining unit, and means operable after said unit is introduced in a shell to spread the joint and expand the lining unit to effect fixed relation between the unit and said shell.



---

**1,696,642. REFRIGERANT LUBRICANT AND METHOD OF LUBRICATING REFRIGERATING MACHINERY.** ROBERT F. MASSA, New York, N. Y., assignor to Carbide & Carbon Chemicals Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1924. Serial No. 742,956. 5 Claims. (Cl. 87—9.)

1. A lubricant for refrigerating machines containing a glycol.

---

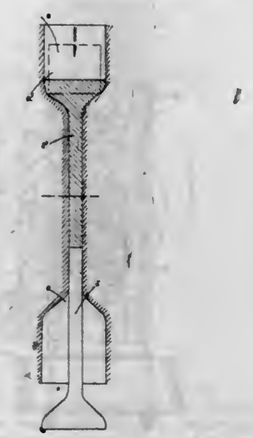
**1,696,643. LAMP.** FRANK W. NORTON, Chicago, Ill. Filed Sept. 29, 1927. Serial No. 222,798. 11 Claims. (Cl. 240—7.35.)

11. A lamp assembly of the character described, comprising a hood having an annular shoulder about the same, means for securing a light bulb in the hood, a translucent dome forming a closure for the hood and having an outwardly extending flange adapted to seat against said shoulder, means providing a screw-threaded connection between the dome and the hood whereby the dome may be screwed into the hood with its flange in tight contact with said shoulder, and a locking device associated with the hood and adapted, when engaged with said flange, to hold the dome from turning with respect to the hood.

---

**1,696,644. CATALYTIC AND ADSORBENT GEL.** WALTER A. PATRICK, Baltimore, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Original application filed Feb. 28, 1920, Serial No. 362,138. Divided and this application filed Mar. 15, 1926. Serial No. 94,959. 4 Claims. (Cl. 23—233.)

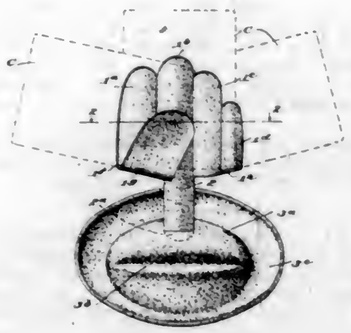
1. A hard stable material having a porous structure substantially the same as silica gel and consisting of a colloidal oxide and copper oxide.



---

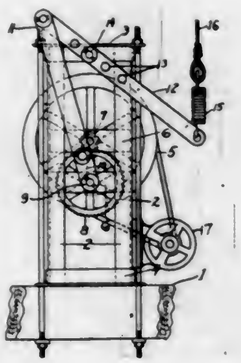
**1,696,645. CATALYTIC AND ADSORBENT GEL.** WALTER A. PATRICK, Baltimore, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Original application filed Feb. 28, 1920, Serial No. 362,138. Divided and this application filed Mar. 15, 1926. Serial No. 94,960. 4 Claims. (Cl. 23—233.)

1. A hard stable material having a porous structure substantially the same as silica gel and consisting of a colloidal oxide and nickel.



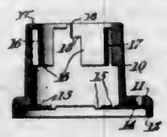
---

**1,696,646. MANUFACTURING OF VALVES AND LIKE DEVICES.** LEON SAIVES, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed Feb. 6, 1928, Serial No. 252,391, and in France Oct. 8, 1927. 1 Claim. (Cl. 207—1.)



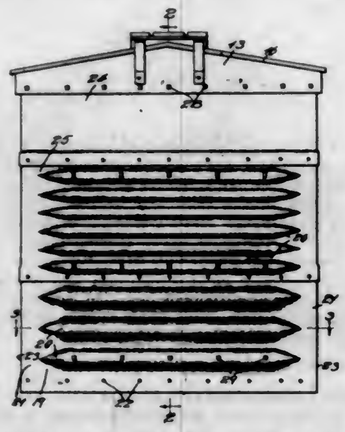
A process of manufacturing valves and like devices in which the matrices receiving the blanks are disposed in pairs, and the matrices of each pair are in directly opposite position and connected by an axial conduit, whereby the matrices of each pair are brought in succession under the press, and the blank pressed into one of the matrices expels the valve just formed in the opposite matrix.

1,696,647. PLAYING-CARD HOLDER. HERMAN J. SANDER and ALBERT J. BREISTER, Fond du Lac, Wis. Filed Apr. 26, 1928. Serial No. 273,049. 3 Claims. (Cl. 273—150.)



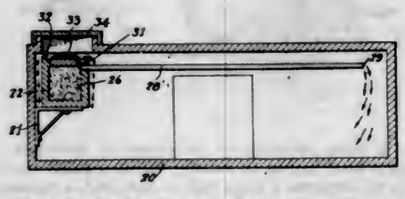
1. A playing-card holder comprising an arcuate stamped sheet metal back, a yieldable thumb member extending from one lower corner of the back and bent to extend diagonally across the concave face of the back; the opposite lower corner of the back being flanged outwardly; and means for supporting the back.

1,696,648. BELL-RINGING DEVICE. GEORGE V. SCHWENZER, Brooklyn, N. Y. Filed Sept. 8, 1925. Serial No. 54,917. 4 Claims. (Cl. 116—25.)



1. A mechanical bell ringing device comprising in combination with a motor, a wheel operable by the motor, a gear rotatable by the operation of the wheel, a crank rotatable with the gear, and a link actuated by the crank, a lever actuated by the link, resilient means connected with the lever for tolling the bell and adjustable means of mounting the lever.

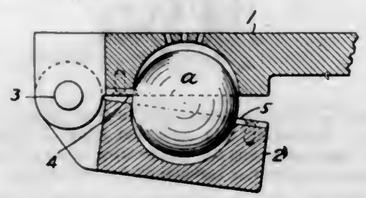
1,696,649. SOCKET FOR RADIO INSTRUMENTS. RICHARD W. SEABURY, Boonton, N. J., assignor to Radio Frequency Laboratories, Incorporated, Boonton, N. J., a Corporation of New Jersey. Filed Jan. 20, 1923. Serial No. 614,036. 5 Claims. (Cl. 173—328.)



1. An instrument socket comprising a tubular wall portion of insulating material integrally provided with an interiorly extending flange and a plurality of spaced interior bearing surfaces depending therefrom and adapted to make discontinuous contact with an instrument base.

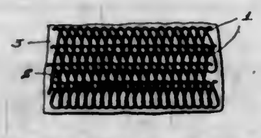
1,696,650. CORRUGATED STEEL END FOR RAILWAY CARS. VINTON E. SISSON, Chicago, Ill., assignor, by mesne assignments, to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed May 19, 1919. Serial No. 297,998. 24 Claims. (Cl. 105—410.)

1. In combination with the end sill and end plate of a railway car, of a sheet metal end structure extending between and attached to said end sill and end plate comprising a lower metallic plate formed with strengthening and rigidifying corrugations, and an upper flat metallic plate.



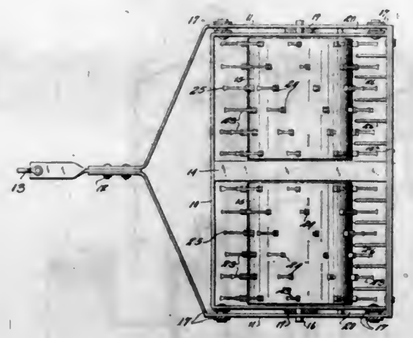
1,696,651. REFRIGERATING APPARATUS AND METHOD. THOMAS B. SLATE, New York, N. Y., assignor, by mesne assignments, to American Patents Development Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 10, 1924, Serial No. 685,482. Divided and this application filed Sept. 27, 1924. Serial No. 740,163. 4 Claims. (Cl. 62—92.)

1. The method of refrigerating material within a chamber which includes establishing separate downflow currents of cooling medium in parts of the chamber remote from one another, the downflow in the first or primary region consisting entirely of the atmosphere of the chamber and the downflow in a second region consisting mainly of carbon dioxide gas; said first or atmospheric circulation being induced by enclosing frozen carbon dioxide in an air-tight imperfectly insulating container, whereby the cooling in said region is entirely by absorbing heat from the atmosphere through the outer surface of said air-tight imperfectly insulating container; permitting the carbon dioxide gas to escape from the container by overflow through a high level outlet at a pressure so low that no further liquid or solid can be formed by expansion, whereby said gas first displaces all of the air in said container and then itself escapes as formed; conducting the expelled air and afterwards the pure gas so formed to said remote region of said chamber and then permitting it to escape and flow downward by gravity to thereby establish said gas and air downflow in said remote region.



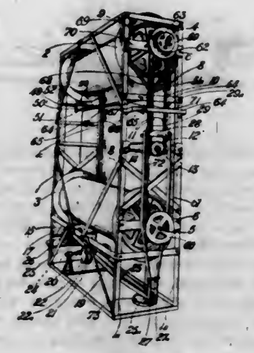
1,696,652. EJECTOR FOR MOLDS. EDWARD W. SMITH, Philadelphia, Pa. Filed July 29, 1926. Serial No. 125,815. 4 Claims. (Cl. 22—154.)

1. Ejecting means for two-part hinged molds comprising spurs projecting into the mold cavity and arranged on opposite sides of the parting.



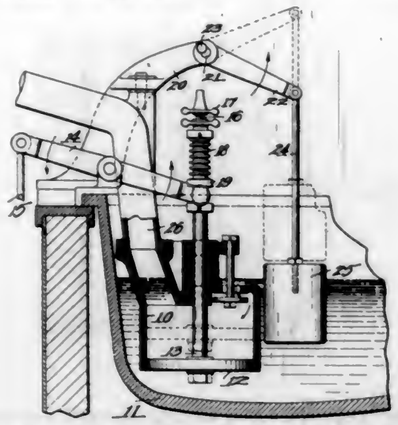
1,696,653. SPRING PAD FOR PRESSING MACHINES. HARRY ALBERT STEELE, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Nov. 24, 1926. Serial No. 150,605. 1 Claim. (Cl. 68—9.)

A spring pad construction for pressing machines comprising a plate, a plurality of coiled springs lying on their sides on the plate, the lower portions of the end coils of the springs at like ends of the springs being secured to the plate and the top portions of the end coils at the other ends of the springs being secured to the plate whereby the springs are tensioned with their coils at an incline to the plate, so that the coils when under pressure swing toward the plate, and the coils of each spring interlacing through the coils of the next spring, the intermediate coils between the end coils being free of and slidably engaging the plate.



1,696,654. ROLLER CULTIVATOR. ISAAC F. STEM and JOHN H. GLAZE, Mountain View, Calif. Filed Feb. 21, 1927. Serial No. 169,099. 1 Claim. (Cl. 55—11.)

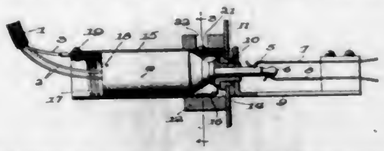
A cultivator comprising an outer, substantially rectangular frame having a draft tongue, an inner rectangular frame disposed within and on the same level as the outer frame and abutting against the rear bar of the outer frame but spaced from the ends of the outer frame, means connecting the inner frame to the outer frame at spaced points, a roller cultivator having trunnions extending through the inner and outer frames at the ends thereof, levers pivotally mounted upon the said trunnions, one at each end of the roller cultivator, and each lever having a roller at its lower end, and arcuate bars attached to the forward and rear ends of the outer and inner frames and extending concentric



to the trunnions and having aligning apertures, and bolts adapted to pass through the levers and through said apertures to thereby hold the levers in adjusted positions to raise or lower the machine from the ground, each of said levers being adjustable independently of the other lever.

1,696,655. AUTOMATIC MACHINE FOR DISPLAYING ADVERTISEMENTS, POSTERS, PICTURES, SHOW CARDS, AND THE LIKE. WILLIAM THORPE, Wellington, New Zealand. Filed Aug. 13, 1925. Serial No. 50,078. 5 Claims. (Cl. 40—31.)

1. An improved automatic machine for displaying posters, pictures, show cards, and the like, comprising a frame member, a pair of revoluble superimposed rollers mounted thereon, a driving connection between the rollers, a screen containing advertisements and the like mounted on said rollers, a motor, a drive chain connected to the upper roller but free of driving connection with the lower roller, a sliding member to embrace said chain, pins on the chain, means on the sliding member whereby the pins may be selectively engaged to move the same in either direction in the movement of the sliding member, links depending from the sliding member, bars pivotally supported at one end and connected at the opposite end to said links, and cam mechanism for operating the bars in both directions whereby to reciprocate the sliding member.

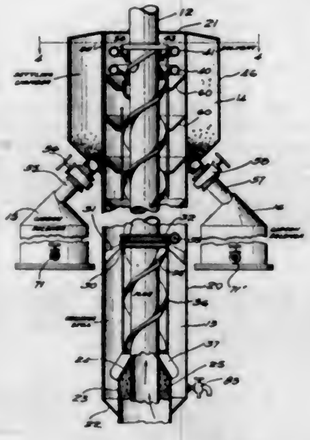


1,696,656. PUMP FOR MOLTEN METAL. ISIDOR TORNBERG, Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 30, 1927. Serial No. 202,499. 6 Claims. (Cl. 22—70.)

1. In a pump for discharging molten metal, the combination with a melting pot and a pump immersed therein, of means for operating the piston of said pump, a float in the molten metal in the pot, and means connected with said float for stopping the operation of the piston controlled by the elevation of the float.

---

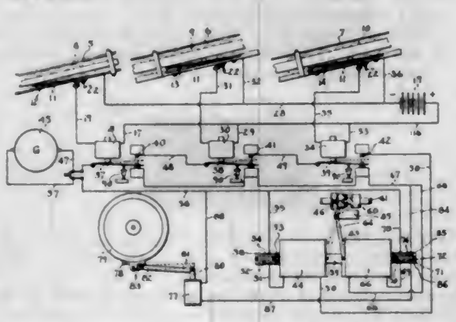
1,696,657. SHIELDED TELEPHONE PLUG. ARTHUR M. TROGNER, Takoma Park, Md., and THOMAS McL. DAVIS, Washington, D. C., assignors to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 24, 1927. Serial No. 163,046. 7 Claims. (Cl. 179—91.)



1. An electrical connector comprising a supporting member, a telephone plug arranged to cooperate with a telephone jack, an insulated member carried by said supporting member and surrounding one end of said jack, a cooperating body portion for said plug, telephone conductors extending into said cooperating body portion, and an electrostatic shield substantially enclosing the insulated body portion of said telephone plug and connected to ground for preventing electromagnetic or electrostatic coupling with conductors extending into said body portion and means carried by said insulated member for locking said plug in said jack.

---

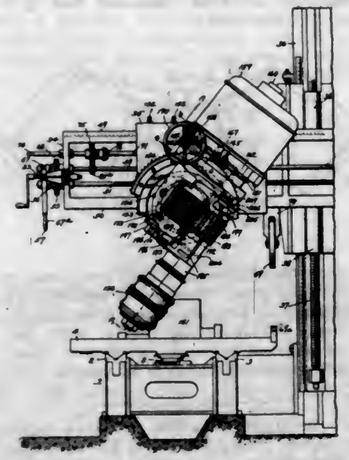
1,696,658. PROCESS OF CRACKING HYDROCARBONS. MILON J. TRUMBLE, Alhambra, Calif. Filed Sept. 2, 1924, Serial No. 735,357. Renewed Oct. 24, 1928. 9 Claims. (Cl. 196—69.)



1. A process for cracking liquid hydrocarbons under pressure which comprises: flowing said hydrocarbon downwardly in a film over an external vertical surface contained within a pressure chamber; heating said surface internally to a temperature sufficient to cause the cracking of said hydrocarbons; removing the residual carbonaceous products of said cracking action from said surface by a combined mechanical and washing process; removing the vapor products of said cracking action from said pressure chamber, and condensing said vapors.

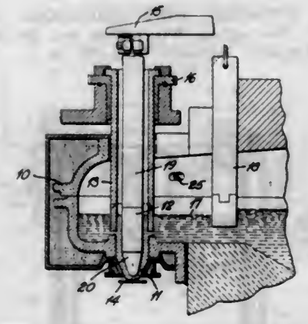
9. A cracking apparatus comprising: a vertical chamber; an upwardly extending flue passing through said chamber; mechanical scraping means rotatable about said flue; means for supplying a thin film of oil descending under the action of gravity in contact with said flue; means for withdrawing vapors and gases from said chamber; means for removing liquid and solid residual mixture from said chamber; means for separating said solid and liquid residual substances; separate means for withdrawing said solid residue, and means for returning residual oil for treatment.

---



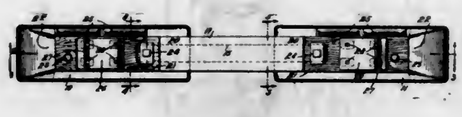
1,696,659. AUTOMATIC CONTROL MECHANISM. WILLIAM C. WARD, Jamestown, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 12, 1927. Serial No. 219,160. 4 Claims. (Cl. 192—125.)

1. A control mechanism comprising, in combination with a runway, a detector spring located in the runway, an electric circuit closed through the spring when the runway is filled with articles, a solenoid in the circuit, a clutch, a solenoid for moving the clutch in one direction, a solenoid for moving the clutch in the opposite direction, an armature common to the second and third solenoids, connections between the armature and the clutch, a circuit through the second solenoid, a circuit through the third solenoid, a movable contact arm arranged to be actuated by the first solenoid for closing the circuit through the second solenoid when the runway is filled with articles and for closing the circuit through the third solenoid when articles are absent from the runway, a brake, a solenoid for actuating the brake, a circuit in which the brake solenoid is located, and means arranged to close the circuit through the brake solenoid following the closing of the circuit through the third solenoid.



1,696,660. MACHINE FOR GRINDING OR CUTTING STONE. JULIUS WEGNER, New York, N. Y. Filed Sept. 12, 1924. Serial No. 737,291. 22 Claims. (Cl. 51—35.)

1. In a machine for grinding flat stone horizontally or fluting columns vertically, the combination of a table upon which the stone or column is supported, a rotary grinding head, a shaft carrying the grinding head, a carriage, means for transversely pivoting said shaft intermediate its ends to said carriage, so that the shaft may swing in a plane transverse to the table, from a vertical to a horizontal position, an electric motor carried by said pivoting means for driving said grinder shaft, a crossrail supporting said carriage, extending across the table, a vertical screw for raising and lowering said crossrail, power operated means for rotating said vertical screw, so as to feed the grinder vertically when the grinder shaft is in horizontal position when fluting columns, a screw for adjusting said carriage along the crossrail, across the work, and for holding the carriage in its adjusted position, and means independent of said electric motor for reciprocating said stone supporting table beneath said crossrail, at right angles to said plane.



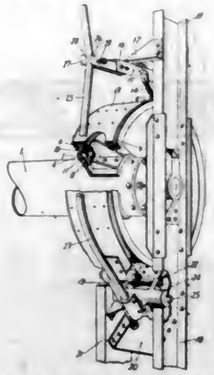
---

1,696,661. COMPOSITE GLASS-FEEDER IMPLEMENT. PAUL G. WILLETTS, Berlin, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed June 4, 1926. Serial No. 113,688. 10 Claims. (Cl. 49—14.)

3. A composite implement for working molten glass comprising separate substantially solid sections of different refractory materials, and means for joining the sections together as a unit.

1,696,662. RAILROAD CROSSTIE. HAROLD A. WILLS, Plainfield, N. J., Filed Mar. 19, 1928. Serial No. 262,631. 2 Claims. (Cl. 238—30.)

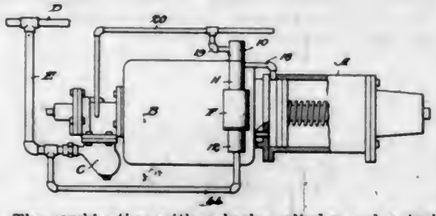
1. A railroad cross-tie comprising, two concrete base blocks having on the upper surfaces of their inner ends shallow recesses, a metal tie-piece received at its ends in the recesses in the base blocks, a concrete alinement member in which the middle section of the metal tie-piece is embedded with its ends projecting longitudinally beyond the ends of the concrete alinement member, the ends of the upper part of the alinement member projecting laterally beyond the sides of the metal tie-piece to rest upon the upper edges of the inner ends of the base blocks, and the middle section of the alinement member projecting downwardly between the base blocks and abutting the inner ends thereof, and means for holding the parts of the cross-piece together.



---

1,696,663. CONNECTER FOR INCANDESCENT LAMPS. GEORG FRIEDRICH BECKER, Bremen, Germany. Filed Dec. 29, 1927, Serial No. 243,356, and in Germany May 25, 1926. 2 Claims. (Cl. 173—328.)

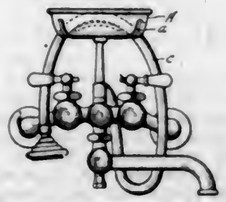
1. A connecter for elongated incandescent lamps of that type having a filament terminal at each end thereof comprising a body of conducting material formed with a socket to receive the adjacent terminals of two longitudinally alined lamps, said body having at one side of said socket a conductor wire receiving bead in electrical conductivity with the body and provided with wire securing means and said body having at its diametrically opposite side a conductor wire receiving bead having a surface for electrically insulating the wire therefrom.



1,696,664. BULL-WHEEL STRUCTURE. RICHARD R. BLOSS, Columbus, Ohio, assignor to The International Derrick & Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed May 29, 1926. Serial No. 112,655. 9 Claims. (Cl. 188—218.)

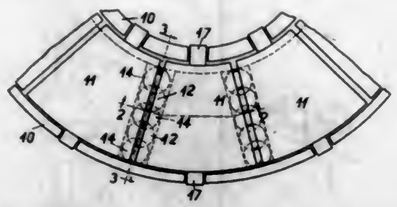
1. A brake wheel structure comprising a brake wheel, a brake band, a means for holding said brake band away from said brake wheel, said means being located above said brake wheel, a leverage mechanism located beneath said brake wheel, and means for latching said leverage mechanism in inoperative position.

---



1,696,665. AIR BRAKE. CARL R. BOWEN, Wilmington, Calif. Filed Mar. 26, 1928. Serial No. 264,682. 5 Claims. (Cl. 303—77.)

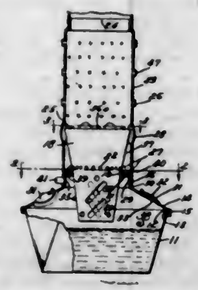
1. The combination with a brake cylinder and a train line, of a vent for the brake cylinder, a valve for opening and closing said vent, means constantly tending to move said valve to a position to close the vent, and means operated by train line pressure to move said valve to a position to open the vent, said last named means being movable relatively to the valve in the direction of its valve opening movement and after said valve is in full open position to thereby adjust itself for correct valve operation under variable maximum train line pressures.



---

1,696,666. SOAP DISH. ALBERT C. BROWN, Chicago, Ill. Filed July 11, 1924. Serial No. 725,317. 3 Claims. (Cl. 45—28.)

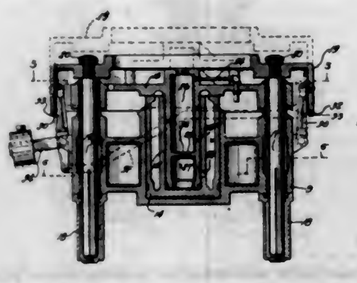
1. In a soap dish, a body portion of vitreous material forming a soap receptacle and a hose supporting member integral with said body portion and extending along one side thereof, said hose supporting member being upwardly concave transversely and upwardly convex longitudinally.



1,696,667. MACHINE BEARING. ERIC BROWN, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company. Filed Feb. 18, 1926, Serial No. 89,211, and in Germany Feb. 25, 1925. Renewed Nov. 3, 1928. 4 Claims. (Cl. 308—160.)

1. Machine bearing construction comprising segments having load supporting surfaces and contact surfaces extending obliquely at different angles to the load supporting surfaces, balls having rolling contact with the contact surfaces of adjacent segments to support them jointly, and shiftable equalizing members supporting the balls.

---

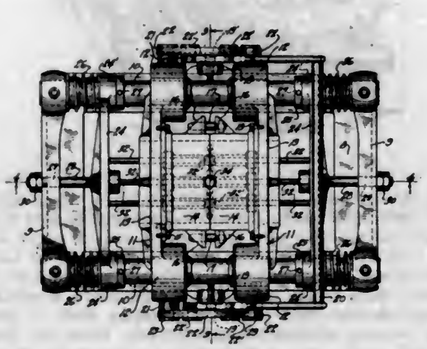


1,696,668. ORCHARD HEATER. WILLIAM STEWART BUTTON, Riverside, Calif., assignor to Riverside Sheet Metal Works, a Corporation of California. Filed June 8, 1925. Serial No. 35,644. 8 Claims. (Cl. 158—91.)

1. An orchard heater comprising: a fuel receptacle provided with a cover; a burner extending above said cover; and a stack extending above said burner and provided with bumps at the level of the top of said burner, to permit an upward current of air preheated in a space between said burner and said stack, said stack having a series of air inlet openings formed therein and arranged circumferentially about said burner below said bumps.

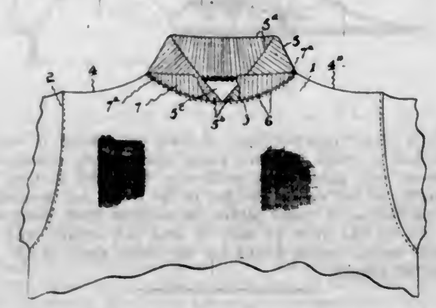
---

1,696,669. FOUNDRY JOLT SQUEEZER. ERLE J. BYERLEIN, Wauwatosa, Wis. Filed Aug. 20, 1926. Serial No. 130,437. 4 Claims. (Cl. 22—29.)



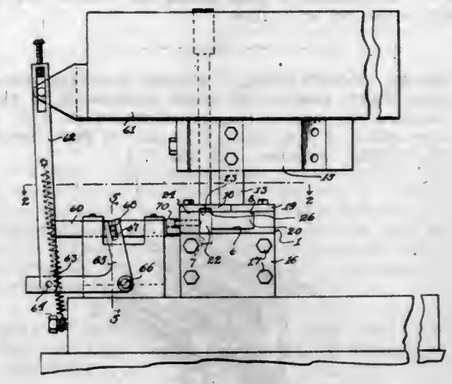
1. A foundry jolt squeezer, comprising a frame, a pair of pistons mounted in said support of relatively different diameters and movable together or independently, a pair of opposed guide members carried by the frame, a head slidably mounted on said guide members and operatively connected to one of the pistons to have a relative movement with respect thereto, a stripper frame secured to and movable with said guide members and supported by said head, a pressure member, releasable means engaging the under surface of the stripper frame to hold it in an elevated position, and compressed air controlled means to operate the pistons in unison or independently.

---



1,696,670. METHOD OF AND MACHINE FOR CASTING. EARLE J. BYERLEIN, Wauwatosa, Wis. Filed Oct. 20, 1927. Serial No. 227,526. 12 Claims. (Cl. 22—92.)

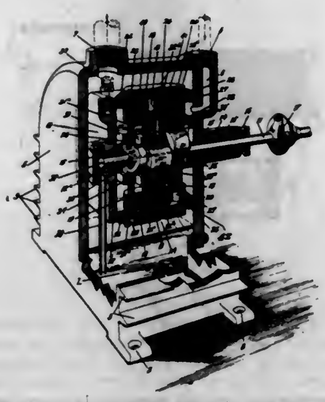
1. A casting machine, comprising a support having a guide means, flask sections slidably mounted thereon and movable towards and away from each other, stripping pins extending through the flask sections and into the recesses forming the mold for engaging the casting to be formed therein, means for moving the flask sections to open positions while the stripping pins are in their casting engaging position, and means for moving the stripping pins to casting disengaging position while the flask sections are in open position.



---

1,696,671. GARMENT. JOHN A. DUNCAN, Hamilton, Ontario, Canada, assignor to Mercury Mills, Limited, Hamilton, Canada. Filed May 9, 1928, Serial No. 276,345, and in Canada July 2, 1927. 5 Claims. (Cl. 2—90.)

1. A garment having an opening at the top thereof; a collar having its ends narrower in width than the remainder of the collar and secured around the edge of the said opening; and a closure strip overlying the said narrow ends and secured to the garment.

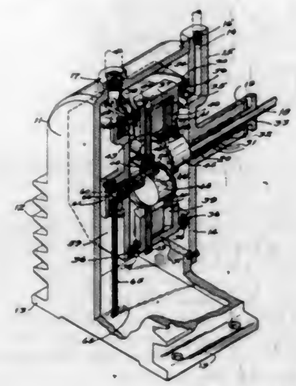


1,696,672. APPARATUS FOR MAKING LOCK-NUT BLANKS. I. C. EMERY, Baltimore, Md., assignor to Chapman Self Locking Nut Company, Baltimore, Md., trustees of a Common Law Trust Estate Filed Oct. 8, 1925. Serial No. 61,255. 19 Claims. (Cl. 10—72.)

6. In a machine for making lock nut blanks from metal strips, the combination of a base member provided with two end portions separated on one side by a pair of vertically disposed recesses and provided with a pair of horizontally disposed recesses; said base member also provided in each end portion with a well passing from said last named recesses down into each end portion; readily attachable and detachable folding and swaging dies located in said vertically disposed recesses; reciprocating compressing dies located in said horizontally disposed recesses; a cutting means carried by said base member; a pair of reciprocating members provided with cam surfaces movable up and down in said wells; folding and swaging plungers coacting with said first named folding and swaging dies; and a reciprocating cutting means coacting with said first named cutting means.

---

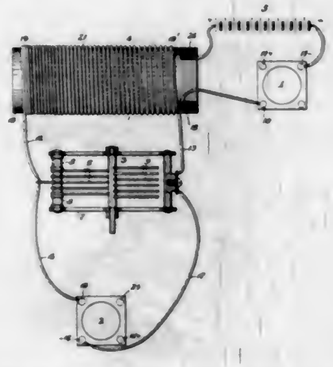
1,696,673. COMPRESSOR. WILFRED FOURNESS, Pasadena, Calif., assignor, by mesne assignments, to The Fourness Development Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1925. Serial No. 61,372. 8 Claims. (Cl. 230—185.)



1. In a compressor, in combination, a compressor body, a plurality of cylinder blocks inserted thereinto with cylinders therein, said cylinder blocks having bores

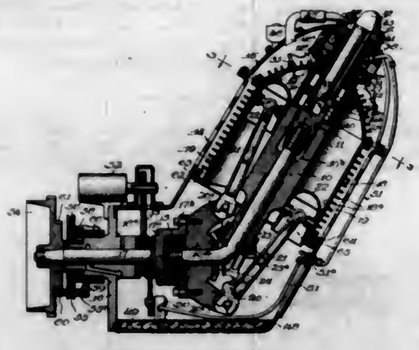
parallel with said cylinders for valve members, and having outlet ports, valve members reciprocating in said bores, and controlling only said outlet ports, pistons in said cylinders, an operating shaft, eccentrics connected for reciprocating said pistons and said valve members, and a housing for said compressor body into which discharge from said cylinders is made during the reciprocating of said pistons and said valves.

---



1,696,674. COMPRESSOR. WILFRED FOURNESS, Pasadena, Calif., assignor, by mesne assignments, to The Fourness Development Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1927. Serial No. 173,739. 9 Claims. (Cl. 230—217.)

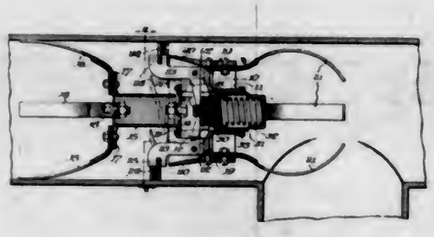
1. In a compressor, a cylinder, an eccentric rotatable about an axis non-parallel with that of the cylinder, a block in which said eccentric rotates, and a piston operating in the cylinder, said piston being provided with an integral extension having a sliding connection with the block for causing the block to reciprocate the piston as the eccentric is rotated, and for permitting relative motion between the piston and the block transverse to the cylinder axis.



---

1,696,675. RADIOFREQUENCY UNIT. THEODORE E. FRIEND, Norwalk, Ohio. Filed Jan. 24, 1927. Serial No. 162,983. 8 Claims. (Cl. 175—359.)

1. A coil for use in radio frequency units in which the primary windings are concentrated in one end of the coil and in which the secondary windings are spaced progressively decreasing distances from the primary winding end to the other end of the coil.

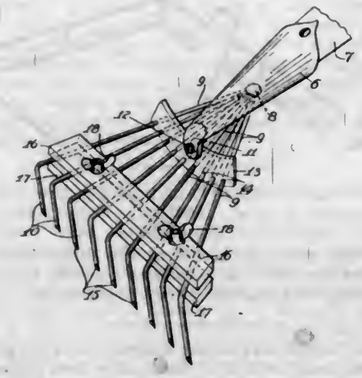


1,696,676. INTERNAL-COMBUSTION MOTOR. WILLIAM FUHA, Chicago, Ill. Filed Apr. 30, 1927. Serial No. 187,780. 5 Claims. (Cl. 123—43.)

1. In an internal combustion motor, the combination of a main drive shaft, a crank disc mounted on said drive shaft and provided with radial crank arms, a crank case for said crank disc, a bearing shaft supported at its lower end in said crank case, and extending upwardly at an obtuse angle to the axis of said drive shaft, a cylinder block rotatively mounted on said bearing shaft, a cylindric housing surrounding said cylinder block and fixed to said crank case, a support at the upper end of said housing for the adjacent end of said bearing shaft, pistons mounted on said cylinders, connecting rods connecting each of said pistons with a corresponding crank arm, and gear members connecting said crank disc with the adjacent end of said cylinder block.

---

1,696,677. TUBE CLEANER. THOMAS R. HAYTON, Appleton, Wis. Filed Dec. 5, 1927. Serial No. 237,737. 5 Claims. (Cl. 15—104.06.)

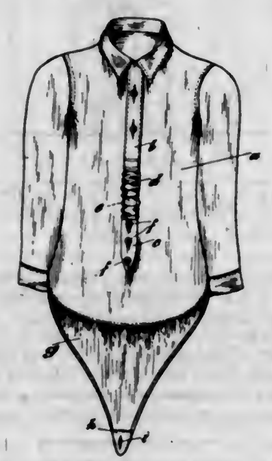


1. A liquid impelled tube cleaner, comprising in combination, a frame, forward guide arms rigidly connected thereto, rear guide arms resiliently connected thereto, a plurality of bell cranks pivoted to the frame and mounted for oscillation in radial planes, an impeller blade mounted on one of the arms of each of said bell cranks, and a single spring means acting on the other arms of all of said bell cranks.

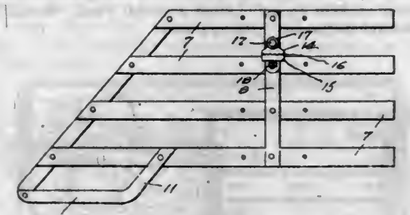
---

1,696,678. HAND CULTIVATOR. CEDRIC RIDDULPH HENNING, Hunters Hill, near Sydney, New South Wales, Australia. Filed Mar. 17, 1924, Serial No. 699,680, and in Australia Mar. 27, 1923. 3 Claims. (Cl. 55—10.)

1. Improvements in hand cultivators comprising a handle, a socket attached thereto, a series of radially extending spring tines rigidly and permanently attached about a point towards the rear of said socket and all passing through a transverse bar or spacing piece rigidly attached at or about the forward end of said socket, said



tines being turned downwardly at their free ends and a supplemental weight detachably secured to the tines between said spacing piece and their down-turned ends.



---

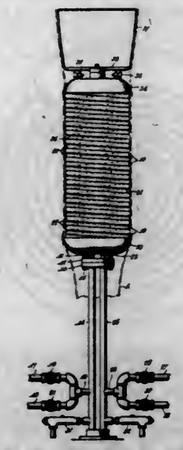
1,696,679. SHIRT AND LIKE ARTICLE OF WEARING APPAREL. ERNEST HIGGINS, Gloucester, England. Filed Apr. 9, 1926, Serial No. 100,866, and in Great Britain Mar. 9, 1926. 1 Claim. (Cl. 2—77.)

A shirt comprising a front portion and a back portion, said front portion adapted to be opened at the front above the waist line, a band attached to one edge of the front portion having a set of button holes therein for buttoning onto a set of buttons attached to the other edge of the front portion, said band extending below the opening of the front portion of the shirt and having a set of of buttons attached thereto, a pear-shaped tail of greater length than the front portion of the shirt, the apex of which forms the extreme bottom edge of said tail, and a button hole in said apex adapted to be secured to one of a plurality of buttons fastened to and extending up the lower portion of the band whereby said tail may be passed between the legs of the wearer and secured by its apex to one of said buttons, and resilient means above said second set of buttons to allow the said tail a certain amount of play and to take up any outward bulge of the front when the wearer stoops or sits down.

1,696,680. PLANT GUARD FOR CULTIVATORS. JAMES HLAVKA, Burke, S. Dak. Filed Dec. 23, 1927. Serial No. 242,128. 4 Claims. (Cl. 97—188.)

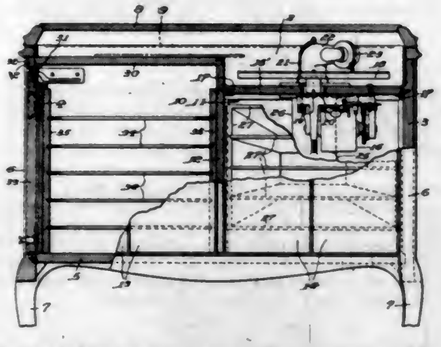
1. A guard of the class described comprising a plurality of spaced parallel bars disposed horizontally in a vertical plane, the lengths of the bars decreasing upwardly in a gradual manner, said bars being disposed with their rear ends in the same vertical plane and their forward ends in an upwardly rearwardly inclined plane, and means for securing the bars in fixed relation together.

---



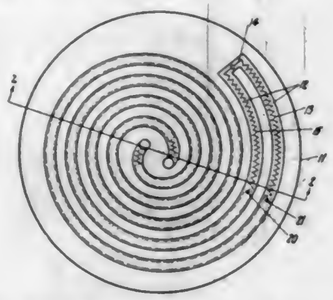
1,696,681. REEL. LIZZIE HOOCK, Colony, Okla. Filed Feb. 24, 1928. Serial No. 256,513. 3 Claims. (Cl. 254—190.)

1. A reel for clothes lines comprising a plate adapted to be fixed to a wall, a plurality of arms mounted on said plate and supporting a second plate spaced from the first plate, a casing mounted on said first plate, a shaft journalled in the casing and the second plate, a pulley non-rotatably mounted on said shaft, and a crank fixed to the outer end of the shaft.



---

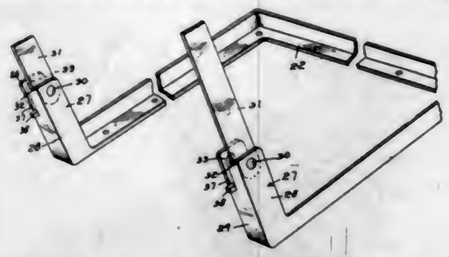
1,696,682. DEVICE FOR DRYING, STEAMING, AND CONDITIONING TUBULAR FABRICS. MAURICE M. KASANOF, New York, N. Y. Filed Dec. 8, 1927. Serial No. 238,604. 7 Claims. (Cl. 26—56.)



1. A device for use in drying, steaming and conditioning fabrics, including two coils, the convolutions of one coil alternating with the convolutions of the other coil, said coils having inlets adapted to receive steam or air, to the inlet and imperforate at the convolutions remote to the inlet and imperfate at the convolutions remote from said inlet, the other coil having imperforate convolutions adjacent to the inlet and perforated convolutions remote from the inlet.

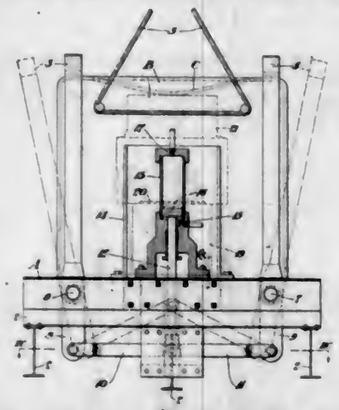
1,696,683. TALKING MACHINE. EUGENE T. KIEFFER and WILLIAM B. STEVENSON, Philadelphia, Pa., assignors to Victor Talking Machine Company, a Corporation of New Jersey. Filed July 31, 1923. Serial No. 654,840. 3 Claims. (Cl. 312—8.)

1. In a talking machine cabinet, the combination of front and rear walls and end walls extending therebetween closing said cabinet on the four substantially vertical sides thereof, one of said end walls being substantially flush with respect to the adjacent ends of the front and rear walls and the other end wall being inwardly offset with respect to the adjacent ends of the front and rear walls so as to provide a recess in the end of the cabinet, a movable leaf adapted to seat in and substantially fill said recess and when in said recess to impart to said end of the cabinet the same appearance that the first mentioned end wall imparts to the other end of the cabinet, and means for hingedly connecting said leaf to said cabinet to permit the lower edge of said leaf to be moved from its lowest position in said recess outwardly and upwardly to bring said leaf into a substantially horizontal position, and means concealed within said cabinet for supporting said leaf in said horizontal position.



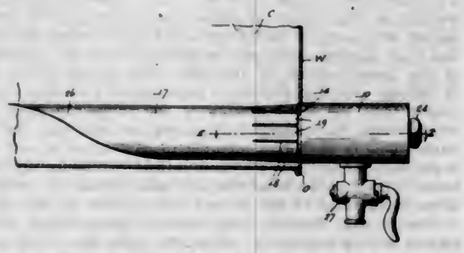
1,696,684. HEATER CONTROLLER. OTTO A. KNOPF, Oakland, Calif. Filed Apr. 13, 1927. Serial No. 183,551. 7 Claims. (Cl. 219—37.)

1. In an electrical heating device, an electrical heating unit, and means for temporarily increasing the energization of the unit beyond its normal operating point during the initial heating up period of the unit comprising a thermostat operated in response to the attainment of the desired rate of heat emission of the unit to decrease its energization.



1,696,685. AUTOMOBILE SEAT HINGE. FERDINAND LEUTZ, Hebron, N. Dak. Filed Apr. 9, 1927. Serial No. 182,403. 3 Claims. (Cl. 16—191.)

1. A hinge for the back section of an automobile seat, comprising a lower hinge section including sides and a back, said back having an inwardly projecting stop tongue spaced from both sides and a longitudinal slot upon one side of the stop tongue, a pin carried by the sides, and an upper hinge section having an aperture to receive the pin, said upper



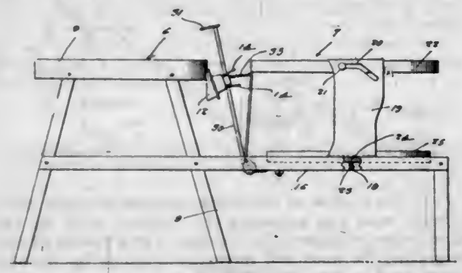
hinge section being of a width to pass between the stop tongue and either side, said stop tongue serving to lock the upper hinge section against lateral displacement.

1,696,686. APPARATUS FOR CROWNING ANNEALING BOXES. ARTHUR R. MCARTHUR, Gary, Ind., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 24, 1926. Serial No. 97,052. 3 Claims. (Cl. 153—48.)

3. An apparatus for crowning annealing boxes, comprising a base, a pair of clamping yokes pivotally secured to said base and adapted to be swung into and out of position over the annealing box to be crowned, to hold said box against vertical movement relative to said base, means for operating said yokes, and a power operated jack mounted on said base and adapted to be operated to force the top of the annealing box upwardly into crowned position.

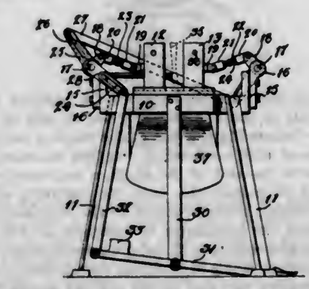
1,696,687. DISPENSING FAUCET. MARTIN NARBO, Brooklyn, N. Y. Filed Mar. 7, 1927, Serial No. 173,530, and in Guatemala Mar. 12, 1926. 10 Claims. (Cl. 221—23.)

1. A dispensing device for containers, comprising a tubular body section and a tubular shank section, said body



provided with a peripheral abutment shoulder, an intermediate portion of less diameter than said shoulder, and a third portion of still less diameter over which said shank section telescopes, said shank having a radially expansible and normally contracted end, means on said intermediate portion coacting with the contractable and expansible end of the shank upon movement thereof toward the peripheral abutment shoulder for radially expanding said end to approximately the diameter of the abutment shoulder, and means for moving said sections longitudinally of each other, whereby to grip the container wall around an outlet opening in the container.

1,696,688. MOLD FOR HIGH-TEMPERATURE CASTING OF REFRACTORY BODIES. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Sept. 28, 1926. Serial No. 138,332. 12 Claims. (Cl. 49—65.)

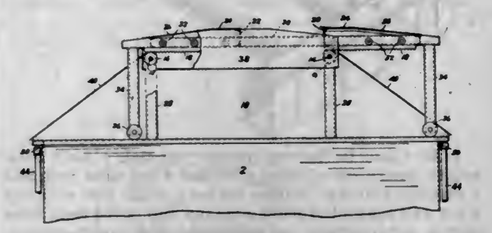


12. The process of making a mold for high temperature casting, that comprises mixing 80 to 85 parts of fused silica, of which a material portion is amorphous, comminuted to at least 20-mesh fineness, with 20 to 15 parts of comminuted lime, adding sufficient water for dry pressing, dry pressing the resulting mixture, and hardening the molded material by heat in the presence of steam.

1,696,689. MILKING STOOL AND PAIL HOLDER. RICHARD A. POEHLS, La Moure, N. Dak. Filed Sept. 18, 1928. Serial No. 306,707. 3 Claims. (Cl. 31—57.)

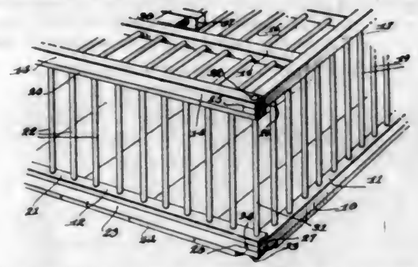
1. In a structure of the class described, in combination, a milking stool, a horizontal forwardly extending frame mounted on said stool and provided with a supporting rod, a milk pail holder rockably mounted on said rod, an operating member pivotally connected with said holder, a retaining device on said stool with which said operating member is cooperable, standards on said frame at diametrically opposite sides of the pail holder, and pin and slot connections between the standards and pail holder.

1,696,690. MOLD. HARRY D. RINDSBERG, Cincinnati, Ohio, assignor to Harry J. Hater, Cincinnati, Ohio. Filed Sept. 14, 1927. Serial No. 219,519. 5 Claims. (Cl. 22—92.)



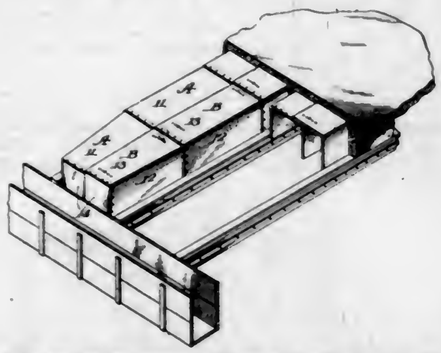
1. A mold comprising a base, a pair of separable mold sections thereon, a pair of rock shafts journaled on said base, crank arms on said shafts, means pivotally connecting the crank arms and mold sections, means operatively connecting said rock shafts whereby rotation of one shaft will turn the other, means to turn one of the shafts whereby the crank arms will separate the mold sections, and a weight to automatically return the mold sections to their operative position.

1,696,691. NECKTIE. TOBIAS ROCHMAN, New York, N. Y. Filed Jan. 12, 1928. Serial No. 246,168. 2 Claims. (Cl. 2—146.)



1. A manually tied necktie comprising outer fabric in tubular form, an inflatable bag disposed within said fabric tube, said inflatable bag being in collapsed condition and serving as a liner when said necktie is in manually tied condition, and inflating means for the bag whereby it may be distended and the fabric stretched and smoothed when said necktie is in untied condition.

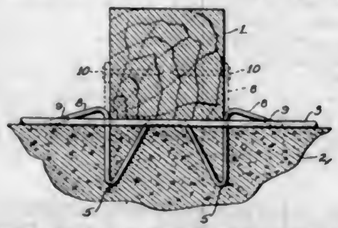
1,696,692. ROOF FOR CARS. PRICE L. ROGERS, Narberth, and LOUIS P. HOLLADAY, Jr., Chestnut Hill, Pa. Filed Mar. 20, 1928. Serial No. 263,107. 4 Claims. (Cl. 105—377.)



1. In combination with a car having upwardly extending sides and ends, a roof including a central portion supported above the tops of the sides of the car and side portions sloping downwardly from the central portion to the sides and pivoted at their upper edges about axes extending lengthwise of the car whereby the side portions may be raised to substantially horizontal positions, said central portion of the roof including at least one section movable horizontally towards a side of the car over a side portion to open the central portion of the car, said section being of such width that, if moved to an extreme open position with its inner edge adjacent the inner edge of the side portion over which it extends, it will not project substantially beyond the side of the car.

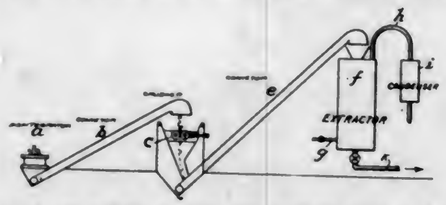
1,696,693. COOP OR CRATE. ARTHUR W. ROSENBERGER, Broadway, Va. Filed June 20, 1927. Serial No. 200,249. 5 Claims. (Cl. 217—43.)

1. A knockdown coop or crate comprising a bottom section having cleats on the upper side thereof to which the bottom boards are attached, said cleats being disposed at the opposite sides of the bottom, side and end sections each having upper and lower bars with interposed rounds, said side sections fitting side by side between the cleats when the coop is in knocked down condition, and a top section consisting of spaced apart longitudinal bars connected by grounds, the ends of the bars and cleats of the aforementioned sections being connected by interlocking joints at the corners of the coop when assembled and having bolt holes therethrough; together with bolts extending through said joints from the top to the bottom of the coop at the corners thereof for securing all the sections together and bracing the structure, the bolt holes at the ends of the top and bottom also providing for securing the parts together in knocked down condition.



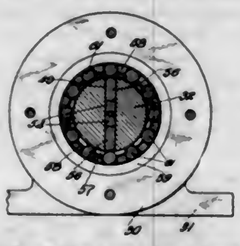
1,696,694. CONCRETE FORM. TELESPHORE J. SENESAC, Chicago, Ill. Filed July 2, 1927. Serial No. 203,099. 14 Claims. (Cl. 25—131.5.)

1. In forms for pouring plastic material, a main form section having spaced sides walls and a top cross wall, and a supplemental form section having a single side wall and a top wall adapted to overlap the top wall of the main form section, and removable end sections adapted interchangeably to be secured to the open end either of a main form section or a supplemental form section, substantially as described.



7. In forms of pouring plastic material, a main form section having spaced side walls and a top cross wall, and a supplemental form section having a single side wall and a top wall adapted to overlap the top wall of the main form section, a cross bar for supporting the lower edges of the main and supplemental form sections, said cross bar consisting of telescoping sections, each provided with a pivoted stirrup embracing the other bar sections, means for supporting the ends of the bars and maintaining exterior contact with the lower edges of the form sections, and means carried by the cross bars for clamping the lower edges of the form sections against the exterior contacting means substantially as described.

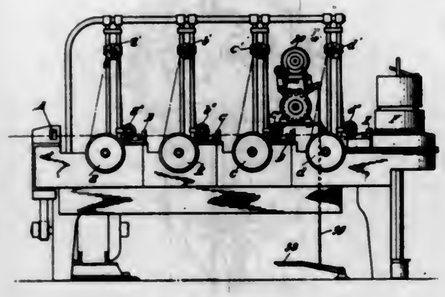
1,696,695. ANCHOR FOR FLOOR SLEEPERS. TELESPHORE JOSEPH SENESAC, Chicago, Ill. Filed Oct. 21, 1927. Serial No. 227,670. 12 Claims. (Cl. 72—101.)



1. A device of the class described comprising a spacing member, a supporting member secured thereto, and a paid of flexible fingers formed on said supporting member and spaced from the point of connection between said members to define a seat for a bar, said supporting member having open loops between said point of connection and said fingers, said fingers having their base portions free to move a limited distance longitudinally of said spacing member.

1,696,696. PROCESS OF EXTRACTING ROSIN AND TURPENTINE FROM WOOD. ABRAHAM A. SHIMER, Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 30, 1926. Serial No. 157,887. 2 Claims. (Cl. 203—6.)

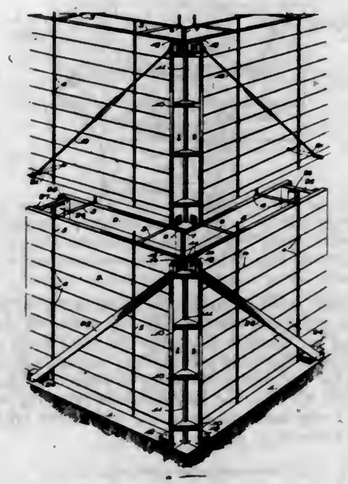
1. In the process of extracting resinous products from resinous wood and preparing the resinous wood for the manufacture of paper pulp, the steps which consist of disintegrating the wood and thereafter crushing the disintegrated wood to form thin flattened pieces without tearing and destroying the fibre.



1,696,697. APPARATUS FOR POINTING WIRES. WILLIAM H. SOMMER, Peoria, Ill. Filed Feb. 20, 1926. Serial No. 89,739. 5 Claims. (Cl. 78—21.)

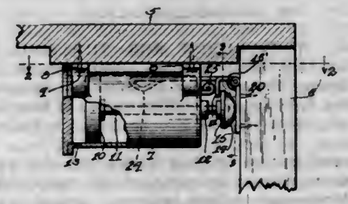
1. In a wire end pointing apparatus, a housing, a slotted rotatable shaft in the housing, a series of sets of swaging mechanisms disposed in the slot of the shaft, a pair of hammers associated with each set of swaging mechanisms and disposed within the slot of the shaft, a cage encircling the shaft, means to mount the cage for creeping movement within the housing, rollers carried by the cage and disposed to engage with the said pairs of hammers as the shaft is revolved, the adjacent sets of swaging mechanisms and the adjacent hammers being in abutting engagement, and combined wire guiding and end thrust take-up means threaded into the shaft and engaging an end set of swaging mechanisms and the hammers thereof.

1,696,698. PROCESS FOR POINTING AND DRAWING WIRES. WILLIAM H. SOMMER, Peoria, Ill. Original application filed Feb. 20, 1926, Serial No. 89,739. Divided and this application filed May 4, 1927. Serial No. 188,745. 1 Claim. (Cl. 205—2.)



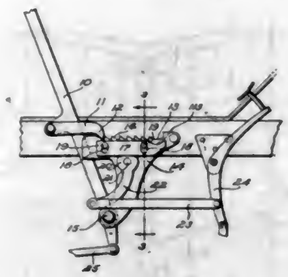
The hereindescribed method for pointing and drawing wire or the like through a series of successive reducing dies of a continuous wire drawing bench, which resides in initially shaping the end portions of the wire to provide same with a succession of reduced portions which latter correspond approximately in diameter to the diameters of the reducing dies of a wire drawing bench, and then in threading the end of least diameter into the reducing die of greatest diameter and moving the wire until the various diametered portions are in register with the respective reducing dies of corresponding diameter, and finally in drawing the wire through the reducing dies.

1,696,699. MECHANISM FOR USE WITH ARTICULATED MOLD FORMS. HAROLD ROBERT SUITER, Grand Rapids, Mich. Filed Aug. 2, 1927. Serial No. 210,197. 12 Claims. (Cl. 25—131.)



9. A holding and releasing mechanism for the tie rods of articulated mold forms, comprising a supporting plate for attachment to the top of a mold frame, a spacing bar secured to and depending from said plate, a plurality of tie rod gripping elements mounted thereon in spaced relation longitudinally of the bar, and a common means operable to effect rod gripping and releasing action of the plurality of gripping elements thereon.

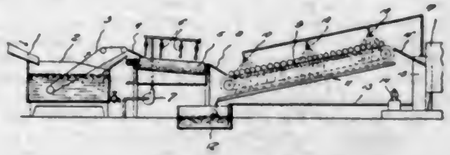
1,696,700. MOLD-FORM STRUCTURE. HAROLD ROBERT SUITER, Grand Rapids, Mich. Filed Aug. 2, 1927. Serial No. 210,199. 15 Claims. (Cl. 25—131.)



7. A corner mold form comprising complemental articulated side wall sections extending in converging angular relation with the adacent edges of the outer side wall sections and terminating at opposite sides of the corner extremity, an angle member having its inner face provided with a vertically extending V-shaped filler portion abutting the edges of and forming a continuation a of the outer side wall sections and providing the outer corner angle of the mold, means to support and position the base of said angle member, corner brackets secured to the opposite sides of said member at its top, and turn-buckles at opposite sides of the angle member anchored to said brackets and to a stationary abutment to position and hold the angle member with its filler in cooperative alinement with the side wall sections.

1,696,701. DOORCHECK. JAMES SCHORNACK, Belleville, N. J. Filed Dec. 10, 1927. Serial No. 239,197. 2 Claims. (Cl. 16—84.)

1. In a door check, a cylinder adapted to be secured to the door jamb and having a restricted opening, a plunger to slide in the cylinder, a plunger rod attached to the plunger, a head carried by a plunger rod and provided with a forward inclined face and a rear shoulder, a plate hinged to the door to swing vertically and provided with a depending engaging lip for co-action with said head, a releasing arm connected with the plate and having a cam, and a stationary trip arranged in the path of travel of the cam.



1,696,702. BRAKE-RELEASING DEVICE. WILLIAM H. WATLINGTON, Denver, Colo. Filed Feb. 2, 1927. Serial No. 165,422. 1 Claim. (Cl. 74—39.)

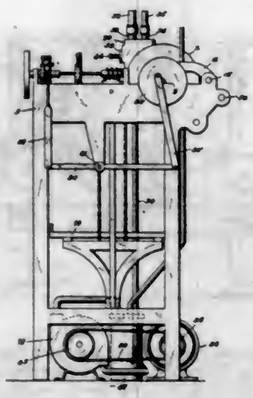
In a brake releasing device, in combination with a pivoted brake latch and toothed rack engageable by the latch, a releasing bar movable to engage the brake latch and lift the same out of latching position and means engaging said releasing bar for raising the same to effect disengagement of the latch, said toothed rack and said releasing bar having each a depression in which the end of the latch rests when the brake is in released position.

---

1,696,703. COMPOSITION FOR TREATING FRUIT. HENRY GRADY ZELLNER, Fort Myers, Fla., assignor to Zeltrocide Chemical Corporation, Lakeland, Fla., a Corporation of Florida. Filed Apr. 21, 1925. Serial No. 24,829. 1 Claim. (Cl. 99—1.)

The herein described composition to be prepared in solution for treating fresh fruit for market to prevent destructive decay resulting from blue mold, green mold, stem end rot, and anthracnose comprising a mixture of substantially one-hundred pounds of borax, substantially twenty pounds of sodium bicarbonate, and substantially two pounds of potassium permanganate.

---



1,696,704. COMPOSITION FOR TREATING FRESH FRUITS AND VEGETABLES. HENRY GRADY ZELLNER, Fort Myers, Fla., assignor to Zeltrocide Chemical Corporation, Lakeland, Fla., a Corporation of Florida. Filed Apr. 23, 1926. Serial No. 104,143. 1 Claim. (Cl. 99—1.)

A composition for treating fresh fruits and vegetables for market to prevent destructive decay, comprising borax, sodium bicarbonate, sodium carbonate, potassium permanganate and copper sulphate, the borax being present in a greater percentage than the other ingredients combined, and the remaining ingredients being present in successively diminishing proportions in the order stated.

---

1,696,705. CONVERTIBLE SINGLE OR DOUBLE ROTARY FEEDER. LESTER KYLE ALDRICH, Sidney, Ohio. Filed Oct. 14, 1927. Serial No. 226,222. 14 Claims. (Cl. 271—20.)

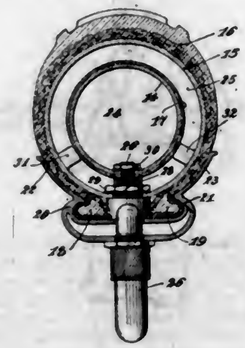
1. A rotary feeder including a continuously rotating pull off suction nozzle provided at its periphery with two arcuate sets of suction mouths having air ports, one set of suction mouths being provided with vent outlets, means for covering and uncovering the outlets for feeding either

one or two sheets during each revolution of the nozzle, and suction means with which the air ports are adapted to successively register.

---

1,696,706. TOOTHBRUSH HOLDER. WALTER C. ATHON, Lavoye, Wyo. Filed June 13, 1927. Serial No. 198,604. 2 Claims. (Cl. 206—15.1.)

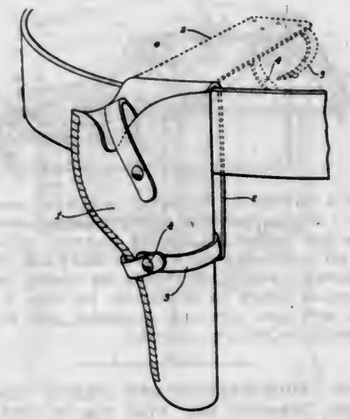
1. A device of the character described comprising a holder providing a housing for a tooth brush, having one end closed and the other end open, a vial located within the holder, a rubber gasket embracing the vial and having its periphery in frictional contact with the inner wall of the holder.



---

1,696,707. VEHICLE TIRE. DAVID N. BOOTH, New York, N. Y. Filed Sept. 5, 1925. Serial No. 54,668. 1 Claim. (Cl. 152—22.)

In a vehicle tire, an expansible outer tube, an expansible inner tube concentric therewith, a substantially inexpansible cover extending immediately around the exterior of, the inner tube to limit the expansion thereof to a diameter appreciably smaller than the inner diameter of the outer tube providing an annular space between the tubes, means

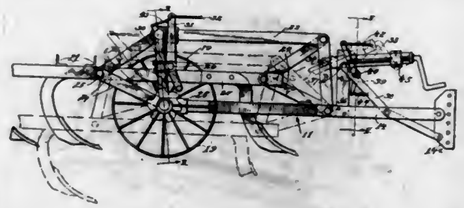


for inflating the inner and outer tubes whereby the pressure in the inner tube is appreciably greater than that in the space between the tubes, series of lugs connected to the

outer tube and normally extending between the same and the inner tube and its cover to position the said inner tube and its cover, and a shoe surrounding the outer tube.

---

1,696,708. HOLSTER. EDWARD J. BRAUER, St. Louis, Mo., assignor to Brauer Bros., Inc., a Corporation of Missouri. Filed Sept. 2, 1927. Serial No. 217,029. 4 Claims. (Cl. 224—2.)

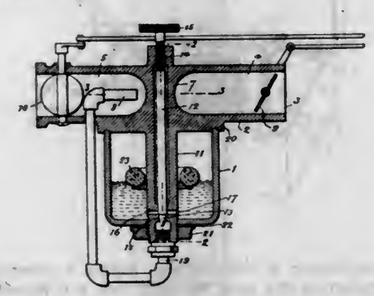


1. A holster having a downwardly turned flap forming a loop adapted to receive a belt, the lower end of said flap being provided with a strip embracing the holster body but removable therefrom in order to open said loop to permit its removal from the belt.

---

1,696,709. INSECTICIDAL PLANT FOOD OR FERTILIZER. FREDERICK G. DOKKENWADEL, Mobile, Ala., assignor of one-tenth to T. W. Millner, one-tenth to V. R. Walley, one-tenth to B. M. Stevens, one-tenth to E. C. Fishel, and one-tenth to J. E. Green, Richton, Miss. Filed Nov. 19, 1926. Serial No. 149,527. 4 Claims. (Cl. 71—9.)

2. A plant food or fertilizer comprising cotton seed hulls and active fertilizing material, and insecticidal and insect repelling material incorporated with the hulls, which act as a body material or carrier to retain and gradually disseminate the active materials in soil under the action of soil moisture.

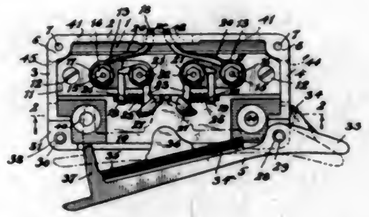


1,696,710. CULTIVATOR. GEORGE A. FLOOD, Los Angeles, Calif. Filed May 24, 1926. Serial No. 111,106. 14 Claims. (Cl. 97—73.)

1. An implement of the character described comprising a main frame, a crank axle carried by the main frame, ground wheels carried by said axle, a plow frame, an operative connection between one end of said plow frame and said axle, means operatively connected to the other end of the plow frame and to said axle whereby swinging movement of said axle will simultaneously impart a uniform amount of vertical movement to both ends of the plow frame, and operative means for latching said axle to said wheels whereby forward movement of the implement will act to impart swinging movement to the axle and thereby elevate the plow frame.

---

1,696,711. CARBURETOR. FRANK C. GIVENS, Tuolumne, Calif.; Clara B. Givens administratrix of said Frank C. Givens, deceased. Filed Sept. 13, 1926. Serial No. 135,242. 1 Claim. (Cl. 261—62.)

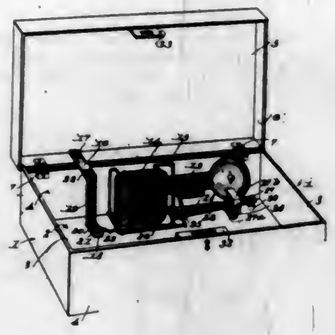


A carburetor, comprising means forming a mixing chamber formed with a central hollow post, an inlet at one end and an outlet at the opposite end, said means being also formed with a tubular extension projecting at right angles to said mixing chamber, said tubular extension being in free communication with said holow post, said tubular extension having apertures in its sides near the end thereof opposite said hollow post and a valve seat surrounding a discharge opening near said apertures, a hand operated valve extending through said hollow post and into said tubular extension for co-acting with said seat to control the flow of fuel passing out through said discharge opening, means forming a float chamber positioned to be in communication with said apertures, tubular means forming a passage-way from said discharge opening to said mixing chamber, and valves co-acting with said inlet and said outlet for controlling the entrance of air into the mixing chamber and the discharge of explosive mixture from the mixing chamber.

---

1,696,712. DOOR-OPERATED SWITCH. HERBERT GLASER, New York, N. Y. Filed Dec. 23, 1927. Serial No. 242,031. 8 Claims. (Cl. 200—54.)

1. In a switch, a casing, a pair of spaced movable contacts therein, spring means for normally pressing said

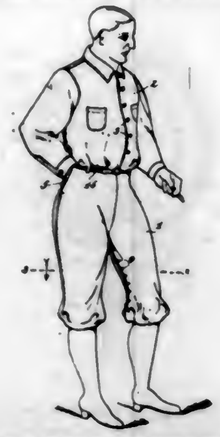


contacts toward one another, a reversible lever pivoted on said casing adjacent to one end thereof, a contact member on said lever adapted to contact with the con-

tacts within the casing when the lever is raised, and a stud at the end of the casing opposite to that at which the lever is pivoted whereby said lever may be pivoted at either end of the casing.

---

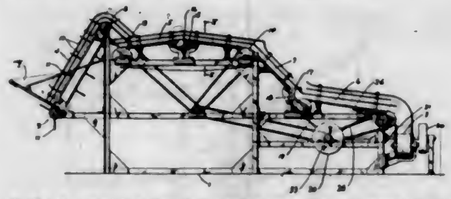
1,696,713. CIRCUIT CLOSER. JOHN T. HARRIGAN, Plainfield, N. J. Filed July 12, 1923. Serial No. 651,157. 1 Claim. (Cl. 200—85.)



In combination a portable base having a plurality of fixed supporting feet upon its under face, a U-shaped contact member supported upon the inner face of the base with its parallel legs arranged horizontally and having electrical connection with one terminal of a source of electrical energy, a resilient switch arm fixed to the base and having electrical connection with the other terminal of the source of electrical energy, the switch arm being disposed between the parallel legs of the U-shaped member and normally urged towards the lower one to complete an electrical circuit, and a vertically movable supporting foot attached to the free end of the switch arm and normally holding the latter in a position where it will not contact with the U-shaped member while the portable base is at rest upon a support, the switch arm being operable to engage the upper horizontal leg of the U-shaped member to complete the electrical circuit in the event the movable foot is pushed manually upwardly.

---

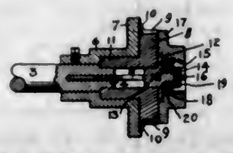
1,696,714. SEASHORE OUTFIT. NATHAN HELLER, Brooklyn, N. Y. Filed May 17, 1927. Serial No. 192,061. 4 Claims. (Cl. 2—79.)



4. In a garment of the character described, leg sections having in their sides adjacent the waist line large openings normally closed by buttons and provided on the inner face, adjacent said openings with flaps, said flaps permitting the hands to be passed through the openings when said openings are unbuttoned without exposing the wearer of the garment, and an undergarment secured to the leg sections at the waist line and comprising front and rear portions, one provided with a button and the other

with a button hole, whereby provision is made for buttoning and unbuttoning the undergarment when the leg sections are donned.

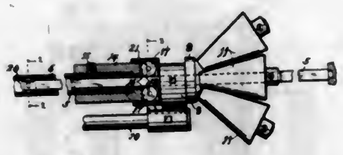
---



1,696,715. CAN-FEEDING MACHINE. ROBERT M. HUDDLESTON, San Francisco, Calif. Filed May 3, 1926. Serial No. 106,184. 4 Claims. (Cl. 198—33.)

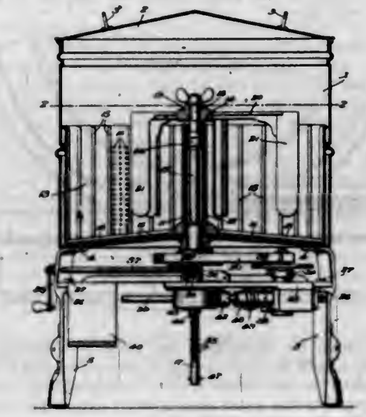
4. In a machine for arranging open-ended cans, a feed hopper, a delivery conveyor, conveyor mechanism arranged between said hopper and delivery conveyor, cam-operated means for positioning the cans, so that their open ends are directed upwardly or towards the hopper, and other cam-operated means for positioning the cans in upright position with their open ends uppermost, prior to depositing them on the delivery conveyor.

---



1,696,716. SHOE-HEEL-CUTTER GUARD. ERNEST L. KEENER, Newcastle, Ind. Filed Aug. 26, 1927. Serial No. 215,547. 2 Claims. (Cl. 12—88.)

1. A rotating shaft having a reduced end and a threaded bore in said reduced end, a sleeve mounted on the shaft said sleeve having a disk extension with a depression on one side, a disk having a hub mounted in the reduced end of the shaft and in the hub of the disk, and said disk also having peripheral cutters, a shaft extension having a threaded end screwed into the threaded bore of the shaft, said extension having an enlargement fitting the bore of the hub and having a disk extension bearing against the cutter disk to retain the assembly of the cutter, and a bearing disk mounted on the outer end of the shaft extension.

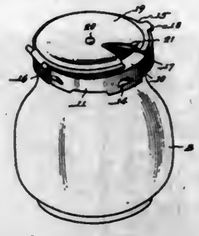


1,696,717. COP-WINDER HEAD. EDWARD F. KRUEGER, Oshkosh, Wis., assignor to Deltox Rug Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed July 9, 1926. Serial No. 121,420. 4 Claims. (Cl. 242—34.)

1. In a cop winder mechanism, a hollow drive shaft; a rotatable cop shaft longitudinally movable within said drive shaft; rollers carried by said drive shaft for transmitting rotary motion therefrom to said cop shaft, said rollers providing an anti-friction longitudinal slip connection between said shafts; and a roller carried by the inner end of said cop shaft, engaging the inner surface of said hollow drive shaft.

---

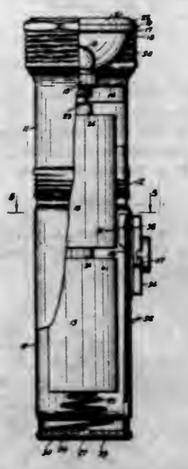
1,696,718. WASHING MACHINE. HENRY F. KUHLMANN and ELENORA KUHLMANN, Indianapolis, Ind., assignors of one-half to George P. Kern, Indianapolis, Ind. Filed July 25, 1925. Serial No. 46,003. 15 Claims. (Cl. 68—15.)



1. In a washing machine, the combination of a casing, a container therein, an agitator associated with the container, a shaft operatively connected with and for rotating the agitator for washing fabrics in the container, means for elevating the shaft, means for operatively connecting the container with the shaft for causing an elevation of the container therewith, and rotating means for the shaft causing a rotation of the container in its elevated position only, for removing the adherent liquid from the fabrics.

---

1,696,719. JAR CAP. AUGUST ALEXANDER LUNDEEN, Lynbrook, N. Y. Filed June 9, 1927. Serial No. 197,677. 3 Claims. (Cl. 215—63.)

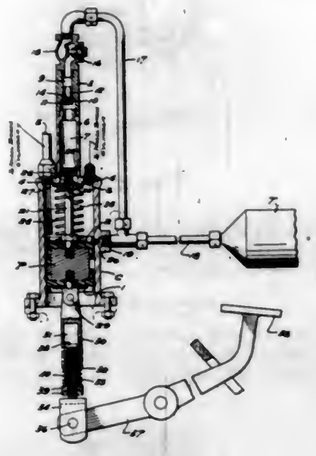


1. A cap for containers of the character set forth, including a neck embracing body detachably connected therewith and having an opening therethrough, a cover hingedly connected to said body for swinging movements to open and closed positions respectively, said cover having a notch and a rotary element on said cover having a notch for registry with the cover notch to permit the handle of a serving element to project therethrough, said rotary

element being shiftable to a position to dispose its notch out of registry with the cover notch whereby to completely close the container.

---

1,696,720. FLASH LIGHT. ANKER S. LYHNE, Bridgeport, Conn. Filed Apr. 27, 1927. Serial No. 186,872. 9 Claims. (Cl. 240—10.5.)

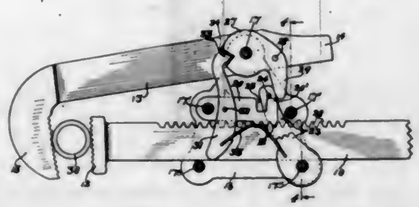


1. In a flashlight, a casing, an insulated contact, means for electrically connecting said contact to one electrode of a battery, a movable switch contact adapted to engage the first contact, means for shifting said switch contact comprising an element extending outside the casing shiftable in a direction parallel to the casing and also transversely thereof, and a guard surrounding the exposed portion of said element and movable therewith in both directions and projecting from the surface of the casing an amount at least as great as that of the element.

---

1,696,721. MASTER CYLINDER FOR HYDRAULIC BRAKES. CHARLES F. MATTINGLY, St. Louis, Mo., assignor to Mattingly Automatic Valve Company, St. Louis, Mo., a Corporation of Missouri. Filed June 7, 1927. Serial No. 197,086. 5 Claims. (Cl. 60—54.6.)

1. A device of the class described comprising, in combination, a cylinder, a piston working therein, a tank, a pipe line leading from the tank to the cylinder and communicating therewith in advance of the piston, said cylinder being provided in its wall with a port in communication with said pipe line, said piston closing said port when in its normally full release position, means for effecting

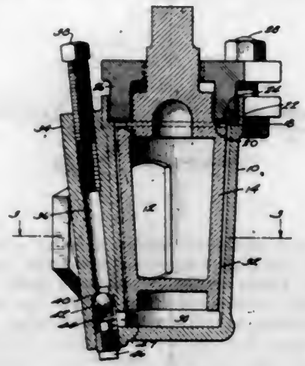


a compression stroke of the piston within the cylinder, a second pipe line leading from the cylinder in advance of the piston, means for returning the piston to its normal release position, means permitting movement of the piston

beyond its normal release position to uncover the port upon abnormal pressure in advance of the piston, and a valve interposed in the first named pipe line between the cylinder and its connection with the tank, said valve opening when the piston is in release position.

---

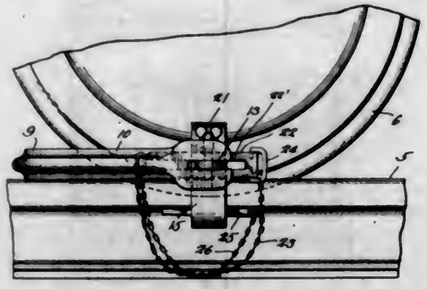
1,696,722. PIPE WRENCH. ARTHUR J. MIEHLE, Chicago, Ill. Filed Sept. 6, 1927. Serial No. 217,560. 7 Claims. (Cl. 81—106.)



2. A pipe wrench comprising a jaw member including a handle, a jaw member which is swingable and movable longitudinally with respect to the first said jaw member, means for holding said members in their operative position, means for locking said holding means, and means on said swingable member for releasing the locking means from the holding means by the swinging of said member, thereby enabling the sliding of said swingable jaw member along the other jaw member to the full open position automatically by a sudden jerking and stopping movement of the wrench.

---

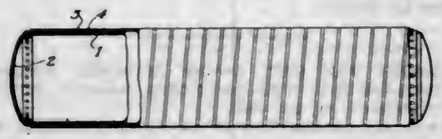
1,696,723. LUBRICATED VALVE. FOSTER MILLIKEN, Lawrence, N. Y., assignor to Milliken Valve Corporation, a Corporation of New York. Filed Mar. 16, 1928. Serial No. 262,089. 6 Claims. (Cl. 251—93.)



1. In a valve having a casing, a plug to fit in said casing and a stem on one end of the plug by which the same may be rotated, a shoulder on the plug adjacent the stem, a seat in the casing approximately in the same plane with the shoulder on the plug, a member adapted to surround said stem and contact with said shoulder and said seat in planes transverse the axis of the plug, means for holding

said member pressed against said shoulder and seat, a peripheral groove extending around the plug covered by said member and means for forcing grease into said groove.

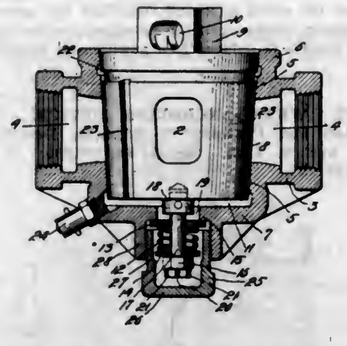
---



1,696,724. RAIL CLAMP. ED MULLINS, Cincinnati, Ohio, assignor of one-third to Arch. Mullins, Latonia, Ky., and one-third to Sam. Fitch Maguire, Louisville, Ky. Filed July 26, 1927. Serial No. 208,604. 2 Claims. (Cl. 188—45.)

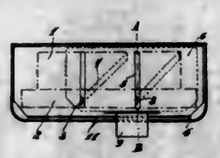
2. A clamp for clamping a car wheel to a railway rail, including a body portion having an outer arm and an inner arm, means on the inner arm for gripping the wheel, a grip secured to the outer arm, a shaft extending from the grip and having connection with the arm, a wedge having an elongated cut out portion extending from one end thereof, said cut out portion adapted to receive the shaft when the wedge is positioned, and said wedge adapted to move the grip into close engagement with the wheel and rail.

---



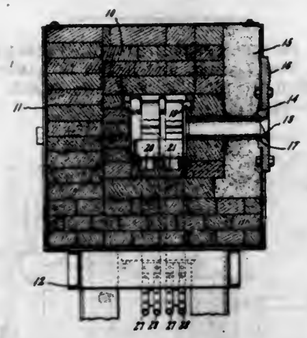
1,696,725. DRUM, PIPE, FITTINGS, ETC. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Feb. 12, 1926. Serial No. 87,987. 5 Claims. (Cl. 220—71.)

1. A tubular pressure-resisting vessel consisting of an inner tube with reinforcing rings welded in place around it and having in addition longitudinal reinforcing members.



1,696,726. VALVE. SVEN JOHAN NORDSTROM, Oakland, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed May 17, 1927. Serial No. 191,955. 8 Claims. (Cl. 251—93.)

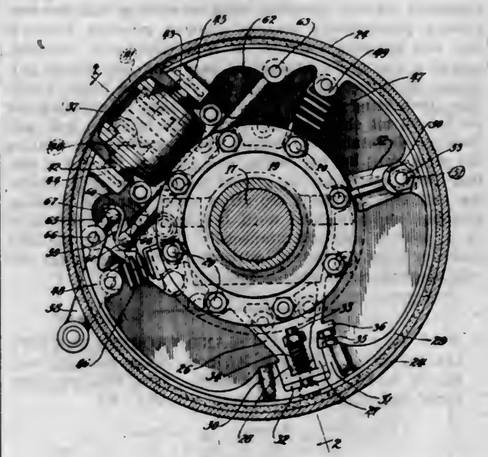
1. A valve comprising, a casing having a passageway therethrough and a tapered seat formed transversely of the passageway, said casing being open at the side in which the larger end of the tapered seat is formed and closed at the other side, a tapered plug rotatably supported in the seat and having a hole adapted to register with the passageway, the smaller end of the plug being separated from the adjacent side of the casing to constitute a chamber adapted to receive lubricant, the larger end of the plug and of the seat in the casing being provided with cooperating circumferential grooves communicating with the chamber, the side of the casing adjacent the smaller end of the plug being provided with a central hole, a stem secured to the smaller end of the plug and projecting through the hole in the side of the casing, a spring surrounding the stem and bearing at one end against the outer side of the casing and at the other end against means carried by the stem, a circular flange surrounding the stem and spring and extending outwardly from the outer surface of the side of the casing, means for closing the outer end of the space determined by the circular flange, and means for introducing lubricant into the space surrounding the spring and stem and into the chamber between the smaller end of the plug and the adjacent side of the casing.



---

1,696,727. POCKET CLOTHESBRUSH. NICOLAS OLMAZU, New York, N. Y. Filed Mar. 28, 1928, Serial No. 265,438, and in Belgium Jan. 13, 1928. 2 Claims. (Cl. 15—184.)

1. A pocket brush comprising in combination: a brushing element formed with a stock and hair-tufts, projecting spindles transversely mounted on the stock, a casing forming handle adapted to house the brushing element and having double walled sides, guide-ways in the inner wall of the sides of the casing extending parallel to the axis of the brushing element and adapted to be engaged by said spindles, movable plates engaging between the two walls of the sides of the casing and provided with oblique guideways adapted to be engaged by the spindles mounted on the stock, an operating knob outside the casing capable of sliding in a longitudinal groove of the bottom of the casing and connections between said operating knob and the movable plates.

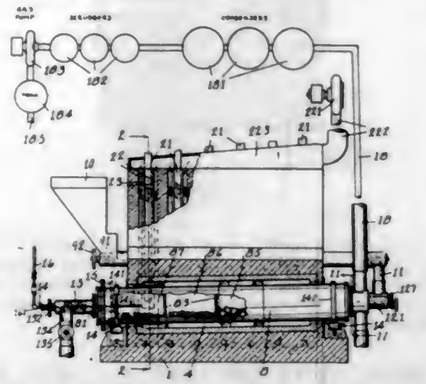


1,696,728. ELECTRIC FURNACE. ALBERT N. OTIS and CARL L. IPSEN, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Sept. 10, 1925. Serial No. 55,585. 8 Claims. (Cl. 266—1.5.)

1. An electric furnace comprising walls forming a heating chamber, a plurality of parallel bars extending across said chamber having their ends secured in opposite walls, and a heating resistor hung from said bars in a series of depending loops.

---

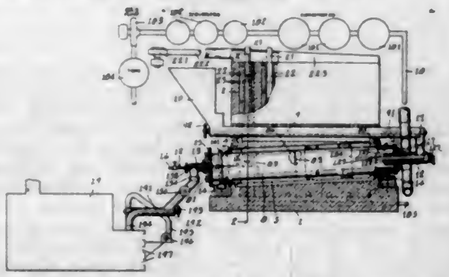
1,696,729. BRAKE FOR VEHICLES. GEORGE JOHN RACKHAM, Chicago, Ill., assignor to Yellow Coach Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1925. Serial No. 64,292. 8 Claims. (Cl. 188—106.)



1. The combination with the axle housing and wheel hub of a motor vehicle, of an inwardly reaching brake drum secured to the wheel hub, a radially extending abutment on the axle housing and within the brake drum, a fluid cylinder secured to the axle housing at a position within the brake drum and having its axis extending tangentially at the position of the cylinder, a circular brake shoe within the drum reaching past the position of the radial abutment and having its ends terminating adjacent to the ends of the cylinder, inwardly reaching lugs on the brake shoe slidably embracing the radial abutment, spring means tending to force the shoe radially inwards at the position of the abutment, adjustable means for limiting such movement, spring means tending to force the end portions of the shoe radially inwards, a pair of oppositely working plungers within the cylinder, operative connections between said plungers and the ends of the

brake shoe, a pair of links connected to the end portions of the brake shoe at points adjacent to the plunger connections aforesaid, and means for forcing said links apart to thereby set the brake independently of fluid pressure within the cylinder, substantially as described.

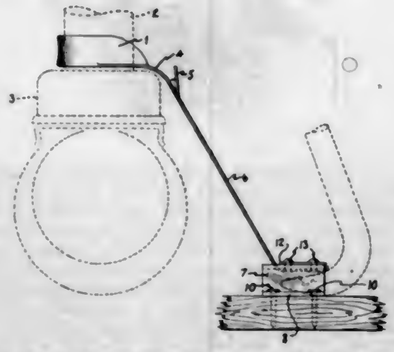
---



1,696,730. PROCESS FOR DISTILLING SHALE. HARRY S. REED, East Lansing, and RALPH D. LAMIE, Lansing, Mich. Filed Oct. 16, 1925. Serial No. 62,855. 4 Claims. (Cl. 202—16.)

1. The continuous process of distilling oil shale in an externally heated sealed tumbling barrel ball mill retort, subdivided by foraminous partitions into several different ball mill chambers, each succeeding partition having progressively smaller openings, each succeeding chamber containing progressively smaller angular grinding elements and ball grinding elements of heat conducting material, and of a size to be retained by each said foraminous partition, consisting in, reducing the shale to a lumpy condition, preheating the oil shale lump, then introducing the pre-heated oil shale in the lump form into the ball mill chamber containing the largest grinding elements, heating the shale until fluxing begins, and grinding the fluxed portion away, screening the ground mass to the next adjoining ball mill chamber, repeating these steps of heating, grinding, and screening until the spent shale is reduced to a powder and simultaneously flushing the distilled products from the retort, with steam to carry away the volatile products of distillation.

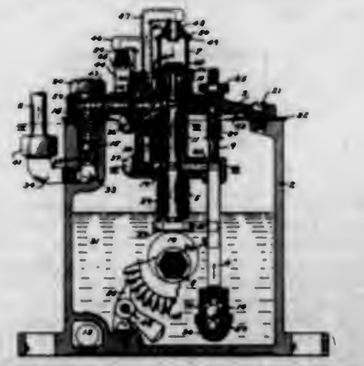
---



1,696,731. APPARATUS AND PROCESS FOR UTILIZING COAL. HARRY S. REED, East Lansing, and RALPH D. LAMIE, Lansing, Mich. Filed Oct. 16, 1925. Serial No. 62,856. 11 Claims. (Cl. 202—8.)

3. The continuous process of distilling solid carbonaceous material in an externally heated sealed tumbling barrel ball mill retort containing angular grinding elements and ball grinding elements of heat conducting material admixed in proportion to insure the flowing tumbling action of such grinding elements consisting in, continuously introducing and subjecting said material in a lumpy condition to the simultaneous tumbling action resulting from the rotation of said retort and the grinding action of such elements to progressively heat the said material lumps until coking begins at the surface, grinding away the coked part and repeating the operation on the residuary lumps until the volatiles are distilled away and the residue is reduced to a powder and discharged.

---

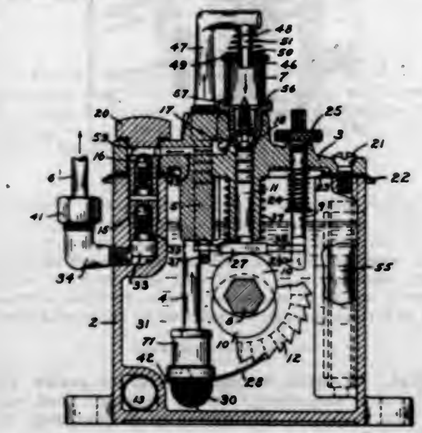


1,696,732. WHEEL-ANCHORING DEVICE. OTIS K. RICHARD and CLEMENT C. RICHARD, Detroit, Mich. Filed Apr. 3, 1925. Serial No. 20,339. 3 Claims. (Cl. 188—32.)

2. A wheel anchoring device comprising a strap iron bent to a U-shape in its midsection providing a collar to engage about a spoke of the wheel and legs extending outwardly therefrom, and a pair of foot portions each comprising a sheet metal plate bent to substantially U-form with apertured outwardly extending side flanges for attachment to a wheel supporting surface the high point of the U portion having a slot and the ends of the legs being inserted through the slot and return bent over the upper face of the respective plate providing an unobstructed space therebeneath for introduction of a detaching implement, and a rivet extending through the return bent end, the plate, and portion of the leg therebeneath.

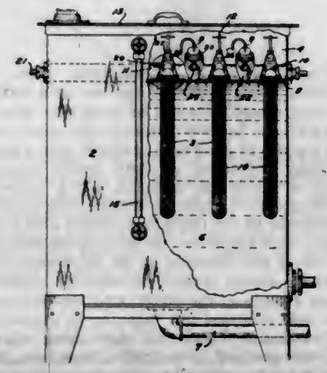
---

1,696,733. OIL PUMP. EUGENE M. SCOVILLE, Milwaukee, Wis., assignor of one-half to Floyd L. Swanberg, Danville, Ill. Filed June 9, 1922. Serial No. 567,064. 10 Claims. (Cl. 184—27.)



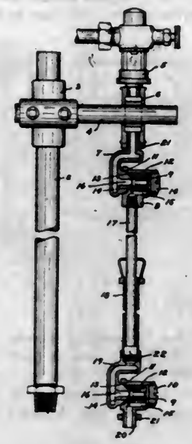
10. In combination, a casing forming a liquid reservoir, a discharge valve located within an integral portion of said casing, a pump unit comprising a cylinder and a plunger detachably associated with said casing, and driving mechanism for said plunger permanently secured to said casing below the normal liquid level in said reservoir, said unit being operable by said mechanism to urge liquid from said reservoir past said valve and being removable from said casing and said mechanism without permitting escape of liquid toward said reservoir past said valve.

---



1,696,734. OIL PUMP. EUGENE M. SCOVILLE, Milwaukee, Wis., assignor of one-half to Floyd L. Swanberg, Danville, Ill. Filed Sept. 22, 1922. Serial No. 589,748. 3 Claims. (Cl. 184—27.)

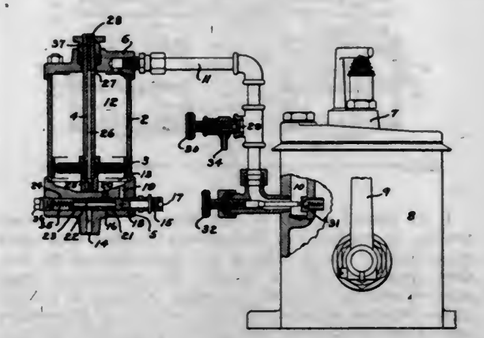
1. In combination, high and low pressure pump plungers, a cross-head having its medial portion rigidly attached to said high pressure plunger and having one end portion operatively connected to said low pressure plunger through a lost motion connection, an adjustable stop cooperating with the opposite end portion of said cross-head for limiting the movement of said plungers in one direction, resilient means coacting with one side of the medial portion of said cross-head for moving the same toward said stop, and means cooperating with the opposite side of the medial portion of said cross-head for moving the same in the opposite direction.



---

1,696,735. OIL FILTER. EUGENE M. SCOVILLE, Milwaukee, Wis., assignor of one-half to Floyd L. Swanberg, Danville, Ill. Filed May 24, 1923. Serial No. 641,075. 11 Claims. (Cl. 210—43.)

1. In a combination, a support, a divided perforated rigid sack retainer detachably connected to said support, and a flexible sack located within said retainer and removable therefrom by separation of said retainer divisions.

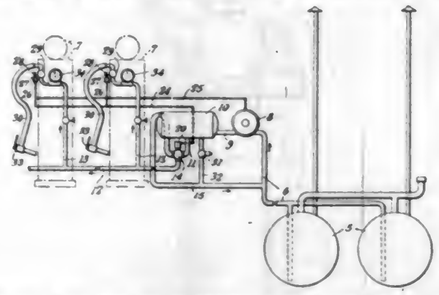


1,696,736. TELESCOPIC OILER. EUGENE M. SCOVILLE, Milwaukee, Wis., assignor of one-half to Floyd L. Swanberg, Danville, Ill. Filed Sept. 20, 1923. Serial No. 663,916. 7 Claims. (Cl. 285—9.)

1. In combination, a pair of elements having mutual coaction along spherical surfaces, one of said elements having a tubular projection penetrating said surfaces and communicating with the interior of said other element and said other element having a conduit extending from said interior transversely of the axis of said projection, and a removable closure cap associated with said other element in line with said projection.

---

1,696,737. GREASE CUP. EUGENE M. SCOVILLE, Cincinnati, Ohio, assignor of one-half to Floyd L. Swanberg, Pittsburgh, Pa. Filed May 5, 1927. Serial No. 188,949. 11 Claims. (Cl. 184—40.)

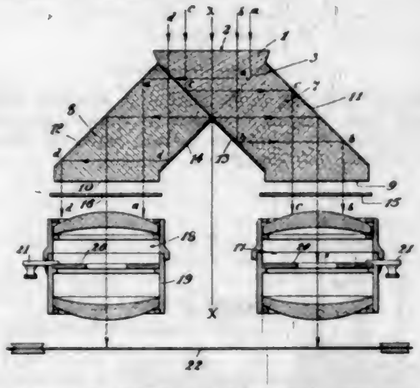


5. In combination, means forming a grease chamber, a piston within said chamber, means for applying oil under pressure to said piston to deliver grease from said chamber, and means including a by-pass for automatically introducing said oil into said chamber through said piston and thence to the point of delivery only when said piston has reached the end of its stroke.

---

1,696,738. LIQUID-DELIVERY SYSTEM. GEORGE W. STEDWELL, Brooklyn, N. Y., assignor of one-half to Francis Sheridan, New York, N. Y. Filed May 9, 1928. Serial No. 276,266. 15 Claims. (Cl. 221—95.)

1. In liquid delivery systems, the combination with a supply line and a delivery line, of pump means for trans-

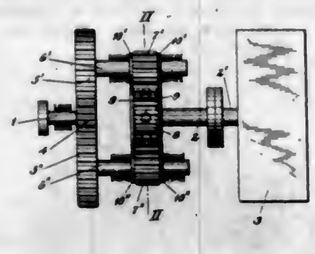


ferring liquid from the supply line to the delivery line, means for controlling discharge from the delivery line means for arbitrarily starting the pump when a delivery is to be made and for stopping the pump when the discharge is completed and bypass means automatically operable after each delivery for relieving the pressure in the

delivery line and for by-passing excess flow away from the delivery line said latter means including a bypass in connection with the delivery line and continually open to the supply line when the pump is not transferring liquid from the supply to the delivery side of the apparatus.

---

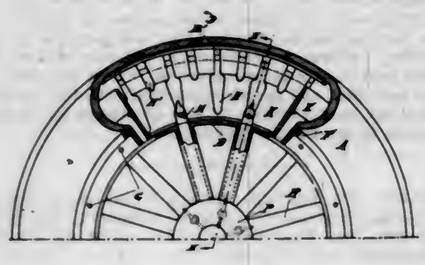
1,696,739. COLOR PHOTOGRAPHY. CLIFFORD LE ROY TRELEAVEN, Jackson Heights, N. Y., assignor to Color Cinema Productions, Inc., New York, N. Y., a Corporation of Delaware. Filed June 2, 1926. Serial No. 113,316. 2 Claims. (Cl. 88—1.)



1. An optical system of the character described comprising, in combination, two mirrors crossing each other at a common line parallel to the center line of the incident component of the system, the portions of these mirrors anterior to said line being silvered in parallel strips disposed perpendicular to said line of intersection and having intermediate transparent strips, the portion of each mirror posterior to said common line being reflecting overall, and a reflecting mirror parallel to each of said posterior reflecting portions, spaced therefrom and positioned in the path of rays reflected therefrom, said mirrors constituting means for dividing the incident beam of light into two beams which are geometrically alike and follow like optical paths.

---

1,696,740. GEARING. MICHAEL TRESCHOW, Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Jan. 24, 1927, Serial No. 163,009, and in Denmark June 17, 1926. 3 Claims. (Cl. 74—7.)



1. A system of gearing comprising a main driving shaft and gear mounted in fixed bearings, two intermediate shafts on opposite sides of the axis of the driving shaft and having gears for engagement with the gear on the driving shaft and having also each a transmitting gear, and a main driven shaft also mounted in fixed bearings,

and in which is included a floating gear loosely mounted on and connected with one of said main shafts to rotate therewith but to be displaceable in a direction substantially at a right angle to the plane of its supporting shaft.

---

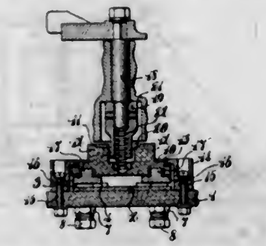
1,696,741. ELASTIC WHEEL. CONSTANT ADRIEN VAN BOURGONIE, Bergerhout-Antwerp, Belgium. Filed Sept. 2, 1925, Serial No. 54,109, and in Belgium Sept. 18, 1924. 1 Claim. (Cl. 152—8.)

In an elastic wheel, the combination with a wheel frame including a hub, spokes and a rim, of a solid rubber annular elastic element formed on each side with an annular hollowed out portion adjacent its inner periphery and having a series of grooves cut radially across same, said grooves having alternately a depth nearly equal to the whole depth of the elastic element, and a lesser depth; two rigid flange-like annular lateral guiding members secured to the edges of the rim and on either side respectively of the said elastic element; metal U-pieces placed on the rim of the wheel and engaging at the sides with the inner periphery of the elastic element at intervals corresponding to the deeper grooves of the latter, said U-pieces each having at each side a lateral pin engaging in a recess of the flange-like guiding members; an outer cover placed over the elastic element and said guiding members, the said outer cover having a circumferential groove formed in its inner periphery to receive and engage with the outer peripheral portion of the elastic element; and detachable means for securing the circumferential edge portions of the said outer cover against the outer faces of such guiding members adjacent the rim of the wheel.

1,696,742. BOTTLE CAP. RUDOLF WM. VON SYDOW, Glendale, Calif., assignor of one-half to Edward G. Burghard, Los Angeles, Calif. Filed Aug. 23, 1926. Serial No. 130,962. 2 Claims. (Cl. 215—38.)

1. In a bottle cap, means forming a closure, and a flange therefor arranged to cover the edge of the bottle opening, said flange having a plurality of small depressions therein forming vacuum cups to hold the cap in place when applied to the opening.

---

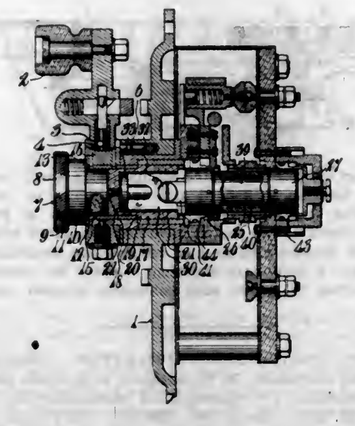


1,696,743. CARRIER USED IN MAKING BOOK AND OTHER MATCHES. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill. Filed Feb. 26, 1927. Serial No. 171,206. 11 Claims. (Cl. 93—7.)

1. In a match carrier of the class described, engaging points and flat projections on one edge of the strip and driving engaging means on the other edge of the strip.

---

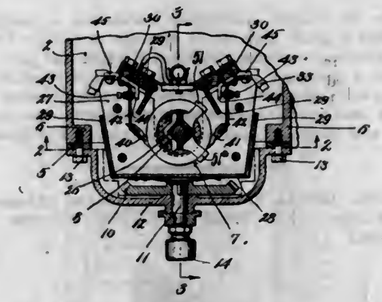
1,696,744. ELECTRIC CONTROLLING DEVICE. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Original application filed July 22, 1918, Serial No. 246,219. Divided and this application filed Apr. 16, 1923. Serial No. 632,332. 14 Claims. (Cl. 200—11.)



1. In a switch, a plurality of flat stationary contacts, a plurality of separate flat movable contacts adapted to bear always uniformly on said other contacts, a rotatable plate by which said movable contacts are loosely guided, an operating member for actuating said plate and connected to the latter, and resilient means acting on said plate for forcing said contacts together.

---

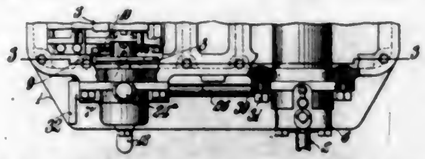
1,696,745. FUSE MECHANISM. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 10, 1923. Serial No. 656,691. 5 Claims. (Cl. 200—133.)



1. In a fuse member, a hollow cylinder of insulating material, heads of conducting material at each end thereof, one of said heads providing a seat extending longitudinally of the cylinder and the other an annular shoulder, a cartridge fuse having projecting terminals one adapted to engage said seat and the other to be bent into a position parallel to the plane of said shoulder, a segmental conducting element adapted to be supported on said

shoulder between the fuse cartridge and bent terminal, means for forcing said element onto said shoulder and said bent terminal into contact with said element, and an insulated grasping portion connected to said first mentioned head.

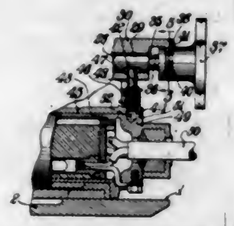
---



1,696,746. CONTROLLING MECHANISM. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 24, 1924. Serial No. 701,594. 11 Claims. (Cl. 200—8.)

8. A controller for the current of an electric circuit comprising a reversely operable rotatable drum having two sets of contacts, one set adapted to direct current in one direction in the circuit and the other set adapted to direct current in the opposite direction in the circuit, a plurality of said contacts being disposed in a single transverse plane, additional contacts carried by said drum, and cooperating contacts for all of said contacts, the contacts of each set being so arranged that upon movement of said drum in one direction from a zero point one set will successively engage said cooperating contacts and upon movement in the other direction from said zero point the other set will successively engage said contacts, said additional contacts remaining in constant engagement with their cooperating contacts as said drum is moved from zero to full position.

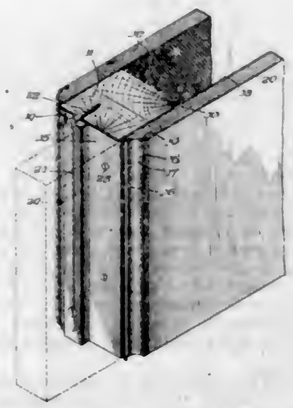
11. A controller comprising a rotatable drum having a plurality of operating positions, intermeshing gears for actuating the same, and means including an element engaging one of said gears for yieldably holding said drum in its various operating positions.



1,696,747. INTERLOCKING MECHANISM. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 5, 1925. Serial No. 73,525. 9 Claims. (Cl. 200—51.)

1. In an electric controlling mechanism, a shaft mounted only for rotation on a fixed axis and adapted on rotation in opposite directions from a given position to produce different circuits, and means including a member rotatable with said rotatable shaft and reciprocable longitudinally thereof and a stationary abutment member for controlling the direction in which said controller member may be moved.

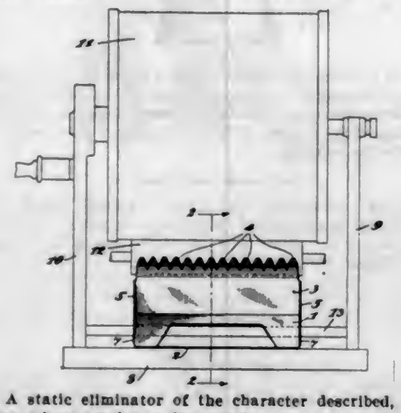
---



1,696,748. CONTROLLING APPARATUS. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 26, 1926. Serial No. 150,850. 16 Claims. (Cl. 200—50.)

1. In an electric controlling mechanism, a controller including a shaft movable in opposite directions from a given position to produce different circuits, and means including a grasping handle mounted on said shaft for moving said controller, said handle being adjustable relative to said shaft to selectively control the direction in which said controller may be moved from said position.

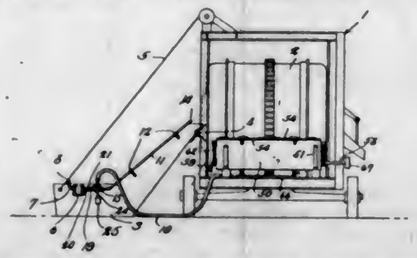
---



1,696,749. METAL TRIM. ISAAC A. BAUM, Chicago, Ill. Filed July 5, 1927. Serial No. 203,388. 3 Claims. (Cl. 72—98.)

1. In means of framing an opening in a wall, the combination of a support, a jamb divided longitudinally to form two sections, said sections being secured to said support, the margins of the sections being bent to provide plaster terminals, and a door stop mounted over and covering the gap formed by the longitudinal division of the jamb.

---

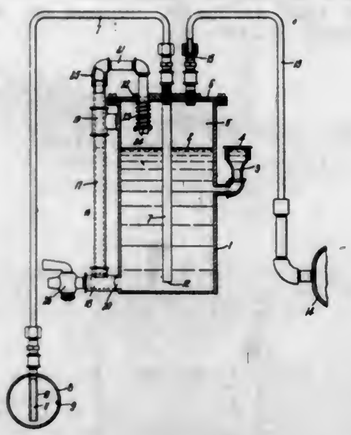


1,696,750. STATIC-DISCHARGE DEVICE FOR ROTARY STENCIL DUPLICATING MACHINES. ERNEST J. BRASSEUR, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed May 8, 1925. Serial No. 28,768. 3 Claims. (Cl. 175—264.)

1. A static eliminator of the character described, comprising a base portion, a foot portion, and an upright portion having a comb-like upper edge providing curved fingers or contact points and consisting of conducting material, said eliminator being adapted to be associated with a rotary stencil duplicating machine in such position that work being delivered from the machine passes over the curved fingers in contact therewith and the eliminator contacts a metallic frame element of the machine to form a ground connection.

---

1,696,751. ATTACHMENT FOR CONCRETE MIXERS. RUSSELL C. BURKET, Pottsville, Pa. Filed Dec. 16, 1927. Serial No. 240,538. 3 Claims. (Cl. 83—73.)



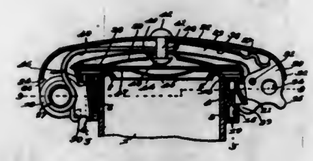
1. In a device of the class described, a mixing drum, a loading skip therefor, a measuring receptacle, means providing a liquid inlet and a liquid outlet for the receptacle, means providing an opening to the atmosphere from said receptacle, means for mounting the receptacle on said skip in such position that the outlet will discharge into said drum when the skip is raised, and gravity-operated valve means responsive to the movement of the receptacle with the skip to open the inlet when the receptacle is lowered, and to close the inlet when the skip is raised.

---

1,696,752. HUMIDIFIER FOR INTERNAL-COMBUSTION ENGINES. ERNEST CARTER, Melrose Highlands, Mass. Filed Jan. 3, 1927. Serial No. 158,614. 2 Claims. (Cl. 123—25.)

1. A humidifier of the character described comprising, in combination, a container, liquid partly filling said container, whereby a chamber is formed therein above said liquid, means to connect said chamber with the intake manifold of an internal combustion engine, a pipe extending through said chamber and liquid and communicating with the exhaust passage of said engine and adapted to discharge exhaust into said container below the level of said liquid, and a deflector within said passage to divert a portion of the exhaust from said engine into said pipe.

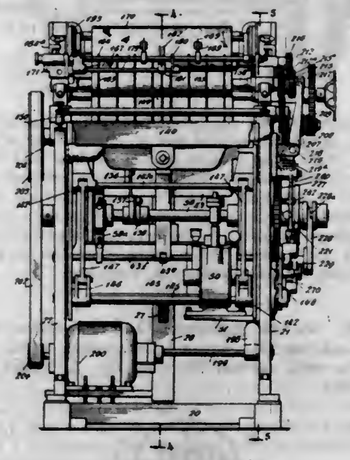
---



1,696,753. APPAREL HANGER. EDWARD H. CLARKE, Peoria, Ill. Filed Feb. 18, 1926, Serial No. 98,087. Renewed Apr. 13, 1928. 2 Claims. (Cl. 211—32.)

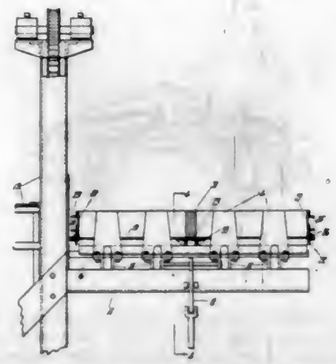
1. As an article of manufacture, an apparel hanger comprising a wire having one end constituting a support engaging screw, an upper arm extending substantially in alinement with said screw and having that end portion opposite from said screw extending upwardly out of said alinement and terminating in a support for hats comprising a loop which extends in substantially horizontal plane transverse to said upper arm, and a lower arm constituting a coat hanger and comprising said wire extending first downwardly at right angles to said screw, secondly thence outwardly, and thirdly thence upwardly and terminating in a comparatively broad second loop as compared to said first loop and constituting a garment support for holding the shoulders of a coat, which extends in a plane transverse to the line of said lower arm, said second loop being supported midway of its ends at its forward edge and thence extending diagonally downwardly and rearwardly with a free and unsupported edge of said loop located between said first downwardly extending and said third upwardly extending portions of said lower arm, all of said upper and said lower arms with the exception of each of said loop portions being of a plurality of twisted strands of said wire.

---



1,696,754. TANK-RISER CLOSURE. LOU C. ELLER, Spokane, Wash., assignor, by direct and mesne assignments, to Lockit Cap Company, a Corporation of Washington. Filed Apr. 11, 1927, Serial No. 182,827. Renewed Oct. 11, 1928. 8 Claims. (Cl. 220—24.)

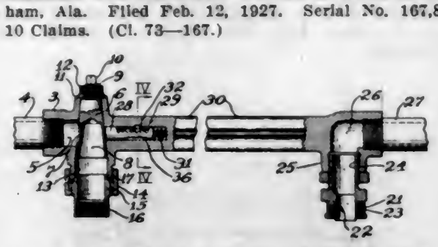
2. In a closure structure for tanks having a riser comprising, an anchoring adapter band adapted to outwardly telescope the riser and having an offset portion, a case hardened screw adapted to be turned into said offset portion to coact with the latter and a portion of the periphery of said riser to lock said band on said riser, a closure structure for said riser, and means for movably mounting said closure structure on said band.



---

1,696,755. GUMMING MACHINE. MARTIN FEYBUSCH, New York, N. Y., and PAUL W. FLEISCHER, Weehawken, N. J., assignors to New Jersey Machine Corporation, Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 1, 1925. Serial No. 19,821. 14 Claims. (Cl. 271—28.)

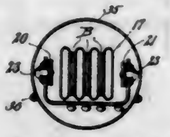
1. In a gumming machine, a support for a stack of sheets, a suction head movable to and from said stack for removing and transferring the uppermost sheet from said stack, a plurality of nozzles for directing a current of air between the sheet being removed and the top surface of the stack, and means to move said nozzles out of the path of movement of said suction head during the initial movement of said head.



1,696,756. MULTIPLE MOLD. STEPHEN FLAM, Walnut Park, Calif., assignor to Supertile Machinery Corporation, Los Angeles, Calif., a Corporation of California. Filed Apr. 26, 1926. Serial No. 104,719. 5 Claims. (Cl. 25—41.)

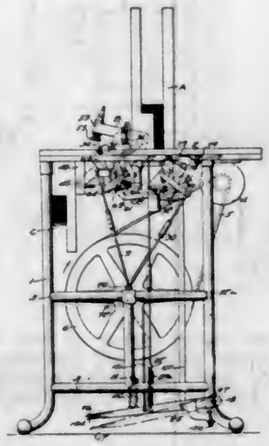
1. In combination, a portable vertically movable support, an apertured bottom plate supported thereon and capable of removal by relative movement between it and the support, and separating plates fastened to the support and arranged to project through the apertures in the bottom plate to form mold spaces.

---



1,696,757. SUSPENDING AND CONTROLLING HEADER FOR METERS. WILLIAM B. FORD, Birmingham, Ala. Filed Feb. 12, 1927. Serial No. 167,842. 10 Claims. (Cl. 73—167.)

1. A header of the character described, comprising gas inlet and outlet connections and an arm joining said connections, there being a valve seat in the gas inlet connection, a turnable plug in said seat having exposed means to operate it, said plug having a gas flow passage therein for registration with the gas inlet when in open position, a lock plunger mounted in the arm and adapted to interlock with the passage in the plug when the plug is in closed position, substantially as described.

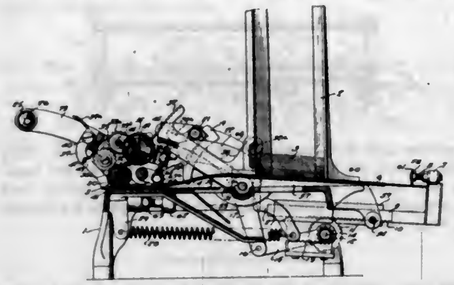


---

1,696,758. WATER HEATER. ARMANDO GALDI, Somerville, and ERIC S. PETERSON, Lexington, Mass. Filed Aug. 2, 1926. Serial No. 126,370. 5 Claims. (Cl. 219—39.)

1. A heater of the character described comprising a pair of hollow one-piece end manifolds, one having an inlet adapted to be connected with a supply pipe and the other having an outlet adapted to be connected with a delivery pipe; a plurality of tubes directly connected at their ends with said manifolds and connecting the interiors of the latter and electric heating units arranged between said tubes.

1,696,759. AUTOMATIC SELECTIVE ATTACHMENT FOR ADDRESSING MACHINES. ERWIN A. GEIGER, Westfield, and AUGUST F. SCHRAEGLE, Roselle, N. J., and HENRY T. JENNINGS, Glendale, N. Y., assignors, by mesne assignments, to Elliott Addressing Machine Company, a Corporation of Massachusetts. Filed Aug. 14, 1926, Serial No. 129,134. Renewed Oct. 19, 1928. 18 Claims. (Cl. 101—58.)

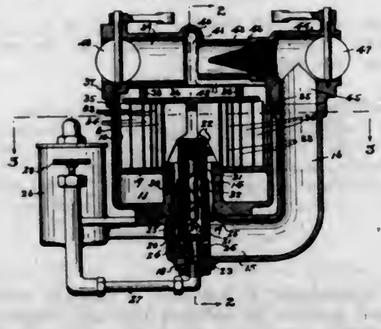


1. In an addressing apparatus comprising a series of address bearing strips, some of which are provided with classifying features, inking and impression mechanisms, means for feeding said strips successively to said inking and impression mechanisms, connecting mechanism between said card feeding means and said impression mechanism capable of being temporarily disabled so as to render the impression mechanism idle while card feeding continues and a selector mechanism adapted to be actuated by the classifying features of certain of said strips, the combination, with said above described apparatus, of means for temporarily disabling said connecting mechanism, which means is adjustable by the operator to convert said selector mechanism from one which will cause the machine portion of the apparatus to print from a card having a given classifying feature to one which will cause said machine portion to skip said card and discharge it without printing therefrom.

15. In an addressing machine comprising a swinging platen, a constantly moving cam, a lever pivoted to said platen and carrying a roller adapted to be engaged by said cam to swing said platen when said lever is in one position, the combination, with said above recited elements, of selective mechanism adapted to swing said lever so that said roller is kept out of contact with said cam.

---

1,696,760. HAND-OPERATED ADDRESSING MACHINE. ERWIN A. GEIGER, Westfield, and ADOLPH GEIGER, Elizabeth, N. J., assignors, by mesne assignments, to Elliott Addressing Machine Company, a Corporation of Massachusetts. Filed Nov. 16, 1927. Serial No. 233,539. 19 Claims. (Cl. 101—48.)



1. In a hand operated printing apparatus employing stencils, the combination, with a main frame, a series of said stencils and means for feeding them consecutively into printing position on said main frame, of an ink bearing pad, a lever system for pressing said pad down upon any stencil in printing position on said main frame, a handle for operating said lever system, and means

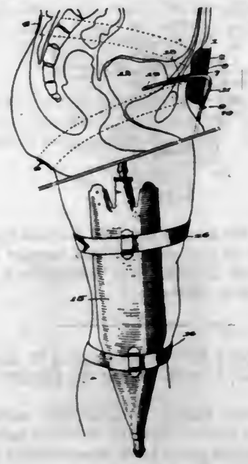
whereby a uniform pressure exerted on said handle may be progressively increased upon said pad as said handle approaches its final pressure exerting position.

---

1,696,761. VAPORIZER FOR LIQUID FUELS. ERNEST R. GODWARD, New York, N. Y., assignor to The Eclipse Petrol Economizer System Company, Limited, Christchurch, New Zealand, a Corporation of New Zealand. Filed Sept. 5, 1924. Serial No. 736,024. 2 Claims. (Cl. 261—79.)

1. In a vaporizing device, means operative under low air velocity for producing an initial mixture of liquid fuel and air for delivery thereto, comprising an air intake member providing a substantially tubular passage arranged to receive air at its lower end, a foraminous liquid fuel support of tubular form concentric to and axially disposed within said air intake member, a liquid fuel delivery means in which the lower portion of said fuel support is submerged and by which it is in turn supported, and said liquid fuel delivery means also having air admission means leading into the interior of said fuel support from said air intake member whereby the air stream delivered through the latter simultaneously moves in part through the interior and in part around the exterior of said fuel support, an internal spiral fin cooperative with the inner surface of said fuel support, and an external spiral fin cooperative with the outer surface of said fuel support.

---



1,696,762. GERMICIDAL COMPOUND. JAMES JEFFRIES GOODWIN, Louisville, Ky., assignor to Goodwin Laboratories, Inc., Louisville, Ky., a Corporation of Kentucky. Filed Nov. 22, 1927. Serial No. 235,114. 6 Claims. (Cl. 167—22.)

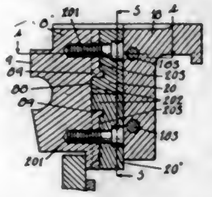
1. A germicidal compound for preparing germicidal aqueous solution, comprising a mixture of soap including salts of the fatty acids common to cocoanut oil and palm nut oil, and tri-sodium phosphate.

1,696,763. SUPRAPUBIC SIPHON. CHRISTOPHER E. HARB, Rochester, Minn. Filed Apr. 6, 1927. Serial No. 181,467. 7 Claims. (Cl. 128—349.)

1. An article of the character described including a cushion having an enlarged opening therein, a pad secured over said cushion and having a registering orifice of smaller diameter than the opening, and a catheter extending through the orifice and opening.

---

1,696,764. LINTEL BAR. STEPHEN S. HERRICK, Oakland, Calif. Filed Oct. 24, 1927. Serial No. 228,191. 2 Claims. (Cl. 189—37.)



1. A lintel bar comprising a pair of angle bars adapted to span a window opening and a third bar disposed between the angle bars and riveted thereto, said third bar forming a spacer between the angle bars and the lower edge of said bar being disposed above the base flanges of the angle bars so that a longitudinally extending slot is formed between the base flanges of the angle bars.

---

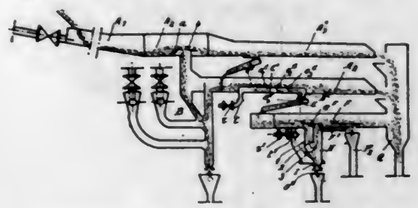
1,696,765. CHUCK JAWS. GEORGE F. HOPKINS, Jackson, Mich.; William K. Sagendorph executor of said George F. Hopkins, deceased. Original application filed Feb. 28, 1925, Serial No. 12,331. Divided and this application filed Jan. 21, 1926. Serial No. 82,685. 8 Claims. (Cl. 279—123.)

1. In a jaw structure, the combination of a master jaw, an adjustable jaw having screw thread engaging means car-

ried thereby, a jaw support divided transversely into two parts fitting in suitable seats on the face of the master jaw, cross countersunk screws in said parts for retaining the

same in place on the master jaw, and a recess in each of the meeting portions of said parts of said support and having an adjusting means in said recess comprising a screw with end journals in said bearings.

---



1,696,766. PEANUT BUTTER. DONALD W. HOWE, Biloxi, Miss. Filed Dec. 6, 1927. Serial No. 238,237. 7 Claims. (Cl. 99—11.)

1. Peanut butter having substantially uniformly distributed therein a soluble clogging reducing agent in finely powdered form presenting a large area whereby it is adapted to be rapidly dissolved by the saliva.

6. The process of producing a food product comprising grinding peanuts and substantially uniformly distributing therein during the grinding, a mixture of salt and a powdered sugar whereby the tendency of the peanut butter to stick to the mouth is reduced.

---

1,696,767. METHOD OF WASHING COAL, ORES, AND OTHER SIMILAR MATERIALS, AND AUTOMATIC WATER-CURRENT SEPARATOR FOR CARRYING THE METHOD INTO PRACTICE. LÉON HOYOIS, Gilly, Belgium. Filed Feb. 18, 1927, Serial No. 169,349, and in Belgium Feb. 25, 1926. 9 Claims. (Cl. 209—18.)

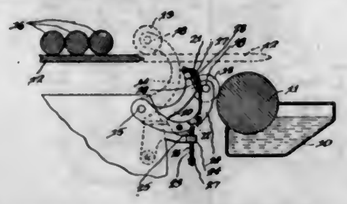
1. Improvements in the method of washing materials such as ores, coals and the like consisting in dividing the body of material to be treated into two portions, one portion comprising most of the light particles and the other portion comprising most of the dense particles, extracting the denser particles from the light portion and extracting the lighter particles from the dense portion, subsequently mixing the particles extracted from each of said portions to form a residual mass composed of mixed products with relatively small proportions of heavy and light particles; removing from said mass all other particles than the light particles together with a very small proportion of the latter, regrading the removed portion into mainly heavy particles and mainly mixed particles, the latter including the light particles, and causing the successive elimination of the heavy particles and of the mixed particles while the elimination of the remaining light particles is avoided.

---

1,696,768. ANIMAL TRAP. GEORGE NORMAN IRWIN, Whitby, Ontario, Canada. Filed Feb. 21, 1928. Serial No. 255,990. 2 Claims. (Cl. 43—61.)

1. An animal trap comprising a hollow open ended member of buoyant material adapted to partially submerge and having vertical opposing guides in the inner face of the side walls adjacent to each end of the member, transverse slits in the bottom wall extending between the guides, a spring pressed closure plate slidably lifting within each pair

of guides and withdrawable through the slit, and a tread plate located within the member, locking means for holding the closure plates in the withdrawn position, and means operated by pressure upon the tread plate for releasing such locking means.

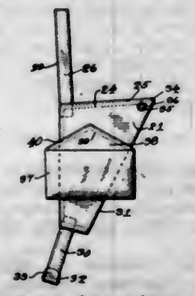


---

1,696,769. METHOD OF PRODUCING CONDENSATION PRODUCTS FROM CRUDE CRESOL AND ACETONE. HANS JORDAN, Berlin-Steglitz, Germany, assignor to the Firm: Chemische Fabrik auf Actien, vorm. E. Schering, Berlin, Germany. Filed Oct. 25, 1927, Serial No. 228,701, and in Germany Oct. 26, 1926. 1 Claim. (Cl. 260—150.)

The method of recovering separately the constituents from a mixture of the products obtained by condensation of crude cresol and acetone, comprising dissolving the product in ether and separating the m-cresol acetone condensation product which has crystallized out.

---



1,696,770. PRINTING PRESS. CHARLES F. LANG, Chicago, Ill. Filed May 27, 1927. Serial No. 194,777. 3 Claims. (Cl. 101—344.)

1. In combination, an ink plate, a fountain roller, a feed roller mounted for swinging movement adapted to carry ink from said fountain roller to said plate, a shaft supporting said feed roller, means adapted to frictionally engage said shaft to cause rotation thereof during said swinging movement, said means embodying a resilient portion for maintaining the frictional engagement between said engaging means and roller.

---

1,696,771. PINCUSHION FOR SEWING MACHINES. ANNA J. LARSON, Naugatuck, Conn. Filed May 26, 1927. Serial No. 194,321. 3 Claims. (Cl. 223—60.)

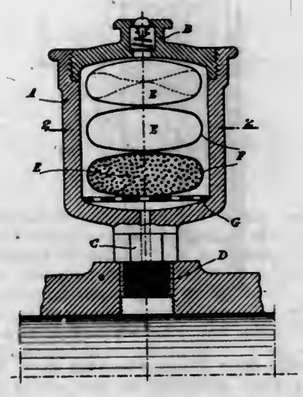
1. In a pin cushion attachment for a sewing machine, a supporting strip of flexible material, cooperating means on opposite edges of said strip for encircling the head of said machine, said strip having an eye for engaging the spool-holding spindle of the sewing machine head for holding it in fixed position, and a pin cushion pad carried by said supporting strip.

---

1,696,772. POLE. ADOLPH W. MALONE, Fillmore, Utah, assignor of one-third to Albert H. Vestal, Anderson, Ind., and one-third to Edwin S. Healy, New York, N. Y. Filed Sept. 24, 1928. Serial No. 307,981. 6 Claims. (Cl. 189—26.)

1. A pole comprising a plurality of longitudinal sections disposed in abutting end to end relation, and clamping means securing the sections together, each section of said pole being made up of a plurality of independent members having complementarily formed interlocking elements, substantially as set forth.

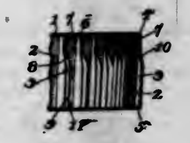
---



1,696,773. POLE. ADOLPH W. MALONE, Fillmore, Utah, assignor of one-third to Albert H. Vestal, Anderson, Ind., and one-third to Edwin S. Healy, New York, N. Y. Filed Sept. 24, 1928. Serial No. 307,982. 4 Claims. (Cl. 20—98.)

1. A pole comprising a plurality of leg sections, clamping means binding said leg sections toegther adjacent one end, and adjustable spacing means adjacent the other end maintaining said leg sections apart, said adjustable spacing means comprising a brace and adjustable means adjacent each end of the brace for clamping engagement with opposite sides of each of said leg sections, substantially as set forth.

---

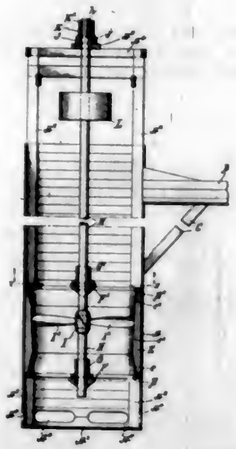


1,696,774. SELF-FEEDING LUBRICATOR. EMILE MARTIN, Grenoble, France. Filed Apr. 21, 1927, Serial No. 185,543, and in Belgium Apr. 21, 1926. 5 Claims. (Cl. 184—38.)

1. A grease cup having filling and discharge openings and also having an expanded member in said cup, disconnected therefrom, totally immersed in the grease in the cup when the latter is full and active by its own expansion to force grease from the cup through the discharge opening.

---

1,696,775. SANITARY HEADREST COVER. CHARLES C. MARTZ, Vineland, N. J., assignor to Sayford Paper Specialty Company, Vineland, N. J. Filed Oct. 29, 1928. Serial No. 315,825. 4 Claims. (Cl. 155—173.)

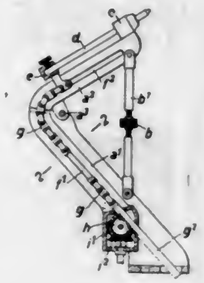


1. A headrest cover comprising, a flexible member bent upon itself to provide a body portion and a depending skirt portion extending thereabout, said skirt portion formed throughout with spaced plaits having the end portions thereof adjacent the bend between the body and skirt portions of less height than the remaining portions of said plaits whereby said skirt portion may normally lie flat against said body portion without being folded upon itself.

---

1,696,776. LOW-LIFT PUMP. SIDNEY L. MENGE, New Orleans, La. Filed Mar. 9, 1928. Serial No. 260,527. 1 Claim. (Cl. 103—103.)

A propeller pump comprising a casing provided with a lower or suction chamber and an upper or delivery chamber, with means for admitting water to the lower

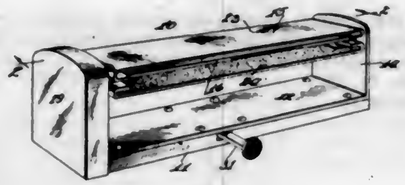


chamber, and for carrying it off from the upper chamber, a partition mounted between said chambers and provided with a bore in the form of the frustum of a slightly tapered inverted cone, said partition being provided with

frusto conoidal faces flaring outwards above and below said obre, a shaft journalled in said casing concentric with said bore, and a screw propeller mounted on said shaft and having the tips of its blades in close proximity to said bore.

---

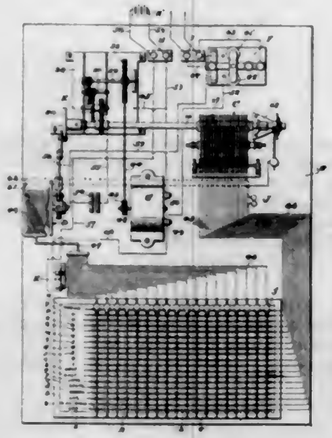
1,696,777. HOLDER FOR ARC-LAMP CARBONS. FRANZ MEYER, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed Feb. 8, 1928, Serial No. 252,910, and in Germany Feb. 21, 1927. 3 Claims. (Cl. 176—119.)



1. A holder for the one of the carbons of an arc lamp, comprising a carrier adapted to be fixed on the casing of the arc lamp and provided with a groove, a sliding piece displaceably supported on this carrier, means for fixing a carbon on this sliding piece, a chain fixed with its one end on this sliding piece and guided in the said groove, a device for displacing the chain, and means connecting this device to the other end of the chain.

---

1,696,778. HONING AND STROPPING DEVICE. ALEX. PASCOO, Bronx, N. Y. Filed Oct. 17, 1927. Serial No. 226,698. 3 Claims. (Cl. 51—198.)



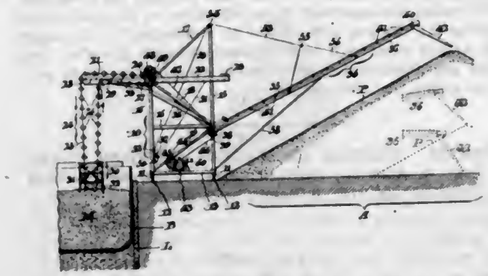
1. In a razor sharpening device, a rotatable stropping element having different stropping surfaces on opposite sides thereof, spring means normally holding one of said stropping surfaces face up, and manually operable means for imparting a turning movement to said rotatable stropping element against the action of said spring means

to reverse the position of said stropping surfaces, said last means including a gear segment fixedly attached to said stropping element, and a slidable rack member coacting therewith.

---

1,696,779. AUTOMATIC RADIO TELEGRAPHIC TRANSMITTER. PEDRO C. ANDUX Y PEREZ, Habana, Cuba. Filed Aug. 25, 1927, Serial No. 215,441, and in Cuba Feb. 4, 1927. 7 Claims. (Cl. 178—83.)

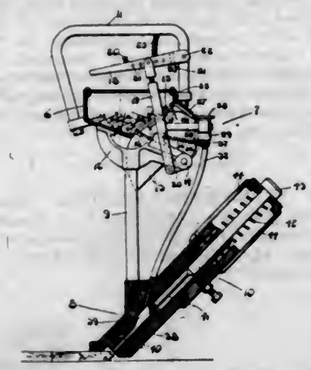
1. An apparatus for the purpose set forth comprising, a signal combining mechanism including a plurality of permanent signal indicators, each having a terminal, a signal distributing mechanism, means for selectively forming an electrical contact between the respective signal indicator terminals and the distributing mechanism, means for forming a signal for each of said signal indicators and for transmitting said signal to the corresponding terminal, and a relay electrically connected with the distributing mechanism for flashing the selected signal.



---

1,696,780. MATERIAL-HANDLING APPARATUS. CHARLES G. PFEIFFER, Philadelphia, Pa., assignor to Specialty Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1926. Serial No. 153,513. 4 Claims. (Cl. 198—91.)

1. A material handling apparatus of the type described comprising a portable supporting structure with pairs of spaced verticals, one pair being considerably higher than the other, with intervening bracings, a counter-balanced out-board boom pivoted to the shorter verticals with the



inner portion laterally expanded outwardly of the higher verticals, an elevating conveyer with a material penetrating boot supported by the counter-balanced boom, an in-board boom fulcrumed to the higher verticals with a delivery conveyer trained thereabout, the pivotal axes

of the booms serving as the drivers for the respective conveyers, a chute intermediate said conveyers, a prime mover on the supporting structure, and drive connections from the prime mover to the pivotal axes aforesaid for actuating the conveyers at synchronized speed to thereby continuously transport the material handled.

---

1,696,781. NAIL DRIVER. ALFRED T. PHILLIPS, Norwood, Ohio. Filed Dec. 20, 1927. Serial No. 241,805. 3 Claims. (Cl. 1—46.)

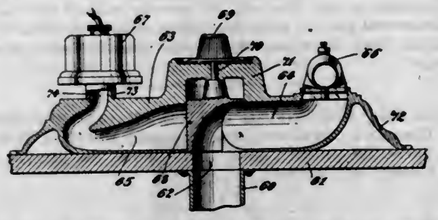
3. A nail driver comprising a hopper, an agitator in the hopper, a slot in the hopper terminating inclinedly on the outer side of the hopper through which slot the agitator moves in and out causing nails to engage and to be moved therethrough, a delivery tube adjacent to the outer inclined slot's bottom, a notched disc rotatively mounted to receive a nail from the slot into the notch and delivering the nail to the tube upon rotation of the disc, a manually operated lever adapted to synchronize the movements of the agitator and disc, a nail receiving foot at the end of the delivery tube and an anvil on one of its sides, the receiving foot's upper end terminating cylindrically, a sleeve in the cylinder and receiving foot, and a spring retracted nail punch operable in said sleeve for driving a nail positioned therein.

---

1,696,782. METHOD OF MAKING ALKYL ISOALKYL CYCLOHEXANOLS. WALTER SCHOELLER, Berlin-Westend, and HANS JORDAN, Berlin-Steglitz, Germany, assignors to the Firm: Chemische Fabrik auf Actien, vorm. E. Schering, Berlin, Germany. Filed Oct. 25, 1927, Serial No. 228,686, and in Germany Oct. 26, 1926. 4 Claims. (Cl. 260—158.)

1. The method of producing alkyl isoalkyl cyclohexanols, comprising first decomposing by heating the condensation products obtainable from alkylated phenols and ketones, thereafter hydrogenating the mixture of the products of decomposition until eight hydrogen atoms have entered into combination, and finally separating from the mixture the hydrogenated alkyl isoalkyl phenols.

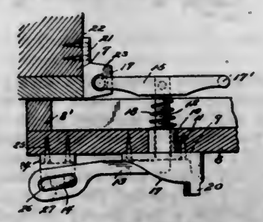
---



1,696,783. GLUE DISPENSER. TATSUO WAKABAYASHI, San Francisco, Calif. Filed Jan. 31, 1927. Serial No. 164,902. 1 Claim. (Cl. 91—67.4.)

In combination with a glue dispenser and the neck thereof, of a sponge positioned in the neck of the container and protruding therefrom and means for preventing a seepage of the glue through the neck of the container, said means comprising a collar secured to the neck of the container and having an annular recess, a celluloid member interposed between the collar and said sponge, a securing cord positioned in the recess of the collar and a removable inner cover for said sponge adapted to contact said collar.

---



1,696,784. ACOUSTIC APPARATUS. MAXIMILIAN WEIL, New York, N. Y. Filed May 20, 1924, Serial No. 714,574. Renewed Nov. 12, 1928. 26 Claims. (Cl. 179—100.1.)

1. In apparatus of the character described, in combination, a phonograph amplifier having a throat, a tone arm for communication with said throat, a fixed conduit of generally ram's-horn shape having its wider end delivering into said throat and adapted for mounting a telephone receiver at its restricted end, said conduit having substantially sound-tight means extending lengthwise thereof to block communication with the tone arm.

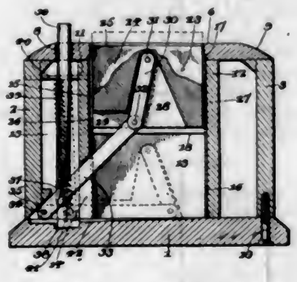
---

1,696,785. LATCH FOR SLIDING DOORS. PETER P. WELTY, Pandora, Ohio. Filed Feb. 17, 1928. Serial No. 255,077. 6 Claims. (Cl. 292—205.)

1. The combination with a door frame and a door, said door being provided with a recess upon the face side thereof,

of a latch device therefor including a member carried by the door and capable of rotary and longitudinal movement, a latch member carried upon the inner end of the same and adapted when in latching relation to be projected beyond and out of the recess, and when in released position to be seated within the recess, means attached to the frame for engaging the latter when external of the recess, and means externally of the door for operating the rotary member.

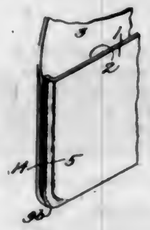
---



1,696,786. INSTEP-ARCH SUPPORT. JONATHAN T. WOOD, Chatham, Ontario, Canada. Filed Dec. 2, 1926, Serial No. 152,189, and in Canada Apr. 29, 1926. 1 Claim. (Cl. 36—71.)

An instep arch supporter comprising an arch plate of spring sheet metal longitudinally curved but straight transversely; a leather cover piece fitted to the arch plate and having its inner side extending materially beyond the inner edge of the arch plate and curved upwardly; padding between the arch plate and cover extending up against the outer surface of the upwardly curved side of the leather cover so as to form a cushion between the upper of the wearer's shoe and the leather cover; a spring support for the arch plate adapted to engage the insole of the shoe at opposite ends of the instep comprising a spring leaf of sheet metal secured to the arch plate; and a spring plate secured at one end to the arch plate and extending under the device past the end of the spring leaf and the arch plate, said sheet metal base plate being adapted to engage the insole of the shoe only at opposite ends of the instep, the central part of said base plate normally tending to lie spaced from the spring support and thus forming a second support.

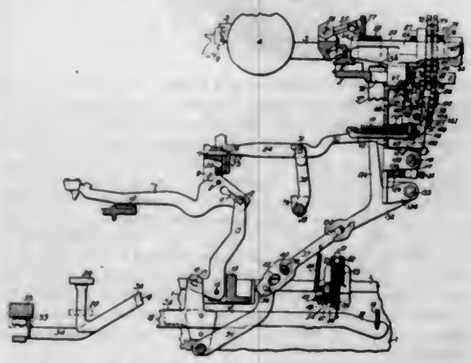
---



1,696,787. DISPENSING DEVICE. NATHAN ZELKOWITZ, HERMAN L. ZELKOWITZ, and BENJAMIN BRAYMAN, Wilkes-Barre, Pa. Filed Oct. 3, 1927. Serial No. 223,726. 1 Claim. (Cl. 312—79.)

A dispensing device comprising a casing provided with opposed spaced partitions to form an article containing compartment and further provided at its top with a discharge slot communicating with said compartment, a vertically movable ejector member travelling through said compartment and formed with a recess having an inverted V portion and a rectangular portion projecting laterally from the V portion, a link having its upper end pivoted in said V portion, a lever arm pivoted at one end to the lower end of said link and operating in said rectangular portion, means for pivotally connecting the other end of said lever to the casing at a point removed from said compartment, a vertically movable spring controlled plunger positioned in said casing adjacent said compartment and having its lower end pivotally connected to said lever in proximity to the point of connection between the lever and said casing and operated in one direction by its controlling spring for shifting said ejector in a direction to discharge an article from said compartment through the slot, and said partitions and ejector having coacting means to provide guides for the ejector.

---



1,696,788. METHOD OF MAKING LEATHER CASES. CARL G. ALDRICH, Medford, Mass. Filed May 5, 1926. Serial No. 106,918. 6 Claims. (Cl. 69—21.)

1. The method of finishing the seam connecting the marginal portions of the walls of a leather case of the character described which consists in compressing the two flaps of the seam edgewise simultaneously throughout their length and width while they are left free to expand laterally in the direction of their thickness thereby molding said flaps into a relatively low finished bead whose opposite sides overlie the stitches of the seam.

---

1,696,789. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Dec. 31, 1926. Serial No. 158,286. 15 Claims. (Cl. 197—82.)

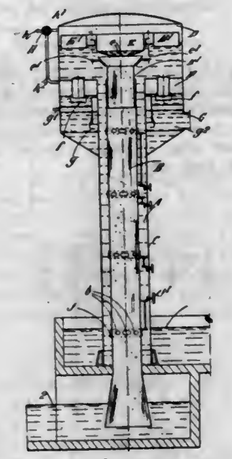
15. Escapement devices for a writing machine, comprising three cooperating toothed wheels having parallel axes of rotation, means for moving one of said wheels bodily transversely of the other two wheels to afford escapement movements, and independently operable key actuated means for affording intermittent rotative movements of said bodily movable wheel while it is held against bodily movement and thereby afford an intermittent step-by-step feed movement of the carriage.

1,696,790. SHOE-LACE-FASTENING DEVICE. ANTONIO BONGIOVANNI, Barnesboro, Pa., assignor of one-fourth to Jess Fridman, Barnesboro, Pa.; one-fourth to Samuel Irving Callet and one-fourth to Tobias J. Callet, Johnstown, Pa. Filed Apr. 30, 1928. Serial No. 274,080. 8 Claims. (Cl. 24—117.)

1. A shoe lace fastening device comprising a base member securable to the tongue of a shoe, a clamping member rockably mounted on said base member intermediate the ends of the two members so that the front end of the rockable member may be raised to permit a lace to be placed between it and the base member, said members having teeth on their confronting surfaces to engage and prevent the lace from slipping, and means for yieldingly holding the two members together with the lace clamped therebetween; said means embodying a spring-plate secured to the base-plate and having arched portions or grooves opposing said base-plate within which oval hinge pins carried by the clamping member are clamped against the base-plate, said spring-plate in conjunction with said hinge pins serving to yieldingly resist movement of the rockable member toward an intermediate point and on passing said point to accelerate its movement into either raised or clamping position according to the direction of movement.

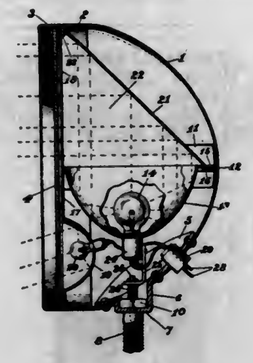
---

1,696,791. SHOE-LACE-FASTENING DEVICE. ANTONIO BONGIOVANNI, Barnesboro, Pa., assignor of one-fourth to Jess Fridman, Barnesboro, Pa., and one-fourth to Samuel Irving Callet, Johnstown, Pa. Filed May 14, 1927. Serial No. 191,330. 4 Claims. (Cl. 24—120.)



1. In combination with a shoe having a tongue and means for applying a cord or lace to secure the edges of the vamp or uppers together, a duplex lace fastening device comprising a base member and a clamping member pivotally secured on opposite sides of an intermediate supporting member of oblong form transversely of the tongue of the shoe; said base member being pivoted to the tongue; said members being foldable one upon another so as to adapt them to clasp the ends of the cord or lace and firmly secure them together by a double fold.

---

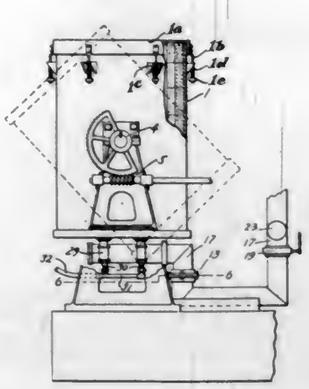


1,696,792. APPARATUS FOR RAISING LIQUIDS. JENS ORTEN BOVING, Westminster, London, England. Filed Feb. 10, 1926, Serial No. 87,370, and in Great Britain May 28, 1925. 8 Claims. (Cl. 137—20.)

1. Apparatus for raising a liquid by the head or difference in level between a high level portion of said liquid and a low level portion of said liquid, comprising in combination a chamber arranged above the level of the high level liquid, a conduit extending downwardly from said chamber and communicating at its lower end with the high level liquid so as to constitute a supply conduit, a discharge conduit extending downwardly from said chamber and discharging at its lower end into the low level liquid, said conduits constituting in conjunction with said chamber a siphon serving by the descent of the liquid in the discharge conduit to draw liquid up the supply conduit, an air induction device at the upper end of said discharge conduit serving during the siphoning action to cause air from said chamber to be entrained in the liquid entering said discharge conduit, and means for automatically causing a portion of the liquid to be intermittently discharged from said chamber to the atmosphere at a point substantially above the high level liquid without breaking the continuity of the siphoning action.

---

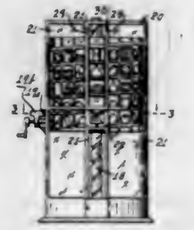
1,696,793. HEADLIGHT. JOSEPH P. C. CHARLEBOIS, Toronto, Ontario, Canada. Filed Feb. 17, 1927. Serial No. 168,940. 1 Claim. (Cl. 240—41.)



A headlight including a substantially semi-circular casing, a band secured to the inner surface of the casing at substantially its mid-height and formed to provide a lateral inwardly projecting flange, a plate arranged at the forward portion of the casing and masking the lower half thereof, a parabolic reflector arranged in the casing with its axis at right angles to the axis of the casing, the upper edge of said reflector having a lateral flange secured at its forward edge to the upper edge of said plate and interlocked at its rear edge with the flange of said band, a plane reflector overlying the parabolic reflector with an edge outline corresponding substantially in shape and di-

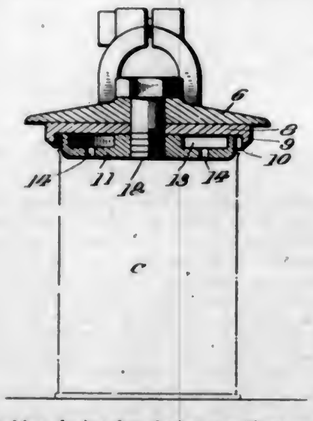
mensions to that of the parabolic reflector, the lower edge of the plane reflector being supported on said band flange in rear of the parabolic reflector and the upper edge of the plane reflector bearing against the forward edge of the casing, said plane reflector including side portions curving substantially concentric with the casing with their free edges engaging the casing at the forward edge of the latter, and a source of illumination within the parabolic reflector.

---



1,696,794. APPARATUS FOR HEAT TREATMENT OF MATERIALS. THOMAS S. CURTIS, Huntington Park, Calif., assignor, by mesne assignments, to The Vitrefrax Corporation, Los Angeles, Calif., a Corporation of California. Filed Aug. 6, 1926. Serial No. 127,601. 4 Claims. (Cl. 263—33.)

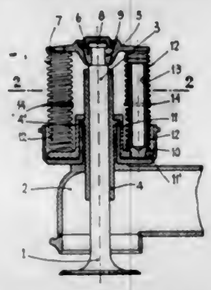
1. A converter of the class described comprising a receptacle, a refractory lining therefor and yieldable retainer means on said receptacle engaging with said lining and accommodating the expansion of the lining when heated, and means for treating the material in the receptacle.



---

1,696,795. MANUALLY-SELECTIVE VENDING MACHINE. WILLIAM C. CUTLER, Glendale, Calif., assignor, by mesne assignments, to Selective Automatic Manufacturing Corporation, Los Angeles, Calif., a Corporation of California. Filed Sept. 2, 1925. Serial No. 54,073. 3 Claims. (Cl. 312—35.)

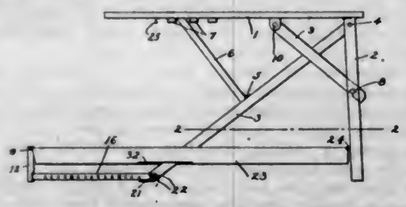
1. In a selective vending machine, a casing provided with a closure movable to open and closed positions respectively, a spirally grooved shaft in said casing, a revoluble magazine threaded on said shaft to ascend said shaft as the magazine is revolved; said magazine provided with a plurality of article holding pockets arranged in a spiral series whereby revolution of said magazine will bring the pockets successively into registration with said closure.



1,696,796. PACKING DEVICE FOR FILLED-CAN-CLOSING MACHINES. HENRY A. FINK, Oak Park, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 5, 1926. Serial No. 146,444. 4 Claims. (Cl. 226—71.)

1. A packing device for closing machines comprising a packing pad adapted to be moved into the can body for depressing the floating content thereof, and a cutter surrounding and spaced from said packing pad adapted to move down over the can body and cut off any content of the can body overlying the flange of the can body.

---

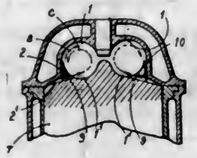


1,696,797. SPRING-CONTROLLED GEAR. GUIDO FORNACA, Turin, Italy. Filed Nov. 26, 1927, Serial No. 235,953, and in Italy Aug. 25, 1927. 9 Claims. (Cl. 123—90.)

1. In a spring operated gear, a return spring comprising a number of sections, said sections being included serially between a stationary part and a movable part of said gear.

---

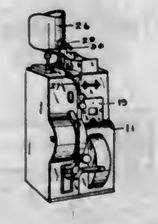
1,696,798. IRONING BOARD. CLARA BROWNING GOODMAN, Ithaca, N. Y. Filed Aug. 25, 1926. Serial No. 131,475. 6 Claims. (Cl. 68—10.)



1. An attachment for self-supporting ironing tables having an ironing board supported by leg sections spaced

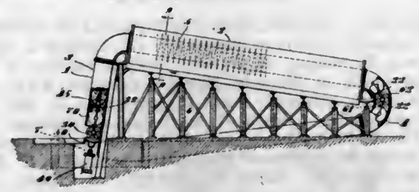
apart lengthwise of the board, with one end of the board projecting, over which end clothes to be ironed may be passed, said attachment comprising an upright supporting member, arms articulately connected to the end portions of said member with their free ends movable approximately horizontally toward and from one another, the free ends of the arms being formed for attachment to one of said leg sections with said member resting upon the floor and disposed transversely of and beyond the free end of the board, and a sheet connected to said member, extending below and endwise of said board, and formed for attachment to one of said leg sections.

---



1,696,799. INTERNAL-COMBUSTION ENGINE OF THE TWO-STROKE TYPE. GEORGES HELD, Brussels, Belgium. Filed Mar. 25, 1927, Serial No. 178,452, and in France Apr. 12, 1926. 2 Claims. (Cl. 123—32.)

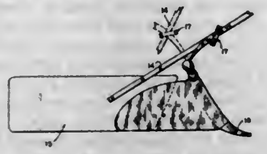
1. In an internal combustion engine, a cylinder, a cylinder head for said cylinder, said cylinder head being provided with an inverted substantially semi-toroidal channel, and a piston adapted to reciprocate in said cylinder, the top of said piston being slightly conical and provided with a central trunconical extension, the upper diameter of which is slightly less than the outer diameter of the channel in said cylinder head, the top of said extension being provided with a substantially semi-toroidal channel oppositely disposed to the channel in said head, said channels having generatrices of equal diameters and having their directrices coinciding with each other and with the axis of said piston, whereby as the piston approaches the limit of its upward travel, a toroidal combustion chamber will be formed, a plurality of inclined conduits provided in the wall of said extension and connecting the annular space between the top portion of said piston and the side wall of the cylinder head with the channel in said piston, whereby the air entering through said conduits will effect a whirling motion of the explosive mixture inside the toroidal combustion chamber in a counter clockwise direction.



---

1,696,800. FIRE-EXTINGUISHING APPARATUS. CHARLES A. HELM, Cleveland, Ohio. Filed Mar. 10, 1926. Serial No. 93,660. 4 Claims. (Cl. 169—2.)

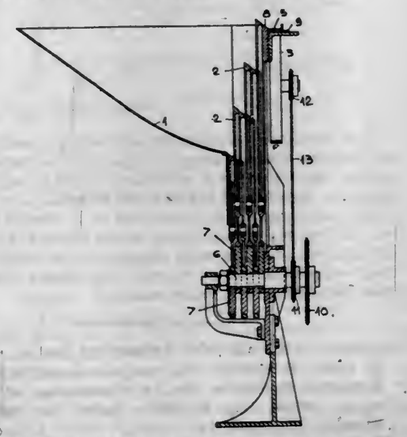
1. In an apparatus of the character described, in combination with a moving picture machine, a volatilizing element arranged in the path of a portion of the light rays from the projecting lamp so as to receive heat from said rays, means for supplying a volatile fire extinguishing medium to said element and means for directing the volatilized fire extinguishing medium in the path of the film carried by said moving picture machine.



1,696,801. HEAT-TREATING APPARATUS. LESLIE E. HOWARD, Lockport, N. Y., assignor to Simonds Saw and Steel Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1926. Serial No. 148,689. 9 Claims. (Cl. 214—18.)

1. The combination of heat-treating apparatus having an upwardly inclined entrance passage and conveyor mechanism to transport articles through the apparatus, said mechanism comprising a series of rolls, a jack adjoining the entrance passage, said jack having a plunger adapted to push the rolls into the same, and means to hold the rolls in advanced position when so pushed to permit retraction of the plunger and addition of another roll to the series.

---

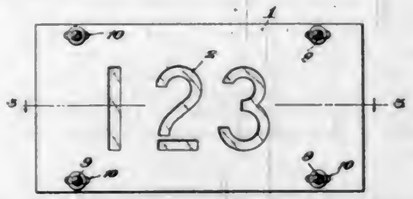


1,696,802. FENDER EXTENSION. FRANK P. KAUFMAN, Grand Island, Nebr. Filed Dec. 6, 1927. Serial No. 238,088. 5 Claims. (Cl. 97—192.)

1. An attachment for cultivator fender blades, said attachment including a rigid finger and a link having means for securely engaging the fender support with said finger inclined downwardly and forwardly in front of the fender blade, a ball and socket joint between said finger and said link, and means for locking said ball and socket joint against movement when said finger and said link are in adjusted position.

---

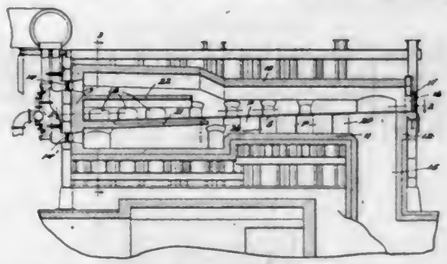
1,696,803. FEEDING DEVICE FOR MANUFACTURING AND WRAPPING OF SWEETMEATS AND THE LIKE. KARL FRITTIOF KRONQVIST, Helsinki, Suomi-Finland. Filed Apr. 10, 1925, Serial No. 22,140, and in Suomi-Finland Feb. 10, 1925. 5 Claims. (Cl. 198—59.)



4. A dispensing device for hoppers comprising a plurality of coincidentally disposed slidable plates, means for trans-

mitting motion to said plates whereby articles within said hopper will be transferred from one plate to the next adjacent plate and means cooperating with one of said plates for receiving articles transferred thereto.

---

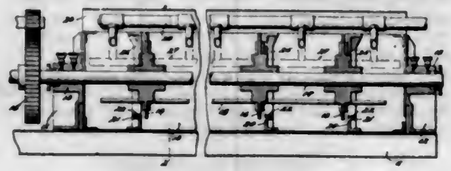


1,696,804. AUTOMOBILE LICENSE-PLATE HOLDER. GEORGE J. LAPIERRE, Pawtucket, and THOMAS A. GILLIGAN, Providence, R. I.; said Gilligan assignor of one-twentieth to Annie P. Bonin, Pawtucket, R. I., one-tenth to Julian C. Marx, Providence, R. I., and one-twentieth to Louis J. G. Martelle, Leo McKenna, and Leo V. Boyle, Pawtucket, R. I., and one-twentieth to Joseph W. and Emma Plante, Woonsocket, R. I. Filed May 4, 1928. Serial No. 275,051. 2 Claims. (Cl. 40—133.)

1. In an automobile license plate holder, a plate having its sides and ends flanged rearwardly and having indicia-forming cutouts, an inopaque member engaged with the rear of the plate and with said flanges so as to be held in position by the latter, a back member having a central dished portion and having outwardly directed flanges at its side and end edges disposed parallel to the plate and engaged with the inopaque member and with the plate flanges, a source of light at the center of the rear of the back member, and attaching screws extending through the said plate, through the inopaque member and through the flanges of the back member.

---

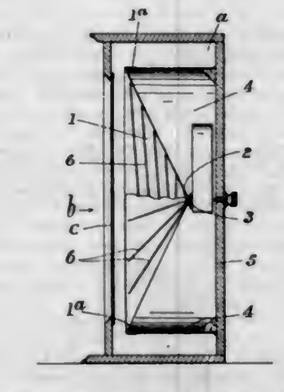
1,696,805. CONTINUOUS HEATING FURNACE. CHARLES E. LEHR, Bethlehem, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Apr. 6, 1923. Serial No. 630,327. 3 Claims. (Cl. 263—6.)



1. A continuous heating furnace having a heating chamber provided with openings at opposite ends for the introduction and withdrawal of blanks, means to support said blanks in their travel through the furnace, ports disposed at the outlet end of the furnace so as to project the flame into the heating chamber from points above and below the said means and muffle walls disposed above and below said blank supporting means, whereby the blanks are shielded from direct contact with the flame.

---

1,696,806. DEVICE FOR TREATING RODS. CHARLES E. LEHR, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed July 9, 1923. Serial No. 650,464. 3 Claims. (Cl. 266—6.)



1. In a machine for treating tubes or rods, the combination of a vat, a rotatable shaft extending longitudinally of the vat, a plurality of discs secured to the shaft and having aligned open recesses therein, guides arranged adjacent to the discs and having guiding surfaces disposed

inwardly of the peripheries of the discs, feeding means cooperating with the guides, and means cooperating with the outlet end portions of the guides to assure the removal of treated rods or tubes from the discs recesses.

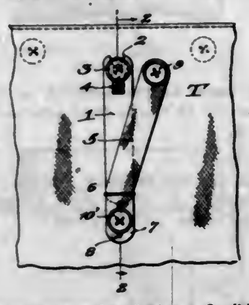
---

1,696,807. DIAPHRAGM FOR TELEPHONE INSTRUMENTS. ERIC VINCENT MACKINTOSH, New Malden, and CYRIL FRENCH, Hampton Wick, Kingston-on-Thames, England. Filed Aug. 13, 1926, Serial No. 129,015, and in Great Britain Oct. 24, 1925. 3 Claims. (Cl. 181—31.)

1. A loud speaker comprising a case, a cylindrical frame located within the case and secured at the inner edge thereto, and a conical diaphragm having a maximum diameter corresponding to the diameter of the frame, the outer edge of the diaphragm being secured to the outer edge of the frame and the apex of the diaphragm extending inwardly of the frame.

---

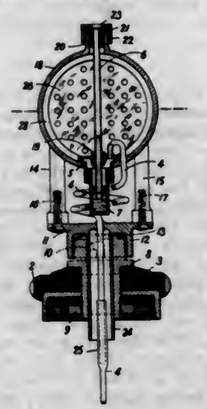
1,696,808. CARD. DONALD F. MATSON, Monessen, Pa. Filed Sept. 25, 1926. Serial No. 137,719. 4 Claims. (Cl. 281—1.)



1. A visiting card comprising a rectangular body portion provided with means to constitute the name of an individual and a monogram, said monogram spaced a substantial distance from the name of the individual, said body portion further formed with opposed, spaced depressed parts to provide a pair of panels and a border of uniform thickness throughout extending entirely around each of the panels, one of the panels carrying said monogram and the other

said name, a part of said border being common to said panels and formed by said part of the body portion positioned between the panels, that part of the body portion positioned between the panels in connection with the remaining portion of said border forming a border of uniform width throughout and extending entirely around one of said panels on the severence of said body portions transversely at one of the edges of the opposed edges of said depressed parts.

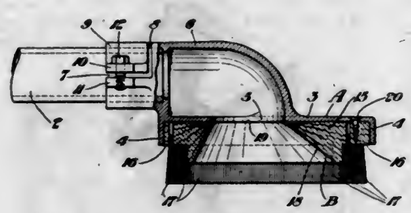
---



1,696,809. TROUSER-SUPPORTING DEVICE. JOHN W. MEIKLEJOHN, Pawtucket, R. I. Filed Sept. 22, 1927. Serial No. 221,294. 5 Claims. (Cl. 241—25.)

1. In a trousers supporting device, a flexible strip having a forked upper end to engage a trousers button and the fastener of said button, a fabric loop carried by the strip formed to engage over the button so as to hold the strip in position, and a fabric tape secured between its ends to the strip and having its lower end extending below the strip and formed with a buttonhole to engage a second button on the trousers, said tape having a suspender engaging button on its upper end.

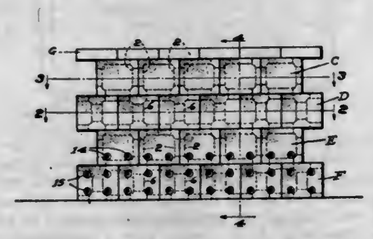
---



1,696,810. RADIATOR FOR MOTOR CARS AND THE LIKE. ALBERT MOND, London, England. Filed Feb. 12, 1926, Serial No. 87,969, and in Great Britain Feb. 17, 1925. 5 Claims. (Cl. 73—54.)

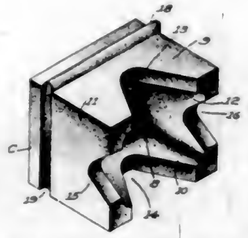
1. Apparatus for automatically indicating the level of liquid cooling media in radiators of internal combustion engines of automotive vehicles, comprising a hermetically closed chamber containing a gaseous fluid, a pipe also containing a gaseous fluid leading from said chamber into the liquid cooling medium, cooling means in the path of said gaseous fluid in said pipe adapted to function under the influence of the air current when the automotive vehicle is in motion, whereby the effect of temperature variations on the gaseous fluid within said pipe and said chamber is diminished and means indicating the pressure in said chamber.

---



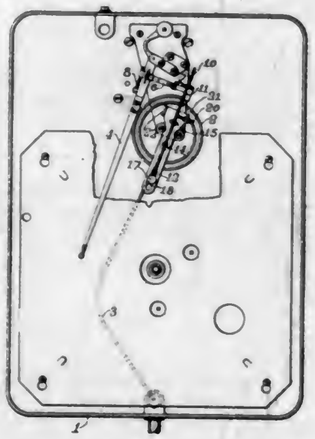
1,696,811. SUCTION CLEANER TOOL. EDWARD A. NISBET, Pittsburgh, Pa., assignor to Invincible Vacuum Cleaner Manufacturing Company, Pittsburgh, Pa., a Corporation of Delaware. Filed June 2, 1927. Serial No. 195,944. 1 Claim. (Cl. 15—158.)

A cleaning head for a suction cleaning apparatus comprising, in combination, a body portion substantially triangular in plan and composed of a relatively flat top wall and a depending peripheral flange, which wall and flange combine to form a triangular receiving socket having substantially three equal sides to receive a triangular shaped brush member, said top wall of said body portion being provided with a centrally arranged opening communicating with an integrally formed connecting conduit adapted to be connected to the suction conduit of a cleaning apparatus, said brush comprising a substantially triangular rigid body portion of said head, a row of bristles secured in and adjacent the outer edge of said body portion of said brush, the portion of said brush body within said bristles extending downwardly a material distance along and terminating short of the lower ends of said bristles and having its central portion cut away so as to form a skirt flange within said row of bristles and a hollow suction dome terminating in a centrally arranged opening communicating with the opening in said top wall of said body portion of said head, and means for removably securing said brush in said body portion of said head.



---

1,696,812. FURNACE WALL AND BRICK THEREFOR. OSCAR NYGAARD, Saugus, and BENJAMIN H. SNOW, West Medford, Mass., assignors to Bernitz Furnace Appliance Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1926. Serial No. 85,682. 15 Claims. (Cl. 110—75.)

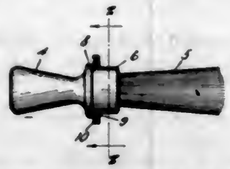


1. A furnace wall structure comprising superposed courses of bricks, composed entirely of refractory materials, the bricks in one course breaking joints with those in the next course, said bricks having upright rearwardly projecting portions with the projecting portions of the bricks in one course superposed on the projections of the bricks in the next lower course, said wall having vertical air passages across adjacent courses, formed by said portions, to permit a vertical flow of air past the rear faces of the bricks.

1,696,813. BRICK FOR FURNACE-WALL CONSTRUCTION. OSCAR NYGAARD, Saugus, Mass., assignor to Bernitz Furnace Appliance Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 8, 1926. Serial No. 85,683. 6 Claims. (Cl. 110—75.)

1. A brick for furnace wall construction having a relatively large chamber extending into it from the rear side thereof leaving a relatively thin wall at the front of the brick, said brick being made of non-metallic refractory material, flanges projecting rearwardly from said wall at opposite edges thereof and forming opposite walls of said chamber, said flanges having notches therein provided passages therethrough leading from the chamber to the opposite sides of the brick, and a hole extending through said wall from said chamber to the front face of the brick.

1,696,814. PRESSURE GAUGE. DURWOOD D. ROSENBURGH, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Dec. 15, 1926. Serial No. 155,095. 7 Claims. (Cl. 73—109.)



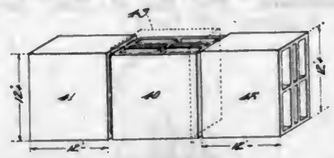
1. In apparatus of the character described, the combination with a pressure-responsive system including a pressure-responsive element, an arm and means for translating movement of the pressure-responsive element, of a spring wire, means for adjusting the position of the wire in the direction of its length and a projection on the pressure-responsive system, the wire being disposed on one side of the projection in the path of motion thereof to be flexed thereby.

1,696,815. PROCESS OF LEATHER FINISHING. ABRAM SMALL, Danvers, Mass. Filed Nov. 30, 1926. Serial No. 151,828. 2 Claims. (Cl. 91—70.)

1. The method of finishing leather, consisting in applying thereon a coating composition having latex as an ingredient to lay the nap, allowing the leather to dry, applying thereto said coating composition without latex as an ingredient, allowing the same to dry, dusting with finely comminuted matter, and finally placing the leather under high pressure between hot plates at a relatively high temperature.

1,696,816. BRUSH ATTACHMENT. SIGURD A. STEINARSON, Bucksport, Me. Filed Nov. 26, 1927. Serial No. 235,938. 1 Claim. (Cl. 15—248.)

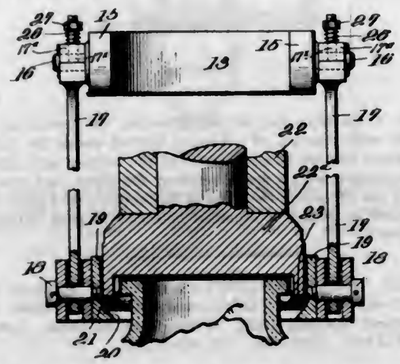
A shaving brush having mounted on its handle near the bristles socket an elastic band attached to an annular ring of sponge.



1,696,817. GOLF ACCESSORY. HENRY W. ST. JOHN, Brightwaters, N. Y. Filed Sept. 7, 1928. Serial No. 304,425. 3 Claims. (Cl. 273—66.)

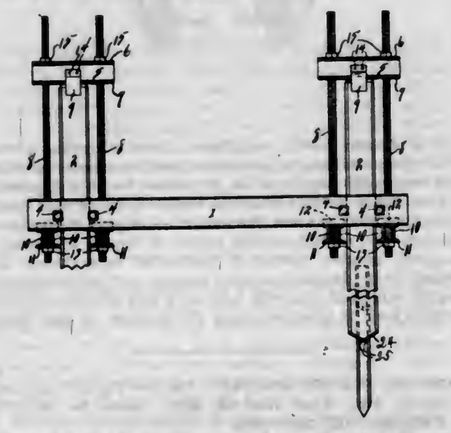
1. In a golf accessory, a suitable rod, and a ball entrapping device embodying two cage sections of a size to collectively embrace and house a ball in a position wherein the ball is wholly within the confines of said sections collectively with the contiguous edges of the sections in substantially abutting relation, resilient shanks formed on the respective sections to mount the sections on the rod and to normally impel said sections into such edge abutting relation, and toggle mechanism connected across the interior of said sections so that when the toggle is extended the sections will be forced apart to permit entry of the ball between them, said toggle being positioned for engagement with the ball as it enters between the sections whereby impact of the ball with the toggle will cause the toggle to be flexed to release the sections and permit them to spring together under the impulse of their resilient shanks.

1,696,818. BUILDING BLOCK AND WALL. HARRY L. STRAND, Boston, Mass., assignor of one-half to Leo F. Emerson, Brookline, Mass. Filed July 15, 1925. Serial No. 43,839. 5 Claims. (Cl. 72—41.)

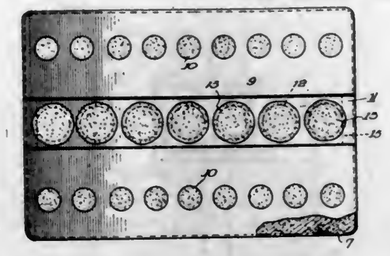


2. A tile building block adapted for use in a wall as a backing for a pre-determined number of superimposed bonded face courses of brick and formed with an approximately square wall of required dimensions to conform to said face courses, said block being pre-formed with one edge of the square wall a predetermined amount shorter than the other edge at right angles thereto to provide, when either light burned or hard burned, one of said edges with substantially no greater height than the

said required square dimensions when the block, if turned at right angles, projects a substantial distance above the top of the face courses.

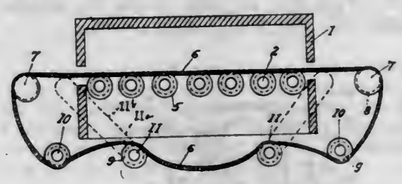


1,696,819. CAPPING MACHINE. TOM SUTCLIFFE, London, England. Filed Apr. 6, 1926, Serial No. 100,098, and in Great Britain July 10, 1925. 6 Claims. (Cl. 226—83.)



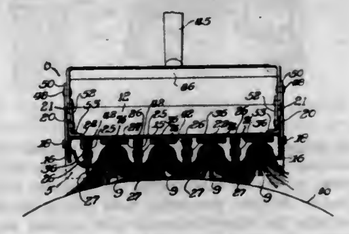
3. A machine for capping bottles or jars comprising in combination a fixed head adapted to receive a loosely capped jar or bottle, a spiral wire annulus mounted in said head and adapted to surround the cap, and means to rotate said annulus about its peripheral axis, so that the inner portions of the coils move axially away from the head and to simultaneously radially contract said annulus.

1,696,820. PROGRESSIVE PILE-DRIVER SUPPORT. JOHN B. TEMPLETON, Dallas, Tex. Filed Jan. 19, 1926. Serial No. 82,384. 8 Claims. (Cl. 61—74.)



1. A pile driver support comprising a plurality of members, each member having a pair of beams disposed on opposite sides of the piles, and means for suspending said beams from the tops of the piles, including adjusting devices for engaging each pile for holding said beams at different points of vertical adjustment.

1,696,821. FRICTION BRAKE. JAMES S. THOMPSON, New York, N. Y., assignor to American Brake Materials Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1926. Serial No. 137,425. 7 Claims. (Cl. 188—258.)



5. A friction brake shoe comprising a composition body and a metal back thereon, said back having a depression therein and said depressed part being provided with perforations, parts of the body extending through said perforations and forming buttons within the depression to anchor the body to the back.

1,696,822. CONTINUOUS FURNACE. JOHN B. TYTUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed May 12, 1925. Serial No. 29,828. 3 Claims. (Cl. 214—18.)

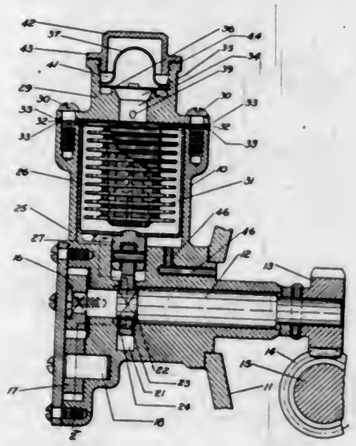
1. In combination, a furnace, a series of relatively smooth rotatable bodies in the furnace, chains arranged over said bodies, said chains being endless and supported in a condition of balance as to their return portions, and means for driving at least one of the rotatable bodies.

1,696,823. HAIR WAVER. ARTHUR E. WALSH, Chicago, Ill. Filed May 10, 1924. Serial No. 712,193. 16 Claims. (Cl. 132—32.)

1. In a device of the class described, the combination of a plurality of spaced blades adapted to lie edgewise to

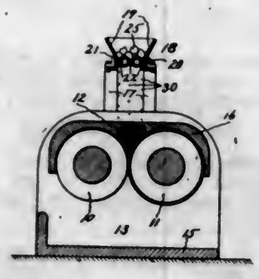
a person's head with the spaces between the blades opening toward the head and a waving member cooperable with the opposite edges of said blades for waving the strands of hair thereover, said blades being of sufficient width to cooperate with the waving member at one edge and to extend at their opposite edges from the waving member for presentation to the head and spacing the waving member therefrom.

---



1,696,824. PRICE MARKER. FREDERICK W. WANNER, St. Louis, Mo. Filed Oct. 13, 1927. Serial No. 225,936. 3 Claims. (Cl. 40—11.)

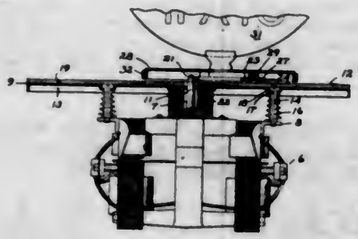
1. A marker comprising a plate having card-holding means at three edges but free of such means at its fourth edge, a card inserted into said card holding means from said fourth edge of said plate, and an attaching device having a spring clip jointly receiving said fourth edge of said plate and the adjacent portion of said card, whereby to not only mount plate and card upon produce or the like on sale, but to removably hold the card engaged with said card-holding means.



---

1,696,825. FUEL PUMP. JOHN WILLIAM WHITE, Buffalo, N. Y. Filed Feb. 19, 1924. Serial No. 693,929. 6 Claims. (Cl. 103—44.)

1. A fuel pump comprising a casing, a bellows therein open at one end, which end is rigidly secured to said casing, a cup-like piston in said casing surrounding said bellows and out of contact therewith, said piston containing fluid which fills the space between said bellows and the walls of said piston, and means for reciprocating said piston and thereby through said fluid controlling the expansion and contraction of said bellows.

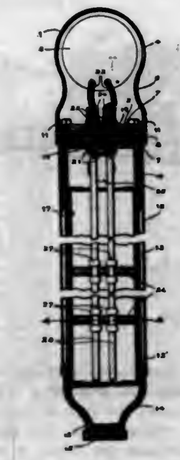


1,696,826. DEVICE FOR MELTING PARAFFIN. ELMER S. WHITTIER, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 10, 1926. Serial No. 108,038. 2 Claims. (Cl. 18—2.)

1. In a machine for mixing plastics, the combination with the rolls thereof, of a hopper located above the rolls, steam pipes located at the bottom of the hopper, said pipes being arranged with a space between the pipes, and spaces between the pipes and the sides of the hopper, said pipes being spaced to permit a liquefied material to pass through said spaces.

---

1,696,827. ANIMATED-DISPLAY DEVICE. MULFORD M. WILLIAMS, Oakland, Calif., assignor to Alexander N. Prentice, Oakland, Calif. Filed Sept. 9, 1926. Serial No. 134,377. 6 Claims. (Cl. 40—139.)

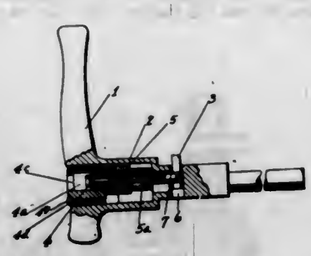


1. A display device comprising a motor having a vertically disposed magnetized motor shaft, a member entirely and resiliently supported on the motor frame and providing an upper surface disposed transversely of said shaft and perforated to allow the extension of said shaft therethrough, and an independent article of display providing a magnetic member having a continuous edge thereof arranged to be disposed on said surface and to frictionally engage said shaft whereby motion of said article over said surface may be produced upon the rotation of said shaft.

---

1,696,828. WATER HEATER. VERNON PRICE-WILLIAMS, Miami, Fla. Filed June 10, 1926. Serial No. 114,977. 3 Claims. (Cl. 219—39.)

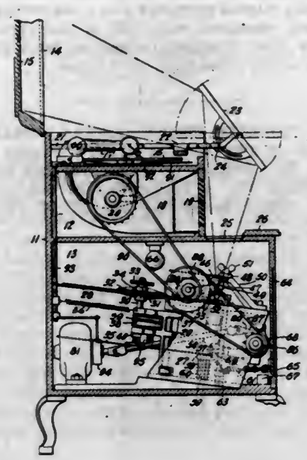
1. A device of the character described comprising a casing, a sleeve head inserted into the upper end thereof and having an annular shoulder formed exteriorly of one end, a depending sleeve threaded into the lower end of the sleeve head, a closure threaded on the lower end of the depending



sleeve, said casing terminating at its lower end in an inward flange resting on the upper edge of said closure, and an insulating member overlying the inner surface of the sleeve head, depending sleeve, and closure.

---

1,696,829. LOCK. SOLOMON WISE, Cincinnati, Ohio. Filed July 12, 1927. Serial No. 205,186. 8 Claims. (Cl. 70—91.)



1. In a lock, the combination of two tumbler containers, means on one container for moving the other container with relation to it, tumbler chambers in said containers, a set of concentric tumblers for each chamber one of which sets at least, is spring impelled, whereby when the chambers are in line the tumblers will intermesh and hold them against relative movement, adapted to receive a key for the one container, establishing a line of cleavage between the sets for concentric tumblers and for rotating said container, and means on the other container to operate a bolt.

---

1,696,830. LIGHT-SENSITIVE SILVER HALIDE EMULSIONS AND PROCESS OF MAKING THE SAME. PETER WULFF, Starnberg, and BRUNO WENDT, Dessau, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed May 16, 1927, Serial No. 191,928, and in Germany May 20, 1926. 9 Claims. (Cl. 95—7.)

1. Process of manufacturing light-sensitive silver halide emulsions characterized by the step of incorporating in the emulsion a compound of the iminazole-series.

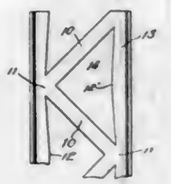
1,696,831. COMBINED GRAMOPHONE AND MOTION-PICTURE APPARATUS. WILLIAM H. BAKER, Montreal, Quebec, Canada. Filed Jan. 7, 1921, Serial No. 435,712. Renewed May 22, 1928. 21 Claims. (Cl. 88—18.8.)

1. A motion picture machine for use with films having pictures arranged thereon in a spiral series, comprising a pivoted arm, a spindle revoluble in the arm and adapted to carry a film, a disc carried by the spindle having apertures therein uniformly spaced and arranged in a spiral series, a toothed wheel positioned to engage the apertures of the disc to both rotate the disc and bodily move the same, and means operative upon disengagement of the disc and wheel to rotate the spindle and disc to return the disc to predetermined relation with respect to the wheel.

15. In a motion picture machine including a flexible disc having a spiral series of apertures, a pinion to engage the disc apertures, and means engaging the disc to hold the disc in engagement with the pinion, said means being movable to enable flexion of the disc to disengage the pinion for resetting of the disc and film.

---

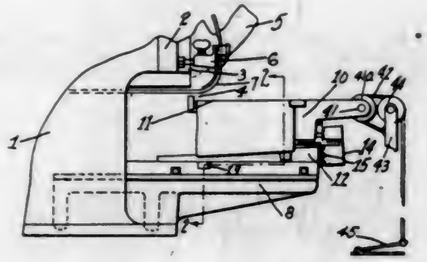
1,696,832. COMBINED MEASURING AND DRAFTING INSTRUMENT. FERMAN L. BANE, Cincinnati, Ohio. Filed Aug. 8, 1925. Serial No. 49,051. 1 Claim. (Cl. 33—192.)



In an instrument of the character described, a lazy tongs construction comprising pairs of cross levers pivotally connected between their ends and centrally of one of the levers of each pair, one end of each lever of a pair being pivotally connected to that of a lever of an adjacent pair, the other end of one of the levers of each pair being pivotally connected to a lever of an adjacent pair at a point between its central pivotal point and its end, the extending portion of said lever being centrally notched and having its side edges converging

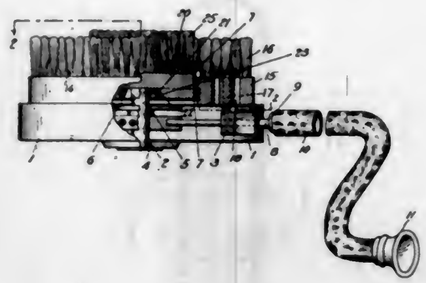
and forming with said notch, points on said extending end, upper and lower blocks at each end of said lazy tongs construction having aligned apertures therein, pointed members extending through said apertures, set screws for holding said pointed members in said blocks, other blocks pivotally connected centrally to certain of said levers and in spaced relation to each other, said other blocks having aligned apertures and a rod extending therethrough and connected with one of the lugs by a set screw, lock nuts threadedly connected with the rod on either side of the other lug.

---



1,696,833. ROLLED TRUSS METAL SHAPE AND METHOD OF PRODUCING SAME. WALTER A. BATES, Chicago, Ill., assignor to Bates Expanded Steel Truss Co., Chicago, Ill., a Corporation of Delaware. Filed Dec. 17, 1921. Serial No. 523,116. 7 Claims. (Cl. 80—66.)

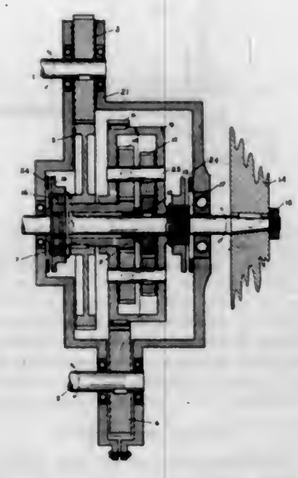
7. The method of making a truss metal shape which consists in slitting a blank transversely and alternately from the marginal portions of the blank, and also slitting the blank angularly and alternately at opposite ends of the transverse slits, and then rolling the blank to elongate the marginal portions and thereby cause a separation and an elongation of the slitted portions intermediate of the marginal portions to form openings in the finished blank.



---

1,696,834. BED FOR SHOE-ORNAMENTING MACHINERY. BISMARCK B. BRODFUEHRER, BENJAMIN W. FREEMAN, and CHARLES A. JESTER, Cincinnati, Ohio, assignors, by mesne assignments, to said Benjamin W. Freeman. Filed Jan. 13, 1926. Serial No. 80,903. 9 Claims. (Cl. 164—93.)

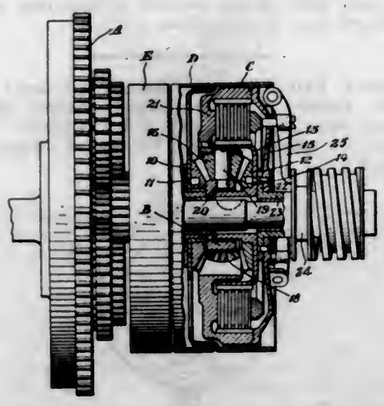
2. For use in a shoe ornamenting machine having a frame provided with guiding means, mechanism comprising a die supporting unit provided with means for cooperating with said guiding means in controlling the movement of said unit relative to said machine, said unit composed of upper and lower members and having self contained means for varying the elevation of portions of said unit, and means on said upper unit for cooperating with a fixed portion of said frame for preventing movement of said upper unit excepting in the direction of its elevational movement.



1,696,835. ROTARY HYDRAULIC BATH BRUSH. WALTER E. BURNETT, Los Angeles, Calif. Filed Mar. 5, 1927. Serial No. 173,003. 3 Claims. (Cl. 15—29.)

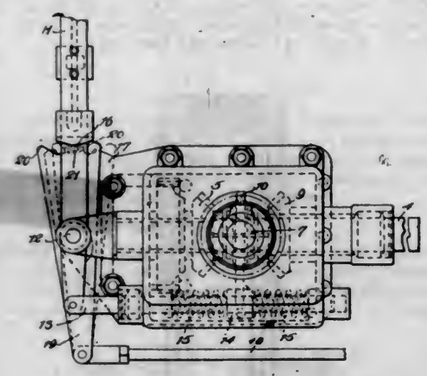
3. A rotary brush comprising a closed casing, a shaft journaled in the casing and projecting through the wall of the casing which forms the face of the casing, a rotor on the shaft in the casing, means for discharging fluid into the casing for turning the rotor, a rotary brushing element mounted on the projecting end of the shaft, and a stationary brushing element comprising a plurality of brushing means projecting from the face wall of the casing around the space occupied by the rotary brushing element, the said face wall of the casing having apertures opening therethrough between adjacent brushing means of the stationary brushing element.

---



1,696,836. POWER TRANSMISSION. LEE R. BUSHYAGER, Hasbrouck Heights, N. J. Filed Nov. 14, 1927. Serial No. 233,124. 2 Claims. (Cl. 74—34.)

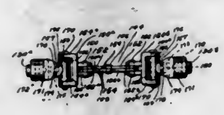
1. In combination with a driven shaft, two prime movers provided each with a power shaft, a collar threaded upon a member rotating in unison with each power shaft and movable by virtue of such threaded connection to and from an oppositely set, fixed abutment, and gearing connecting the two power shafts with the driven shaft.



1,696,837. INTERMEDIATE GEAR FOR AUTOMOBILES. NELS CHRISTIANSEN and ERNEST A. ILLERBURN, Gull Lake, Saskatchewan, Canada. Filed May 23, 1927, Serial No. 193,625, and in Canada May 12, 1927. 1 Claim. (Cl. 74—34.)

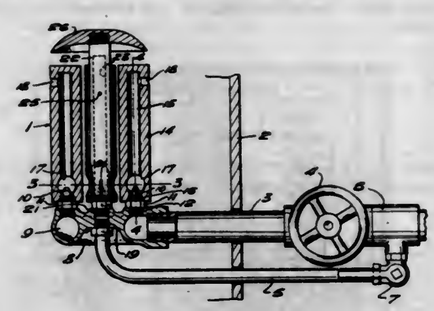
An intermediate speed gear mechanism for planetary transmissions, comprising in combination a drive shaft, a sleeve, a brake drum, a gear for the brake drum, a clutch drum and a gear for the clutch drum, a driving plate secured to the sleeve, a series of pinions mounted intermediate of the aforementioned gears and meshing therewith.

---



1,696,838. CLUTCH CONTROL FOR TRANSMISSION MECHANISM. RALPH F. CRAWFORD, Salina, Kans. Filed Aug. 3, 1926. Serial No. 126,852. 3 Claims. (Cl. 192—138.)

1. In an automatic clutch control for power transmission mechanism, driving means, driven means, a clutch connection between said driving means and said driven means including a clutch control lever manually operable from neutral to clutch position and having a spring pressed pawl and a segment rack engaged thereby to hold the adjustment, and means operable by said driven means to automatically return the clutch control lever from clutch position to neutral position upon a predetermined movement of said driven means including a reciprocatory cam device for raising said pawl from engagement with the teeth of said rack and a spring tensioned in the movement of said clutch control lever from neutral to clutch position.

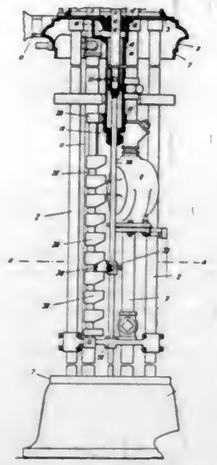


1,696,839. CONTROLLING MECHANISM FOR WHEEL BRAKES. JOHN B. DES ROSIERS, Providence, R. I. Filed June 24, 1925, Serial No. 39,296. Renewed Apr. 20, 1928. 42 Claims. (Cl. 188—194.)

3. In a road vehicle, the combination of a stationary axle, a wheel mounted on each end of said axle so as to rotate freely around a horizontal axis and to swivel around a substantially vertical axis, a braking mechanism attached to each wheel, rotatable means freely expansible and freely flexible in all directions for actuating said braking mechanisms mounted on said vehicle, said rotatable means comprising rod sections and connecting means therefor comprising two sets of toggle joints each having one end thereof pivotally joined to adjacent ends of said rod sections in one plane and having the opposite ends thereof pivotally joined together in the same plane, said joints being also pivotable in a plane at right angles to said rod sections, and means operable from the driver's seat to rotate said means to actuate said breaking mechanisms.

---

1,696,840. GAS BURNER. HARRY E. DICKINSON, Houston, Tex. Filed Aug. 2, 1926. Serial No. 126,533. 3 Claims. (Cl. 158—104.)

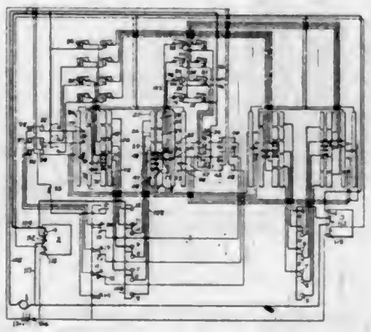


1. A gas burner comprising an annular gas manifold having a plurality of gas jets upstanding therefrom, a group of tubes one to each gas jet mounted upon the manifold and extending upwardly therefrom, a pilot light burner mounted concentrically of and on the manifold within said group of burners and projecting upwardly and terminating above the latter, and a canopy mounted on the upper end of the pilot light burner and extending above and over said group of burners.

---

1,696,841. LIQUID MEASURING AND DISPENSING APPARATUS. RUSSELL L. EDISON, Grand Rapids, Mich., assignor, by direct and mesne assignments, to Fleckenstein Pump Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Feb. 12, 1925. Serial No. 8,729. 2 Claims. (Cl. 221—100.)

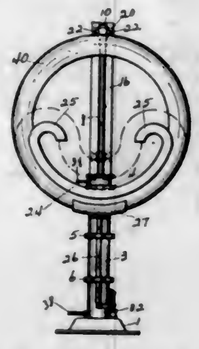
1. In liquid measuring and dispensing apparatus, the combination with a container, a tube movably mounted therein for controlling the discharge of measured quantities of liquid from the container, a handle connected with and adapted to be shifted for moving the tube, a lug ex-



tending from the handle and having one flat face and one inclined or cam face, and a series of fixed, spaced lugs adapted to receive the first-mentioned lug therebetween,

the second-mentioned lugs having one inclined face and one flat face adapted to respectively receive contact of the inclined and flat faces of the handle-carried lug.

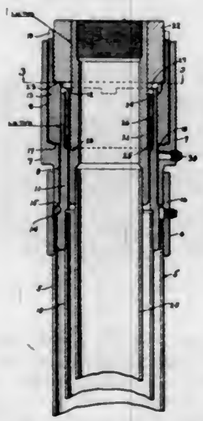
---



1,696,842. SIGNALING SYSTEM FOR ELEVATORS. ROBERT H. GAYLORD, Los Angeles, Calif. Filed Aug. 22, 1923. Serial No. 658,736. 14 Claims. (Cl. 177—336.)

3. An elevator signal system for a plurality of cars, comprising landing signals corresponding to the respective cars; a car operated switch corresponding to each car and having contacts corresponding to the respective landing signals and means operated in correspondence with the movement of the car to control circuit connection at such contacts; signal operating circuits including a source of current and the respective landing signals and also including the corresponding contacts of the car operated switches; control circuits including a source of current and circuit closers at the respective landings and also including electromagnetic means; circuit closers included in the respective signal operating circuits and operated by the respective electromagnetic means aforesaid to close the respective signal circuits; each signal operating circuit also including an electromagnet of sufficient resistance to prevent operation of the signal, and also including a switch controlled by said electromagnet and connections including said switch and a part of said electromagnet and adapted to short circuit said part of the electromagnet to reduce the resistance of the circuit upon operation of the electromagnet, so as to cause increased current to flow in the corresponding signal circuit, and an interlocking member adapted to cooperate with the said electromagnetically operated switches for each floor and direction of travel of the car, to prevent operation of any of said switches while any other of said switches for that floor and direction of travel is in operation.

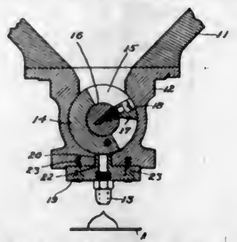
---



1,696,843. BAG INSERTER. RAYMOND HANSEN, Cudahy, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Sept. 29, 1924. Serial No. 740,523. 6 Claims. (Cl. 18—2.)

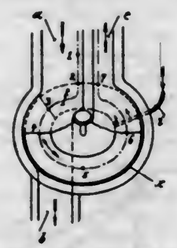
1. A device of the character described comprising means to engage not more than half of the inner periphery of a bag and means to fold the unengaged portion of the bag inwardly toward the engaged portion.

---



1,696,844. CASING HEAD FOR OIL WELLS. HUGH SCOTT HAYNES and WILLIAM L. ALEXANDER, Tampico, Mexico, assignors of one-third to George E. Paddleford, Tampico, Tamaulipas, Mexico. Filed Nov. 11, 1925. Serial No. 68,415. 3 Claims. (Cl. 285—22.)

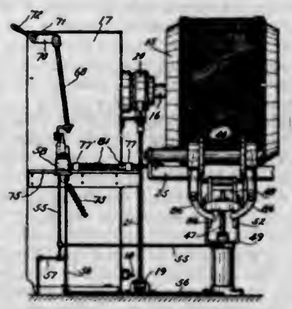
1. A casing head construction comprising a body member provided with an interior annular seat, adapted to be detachably secured to the upper end of a well casing, a locking ring disposed within said head and engaging said annular seat, and a casing head bushing for connecting a string of casing detachably secured to said locking ring, said bushing provided with an annular seat adapted to engage the casing head to form a gas tight joint therebetween.



1,696,845. DEPOSITOR. ROBERT S. HISLOP, Racine, Wis., assignor to Racine Confectioners Machinery Company, Racine, Wis., a Corporation of Wisconsin. Filed Apr. 3, 1925. Serial No. 20,523. 3 Claims. (Cl. 107—28.)

3. In a depositor for plastic material having a reservoir for the material, valve mechanism comprising a valve casing communicating with said reservoir, a removable measuring valve in said casing having a plurality of recesses therein to receive measured quantities of the material, said casing having a single discharge opening communicating with all of said recesses, and a plate removably secured to said casing, said plate having a portion closing the discharge opening in said casing and itself provided with a plurality of discharge openings corresponding in number, arrangement, and capacity to the recesses in said valve.

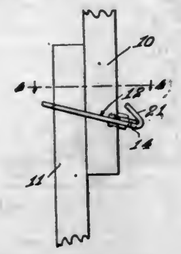
---



1,696,846. SEWAGE TREATMENT WITH THE AID OF A SCREEN ACTING LIKE A FILTER. KARL IMHOFF, Essen, Germany. Filed June 18, 1927, Serial No. 199,782, and in Germany July 31, 1926. 3 Claims. (Cl. 210—2.)

1. In sewage treatment, the process of exposing a screen to the sewage, and preventing passage of sewage therethrough till a filter of sludge forms thereon, then causing the passage of sewage therethrough to take place, and finally removing the sludge from the screen.

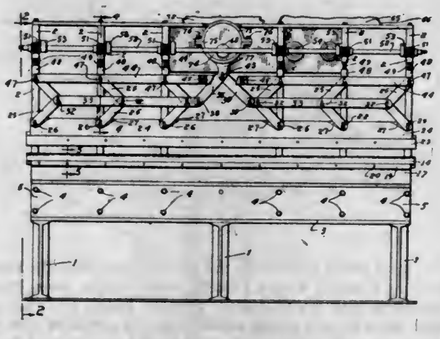
---



1,696,847. STITCHING DEVICE. WILLIAM F. IRROANG, Chicopee, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1927. Serial No. 182,754. 3 Claims. (Cl. 154—10.)

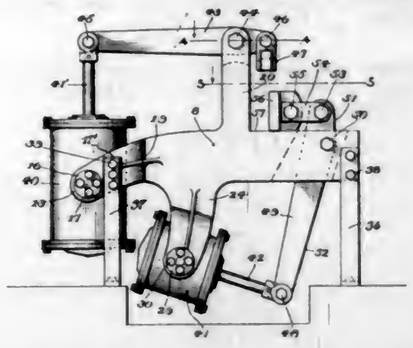
1. In combination with a revolving tire building drum, a pair of freely rotatable stitching rollers, means for pressing the rollers against the drum, means for causing the rotation of the rollers due to their contact with the drum to move the rollers apart, and mechanism automatically operated upon the separation of the rollers to a predetermined degree to remove them from contact with the drum.

---



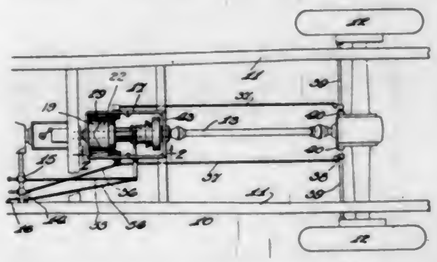
1,696,848. SHORE CLAMP. JACOB KAUTZ, Chicago, Ill. Filed Oct. 18, 1926. Serial No. 142,426. 1 Claim. (Cl. 304—40.)

A shore clamp including a clamping element having one edge portion provided with teeth and oppositely disposed outwardly extending portions at the ends of said element terminating in downwardly protruding portions, and a cooperating clamping element formed substantially U-shaped and having an edge portion provided with teeth and having portions providing a pivot for the first mentioned clamping element, said downwardly protruding portions on said first mentioned clamping element engaging said second mentioned clamping element adjacent said pivot to limit transverse movement of said first mentioned element, said outwardly extending portions being adapted to be disposed on opposite sides of said cooperating clamping element, and a locking member pivotally mounted on one leg of said U-shaped member and having a bifurcated portion adapted to be disposed to lock said clamping elements in clamping position.



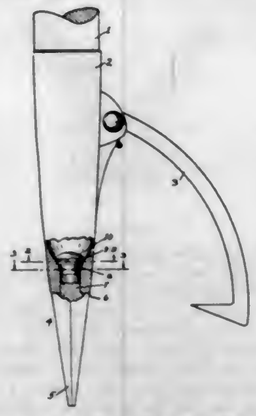
---

1,696,849. BENDING MACHINE. THOMAS J. KELLEHER, Chicago, Ill. Filed June 29, 1927. Serial No. 202,343. 8 Claims. (Cl. 153—21.)



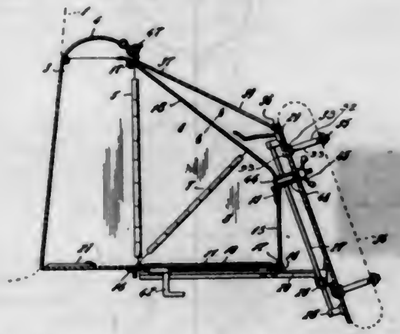
6. In a bending machine, a plurality of vertical metal plates secured in parallel planes, portions of the sides of said plates removed to obtain a plurality of horizontal supports and a like number of over-hanging portions of said plates above said tables, in combination with a bar adapted to form the base of a die, a die on said base, an additional bar, an additional die on said additional bar arranged to co-act with said first named die, controlled means to move said additional bar, said means to move comprising a plurality of series of toggle joints positioned below said over-hanging portions of said vertical plates, and means to actuate said toggle joints.

1,696,850. BANDING MACHINE. JOHN W. KILLINGSWORTH, Atlanta, Ga. Filed Mar. 21, 1927. Serial No. 177,178. 4 Claims. (Cl. 78—24.)



1. A machine for securing a band in position to bind the leaves of a spring together comprising a suspension structure for supporting the band in position to be acted upon, an upper lever disposed longitudinally with respect to and eccentrically pivoted to said structure above the point of supporting the band, a lower lever disposed at an upstanding position with respect to and eccentrically pivoted to said structure and further arranged forwardly of the upper lever, a combined holding and presser element pivotally carried by the forward end of the upper lever, an upsetting element pivotally carried by the upper end of the lower lever and sliding on said structure, and means supported from said structure and connected to the rear end of the upper lever and lower end of the lower lever for actuating said levers to shift said elements simultaneously at right angles to each other to secure the band to the spring.

1,696,851. POWER-OPERATED BRAKE. LOUIS KRUPP, New York, N. Y. Filed Nov. 2, 1927. Serial No. 230,627. 7 Claims. (Cl. 188—140.)



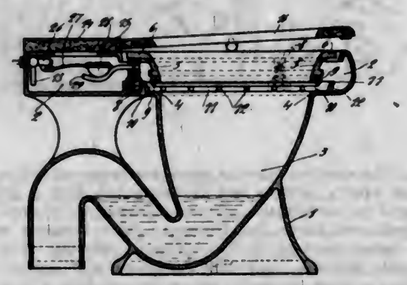
1. In a brake apparatus, the combination with the power shaft of a motor driven vehicle, brake drums, brake bands encircling said brake drums, a brake pedal, a clutch element fixed to said power shaft, a fixedly mounted cam element, a second cam element slidably mounted on said power shaft and normally engaging said first cam element, a second clutch element fixed to said second cam element and slidable longitudinally thereon, actuating means between said brake pedal and said second clutch element whereby depression of said brake pedal will cause said second clutch element to slide into coacting engagement with said first clutch element for transmitting rotary power to said second cam element for forcing the same longitudinally of said power shaft, and mechanism operable by the sliding movement of said second cam element for contracting said brake bands about said brake drums.

1,696,852. PEAVEY. WILLIAM LATTA, Evart, Mich., assignor to American Logging Tool Co., a Corporation of Michigan. Filed Apr. 27, 1923. Serial No. 635,031. 1 Claim. (Cl. 306—29.)

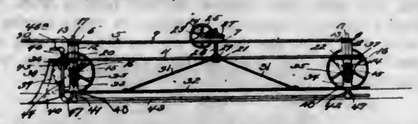
Means for securing a pike in the end of a peavey socket having a reduced end portion comprising a cylindrical shank on the pike, the terminal part of the reduced end portion of the socket formed with an axial cylindrical bore permitting insertion of and providing a bearing for said shank, an intermediate part of said end portion formed with a tapered bore to provide an anchorage for said shank against endwise movement, the upper part of said end portion formed with an internal rectangular socket to provide an anchorage for said shank against turning, the end of said shank upset to fill said tapered part and said rectangular socket respectively.

1,696,853. FOLDING TRUNK. OTTO R. LUDWIG, Garvin, Minn. Filed Mar. 25, 1927. Serial No. 178,360. 3 Claims. (Cl. 224—29.)

1. In a device for the purpose set forth, a box-like member having an open front and an open top and also having an opening at the bottom thereof, a cover plate for the last mentioned opening, a hinged cover for the top, side members hinged to the outer edges of the sides of the box, each of said sides comprising two members having angle confronting edges which are hingedly connected at said sides susceptible to inward swinging, a plate hingedly secured to the outer lower edge of the box and sides, a comparatively short lip carrying plate hingedly secured to the outer edge of the last mentioned plate, a flanged combined cover and partition plate hingedly secured to the top of the box, and swingable over the sides and engageable with the lip of the last mentioned plate when so swung and likewise swingable between the sides and means for locking the combined cover and partition plate to the lip of the last mentioned plate for closing the box-like member when the sides thereof are extended.

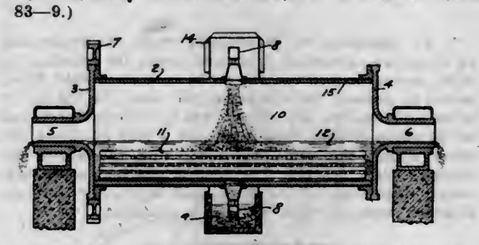


1,696,854. CORN VENTILATING AND DRYING DEVICE. OTTO R. LUDWIG, Garvin, Minn. Filed Oct. 29, 1927. Serial No. 229,713. 1 Claim. (Cl. 98—55.)



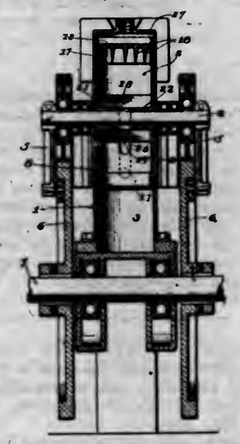
A ventilator for grain storage houses, comprising a plurality of pipe members which are gradually widened from one to their other ends and the reduced end of each of the pipe members designed to be received in the widened end of the adjacent pipe members, one of said pipe members having outstanding ears thereon for the reception of elements for securing this member to the top of the house, oppositely arranged flexible elements connected to the widened ends of the pipe members, and a rod on the outer edge of the lower pipe member to which the lower flexible elements are secured, all of said flexible elements being of the same length, whereby when extended the said elements will sustain the reduced ends of the pipes in the widened ends of the adjacent pipes, a sheave wheel fixedly supported on the top of the building, a cable trained therethrough and having one end surrounding and fixed to the rod and a counterbalancing weight on the second end of the cable whereby a pull on the cable will telescope the pipe members.

1,696,855. WATER-CLOSET. ELOF KARL HJALMAR LUNDBERG, Saltsjobaden, Sweden, assignor to Sesam Aktiebolag, Stockholm, Sweden, a Company of Sweden. Filed Nov. 12, 1925, Serial No. 68,668, and in Sweden Nov. 26, 1924. 1 Claim. (Cl. 4—13.)



A water closet including an outlet pipe enlarged to provide a collecting funnel, a flushing cistern disposed at the top of the funnel and communicating therewith, said cistern including a movable inner wall, valve controlled means for supplying water to the cistern, said movable wall being adapted when leveled to permit the discharge of water from the cistern into the funnel, and an upstanding wall in the cistern surrounding the movable wall adapted to restrain a part of the water in the cistern, said upstanding wall having perforations therein to permit of the relatively slow discharge of the remainder of the water in the cistern into the funnel.

1,696,856. WEED EXTERMINATOR. MARTIN F. MORAN, Nekoma, Kans. Filed Dec. 4, 1926. Serial No. 152,633. 3 Claims. (Cl. 97—1.)

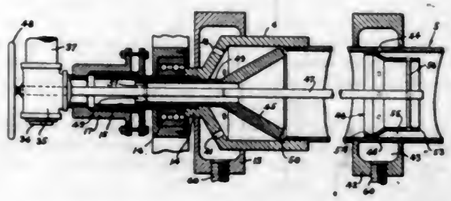


1. In a weed exterminator, the combination of a frame mounted on wheeled axles, a second frame adjustably mounted in relation to the first frame so as to move vertically, furrow-forming devices at the forward extremity of the adjustable frame, steam supply means having distributing members movable longitudinally along the furrows in rear of the furrow-forming devices, and a horizontal metal plate carried by said second frame and movable on the ground surface over the furrows and covering the steam distributing members, and operating to confine the steam in the furrows and to the roots of the weeds.

1,696,857. COMMINUTOR. RAY C. NEWHOUSE, Chicago, Ill., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 24, 1926. Serial No. 104,298. 6 Claims. (Cl. 83—9.)

1. In combination, a rotary drum forming a granulating chamber the inner wall of which has straight line generatrices throughout its length, means for feeding material into a medial portion of said chamber through the periphery of said drum, means for discharging material from the opposite ends of said chamber, and a plurality of freely tumbling granulating rods extending substantially throughout the length of said drum.

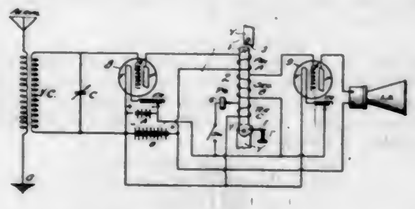
1,696,858. AIR-COOLED PISTON CONSTRUCTION. HARRY A. PALMER, Dorchester, Mass., assignor to Palmer Inventions, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1927. Serial No. 182,803. 4 Claims. (Cl. 123—171.)



1. A piston for internal combustion motors comprising a hollow body portion closed at its outer and at its inner

end and providing a cooling air receiving chamber, said body formed intermediate its ends with a pair of diametrically opposed slots forming intake and exhaust for the cooling air, said body portion further formed with diametrically opposed openings arranged at right angles to the slots, and wrist pin bearing sleeves integral with and arranged within said body portion and registering with said openings.

---

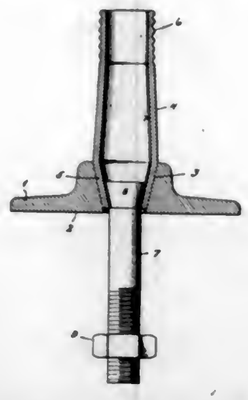


1,696,859. APPARATUS FOR DEHYDRATING CRUDE OILS. WILLIAM LEE PALMER, Long Beach, Calif., assignor of one-half to Regan Forge & Engineering Company, San Pedro, Calif., a Corporation of California. Filed Jan. 31, 1925. Serial No. 6,021. 6 Claims. (Cl. 233—11.)

1. An apparatus for dehydrating crude oils comprising an elongated cylindrical drum and means for rotating the same, means to feed the oils to be treated to said drum, means to preheat the oils before the same are fed to the drum, said drum having water discharge outlets therein and an oil outlet leading therefrom, and a pair of valves disposed within the drum for controlling the water discharge outlets, whereby the treated oils and water separated therefrom will be discharged separately and continuously from the drum during its operation.

---

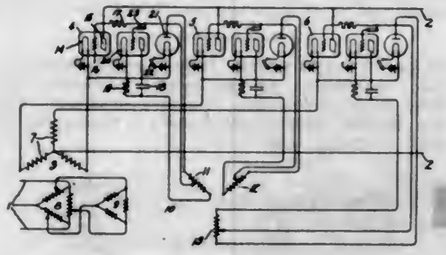
1,696,860. RADIOTRANSFORMER. FRANK D. PEARNE, Chicago, Ill.; Martha K. Pearne executrix of said Frank D. Pearne, deceased. Filed Mar. 16, 1925. Serial No. 15,965. 4 Claims. (Cl. 179—171.)



1. A sound amplifying transformer comprising a magnet having windings thereon adapted and arranged to provide a pair of mutually inductive electrical circuits, said magnet including a pair of relatively movable core parts and included in the magnetic circuit and arranged to provide by their relative movement a variable air gap, and means acting against the magnetic pull which tends to minimize the air gap and mechanically urging said parts to augment said air gap, said core parts being pivotally connected at the core joint separate from said air gap and said resilient means being adjustable.

---

1,696,861. INSULATOR-SUPPORTING PIN. BENTLEY A. PLIMPTON, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Mar. 21, 1927. Serial No. 176,978. 5 Claims. (Cl. 173—321.)



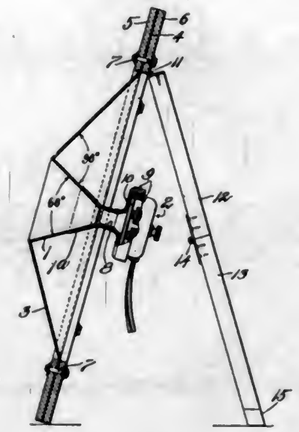
1. An insulator supporting pin of the character described comprising a base, a hollow post extending partly through the base and having a seat therein, and a bolt insertable through the post and cooperating therewith for securing the same with respect to the base, the bolt being

adapted for passage through a cross arm to effect mounting, the base, adjacent portion of the post and bolt having a wedging interrelation.

---

1,696,862. ELECTRICAL APPARATUS. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 23, 1926. Serial No. 131,016. 7 Claims. (Cl. 175—363.)

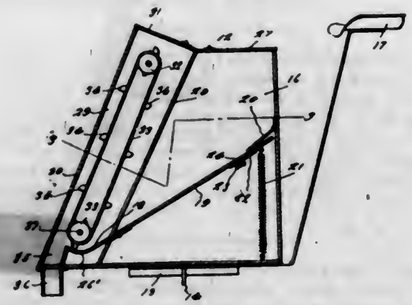
1. The combination of a space discharge apparatus provided with a cathode and an anode and with a grid arranged to control the current transmitted between said cathode and anode, low frequency current supply means, an energy storage device connected between said grid cathode through said supply means, and means comprising a space discharge apparatus provided with a control electrode arranged to maintain the stored energy of said device while the potential of said grid is negative.



---

1,696,863. LOUD SPEAKER. ARTHUR F. RANDALL, Boston, Mass. Filed Sept. 7, 1926. Serial No. 133,953. 4 Claims. (Cl. 179—116.)

1. A sound producing instrument comprising a relatively large hollow conical member of sheet material rigidly connected adjacent its middle with the larger end of a relatively small reversely disposed conical member of sheet



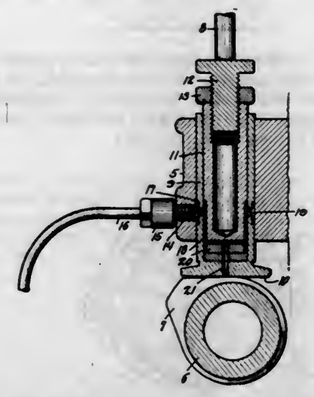
material, and electromagnetic operating means rigidly connected with and wholly supported by said relatively small member, said operating means including a direct act-

ing armature diaphragm closing the smaller end of the relatively small member and an electromagnet rigidly fixed to said relatively small member.

---

1,696,864. POTATO-PLANTING ATTACHMENT FOR LISTERS. RICHARD VIRGIL ROBERTSON, Waunets, Nebr. Filed Oct. 17, 1927. Serial No. 226,803. 2 Claims. (Cl. 221—128.)

1. A potato planting attachment for listers, comprising a hopper which is clamped on the lister frame, and which has a false bottom including a fixed section and a hinged section therein, a hinger directing plate over the hinged section of the bottom, a spring normally swinging the hinged section away from the directing plate, a shaft having a lug thereon for contact with the false bottom section when the shaft is turned, the fixed bottom section merging into a rounded trough, an inclined elevator compartment at the forward end of the hopper, an endless chain elevator therein and having its outer lead disposed parallel with and at the same angle as the outer wall of the compartment, said elevator having buckets fixed on the leads thereof, all of which is designed to successively travel through the gutter, a chute in the compartment outward of the gutter, a spout connected with the chute, in combination with means for imparting movement to the elevator and to the shaft.



1,696,865. JACK. NEWTON C. SCHELLENGER, Elkhart, Ind., assignor to Chicago Telephone Supply Company, Elkhart, Ind., a Corporation of Delaware. Filed Feb. 21, 1925. Serial No. 10,726. 4 Claims. (Cl. 173—328.)

4. In a jack of the character described, a pair of contact springs insulated from each other and secured at their front and rear ends in fixed relationship with respect to one another, said springs extending longitudinally from the front to the rear of the jack and being bent intermediate of their ends, and a body member having an opening for guiding a plug member to connect with the bent portion of said springs.

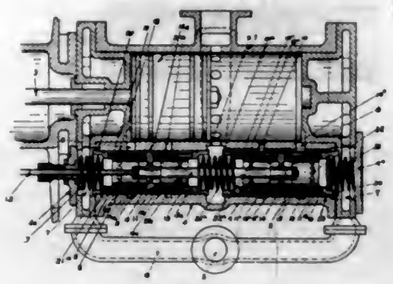
---

1,696,866. PUSH-ROD OPERATING MECHANISM. WILLIAM A. SEAMAN, Saginaw, Mich. Filed Sept. 23, 1926. Serial No. 137,366. 6 Claims. (Cl. 123—90.)

1. A self-adjusting tappet for push rod operating mechanisms, including a pair of telescopically and slidably associated members, means to supply oil under pressure between said tappet members for providing a liquid cushion therebetween and lengthening the tappet for maintaining constant contact of the tappet with the cam and the push rod, said tappet having a longitudinal opening through the lower end thereof to allow the oil to flow from between the tappet members to a point between the tappet and the cam and to partially relieve the liquid pressure of the cushion during the retreating movement of the cam whereby the tappet is allowed to shorten for permitting complete return movement of the push rod.

---

1,696,867. PROCESS OF TREATING LEATHER. MARTIN SEGORIA, Vallejo, Calif. Filed Nov. 30, 1927. Serial No. 236,887. 1 Claim. (Cl. 149—6.)

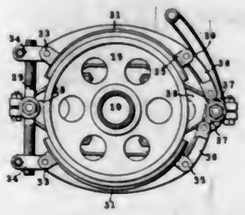


The process of treating leather for rendering the same smooth, durable, and pliable which consists in subjecting the leather to a mixture of twenty five pounds of white pine pitch, two and one-half quarts of linseed oil and six pounds of beeswax.

---

1,696,868. VALVE. ALLAN D. SKINNER, Erie, Pa., assignor to Skinner Engine Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1922. Serial No. 602,982. 2 Claims. (Cl. 121—193.)

1. In a fluid actuated engine, the combination of a cylinder having an inlet and exhaust port; a double-ended

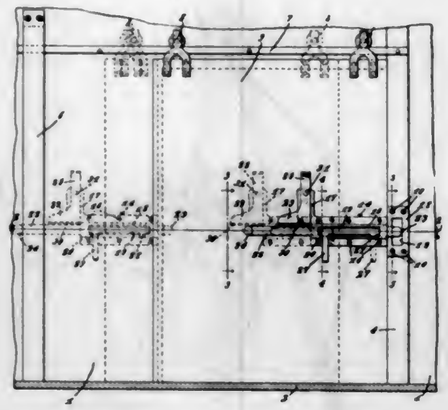


valve acting on said ports, one end controlling the steam port and the other the exhaust port and each comprising a valve member and a seating member, each of said members having a plurality of cylindrical rings telescoping a

plurality of cylindrical rings on the other member, the sliding surfaces of the telescoping rings forming a closure for the valve; and yielding mountings for the seating members.

---

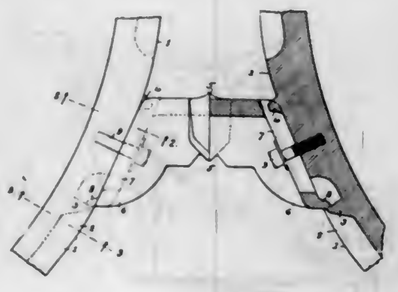
1,696,869. RAILWAY BRAKE. WILLIAM JUDSON SMITH, St. Paul, Minn., assignor of one-third to Horace Lowry, Minneapolis, Minn., and one-third to Alphonsus L. Drum, Chicago, Ill. Filed Nov. 29, 1924. Serial No. 752,857. 2 Claims. (Cl. 188—75.)



2. In combination, a rotatable axle, a drum secured thereto, a bearing housing for said axle, a pair of brake shoes adjacent said drum, actuating means for moving said shoes into contact with said drum, a fixed plate forming a part of said housing and arranged adjacent said drum, a pair of screw-threaded members secured to said plate, means for adjustably connecting the inner ends of the shoes with said members, means for pivotally mounting the actuating member upon said plate, and arms forming a part of said actuating member and connected with the outer ends of said shoes.

---

1,696,870. SLIDING-DOOR LATCH. HENRY J. SPENCER, Waco, Tex. Filed Nov. 8, 1927. Serial No. 231,943. 5 Claims. (Cl. 292—57.)

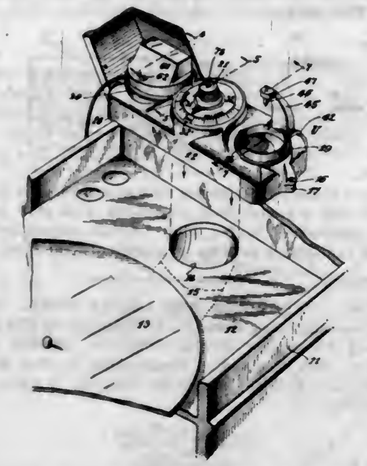


1. A sliding door latch comprising a keeper adapted to be secured to a stationary support, a carrier provided intermediate its ends with lengthwise extending slot, said carrier adapted to be secured to the sliding door, a latching bolt of greater length than and slidably mounted in the carrier, said bolt provided at one end with an angularly disposed nose for engagement in the keeper to arrest sliding movement of the door in one direction and provided at its other end with an angularly disposed protuberance adapted to engage with a stationary support spaced from the support to which the keeper is secured to arrest sliding movement of the door in the other direction, a handle extending through said slot, connected to the bolt and providing means for shifting and turning the

latter, and said carrier provided with spaced means for receiving said handle for latching the bolt in selected shifted position.

---

1,696,871. TABLE OR STAND. LEWIS E. WACKERLE, Waukegan, Ill., assignor to Chicago Hardware Foundry Company, North Chicago, Ill., a Corporation of Illinois. Filed May 3, 1927. Serial No. 188,506. 3 Claims. (Cl. 45—48.)



3. In a table or the like, the combination of a plurality of legs, each leg being of a curved form and provided with an upper lug on its rear surface, with a channel in said rear surface and with a cross lug in said channel, said lugs being in separated relation, a central brace member of an open bottom shell form formed with radial wings with each wing formed with a channel or slot in its outer face for engagement with the upper lug of the leg and a bearing lug at its lower end for abutment against the lower lug of the leg and a headed screw bolt arranged intermediate of said lugs and adapted to draw and fixedly hold the parts together.

---

1,696,872. SOUND-REPRODUCING APPARATUS. MAXIMILIAN WEIL, New York, N. Y. Filed Oct. 1, 1925. Serial No. 59,783. 23 Claims. (Cl. 179—100.1.)

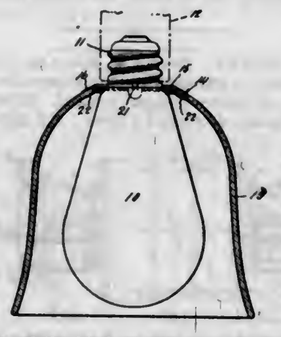
1. A unit for attachment in lieu of the tone arm base upon the motorboard of a phonograph, said unit comprising a support having an opening in its lower face registering with the amplifier inlet in the motorboard, said support constituting a base for the tone arm mounted thereon and including a passageway therein from the tone arm to

said opening, said support also mounting a telephonic reproducer and having a second passageway therein merging with said first passageway at said outlet aperture.

---

1,696,873. MAGNESIUM PRIMARY CELL. ROBERT T. WOOD, Niagara Falls, N. Y., assignor to American Magnesium Corporation, a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,385. 9 Claims. (Cl. 136—100.)

1. A primary cell comprising an electrode of magnesium and a neutral electrolyte containing a strong soluble oxidizing agent adapted to reduce the rate of corrosion of the magnesium electrode on open circuit.

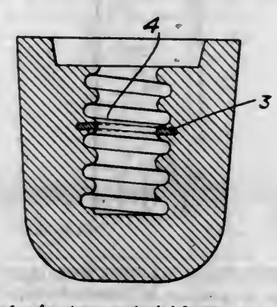


---

1,696,874. PROCESS OF MAKING ETHYLENE GLYCOL MONOALKYL ETHERS. CHARLES O. YOUNG, Elmhurst, N. Y., assignor to Carbide & Carbon Chemical Corporation, a Corporation of New York. Filed Feb. 7, 1924. Serial No. 691,283. 1 Claim. (Cl. 260—151.)

Process of making ethylene glycol monoethyl ether, comprising effecting a reaction between ethylene oxid and ethyl alcohol by means of heat and pressure in the presence of a large excess of alcohol.

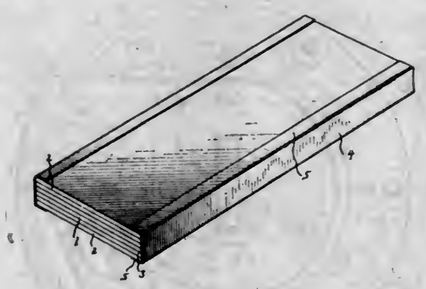
---



1,696,875. CLINCH COLLAR FOR SHADES. LAURITZ W. ANDERSEN, Waterbury, Conn. Filed Oct. 8, 1926. Serial No. 140,250. 4 Claims. (Cl. 240—142.)

1. A device of the kind described comprising a metallic ring having a flange adapted to engage the exterior of a glass shade, a plurality of bendable tongues adapted to engage the interior of said shade, an intermediate inwardly projecting flange and a fiber ring seated upon the said inwardly projecting flange, the interior diameter of the fiber ring being less than the interior diameter of the inwardly projecting flange.

---

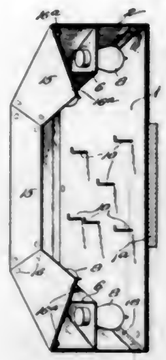


1,696,876. LADLE STOPPER. CHARLES C. BACON, Philadelphia, Pa., assignor to Ross Tacony Crucible Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 31, 1925. Serial No. 47,304. 1 Claim. (Cl. 22—85.)

A stopper of refractory material having a concavity provided with a thread of refractory material and having a plate washer of spiral form embedded in the wall of the cavity and constituting a part of the thread.

---

1,696,877. PLASTER-BOARD BUNDLE. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor to The United States Gypsum Co., Chicago, Ill., a Corporation of Illinois. Filed June 27, 1927. Serial No. 201,578. 9 Claims. (Cl. 206—60.)

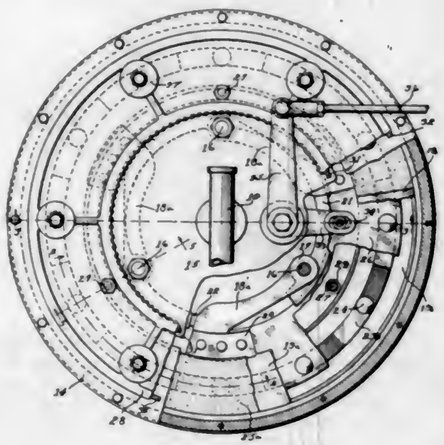


1. A package of flat structural elements of similar size and shape, comprising a plurality of such elements arranged in stacked relation, and means for securing said elements together in such relation, said means comprising thin relatively tough binding strips of thin paper or fibrous material having similar flexibility enclosing certain of the edges of the elements and having intermediate portions unattached thereto and under tension due to the application of substantial compacting force to said elements when the package is being formed, and marginal portions overlapping and adhesively secured to the marginal portions of the outer elements of the package.

---

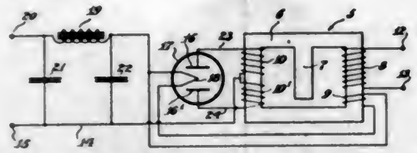
1,696,878. DISPLAY SIGN. ELMER J. BLISS, Boston, Mass., assignor to Regal Shoe Company, Whitman, Mass., a Corporation of Massachusetts. Filed June 5, 1925. Serial No. 35,102. 3 Claims. (Cl. 40—130.)

1. A display sign embracing in its construction a hollow casing comprising a back wall for the display of illuminated letters, peripheral walls projecting forwardly from the back wall, and a peripheral border inwardly pro-



jecting from the front edge portions of the peripheral walls to form an open frame through which the middle portion of the interior is exposed, supporting angle plates connecting the back of the border with the peripheral walls,

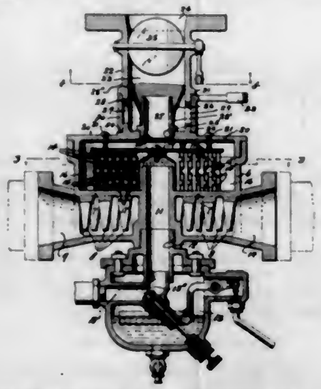
said angle plates being provided with lamp sockets for holding lamps in position to illuminate objects displayed on the back wall while concealing the lamps from outside view.



---

1,696,879. BRAKE FOR VEHICLES. HAMILTON C. CHASE, Los Angeles, Calif., assignor of one-half to Tobias Weber, Los Angeles, Calif. Filed May 25, 1927. Serial No. 193,988. 9 Claims. (Cl. 188—138.)

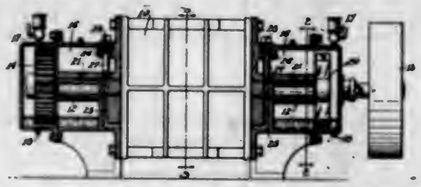
1. A brake comprising a rotatable element, confronting friction plates normally spaced from one another and mounted to be moved into frictional engagement, one of said plates being secured to said element so as to be rotated therewith, the other of said plates being stationary, means to urge said plates into frictional engagement including a runway having inclined planes, rolling elements mounted on said runway to travel over said planes, restraining means controlling travel of said rolling elements, operating means for actuating said restraining means so as to cause said rolling elements to travel comprising electromagnetic means for coupling said operating means to the rotatable plate whereby to urge said operating means to travel therewith.



1,696,880. POWER SUPPLY. HAROLD P. DONLE, Meriden, Conn., assignor to Donle Electrical Products Corporation, Meriden, Conn., a Corporation of Connecticut. Filed Feb. 19, 1927. Serial No. 169,564. 4 Claims. (Cl. 175—363.)

2. In a power supply device for vacuum tubes, a rectifier, a filter and a transformer associated with said rectifier, said transformer having high leakage inductance, said leakage inductance serving as a part of said filter.

---

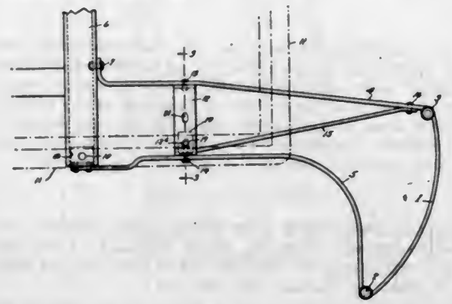


1,696,881. VAPORIZER FOR LIQUID FUEL. EARNEST R. GODWARD, New York, N. Y., assignor to The Eclipse Petrol Economizer System Company, Limited, Christchurch, New Zealand, a Corporation of New Zealand. Filed Apr. 1, 1924. Serial No. 703,380. 1 Claim. (Cl. 261—63.)

The combination with a fuel vaporizer and a secondary mixing chamber, of a fuel vaporizer discharge passage extending axially into said secondary mixing chamber, an automatic air admission valve formed by an inverted conical closed spiral spring fixed at its lower end in concentric relation to said discharge passage with its upper free end movably engaging the wall of said secondary mixing chamber whereby its convolutions may open under externally applied air pressure, the walls of said secondary mixing chamber having air admission ports below said spiral spring valve, and a manually rotatable valve sleeve having ports registerable with said air admission ports to admit atmospheric air to the exterior side of said spiral spring valve.

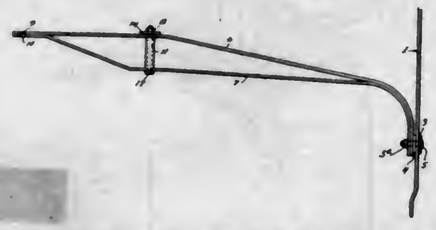
---

1,696,882. BLOWER. ERNEST C. HASSLER, Connersville, Ind., assignor to The Connersville Blower Co., Connersville, Ind., a Corporation of Indiana. Filed Dec. 16, 1925. Serial No. 75,698. 2 Claims. (Cl. 230—205.)



1. In a pump of the co-acting lobed impeller type, an air tight oil retaining enclosure surrounding and communicating with the shaft bearings thereof, and means for maintaining in said casing a lower pressure than in the pump casing at the shaft entry point comprising a passage leading from the upper regions of said enclosure to the interior of the impeller chamber in the region of lesser pressure.

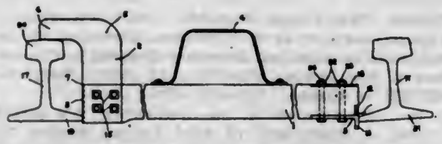
---



1,696,883. BUMPER. HERBERT S. JANDUS and LEON H. REED, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 18, 1926. Serial No. 155,579. 26 Claims. (Cl. 293—55.)

1. The combination with a bumper impact element, of two resilient support arms having their forward ends adapted for attachment to a vehicle frame and their rear ends adapted for attachment at spaced points to the impace element, and a brace attached at its rear end to the rear portion of one support arm and at its front end to the other support arm.

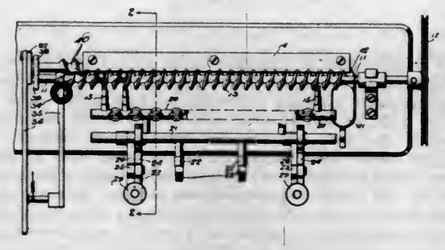
---



1,696,884. BUMPER SUPPORT. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Apr. 6, 1927. Serial No. 181,431. 16 Claims. (Cl. 293—55.)

1. A bumper support including bars held adjacent each other at their outer ends and spaced apart intermediate their ends, and means for holding such intermediate portions in proper spaced relation.

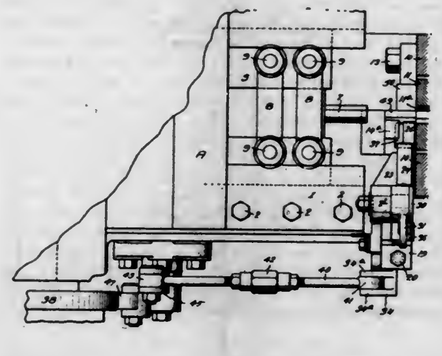
---



1,696,885. TRACK GAUGE. ROBERT EMMET KEOUGH, Montreal West, Canada, assignor to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 16, 1926. Serial No. 102,568. 5 Claims. (Cl. 33—144.)

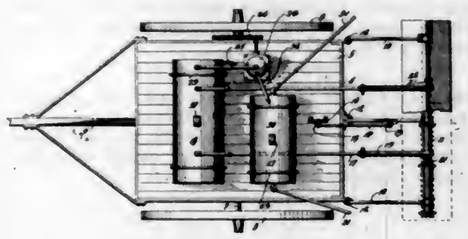
1. A track gauge comprising a spacer bar adapted to be disposed between a pair of railway rails, a plurality of rail contactor elements for the bar carried at ends thereof and adapted to make simultaneous contact with both rails of the track, one of said elements adapted to rest upon the top surface of the rail head, a second contactor element at the same end of the bar relatively so disposed as to contact at its outer edge with the inner edge of the base flange of the rail upon whose head the first element rests, a third contactor element at the other end of the bar disposed to contact with the rail base flange of the companion rail of the track.

---



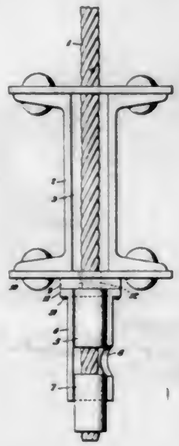
1,696,886. ANNEALING APPARATUS. HERBERT V. LECKIE and SAMUEL A. NORTH, Bridgeport, Conn., assignors to Remington Arms Company, Inc., a Corporation of Delaware. Filed July 16, 1925. Serial No. 44,011. 4 Claims. (Cl. 263—6.)

1. In a cartridge case annealing machine, a screw conveyor adapted to translate and simultaneously rotate cartridge cases, and heating means adjacent to said conveyor adapted to heat a definite section only of said cartridge cases.



---

1,696,887. MACHINE FOR MAKING HOT-PRESSED NUTS. CHARLES F. NEWPHER, Shaker Heights, Ohio, assignor to The Bourne-Fuller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 26, 1926. Serial No. 131,567. 16 Claims. (Cl. 164—23.)

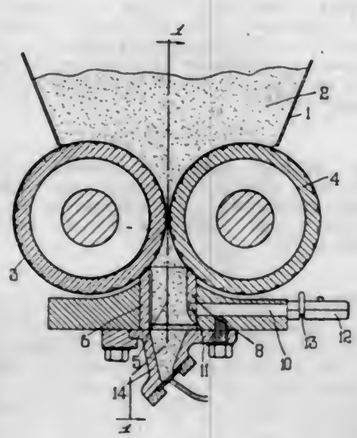


4. In a machine for making nut blanks from a bar, the combination of a shearing die having an opening, a punch so shaped as to shear a nut blank from such bar and force the same into said opening with the production of a slug, a stripper spaced from said die and adapted to prevent the withdrawal of the slug past said stripper by the punch, means for moving the punch toward and from the die, and means carried by said machine and operative by the punch-moving means for engaging the said slug and moving it away from the said punch, stripper, and die.

1,696,888. PORTABLE BURNING APPARATUS. FRANK D. SCHULTZ, Seattle, Wash., assignor of one-half to Albert Therry, Seattle, Wash. Filed June 26, 1926. Serial No. 118,766. 1 Claim. (Cl. 126—271.2.)

A portable burning apparatus of the class described comprising a wheeled supporting body, a fuel tank supported thereon, arms pivotally connected with the rear corners of the body, an arm pivotally connected with the rear portion of the body between the rear corners thereof, a tubular burner head supported by the lower ends of the arms, pipes leading from the fuel supply tank to the rear end of the body, flexible hose connections between the pipes and the burner head, a lever mounted upon the body, and an operative connection between the said lever and the intermediate arm for effecting vertical adjustment of the burner head.

1,696,889. ATTACHMENT FOR WIRE ROPE. RUMSEY W. SCOTT, Montclair, N. J., assignor to American Cable Company, Inc., a Corporation of Delaware. Original application filed Mar. 9, 1926, Serial No. 93,379. Divided and this application filed May 20, 1927. Serial No. 192,917. 6 Claims. (Cl. 24—114.5.)

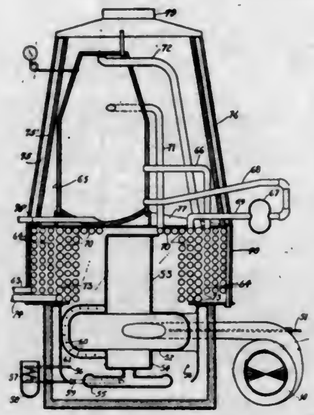


1. An attachment for wire rope, said attachment comprising a primary member secured permanently to the rope and adapted to sustain the stress of loads to which the rope is subjected, and means to indicate relative movement between said rope and member, said indicating means including an auxiliary member also secured to the rope in proximity to said primary attachment member.

1,696,890. AUTO SIGNAL. EDMUND FRANCIS SMART, Wallsend-on-Tyne, England, assignor of one-half to James William Hartley, Brooklyn, N. Y. Filed July 28, 1926, Serial No. 125,397, and in Great Britain July 14, 1925. 2 Claims. (Cl. 116—50.)

1. A signalling device for use on road vehicles and the like, comprising a plurality of sliding members and means whereby said members may be readily moved in either direction so as to project one at each side of the vehicle, pivoted arms adjacent to the outer end of each said sliding member and adapted to operate to increase the area of said signalling means.

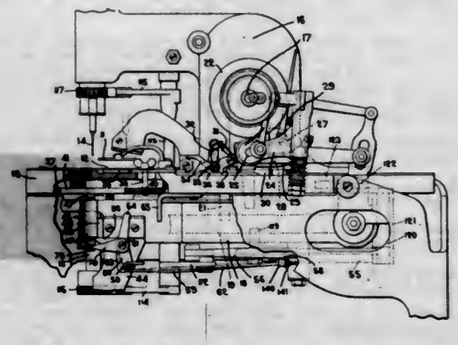
1,696,891. MACHINE FOR SHEETING DOUGH. EDWARD MILNER CROSLAND, Helsby, England. Filed May 22, 1928, Serial No. 279,719, and in Great Britain Mar. 29, 1927. 4 Claims. (Cl. 107—14.)



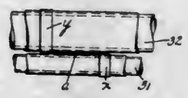
1. A machine for working plastic substances comprising in combination a compression chamber, an extrusion nozzle to receive the plastic substance from said compression chamber, the walls of said chamber comprising plurality of sections mounted for independent movement, and means to move and fix said sections independently whereby to permit more or less of the plastic substance to escape from said chamber opposite the respective sections without passing to said nozzle so that a uniform extrusion through said nozzle may be accomplished.

1,696,892. SEMIFLASH BOILER. CHARLES A. FRENCH, Chicago, and GUSTAF W. ENGSTROM, Riverside, Ill., assignors to International Harvester Company, a Corporation of New Jersey. Filed Nov. 11, 1920. Serial No. 423,271. 9 Claims. (Cl. 122—250.)

1. In a steam generator, the combination of a burner, a casing, a superheater of fixed heating surface, an evaporator of fixed heating surface, a preheater of fixed heating surface, the superheater, evaporator and preheater all surrounding the burner, a storage drum, means

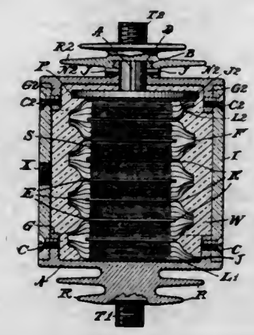


for supplying water to the preheater, a connection for discharging the water from preheater into the drum, a single connection for taking the water from the drum and de-



livering it to the evaporator, a pump in said single connection for forcing the water through the evaporator, a connection for delivering water and steam from the evaporator back to the drum above the center thereof, and a connection from the top of the drum for delivering the steam to the superheater.

1,696,893. BUTTONHOLE-SEWING MACHINE. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed May 9, 1927. Serial No. 189,792. 23 Claims. (Cl. 112—71.)



1. In a sewing machine, the combination with work-holding means, of stitch-forming mechanism, a stitch-frame supporting the stitch-forming mechanism, a work-frame supporting the work-holding means, means to give the work-holding means and stitch-forming mechanism a relative feeding movement in the direction of the length of the buttonhole, and means carried by the work-frame to cause said stitch-forming mechanism and work-holding means to have a relative lateral movement after the first few stitches have been formed and again just before the last stitches have been formed thereby to form a bar extending in the direction of the length of the buttonhole.

1,696,894. METHOD OF AND MACHINE FOR WAXING BLANKS. HAROLD S. LABOMBARDE, Nashua, N. H. Filed Feb. 15, 1926, Serial No. 88,218. Renewed June 12, 1928. 6 Claims. (Cl. 91—68.)

4. A machine for waxing blanks, said machine having means for applying hot wax to the blanks while travelling, a wax remover in position to act on a predetermined portion of the hot wax on each blank, and means for chilling the blanks.

1,696,895. HIGH-TENSION ELECTRICAL CONDENSER. GREENLEAF WHITTIER PICKARD, Newton Center, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed June 26, 1924. Serial No. 722,431. 34 Claims. (Cl. 175—41.)

1. A high tension electrical condenser comprising a sheet-stack consisting of a plurality of serially-connected stack-sections permitting high potential difference across the stack-ends; a tubular casing of insulating material extending around the sides of the stack and having end openings in the vicinity of the stack ends; a metal end structure held to said insulating casing and closing one end thereof, one end of the stack abutting against said metal end structure a metal structure fixedly held to the other end of said insulating casing; a metal compression member engaging the end of the stack adjacent said second metal end member; and a metal compression-adjusting member movably engaging said second end member and bearing against said compression member, holding the stack sheets in intimate contact with one another successively; said second end member transmitting clamping tension to the tubular insulating casing; and said insulating casing providing an extended creepage distance between the condenser ends of high potential difference.

1,696,896. PULP BOARD AND PROCESS OF MANUFACTURING THE SAME. HERBERT THEODORE PRICE, Burwood, Sydney, New South Wales, Australia. Filed Apr. 13, 1927, Serial No. 183,626, and in Australia June 14, 1926. 23 Claims. (Cl. 92—9.)

1. An improved pulp board comprising finely ground ti-tree.

Dec. 4, 1928

# ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

Aix-Olein Co., Inc., Brooklyn, N. Y. Oil-containing chemical preparations. 250,370; Dec. 4. Class 6.

Albemarle Paper Manufacturing Company, The, Richmond, Va. Blotting paper. 72,402; renewed Jan. 26, 1929.

Alexiades, Manuel, Madrid, Spain. Preparation to be used by injection in treating phthisis, etc. 250,191; Dec. 4; Serial No. 266,450; published Sept. 18, 1928. Class 6.

Allen Air Appliance Company, Inc., New York, N. Y. Pneumatic apparatus and equipment. 250,348; Dec. 4; Serial No. 269,931; published Sept. 18, 1928. Class 23.

Allen, Horace L., Mfg. Co., Nashville, Tenn. Shirts. 250,184; Dec. 4; Serial No. 269,271; published Sept. 18, 1928. Class 39.

Amazon Knitting Company, Muskegon, Mich. Underwear. 250,180–1; Dec. 4; Serial Nos. 269,381–2; published Sept. 11, 1928. Class 39.

American Broadtail Corporation, New York, N. Y. Lambskins. 250,219; Dec. 4; Serial No. 268,837; published Sept. 4, 1928. Class 1.

American Hair Felt Company, Chicago, Ill. Undercushion for linoleum and cork carpets. 250,198; Dec. 4; Serial No. 265,768; published Aug. 14, 1928. Class 50.

American Hair Felt Company, Chicago, Ill. Undercushion for linoleum and cork carpets. 250,200; Dec. 4; Serial No. 265,460; published Aug. 14, 1928. Class 50.

American Nuplax Corporation, Wilmington, Del. Plastic material. 250,206; Dec. 4; Serial No. 265,082; published Sept. 4, 1928. Class 1.

Coal. C. M. Moderwell. 73,274; renewed Apr. 6, 1929.

Coal. Tildesley Coal Company. 250,307; Dec. 4; Serial No. 268,521; published Sept. 11, 1928.

Coal, Bituminous. Lillybrook Coal Company. 250,337; Dec. 4; Serial No. 262,664; published Aug. 7, 1928.

Coal except smithing coal. Pittsburgh Coal Company. 250,246; Dec. 4; Serial No. 267,207; published Aug. 7, 1928.

Cotton and sacked cottonseed, Baled lint. Greer Staple Cotton Breeding Farms. 250,314; Dec. 4; Serial No. 268,220; published Sept. 11, 1928.

Diatomite. Diatomite Products Company. 250,263-4; Dec. 4; Serial Nos. 248,815-16; published Aug. 7, 1928.

Earth, Diatomaceous. Floatstone Products Company. 250,354; Dec. 4; Serial No. 269,727; published Sept. 18, 1928.

Earth, Diatomaceous or infusorial. Denver Fire Clay Company. 250,323; Dec. 4; Serial No. 262,156; published Aug. 7, 1928.

Fibres for making felts, fabrics, and yarns, Vegetable. Società Anonima Cellulosa. 250,257; Dec. 4; Serial No. 259,600; published Sept. 11, 1928.

Fur pelts. B'ark Star Mink Farm. 250,245; Dec. 4; Serial No. 267,226; published Aug. 21, 1928.

Furs. Joseph Hollander, Inc. 250,258; Dec. 4; Serial No. 258,910; published Aug. 7, 1928.

Furs. U. S. Fur Auction Brokerage Corp. 250,328; Dec. 4; Serial No. 264,546; published Aug. 21, 1928.

Hides and furs. United Rabbitries Marketing Inc. 250,238; Dec. 4; Serial No. 267,814; published Aug. 21, 1928.

Lambskins. American Broadtail Corporation. 250,219; Dec. 4; Serial No. 268,837; published Sept. 4, 1928.

Leather in the piece, Lace. J. E. Rhoads & Sons. 250,308; Dec. 4; Serial No. 268,512; published Sept. 11, 1928.

Leathers. Hunt-Rankin Leather Co. 250,358; Dec. 4; Serial No. 269,661; published Sept. 18, 1928.

Leathers. Ohio Leather Company. 250,332; Dec. 4; Serial No. 264,183; published Aug. 21, 1928.

Mariaceous material. M. E. Travers. 250,247; Dec. 4; Serial No. 267,163; published Aug. 21, 1928.

Plastic material. American Nuplax Corporation. 250,206; Dec. 4; Serial No. 265,082; published Sept. 4, 1028.

Seed. Lawn-grass. J. M. McCullough's Sons Co. 250,176-7; Dec. 4; Serial Nos. 269,534-5; published Sept. 18, 1928.

Seeds. Whitney-Eckstein Seed Co. 250,234-5; Dec. 4; Serial Nos. 267,881-2; published Aug. 14, 1928.

Seeds and seed grains, Field. Occidental Seed Company. 250,275; Dec. 4; Serial No. 226,366; published Aug. 14, 1928.

Vegetable, animal, and mineral substances. Moler Products Limited. 250,333; Dec. 4; Serial No. 264,038; published Sept. 4, 1928.

Wood products, Ground-. Burnet Company. 250,205; Dec. 4; Serial No. 265,138; published Aug. 14, 1928.

CLASS 3.

Pocketbooks and cardcases. Emil Weisshrod and Sons Incorporated. 72,549; renewed Feb. 2, 1929.

CLASS 4.

Polish, Silver and gold. F. T. Lord Polish Co. 73,278; renewed Apr. 6, 1929.

Steel for use as an abrasive, Crushed. Pittsburgh Crushed Steel Company. 73,380; renewed Apr. 13, 1929.

CLASS 6.

Antiseptic. Mintolene Products Co. 250,255; Dec. 4; Serial No. 261,376 published Sept. 11, 1928.

Antiseptic, deodorant, etc. Halosine Company. 250,203; Dec. 4; Serial No. 265,212; published Sept. 18, 1928.

Antiseptic preparation. C. W. Straffon. 250,360; Dec. 4; Serial No. 229,131; published June 29, 1926.

Astringents, cerates, bleach creams, etc. P. B. Jacobs. 250,183; Dec. 4; Serial No. 269,293; published Sept. 4, 1928.

Bath salts. National Chemical Holdings Ltd. 250,330; Dec. 4; Serial No. 264,381; published Sept. 11, 1928.

Biologics, serums, pharmaceuticals. Norden Laboratories. 250,284; Dec. 4; Serial No. 267,313; published Sept. 11, 1928.

Calcium carbide. Union Carbide Company. 73,153; renewed Mar. 23, 1929.

Calcium chloride. Michigan Alkali Company. 250,303; Dec. 4; Serial No. 268,554; published Sept. 4, 1928.

Chemical. Visco Chemical Products Company. 250,171; Dec. 4; Serial No. 269,617; published Sept. 18, 1928.

Chemical and pharmaceutical products. Eli Lilly and Company. 250,331; Dec. 4; Serial No. 264,377; published Sept. 4, 1928.

Chemical fluid for cigarette lighters. Midway Chemical Co. 250,371; Dec. 4.

Chemical preparations, Oil-containing. Aix-Olein Co. 250,370; Dec. 4.

Cosmetics. Lynne Arley, Inc. 250,369; Dec. 4.

Creams and lotions. Lynn Arley, Inc. 250,374-5; Dec. 4.

Dentifrices, dental creams, tooth pastes, etc. J. J. Harris. 250,240; Dec. 4; Serial No. 267,707; published Sept. 18, 1928.

Disinfectant. L. G. Duggar. 250,262; Dec. 4; Serial No. 249,266; published Sept. 18, 1928.

Eau de cologne water, perfumery, hair tonics, etc. P. P Mülhens. 250,322; Dec. 4; Serial No. 261,803; published Sept. 18, 1928.

Fluid, Ink-removing. Unique Manufacturing Co. 250,217; Dec. 4; Serial No. 268,895; published Sept. 18, 1928.

Hairdressing. M. M. Fleron & Son, Inc. 250,359; Dec. 4; Serial No. 269,650; published Sept. 18, 1928.

Hair tonic and preparations for skin. G. Rappazzo. 250,186; Dec. 4; Serial No. 269,205; published Sept. 11, 1928.

Healing antiseptic. F. E. Daniel. 250,362; Dec. 4; Serial No. 266,793; published Sept. 4, 1928.

Insecticide. Balfour, Guthrie & Co. 250,316; Dec. 4; Serial No. 268,204; published Sept. 4, 1928.

Insecticide. R. H. Macy & Co. 250,309; Dec. 4; Serial No. 268,506; published Sept. 4, 1928.

Insecticides. G. McCloskey. 250,220; Dec. 4; Serial No. 268,797; published Sept. 18, 1928.

Laxative gum. Weller Brothers. 250,356; Dec. 4; Serial No. 269,702; published Sept. 18, 1928.

Liniment. F. Ad. Richter & Co. of New York. 250,313; Dec. 4; Serial No. 268,307; published Aug. 14, 1928.

Magnesium carbonates. H. Kimura. 250,272; Dec. 4; Serial No. 257,878; published Sept. 4, 1928.

Material for fluxing the impurities and oxides in non-ferrous-metal mixtures. Lava Crucible Company of Pittsburgh. 250,368; Dec. 4.

Material for redyeing and renovating plush. Wilson-Imperial Company. 250,335; Dec. 4; Serial No. 263,296; published Sept. 18, 1928.

Medicinal preparation. Dr. J. H. McLean Medicine Co. 250,378; Dec. 4.

Medicinal preparation. D. Scocos. 250,339; Dec. 4; Serial No. 262,266; published Sept. 18, 1928.

Medicine and pharmaceutical preparation. Oregon Kelp-Ore Products Company. 250,276; Dec. 4; Serial No. 222,789; published Mar. 23, 1926.

Perfume, toilet water, face powder, etc. Societe Martial et Armand et Cie. 250,190; Dec. 4; Serial No. 266,562; published Sept. 11, 1928.

Perfumes, toilet powders, and toilet waters. Barouh Hermanos. 250 334; Dec. 4; Serial No. 263,915; published Aug. 21, 1928.

Perfumery extracts, toilet powders, and bath crystals. F. R. Arnold & Co. 250,251; Dec. 4; Serial No. 180,166; published Dec. 25, 1923.

Perfumery products. Société Parisienne d'Essences Rares et de Parfums. 250,274; Dec. 4; Serial No. 229,756; published Aug. 24, 1926.

Pharmaceutical products. Pneumo-Phthysine Chemical Manufacturing Company. 250,189; Dec. 4; Serial No. 269,056; published Sept. 18, 1928.

Powder, compacts, lip sticks, etc., Bath. Isabey Paris, Inc. 250,248; Dec. 4; Serial No. 267,128; published Sept. 4, 1928.

Powder for use as an antacid gas eliminant, Stomach. Samodan Company. 250,228; Dec. 4; Serial No. 268,635; published Sept. 11, 1928.

Powder, Manicure. H. E. Willaie. 250,232; Dec. 4; Serial No. 267,914; published Sept. 1, 1928.

Preparation, Chemical bleaching. Jack Margolis. 250 304; Dec. 4; Serial No. 268,552; published Aug. 14, 1928.

Preparation for corns, calll, warts, etc. "Gets-It" Inc. 250,241; Dec. 4; Serial No. 267,573; published Sept. 4, 1928.

Preparation for the reduction of obesity, for the treatment of ovarian disfunction, etc. Cole Chemical Company. 250,301; Dec. 4; Serial No. 268,586; published Sept. 11, 1928.

Preparation for the skin and the hair. Hair & Scalp Institute, Inc. 250,192; Dec. 4; Serial No. 266,371; published Sept. 4, 1928.

Preparation for the treatment of asthma. O. W. Dean. 250,170; Dec. 4; Serial No. 269,641; published Sept. 18, 1928.

Preparation, Liquid. Thomas P. Cahill. 250,312; Dec. 4; Serial No. 268,420; published Sept. 11, 1928.

Preparation of magnesia. Charles H. Phillips Chemical Company. 250,302; Dec. 4; Serial No. 268,561; published Sept. 18, 1928.

Preparation to be used by injection in treating phthisis, etc. M. Alexiades. 250,191; Dec. 4; Serial No. 266,450; published Sept. 18, 1928.

Preparations, Deodorant and disinfectant. Sig. J. F. Hahn. 250,229; Dec. 4; Serial No. 268,601; published Sept. 11, 1928.

Preparations, Shampoo. H. T. Tagore. 250,243; Dec. 4; Serial No. 267,326; published Sept. 11, 1928.

Pyorrhea preparation and dentrifrice. Forhan Company. 250,188; Dec. 4; Serial No. 269,063; published Sept. 18, 1928.

Salve. B. Kohosoff. 69,748; renewed June 30, 1928.

Salves and ointments, etc., Healing. Russia Cement Company. 250,185; Dec. 4; Serial No. 269,260; published Sept. 18, 1928.

Toilet preparations. Wilfred Laboratories, Inc. 250,277; Dec. 4; Serial No. 220,380; published Apr. 6, 1926.

Tonic, blood purifier, etc., Nerve. Weinberger Drug Company. 250.195; Dec. 4; Serial No. 266,231; published Sept. 18, 1928.

Tonic, Hair. A. Lentino. 250.357; Dec. 4; Serial No. 269,669; published Sept. 18, 1928.

Tonics and appetizers, Hog. Swinex Company. 250,254; Dec. 4; Serial No. 261,533; published Sept. 18, 1928.

CLASS 10.

Fertilizers. Federal Chemical Company. 72,244; renewed Jan. 12, 1929.

Fertilizers. Federal Chemical Company. 72,361; renewed Jan. 19, 1929.

CLASS 12.

Cementitious products. W. Haessler, jr. 250,377; Dec. 4.

Reinforcements, girders, beams, etc., Steel. H. Sorensen. 250,376; Dec. 4.

CLASS 13.

Kitchen utensils. Utility Manufacturing Company. 250,266; Dec. 4; Serial No. 244,035; published June 7, 1927.

CLASS 14.

Carbides and their alloys, Metallic. Fried. Krupp Aktiengesellschaft. 250,233; Dec. 4; Serial No. 267,890; published Sept. 18, 1928.

CLASS 15.

Gasoline. Mehmken Oil Co. 250,284; Dec. 4; Serial No. 254,467; published Aug. 7, 1928.

CLASS 16.

Cleaning and polishing liquid, Automobile. E. Eback. 250,250; Dec. 4; Serial No. 266,856; published Sept. 18, 1928.

Colors, Artists' oil. G. Gilbert. 250,187; Dec. 4; Serial No. 269,188; published Sept. 18, 1928.

Cakes and bread. Capital City Baking Co. 250,204; Dec. 4; Serial No. 265,194; published Sept. 18, 1928.
Cocoa, bread and pastry flour, canned fish, etc. G. B. Wadsworth. 250,252; Dec. 4; Serial No. 248,980; published Apr. 10, 1928.
Cocoa, bread and pastry flour, canned fish, etc. G. B. Wadsworth. 250,253; Dec. 4; Serial No. 248,942; published Apr. 10, 1928.
Coffee. Richert Bros. 72,235; renewed Jan. 12, 1929.
Coffee, Blended. R. C. Williams & Co. 71,418; renewed Nov. 24, 1928.
Doughnuts. E. S. Goldhill. 250,174; Dec. 4; Serial No. 269,582; published Sept. 18, 1928.
Flour, Wheat. Wm. Kelly Milling Company. 69,029; renewed June 23, 1928.
Flour, Wheat and self-rising. Lawrenceburg Roller Mills Co. 250,173; Dec. 4; Serial No. 269,592; published Sept. 18, 1928.
Milk and cream. Detroit Creamery Company. 250,344; Dec. 4; Serial No. 270,018; published Sept. 4, 1928.
Syrup, Sugar-cane food. Meeker Sugar Refining Company. 250,199; Dec. 4; Serial No. 265,489; published Aug. 7, 1928.
Wheat flour, meal, horse feed, etc. Arkadelphia Milling Co. 250,179; Dec. 4; Serial No. 269,441; published Sept. 11, 1928.

CLASS 48.

Beverage used as a tonic. Falls City Ice & Beverage Company. 250,355; Dec. 4; Serial No. 269,724; published Sept. 18, 1928.
Malt cereal beverages, Nonalcoholic. Jackson Brewing Company. 250,347; Dec. 4; Serial No. 269,900; published Sept. 18, 1928.

CLASS 50.

Cushion for linoleum and cork carpets, Under. American Hair Felt Company. 250,198; Dec. 4; Serial No. 265,768; published Aug. 14, 1928.
Cushion for linoleum and cork carpets, Under. American Hair Felt Company. 250,200; Dec. 4; Serial No. 265,460; published Aug. 14, 1928.
Fabric, Coated. Textileather Corporation. 250,218; Dec. 4; Serial No. 268,893; published Sept. 4, 1928.
Fabrics, Air-tight, water-tight, acid and heat resistant. E. I. du Pont de Nemours and Company. 250,231; Dec. 4; Serial No. 267,942; published Sept. 11, 1928.
Hangers, Coat. White Luggage Co. 250,306; Dec. 4; Serial No. 268,523; published Sept. 11, 1928.
Holders, Christmas-tree. Noma Electric Corporation. 250,259; Dec. 4; Serial No. 251,851; published Sept. 11, 1928.
Leather substitutes and pyroxylin coated fabrics. Aspinook Co. 250,318; Dec. 4; Serial No. 268,074; published Aug. 21, 1928.
Mats, Table. Heat Proof Table Mat Company. 250,261; Dec. 4; Serial No. 251,056; published Aug. 21, 1928.
Name plates and poultry equipment. James Manufacturing Company. 250,240; Dec. 4; Serial No. 267,053; published Aug. 7, 1928.
Poultry nests. Forster Automatic Poultry Separator Company. 250,327; Dec. 4; Serial No. 264,574; published Sept. 4, 1928.
Reflectors, Metal. Karnak Chemical Company. 250,194; Dec. 4; Serial No. 266,253; published Sept. 4, 1928.
Rubber bath mats. J. A. Kaplan. 250,338; Dec. 4; Serial No. 262,567; published Sept. 11, 1928.
Shoe-trees. Shoecraft Shop Inc. 250,196; Dec. 4; Serial No. 265,989; published Aug. 28, 1928.
Statuary. Hy-Art Hy-Way Display Corporation. 250,325; Dec. 4; Serial No. 264,687; published Aug. 21, 1928.
Waterproof fabrics. J. C. Haartz Company. 250,222; Dec. 4; Serial No. 268,783; published Aug. 28, 1928.

## ALPHABETICAL LIST OF LABELS.

Arpeako Pure Pork Sausage In Links. For Pure Pork Sausage in Links. Rochester Packing Co. 35,044; Dec. 4.
"Aviator" Flannel Shirts. For Men's Flannel Shirts Made of Part Wool and Wool Fabrics. Clawson & Wilson Company. 35,028; Dec. 4.
Beau-Geste. For Cheese. B. Chesman & Son Inc. 35,027; Dec. 4.
Big Hearted Al. For Candy. Williamson Candy Co. 35,049; Dec. 4.
Fruit Flavored Castor Oil. For Castor Oil. W. A. Walsh. 35,047; Dec. 4.
Fruit Flavored Cod Liver Oil. For Cod-Liver Oil. W. A. Walsh. 35,048; Dec. 4.
Gill's Hotel Special. For Coffee and Chicory. James G. Gill Co. 35,033; Dec. 4.
Independent Malt Extract Bohemian Style. For Malt Syrup. Independent Milwaukee Brewery. 35,036; Dec. 4.
Kane's Best. For Malt Syrup and Malt Extract. M. Kane. 35,037; Dec. 4.
Kiln Dried Cream Corn Meal. For Corn Meal. Jenny Wren Co. 35,050; Dec. 4.
Kirshner's Jewel Bright. For Jewelry-Cleaning Outfits or Kits. N. M. Kirshner. 35,038; Dec. 4.
Lucky Life. For Malt Syrup. Lucky Life Distributing Company. 35,040; Dec. 4.

Moritz Sweets. For Candy. Pacific Coast Biscuit Company. 35,042; Dec. 4.
Oh Yes We Grow The Best Apples (Blue Label). For Fresh Apples. Earl Fruit Company. 35,031; Dec. 4.
Oh Yes We Grow The Best Apples (Red Label). For Fresh Apples. Earl Fruit Company. 35,030; Dec. 4.
Oh Yes We Grow The Best Apples (Yellow Label). For Fresh Apples. Earl Fruit Company. 35,029; Dec. 4.
P. For Pears. Palmer Corporation. 35,043; Dec. 4.
Persharak. For Rugs and Carpets of a Tapestry Weave. Stephen Sanford & Sons, Inc. 35,045; Dec. 4.
R—164. For Medicine. R. A. Brackett. 35,022; Dec. 4.
Rastus. For Watermelons. Kramer & Barcus. 35,039; Dec.. 4
Shu-Shine. For Shoe Polish. C. P. Buchanan. 35,023; Dec. 4.
"Starjax" on One Side and "Rules" on the Other Side. For Jack Sets. Grey Iron Casting Company. 35,034; Dec. 4.
Starlite Copper Dip. For Metal Cleanser and Restorer. Carasso Supply Co. 35,024; Dec. 4.
Starlite Silver Dip. For Metal Cleanser and Restorer. Carasso Supply Co. 35,025; Dec. 4.
Starlite Silver Gloss. For Metal Cleanser and Restorer. Carasso Supply Co. 35,026; Dec. 4.
Stringol. For a Prescription in Liquid Form, Antiseptic and Astringent in Nature. Dr. W. T. Gullion. 35,035; Dec. 4.
Super-Mash—Starts Them—Grows Them—Makes Them Lay. For Poultry Feed. Feeders Supply and Manufacturing Company. 35,032; Dec. 4.
Surtea The Drinkfood. For Yerba-Mate. Surtea Incorporated. 35,046; Dec. 4.
Tobler Die Vitaminreiche Schweizer Chocolade. For Chocolate. Aktiengesellschaft Chocolat Tobler. 35,021; Dec. 4.
Vel-Vette. For a Preparation for Whitening the Skin. Mme. Ludays. 35,041; Dec. 4.

## ALPHABETICAL LIST OF PRINTS.

All Aboard for the Land of Nod. For Blankets. Nashua Manufacturing Company. 11,365; Dec. 4.
Do You Know Elizabeth Arden Herself. For Venetian Toilet Preparations. Elizabeth Arden, Inc. 11,358; Dec. 4.
Each Evening the End of a Perfect Day. For Coffee. M. J. B. Company. 11,363; Dec. 4.
For Your Colds Too. For Remedies for the Relief of Colds. Vick Chemical Company. 11,370; Dec. 4.
Good—Wingfoot—Year The Greatest Name in Rubber. For Rubber. Goodyear Tire & Rubber Company Inc. 11,360; Dec. 4.
Have You One Gray Hair? And Does It Frighten You? For Inecto Rapid Notox. Inecto, Inc. 11,361; Dec. 4.
Jersey White Giants. For Live Poultry. U. L. Meloney. 11,362; Dec. 4.
Millwork. For Millwork. North Side Sash & Door Co. 11,366; Dec. 4.
Orange Blossom. For Stationery. W. J. Ecker, jr. 11,339; Dec. 4.
Standard Unbreakable Watch Crystals, Inc., New York, N. Y., U. S. A. For Unbreakable Watch Crystals and Machine to Insert These Unbreakable Crystals. Standard Unbreakable Watch Crystals Inc. 11,368; Dec. 4.

The Millions of Tiny Fibres That Seal Body Warmth In. For Blankets. Nashua Manufacturing Company. 11,364; Dec. 4.
These Leading Aircraft Manufacturers. For Bearings. S. K. F. Industries, Inc. 11,367; Dec. 4.

# ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 4TH DAY OF DECEMBER, 1928.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Abbott Laboratories. (See Adams, R., and Hiers, assignors.)
Acro Aktiengesellschaft. (See Lang, Franz, assignor.)
Adams, Roger, and G. S. Hiers, Urbana, assignor to Abbott Laboratories, North Chicago, Ill. Cyclohexyl-substituted aliphatic acids. 1,693,801; Dec. 4.
Adams, William H., Kenyon, R. I. Sectional induction coil. 1,694,091; Dec. 4.
Adler, Milton M. (See Reihlen, Hans, assignor.)
Aimé, Frank L., Spokane, Wash. Attachment plug. 1,693,972; Dec. 4.
Aktieselskapet Krystal. (See Isaachsen, Isak, assignor.)
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. Electric apparatus. 1,694,244; Dec. 4.
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. Electrical transmission of pictures. 1,694,301; Dec. 4.
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. Transmission of pictures. 1,694,302; Dec. 4.
Alland, Maurice, Atlantic City, N. J. Combined comb and razor. 1,693,973; Dec. 4.
Allen, Arthur G., Cambridge, Mass. Paint-can holder. 1,693,772; Dec. 4.
Allen, Sarah R., Bethel, Conn. Convertible gocart and crib. 1,693,633; Dec. 4.
Allen, Walter J., et al. (See Rowley, Benjamin F., assignor.)
Alter, Frank R. (See Howe, Chester C., assignor.)
American Button & Fastener Co. (See Latham, Albert.)
American Chain Company. (See Yanss, George W., assignor.)
American Doucil Company. (See Wheaton, Harold J., assignor.)
American Incubator Manufacturing Company. (See Heldrich, Andrew, assignor.)
American Road Machinery Company. (See Greenwood, Raymond C., assignor.)
American Rolling Mill Company, The. (See Tytus, John B., assignor.)
American Sales Book Company. (See Hagemann, Louis F., assignor.)
American Telephone and Telegraph Company. (See McKown, Frederick W., assignor.)
American Telephone and Telegraph Company. (See Nyquist, H., and Pfleger, assignors.)
American Telephone and Telegraph Company. (See Ohl, Russell S., assignor.)
American Telephone and Telegraph Company. (See Weaver, Allan, assignor.)
Anaconda Sales Company. (See Wanamaker, Elmer M., assignor.)
Anchor Cap & Closure Corporation. (See Jaeger, Max, assignor.)
Anderson Company, The. (See Rivanov, Felix, assignor.)
Anderson, Frederick V., Lakewood, assignor to The V. D. Anderson Company, Cleveland, Ohio. Press. 1,694,114; Dec. 4.
Anderson, James B., assignor of one-fourth to L. S. Murray, San Diego, Calif. Aircraft pontoon apparatus. 1,693,773; Dec. 4.
Anderson, V. D., Company, The. (See Anderson, Frederick V., assignor.)
Angle, Glenn D., assignor to Detroit Aircraft Engine Corporation, Detroit, Mich. Crank-shaft oil plug. 1,693,882; Dec. 4.
Anoilcoal Burner Co., The. (See Wetmore, Earl P., assignor.)
Arenz, John A., Chicago, Ill., assignor to International Screw Company, Wilmington, Del. Screw pointing and threading machine. 1,694,303; Dec. 4.
Armstrong, George J., Raymond, Alberta, Canada. Liquid-dispensing container. 1,694,304; Dec. 4.
Arnett, Albert C. (See Shawen, E. W., and Arnett.)
Art Metal Screen and Weather Strip Company. (See Shogren, Charles A., assignor.)
Ascarelli, Enrico, Rome, Italy. Swiveled axle for motor cars. 1,694,305; Dec. 4.
Astley, Edward F., assignor to H. M. Seyer, Chicago, Ill. Brush. 1,694,306; Dec. 4.
Automatic Electric Inc. (See Gillings, Charles, assignor.)
Automatic Electric Inc. (See Martin, Talbot G., assignor.)
Automatic Electric Inc. (See Nelson, Martin L., assignor.)
Avera, Arch U., Florence, Ala. Transmission of power to vehicles. 1,693,914; Dec. 4.
Babcock & Wilcox Company, The. (See Harter, Isaac, assignor.)
Badger, E. B., and Sons Company. (See Webre, Alfred L., assignor.)
Bakelite Corporation. (See Redman, L. V., and Cheetham, assignors.)
Baker, Gilbert L., and H. W. Pattillo, Oakland, Calif. Window cleaner. 1,694,245; Dec. 4.
Baker, Russell W., Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio. Armature-insulation-cutting machine. 1,693,996; Dec. 4.
Bailey, George A. C. (See Stevens, J. P., and Bailey.)
Bailey, George S., assignor to J. M. Bailey, San Francisco, Calif. Display stand. 1,693,802; Dec. 4.
Bailey, James M. (See Bailey, George S., assignor.)
Bailey, Rufus W., Kansas City, Mo. Brake and door control for automotive buses. 1,693,834; Dec. 4.
Bait Manufacturing Co. (See Lemmon, George N., assignor.)
Barber-Colman Company. (See Edgar, John, assignor.)
Barber-Colman Company. (See Mitchell, Raymond C., assignor.)
Barbet, Emile A., Paris, France. Apparatus for the continuous preliminary treatment of crude benzoles. 1,693,774; Dec. 4.
Barbieri, Cesare, New York, N. Y., assignor to The Vortex Mfg. Co. Dispenser and method of use. 1,693,883; Dec. 4.
Barbieri, Cesare, New York, N. Y., assignor to The Vortex Mfg. Co. Conical-cup dispenser. 1,694,157; Dec. 4.
Barclay, William R., and F. B. Keall, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J. Finishing machine. 1,693,634; Dec. 4.
Bardon, Donis M., Seattle, Wash. Cable-connecting means. 1,694,051; Dec. 4.
Bartholomew, Thomas, Columbus, Ohio. Toothpick holder. 1,694,200; Dec. 4.
Bauer, Raymond M., West St. Paul, Minn. Flower stand. Des. 77,049; Dec. 4.
Bauersfeld, Walther. (See Villiger, W., and Bauersfeld.)
Bay State Fishing Company. (See Mudge, R. C., and Gallison, assignors.)
Bean, Louis A., Denver, Colo. Radiator cap for automobiles. 1,694,030; Dec. 4.
Beaudoin, Hector. (See Le Blanc, H. L., and Beaudoin.)
Belden Manufacturing Company. (See Wermine, Hugo H., assignor.)
Bell, John E., Brooklyn, N. Y., assignor to Sinclair Refining Company, Chicago, Ill. Operation of pressure stills. 1,693,946; Dec. 4.
Bell, William T., Concord, N. H. Link mat. 1,693,803; Dec. 4.
Bemis, Albert F., Newton, assignor to Bemis Industries, Inc., Boston, Mass. Building construction. 1,693,742; Dec. 4.
Bemis Industries, Inc. (See Bemis, Albert F., assignor.)
Bendix Brake Company. (See McConkey, Montgomery W., assignor.)
Benedict, George W., assignor, by mesne assignments, to M. Ezell, Oakland, Calif. Brake drum. 1,694,052; Dec. 4.
Berger, Samuel I., Newark, N. J. Statuette. Des. 77,050; Dec. 4.
Best, Cyril. (See Mollins, W. E., and Best.)
Beuford, George, assignor of one-half to W. E. Cook, Pageton, W. Va. Harness. 1,693,743; Dec. 4.
Bickford, Clarence W., et al. (See Warga, Kalman, assignor.)
Bickford, Mary, et al. (See Warga, Kalman, assignor.)
Bienstock, Anna E., Newark, N. J. Attachment for cooking utensils. 1,693,974; Dec. 4.
Bishop, Travis L., et al. (See Rowley, Benjamin F., assignor.)
Blair, Rolandis A., Fort Wayne, Ind. Rail anchor. 1,693,804; Dec. 4.
Blaisdell, Harrison O., Brooklyn, assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 1,693,705; Dec. 4.
Blake, Lionel J. B., Bishops Stortford, England. Mixing machine. 1,693,688; Dec. 4.
Blake, William P., et al. (See Long, Wilber L., assignor.)
Blessman, Charles, jr., assignor to The Reel Novelty Mfg. Co., Toledo, Ohio. Reel for conducting cords. 1,693,884; Dec. 4.
Blow, Cargill, Winter Haven, Fla. Doorstop. Des. 77,051; Dec. 4.
Bloss, Richard R., assignor to The International Derrick & Equipment Company, Columbus, Ohio. Wheel for drilling-rig structures. 1,694,350; Dec. 4.
Bohlman, Ernest A., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Condenser. 1,693,588; Dec. 4.

Bohn Aluminum and Brass Corporation. (See Flegel, W. J., and Enderick, assignors.)
Bolton, Andrew C., Miami, Fla. Bias-cutting machine. 1,693,589; Dec. 4.
Booth, Charles F. (See Carothers, J. N., and Booth.)
Booth, Ralph E., Lynn, Mass., assignor to General Electric Company. Indicating devices. 1,694,307; Dec. 4.
Booth, William K., Chicago, Ill., assignor to Electroil Syndicate. Electric fuel igniting. 1,694,053; Dec. 4.
Boozer, Douglas G. (See Williams, H. W., and Boozer.)
Borchert, Fred L., Rockford, Ill. Spring latch. 1,693,706; Dec. 4.
Borgman, Oscar J., Hammond, Ind. Boat-propelling mechanisms. 1,693,590; Dec. 4.
Bosch, Robert, Aktiengesellschaft. (See Ehrmann, Friedrich, assignor.)
Bosch, Robert, Aktiengesellschaft. (See Möhrle, Arthur, assignor.)
Bostedo, Louis G., Oak Park, Ill. Convertible steam and hot-water radiator. 1,694,201; Dec. 4.
Both, Tonjes A., Stratford, assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn. Switch or receptacle plate. 1,694,054; Dec. 4.
Both, Tonjes A., Stratford, assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn. Combination electric wall fitting. 1,694,158; Dec. 4.
Both, Tonjes A., Stratford, assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn. Mounting for electrical devices. 1,694,159; Dec. 4.
Böttcher, Paul, Atona-Bahrenfeld, near Hamburg, Germany. Dovetailing, cogging, and indenting machine. 1,694,115; Dec. 4.
Bowen, William S., Westfield, N. J. Separation and liquefaction of gases. 1,694,308; Dec. 4.
Boyce, Harrison H. (See Hebig, Henry C., assignor.)
Boyne, Frank C., Graton, Calif. Capsule injector. 1,694,246; Dec. 4.
Brackett, Edward M. and F. M., Topeka, Kans. Intermittent feeding device. 1,694,202; Dec. 4.
Brackett, Fred M. (See Brackett, Edward M. and F. M.)
Bradley, Charles E., and G. L. Van Dinter, assignors to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind. Fastener-covering method and means. 1,693,805; Dec. 4.
Bradley, Charles E., and G. L. Van Dinter, assignors to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind. Fastener covering and making same. 1,693,835; Dec. 4.
Bramble, Jesse, assignor to The Graham Glass Company, Evansville, Ind. Bottle or the like. Des. 77,052; Dec. 4.
Bramble, Jesse, assignor to The Graham Glass Company, Evansville, Ind. Bottle or the like. Des. 77,053; Dec. 4.
Bramble, Jesse, assignor to The Graham Glass Company, Evansville, Ind. Bottle or the like. Des. 77,054; Dec. 4.
Brandtjen & Kluge, Incorporated. (See Kluge, Abel and E., assignors.)
Braren, Lorenz K., Munich, assignor to firm: Friedrich Deckel Präzisionsmechanik und Maschinenbau, Munich, Bavaria, Germany. Gear transmission. 1,694,031; Dec. 4.
Brault, François, and André Cordier, Levallois-Perret, France. Brake mechanism. 1,694,203; Dec. 4.
Breneman, Paul E., assignor to C. R. Wilson Body Company, Detroit, Mich. Vehicle body. 1,693,836; Dec. 4.
Brecht, Emil, and R. Fugmann, Guben, Germany. Manufacture of wool felts. 1,694,032; Dec. 4.
Brewster, Oswald C., Casper, Wyo., assignor to Standard Oil Company, Whiting, Ind. Converting hydrocarbon oils. 1,694,092; Dec. 4.
Bridgeport Brass Company. (See Oakley, Erastus G., assignor.)
Briggs, George L., Brooklyn, N. Y. Stocking. Des. 77,055; Dec. 4.
Briggs, Stephen F., assignor, by mesne assignments, to E. B. H. Tower, jr., Milwaukee, Wis. Electric motor. 1,694,247; Dec. 4.
British Dyestuffs Corporation Limited. (See Horsfall, R. S., and Lawrie, assignors.)
Brode, Johannes, and A. Johannsen, Ludwigshafen-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y. Carrying out catalytic oxidations in the gaseous or vapor state. 1,693,915; Dec. 4.
Brown & Bigelow. (See Kristofek, Frank J., assignor.)
Brown Company. (See Richter, George A., assignor.)
Brown, Samuel F., Heth, Ark. Cross-row cotton blocker. 1,694,204; Dec. 4.
Brown, William A., Philadelphia, Pa. Emergency convection heater. 1,694,160; Dec. 4.
Buc, Hyym E. (See Hopkins, M. B., and Buc.)
Buccini, Hugo A., assignor to Victory Lamp Company, Philadelphia, Pa. Electric-lighting-fixture ring. Des. 77,056; Dec. 4.
Buckham, Charles W., New York, N. Y. Building. 1,694,309; Dec. 4.
Buckham, George T. (See Dawson, A. T., and Buckham.)
Budd, Edward G., Manufacturing Company. (See D'Ardenne, Walter H., assignor.)
Budd Wheel Company. (See Nelson, Emil A., assignor.)
Budwig, Maurice, and J. N. Schneider, Cleveland, Ohio. Infantile napkin. 1,694,161; Dec. 4.
Bultenkamp, Frank, San Francisco, Calif. Track-laying skate. 1,694,162; Dec. 4.
Bulman, William V., Philadelphia, Pa. Adjustable supporting chair for wall closets, etc. 1,693,744; Dec. 4.
Burdett, Le Roy, assignor to Messenger Publishing Company, Inc., Chicago, Ill. Sheet-binding machine. 1,694,055; Dec. 4.
Burgess, Samuel N., London, England. Wristlet watch. Des. 77,057; Dec. 4.
Busch-Sulzer Bros.-Diesel Engine Co. (See Schaeren, Ernst, assignor.)
Butkovsky, John J. (See Ray, A. B., Doying, and Butkovsky.)
Butler, Henry E., Scotia, N. Y. Combined button and license-paper holder. 1,694,310; Nov. 4.
Butterworth, Arthur B., Port Arthur, Tex. Tank-cleaning device. 1,693,885; Dec. 4.
Byk, Alfred, Charlottenburg, Germany, assignor to General Electric Company. Telephone line. 1,694,248; Dec. 4.
Byles, Frank A., Schenectady, N. Y., assignor to General Electric Company. Electric regulator. 1,694,249; Dec. 4.
C. G. Spring & Bumper Company, The. (See Jandus, Herbert S., assignor.)
C. G. Spring & Bumper Company, The. (See Jandus, H. S., and Morgan, assignors.)
C. G. Spring & Bumper Company, The. (See Jandus, H. S., and Van Husen, assignors.)
Cadis, Jean L. (See Coullie, J. G. G., and Cadis.)
Cady, Walter G., Middletown, Conn., assignor to Radio Corporation of America. Electromechanical system. 1,693,806; Dec. 4.
Calkins, Cecil, Albany, Oreg. Locking plug for extension cords. 1,694,056; Dec. 4.
Callan, Luke H., Bristol, R. I. Road. 1,693,807; Dec. 4.
Callis, Conral C. (See Kraus, C. A., and Callis.)
Calvert, William, et al. (See Le Bus, John E., assignor.)
Carbide and Carbon Chemicals Corporation. (See Davidson, Joseph G., assignor.)
Carbide and Carbon Chemicals Corporation. (See Ray, A. B., Doying, and Butkovsky, assignors.)
Carlson, Axel F., Cambridge, assignor to The Reece Button Hole Machine Company, Boston, Mass. Button-hole-sewing machine. 1,694,093; Dec. 4.
Carothers, John N., and C. F. Booth, Anniston, assignors to Federal Phosphorus Company, Birmingham, Ala. Production of sodium bisulphate. 1,693,947; Dec. 4.
Carson, Joseph F. (See Spinelle, Michael B., assignor.)
Carter, John J., Lansing, Mich., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio. Making commutators. 1,693,997; Dec. 4.
Case, J. I., Plow Works, Inc. (See Everett, Charles E., assignor.)
Caterpillar Tractor Co. (See Grotts, Fred, assignor.)
Caterpillar Tractor Co. (See Turnbull, William, assignor.)
Caton, Eugene. (See Caton, H. and E., and Howard.)
Caton, Herschel, Kansas City, E. Caton, Rosedale, Kans., and L. C. Howard, assignors to Caton Printing Company, Kansas City, Mo. Slip sheeting and means for practicing the same. 1,693,886; Dec. 4.
Caton Printing Company. (See Caton, H. and E., and Howard, assignors.)
Catron, Frederick O., assignor of one-half to N. P. Catron, Memphis, Tenn. Air cleaner. 1,694,116; Dec. 4.
Catron, Nettie P. (See Catron, Frederick O., assignor.)
Catudal, Frederic N., Newton, Iowa. Lawn-edging implement. 1,693,808; Dec. 4.
Chain Belt Company. (See Merwin, John C., assignor.)
Champ Electrical Company. (See Chandler, Daniel, L., assignor.)
Chandler, Daniel L., assignor to Champ Electrical Company, Boston, Mass. Time-controlled electric switch. 1,693,635; Dec. 4.
Chatillon, George E., assignor to John Chatillon & Sons, New York, N. Y. Display device. 1,693,501; Dec. 4.
Chatillon, John, & Sons. (See Chatillon, George E., assignor.)
Cheatham Electric Switching Device Co. (See Robinson, Robert M., assignor.)
Cheetham, Harold C. (See Redman, L. V., and Cheetham.)
Chicago Electric Manufacturing Co. (See Gough, James J., assignor.)
Chipman, Ralph N., Plainfield, N. J. Weed killer and method of killing weeds. 1,694,205; Dec. 4.
Christensen, Niels A., Milwaukee, Wis. Vehicle brake mechanism. 1,693,887; Dec. 4.
Chryst, William A., assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio. Electric switch. 1,693,908; Dec. 4.
Clark, Frederick E., Albert Park, Victoria, assignor to F. I. Schilling, Brighton Beach, Victoria, Australia. Piston ring. 1,694,311; Dec. 4.
Clark, James H., Miami, Fla. Bitt. 1,694,312; Dec. 4.
Clark, Nolan I., Beggs, Okla. Check valve for water-circulating systems. 1,693,888; Dec. 4.
Clarkson, William B., Schenectady, N. Y., assignor to General Electric Company. Electromagnetic device. 1,694,250; Dec. 4.
Clay-Adams Co. (See Risch, Oskar, assignor.)
Clements, Wellington I., Norfolk, Va. Sailor's dress blouse. 1,694,206; Dec. 4.
Clemm, Hans, assignor to Zellstofffabrik Waldhof, Mannheim-Waldhof, Germany. Filling boilers for cellulose with sulphite solution. 1,693,999; Dec. 4.
Cleveland Rock Drill Company, The. (See Richardson, Led L., assignor.)
Clune, J. W., Co. (See Lowe, Edward L., assignor.)

Clutter, Bird C., Akron, Ohio, assignor, by mesne assignments, to Clutter-Wagner, Inc. Power shovel or excavator. 1,693,809; Dec. 4.
Clutter-Wagner, Inc. (See Clutter, Bird C., assignor.)
Coe, John P., Yonkers, N. Y., assignor to G & J Tire Company, Indianapolis, Ind. Making inner tubes. 1,693,636; Dec. 4.
Coe, John P., Detroit, Mich., assignor to G & J Tire Company, Indianapolis, Ind. Apparatus for manufacturing inner tubes. 1,693,637; Dec. 4.
Cogswell, Leander A., assignor to Lacene Manufacturing Company, Manchester, N. H. Automatic top-lift grading and distributing machine. 1,693,638; Dec. 4.
Colbiornsen, Thorvald C., Antonito, Colo. Automatically-actuated brush for grainer pipes. 1,693,689; Dec. 4.
Cole, Charles F., Huntington, W. Va. Boiler stand. 1,694,000; Dec. 4.
Cole, Robert M., Sandusky, Ohio. Making triphenylmethane dyes. 1,694,057; Dec. 4.
Coleman, Bert, Plattsmouth, Nebr. Display rack. 1,694,207; Dec. 4.
Combustion Engineering Corporation. (See Van Brunt, John, assignor.)
Compagnie des Forges et Acieries de la Marine et d'Homecourt. (See Granat, Elie, assignor.)
Company Elektrizitätswerk Lonza, The. (See Lüscher, Emil, assignor.)
Conally, Henry, Company. (See Warner, William F., jr., assignor.)
Connecticut Electric Manufacturing Company, The. (See Both, Tonjes A., assignor.)
Connor, James F., Renova, Pa. Combination brush, knife, and roller. 1,693,745; Dec. 4.
Continental Optical Corporation. (See Gamble, John D., assignor.)
Continental Products Corporation. (See Fabbrin, Frank, assignor.)
Cook, Floyd J., Medford, Oreg. Assorting machine. Re-17,149; Dec. 4.
Cook, Stanley S. (See Parsons, C. A., and Cook.)
Cook, William E. (See Benford, George, assignor.)
Coon, Chester C., Oakland, Calif. Mechanical hand. 1,694,058; Dec. 4.
Corbin, Francis D., assignor of three-eighths to The Llanelly Foundry & Engineering Company Limited and one-third to Richard Nevill & Company Limited, Llanelly, Carmarthen, South Wales, Great Britain. Roll for rolling metals and making same. 1,694,251; Dec. 4.
Corcoran, Lewis L., Allentown, Pa., assignor to International Motor Company, New York, N. Y. Motor-vehicle bus-window-operating mechanism. 1,693,690; Dec. 4.
Cordier, André. (See Brault, F., and Cordier.)
Cordley, Henry G., New York, N. Y., and G. R. Long, Waterbury, Conn. Safety attachment for faucets. 1,693,975; Dec. 4.
Cory, Chas., & Son, Incorporated. (See ONeal, L. E., and Mead, assignors.)
Coullie, Jean G. G., and J. L. Cadis, Bordeaux, France. Fishplate. 1,693,775; Dec. 4.
Covey, John E., assignor to Swift & Company, Chicago, Ill. Smoke box. 1,694,163; Dec. 4.
Crimmel, Alvie C., Hartford City, Ind. Dispensing display stand. 1,693,592; Dec. 4.
Crossley, Frank, assignor to J. E. Plant, Cleveland, Ohio. Magnesium compound and producing the same. 1,694,341; Dec. 4.
Crosthwait, David N., jr., assignor to C. A. Dunham Company, Marshalltown, Iowa. Method and apparatus for setting thermostats. 1,694,164; Dec. 4.
Cullen, Harry J. (See Symonds, H. D., and Cullen.)
Cunnington, George R., Akron, assignor to The Paine-Cunnington Company, Cleveland, Ohio. Shield for vehicle brakes. 1,694,033; Dec. 4.
Currier, Hiram D., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Coil. 1,693,837; Dec. 4.
Cutler-Hammer Mfg. Co., The. (See Stoekle, Erwin R., assignor.)
Cutting, Charles D., Detroit, Mich. Universal joint. 1,693,593; Dec. 4.
Cutting, Charles D., Detroit, Mich. Universal joint. 1,693,594; Dec. 4.
Dalbey, George E., East Berlin, and T. P. Hanford, Berlin, assignors to The Stanley Chemical Company, East Berlin, Conn. Treating impure lead and lead alloys. 1,693,639; Dec. 4.
Dalbey, George E., East Berlin, and T. P. Hanford, Berlin, asisgnors to The Stanley Chemical Company, East Berlin, Conn. Treating impure lead. 1,693,640; Dec. 4.
Dalbey, George E., East Berlin, and T. P. Hanford, Berlin, assignors to The Stanley Chemical Company, East Berlin, Conn. Treating mixtures containing alkali salts of certain metals. 1,693,641; Dec. 4.
Dalbey, George E., East Berlin, and T. P. Hanford, Berlin, assignors to The Stanley Chemical Company, East Berlin, Conn. Treating metallic particles. 1,693,642; Dec. 4.
Dalton, William, Glenville, N. Y. Railway roadbed. 1,694,313; Dec. 4.
Dana, Duncan, Marblehead, Mass. Heating system. 1,694,001; Dec. 4.
Daniels Health Table Company. (See Daniels, M., and Wood, assignors.)
Daniels, Melville, and A. J. Wood, assignors to Daniels Health Table Company, Grand Rapids, Mich. Neuropathic health table. 1,693,810; Dec. 4.
D'Ardenne, Walter H., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Machine for making automobile doors. 1,693,643; Dec. 4.
Darley, William S. (See Weldon, William B., assignor.)
Davidson, Joseph G., Yonkers, N. Y., assignor to Carbide and Carbon Chemicals Corporation. Compositions containing cellulose derivatives. 1,693,746; Dec. 4.
Davidson, Leo R., and H. F. Rahl, Sturgis, Mich. Ball cock. 1,693,691; Dec. 4.
Davies, Albert W., assignor to Mavor & Coulson, Limited, Glasgow, Scotland. Rotary engine and the like. 1,694,208; Dec. 4.
Davis, Archibald H., Lincoln, Nebr. Sash or store-front construction. 1,694,002; Dec. 4.
Davis, Archibald H., Lincoln, Nebr. Sash, door, or store-front construction. 1,694,003; Dec. 4.
Davis, Harry A., assignor to Draper Corporation, Hopedale, Mass. Warp stop mechanism for looms. 1,693,770; Dec. 4.
Davis, Harry E., Jersey City, N. J. Device for spraying hydrocarbon fuel. 1,694,209; Dec. 4.
Davis, Mansell A., Waukegan, Ill. Bed-bottom fabric. 1,694,094; Dec. 4.
Davis, William E., et al. (See Long, Wilber L., assignor.)
Dawson, Arthur T., and G. T. Buckham, Westminster, London, assignors to Vickers Limited, London, England. Gun mounting and traveling carriage therefor. 1,693,692; Dec. 4.
Dawson, Clarence N. (See Dawson, Isaac L., C. N., and R. W.)
Dawson, Isaac L., C. N., and R. W., Lawrence, Kans. Grain shocker. 1,693,595; Dec. 4.
Dawson, Raymond W. (See Dawson, Isaac L., C. N., and R. W.)
Dayton Engineering Laboratories, The. (See Chryst, William A., assignor.)
Dayton Steel Racquet Company, The. (See Larned, William A., assignor.)
Debacher, Robert R., New York, N. Y. Ball for pails and the like. 1,694,165; Dec. 4.
De Bethune, Gaston, Brussels, Belgium. Apparatus for the manufacture of pig iron. 1,693,916; Dec. 4.
Deckel, Friedrich, Präzisionsmechanik und Maschinenbau. (See Braren, Lorenz K., assignor.)
Decker, Edward P., New York, N. Y. Drier. 1,693,747; Dec. 4.
Delco-Remy Corporation. (See Baker, Russell W., assignor.)
Delco-Remy Corporation. (See Carter, John J., assignor.)
Delco-Remy Corporation. (See Elsey, George W., assignor.)
Delco-Remy Corporation. (See Fitzsimmons, John T., assignor.)
Delco-Remy Corporation. (See Henry, Howard W., assignor.)
Delco-Remy Corporation. (See Hunt, John H., assignor.)
Dennison Manufacturing Company. (See McNally, William J., assignor.)
Denny, Levi P., Berkeley, Calif. Hour glass. 1,694,059; Dec. 4.
Detroit Aircraft Engine Corporation. (See Angle, Glenn D., assignor.)
De Vilbiss Company, The. (See Mueller, Godfrey A., assignor.)
Dexter, Carl J., La Fayette, Ind. Building-block mold. 1,693,693; Dec. 4.
Diamant, Nicholas, assignor to Jamestown Car Parts Mfg. Co., Inc., Jamestown, N. Y. Radiator. 1,694,004; Dec. 4.
Dick, Talbert M., Des Moines, Iowa. Golf-bag support. 1,693,889; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,058; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,059; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,060; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,061; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,062; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,063; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,064; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,065; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,066; Dec. 4.
Dieck, Henry W., Brooklyn, assignor to The Standard Textile Products Company, New York, N. Y. Oilcloth. Des. 77,067; Dec. 4.
Dietzgen, Eugene, Company. (See Price, Elmer E., assignor.)
Dishmaker, Anton, Kewaunee, Wis. Clipper. 1,693,707; Dec. 4.

Dixson, Harry, assignor to Rolscreen Company, Pella, Iowa. Guide track for screen construction. 1,694,314; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,068; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,069; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,070; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,071; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,072; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,073; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,074; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,075; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,076; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,077; Dec. 4.
Dlouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Curtain rod. Des. 77,078; Dec. 4.
Doane, Charles F., Salem, Oreg. Wrapping cheese. 1,693,694; Dec. 4.
Dobson, William A., Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 1,693,708; Dec. 4.
Dodge, Milton L., Newburyport, Mass. Mechanism for making turn shoes. 1,693,976; Dec. 4.
Doepke, William, Selah, Wash. Ditcher. 1,694,252; Dec. 4.
Doering, Charles, Chicago, Ill. Beverage-dispensing cabinet. Des. 77,079; Dec. 4.
Dolan, Bernard A., Brookline, assignor to Tuttle Silver Company, Boston, Mass. Plate or similar article. Des. 77,080; Dec. 4.
Dörr, Edward. (See Leuchs, O., and Dörr.)
Doty, William W., Great Kills, N. Y. Car-door-moving mechanism. 1,694,166; Dec. 4.
Douglas, Harry A., Bronson, Mich. Instrument-board lamp. 1,693,596; Dec. 4.
Doying, Ernest G. (See Ray, A. B., Doying, and Bu'kovsky.)
Dräger, Alexander B. (See Schröder, Hans W. C., assignor.)
Dräger, Elfriede, née Stange, executrix. (See Schröder, Hans W. C.)
Draper Corporation. (See Davis, Harry A., assignor.)
Draper Corporation. (See Stimpson, Wallace I., assignor.)
Driver-Harris Company. (See Sammon, Joseph, assignor.)
Dubilier Condenser Corporation. (See Dubilier, William, assignor.)
Dubilier Condenser Corporation. (See Vawter, Charles E., assignor.)
Dubilier, William, New Rochelle, assignor to Dubilier Condenser Corporation, New York, N. Y. Electrical resistance. 1,694,167; Dec. 4.
Duclaux, Jacques, Paris, France. Ultrafilter membrane. 1,693,890; Dec. 4.
Du Moulin, Eleanor G., New York, N. Y. Foot rest. 1,694,095; Dec. 4.
Dunand, Ernest L., London, England. Screen for telephones or the like. 1,693,709; Dec. 4.
Duncan, Charles R., Detroit, Mich. Automobile accessory. 1,694,060; Dec. 4.
Dunham, C. A., Company. (See Crosthwait, David N., jr., assignor.)
Dunker, Vincent J., Ste. Genevieve, Mo. Photographic printer. 1,693,891; Dec. 4.
Dunlop, William F., New York, N. Y. Arch support. 1,694,315; Dec. 4.
Duquenne, Camille, Paris, France. Pulverulent-fuel furnace. 1,693,597; Dec. 4.
Dusa, Olive V., Gladstone, Oreg. Screen-door attachment. 1,694,168; Dec. 4.
Dziuk, Edmund, Detroit, Mich. Combination post card and letter. 1,693,811; Dec. 4.
Eastman Kodak Company. (See Wellman, Howard C., assignor.)
Eckdahl, Werner P., Chicago, Ill. Wet process for manufacturing cement. 1,693,644; Dec. 4.
Edgar, John, assignor to Barber-Colman Company, Rockford, Ill. Workholder. 1,694,034; Dec. 4.
Edmiston, Boyd, and H. T. Kinney, Punxsutawney, Pa. Bottle. Des. 77,081; Dec. 4.
Edwards, James M., assignor to Iowa Dairy Separator Company, Waterloo, Iowa. Oiling indicator. 1,693,812; Dec. 4.
Edwards, William S. (See St. Clair, Moffat, assignor.)
Efcolite Corporation. (See von Nessen, Walter, assignor.)
Egan, George F., Jersey City, N. J. Sewer construction. 1,693,977; Dec. 4.
Egan, George F., Jersey City, N. J. Sewer construction. 1,693,978; Dec. 4.
Ehrmann, Friedrich, Stuttgart-Feuerbach, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Casting apparatus. 1,694,118; Dec. 4.
Eichwede, Heinz, Hochst-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y. Azo dyestuffs and preparing the same. 1,694,117; Dec. 4.
Eilers, Henry K., Plainfield, N. J., assignor to Pyramid Iron Products Corporation. Grate bar. 1,693,710; Dec. 4.
Eisenstein, Alfred, Schreckenstein, near Aussig-on-the-Elbe, Czechoslovakia, assignor of one-half to Georg Schicht A.-G., Aussig-on-the-Elbe. Manufacture of linoleum covering material. 1,693,917; Dec. 4.
Electroil Syndicate. (See Booth, William K., assignor.)
Electrolux Servel Corporation. (See von Platen, B. C., and Munters, assignors.)
Electro Manufacturing Company of America. (See Ginder, William H., assignor.)
Electro-Tel-It Manufacturing Company. (See Gage, Jay, assignor.)
Ellis, Zachary T., Duncan, Okla. Knockdown tank. 1,693,695; Dec. 4.
Elrod, Henry E., Santa Monica, Calif. Direction indicator. 1,693,918; Dec. 4.
Elsey, George W., Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio. Machine for testing shock absorbers. 1,694,005; Dec. 4.
Embry, L. D., et al. (See Le Bus, John E., assignor.)
Enderick, Winfield S. (See Flegel, W. J., and Enderick.)
Engbrecht, Herman J., assignor to Standard Oil Company, Chicago, Ill. Grease-charging apparatus. 1,694,096; Dec. 4.
Engelbrektson, Olof, Bogen, Sweden. Structure for drying wood. 1,693,777; Dec. 4.
Engman, Louis, Moline, Ill. Grinding tool. 1,693,778; Dec. 4.
Equipment Specialties Co. (See Hull, George A., assignor.)
Erlinger, N. T. (See Louis, Charles J., assignor.)
Evans Auto Loading Co. Inc., The. (See Evans, Edward S., assignor.)
Evans Auto Loading Co. Inc., The. (See Snyder, Clifford L., assignor.)
Evans, Edward S., assignor to The Evans Auto Loading Co. Inc., Detroit, Mich. Composition chock block. 1,694,316; Dec. 4.
Everett, Charles E., Longford, Kans., assignor, by mesne assignments, to J. I. Case Plow Works, Inc. Tractor guide. 1,694,210; Dec. 4.
Ezell, Marion. (See Benedict, George W., assignor.)
Fabbrin, Frank, Tallman, assignor to Continental Products Corporation, New York, N. Y. Umbrella rib and spreader structure and producing the same. 1,693,948; Dec. 4.
Fahrney, Emery H., Chicago, Ill. Combined reverse and reduction gear. 1,693,645; Dec. 4.
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Air purifier. 1,693,646; Dec. 4.
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Air purifier. 1,693,647; Dec. 4.
Faudi, Fritz, Duesseldorf-Oberkassel, Germany. Making shafts, connecting rods, and the like. 1,693,838; Dec. 4.
Faudi, Fritz, Duesseldorf-Oberkassel, Germany. Jointing tubular members. 1,693,839; Dec. 4.
Faudi, Fritz, Dusseldorf-Oberkassel, Germany. Ball-and-socket joint. 1,693,840; Dec. 4.
Faultless Caster Company. (See Noelting, William H., assignor.)
Federal Phosphorus Company. (See Carothers, J. N., and Booth, assignors.)
Federal Telephone Manufacturing Corporation. (See Horle, Lawrence C. F., assignor.)
Fernandez, Eugenio, Valparaiso, Chile. Oven. 1,694,211; Dec. 4.
Ferree, Clarence E. and G. R., Bryn Mawr, Pa. Perimeter. 1,693,979; Dec. 4.
Ferree, Gertrude R. (See Ferree, Clarence E. and G. R.)
Flegel, William J., and W. S. Enderick, assignors to Bohn Aluminum and Brass Corporation, Detroit, Mich. Making ball-and-socket joints. 1,693,748; Dec. 4.
Fifth Avenue Coach Company. (See Forrester, Michael J., assignor.)
Firestone Tire and Rubber Company, The. (See Stevens, Horace D., assignor.)
Firma Hannovera-Kassen-Gesellschaft m. b. H. (See Schubode, Albert, assignor.)
Fischer, Albert C., Chicago, Ill. Expansion joint. 1,694,212; Dec. 4.
Fischer, Albert C., Chicago, Ill. Combined expansion and contraction joint—semi-hexagonal type. 1,694,213; Dec. 4.
Fisk Rubber Company, The. (See Lehman, Paul W., assignor.)
Fisk Rubber Company, The. (See Maynard, Charles E., assignor.)
Fisk Rubber Company, The. (See Midgley, Thomas, assignor.)
Fitz Harris, Leo J., Brooklyn, assignor, by mesne assignments, to Franklin Simon & Co. Inc., New York, N. Y. Shoe. Des. 77,082; Dec. 4.
Fitzsimmons, John T., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio. Instrument panel. 1,694,006; Dec. 4.
Fleuron, Inc. (See Kobbé, William H., assignor.)
Floorola Corporation, The, et al. (See Gillis, Lyle N., assignor.)
Floorola Corporation, The, et al. (See Marshall, Thomas A., assignor.)
Fogle West Undertaking Company. (See Muckleroy, William B., assignor.)
Fontana, Frank, San Francisco, Calif. Clock face. Des. 77,083; Dec. 4.

Forrester, Michael J., Astoria, N. Y., assignor to Fifth Avenue Coach Company. Double-deck passenger vehicle. 1,694,007; Dec. 4.
Forsberg, Peter W., Schenectady, N. Y., assignor to General Electric Company. Regulating system. 1,694,253; Dec. 4.
Fort Pitt Bedding Company. (See Trimble, Charles P., assignor.)
Fox, Thomas W., Cincinnati, Ohio. Monument. Des. 77,084; Dec. 4.
Frank, Jacob, assignor to The Frank Tea & Spice Company, Cincinnati, Ohio. Can. 1,694,119; Dec. 4.
Frank Tea & Spice Company, The. (See Frank, Jacob, assignor.)
Franke, Fritz, Berlin, Germany. Swimming bladder. 1,693,779; Dec. 4.
Franklin, Charles B., Springfield, Mass., assignor to Indian Motorcycle Company. Generator assembly for motorcycle engines. 1,693,696; Dec. 4.
Franklin Railway Supply Company. (See Roberts, Montague H., assignor.)
Franklin Simon & Co. Inc. (See Fitz Harris, Leo J., assignor.)
Fraser, George H., Brooklyn, N. Y. Drive and driven device. 1,694,008; Dec. 4.
Frederickson, Otto A., Weathersfield, assignor to The Wiremold Company, Hartford, Conn. Circular loom. 1,694,254; Dec. 4.
Friedrich, Albert, and R. O. Powell, San Antonio, Tex. Electric lamp. Des. 77,085; Dec. 4.
Friendly, Herbert M., Chicago, Ill. Call register for telephone systems. 1,694,169; Dec. 4.
Friendly, Herbert M., Portland, Oreg. Telephone system. 1,694,170; Dec. 4.
Fritz, Emil F. L., Chicago, Ill. Puzzle. 1,693,711; Dec. 4.
Fuchs, Nicholas P., jr., Akron, Ohio. Station indicator for radio sets. 1,693,892; Dec. 4.
Fugmann, Rudolf. (See Brecht, E., and Fugmann.)
Fulton Company, The. (See Henderson, Robert M., assignor.)
Furber, Frederick M., Revere, Mass. Temperature-controlling apparatus for internal-combustion engines. 1,694,171; Dec. 4.
G & J Tire Company. (See Coe, John P., assignor.)
Gage, Jay, Los Angeles, Calif., assignor to Electro-Tel-It Manufacturing Company. Automatic intermittent exhibiting device. 1,693,803; Dec. 4.
Gale, Clarence W., Beatrice, Nebr. Show case. 1,693,980; Dec. 4.
Gale, Laburton A., Belmont, Mass., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y. Reenforcing device for sides of perforations. 1,693,648; Dec. 4.
Gallison, Ernest A. (See Mudge, R. C., and Gallison.)
Galliowitz, Gustave A., assignor to The Kny-Scheerer Corporation of America, New York, N. Y. Adjustable wheel stretcher. 1,694,172; Dec. 4.
Gamble Brothers, Inc. (See Jones, Richard C., assignor.)
Gamble, John D., assignor to Continental Optical Corporation, Indianapolis, Ind. Polishing pad for lenses and making same. 1,693,598; Dec. 4.
Garlick, Edward, Kelso, Wash. Sand washer and separator. 1,694,255; Dec. 4.
Garrison, Herman, Chicago, Ill. Can opener. 1,693,894; Dec. 4.
Gaylord, George S., Menasha, assignor, by mesne assignments, to Marathon Paper Mills Company, Rothschild, Wis. Double-receptacle carton. 1,693,841; Dec. 4.
Gebel, Michael E., Armour, S. Dak. Electric soldering carbon. 1,694,256; Dec. 4.
Geier, P. A., Company, The. (See Martinet, Eugene F., assignor.)
General Electric Company. (See Alexanderson, Ernst F. W., assignor.)
General Electric Company. (See Booth, Ralph E., assignor.)
General Electric Company. (See Byk, Alfred, assignor.)
General Electric Company. (See Byles, Frank A., assignor.)
General Electric Company. (See Clarkson, William B., assignor.)
General Electric Company. (See Forsberg, Peter W., assignor.)
General Electric Company. (See Grünholz, Hans, assignor.)
General Electric Company. (See Guedon, Emile C., assignor.)
General Electric Company. (See Hilliard, John D., assignor.)
General Electric Company. (See Hull, Albert W., assignor.)
General Electric Company. (See Hull, John I., assignor.)
General Electric Company. (See Inman, George E., assignor.)
General Electric Company. (See Jump, George H., assignor.)
General Electric Company. (See Krämer, Christian, assignor.)
General Electric Company. (See Murphy, E. J., and Hutt, assignors.)
General Electric Company. (See Prince, David C., assignor.)
General Electric Company. (See Rankin, William K., assignor.)
General Electric Company. (See Simonds, Dewey T., assignor.)
General Electric Company. (See Sohlberg, Erik G., assignor.)
General Electric Company. (See Sywert, Philip T., assignor.)
General Electric Company. (See Walle, Ludvig S., assignor.)
General Electric Company. (See Weiler, Wilhelm, assignor.)
Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches. (See Mayer, Emil, assignor.)
Gesellschaft für Drahtlose Telegraphie m. b. H. (See Meissner, Alexander, assignor.)
Geyer, Harvey D., assignor to The Inland Manufacturing Company, Dayton, Ohio. Oscillating joint. 1,693,981; Dec. 4.
Gillespie, Bee K., Los Angeles, Calif. Apparatus for cleaning and polishing automobiles. 1,694,120; Dec. 4.
Gillings, Charles, Liverpool, England, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Telephone system. 1,693,599; Dec. 4.
Gillis, Lyle N., Rose Crest, Va., assignor of one-half to The Floorola Corporation and one-half to E. J. Newcomer, Baltimore, Md. Brush holder for floor polishers. 1,693,919; Dec. 4.
Ginder, William H., Haddonfield, N. J., assignor, by mesne assignments, to Electro Manufacturing Company of America. Portable fan. 1,694,214; Dec. 4.
Gleason Works. (See Wildhaber, Ernest, assignor.)
Glomstead, Edwin E, and J. A. Williamson, Neenah, Wis., assignors, by mesne assignments, to International Cellucotton Products Co., Chicago, Ill. Machine for making absorbent rolls. 1,693,749; Dec. 4.
Goetsch, George W., Elkins Park, assignor to Quaker Hosiery Company, Philadelphia, Pa. Stocking. Des. 77,086; Dec. 4.
Goetsch, George W., Elkins Park, assignor to Quaker Hosiery Company, Philadelphia, Pa. Stocking. Des. 77,143; Dec. 4.
Goldberg, Maximilian M., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio. Auditing machine. 1,694,009; Dec. 4.
Goldwyn, Walter M. (See Kellner, E., and Goldwyn.)
Golembiewski, Boleslaw, Utica, N. Y. Sled runner for automobiles. 1,694,215; Dec. 4.
Good, Samuel, Newton, Kans. Electric fan. 1,694,317; Dec. 4.
Goodman, Barney, Chicago, Ill. Draft regulator. 1,693,813; Dec. 4.
Goodman, Barney, Chicago, Ill. Draft regulator. 1,693,814; Dec. 4.
Goranson, Joseph O., Seattle, Wash. Warehouse tool. 1,694,173; Dec. 4.
Gordon, Aaron. (See Lipman, C. B., and Gordon.)
Gorham Mfg. Co. (See Magnussen, Erik, assignor.)
Gough, James J., assignor to Chicago Electric Manufacturing Co., Chicago, Ill. Electric switch. 1,694,216; Dec. 4.
Graham Glass Company, The. (See Bramble, Jesse, assignor.)
Granat, Elie, assignor of one-half to Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France. Electric distant control device. 1,694,121; Dec. 4.
Grant, William F., Newport News, Va., assignor to Newport News Shipbuilding and Dry Dock Company. Oil and water control for hydraulic-turbine bearings. 1,693,600; Dec. 4.
Grasselli Chemical Company, The. (See Taylor, Edward A., assignor.)
Grasselli Dyestuff Corporation. (See Brode, J., and Johannsen, assignors.)
Grasselli Dyestuff Corporation. (See Eichwede, Heinz, assignor.)
Greeley, Ella T., Whitman, Mass. Radiator ornament. Des. 77,087; Dec. 4.
Greeley, Ella T., Whitman, Mass. Radiator ornament. Des. 77,088; Dec. 4.
Greenwood, Raymond C., assignor to American Road Machinery Company, Inc., Kennett Square, Pa. Snowplow. 1,694,174; Dec. 4.
Griffiths, Alfred, Rock Ferry, assignor to Kleenglas Limited, London, England. Washing, drying, and polishing tumblers, cups, and like articles. 1,693,780; Dec. 4.
Grimes, Lester A., Montclair, assignor to Grimes Sprinkler Company, Inc., Newark, N. J. Alarm check valve. 1,693,842; Dec. 4.
Grimes Sprinkler Company. (See Grimes, Lester A., assignor.)
Grimm, Fred I., Beaver, assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Support for nailing strips and the like. 1,693,949; Dec. 4.
Griswold Manufacturing Company, The. (See Hollands, John C., assignor.)
Groehn, Otto J., Grosse Pointe Park, assignor to Hudson Motor Car Company, Detroit, Mich. Panel joint for automobile bodies and making the same. 1,693,750; Dec. 4.
Groove Lock Co. Inc. (See Leberman, Harry, assignor.)
Gross, Harry, Brooklyn, N. Y. Cellar drainer. 1,694,199; Dec. 4.
Grossman, Herman P., Boonville, Ind., assignor to International Harvester Company, Chicago, Ill. Corn shredder and husker. Re17,152; Dec. 4.

Grotts, Fred, Peoria, Ill., assignor, by mesne assignments, to Caterpillar Tractor Co. Track-link connection. 1,694,035; Dec. 4.

Groves, Frank A., Dayton, Ohio. Shoe-shining apparatus. 1,693,601; Dec. 4.

Grünholz, Hans, Charlottenburg, Germany, assignor to General Electric Company. Electric induction apparatus. 1,694,318; Dec. 4.

Guedon, Emile C., Schenectady, N. Y., assignor to General Electric Company. Apparatus for producing sound. 1,694,319; Dec. 4.

Hafner, Wilhelm, Saarbrucken, Germany. Composition of matter for use in honing razors and other knives. 1,693,697; Dec. 4.

Hagemann, Louis F., Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada. Autographic register. 1,693,982; Dec. 4.

Hagopian, Serpoobie, San Francisco, Calif. Dust or dirt removing apparatus. 1,694,257; Dec. 4.

Hale, Samuel B., Buckley, Ill. Mail-box post. 1,693,698; Dec. 4.

Hall, Guy H., Jackson Heights, N. Y. Combined plow and soil pulverizer. 1,693,895; Dec. 4.

Hamer, Gus M., et al. (See Le Bus, John E., assignor.)

Hammond, John H., jr., Gloucester, Mass. Shutter-control mechanism for musical instruments. 1,693,751; Dec. 4.

Hammond, John H., jr., Gloucester, Mass. Organ control. 1,693,752; Dec. 4.

Hanford, Thomas P. (See Dalbey, G. E., and Hanford.)

Hangleiter, Carl, Mannheim-Woldhof, and A. Schneider, Kelheim-on-the-Danube, assignors to the firm: Zellstoffabrik Waldhof, Mannheim-Waldhof, Germany. Apparatus for boiling cellulose. 1,693,983; Dec. 4.

Hansen, Klaus L., Milwaukee, Wis. Dynamo-electric machine. 1,694,062; Dec. 4.

Hansen, Klaus L., and W. J. Oesterlein, Milwaukee, Wis. Self-starting induction motor. 1,694,061; Dec. 4.

Hanson, Bengt M. W., deceased, Hartford, Conn.; E. A. Hanson, executor. Machine for grinding gears. 1,693,781; Dec. 4.

Hanson, Einar A., executor. (See Hanson, Bengt M. W.)

Hanson, Hans P., Chicago, Ill. Flowerpot holder. 1,693,896; Dec. 4.

Harrigan, Harold W., Medford, assignor to Hersey Manufacturing Company, South Boston, Mass. Method of and apparatus for treating starch. 1,693,649; Dec. 4.

Harris, Leo J. F. (See Fitz Harris, Leo J.)

Hart, Frederick A., New Britain, Conn., assignor to Remington Accounting Machine Corporation, New York, N. Y. Computing machine. 1,693,753; Dec. 4.

Hart, William C., New York, N. Y. Printer's inking roller and method of protecting journal supports of same. 1,694,217; Dec. 4.

Harter, Isaac, Dongan Hills, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J. Steam boiler. 1,693,602; Dec. 4.

Hartmann, William C., Cleveland, Ohio. Adjustable caster. 1,693,920; Dec. 4.

Hartong, Robert C., assignor to Seiberling Rubber Company, Akron, Ohio. Manufacturing imitation leather. 1,694,258; Dec. 4.

Haseltine, Stacy B., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,693,921; Dec. 4.

Hasselkus, William E. B., Jamaica, assignor to International Motor Company, New York, N. Y. Seat. 1,693,782; Dec. 4.

Hasselkus, William E. B., Jamaica, assignor to International Motor Company, New York, N. Y. Seat. 1,693,783; Dec. 4.

Hauser, George D., assignor to Utica Products, Inc., Utica, N. Y. Portable electric heater. 1,693,950; Dec. 4.

Hauser, George D., assignor to Utica Products, Inc., Utica, N. Y. Portable electric heater. 1,694,175; Dec. 4.

Hazard, George E., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Air-compressing mechanism. 1,694,218; Dec. 4.

Heany, John A., assignor to Heany Laboratories, Inc., New Haven, Conn. Antifriction air-spring assembly. 1,693,603; Dec. 4.

Heany Laboratories, Inc. (See Heany, John A., assignor.)

Hebig, Henry C., Hoffmans, N. J., assignor to H. H. Boyce, Jericho, N. Y. Spherical heat indicator for automotive internal-combustion engines. 1,693,984; Dec. 4.

Hecht, Leo., New York, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc. Dish or article of analogous nature. Des. 77,089; Dec. 4.

Hecht, Leo, New York, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc. Lantern body or article of analogous nature. Des. 77,090; Dec. 4.

Heldrich, Andrew, New Brunswick, N. J., assignor to American Incubator Manufacturing Co., Inc. Burner wick. 1,693,604; Dec. 4.

Henderson, James B., Blackheath, England. Gun mounting. 1,693,712; Dec. 4.

Henderson, Louis S., Philadelphia, Pa. Rug or similar article. Des. 77,091; Dec. 4.

Henderson, Robert M., assignor to The Fulton Company, West Allis, Wis. Accelerator. 1,693,897; Dec. 4.

Hennessey, Vincent D., Milwaukee, Wis. Combination mixing valve. 1,693,758; Dec. 4.

Henry, Howard W., Bloomfield, N. J., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio. Signaling device. 1,694,010; Dec. 4.

Henry, Nelson B., Atlanta, Ga. Cotton separator. 1,693,754; Dec. 4.

Hercules Powder Company. (See Jenks, George E., assignor.)

Herd, William G., Drumheller, Alberta, Canada. Luggage carrier for automobiles. 1,693,922; Dec. 4.

Herman, Raymond L., New York, and G. F. Schmidt, Roslyn, N. Y. Attachment for bending machines. 1,693,951; Dec. 4.

Herrenbruck, Herman, assignor to Orbon Stove Co., Belleville, Ill. Stove. 1,694,176; Dec. 4.

Hersey Manufacturing Company. (See Harrigan, Harold W., assignor.)

Hess, Arthur J., assignor to E. Holley, Detroit, Mich. Coating for molds. 1,693,923; Dec. 4.

Hewetson, Henry H., Elizabeth, N. J., assignor to Standard Oil Development Company. Distilling petroleum. 1,694,259; Dec. 4.

Hewitt, Harold S., Brantford, Ontario, Canada. Ornament for radiators of motor cars. Des. 77,092; Dec. 4.

Heywood-Wakefield Company. (See McElligott, Edward R., assignor.)

Hibbert, Ernest, assignor to Hibbert Pneumatic Cell Tyre Company Limited, Goulbourn, New South Wales, Australia. Manufacturing of tyres for motor vehicles. 1,694,260; Dec. 4.

Hibbert Pneumatic Cell Tyre Company Limited. (See Hibbert, Ernest, assignor.)

Hiers, Glen S. (See Adams, R., and Hiers.)

Hillebrandt, Johan E., West Brighton, N. Y. Musical instrument. 1,693,924; Dec. 4.

Hilliard, John D., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 1,694,261; Dec. 4.

Hilliard, John D., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 1,694,320; Dec. 4.

Hindahl, David. (See Morey, W. E., and Hindahl.)

Hinde, Henry J., assignor to The Toledo Machine & Tool Company, Toledo, Ohio. Shaft-control means for drawing and stamping presses. 1,694,063; Dec. 4.

Hoe, R., and Co. (See Zuckerman, Adolph M., assignor.)

Hollands, John C., assignor to The Griswold Manufacturing Company, Erie, Pa. Electric cooking stove. 1,693,784; Dec. 4.

Holle, Edward E., Arlington, N. J. Machine for slicing cheese. 1,693,605; Dec. 4.

Holley, Earl. (See Hess, Arthur J., assignor.)

Holm, Anton. (See Richardson, H., and Holm.)

Holt, Donald, Chicago, Ill. Lighting fixture and the like. 1,693,925; Dec. 4.

Hopkins, Marion B., Elizabeth, and H. E. Buc, Roselle, N. J., assignors to Standard Oil Development Company. Cellulose-nitrate solution. 1,694,097; Dec. 4.

Horle, Lawrence C. F., Newark, N. J., assignor to Federal Telephone Manufacturing Corporation, Buffalo, N. Y. Amplification system. 1,693,898; Dec. 4.

Horle, Lawrence C. F., Newark, N. J., assignor, by mesne assignments, to Federal Telephone Manufacturing Corporation, Buffalo, N. Y. Grid leak. 1,693,899; Dec. 4.

Horn, Sigmund, and M. Zipkes, New York, N. Y. Aeroplane. 1,694,177; Dec. 4.

Horsfall, Ronald S., and L. G. Lawrie, assignors to British Dyestuffs Corporation Limited, Blackley, Manchester, England. Protection of animal fibers against the effects of alkaline or acid mediums. 1,693,926; Dec. 4.

Horton, Clement E., New York, N. Y., assignor to McKinney Manufacturing Company, Pittsburgh, Pa. Hinge strap or similar article. Des. 77,093; Dec. 4.

Horton, Clement E., New York, N. Y., assignor to McKinney Manufacturing Company, Pittsburgh, Pa. Hinge strap or similar article. Des. 77,094; Dec. 4.

Hose, Walter R., New Ulm, Minn. Dirigible headlight. 1,693,900; Dec. 4.

Hosford, John L., Boonville, Mo. Gear-shifting-lever lock and ignition-switch-actuating mechanism. 1,694,011; Dec. 4.

Hotz, John P., assignor of one-half to M. A. Wood, Boston, Mass. Tire-chain tool. 1,693,755; Dec. 4.

Howard, Frank A., Elizabeth, N. J., assignor to Standard Oil Development Company. Converting hydrocarbons into lower-boiling products. 1,694,262; Dec. 4.

Howard, Lloyd C. (See Caton, H. and E., and Howard.)

Howe, Chester C., New Kensington, assignor, by mesne assignments, to F. R. Alter, Parnassus, Pa. Washing machine. 1,693,785; Dec. 4.

Howell, J. H., et al. (See Le Bus, John E., assignor.)

Howson, Charles T., asaignor to Huntley Manufacturing Co., Silver Creek, N. Y. Cherry-pitting machine. 1,694,263; Dec. 4.

Hudson Heating Systems, Inc. (See Hudson, Walter E., assignor.)

Hudson Motor Car Company. (See Groehn, Otto J., assignor.)

Hudson, Walter E., Amagansett, assignor to Hudson Heating Systems, Inc., New York, N. Y. Heating unit. 1,694,178; Dec. 4.

Hull, Albert W., Schenectady, N. Y., assignor to General Electric Company. Temperature regulator. 1,694,264; Dec. 4.

Hull, George A., assignor to Equipment Specialties Co., Chicago, Ill. Refrigerator car. 1,693,815; Dec. 4.

Hull, John I., Schenectady, N. Y., assignor to General Electric Company. Speed-control system. 1,694,321; Dec. 4.

Hull, John I., Schenectady, N. Y., assignor to General Electric Company. Speed-control system. 1,694,322; Dec. 4.

Hunt, John H., Detroit, Mich., assignor to Delco-Remy Corporation, Dayton, Ohio. Lighting and ignition system. 1,693,985; Dec. 4.

Huntley Manufacturing Co. (See Howson, Charles T., assignor.)

Hurxthal, Alpheus O., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Toaster. Des. 77,095; Dec. 4.

Hutchens, Edward, Milwaukee, Wis. Washer-setter spout. 1,693,901; Dec. 4.

Hutt, Leonard P. (See Murphy, E. J., and Hutt.)

I. G. Farbenindustrie Aktiengesellschaft. (See Jantsch, G., and Wolski, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Leuchs, O., and Dörr, assignors.)

Imperial Tobacco Co., The. (See Milligan, W., and Palmer, assignors.)

Indian Motorcycle Company. (See Franklin, Charles B., assignor.)

Inland Manufacturing Company, The. (See Geyer, Harvey D., assignor.)

Inman, George E., East Cleveland, Ohio, assignor to General Electric Company. Method and apparatus for treating filaments. 1,694,265; Dec. 4.

International Cellucotton Products Co. (See Glomstead, E. E., and Williamson, assignors.)

International Combustion Engineering Corporation. (See Rosencrants, Fay H., assignors.)

International Derrick & Equipment Company, The. (See Bloss, Richard R., assignor.)

International Harvester Company. (See Grossman, Herman P., assignor.)

International Motor Company. (See Corcoran, Lewis L., assignor.)

International Motor Company. (See Hasselkus, William E. B., assignor.)

International Motor Company. (See McCall, G., and Reid, assignors.)

International Motor Company. (See Wilson, Raymond C., assignor.)

International Screw Company. (See Arenz, John A., assignor.)

Iowa Dairy Separator Company. (See Edwards, James M., assignor.)

Isaachsen, Isak, assignor to Aktienselskapet Krysal, Oslo, Norway. Crystallization of solid substances in a coarse granular form from solutions. 1,693,786; Dec. 4.

Jackson, Lloyd E., and H. E. Wassell, Pittsburgh, Pa., assignors to Mundatechnical Products Company, Detroit, Mich. Mothproofing substance and preparing it. 1,694,219; Dec. 4.

Jaeger, Alphons O., Crafton, Pa., assignor, by mesne assignments, to The Selden Research & Engineering Corporation, Pittsburgh, Pa. Purification of crude anthracene. 1,693,713; Dec. 4.

Jaeger, Alphons O., assignor to The Selden Company, Pittsburgh, Pa. Catalytic oxidation of organic compounds. 1,694,122; Dec. 4.

Jaeger, Alphons O., Crafton, assignor to The Selden Company, Pittsburgh, Pa. Contact sulphuric-acid process. 1,694,123; Dec. 4.

Jaeger, Alphons O., Crafton, assignor to The Selden Company, Pittsburgh, Pa. Purification of benzoic acid and its derivatives. 1,694,124; Dec. 4.

Jaeger, Max, assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y. Glass-blowing machine. 1,693,843; Dec. 4.

Jaffe, Joseph L., and R. J. Monroe, assignors to The Perfecite Company, Cleveland, Ohio. Lighting fixture. Des. 77,096; Dec. 4.

Jamestown Car Parts Mfg. Co. (See Diamant, Nicholas, assignor.)

Jandus, Herbert S., assignor to The C. G. Spring & Bumper Company, Detroit, Mich. Clamp plate for vehicle bumpers. Des. 77,097; Dec. 4.

Jandus, Herbert S., assignor to The C. G. Spring & Bumper Company, Detroit, Mich. Impact sections for a vehicle bumper. Des. 77,101; Dec. 4.

Jandus, Herbert S., and J. R. Morgan, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Clamp plate. Des. 77,100; Dec. 4.

Jandus, Herbert S., and N. Van Husen, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Mask plate for vehicle bumpers. Des. 77,098; Dec. 4.

Jandus, Herbert S., and N. Van Husen, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Clamp plate for vehicle bumpers. Des. 77,099; Dec. 4.

Jantsch, Gustav, Bonn-on-the-Rhine, and P. Wolski, Wiesdorf-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort, Germany. Producing lithopone fast to light. 1,693,902; Dec. 4.

Jencick, Stephen, Chagrin Falls, Ohio. Flexible coupling. 1,694,064; Dec. 4.

Jenkins, Charles F., Washington, D. C. Duplex radiomachine. 1,694,065; Dec. 4.

Jenkins, Charles F., Washington, D. C. Reversing-propeller throttle control. 1,694,220; Dec. 4.

Jenks, George E., Bacchus, Utah, assignor to Hercules Powder Company, Wilmington, Del. Refining wood rosin. 1,694,179; Dec. 4.

Johannsen, Adolf. (See Brode, J., and Johannsen.)

Johansson, Ernest G., Boston, assignor, by mesne assignments, to The Palmer Electric & Manufacturing Co., Waltham, Mass. Safety switch. 1,693,952; Dec. 4.

Johnson, Carl S., Butte, Mont. Chair. 1,694,018; Dec. 4.

Johnson, Charles W., Seattle, Wash. Burner head for oil-burner plants. 1,694,012; Dec. 4.

Johnson, George D. (See Paddack, S. D., and Wilford, assignors.)

Johnson, John E., and C. H. Oslund, assignors to The O. & J. Machine Company, Worcester, Mass. Milk-bottle cap. 1,693,787; Dec. 4.

Johnson, Noah, and L. H. Strasser, St. Louis, Mo. Grain door for box cars. 1,694,180; Dec. 4.

Johnston, Vernon O., Lincoln, Ill. Method and apparatus for making road edgings. 1,693,903; Dec. 4.

Jones, Daphne S., administratrix. (See Jones, Richard C.)

Jones & Laughlin Steel Corporation. (See Grimm, Fred I., assignor.)

Jones, Richard C., deceased, by D. S. Jones, administratrix, assignor to Gamble Brothers, Inc., Louisville, Ky. Gluing machine. 1,693,606; Dec. 4.

Jopson, William G., assignor to C. A. Reed Company, Williamsport, Pa. Decorative wreath. 1,694,125; Dec. 4.

Jordan, Leonard A., New Glasgow, Nova Scotia, Canada. Fox ranch. 1,693,756; Dec. 4.

Joslin, Frank M., Amsterdam, N. Y. Making collapsible boxes. 1,694,126; Dec. 4.

Judd, H. L., Company. (See Diouhy, August, assignor.)

Jump, George H., Buffalo, N. Y., assignor to General Electric Company. Heating control system. 1,694,323; Dec. 4.

Kaisling, William, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Lock for ignition and lighting switches. 1,693,844; Dec. 4.

Kaplan, Louis, Astoria, N. Y. Reenforced hosiery and producing same. 1,694,324; Dec. 4.

Kaplon, Abraham I., Brunswick, Md. Braking device for vehicles. 1,694,181; Dec. 4.

Kaptuller, Alexander F., Chicago, Ill. Machine for expressing juice from fruit, chopping meat, etc. 1,693,757; Dec. 4.

Karitzky, John, assignor, by mesne assignments, to Henry B. Newhall Corporation, Garwood, N. J. Nail expansion. 1,694,266; Dec. 4.

Kaspar Getreideschälmaschine G. m. b. H. (See Kaspar, Leopold, assignor.)

Kaspar, Leopold, Olmutz/Mähren, Czechoslovakia, assignor to Kaspar Getreideschälmaschine G. m. b. H., Offenbach-on-the-Main, Germany. Machine for husking, podding, brushing, or treating grain. 1,693,953; Dec. 4.

Keall, Frank R. (See Barclay, W. R., and Keall.)

Keller Mechanical Engineering Corporation. (See Shaw, John C. and R. D., assignors.)

Keller, William H., Inc. (See Shaff, Ernest H., assignor.)

Kellett, William P., Brantford, Ontario, Canada. Freight-transporting equipment. 1,693,607; Dec. 4.

Kelley, J. Maurice. (See Plunkett, Michael R., assignor.)

Kellner, Edward, and W. M. Goldwyn, New York, N. Y. Removable dental bridgework. 1,693,845; Dec. 4.

Kellogg Manufacturing Co. (See Hazard, George E., assignor.)

Kellogg Switchboard and Supply Company. (See Bohlman, Ernest A., assignor.)

Kellogg Switchboard and Supply Company. (See Currier, Hiram D., assignor.)

Kellogg Switchboard and Supply Company. (See Kaisling, William, assignor.)

Kellogg Switchboard and Supply Company. (See Stazak, Michael B., assignor.)

Kendall, William G., Newark, N. J. Cosmetic-pad holder. 1,694,325; Dec. 4.

Kimmick, Rudolph, Ramah, Colo. Steam-boiler furnace. 1,694,014; Dec. 4.

King, Dee M., Canton, Tex. Ice saw. 1,694,221; Dec. 4.

King, Emory A., Corydon, Iowa. Trailer. 1,694,267; Dec. 4.

Kinney, Henry T. (See Edmiston, B., and Kinney.)

Klausner, Edward S., Owego, N. Y. Fitting-up bolt device. 1,694,326; Dec. 4.

Kleenglas Limited. (See Griffiths, Alfred, assignor.)

Klein, Carl, Wichita, Kans. Truck. 1,694,342; Dec. 4.

Klein, Carl, Wichita, Kans. Truck. 1,694,343; Dec. 4.

Klingenberg, Herman, Fitchburg, Mass. Floor-brush attachment. 1,694,327; Dec. 4.

Kluge, Abel and E., assignors, by mesne assignments, to Brandtjen & Kluge, Incorporated, St. Paul, Minn. Feeding magazine for printing presses. 1,693,986; Dec. 4.

Kluge, Abel and E., assignors to Brandtjen and Kluge, Inc., St. Paul, Minn. Stock-feeding magazine for printing presses. 1,694,015; Dec. 4.

Kluge, Eneval. (See Kluge, Abel and E.)

Knapp, Archer L., assignor to Packard Motor Car Company, Detroit, Mich. Automobile radiator. Des. 77,102; Dec. 4.

Knott, Harry H., Washington, Iowa. Chuck-positioning device and drill guide for drilling machines. 1,693,904; Dec. 4.

Kny-Scheerer Corporation of America, The. (See Gallowitz, Gustave A., assignor.)

Kobbé, William H., New York, assignor to Fleuron, Inc., North Tonawanda, N. Y. Sulphur-silica composition. 1,693,714; Dec. 4.

Kobbé, William H., New York, N. Y., assignor to Texas Gulf Sulphur Company, Bay City, Tex. Hardened plaster product. 1,693,715; Dec. 4.

Kobbé, William H., New York, N. Y., assignor to Texas Gulf Sulphur Company, Bay City, Tex. Plaster board and the like. 1,693,716; Dec. 4.

Koch, Lydia B., New York, N. Y., assignor to Reinforced Paper Bottle Corporation, Chicago, Ill. Bottle. Des. 77,103; Dec. 4.

Koelbel, Joseph J., Baldwin, N. Y. Loader. 1,694,344; Dec. 4.

Koelkebeck, Carl W. A., Pittsburgh, Pa. Method of and apparatus for the manufacture of structural shapes. 1,693,987; Dec. 4.

Kohler, John F., Larchmont Manor, N. Y. Removing shells from nuts. 1,694,182; Dec. 4.

Kovacs, Frank, Akron, Ohio, assignor to Selberling Rubber Company. Tire. Des. 77,104; Dec. 4.

Kovacs, Frank, Akron, Ohio, asignor to Selberling Rubber Company. Tire. Des. 77,105; Dec. 4.

Kraeft, Herman L., assignor to Murray Ohio Manufacturing Company, Cleveland, Ohio. Juvenile vehicle. 1,694,183; Dec. 4.

Krah & Kirchhoff. (See Müller, Richard, assignor.)

Krämer, Christian, Pankow, Germany, assignor to General Electric Company. Mercury rectifier. 1,694,328; Dec. 4.

Kramer, William J., St. Louis, Mo. Automobile traffic signal. 1,694,184; Dec. 4.

Kraus, Charles A., and C. Callis, Worcester, Mass., assignors to Standard Oil Development Company. Preparing alkyl compounds of lead. 1,694,268; Dec. 4.

Krebsbach, Alois J., St. Cloud, Minn. Silo sealer. 1,694,016; Dec. 4.

Kristofek, Frank J., assignor to Brown & Bigelow, St. Paul, Minn. Attachment of face plates. 1,693,846; Dec. 4.

Kroll, Walter, Berlin, assignor to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemensstadt, near Berlin, Germany. Telephone system. 1,693,927; Dec. 4.

Kuert, Ira J., Los Angeles, Calif. Adjustable and interchangeable form for hollow wall construction. 1,694,036; Dec. 4.

Kuert, Ira J., Los Angeles, Calif. Concrete form, method of molding a concrete wall, and wall. 1,694,037; Dec. 4.

Kuhn, Frederick X., Waltham, assignor to Kuhn Ice Cream Machinery Co., Boston, Mass. Ice-cream-packaging machine., 1,693,988; Dec. 4.

Kuhn Ice Cream Machinery Co. (See Kuhn, Frederick X., assignor.)

Kyle, William D., Milwaukee, assignor to Line Material Company, South Milwaukee, Wis. Cap for ground members. 1,693,848; Dec. 4.

Labombarde, Harold S., Nashua, N. H. Machine for feeding blanks. 1,693,928; Dec. 4.

Lacene Manufacturing Company. (See Cogswell, Leander A., assignor.)

Ladd, John W., Co. (See Williams, Henry B., assignor.)

Lagaard, Alexander S. T., Minneapolis, Minn. Cabinet for a coin-controlled game apparatus. Des. 77,106; Dec. 4.

Lampert, Henry H., Chicago, Ill. Bar support and spacer. 1,694,066; Dec. 4.

Lang, Franz, Munich, Germany, assignor to Acro Aktiengesellschaft, Knessnacht-on-the-Rigi. Switzerland. Internal-combustion engine. 1,694,269; Dec. 4.

Langhammer, Paul. (See Smith, E. L., Phelon, and Langhammer.)

Langmack, Roy E., Minneapolis, Minn. Lubricating mechanism. 1,693,788; Dec. 4.

Lardy, Guillaume, Feage de Roussillon, assignor to Societe pour la Fabrication de la Soie "Rhodiaseta," Paris, France. Production of artificial yarns or threads. 1,693,759; Dec. 4.

Larned, William A., Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio. Elastic metal stringing and making the same. 1,694,360; Dec. 4.

Latham, Albert, deceased, Beverly; J. W. Nourbourn, administrator, Somerville, Mass., assignor to American Button & Fastener Co., Augusta, Me. Supplying apparatus. 1,693,650; Dec. 4.

Lauper, John F., Hollandale, Wis. Safety switch. 1,694,270; Dec. 4.

Laursen, Viggo. (See Tockar, Nicholas J., assignor.)

Lawrie, Leslie G. (See Horsfall, R. S., and Lawrie.)

Leberman, Harry, assignor to Groove Lock Co. Inc., New York, N. Y. Vanity case. 1,694,185; Dec. 4.

Le Blanc, Henri L., and H. Beaudoin, East Angus, Quebec, assignors of one-third to E. L. Lessard, Disraeli, Quebec, Canada. Signal device for automobiles. 1,694,345; Dec. 4.

Le Bus, George F., Electra, Tex. Combination tool for well-drilling operations. 1,693,789; Dec. 4.

Le Bus, John E., Electra, Tex., assignor of one-sixth to W. Caixert, one-sixth to J. H. Howell, one-sixth to L. D. Embry, one-sixth to G. M. Hamer, and one-sixth to A. L. Robb. Rotary pump. 1,694,329; Dec. 4.

Lee, Richard J., Marrero, La. Internal-combustion engine. 1,694,098; Dec. 4.

Lee, Worthy, Council Bluffs, Iowa. Machine for decorticating, scouring, and polishing cereals. 1,693,847; Dec. 4.

Lehman, Paul W., Wilkwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Inner-tube deflater. 1,694,222; Dec. 4.

Lemmon, George N., Marietta, assignor to Balt Manufacturing Co., Atlanta, Ga. Electric switch. 1,694,223; Dec. 4.

L'Enfant, Charles, New York, N. Y. Combination bill fold and pass case. 1,694,186; Dec. 4.

Lepler, Jacob, Providence, R. I. Clothes-pressing machine and the like. 1,694,224; Dec. 4.

Lessard, Ernest L. (See Le Blanc, H. L., and Beaudoin, assignor.)

Leuchs, Otto, Elberfeld, and E. Dorr, Elberfeld-Sonnborn, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Manufacture of cellulose ethers. 1,694,127; Dec. 4.

Leveille, Joseph D., Westfield, Mass. Toweling cabinet. 1,693,905; Dec. 4.

Lévêque, Pierre H., Paris, assignor to Societe de Recherches et de Perfectionnements Industriels, Puteaux, Seine, France. Compound fuel. 1,693,790; Dec. 4.

Lewis, Robert B., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa. Testing instrument. 1,694,187; Dec. 4.

Lewis, Robert B., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa. Mechanism for preventing lost motion. 1,694,188; Dec. 4.

Lewis, William T., assignor to Western Coil & Electrical Co., Racine, Wis. Therapeutic lamp. 1,694,067; Dec. 4.

Libbey-Owens Sheet Glass Company, The. (See Randall, James W. H., assignor.)

Liberman, Alexander I., Boulogne, France. Combined back-fire and theft preventing device. 1,694,271; Dec. 4.

Liebermann, Harry A., Chicago Heights, Ill. Game. 1,694,068; Dec. 4.

Liebs, L. A., Company. (See Liebs, Louis A., assignor.)

Liebs, Louis A., Woodhaven, assignor to L. A. Liebs Company, Inc., New York, N. Y. Band envelope. 1,693,791; Dec. 4.

Lienesch, Charles F., Monrovia, assignor to C. L. Stokes, Los Angeles, Calif. Filtering mechanism. 1,693,717; Dec. 4.

Lindsay, Charles W., Houston, Tex. Single-trigger mechanism for double-barrel firearms. 1,693,929; Dec. 4.

Line Material Company. (See Kyle, William D., assignor.)

Lipman, Charles B., and A. Gordon, assignors to Regents of the University of California, Berkeley, Calif. Impregnating wood with substances toxic to animal and bacterial life and fungus growths. 1,693,930; Dec. 4.

Lippert, Samuel, Garfield Heights, assignor to The Outlook Manufacturing Company, Cleveland, Ohio. Electric switch. 1,693,608; Dec. 4.

Lippincott, Carl L., Newark, Ohio. Sheet-metal crate. 1,693,906; Dec. 4.

Livergood, Gerald R., Houston, Tex. Well-drilling apparatus. 1,693,609; Dec. 4.

Llanelly Foundry & Engineering Company Limited et al. (See Corbin, Francis D., assignor.)

Lloyd, Harold M., Los Angeles, Calif. Ready-built lamp post. 1,693,760; Dec. 4.

Lockett, Fred, Vancouver, British Columbia, Canada. Cattle guard. 1,694,128; Dec. 4.

Lombard Carbureter Company. (See Lombard, Nathaniel, assignor.)

Lombard, Fred, Santa Rosa, Calif. Extension for fly swatters. 1,694,069; Dec. 4.

Lombard, Nathaniel, assignor to Lombard Carbureter Company, Worcester, Mass. Carburetor. 1,693,792; Dec. 4.

Lombard, Nathaniel, assignor to Lombard Carbureter Company, Worcester, Mass. Carburetor. 1,693,793; Dec. 4.

Long, George R. (See Cordley, H. G., and Long.)

Long, Helene L., Spokane, Wash. Combined smoker's outfit and receptacle for game accessories. Des. 77,107; Dec. 4.

Long, Wilber L., assignor of one-fourth to W. P. Blake, one-fourth to W. T. Minor, one-eighth to W. E. Davis, and one-eighth to J. M. Wattenbarger, Kirksville, Mo. Air heater. 1,694,351; Dec. 4.

Loomis, Nathaniel E., Elizabeth, N. J., assignor to Standard Oil Development Company. Preparing hydrocarbon products. 1,694,272; Dec. 4.

Lord, Edwin C. E., Washington, D. C. Waterproofing compound and making the same. 1,693,718; Dec. 4.

Lorraine, David G., Los Angeles, Calif. Oil and gas separator. 1,693,849; Dec. 4.

Louis, Charles J., St. Louis, Mo., assignor of two-thirds to N. T. Erlinger, East St. Louis, Ill. Attachment for reshaping tubular members. 1,693,850; Dec. 4.

Low, Dave D., Mont Helena, Miss. Cultivator blade or sod scraper. 1,694,099; Dec. 4.

Lowe, Edward L., Palo Alto, assignor to J. W. Clune Co., Los Angeles, Calif. Burner and valvular control therefor. 1,693,931; Dec. 4.

Lowe, Edward L., Palo Alto, assignor to J. W. Clune Co., Los Angeles, Calif. Time control of fuel injection for internal-combustion engines. 1,693,932; Dec. 4.

Lundberg, Oscar, San Diego, Calif. Resistance switch. 1,694,330; Dec. 4.

Lüscher, Emil, Basel, assignor to The Company Elektrizitätswerk Lonza, Gampel and Basel, Switzerland. Manufacture of crotonaldehyde from acetaldehyde and aldol. 1,693,907; Dec. 4.

Lusher, Albert C., assignor to Scovill Manufacturing Co., Waterbury, Conn. Producing tubular articles. 1,693,610; Dec. 4.

Lyons, Harry C., Mount Vernon, N. Y. Fluid-measuring faucet. 1,693,719; Dec. 4.

Lyons, Harry C., Mount Vernon, N. Y. Measuring faucet. 1,693,720; Dec. 4.

Mabee, Charles R., Buffalo, N. Y., assignor to Mabee Patents Corporation, Dover, Del. Manufacture of livestock feeds. 1,693,611; Dec. 4.

Mabee, Charles R., Buffalo, N. Y., assignor to Mabee Patents Corporation, Dover, Del. Manufacture of livestock feeds. 1,693,612; Dec. 4.

Mabee Patents Corporation. (See Mabee, Charles R., assignor.)

MacLagan, Hector P., Oak Park, assignor to McIntosh Electrical Corporation, Chicago, Ill. Clock-controlled switch. 1,693,721; Dec. 4.

MacLeod, Daniel T., assignor to Perfex Corporation, Racine, Wis. Radiator. 1,694,352; Dec. 4.

Macripo, Domenic, Hazleton, Pa. Meat-cutting board. 1,693,761; Dec. 4.

Madsen, Hans C., Milwaukee, Wis. Toy jig saw. 1,694,070; Dec. 4.

Magnus, Philip, Leichhardt, near Sydney, New South Wales, Australia. Manufacture of artificial leather. 1,694,129; Dec. 4.

Magnussen, Erik, assignor to Gorham Mfg. Co., Providence, R. I. Plate or similar article. Des. 77,108; Dec. 4.

Magnussen, Erik, assignor to Gorham Mfg. Co., Providence, R. I. Bowl or similar article. Des. 77,109; Dec. 4.

Mallory, Charles M., Chattanooga, Tenn., assignor of one-half to E. C. Mallory, Indianapolis, Ind. Making molds. 1,694,130; Dec. 4.

Mallory, Earl C. (See Mallory, Charles M., assignor.)

Mallory, Harry C., deceased, New York, N. Y., S. R. Mallory, administratrix. Cooling system for aircraft engines. 1,694,071; Dec. 4.

Mallory, Sue R., administratrix. (See Mallory, Harry C.)

Manion, Cyrus R., Milwaukee, Wis. Flush valve. 1,694,072; Dec. 4.

Manning, Rodney W., Riverside, R. I. Tappet for valves. 1,693,651; Dec. 4.

Marathon Paper Mills Company. (See Gaylord, George S., assignor.)

Marcel, Francois R., Brooklyn, N. Y. Hair-waving device. 1,694,073; Dec. 4.

Marquart, Charles V., Sandusky, Ohio. Safety appliance for brake beams. 1,694,100; Dec. 4.

Marquette Manufacturing Company. (See Nordgren, Algot W., assignor.)

Marsh, Howard E., Lompoc, Calif. Tunneling machine. 1,693,954; Dec. 4.

Marshall, Thomas A., Hagerstown, assignor of one-half to The Floorola Corporation and one-half to E. J. Newcomer, Baltimore, Md. Wax distributor for floor-polishing machines. 1,693,908; Dec. 4.

Martel, Edgar J., Laconia, N. H. Locking device for automobiles. 1,693,762; Dec. 4.

Martin, Claude W., Gold Hill, Oreg. Registering apparatus. 1,694,763; Dec. 4.

Martin, Talbot G., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Telephone system. 1,693,613; Dec. 4.

Martinet, Eugene F., assignor to The P. A. Geier Company, Cleveland, Ohio. Suction cleaning apparatus. 1,694,273; Dec. 4.

Martone, Jeremiah, Waterbury, Conn. Attachment for grinding machines. 1,694,074; Dec. 4.

Mason, Hobart, Westfield, N. J. Elevator system. 1,693,851; Dec. 4.

Mathes, Robert C., Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Electric-current transmission. 1,693,955; Dec. 4.

Matheson, Howard W., and J. C. Smith, Montreal, Quebec, Canada. Electrode. 1,693,794; Dec. 4.

Mathews, Fred. (See Strid, Sven J., assignor.)

Mayor & Coulson, Limited. (See Davies, Albert W., assignor.)

Mayer, Emil, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany. Arrangement for use in telephony. 1,694,131; Dec. 4.

Maynard, Charles E., Northampton, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Inserting valves in annular tubes. 1,694,225; Dec. 4.

McCain, Albert B., Reward, Calif. Grip cage grab for deep-well pumps. 1,693,764; Dec. 4.

McCain, William J., Livingston, Ala. Air-circulating fireback. 1,693,614; Dec. 4.

McCall, George, Woodside, and J. E. Reid, assignors to International Motor Company, New York, N. Y. Container bogie. 1,693,700; Dec. 4.

McCleary Hydraulic Brake Company. (See Price, William G., assignor.)

McClure, William R., Chicago, Ill. Shoe fastener. 1,694,101; Dec. 4.

McConkey, Montgomery W., South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill. Brake control. 1,694,075; Dec. 4.

McCoy, Melvin W., Springfield, Ill. Jack for self-propelling vehicles. 1,694,076; Dec. 4.

McCuen, Frederick H. (See Sattler, D. S., and McCuen.)

McCune, Joseph C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Split-reduction device. 1,693,652; Dec. 4.

McDonald, Charles D., assignor to McDonald Machine Co., Chicago, Ill. Can-testing machine. 1,694,132; Dec. 4.

McDonald Machine Co. (See McDonald, Charles D., assignor.)

McDowall, Andrew, Castle Douglas, Scotland. Tractor. 1,694,226; Dec. 4.

McEldowney, Robert E., assignor to New Martinsville Glass Mfg. Co., New Martinsville, W. Va. Powder-puff box or similar article. Des. 77,110; Dec. 4.

McElligott, Edward R., Brookline, assignor to Heywood-Wakefield Company, Boston, Mass. Reed chair. Des. 77,111; Dec. 4.

McGill, Chester T., assignor to Reiter Co., Elgin, Ill. Gravity system for continuously treating boiler water. 1,694,331; Dec. 4.

McGill, Chester T., assignor to Reiter Company, Elgin, Ill. Base-exchange water softener, salt-pot attachment. 1,694,332; Dec. 4.

McGrane, James L., Buffalo, N. Y. Direction indicator. Des. 77,112; Dec. 4.

McHugh, Agnes J., executrix. (See McHugh, Edward T.)

McHugh, Edward T., deceased, by A. J. McHugh, executrix, Holyoke, Mass. Manhole cover. 1,694,133; Dec. 4.

McInnis, Walter J., Stelton, assignor to Widescope Camera Company, Newark, N. J. Panoramic motion-picture camera. 1,693,722; Dec. 4.

McIntosh Electrical Corporation. (See MacLagan, Hector P., assignor.)

McIntosh Electrical Corporation. (See Waggoner, Melancthon R., assignor.)

McJohn, Raymond J., Chicago, Ill. Ironing-board appliance. 1,693,615; Dec. 4.

McKean, John I., Parkersburg, W. Va., assignor to Standard Oil Development Company. Tug wheel. 1,694,274; Dec. 4.

McKinney Manufacturing Company. (See Horton, Clement E., assignor.)

McKown, Frederick W., Englewood, N. J., assignor to American Telephone and Telegraph Company. Battery supply circuit. 1,693,653; Dec. 4.

McMenemy, Logan T., Chicago, Ill. Automobile lubrication indicator. 1,694,102; Dec. 4.

McMullen, John, Buffalo, N. Y. Door opening and closing mechanism. 1,694,134; Dec. 4.

McNally, William J., assignor to Dennison Manufacturing Company, Framingham, Mass. Game counter and making the same. 1,694,103; Dec. 4.

McQuain, Thomas, Ocean Park, Calif. Concrete-molding machine. 1,693,852; Dec. 4.

McWane, Arthur T., Birmingham, Ala. Window guard. 1,693,853; Dec. 4.

Mead, Samuel N., jr. (See Oneal, L. E., and Mead.)

Mecilovits, Bernat, New York, N. Y. Brooch or similar article. Des. 77,113; Dec. 4.

Meissner, Alexander, assignor to Gesellschaft für Dratlose Telegraphie m. b. H., Berlin, Germany. Antenna for electric wave transmission. 1,694,135; Dec. 4.

Menschel, Reinhold, Berlin, Germany. Pump for atomizers. 1,694,104; Dec. 4.

Melvin, Bradford M. (See Schulthess, Clara, assignor.)

Merrick, Herbert L., Passaic, N. J. Recording means. 1,693,701; Dec. 4.

Merritt, G. C. (See Minott, Adair W., assignor.)

Merwin, John C., assignor to Chain Belt Company, Milwaukee, Wis. Sprocket chain. 1,694,275; Dec. 4.

Messenger Publishing Company. (See Burdett, Le Roy, assignor.)

Messimer, Ward N., Jersey Shore, Pa. Journal-length gauge. 1,694,333; Dec. 4.

Messler, Matie C., assignor to M. Messler, Providence, R. I. Arch-supporting device for boots and shoes. 1,694,353; Dec. 4.

Messler, Madge. (See Messler, Matie C., assignor.)

Metropolitan Lamp Co. (See Zweig, Joseph, assignor.)

Michelin, André J., Paris, assignor to Michelin et Cie., Clermont-Ferrand, France. Rim for penumatic tires. 1,693,909; Dec. 4.

Michelin et Cie. (See Michelin, André J., assignor.)

Michnievitch, Stanislav, Los Angeles, Calif. Organ. 1,693,933; Dec. 4.

Midgley, Thomas Hampden, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Splice-holding device for tire expander. 1,694,227; Dec. 4.

Miller, George C., Brookline, Mass. Combined shipping and display box. 1,694,017; Dec. 4.

Milligan William, and W. E. Palmer, Richmond, Va., assignors to The Imperial Tobacco Co., Great Britain and Ireland. Method of and apparatus for treating tobacco. 1,693,989; Dec. 4.

Millspaugh, William H., assignor to The Paper & Textile Machinery Co., Sandusky, Ohio. Water evacuator for drier drums. 1,693,934; Dec. 4.

Miner, W. H., Inc. (See Haseltine, Stacy B., assignor.)

Miner, W. H., Inc. (See O'Connor, John F., assignor.)

Mingus, Maude A., formerly M. A. M. Wheeler, Oakland, Calif. Hair dye. Re17,153; Dec. 4.

Minor, William T., et al. (See Long, Wilber L., assignor.)

Minott, Adair W., Ames, assignor of one-half to G. C. Merritt, Des Moines, Iowa. Electric fuse panel. 1,693,854; Dec. 4.

Miriach, George G., Beaver Dam, Wis. Mail box. 1,694,334; Dec. 4.

Mishawaka Rubber and Woolen Manufacturing Company. (See Bradley, C. E., and Van Dinter, assignors.)

Mitchell, Raymond C., Springfield, Ohio, assignor by mesne assignments, to Barber-Colman Company. Grinding machine. 1,693,723; Dec. 4.

Mock, James C., Detroit, Mich. Rail brace. 1,694,136; Dec. 4.

Möhrle, Arthur, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Electrical condenser. 1,694,276; Dec. 4.

Molins, Walter E., and C. Best, London, England. Printing machinery. 1,694,038; Dec. 4.

Monroe Auto Equipment Mfg. Co. (See Myers, Don D., assignor.)

Monroe, Robert J. (See Jaffe, J. L., and Monroe.)

Moore, Arlington, New York, N. Y., assignor to Moore Inventions Corporation, Worcester, Mass. Multiple-ply sanitary metal can. 1,693,956; Dec. 4.

Moore, Charles A., Edina, Minn. Air-conditioning system. 1,693,855; Dec. 4.

Moore, Charles A., Edina, Minn. System for conditioning air in storage chambers. 1,693,856; Dec. 4.

Moore, Frank R., Grand Junction, Colo. Folding bed. 1,693,795; Dec. 4.

Moore Inventions Corporation. (See Moore, Arlington, assignor.)

Moore, William D., and W. Morgan, Birmingham, Ala., assignors to Sand Spun Patents Corporation, New York, N. Y. Centrifugal casting machine (weighing mechanism). 1,693,654; Dec. 4.

Morey, William E., Chicago, and D. Hindahl, assignors to Rodger Ballast Car Co., Chicago, Ill. Dump-car construction. 1,694,077; Dec. 4.

Morgan, John R. (See Jandus, H. S., and Morgan.)

Morgan, Walter. (See Moore, W. D., and Morgan.)

Morris, Charles E., Leavenworth, Kans. Carrousel-driving mechanism. 1,693,724; Dec. 4.

Moser, Stuart, Berkeley, assignor to Standard Oil Company of California, San Francisco, Calif. Storage tank for liquids. 1,693,857; Dec. 4.

Moss, Arline B. N., St. Louis, Mo., assignor to The National Society of the Daughters of the American Revolution, Washington, D. C. Statue. Des. 77,114; Dec. 4.

Mowry, Daniel P., Montreal, Quebec, Canada. Toothbrush. Des. 77,115; Dec. 4.

Moyer, Albert, New York, N. Y. Mixer. 1,694,137; Dec. 4.

Muckleroy, William B., assignor to Fogle West Undertaking Company, Honston, Tex. Burial-receptacle cover. Des. 77,116; Dec. 4.

Mudge, Raymond C., East Boston, and E. A. Gallison, Watertown, assignors to Bay State Fishing Company, Boston, Mass. Rotatable brush. 1,694,018; Dec. 4.

Mueller, Godfrey A., Point Place, assignor to The De Vilbiss Company, Toledo, Ohio. Spray gun. 1,694,078; Dec. 4.

Müller, Richard, Spandau, assignor to Krah & Kirchhoff, Berlin, Germany. Worm conveyer. 1,694,228; Dec. 4.

Mundatechnical Products Company. (See Jackson, L. E., and Wassell, assignors.)

Munters, Carl G. (See von Platen, B. C., and Munters.)

Murlin Manufacturing Company. (See Seidell, Alfred P., assignor.)

Murphy, Edwin J., and L. P. Hutt, Schenectady, N. Y., assignors to General Electric Company. Reproducing position. 1,694,277; Dec. 4.

Murphy, Everett N., assignor to Stevens Partition & Floor Deadener Co., Chicago, Ill. Floor construction. 1,693,655; Dec. 4.

Murray, L. S. (See Anderson, James B., assignor.)

Murray, George, and V. O. Simpkins, London, England. Automatically discharging liquids from chambers, automatic fountains, and the like devices. 1,694,335; Dec. 4.

Murray Ohio Manufacturing Company. (See Kraeft, Herman L., assignor.)

Myers, Don D., Toledo, Ohio, assignor to Monroe Auto Equipment Mfg. Co., Monroe, Mich. Pump base. 1,693,858; Dec. 4.

Nardone, Frank, Philadelphia, Pa. Accordion. 1,693,616; Dec. 4.

National Biscuit Company. (See Taylor, George A., assignor.)

National Cash Register Company, The. (See Goldberg, Maximilian M., assignor.)

National Graphite Lubrication Company. (See Watres, Lewis S., assignor.)

National Rubber Machinery Company. (See Weaver, Ralph J., assignor.)

National Society of the Daughters of the American Revolution, The. (See Moss, Arline B. N., assignor.)

Naylor, William K., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Insulator structure. Re17,150; Dec. 4.

Nebel, Ernst O., Philadelphia, Pa. Stocking. Des. 77,117; Dec. 4.

Neidig, John R., Ollmont, Mont. Manicuring implement. 1,694,336; Dec. 4.

Nelles, Lafayette H., London, England. Rotary mixer. 1,693,935; Dec. 4.

Nelson, Claude A. (See Thomas, T. H., and Nelson.)

Nelson, Claude A., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Train-control device. 1,693,656; Dec. 4.

Nelson, Emil A., Roseville, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Cover for tire-valve apertures. 1,693,589; Dec. 4.

Nelson, Herman, Corporation, The. (See Otis, Gerald E., assignor.)

Nelson, Martin L., Park Ridge, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Impulse-testing equipment. 1,693,725; Dec. 4.

Nestor, Joseph P., Lykens, Pa., assignor to Reiff & Nestor Company, Incorporated. Thread restorer. 1,694,229; Dec. 4.

Neuwirth, Herman, Brooklyn, assignor to Testrite Instrument Co., New York, N. Y. Hydrometer. 1,694,138; Dec. 4.

Nevill, Richard, & Company Limited, et al. (See Corbin, Francis D., assignor.)

Newcomer, Ernest J., et al. (See Gillis, Lyle N., assignor.)

Newcomer, Ernest J., et al. (See Marshall, Thomas A., assignor.)

Newhall, Henry B., Corporation. (See Karitzky, John, assignor.)

New Martinsville Glass Mfg. Co. (See McEldowney, Robert E., assignor.)

Newport News Shipbuilding and Dry Dock Company. (See Grant, William F., assignor.)

Nicholas, Wilbur H., Indianapolis, Ind. Sack holder. 1,694,079; Dec. 4.

Niebel, Godfrey, New York, N. Y. Electric bulb or similar article. Des. 77,118; Dec. 4.

Noelting, William H., assignor to Faultless Caster Company, Evansville, Ind. Ball-bearing socket and friction band stem. 1,693,657; Dec. 4.

Noelting, William H., assignor to Faultless Caster Company, Evansville, Ind. Combination plate-caster socket and slide. 1,693,658; Dec. 4.

Nordigren, Algot W., St. Paul, Minn., assignor to Marquette Manufacturing Company. Coupling and steering device for automobiles. 1,694,278; Dec. 4.

Nourbourn, James W., administrator. (See Latham, Albert.)

Nyquist, Harry, Millburn, and K. W. Pfleger, Arlington, N. J., assignors to American Telephone and Telegraph Company. Echo suppressor. 1,693,659; Dec. 4.

O. & J. Machine Company, The. (See Johnson, J. E., and Oslund, assignors.)

Oakley, Erastus G., Southport, assignor to Bridgeport Brass Company, Bridgeport, Conn. Making battery nuts. 1,693,957; Dec. 4.

Obbard, Norman B., Pittsburgh, Pa. Truss. 1,693,660; Dec. 4.

Oberheim, Jacob, New York, N. Y. Safety razor. 1,694,337; Dec. 4.

O'Bryan, James W. (See O'Bryan, Kenneth C., and J. W.)

O'Bryan, Kenneth C. and J. W., Washington, D. C. Space-graduating mechanism for typewriters and the like. 1,693,796; Dec. 4.

O'Bryan, Kenneth C. and J. W., Washington, D. C. Graduating character spacing in a typewriter. 1,693,797; Dec. 4.

O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,693,816; Dec. 4.

Oesterlein, William J. (See Hansen, K. L., and Oesterlein.)

Ogden, Amos, Barrow-in-Furness, assignor to Vickers Limited, Westminster, England. Percussion and hydrostatic fuse. 1,693,661; Dec. 4.

Ohio Foundry and Manufacturing Co., The. (See Sharp, Alexander B., assignor.)

Ohl, Russell S., New York, N. Y., assignor to American Telephone and Telegraph Company. Radio signaling system. 1,693,662; Dec. 4.

Olshei, John R., assignor to Trico Products Corporation, Buffalo, N. Y. Operating motor-vehicle accessory motors. 1,694,279; Dec. 4.

Oliver, John R., Medfield, assignor to Reece Shoe Machinery Company, Boston, Mass. Press for cutting or punching sheet material. 1,693,726; Dec. 4.

Olson, Carl P., Battle Lake, Minn. Doorcheck. 1,693,860; Dec. 4.

Olsson, Ells, West Point, Va. Charging apparatus for pulp digesters. 1,694,139; Dec. 4.

Oneal, Lloyd E., East Orange, N. J., and S. N. Mead, jr., Brooklyn, assignors to Chas. Cory & Son, Incorporated, New York, N. Y. Signaling system and mechanism. 1,693,663; Dec. 4.

O'Neill, Walter I., New York, N. Y. Wrench. 1,694,140; Dec. 4.

Orbon Stove Co. (See Herrenbruck, Herman, assignor.)

Oslund, Charles H. (See Johnson, J. E., and Oslund.)

Oswald, Alfred E., Hackensack, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y. Electric motor. 1,693,617; Dec. 4.

Otis, Gerald E., assignor to The Herman Nelson Corporation, Moline, Ill. Radiator structure. 1,693,618; Dec. 4.

O'Toole, Edward, Gary, W. Va. Apparatus for cleaning Coal. 1,693,861; Dec. 4.

Otto, Albert T., & Sons. (See Spalding, John, assignor.)

Otto, August, Sauk Center, Minn. Sled attachment for motor vehicles. 1,693,862; Dec. 4.

Outlook Manufacturing Company, The. (See Lippert, Samuel, assignor.)

Package Machinery Company. (See Smith, E. L., and Phelon, assignors.)

Package Machinery Company. (See Smith E. L., Phelon, and Langhammer, assignors.)

Packard Motor Car Company. (See Knapp, Archer L., assignor.)

Packard Motor Car Company. (See Vincent, Jesse G., assignor.)

Paddack, Simon D., and C. G. Wilford, assignors, by mesne assignments, to G. D. Johnson, Los Angeles, Calif. Tail light and danger signal. 1,693,936; Dec. 4.

Paine-Cunnington Company, The. (See Cunnington, George R., assignor.)

Palmer Electric & Manufacturing Co., The. (See Johansson, Ernest G., assignor.)

Palmer, Wiley E. (See Milligan, W., and Palmer.)

Pape, Herman G., New York, N. Y. Acoustic diaphragm. 1,693,727; Dec. 4.

Paper & Textile Machinery Co., The. (See Millspaugh, William H., assignor.)

Parenteau, Louise. (See Stevens, J. P., and Bailey, assignors.)

Parsons, Charles A., and S. S. Cook, Newcastle-upon-Tyne, England; said Cook assignor to said Parsons. Elastic drive. 1,693,765; Dec. 4.

Pass & Seymour, Inc. (See Russell, Mark N., assignor.)

Patent Button Company, The. (See Purinton, Forrest G., assignor.)

Patrouilleau, Louis G., assignor to Societe Alumine et Derives, Paris, France. Manufacture of aluminous cement. 1,694,338; Dec. 4.

Patten, John S., Madison, N. J. Breather cover for tanks. 1,693,958; Dec. 4.

Patterson, Martin L., Bogota, N. J., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y. Safety stop for searchlights. 1,694,039; Dec. 4.

Pattillo, Helen W. (See Baker, G. L., and Pattillo.)

Payne, Ellen D., Brooklyn, N. Y. Eyebrow pencil. 1,693,990; Dec. 4.

Pearson, Nils A., Long Island City, N. Y. Automobile mirror. Des. 77,119; Dec. 4.

Perdue, Landon L., Chester, assignor to State Conservation and Development Commission on behalf of the Commonwealth of Virginia, Richmond, Va. Road sign. Des. 77,120; Dec. 4.

Perfeclite Company, The. (See Jaffe, J. L., and Monroe, assignors.)

Perfection Faucet Mfg. Corp. (See Schimmel, Lloyd G., assignor.)

Perfection Package Sealer Company. (See Uttz, William A., sr., assignor.)

Perfex Corporation. (See MacLeod, Daniel T., assignor.)

Perry, John E., Sharon, assignor to Valley Mould and Iron Corporation, Sharpsville, Pa. Core box for ingot molds. 1,694,105; Dec. 4.

Perry, William A., and G. D. Toy, Sidney, Ohio; said Toy assignor to said Perry. Earth-working apparatus. 1,693,991; Dec. 4.

Peterson, Gunnard P., assignor to The Risdon Manufacturing Company, Naugatuck, Conn. Automatic-machine work transferrer. 1,693,959; Dec. 4.

Peterson, Uno G., Salt Lake City, Utah. Hinge. 1,693,992; Dec. 4.

Petitjean, Clifford O., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn. Transfer mechanism for upsetting machines. 1,693,664; Dec. 4.

Pfeiffer, Charles G., assignor to Specialty Engineering Company, Philadelphia, Pa. Gravity chute. 1,694,019; Dec. 4.

Pfleger, Kenneth W. (See Nyquist, H., and Pfleger.)

Phelon, Arthur E. (See Smith, E. L., and Phelon.)

Phelon, Arthur E. (See Smith, E. L., Phelon, and Langhammer.)

Phelps, James W., Chicago, Ill. Electric receptacle. 1,694,141; Dec. 4.

Phelps, James W., Chicago, Ill. Electric flasher. 1,694,142; Dec. 4.

Phillips, Charles R. (See Smith, J. D., and Phillips.)

Phillips, John X., jr., Washington, D. C., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y. Windshield cleaner. 1,693,665; Dec. 4.

Pierce, Paul, Chicago, Ill. Printing attachment for wrapping machines. 1,693,864; Dec. 4.

Plant, James E. (See Crossley, Frank, assignor.)

Plunkett, Michael R., assignor of one-half to J. M. Kelley, Philadelphia, Pa. Heating system. 1,694,080; Dec. 4.

Potter, Thomas I., Portland, Oreg. Rotary expansion valve. 1,693,863; Dec. 4.

Powell, Raymond E., Houston, Tex., assignor to Standard Oil Development Company. Reclaiming distillation residues. 1,694,280; Dec. 4.

Powell, Roy O. (See Friedrich, A., and Powell.)

Price, Elmer E., assignor to Eugene Dietzgen Company, Chicago, Ill. Book. 1,693,865; Dec. 4.

Price, William E., White Plains, N. Y. Method and apparatus for making display signs, lamp shades, and other like articles. 1,693,817; Dec. 4.

Price, William G., Yakima, Wash., assignor to McCleary Hydraulic Brake Company. Hydraulic and band brake operating means. 1,694,020; Dec. 4.

Prince, David C., Schenectady, N. Y., assignor to General Electric Company. Electrical apparatus. 1,694,281; Dec. 4.

Proctor & Schwartz, Incorporated. (See Hurxthal, Alpheus O., assignor.)

Purdy, Frederick L., Columbus, Ohio. Frame for buildings. Re17,154; Dec. 4.

Purinton, Forrest G., assignor to The Patent Button Company, Waterbury, Conn. Cleaning flexible foraminous sheets. 1,694,021; Dec. 4.

Putt, Earl B., New York, N. Y. Finely-divided phenolphthalein and making same. 1,693,666; Dec. 4.

Pym, Arthur F., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for operating on shoes. 1,693,667; Dec. 4.

Pyramid Iron Products Corporation. (See Ellers, Henry K., assignor.)

Quaker Hosiery Company. (See Goetsch, George W., assignor.)

Radio Corporation of America. (See Cady, Walter G., assignor.)

Radway, Samuel, West Frankfort, Ill. Boiler washer. 1,694,346; Dec. 4.

Rahe, Samuel E., Richmond Hill, N. Y. Machine for cutting match splints. 1,693,937; Dec. 4.

Rahe, Samuel E., Richmond Hill, N. Y. Machine for making match cards. 1,693,938; Dec. 4.

Rahl, Henry F. (See Davidson, L. R., and Rahl.)

Rainsford, Thomas F., Detroit, assignor to Whitehead and Kales, Inc., River Rouge, Mich. Material-feeding device. 1,693,728; Dec. 4.

Ramée, Charles E., New York, N. Y. Line clamp. 1,693,960; Dec. 4.

Randall, James W. H., New York, N. Y., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Laminated glass and producing the same. 1,693,729; Dec. 4.

Rankin, William K., Scotia, N. Y., assignor to General Electric Company. Electric switch. 1,694,282; Dec. 4.

Rappaport, Hermann, Brooklyn, N. Y. Making sweatbands. 1,694,230; Dec. 4.

Ray, Arthur B., Bayside, E. G. Boying, New York, N. Y., and J. J. Butkovsky, Elizabeth, N. J., assignors to Carbide and Carbon Chemicals Corporation. Making Activated carbon. 1,694,040; Dec. 4.

Rayfield, Charles L., assignor to Rayfield Manufacturing Company, Chicago, Ill. Nozzle for oil burners. 1,693,866; Dec. 4.

Rayfield Manufacturing Company. (See Rayfield, Charles L., assignor.)

Redman, Lawrence V., Caldwell, N. J., and H. C. Cheetham, Chicago, Ill., assignors to Bakelite Corporation, New York, N. Y. Impregnating solution. 1,693,939; Dec. 4.

Reece Button Hole Machine Company, The. (See Carlson, Axel F., assignor.)

Reece Shoe Machinery Company. (See Oliver, John R., assignor.)

Reed, C. A., Company. (See Jopson, William G., assignor.)

Reed, William E., Pittsburgh, Pa. Electric welding machine. 1,694,081; Dec. 4.

Reel Novelty Mfg. Co., The. (See Blessman, Charles, jr., assignor.)

Regents of the University of California. (See Lipman, C. B., and Gordon, assignors.)

Reid, James C., Lincoln, Nebr. Buffet table. 1,694,283; Dec. 4.

Reid, Josiah E. (See McCall, G., and Reid.)

Reiff & Nestor Company. (See Nestor, Joseph P., assignor.)

Reihlen, Hans, Karlsruhe, Baden, Germany, assignor to M. M. Adler, Newark, N. J. Detonating firework. 1,693,818; Dec. 4.

Reinforced Paper Bottle Corporation. (See Koch, Lydia B., assignor.)

Reinwald, Paul, San Francisco, Calif. Water shoe. 1,693,867; Dec. 4.

Reiter Company. (See McGill, Chester T., assignor.)

Remington Accounting Machine Corporation. (See Hart, Frederick A., assignor.)

Remington Rand Inc. (See Gale, Laburton A., assignor.)

Rendleman, John H., et al. (See Voss, George C., assignor.)

Reserve Holding Company. (See Ruggles, Leonard L., assignor.)

Richardson, Henry, and A. Holm, Passaic, N. J.; said Holm assignor to said Richardson. Method of and apparatus for generating thermodynamic energy. 1,693,910; Dec. 4.

Richardson, John K. (See Smith, Joseph D., assignor.)

Richardson, Led L., assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Steel retainer for rock drills. 1,694,106; Dec. 4.

Richter, George A., assignor to Brown Company, Berlin, N. H. Making raw calcium-bisulphite digesting liquor. 1,694,231; Dec. 4.

Rider, Rowland W., Salt Lake City, Utah, assignor to Utah Royalty Corporation. Tire-deflation signal device. 1,694,232; Dec. 4.

Risch, Oskar, Jena, Germany, assignor to Clay-Adams Co., Inc., New York, N. Y. Hæmacytometer counting chamber. 1,693,961; Dec. 4.

Risdon Manufacturing Company, The. (See Peterson, Gunnard P., assignor.)

Ritter Dental Manufacturing Company. (See Wilford, Edward B., assignor.)

Rivanov, Felix, Chicago, Ill., assignor to The Anderson Company, Gary, Ind. Radiator-cap ornament. Des. 77,121; Dec. 4.

Rivanov, Felix, Chicago, Ill., assignor to The Anderson Company, Gary, Ind. Radiator cap ornament. Des. 77,122; Dec. 4.

Robb, A. L., et al. (See Le Bus, John E., assignor.)

Roberts, Montague H., Englewood, N. J., assignor to Franklin Railway Supply Company, New York, N. Y. Power reverse gear. 1,694,143; Dec. 4.

Robins Conveying Belt Company. (See Robins, Samuel D., assignor.)
Robins, Samuel D., Woodmere, N. Y., assignor to Robins Conveying Belt Company, Passaic, N. J. Screening apparatus. 1,693,940; Dec. 4.
Robinson, Ernest Y., Lymm, England, assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company. Rectification of alternating current. 1,693,668; Dec. 4.
Robinson, John W., Chicago, Ill. Syringe. 1,694,233; Dec. 4.
Robinson, Robert M., assignor to Cheatham Electric Switching Device Co., Incorporated, Louisville, Ky. Ground box. 1,693,868; Dec. 4.
Rodger Ballast Car Co. (See Morey, W. E., and Hindahl, assignors.)
Rogers, Victor B., Buffalo, N. Y. Cuff link. 1,693,993; Dec. 4.
Rohmer, Gabriel E., New York, N. Y. Diving apparatus for swimming pools. 1,693,669; Dec. 4.
Rollason, Charles H., assignor to Wheeling Steel Corporation, Wheeling, W. Va. Shipping drum. 1,694,354; Dec. 4.
Rolscreen Company. (See Dixson, Harry, assignor.)
Ronk, George T., assignor to Speeder Machinery Corporation, Cedar Rapids, Iowa. Trailer for self-propelled vehicles. 1,693,869; Dec. 4.
Rosenblatt, Isidor, Brooklyn, N. Y. Chandelier. Des. 77,123; Dec. 4.
Rosenblatt, Isidor, Brooklyn, N. Y. Chandelier. Des. 77,124; Dec. 4.
Rosenblatt, Isidor, Brooklyn, N. Y. Wall bracket for lighting fixtures. Des. 77,125; Dec. 4.
Rosencrants, Fay H., Bushey, England, assignor to International Combustion Engineering Corporation. Furnace. 1,694,144; Dec. 4.
Rowley, Benjamin F., assignor of one-third to W. J. Allen and one-third to T. L. Bishop, Jackson, Tenn. Running-board saddle. 1,693,994; Dec. 4.
Royer Foundry & Machinery Company. (See Royer, George F., assignor.)
Royer, George F., assignor to Royer Foundry & Machine Company, Wilkes-Barre, Pa. Mechanical loading device. 1,694,145; Dec. 4.
Royer, George F., assignor to Royer Foundry & Machine Company, Wilkes-Barre, Pa. Machine for preparation of molder's sand. 1,694,355; Dec. 4.
Royer, George F., assignor to Royer Foundry & Machine Co., Wilkes-Barre, Pa. Sand collecting and treating machine. 1,694,356; Dec. 4.
Ruben, Samuel, New York, N. Y. Photosensitive cell. 1,694,189; Dec. 4.
Ruben, Samuel, New York, N. Y. Photo-electric cell. 1,694,190; Dec. 4.
Ruggles, Leonard L., Wheaton, Ill., assignor to Reserve Holding Company, Kansas City, Mo. Telephone system. 1,693,962; Dec. 4.
Russell, Mark N., Syracuse, assignor to Pass & Seymour, Inc., Solvay, N. Y. Wall fixture. Des. 77,126; Dec. 4.
Safety Grinding Wheel & Machine Company. (See Weinland, Hermon G., assignor.)
St. Clair, John C., Butte, Mont. Combined coal stoker and burner. 1,694,290; Dec. 4.
St. Clair, Moffat, Galt, Ontario, assignor of one-half to W. S. Edwards, Toronto, Canada. Oil burner. 1,693,623; Dec. 4.
St. Louis Butchers' & Hotel Supply Co. (See Siebert, Alfred H., assignor.)
Salesas, Carmelo, Guantanamo, Cuba. Electric-wire support. 1,693,670; Dec. 4.
Sammon, Joseph, Kearny, assignor to Driver-Harris Company, Harrison, N. J. Roller rail for heat-treating furnaces. 1,693,870; Dec. 4.
Sand Spun Patents Corporation. (See Moore, W. D., and Morgan, assignors.)
Sandford, Dent, Toledo, Ohio. Noiseless check valve. 1,693,619; Dec. 4.
Santa Ana, Max, Huntington Park, Calif. Electric hammer. 1,694,284; Dec. 4.
Sattler, Dennis S., and F. H. McCuen, Chicago, Ill. Footstool and leg rest. 1,694,146; Dec. 4.
Saxton, Frank S., Blissfield, Mich. Easel stand. Des. 77,127; Dec. 4.
Scalf, William D., Pineville, Ky. Cash-fare manipulator. 1,694,285; Dec. 4.
Schaeren, Ernst, Bern, Switzerland, assignor, by mesne assignments, to Busch-Sulzer Bros.-Diesel Engine Co., St. Louis, Mo. High-pressure crude-oil motor. 1,693,963; Dec. 4.
Schaffer, Henry J., assignor to J. Schaffer, Brooklyn, N. Y. Container. 1,693,819; Dec. 4.
Schaffer, Jacob. (See Schaffer, Henry J., assignor.)
Schalk, Jacob R., Rhinebeck, N. Y. Marine rail stanchion. Des. 77,128; Dec. 4.
Schenk, Frederick W., New York, N. Y. Clock frame. Des. 77,129; Dec. 4.
Scheuer, Max G. (See Switzer, Maurice, assignor.)
Schicht, Georg, A.-G. (See Eisenstein, Alfred, assignor.)
Schilling, Frances I. (See Clark, Frederick E., assignor.)
Schimmel, Lloyd G., Los Angeles, Calif., assignor to Perfection Faucet Mfg. Corp. Faucet and making same. 1,694,234; Dec. 4.
Schmeer, Jakob, Washington, D. C. Shoe. 1,693,911; Dec. 4.
Schmid, John J., Louisville, Ky. Amusement device. 1,693,798; Dec. 4.
Schmidt, Gustav F. (See Herman, R. L., and Schmidt.)
Schmidt, Karl, Neuruppin, Germany. Portable liquid fire extinguisher. 1,693,671; Dec. 4.
Schneider, Adolf. (See Hangleiter, C., and Schneider.)
Schneider, Joseph N. (See Budwig, M., and Schneider.)
Schneider, Samuel A., Washington, D. C. Garment hanger. 1,693,871; Dec. 4.
Schnormeier, Paul H., Hubbard, Iowa. Illuminated-sign flashing mechanism. 1,693,820; Dec. 4.
Schoenfelder, Alfred, Chicago, Ill. Soap dish. 1,694,235; Dec. 4.
Schröder, Hans W. C., assignor to A. B. Dräger, Lubeck, Germany; E. Dräger, née Stange, executrix of said Dräger, deceased. Breathing apparatus particularly for administering anæsthetics. 1693,730; Dec. 4.
Schroeder, Charles J., Minonk, Ill. Electric light. 1,693,672; Dec. 4.
Schroeder, Simon E., Newton, Ind. Wringer. 1,693,821; Dec. 4.
Schubode, Albert, Brunswick, assignor to Firma Hannovera-Kassen-Gesellschaft m. b. H., Peine, Hanover, Germany. Calculating machine. 1,693,766; Dec. 4.
Schulthess, Clara, assignor of one-half to B. M. Melvin, San Francisco, Calif. Iron stand. 1,694,236; Dec. 4.
Schuster, Karl R., Hopatcong, N. J. Building construction. 1,693,941; Dec. 4.
Scofield, Lillian E., New York, N. Y. Combined corset and brassière. 1,693,799; Dec. 4.
Scovill Manufacturing Co. (See Lusher, Albert C., assignor.)
Seiberling Rubber Company. (See Hartong, Robert C., assignor.)
Seiberling Rubber Company. (See Kovacs, Frank, assignor.)
Seidell, Alfred P., Bloomfield, N. J., assignor to Murlin Manufacturing Company, Incorporated, Philadelphia, Pa. Lantern. Des. 77,130; Dec. 4.
Selden Company, The. (See Jaeger, Alphons O., assignor.)
Selden Research & Engineering Corporation, The. (See Jaeger, Alphons O., assignor.)
Sether, Just H., Jackson, Mich. Wagon-tractor hitch. 1,693,673; Dec. 4.
Sezer, Humboldt M. (See Astley, Edward F., assignor.)
Shaff, Ernest H., assignor to W. H. Keller, Inc., Grand Haven, Mich. Tool-retaining device. 1,693,872; Dec. 4.
Sharp, Alexander B., assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio. Gas heater. 1,694,357; Dec. 4.
Shaw, John C. and R. D., assignors to Keller Mechanical Engineering Corporation, Brooklyn, N. Y. Tracer point. 1,694,022; Dec. 4.
Shaw, Robert D. (See Shaw, John C. and R. D.)
Shawen, Eli W., and A. C. Arnett, Dayton, Ohio. Water-softening silicate and producing same. 1,693,873; Dec. 4.
Sheehy, William, Fontana, Calif. Rabbit hutch. 1,694,082; Dec. 4.
Shogren, Charles A., assignor, by mesne assignments, to Art Metal Screen and Weather Strip Company, Chicago, Ill. Screen. 1,693,822; Dec. 4.
Shore, William, Minneapolis, Minn. Drill chuck. 1,693,823; Dec. 4.
Shorts, Nelson T., Fern, Pa. Tire-valve stem and pressure gauge. 1,694,286; Dec. 4.
Shulan, David H., Akron, Ohio. Finger ring. Des. 77,131; Dec. 4.
Siebert, Alfred H., assignor to St. Louis Butchers' & Hotel Supply Co., St. Louis, Mo. Display refrigerator. 1,694,147; Dec. 4.
Siemens & Halske Aktiengesellschaft. (See Kroll, Walter, assignor.)
Silverman, Wulf, New York, N. Y. Smoker's lamp. 1,693,620; Dec. 4.
Simonds, Dewey T., Schenectady, N. Y., assignor to General Electric Company. Control system. 1,694,237; Dec. 4.
Simonds, Francis M., New York, N. Y. Furnace for treating ores. 1,693,702; Dec. 4.
Simpkins, Victor I. (See Murray, G., and Simpkins.)
Sinclair Refining Company. (See Bell, John E., assignor.)
Sioberg, Charles F., assignor to York Safe and Lock Co., York, Pa. Lock. 1,693,731; Dec. 4.
Sirot, Charles R., Aubervilliers, France. Tipping device for wagons. 1,693,874; Dec. 4.
Smith, Edward F., Los Angeles, Calif. Rotary toothbrush. 1,693,964; Dec. 4.
Smith, Elmer L., and A. E. Phelon, assignors to Package Machinery Company, Springfield, Mass. Soap-wrapping machine. 1,693,675; Dec. 4.
Smith, Elmer L., A. E. Phelon, and P. Langhammer, assignors to Package Machinery Company, Springfield, Mass. Wrapping machine for stick candy. 1,693,674; Dec. 4.
Smith, John D., and C. R. Phillips, Richmond, Va. Stamp-affixing machine. 1,693,965; Dec. 4.
Smith, Joseph D., assignor of one-half to J. K. Richardson, St. Marys, Ontario, Canada. Sheet-metal pipe. 1,693,621; Dec. 4.
Smith, Julian C. (See Matheson, H. W., and Smith.)
Smith, Sylvester, Reedley, Calif. Tool for cutting valve seats. 1,693,767; Dec. 4.

Snyder, Clifford L., assignor to The Evans Auto Loading Co. Inc., Detroit, Mich. Head-block strap attachment. 1,694,287; Dec. 4.
Sobel, Samuel, Brooklyn, N. Y. Display stand. Des. 77,132; Dec. 4.
Societe Alumine et Derives. (See Patrouilleau, Louis G., assignor.)
Societe de Recherches et de Perfectionnements Industriels. (See Lévêque, Pierre H., assignor.)
Societe pour la Fabrication de la Soie "Rhodiaseta." (See Lardy, Guillaume, assignor.)
Sohlberg, Erik G., Schenectady, N. Y., assignor to General Electric Company. Installation of electric apparatus. 1,694,288; Dec. 4.
Sommer, William H., Peoria, Ill. Heating apparatus. 1,694,191; Dec. 4.
Spalding, John, Stamford, Conn., assignor to Albert T. Otto & Sons, New York, N. Y. Dry lubrication of textile machines. 1,694,148; Dec. 4.
Spaulding, Charles, Hingham, assignor to Spaulding-Moss Company, Boston, Mass. Greeting-card storing and displaying holder. 1,683,622; Dec. 4.
Spaulding-Moss Company. (See Spaulding, Charles, assignor.)
Specialty Engineering Company. (See Pfeiffer, Charles G., assignor.)
Speeder Machinery Corporation. (See Ronk, George T., assignor.)
Sperry Development Company. (See Sperry, Elmer A., assignor.)
Sperry, Elmer A., Brooklyn, N. Y., assignor to Sperry Development Company, Dover Green, Del. Oil-burning engine. 1,693,966; Dec. 4.
Sperry, Elmer A., jr., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y. Gyroscopic compass. 1,694,192; Dec. 4.
Sperry Gyroscope Company, The. (See Patterson, Martin L., assignor.)
Sperry Gyroscope Company, The. (See Sperry, Elmer A., jr., assignor.)
Spinelle, Michael B., assignor of one-half to J. F. Carson, Chicago, Ill. Ball-joint faucet. 1,693,676; Dec. 4.
Sproull, Clarence W., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Fluid-pressure braking apparatus. 1,694,193; Dec. 4.
Srulowitz, Herman, Vienna, Austria. Device for draining the main pipe of heating installations of railroad cars. 1,694,289; Dec. 4.
Standard Oil Company. (See Brewster, Oswald C., assignor.)
Standard Oil Company. (See Engbrecht, Herman J., assignor.)
Standard Oil Company. (See Zweig, Charles, assignor.)
Standard Oil Company of California. (See Moser, Stuart, assignor.)
Standard Oil Development Company. (See Hewetson, Henry H., assignor.)
Standard Oil Development Company. (See Hopkins, M. B., and Buc, assignors.)
Standard Oil Development Company. (See Howard, Frank A., assignor.)
Standard Oil Development Company. (See Kraus, C. A., and Callis, assignors.)
Standard Oil Development Company. (See Loomis, Nathaniel E., assignor.)
Standard Oil Development Company. (See McKean, John I., assignor.)
Standard Oil Development Company. (See Powell, Raymond E., assignor.)
Standard Textile Products Company, The. (See Dieck, Henry W., assignor.)
Stanley Chemical Company, The. (See Dalbey, G. E., and Hanford, assignors.)
Starkins, Walter R., Rochester, N. Y. System for detecting and controlling humidity variations. 1,694,107; Dec. 4.
State Conservation and Development Commission on behalf of the Commonwealth of Virginia. (See Perdue, Landon L., assignor.)
Stator Refrigeration, Inc. (See Wescott, Ernest W., assignor.)
Staudte, Albert, Philadelphia, Pa. Stocking. Des. 77,133; Dec. 4.
Stazak, Michael B., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Telephone system. 1,693,824; Dec. 4.
Stein, Johann-Georg, Berlin-Halensee, Germany. Diving contrivance adapted for deep-sea diving. 1,694,108; Dec. 4.
Steinrück, Hermann, Berlin, Germany. Screw-thread tap. 1,693,768; Dec. 4.
Sterling, John R., London, England. Apparatus for extraction of water, oil, and fatty matter from solid material. 1,694,361; Dec. 4.
Stevens, Horace D., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Tube-splicing machine. 1,694,238; Dec. 4.
Stevens, John P., Long Beach, and G. A. C. Bailey; said Bailey assignor to L. Parenteau, Los Angeles, Calif. Automobile service indicator. 1,693,828; Dec. 4.
Stevens Partition & Floor Deadener Co. (See Murphy, Everett N., assignor.)
Stimpson, Wallace I., assignor to Draper Corporation, Hopedale, Mass. Spring for thread-cutting-loom temples. 1,693,942; Dec. 4.
Stockle, Erwin R., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Resistance unit. 1,693,825; Dec. 4.
Stokes, Charles L. (See Llenesch, Charles F., assignor.)
Stokes, Charles L., Los Angeles, Calif. Priming apparatus. 1,693,732; Dec. 4.
Stokes, Charles L., Los Angeles, Calif. Applying engine explosion pressure. 1,693,733; Dec. 4.
Stoltenberg, Louis, Oakland, Calif. Neckwear holder. 1,693,826; Dec. 4.
Stoltenberg, Louis, Oakland, Calif. Combination collar box and neckwear holder. 1,693,827; Dec. 4.
Straight, Halver R., Adel, Iowa. Corn-crib wall construction. 1,694,083; Dec. 4.
Straight, Halver R., Adel, Iowa. Crane. 1,694,084; Dec. 4.
Straight, Halver R., Adel, Iowa. Kiln car. 1,694,085; Dec. 4.
Strasser, Louis H. (See Johnson, N., and Strasser.)
Strid, Sven J., assignor to F. Mathews, Chicago, Ill. Mounting for brake gears. Re17,151; Dec. 4.
Strunge, Sigurd, Wyandotte, Mich. Friction screw-lifting mechanism. 1,693,624; Dec. 4.
Suck, Henry, Roslindale, Mass. Fastener for doors, panels, and the like. 1,694,023; Dec. 4.
Sumi, Yuji, San Francisco, Calif. Combined coat hanger and brush. Des. 77,134; Dec. 4.
Sun Rise Lamp Mfg. Co. (See Hecht, Leo, assignor.)
Sundstrand Corporation. (See Sundstrand, Gustaf D., assignor.)
Sundstrand, Gustaf D., Rockford, Ill., assignor, by mesne assignments, to Sundstrand Corporation, Wilmington, Del. Adding and listing machine. 1,694,362; Dec. 4.
Sundstrand, Gustaf D., assignor to Sundstrand Machine Tool Co., Rockford, Ill. Machine tool. 1,694,363; Dec. 4.
Sundstrand Machine Tool Co. (See Sundstrand, Gustaf D., assignor.)
Swartzbaugh Manufacturing Company, The. (See Ziola, Henry A., assignor.)
Sweeney, Orland R., Ames, Iowa, assignor to Ward-Love Pump Corporation, Rockford, Ill. Brine tank for water softeners. 1,693,829; Dec. 4.
Swift & Company. (See Covey, John E., assignor.)
Swift, Lewis B., assignor to Taylor Instrument Companies, Rochester, N. Y. Process-control system. 1,693,677; Dec. 4.
Switzer, Maurice, assignor to M. G. Scheuer, New York, N. Y. Radiator-front cover. 1,694,358; Dec. 4.
Sykes, William E., Slough, England. Machine for cutting gear teeth. 1,694,041; Dec. 4.
Sykes, William E., Buffalo, N. Y. Machine for cutting gear teeth. 1,694,042; Dec. 4.
Symonds, Harold D., and H. J. Cullen, New York, N. Y. Inlet box. 1,694,347; Dec. 4.
Sywert, Philip T., Scotia, N. Y., assignor to General Electric Company. Gasket. 1,694,291; Dec. 4.
Tanaka, Tombay, Paso Robles, Calif. Thumb tack. 1,693,875; Dec. 4.
Tappan Stove Company, The. (See Taylor, Thomas E., assignor.)
Taylor, Edward A., assignor to The Grasselli Chemical Company, Cleveland, Ohio. Drainpipe-cleaning composition. 1,693,678; Dec. 4.
Taylor, George A., Bergenfield, N. J., assignor to National Biscuit Company, New York, N. Y. Display device. 1,694,024; Dec. 4.
Taylor Instrument Companies. (See Swift, Lewis B., assignor.)
Taylor, Thomas E., assignor to The Tappan Stove Company, Mansfield, Ohio. Oven construction. 1,693,625; Dec. 4.
Terry, Merrill H., Columbus, Ohio. Fuse plug. 1,693,679; Dec. 4.
Testrite Instrument Co. (See Neuwirth, Herman, assignor.)
Texas Gulf Sulphur Company. (See Kobbé, William H., assignor.)
Thomas, Adolph A., New York, N. Y. Combined radio and phonograph cabinet. 1,693,967; Dec. 4.
Thomas, Percy H., Upper Montclair, N. J. System for excitation of synchronous-type electric machines. 1,693,968; Dec. 4.
Thomas, Thomas H., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Split reduction device. 1,693,626; Dec. 4.
Thomas, Thomas H., Edgewood, and C. A. Nelson, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid-pressure brake. 1,693,627; Dec. 4.
Thomas, Thomas H., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid-pressure brake. 1,693,943; Dec. 4.
Thompson, George B., Richmond Hill, N. Y. Fighting bag. 1,694,044; Dec. 4.
Thompson, Howard A., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,694,339; Dec. 4.
Thomson, Charles M., Westmount, Quebec, Canada. Metallic frame construction. 1,694,043; Dec. 4.
Thonsen, Charles H., Brooklyn, N. Y. Electrical binding post. 1,694,239; Dec. 4.
Thum, Martin, Rochester, N. Y. Joint for tubular structures. 1,688,680; Dec. 4.
Tinius Olsen Testing Machine Company. (See Lewis, Robert B., assignor.)

Tockar, Nicholas J., North Vancouver, assignor to V. Laursen, Vancouver, British Columbia, Canada. Pole-protecting device. 1,694,109; Dec. 4.
Toledo Machine & Tool Company, The. (See Hinde, Henry J., assignor.)
Tower, Edwin B. H., jr. (See Briggs, Stephen F., assignor.)
Toy, George D. (See Perry, W. A., and Toy.)
Tracey, Fred A., Portland, Oreg. Constructing and supporting forms for concrete work. 1,694,292; Dec. 4.
Trico Products Corporation. (See Oishei, John R., assignor.)
Trico Products Corporation. (See Phillips, John X., jr., assignor.)
Trimble, Charles P., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa. Spring cushion and the like. 1,694,359; Dec. 4.
Triska, Joseph, Omaha, Nebr. Bottle cap. 1,693,830; Dec. 4.
Troy Laundry Machinery Company. (See Waggett, Thomas A., assignor.)
Trudo, Eugene F., Weston, Mass. Metal chair. 1,694,293; Dec. 4.
Tuck, George A., San Francisco, Calif. Automatic flue control for furnaces. 1,693,769; Dec. 4.
Turnbull, William, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Ice grouser shoe. 1,693,831; Dec. 4.
Turner, Guilford S. (See Vissering, H., and Turner.)
Turner, Jacob, assignor to Turner Manufacturing Company, Chicago, Ill. Mirror frame. Des. 77,135; Dec. 4.
Turner Manufacturing Company. (See Turner, Jacob, assignor.)
Tuttle, Henry A., Upton, Mass. Reversing mechanism. 1,694,294; Dec. 4.
Tuttle, Henry A., Upton, Mass. Reversing mechanism. 1,694,295; Dec. 4.
Tuttle Silver Company. (See Dolan, Bernard A., assignor.)
Tytus, John B., assignor to The American Rolling Mill Company, Middletown, Ohio. Annealing process. 1,693,800; Dec. 4.
Uhrig, John H., Beverly, assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J. Mold for centrifugal pipe casting. 1,693,703; Dec. 4.
Underwood Elliott Fisher Company. (See Blaisdell, Harrison O., assignor.)
Underwood Elliott Fisher Company. (See Dobson, William A., assignor.)
Underwood Elliott Fisher Company. (See Oswald, Alfred E., assignor.)
Union Switch & Signal Company, The. (See Sproull, Clarence W., assignor.)
Union Switch & Signal Company, The. (See Thompson, Howard A., assignor.)
Union Switch & Signal Company, The. (See Young, Henry S., assignor.)
United Shoe Machinery Corporation. (See Barclay, W. R., and Keall, assignors.)
United Shoe Machinery Corporation. (See Pym, Arthur F., assignor.)
United States Cast Iron Pipe & Foundry Company. (See Uhrig, John H., assignor.)
Unruh, Edward N., jr., Corsicana, Tex. Cable-spooling device. 1,693,876; Dec. 4.
Utah Royalty Corporation. (See Rider, Rowland W., assignor.)
Utica Products, Inc. (See Hauser, George D., assignor.)
Uttz, William A., sr., St. Louis, Mo., assignor to Perfection Package Sealer Company, Inc., Dallas, Tex. Roll holder for gummed-tape-serving machines. 1,693,877; Dec. 4.
Valley Mould and Iron Corporation. (See Perry, John E., assignor.)
Van Brunt, John, Flushing, assignor to Combustion Engineering Corporation, New York, N. Y. Traveling chain grate. 1,693,628; Dec. 4.
Van Dinter, George L. (See Bradley, C. E., and Van Dinter.)
Van Husen, Norman. (See Jandus, H. S., and Van Husen.)
Vawter, Charles E., Philadelphia, Pa., assignor to Dubilier Condenser Corporation, New York, N. Y. Electrical resistance. 1,694,149; Dec. 4.
Vickers Limited. (See Dawson, A. T., and Buckham, assignors.)
Vickers Limited. (See Ogden, Amos, assignor.)
Victory Lamp Company. (See Buccini, Hugo A., assignor.)
Villaret, Gustave E., Leonia, N. J. Chandelier. Des. 77,136; Dec. 4.
Villaret, Gustave E., Leonia, N. J. Wall bracket for lighting fixtures. Des. 77,137; Dec. 4.
Villiger, Walter, and W. Bauersfeld, assignors to Carl Zeiss, a firm, Jena, Germany. Device for projecting stars. 1,693,969; Dec. 4.
Vincent, Jesse G., assignor to Packard Motor Car Company, Detroit, Mich. Internal-combustion engine. 1,693,832; Dec. 4.
Vion, Eugène, Paris, France. Compass. 1,694,194; Dec. 4.
Vissering, Harry, and Company. (See Vissering, H., and Turner, assignors.)
Vissering, Harry, Kenilworth, and G. S. Turner, Berwyn, assignors to Harry Vissering and Company, Chicago, Ill. Track-sanding apparatus. 1,693,944; Dec. 4.
Vogel, Vincent, Chicago, Ill. Fastener. 1,693,013; Dec. 4.
Von Nessen, Walter, New York, N. Y., assignor to Efcolite Corporation. Shade. Des. 77,138; Dec. 4.
Von Platen, Baltzar C., and C. G. Munters, Stockholm, Sweden, assignors to Electrolux Servel Corporation, New York, N. Y. Refrigerating apparatus. 1,693,970; Dec. 4.
Vortex Mfg. Co., The. (See Barbieri, Cesare, assignor.)
Voss, George C., assignor of one-third to J. H. Rendleman and one-third to R. R. Wiard, Exira, Iowa. Saw. 1,694,150; Dec. 4.
Waggett, Thomas A., East Moline, Ill., assignor, by mesne assignments, to Troy Laundry Machinery Company, Inc., Dover, Del. Plate punching and finishing means. 1,694,045; Dec. 4.
Waggoner, Melancthon R., Cedar Rapids, Iowa, assignor to McIntosh Electrical Corporation, Chicago, Ill. Switching means for effecting electrotherapeutic treatment. 1,693,734; Dec. 4.
Wagner, Stefan, Los Angeles, Calif. Boring machine. 1,693,971; Dec. 4.
Waite, Harry F., New York, N. Y. Rectifying system. 1,694,151; Dec. 4.
Walker, Hervey S., Ardmore, Pa. Underfloor duct system. 1,693,682; Dec. 4.
Walle, Ludvig S., Scotia, N. Y., assignor to General Electric Company. Time-element device. 1,694,240; Dec. 4.
Wanamaker, Elmer M., assignor to Anaconda Sales Company, New York, N. Y. Apparatus for electrodeposition. 1,693,683; Dec. 4.
Warburg, Julius, Brooklyn, N. Y. Bag-frame fastener. 1,694,152; Dec. 4.
Ward-Love Pump Corporation. (See Sweeney, Orland R., assignor.)
Warga, Kalman, New York, N. Y., assignor to C. W. Bickford and M. Bickford, Osceola Mills, Pa. Decorating glass surfaces. 1,693,735; Dec. 4.
Warner, William F., jr., assignor to Henry Conally Company, Inc., Rochester, N. Y. Loose-leaf binder. 1,693,684; Dec. 4.
Waseiak, Joseph, Minneapolis, Minn. Valve lock. 1,694,086; Dec. 4.
Wassell, Helen E. (See Jackson, L. E., and Wassell.)
Waterbury Farrel Foundry and Machine Company, The. (See Petitjean, Clifford O., assignor.)
Watkins, Devereux J. G., Lincoln, England. Windproof lamp. 1,693,704; Dec. 4.
Watres, Lewis, S., Scranton, Pa., assignor to National Graphite Lubrication Company, Wilmington, Del. Apparatus for abrading graphite or similar material. 1,693,736; Dec. 4.
Watres, Lewis S., Scranton, Pa., assignor to National Graphite Lubrication Company, Wilmington, Del. Lubrication and apparatus therefor. 1,694,153; Dec. 4.
Watteubarger, Jacob N., et al. (See Long, Wilber L., assignor.)
Watts, Thomas L., Indianapolis, Ind. Variable direction control for trailing objects. 1,694,195; Dec. 4.
Way, Harry C., Wheeling, W. Va. Grave marker. 1,694,196; Dec. 4.
Weaver, Allan, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company. Method and apparatus for transmission of pictures. 1,693,685; Dec. 4.
Weaver, Ralph J., assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio. Mold. 1,694,025; Dec. 4.
Weber, Albert, Upper Montclair, N. J., assignor to Herman C. Kupper, Inc., New York, N. Y. Covered dish or similar article. Des. 77,139; Dec. 4.
Weber, Karl A., assignor to Weber Showcase & Fixture Company, Los Angeles, Calif. Panel polishing and rubbing machine. 1,694,046; Dec. 4.
Weber Showcase & Fixture Company. (See Weber, Karl A., assignor.)
Webre, Alfred L., Winchester, assignor to E. B. Badger and Sons Company, Boston, Mass. Nonclogging spray nozzle. 1,693,629; Dec. 4.
Weiler, Wilhelm, Niederschonhausen, Germany, assignor to General Electric Company. Induction-motor-regulating system. 1,694,241; Dec. 4.
Weiler, Wilhelm, Niederschonhausen, Berlin, Germany, assignor to General Electric Company. Frequency-changer apparatus. 1,694,296; Dec. 4.
Weinland, Hermon G., assignor to The Safety Grinding Wheel & Machine Company, Springfield, Ohio. Grinding machine. 1,694,340; Dec. 4.
Weldon, William B., assignor to W. S. Darley, Chicago, Ill. Method and apparatus for locating the point of escape of a fluid from concealed pipes. 1,693,737; Dec. 4.
Weller, Ernest E., Providence, R. I. Shoe-strap fastener member. Des. 77,140; Dec. 4.
Wellman, Howard C., assignor to Eastman Kodak Company, Rochester, N. Y. Motion-picture projector. 1,694,110; Dec. 4.
Wellman, Howard C., assignor to Eastman Kodak Company, Rochester, N. Y. Motion-picture projector. 1,694,111; Dec. 4.
Wells, Ralph J., Dayton, Ohio. Track liner and applying same. 1,693,878; Dec. 4.
Wening, Frederick, Cleveland, Ohio. Shade holder. 1,694,047; Dec. 4.
Wermine, Hugo H., assignor to Belden Manufacturing Company, Chicago, Ill. Insulating tube and making same. 1,693,630; Dec. 4.

Wescott, Ernest W., Niagara Falls, N. Y., assignor, by mesne assignments, to Stator Refrigeration, Inc. Aspirator. 1,694,087; Dec. 4.
Westendorf, John W., Baltimore, Md. Window-shade fixture. 1,694,154; Dec. 4.
Western Coil & Electrical Co. (See Lewis, William T., assignor.)
Western Electric Company. (See Mathes, Robert C., assignor.)
Westinghouse Air Brake Company, The. (See Farmer, Clyde C., assignor.)
Westinghouse Air Brake Company, The. (See McCune, Joseph C., assignor.)
Westinghouse Air Brake Company, The. (See Nelson, Claude A., assignor.)
Westinghouse Air Brake Company, The. (See Thomas, Thomas H., assignor.)
Westinghouse Air Brake Company, The. (See Thomas, T. H., and Nelson, assignors.)
Westinghouse Electric & Manufacturing Company. (See Naylor, William K., assignor.)
Westinghouse Electric & Manufacturing Company. (See Robinson, Ernest Y., assignor.)
Westinghouse Electric & Manufacturing Company. (See Williams, H. W., and Boozer, assignors.)
Westphal, Frederick, New York, N. Y. Nonrefillable bottle. 1,693,879; Dec. 4.
Wetmore, Earl P., Concord, Mich., assignor to The Anoilcoal Burner Co., Toledo, Ohio. Method and apparatus for burning fuel. 1,693,880; Dec. 4.
Wheaton, A. W., Brass Works. (See Wheaton, Abram W., jr., assignor.)
Wheaton, Abram W., jr., Maplewood, assignor to A. W. Wheaton Brass Works, Newark, N. J. Faucet wrench. 1,694,242; Dec. 4.
Wheaton, Harold J., Lower Walton, near Warrington, England, assignor, by mesne assignments, to American Doucil Company, Philadelphia, Pa. Base-exchange compound and making it. 1,694,155; Dec. 4.
Wheeler, Maude A. M. (See Mingus, Maude A.)
Wheeling Steel Corporation. (See Rollason, Charles H., assignor.)
White, Fred H., Toledo, Ohio. Indicator device, 1,694,048; Dec. 4.
Whitehead and Kales, Inc. (See Rainsford, Thomas F., assignor.)
Whitehead, Thomas C., Detroit, Mich. Oil extractor. 1,693,738; Dec. 4.
Whitney, Gilbert C., New York, N. Y. Train-indication system. 1,693,739; Dec. 4.
Whittemore, Herbert A., Newcastle, Calif. Fruit-car brace. 1,694,026; Dec. 4.
Whittington, Allen R., Detroit, Mich. Door buffer. 1,694,297; Dec. 4.
Wiard, Roy R., et al. (See Voss, George C., assignor.)
Widescope Camera Company. (See McInnis, Walter J., assignor.)
Wildern, George R., Detroit, Mich. Valve. 1,693,945; Dec. 4.
Wildhaber, Ernest, assignor to Gleason Works, Rochester, N. Y. Producing curved tooth gearing. 1,693,686; Dec. 4.
Wildhaber, Ernest, assignor to Gleason Works, Rochester, N. Y. Producing gears. 1,693,687; Dec. 4.
Wildhaber, Ernest, assignor to Gleason Works, Rochester, N. Y. Gear. 1,693,740; Dec. 4.
Wildhaber, Ernest, Brooklyn, assignor to Gleason Works, Rochester, N. Y. Gearing. 1,694,027; Dec. 4.
Wildhaber, Ernest, assignor to Gleason Works, Rochester, N. Y. Gear. 1,694,028; Dec. 4.
Wilford, Charles G. (See Paddack, S. D., and Wilford.)
Wilford, Edward B., Merion, Pa., assignor to Ritter Dental Manufacturing Company, Inc., Rochester, N. Y. Dental chair. 1,694,243; Dec. 4.
Williams, Harold W., East Pittsburgh, and D. G. Boozer, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company. Control apparatus. 1,693,631; Dec. 4.
Williams, Henry B., assignor to John W. Ladd Co., Detroit, Mich. Bottle cooler. 1,693,995; Dec. 4.
Williams, James M., Sanford, Fla. Automatic folding crossing gate. 1,694,298; Dec. 4.
Williamson, John A. (See Glomstead, E. E., and Williamson.)
Wilson, C. R., Body Company. (See Breneman, Paul E., assignor.)
Wilson, Raymond C., assignor to International Motor Company, New York, N. Y. Seat. 1,693,770; Dec. 4.
Windberger, Othmar, Wiener-Neustadt, Austria. Underframe for automobile vehicles. 1,694,112; Dec. 4.
Winkler, Carl, Bern, Switzerland. Machine for casting curved stereoplates. 1,694,299; Dec. 4.
Wiremold Company, The. (See Frederickson, Otto A., assignor.)
Wirt, Zebulon, Omaha, Nebr. Refrigerating apparatus. 1,694,156; Dec. 4.
Witham, George S., jr., Hudson Falls, N. Y. Apparatus for controlling the drying operation in paper machines. 1,694,349; Dec. 4.
Wolf, Jacques, Basel, Switzerland. Shutter mechanism for photographic apparatus. 1,694,113; Dec. 4.
Wolfe, Warren, E., Los Angeles, Calif. Building. Des. 77,141; Dec. 4.
Wolkowich, Natalie, Worcester, Mass. Strainer. 1,694,088; Dec. 4.
Wolski, Paul. (See Jantsch, G., and Wolski.)
Wood, A. J. (See Daniels, M., and Wood.)
Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Folding and cutting couple for folding machines. 1,694,300; Dec. 4.
Wood, Manton A. (See Hotz, John P., assignor.)
Wood Newspaper Machinery Corporation. (See Wood, Henry A. W., assignor)
Wood, William H., South Euclid, Ohio. Manufacture of headlights. Re17,155; Dec. 4.
Woodling, Miner D., Kansas City, Mo. Vehicle washing tank. 1,694,197; Dec. 4.
Worley, George L., Akron, Ohio. Band for use with tractors or the like. 1,693,833; Dec. 4.
Worthen, Walter E., West Hollywood, Calif. Latch. 1,693,912; Dec. 4.
Wright, James A., Montreal, Quebec, Canada. Rear-axle assembly. 1,694,049; Dec. 4.
Wright, Maurice J., Boise, Idaho. Register dust cover. 1,694,098; Dec. 4.
Wuest, Andrew, Rochester, N. Y. Liquid filter. 1,693,741; Dec. 4.
Yamamoto, Ototaro N., Los Angeles, Calif. Card game. 1,694,029; Dec. 4.
Yanss, George W., Bridgeport, Conn., assignor to American Chain Company, Inc. Automobile fender guard. 1,694,198; Dec. 4.
York Safe and Lock Co. (See Sioberg, Charles F., assignor.)
Young, Henry S., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of railway switches. 1,694,050; Dec. 4.
Young, Thomas, Enfield, England. Sound amplifier. 1,693,771; Dec. 4.
Zeiss, Carl, a Firm. (See Villiger, W., and Bauersfeld, assignor.)
Zellstofffabrik Waldhof. (See Clemm, Hans, assignor.)
Zellstofffabrik Waldhof. (See Hanglelter, C., and Schneider, assignors.)
Ziola, Henry A., assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio. Electric terminal construction. 1,693,881; Dec. 4.
Zipkes, Maximilian. (See Horn, S., and Zipkes.)
Zuckerman, Adolph M., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y. Delivery mechanism. 1,693,632; Dec. 4.
Zweig, Charles, Wood River, Ill., assignor to Standard Oil Company, Whiting, Ind. Removal of petrolatum from oils. 1,694,090; Dec. 4.
Zweig, Joseph, Brooklyn, assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Handle for smoking stands or similar articles. Des. 77,142; Dec. 4.

# ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

## PATENTS WERE ISSUED ON THE 4TH DAY OF DECEMBER, 1928.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

Accelerator. R. M. Henderson. 1,693,897; Dec. 4.
Accordion. F. Nardone. 1,693,616; Dec. 4.
Acid process, Contact sulphuric-. A. O. Jaeger. 1,694,123; Dec. 4.
Acoustic diaphragm. H. G. Pape. 1,693,727; Dec. 4.
Adding and listing machine. G. D. Sundstrand. 1,694,362; Dec. 4.
Aeroplane. S. Horn and M. Zipkes. 1,694,177; Dec. 4.
Air cleaner. F. O. Catron. 1,694,116; Dec. 4.
Air-compressing mechanism. G. E. Hazard. 1,694,218; Dec. 4.
Air-conditioning system. C. A. Moore. 1,693,855; Dec. 4.
Aircraft pontoon apparatus. J. B. Anderson. 1,693,773; Dec. 4.
Air heater. W. L. Long. 1,694,351; Dec. 4.
Air in storage chambers, System for conditioning. C. A. Moore. 1,693,856; Dec. 4.
Air purifier. C. C. Farmer. 1,693,646–7; Dec. 4.
Alkyl compounds of lead, Preparing. C. A. Kraus and C. C. Callis. 1,694,268; Dec. 4.
Amplification system. L. C. F. Horle. 1,693,898; Dec. 4.
Amusement device. J. J. Schmid. 1,693,798; Dec. 4.
Anchor, Rail. R. A. Blair. 1,693,804; Dec. 4.
Annealing process. J. B. Tytus. 1,693,800; Dec. 4.
Antenna for electric wave transmission. A. Meissner. 1,694,135; Dec. 4.
Anthracene, Purification of crude. A. O. Jaeger. 1,693,713; Dec. 4.
Arch support. W. F. Dunlop. 1,694,315; Dec. 4.
Arch-supporting device for boots and shoes. M. C. Messler. 1,694,353; Dec. 4.
Armature-insulation-cutting machine. R. W. Baker. 1,693,996; Dec. 4.
Aspirator. E. W. Wescott. 1,694,087; Dec. 4.
Assorting machine. F. J. Cook. Re17,149; Dec. 4.
Auditing machine. M. M. Goldberg. 1,694,009; Dec. 4.
Autographic register. L. F. Hagemann. 1,693,982; Dec. 4.
Automobile accessory. C. R. Duncan. 1,694,060; Dec. 4.
Axle assembly, Rear-. J. A. Wright. 1,694,049; Dec. 4.
Axle for motor cars, Swivelled. E. Ascarelli. 1,694,305; Dec. 4.
Back-fire and theft preventing device, Combined. A. I. Liberman. 1,694,271; Dec. 4.
Bag: *See*—
Fighting bag.
Bail for pails and the like. R. R. Debacher. 1,694,165; Dec. 4.
Ball-and-socket joint. F. Faudl. 1,693,840; Dec. 4.
Band for use with tractors or the like. G. I. Worley. 1,693,833; Dec. 4.
Bar: *See*—
Grate bar.
Battery nuts, Making. E. G. Oakley. 1,693,957; Dec. 4.
Bearings, Oil and water control for hydraulic turbine. W. F. Grant. 1,693,600; Dec. 4.
Bed-bottom fabric. M. A. Davis. 1,694,094; Dec. 4.
Bed, Folding. F. R. Moore. 1,693,795; Dec. 4.
Bending machines, Attachment for. R. L. Herman and G. F. Schmidt. 1,693,951; Dec. 4.
Bias-cutting machine. A. C. Bolton. 1,693,589; Dec. 4.
Bill fold and pass case, Combination. C. L'Enfant. 1,694,186; Dec. 4.
Binder, Loose-leaf. W. F. Warner, jr. 1,693,684; Dec. 4.
Binding machine, Sheet-. L. Burdett. 1,694,055; Dec. 4.
Binding post, Electrical. C. H. Thonsen. 1,694,239; Dec. 4.
Bitt. J. H. Clark. 1,694,312; Dec. 4.
Blade or sod scraper, Cultivator. D. D. Low. 1,694,099; Dec. 4.
Block: *See*—
Chock block.
Blouse, Sailor's dress. W. I. Clements. 1,694,206; Dec. 4.
Board: *See*—
Cutting board.
Boat-propelling mechanism. O. J. Borgman. 1,693,590; Dec. 4.
Boiler: *See*—
Steam boiler.
Boiler stand. C. F. Cole. 1,694,000; Dec. 4.
Boiler-washer. S. Radway. 1,694,346; Dec. 4.
Bolt device, Fitting-up. E. S. Klausner. 1,694,326; Dec. 4.
Book. E. E. Price. 1,693,865; Dec. 4.
Boring machine. S. Wagner. 1,693,971; Dec. 4.
Bottle. B. Edmiston and H. T. Kinney. Des. 77,081; Dec. 4.
Bottle. L. B. Koch. Des. 77,103; Dec. 4.
Bottle cap. J. Triska. 1,693,830; Dec. 4.
Bottle cap, Milk-. J. E. Johnson. 1,693,787; Dec. 4.
Bottle cooler. H. B. Williams. 1,693,995; Dec. 4.
Bottle, Nonrefillable. F. Westphal. 1,693,879; Dec. 4.
Bottle or the like. J. Bramble. Des. 77,052–4; Dec. 4.
Bowl or similar article. E. Magnussen. Des. 77,109; Dec. 4.
Box: *See*—
Ground box. Mail box.
Inlet box. Smoke box.
Box and neckwear holder, Combination collar. L. Stoltenberg. 1,693,827; Dec. 4.
Box for ingot molds, Core. J. E. Perry. 1,694,105; Dec. 4.
Box or similar article, Powder-puff. R. E. McEldowney. Des. 77,110; Dec. 4.
Boxes, Making collapsible. F. M. Joslin. 1,694,126; Dec. 4.
Brace: *See*—
Fruit-car brace. Rail brace.
Bracket for lighting fixtures, Wall. I. Rosenblatt. Des. 77,125; Dec. 4.
Bracket for lighting fixtures, Wall. G. E. Villaret. Des. 77,137; Dec. 4.
Brake: *See*—
Fluid-pressure brake.
Brake and door control for automotive buses. R. W. Bailey. 1,693,834; Dec. 4.
Brake control. M. W. McConkey. 1,694,075; Dec. 4.
Brake drum. G. W. Benedict. 1,694,052; Dec. 4.
Brake mechanism. F. Brault and A. Cordier. 1,694,203; Dec. 4.
Brake mechanism, Vehicle. N. A. Christensen. 1,693,887; Dec. 4.
Brake operating means, Hydraulic and band. W. G. Price. 1,694,020; Dec. 4.
Braking apparatus, Fluid-pressure. C. W. Sproull. 1,694,193; Dec. 4.
Braking device for vehicles. A. I. Kapion. 1,694,181; Dec. 4.
Breathing apparatus particularly for administering anæsthetics. H. W. C. Schröder. 1,693,730; Dec. 4.
Brooch or similar article. B. Mechlovits. Des. 77,113; Dec. 4.
Brush. E. F. Astley. 1,694,306; Dec. 4.
Brush attachment, Floor. H. Klingenberg. 1,694,327; Dec. 4.
Brush for grainer pipes, Automatically-actuated. T. C. Colbiornsen. 1,693,689; Dec. 4.
Brush, knife, and roller, Combination. J. F. Connor. 1,693,745; Dec. 4.
Brush, Rotatable. R. C. Mudge and E. A. Gallison. 1,694,018; Dec. 4.
Buffet table. J. C. Reid. 1,694,283; Dec. 4.
Building. C. W. Buckham. 1,694,309; Dec. 4.
Building. W. E. Wolfe. Des. 77,141; Dec. 4.
Building-block mold. C. J. Dexter. 1,693,693; Dec. 4.
Building construction. A. F. Bemis. 1,693,742; Dec. 4.
Building construction. K. R. Schuster. 1,693,941; Dec. 4.
Bulb or similar article, Electric. G. Niebel. Des. 77,118; Dec. 4.
Burner: *See*—
Oil burner.
Burner and valvular control therefor. E. L. Lowe. 1,693,931; Dec. 4.
Burning fuel, Method and apparatus for. E. P. Wetmore. 1,693,880; Dec. 4.
Cabinet, Beverage-dispensing. C. Doering. Des. 77,079; Dec. 4.
Cabinet, Combined radio and phonograph. A. A. Thomas. 1,693,967; Dec. 4.
Cabinet for a coin-controlled game apparatus. A. S. T. Lagaard. Des. 77,106; Dec. 4.
Cabinet, Toweling. J. D. Leveille. 1,693,905; Dec. 4.
Cable-connecting means. D. M. Bardon. 1,694,051; Dec. 4.
Calculating machine. A. Schubode. 1,693,766; Dec. 4.
Camera, Panoramic motion-picture. W. J. McInnis. 1,693,722; Dec. 4.
Can: *See*—
Metal can.
Can. J. Frank. 1,694,119; Dec. 4.
Can opener. H. Garrison. 1,693,894; Dec. 4.
Cap for ground members. W. D. Kyle. 1,693,848; Dec. 4.
Car construction, Dump-. W. E. Morey and D. Hindahl. 1,694,077; Dec. 4.
Car, Kiln. H. R. Straight. 1,694,085; Dec. 4.
Car, Refrigerator. G. A. Hull. 1,693,815; Dec. 4.
Carbon, Electric soldering. M. E. Gebel. 1,694,256; Dec. 4.
Carbon, Making activated. A. B. Bay, E. G. Doying and J. J. Butkovsky. 1,694,040; Dec. 4.
Carburetor. N. Lombard. 1,693,792–3; Dec. 4.
Card and letter, Combination post. E. Dziuk. 1,693,811; Dec. 4.
Carrier for automobiles, Luggage. W. G. Herd. 1,693,922; Dec. 4.

Carrousel-driving mechanism. C. E. Morris. 1,693,724; Dec. 4.
Carton, Double-receptacle. G. S. Gaylord. 1,693,841; Dec. 4.
Case: *See*—
Show case. Vanity case.
Caster, Adjustable. W. C. Hartmann. 1,693,920; Dec. 4.
Casting apparatus. F. Ehrmann. 1,694,118; Dec. 4.
Casting machine (weighing mechanism), Centrifugal. W. D. Moore and W. Morgan. 1,693,654; Dec. 4.
Catalytic oxidations in the gaseous or vapor state, Carrying out. J. Brode and A. Johannsen. 1,693,915; Dec. 4.
Cell, Photosensitive. S. Ruben. 1,694,189; Dec. 4.
Cellulose, Apparatus for boiling. K. Hangleiter and A. Schneider. 1,693,983; Dec. 4.
Cellulose ethers, Manufacture of. O. Leuchs and E. Dörr. 1,694,127; Dec. 4.
Cellulose-nitrate solution. M. B. Hopkins and H. E. Buc. 1,694,097; Dec. 4.
Cement, Wet process for manufacturing. W. P. Eckdahl. 1,693,644; Dec. 4.
Cements, Manufacture of aluminous. L. G. Patrouilleau. 1,694,338; Dec. 4.
Chain, Sprocket. J. C. Merwin. 1,694,275; Dec. 4.
Chair: *See*—
Dental chair. Metal chair.
Chair. C. S. Johnson. 1,694,013; Dec. 4.
Chair for wall closets, etc., Adjustable supporting. W. V. Bulman. 1,693,744; Dec. 4.
Chandelier. I. Rosenblatt. Des. 77,123–4; Dec. 4.
Chandelier. G. E. Villaret. Des. 77,136; Dec. 4.
Charging apparatus for pulp digesters. E. Olsson. 1,694,139; Dec. 4.
Chock block, Composition. E. S. Evans. 1,694,316; Dec. 4.
Crystallization of solid substances in a coarse granular form from solutions. I. Isaachsen. 1,693,786; Dec. 4.
Chute, Gravity. C. G. Pfeiffer. 1,694,019; Dec. 4.
Circuit, Battery supply. F. W. McKown. 1,693,653; Dec. 4.
Clamp: *See*—
Line clamp.
Clamp plate. H. S. Jandus and J. R. Morgan. Des. 77,100; Dec. 4.
Clamp plate for vehicle bumpers. H. S. Jandus. Des. 77,097; Dec. 4.
Clamp plate for vehicle bumpers. H. S. Jandus and N. Van Husen. Des. 77,099; Dec. 4.
Cleaner: *See*—
Air cleaner. Windshield cleaner.
Window cleaner.
Cleaning and polishing automobiles, Apparatus for. B. K. Gillespie. 1,694,120; Dec. 4.
Cleaning apparatus, Suction. E. F. Martinet. 1,694,273; Dec. 4.
Cleaning coal, Apparatus for. E. O'Toole. 1,693,861; Dec. 4.
Cleaning composition, Drainpipe-. E. A. Taylor. 1,693,678; Dec. 4.
Cleaning device, Tank-. A. B. Butterworth. 1,693,885; Dec. 4.
Cleaning flexible foraminous sheets. F. G. Purinton. 1,694,021; Dec. 4.
Clipper. A. Dishmaker. 1,693,707; Dec. 4.
Clock-controlled switch. H. P. MacLagan. 1,693,721; Dec. 4.
Clock face. F. Fontana. Des. 77,083; Dec. 4.
Clock frame. F. W. Schenk. Des. 77,129; Dec. 4.
Coating for molds. A. J. Hess. 1,693,923; Dec. 4.
Cock, Ball. L. R. Davidson and H. F. Rahl. 1,693,691; Dec. 4.
Coil. H. D. Currier. 1,693,887; Dec. 4.
Coil, Sectional induction. W. H. Adams. 1,694,091; Dec. 4.
Comb and razor, Combined. M. Aland. 1,693,973; Dec. 4.
Commutators, Making. J. J. Carter. 1,693,997; Dec. 4.
Compass. E. Vion. 1,694,194; Dec. 4.
Compass, Gyroscopic. E. A. Sperry, jr. 1,694,192; Dec. 4.
Composition containing cellulose derivatives. J. G. Davidson. 1,693,746; Dec. 4.
Compound and making it, Base-exchange. H. J. Wheaton. 1,694,155; Dec. 4.
Computing machine. F. A. Hart. 1,693,753; Dec. 4.
Concrete form, molding a concrete wall, and wall. I. J. Kuert. 1,694,037; Dec. 4.
Condenser. E. A. Bohlman. 1,693,588; Dec. 4.
Condenser, Electrical. A. Möhrle. 1,694,276; Dec. 4.
Container. H. J. Schaffer. 1,693,819; Dec. 4.
Container bogie. G. McCall and J. E. Reid. 1,693,700; Dec. 4.
Container, Liquid-dispensing. G. J. Armstrong. 1,694,304; Dec. 4.
Control apparatus. H. W. Williams and D. G. Boozer. 1,693,631; Dec. 4.
Control device, Electric distant. E. Granat. 1,694,121; Dec. 4.
Control of railway switches, Apparatus for the. H. S. Young. 1,694,050; Dec. 4.
Control system. D. T. Simonds. 1,694,237; Dec. 4.
Control system, Process-. L. B. Swift. 1,693,677; Dec. 4.
Convection heater, Emergency. W. A. Brown. 1,694,160; Dec. 4.
Conveyer, Worm. R. Miller. 1,694,228; Dec. 4.
Cooking utensils, Attachment for. A. E. Blenstock. 1,693,974; Dec. 4.
Cooler: *See*—
Bottle cooler.
Cooling system for aircraft engines. H. C. Mallory. 1,694,071; Dec. 4.
Cotton blocker, Cross-row. S. F. Brown. 1,694,204; Dec. 4.
Cotton separator. N. B. Henry. 1,693,754; Dec. 4.
Corn shredder and husker. H. P. Grossman. Re17,152; Dec. 4.
Corset and brassière, Combined. L. E. Scofield. 1,693,799; Dec. 4.
Coupling: *See*—
Flexible coupling.
Coupling and steering device for automobiles. A. W. Nordgren. 1,694,278; Dec. 4.
Cover, Burial-receptacle. W. B. Muckleroy. Des. 77,116; Dec. 4.
Cover for tanks, Breather. J. S. Patten. 1,693,958; Dec. 4.
Cover for tire-valve apertures. E. A. Nelson. 1,693,859; Dec. 4.
Cover, Manhole. E. T. McHugh. 1,694,133; Dec. 4.
Cover, Register dust. M. J. Wright. 1,694,089; Dec. 4.
Crane. H. R. Straight. 1,694,084; Dec. 4.
Crate, Sheet-metal. C. L. Lippincott. 1,693,906; Dec. 4.
Crossing gate, Automatic folding. J. M. Williams. 1,694,298; Dec. 4.
Crotonaldehyde from acetaldehyde and aldol, Manufacture of. E. Lüscher. 1,693,907; Dec. 4.
Crude-oil motor, High-pressure. E. Schaeren. 1,693,963; Dec. 4.
Cuff link. V. B. Rogers. 1,693,993; Dec. 4.
Current, Rectification of alternating. E. Y. Robinson. 1,693,668; Dec. 4.
Curtain rod. A. Diouhy. Des. 77,068–78; Dec. 4.
Cutting board, Meat. D. Macripo. 1,693,761; Dec. 4.
Cyclohexyl-substituted aliphatic acids. R. Adams and G. S. Hiers. 1,693,801; Dec. 4.
Decorating glass surfaces. K. Warga. 1,693,735; Dec. 4.
Deflector, Inner-tube. P. W. Lehman. 1,694,222; Dec. 4.
Delivery mechanism. A. M. Zuckerman. 1,693,632; Dec. 4.
Dental bridgework, Removable. E. Kellner and W. M. Goldwyn. 1,693,845; Dec. 4.
Dental chair. E. B. Wilford. 1,694,243; Dec. 4.
Direction control for trailing objects, Variable. T. L. Watts. 1,694,195; Dec. 4.
Direction indicator. H. E. Elrod. 1,693,918; Dec. 4.
Direction indicator. J. L. McGrane. Des. 77,112; Dec. 4.
Dish or article of analogous nature. L. Hecht. Des. 77,089; Dec. 4.
Dish or similar article, Covered. A. Weber. Des. 77,139; Dec. 4.
Dish, Soap. A. Schoenfelder. 1,694,235; Dec. 4.
Dispenser and use. C. Barbieri. 1,693,883; Dec. 4.
Dispenser, Conical-cup. C. Barbieri. 1,694,157; Dec. 4.
Display device. G. E. Chatillon. 1,693,591; Dec. 4.
Display device. G. A. Taylor. 1,694,024; Dec. 4.
Display rack. B. Coleman. 1,694,207; Dec. 4.
Display stand. G. S. Bailey. 1,693,802; Dec. 4.
Display stand. S. Sobel. Des. 77,132; Dec. 4.
Display stand, Dispensing. A. C. Crimmel. 1,693,592; Dec. 4.
Distillation residues, Reclaiming. R. E. Powell. 1,694,280; Dec. 4.
Distilling petroleum. H. H. Hewetson. 1,694,259; Dec. 4.
Ditcher. W. Doepke. 1,694,252; Dec. 4.
Diving apparatus for swimming pools. G. E. Rohmer. 1,693,669; Dec. 4.
Diving contrivance adapted for deep-sea diving. J.-G. Stein. 1,694,108; Dec. 4.
Door attachment, Screen-. O. V. Dusa. 1,694,168; Dec. 4.
Door buffer. A. R. Whittington. 1,694,297; Dec. 4.
Doorcheck. C. P. Olson. 1,693,860; Dec. 4.
Door for box cars, Grain. N. Johnson and L. H. Strasser. 1,694,180; Dec. 4.
Door-moving mechanism, Car-. W. W. Doty. 1,694,166; Dec. 4.
Door opening and closing mechanism. J. McMullen. 1,694,134; Dec. 4.
Doorstop. C. Blow. Des. 77,051; Dec. 4.
Dovetailing, cogging, and indenting machine. P. Böttcher. 1,694,115; Dec. 4.
Draft regulator. B. Goodman. 1,693,813–14; Dec. 4.
Drainer, Cellar. H. Gross. 1,694,199; Dec. 4.
Draining the main pipe of heating installations of railroad cars, Device for. H. Srulowitz. 1,694,289; Dec. 4.
Drawing and stamping presses, Shaft-control means for. H. J. Hinde. 1,694,063; Dec. 4.
Drier. E. P. Decker. 1,693,747; Dec. 4.
Drill chuck. W. Shore. 1,693,823; Dec. 4.
Drilling apparatus, Well-. G. R. Livergood. 1,693,609; Dec. 4.
Drilling machines, Chuck-positioning device and drill guide for. H. H. Knott. 1,693,904; Dec. 4.
Drive and driven device. G. H. Fraser. 1,694,008; Dec. 4.
Drying wood, Structure for. O. Engelbrektson. 1,693,777; Dec. 4.
Dust or dirt removing apparatus. S. Hagopian. 1,694,257; Dec. 4.
Dyes, Making triphenylmethane. R. M. Cole. 1,694,057; Dec. 4.
Dyestuffs and preparing the same, Azo. H. Eichwede. 1,694,117; Dec. 4.

Earth-working apparatus. W. A. Perry and G. D. Toy. 1,693,991; Dec. 4.
Easel stand. F. S. Saxton. Des. 77,127; Dec. 4.
Echo suppressor. H. Nyquist and K. W. Pfleger. 1,693,659; Dec. 4.
Edging implement, Lawn-. F. N. Catudal. 1,693,808; Dec. 4.
Elastic drive. C. A. Parsons and S. S. Cook. 1,693,763; Dec. 4.
Electric apparatus, Installation of. E. G. Schlberg. 1,694,288; Dec. 4.
Electric flasher. J. W. Phelps. 1,694,142; Dec. 4.
Electric heater, Portable. G. D. Hauser. 1,693,950; Dec. 4.
Electric heater, Portable. G. D. Hauser. 1,694,175; Dec. 4.
Electric light. C. J. Schroeder. 1,693,672; Dec. 4.
Electric machine, Dynamo-. K. L. Hansen. 1,694,062; Dec. 4.
Electric machines, System for excitation of synchronous type. P. H. Thomas. 1,693,968; Dec. 4.
Electric motor. S. F. Briggs. 1,694,247; Dec. 4.
Electric motor. A. E. Oswald. 1,693,617; Dec. 4.
Electric regulator. F. A. Byles. 1,694,249; Dec. 4.
Electric switch. W. A. Chryst. 1,693,998; Dec. 4.
Electric switch. J. J. Gough. 1,694,216; Dec. 4.
Electric switch. J. D. Hilliard. 1,694,261; Dec. 4.
Electric switch. J. D. Hilliard. 1,694,320; Dec. 4.
Electric switch. G. N. Lemmon. 1,694,223; Dec. 4.
Electric switch. S. Lippert. 1,693,608; Dec. 4.
Electric switch. W. K. Rankin. 1,694,282; Dec. 4.
Electric switch, Time-controlled. D. L. Chandler. 1,693,635; Dec. 4.
Electric-wire support. C. Salesas. 1,693,670; Dec. 4.
Electrical apparatus. E. F. W. Alexanderson. 1,694,244; Dec. 4.
Electrical apparatus. D. C. Prince. 1,694,281; Dec. 4.
Electrical resistance. W. Dubilier. 1,694,167; Dec. 4.
Electrical resistance. C. E. Vawter. 1,694,149; Dec. 4.
Electrode. H. W. Matheson and J. C. Smith. 1,693,794; Dec. 4.
Electrodeposition, Apparatus for. E. M. Wanamaker. 1,693,683; Dec. 4.
Electromagnetic device. W. B. Clarkson. 1,694,250; Dec. 4.
Electromechanical system. W. G. Cady. 1,693,806; Dec. 4.
Elevator system. H. Mason. 1,693,851; Dec. 4.
Engine: *See*—
Internal-combustion engine.
Engine and the like, Rotary. A. W. Davies. 1,694,208; Dec. 4.
Engine explosion pressure, Applying. C. L. Stokes. 1,693,733; Dec. 4.
Envelope, Band. L. A. Liebs. 1,693,791; Dec. 4.
Evacuator for drier drums, Water. W. H. Millspaugh. 1,693,934; Dec. 4.
Expansion joint. A. C. Fischer. 1,694,212; Dec. 4.
Extension for fly swatters. F. Lombard. 1,694,069; Dec. 4.
Extraction of water, oil, and fatty matter from solid material, Apparatus for. J. R. Sterling. 1,694,361; Dec. 4.
Extractor: *See*—
Oil extractor.
Fabric: *See*—
Bed-bottom fabric.
Face plates, Attachment of. F. J. Kristofek. 1,693,846; Dec. 4.
Fan, Electric. S. Good. 1,694,317; Dec. 4.
Fan, Portable. W. H. Ginder. 1,694,214; Dec. 4.
Fastener. V. Vogel. 1,693,913; Dec. 4.
Fastener, Bag-frame. J. Warburg. 1,694,152; Dec. 4.
Fastener covering and making same. C. E. Bradley and G. L. Van Dinter. 1,693,835; Dec. 4.
Fastener-covering method and means. C. E. Bradley and G. L. Van Dinter. 1,693,805; Dec. 4.
Fastener for doors, panels, and the like. H. Suck. 1,694,023; Dec. 4.
Fastener, Shoe. W. R. McClure. 1,694,101; Dec. 4.
Faucet and making same. L. G. Schimmel. 1,694,234; Dec. 4.
Faucet, Ball-joint. M. B. Spinelle. 1,693,676; Dec. 4.
Faucet, Fluid-measuring. H. C. Lyons. 1,693,719; Dec. 4.
Faucet Measuring. H. C. Lyons. 1,693,720; Dec. 4.
Faucet wrench. A. W. Wheaton, jr. 1,694,242; Dec. 4.
Faucets, Safety attachment for. H. G. Cordley and G. R. Long. 1,693,975; Dec. 4.
Feeding device, Intermittent. E. M. and F. M. Brackett. 1,694,202; Dec. 4.
Feeding device, Material-. T. F. Rainsford. 1,693,728; Dec. 4.
Feeding magazine for printing presses. A. and E. Kluge. 1,693,986; Dec. 4.
Feeding magazine for printing presses, Stock. A. and E. Kluge. 1,694,015; Dec. 4.
Feeds, Manufacturing of livestock. C. R. Mabee. 1,693,611–12; Dec. 4.
Fender guard, Automobile. G. W. Yanss. 1,694,198; Dec. 4.
Fighting bag. G. B. Thompson. 1,694,044; Dec. 4.
Filling boilers for cellulose with sulphite solution. H. Clemm. 1,693,999; Dec. 4.
Filter, Liquid. A. Wuest. 1,693,741; Dec. 4.
Filtering mechanism. C. F. Lienesch. 1,693,717; Dec. 4.
Finger ring. D. H. Shulan. Des. 77,131; Dec. 4.
Finishing machine. W. R. Barclay and F. B. Keall. 1,693,634; Dec. 4.
Fireback, Air-circulating. W. J. McCain. 1,693,614; Dec. 4.
Fire extinguisher, Portable liquid. K. Schmidt. 1,693,671; Dec. 4.
Firework, Detonating. H. Reihlen. 1,693,818; Dec. 4.
Fishplate, J. G. G. Coullie and J. L. Cadis. 1,693,775; Dec. 4.
Flexible coupling. S. Jencick. 1,694,064; Dec. 4.
Floor construction. E. N. Murphy. 1,693,655; Dec. 4.
Flower stand. R. M. Bauer. Des. 77,049; Dec. 4.
Fluid-pressure brake. T. H. Thomas. 1,693,943; Dec. 4.
Fluid-pressure brake. T. H. Thomas and C. A. Nelson. 1,693,627; Dec. 4.
Folding and cutting couple for folding machines. H. A. W. Wood. 1,694,300; Dec. 4.
Foot rest. E. G. du Moulin. 1,694,095; Dec. 4.
Footstool and leg rest. D. S. Sattler and F. H. McCuen. 1,694,146; Dec. 4.
Form for hollow wall construction, Adjustable and interchangeable. I. J. Kuert. 1,694,036; Dec. 4.
Forms for concrete work, Constructing and supporting. F. A. Tracey. 1,694,292; Dec. 4.
Fox ranch. L. A. Jordan. 1,693,756; Dec. 4.
Frame construction, Metallic. C. M. Thomson. 1,694,043; Dec. 4.
Frame for buildings. F. L. Purdy. Re17,154; Dec. 4.
Freight-transporting equipment. W. R. Kellett. 1,693,607; Dec. 4.
Frequency-changer apparatus. W. Weller. 1,694,296; Dec. 4.
Fruit-car brace. H. A. Whittemore. 1,694,026; Dec. 4.
Fuel, Compound. P. H. Lévèque. 1,693,790; Dec. 4.
Fuel furnace, Pulverulent-. C. Duquenne. 1,693,597; Dec. 4.
Furnace: *See*—
Fuel furnace. Steam-boiler furnace.
Furnace. F. H. Rosencrants. 1,694,144; Dec. 4.
Furnace for treating ores. F. M. Simonds. 1,693,702; Dec. 4.
Furnaces, Automatic flue control for. G. A. Tuck. 1,693,769; Dec. 4.
Fuse, Percussion and hydrostatic. A. Ogden. 1,693,661; Dec. 4.
Fuse plug. M. H. Terry. 1,693,679; Dec. 4.
Game, H. A. Liebermann. 1,694,068; Dec. 4.
Game, Card. O. N. Yamamoto. 1,694,029; Dec. 4.
Game counter and making the same. W. J. McNally. 1,694,103; Dec. 4.
Garment hanger. S. A. Schneider. 1,693,871; Dec. 4.
Gas heater. A. B. Sharp. 1,694,357; Dec. 4.
Gasket. P. T. Sywert. 1,694,291; Dec. 4.
Gate: *See*—
Crossing gate.
Gauge: *See*—
Length gauge. Valve stem and pressure gauge.
Gear. E. Wildhaber. 1,693,740; Dec. 4.
Gear. E. Wildhaber. 1,694,028; Dec. 4.
Gear, Combined reverse and reduction. E. H. Fahrney. 1,693,645; Dec. 4.
Gear, Power reverse. M. H. Roberts. 1,694,143; Dec. 4.
Gear transmission. L. K. Braren. 1,694,031; Dec. 4.
Gearing. E. Wildhaber. 1,694,027; Dec. 4.
Gearing, Producing curved tooth. E. Wildhaber. 1,693,686; Dec. 4.
Gears, Producing. E. Wildhaber. 1,693,687; Dec. 4.
Generator assembly for motor-cycle engines. C. B. Franklin. 1,693,696; Dec. 4.
Glass: *See*—
Hour glass.
Glass and producing the same, Laminated. J. W. H. Randall. 1,693,729; Dec. 4.
Glass-blowing machine. M. Jaeger. 1,693,843; Dec. 4.
Gluing machine. R. C. Jones. 1,693,600; Dec. 4.
Gocart and crib, Convertible. S. R. Allen. 1,693,633; Dec. 4.
Grading and distributing machine, Automatic top-lift. L. A. Cogswell. 1,693,638; Dec. 4.
Graphite or similar material, Apparatus for abrading. L. S. Watres. 1,693,736; Dec. 4.
Grate bar. H. K. Eilers. 1,693,710; Dec. 4.
Grate, Traveling chain. J. Van Brunt. 1,693,628; Dec. 4.
Gravity system for continuously treating boiler water. C. T. McGill. 1,694,331; Dec. 4.
Grease-charging apparatus. H. J. Engbrecht. 1,694,096; Dec. 4.
Grid leak. L. C. F. Horle. 1,693,899; Dec. 4.
Grinding machine. R. C. Mitchell. 1,693,723; Dec. 4.
Grinding machine. H. G. Weinland. 1,694,340; Dec. 4.
Grinding machines, Attachments for. J. Martone. 1,694,074; Dec. 4.
Ground box. R. M. Robinson. 1,693,868; Dec. 4.
Guard, Cattle. F. Lockett. 1,694,128; Dec. 4.
Guide track for screen construction. H. Dixson. 1,694,314; Dec. 4.
Gun mounting. J. B. Henderson. 1,693,712; Dec. 4.
Gun mounting and traveling carriage therefor. A. T. Dawson and G. T. Buckham. 1,693,692; Dec. 4.
Gun, Spray. G. A. Mueller. 1,694,078; Dec. 4.
Hæmacytometer counting chamber. O. Risch. 1,693,961; Dec. 4.
Hair dye. M. A. Mingus. Re17,153; Dec. 4.

Hammer, Electric. M. Santa Ana. 1,694,284; Dec. 4.
Hand, Mechanical. C. C. Coon. 1,694,058; Dec. 4.
Handle for smoking stands or similar articles. J. Zweig. Des. 77,142; Dec. 4.
Hanger: *See*—
Garment hanger.
Hanger and brush, Combined coat. Y. Sumi. Des. 77,134; Dec. 4.
Harness. G. Benford. 1,693,743; Dec. 4.
Headlight, Dirigible. W. R. Hose. 1,693,900; Dec. 4.
Headlights, Manufacture of. W. H. Wood. Re17,155; Dec. 4.
Health table, Neuropathic. M. Daniels and A. J. Wood. 1,693,810; Dec. 4.
Heat indicator for automotive internal-combustion engines, Spherical. H. C. Hebig. 1,693,984; Dec. 4.
Heater: *See*—
Air heater. Electric heater.
Convection heater. Gas heater.
Heating apparatus. W. H. Sommer. 1,694,191; Dec. 4.
Heating control system. G. H. Jump. 1,694,323; Dec. 4.
Heating system. D. Dana. 1,694,001; Dec. 4.
Heating system. M. R. Plunkett. 1,694,080; Dec. 4.
Heating unit. W. E. Hudson. 1,694,178; Dec. 4.
Hinge. U. G. Peterson. 1,693,992; Dec. 4.
Hinge strap or similar article. C. E. Horton. Des. 77,093–4; Dec. 4.
Hitch, Wagon-tractor. J. H. Sether. 1,693,673; Dec. 4.
Holder, Combined button and license-paper. H. E. Butler. 1,694,310; Dec. 4.
Holder, Cosmetic-pad. W. G. Kendall. 1,694,325; Dec. 4.
Holder, Flowerpot. H. P. Hanson. 1,693,896; Dec. 4.
Holder for floor polishers, Brush. L. N. Gillis. 1,693,919; Dec. 4.
Holder for gummed-tape-serving machines, Roll. W. A. Uttz, sr. 1,693,877; Dec. 4.
Holder, Greeting-card storing and displaying. C. Spaulding. 1,683,622; Dec. 4.
Holder, Neckwear. L. Stoltenberg. 1,693,826; Dec. 4.
Holder, Paint-can. A. G. Allen. 1,693,772; Dec. 4.
Holder, Sack. W. H. Nicholas. 1,694,079; Dec. 4.
Holder, Shade. F. Wening. 1,694,047; Dec. 4.
Holder, Toothpick. T. Bartholomew. 1,694,200; Dec. 4.
Holding device for tire expanders, Splice-. T. Midgley. 1,694,227; Dec. 4.
Honing razors and other knives, Composition of matter for use in. W. Hafner. 1,693,697; Dec. 4.
Hosiery and producing same, Reenforced. L. Kaplan. 1,694,324; Dec. 4.
Hour glass. L. P. Denny. 1,694,059; Dec. 4.
Humidity variations, System for detecting and controlling. W. R. Starkins. 1,694,107; Dec. 4.
Husking, podding, brushing, or treating grain, Machine for. L. Kaspar. 1,693,953; Dec. 4.
Hydrocarbon products, Preparing. N. E. Loomis. 1,694,272; Dec. 4.
Hydrocarbons into lower-boiling products, Converting. F. A. Howard. 1,694,262; Dec. 4.
Hydrometer. H. Neuwirth. 1,694,188; Dec. 4.
Igniting, Electric fuel. W. K. Booth. 1,694,053; Dec. 4.
Impact sections for a vehicle bumper. H. S. Jandus. Des. 77,101; Dec. 4.
Impregnating solution. L. V. Redman and H. C. Cheetham. 1,693,939; Dec. 4.
Impregnating wood with substances toxic to animal and bacterial life and fungus growths. C. B. Lipman and A. Gordon. 1,693,930; Dec. 4.
Impulse-testing equipment. M. L. Nelson. 1,693,725; Dec. 4.
Indicating devices. R. E. Booth. 1,694,307; Dec. 4.
Indicator: *See*—
Direction indicator. Oiling indicator.
Lubrication indicator. Service indicator.
Indicator device. F. H. White. 1,694,048; Dec. 4.
Induction apparatus, Electric. H. Grünholz. 1,694,318; Dec. 4.
Induction motor, Self-starting. K. L. Hansen and W. J. Oesterlein. 1,694,061; Dec. 4.
Injector, Capsule. F. C. Boyne. 1,694,246; Dec. 4.
Inking roller and projecting journal supports of same, Printer's. W. C. Hart. 1,694,217; Dec. 4.
Inlet box. H. D. Symonds and H. J. Cullen. 1,694,347; Dec. 4.
Instrument panel. J. T. Fitzsimmons. 1,694,006; Dec. 4.
Insulator structure. W. K. Naylor. Re17,150; Dec. 4.
Intermittent exhibiting device, Automatic. J. Gage. 1,693,893; Dec. 4.
Internal-combustion engine. F. Lang. 1,694,269; Dec. 4.
Internal-combustion engine. R. J. Lee. 1,694,098; Dec. 4.
Internal-combustion engine. J. G. Vincent. 1,693,832; Dec. 4.
Iron, Apparatus for the manufacture of pig. G. de Bethune. 1,693,916; Dec. 4.
Iron stand. C. Schulthess. 1,694,236; Dec. 4.
Ironing-board appliance. R. J. McJohn. 1,693,615; Dec. 4.
Jack for self-propelling vehicles. M. W. McCoy. 1,694,076; Dec. 4.
Joint: *See*—
Ball-and-socket joint. Oscillating joint.
Expansion joint. Universal joint.
Joint for tubular structures. H. Thum. 1,693,680; Dec. 4.
Joint—semihexagonal type, Combined expansion and contraction. A. C. Fischer. 1,694,213; Dec. 4.
Jointing tubular members. F. Faudi. 1,693,839; Dec. 4.
Joints, Making ball-and-socket. W. J. Fiegel and W. S. Enderick. 1,693,748; Dec. 4.
Knockdown tank. Z. T. Ellis. 1,693,695; Dec. 4.

Toy jig saw. H. C. Madsen. 1,694,070; Dec. 4.
Tracer point. J. C. and R. D. Shaw. 1,694,022; Dec. 4.
Track-link connection. F. Grotts. 1,694,035; Dec. 4.
Tractor. A. McDowall. 1,694,226; Dec. 4.
Tractor guide. C. E. Everett. 1,694,210; Dec. 4.
Traffic-controlling apparatus, Railway-. H. A. Thompson. 1,694,339; Dec. 4.
Traffic signal, Automobile. W. J. Kramer. 1,694,184; Dec. 4.
Trailer. E. A. King. 1,694,267; Dec. 4.
Trailer for self-propelled vehicles. G. T. Ronk. 1,693,869; Dec. 4.
Train-control device. C. A. Nelson. 1,693,636; Dec. 4.
Train-indication system. G. C. Whitney. 1,693,739; Dec. 4.
Transfer mechanism for upsetting machines. C. O. Petitjean. 1,693,664; Dec. 4.
Transmission, Electric-current. R. C. Mathes. 1,693,955; Dec. 4.
Transmission of pictures. E. F. W. Alexanderson. 1,694,302; Dec. 4.
Transmission of pictures, Electrical. E. F. W. Alexanderson. 1,694,301; Dec. 4.
Transmission of pictures, Method and apparatus for. A. Weaver. 1,693,685; Dec. 4.
Transmission of power to vehicles. A. U. Avera. 1,693,914; Dec. 4.
Treating filaments, Method and apparatus for. G. E. Inman. 1,694,265; Dec. 4.
Treating impure lead. G. E. Dalbey and T. P. Hanford. 1,693,640; Dec. 4.
Treating impure lead and lead alloys. G. E. Dalbey and T. P. Hanford. 1,693,639; Dec. 4.
Treating metallic particles. G. E. Dalbey and T. P. Hanford. 1,693,642; Dec. 4.
Treating mixtures containing alkali salts of certain metals. G. E. Dalbey and T. P. Hanford. 1,693,641; Dec. 4.
Treating starch, Method of and apparatus for. H. W. Harrigan. 1,693,649; Dec. 4.
Treating tobacco, Method of and apparatus for. W. Milligan and W. E. Palmer. 1,693,989; Dec. 4.
Treatment of crude benzoles, Apparatus for the continuous preliminary. E. A. Barbet. 1,693,774; Dec. 4.
Trigger mechanism for double-barrel firearms, Single-. C. W. Lindsay. 1,693,929; Dec. 4.
Truck. C. Klein. 1,694,342–3; Dec. 4.
Truss. N. B. Obbard. 1,693,660; Dec. 4.
Tube and making same, Insulating. H. H. Wermine. 1,693,630; Dec. 4.
Tubes, Apparatus for manufacturing inner. J. P. Coe. 1,693,637; Dec. 4.
Tubes, Making inner. J. P. Coe. 1,693,636; Dec. 4.
Tubular articles, Producing. A. C. Lusher. 1,693,610; Dec. 4.
Tubular members, Attachment for reshaping. C. J. Louis. 1,693,850; Dec. 4.
Tug wheel. J. I. McKean. 1,694,274; Dec. 4.
Tunneling machine. H. E. Marsh. 1,693,954; Dec. 4.
Typewriter, Graduating character spacing in a. K. C. and J. W. O'Bryan. 1,693,797; Dec. 4.
Typewriters and the like, Space-graduating mechanism for. K. C. and J. W. O'Bryan. 1,693,796; Dec. 4.
Typewriting machine. H. O. Blaisdell. 1,693,705; Dec. 4.
Typewriting machine. W. A. Dobson. 1,693,708; Dec. 4.
Umbrella rib and spreader structure and producing the same. F. Fabbrin. 1,693,948; Dec. 4.
Underfloor duct system. H. S. Walker. 1,693,682; Dec. 4.
Underframe for automobile vehicles. O. Windberger. 1,694,112; Dec. 4.
Universal joint. C. D. Cutting. 1,693,593–4; Dec. 4.
Valve. G. R. Wildern. 1,693,945; Dec. 4.
Valve, Alarm check. L. A. Grimes. 1,693,842; Dec. 4.
Valve, Combination mixing. V. D. Hennessey. 1,693,758; Dec. 4.
Valve, Flush. C. R. Manion. 1,694,072; Dec. 4.
Valve for water-circulating systems, Check. N. I. Clark. 1,693,888; Dec. 4.
Valve lock. J. Waselak. 1,694,086; Dec. 4.
Valve, Noiseless check. D. Sandford. 1,693,619; Dec. 4.
Valve, Rotary expansion. T. I. Potter. 1,693,863; Dec. 4.
Valve stem and pressure gauge, Tire-. N. T. Shorts. 1,694,286; Dec. 4.
Valves in annular tubes, Inserting. C. E. Maynard. 1,694,225; Dec. 4.
Vanity case. H. Leberman. 1,694,185; Dec. 4.
Vehicle accessory motors, Operating motor-. J. B. Oishei. 1,694,279; Dec. 4.
Vehicle body. P. E. Breneman. 1,693,836; Dec. 4.
Vehicle, Double-deck passenger. M. J. Forrester. 1,694,007; Dec. 4.
Vehicle, Juvenile. H. L. Kraeft. 1,694,183; Dec. 4.
Wall construction, Corncrib-. H. R. Straight. 1,694,083; Dec. 4.
Wall fitting, Combination electric. T. A. Both. 1,694,158; Dec. 4.
Wall fixture. M. N. Russell. Des. 77,126; Dec. 4.
Washer-setter spout. E. Hutchens. 1,693,901; Dec. 4.
Washing, drying, and polishing tumblers, cups, and like articles. A. Griffiths. 1,693,780; Dec. 4.
Washing machine. C. C. Howe. 1,693,785; Dec. 4.
Washing tank, Vehicle. M. D. Woodling. 1,694,197; Dec. 4.
Watch, Wristlet. S. N. Burgess. Des. 77,057; Dec. 4.
Waterproofing compound and making the same. C. E. Lord. 1,693,718; Dec. 4.
Water softener, Salt-pot attachment, Base-exchange. C. T. McGill. 1,694,332; Dec. 4.
Waving device, Hair-. F. R. Marcel. 1,694,073; Dec. 4.
Wax distributor for floor-polishing machines. T. A. Marshall. 1,693,908; Dec. 4.
Weed killer and killing weeds. R. N. Chipman. 1,694,205; Dec. 4.
Welding machine, Electric. W. E. Reed. 1,694,081; Dec. 4.
Wheel: *See*—
Tug wheel.
Wheel for drilling-rig structures. R. R. Bloss. 1,694,350; Dec. 4.
Wick, Burner. A. Heldrich. 1,693,604; Dec. 4.
Window cleaner. G. L. Baker and H. W. Pattilo. 1,694,245; Dec. 4.
Window guard. A. T. McWane. 1,693,853; Dec. 4.
Window-operating mechanism. Motor-vehicle bus-. L. L. Corcoran. 1,693,690; Dec. 4.
Window-shade fixture. J. W. Westendorf. 1,694,154; Dec. 4.
Windshield cleaner. J. X. Phillips, jr. 1,693,665; Dec. 4.
Wool felts, Manufacture of. E. Brecht and R. Fugmann. 1,694,032; Dec. 4.
Workholder. J. Edgar. 1,694,034; Dec. 4.
Work transferrer, Automatic-machine. G. P. Peterson 1,693,959; Dec. 4.
Wrapping cheese. C. F. Doane. 1,693,694; Dec. 4.
Wrapping machine for stick candy. E. L. Smith, A. E. Phelon, and P. Langhammer. 1,693,674; Dec. 4.
Wrapping machine, Soap-. E. L. Smith and A. E. Phelon. 1,693,675; Dec. 4.
Wreath, Decorative. W. G. Jopson. 1,694,125; Dec. 4.
Wrench: *See*—
Faucet wrench.
Wrench. W. I. O'Neill. 1,694,140; Dec. 4.
Wringer. S. E. Schroeder. 1,693,821; Dec. 4.
Yarns or threads, Production of artificial. G. Lardy. 1,693,759; Dec. 4.

# CLASSIFICATION OF PATENTS

## ISSUED DECEMBER 4, 1928.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 19: 1,693,667
46: 1,694,284
2— 30: 1,693,799
122: 1,694,206
181: 1,694,230
241: 1,694,324
4— 252: 1,693,744
5— 146: 1,693,795
260: 1,694,359
327: 1,694,095
8— 12: 1,693,926
9— 20: 1,693,779
21: 1,693,847
10— 1: 1,694,229
4: 1,694,303
25: 1,693,664
86: 1,693,957
141: 1,693,768
11— 1: 1,694,055
12— 17: 1,693,634
133: 1,693,976
15— 23: 1,693,964
101: 1,693,780
131: 1,694,327
133: 1,694,306
146: 1,693,919
158: 1,694,257
1,694,273
239: 1,693,803
253: 1,693,665
255: 1,694,245
265: 1,693,601
16— 19: 1,693,920
21: 1,693,657
42: 1,693,658
85: 1,693,860
1,694,207
114: 1,693,772
144: 1,693,709
163: 1,693,902
17— 5: 1,694,018
18— 1: 1,693,901
35: 1,694,025
48: 1,694,217
53: 1,694,260
54: 1,693,759
19— 75: 1,693,754
146: 1,694,032
20— 1.4: 1,694,016
1.13: 1,694,309
6: 1,693,655
34: 1,694,180
56.4: 1,694,002
1,694,003
69: 1,694,291
71: 1,693,853
100: 1,694,109
22— 2: 1,694,299
13: 1,694,105
65: 1,693,654
1,693,703
77: 1,694,118
1,694,119

Medicine. Fowler's Medicated Fruits. 250,647; Dec. 11; Serial No. 267,412; published Sept. 25, 1928.
Medicine. Hollings-Smith Co. 250,467; Dec. 11; Serial No. 270,483; published Sept. 25. 1928.
Medicine. Vial. 72,610; renewed Feb. 9, 1929.
Medicines. Dr. Bob Medical Company. 71,434; renewed Nov. 24, 1928.
Oil for chemical, etc., purposes, White. Stanco Incorporated. 250,426; Dec. 11; Serial No. 269,803; published Oct. 2, 1928.
Ointment or liniment used in treating boils, etc. W. A. Smiley. 250,557; Dec 11; Serial No 262,940; published Sept 25, 1928.
Ointments. Senola Drug Co. 250,382; Dec. 11; Serial No. 270,354; published Oct. 2, 1928.
Perfumery, face powder, etc. M. Blume. 250,519; Dec. 11; Serial No. 264,960; published Oct. 2, 1928.
Perfumery, toilet waters, lip sticks, etc. P. Coats. 250,496; Dec. 11; Serial No. 269,394; published Oct. 2, 1928.
Perfumes. J. A. Rietmann. 250,577; Dec. 11; Serial No. 258,786; published Sept. 25, 1928.
Pharmaceutical preparation. Hy-Nap Chemical Company. 250,651; Dec. 11; Serial No. 268,546; published Sept. 25, 1928.
Poison. L. V. Taylor. 250,379; Dec. 11; Serial No. 270,400; published Sept. 25, 1928.
Powder and cream, Depilatory. Hall & Ruckel, Inc. 250,619; Dec. 11; Serial No. 271,184; published Sept. 25, 1928.
Powder, Douche. W. B. Smith. 250,421; Dec. 11; Serial No. 269,864; published Oct. 2, 1928.
Powder, lip sticks, perfumes, etc., Face and talc. O. A. Gross. 250,537; Dec. 11; Serial No. 267,193; published Sept. 25, 1928.
Powders and rouges, lip sticks, face lotion, etc., Compact. I. Miller & Sons, Inc. 250,663; Dec. 11; Serial No. 257,691; published Sept. 25, 1928.
Preparation, Blood-forming and blood-improving. Aktiengesellschaft Hommel's Haematogen. 71,984; renewed Dec. 29, 1928.
Purifier with cod-liver oil, Blood. Anchor Drug Co. 250,650; Dec. 11; Serial No. 268,570; published Sept. 25, 1928.
Remedy. N. C. Poison. 72,726; renewed Feb. 16, 1929.
Remedy. H. M. Strange. 73,345; renewed Apr. 13, 1929.
Salt used as a dietary substitute for table salt. Sharp & Dohme, Incorporated. 250,447; Dec. 11; Serial No. 270,727; published Sept. 25, 1928.
Salve. J. B. Hutchins. 250,466; Dec. 11; Serial No. 270,492; published Oct. 2, 1928.
Salve for animals, Healing. Bickmore Gall Cure Co. 72,599; renewed Feb. 9, 1929.
Tonic for dressing the hair. F. E. Ischerland. 250,626; Dec. 11; Serial No. 271,258; published Sept. 25, 1928.
Tonic, General. Societa Anonima Distillerie G. Ramazzotti fu Ausano. 250,653; Dec. 11; Serial No. 268,469; published Sept. 25, 1928.

CLASS 7.

Rope and cables and for high-carbon wire, Wire. Union Wire Rope Corporation. 250,406; Dec. 11; Serial No. 270,307; published Sept. 25, 1928.
Twine. Hanover Cordage Company. 250,628; Dec. 11; Serial No. 271,253; published Sept. 25, 1928.
Twine, Hemp. Hanover Cordage Company. 250,616; Dec. 11; Serial No. 271,252; published Set. 25, 1928.
Twines, White fibre. Hanover Cordage Company. 250,627; Dec. 11; Serial No. 271,254; published Sept. 25, 1928.

CLASS 9.

Dynamite. Hercules Powder Company. 250,525; Dec. 11; Serial No. 264,304; published Sept. 25, 1928.
Fireworks. National Fireworks Distributing Co. of Arizona. 250,576; Dec. 11; Serial No. 259,251; published Sept. 25, 1928.
Matches. Amtorg Trading Corporation. 250,481; Dec. 11; Serial No. 270,869; published Sept. 25, 1928.
Matches. Vulcan Match Co. 250,581; Dec. 11; Serial No. 271,460; published Sept. 25, 1928.

CLASS 10.

Fertilizer. Baugh and Sons Company. 250,694; Dec. 11.
Fertilizer. American Fertilizing Company. 250,415; Dec. 11; Serial No. 270,162; published Sept. 25, 1928.
Fertilizers. Georgia Chemical Works. 250,414; Dec. 11; Serial No. 270,181; published Sept. 25, 1928.
Fertilizers. Limestone Products Corporation of America. 250,383; Dec. 11; Serial No. 270,342; published Sept. 25, 1928.
Fertilizers. Limestone Products Corporation of America. 250,679; Dec. 11; Serial No. 270,037; published Sept. 25, 1928.

CLASS 11.

Dryers for inks. H. Lanschey, Inc. 250,392; Dec. 11; Serial No. 247,329; published Sept. 25, 1928.
Ink ribbons and carbon papers. A. Padberg. 250,472; Dec. 11; Serial No. 270,779; published Oct. 2, 1928.
Inking materials. H. Lanschey, Inc. 250,391; Dec. 11; Serial No. 247,330; published Sept. 25, 1928.
Inking materials, Antiabsorption. H. Lanschey, Inc. 250,393–4; Dec. 11; Serial Nos. 247,326–7; published Sept. 25, 1928.
Inking materials, Antisiccative. H. Lanschey, Inc. 250,398; Dec. 11; Serial No. 247,322; published Sept. 25, 1928.
Inking materials for increasing pliability. H. Lanschey, Inc. 250,396; Dec. 11; Serial No. 247,325; published Sept. 25, 1928.
Inking materials for reviving and increasing pliability. H. Lanschey, Inc. 250,397; Dec. 11; Serial No. 247,323; published Sept. 25, 1928.
Metal leaf and pigment mounted on a roll of paper, Imitation. Peerless Roll Leaf Co. 250,726; Dec. 11.

CLASS 12.

Asphalt, asphaltic binder, cement, etc. Gilmore Oil Company. 250,506; Dec. 11; Serial No. 269,112; published Sept. 4, 1928.
Asphaltic surfacing material. J. W. Craig. 250,678; Dec. 11; Serial No. 248,090; published Aug. 7, 1928.
Baffle mix. Power Plant Economy Co. 250,644; Dec. 11; Serial No. 267,454; published Aug. 7, 1928.
Bituminous compounds and emulsions miscible in water. Bitumuls Corporation. 250,563; Dec. 11; Serial No. 262,389; published Aug. 14, 1928.
Bituminous materials. Arthur Victor Leggo and Ernest Barton Hack. 250,667; Dec. 11; Serial No. 256,527; published Aug. 7, 1928.
Blocks and sheets formed of cork and cement. W. H. D. Hinchman. 250,502; Dec. 11; Serial No. 269,190; published Sept. 11, 1928.
Boards or sheets made of cork. Armstrong Cork & Insulation Company. 250,503; Dec. 11; Serial No. 269,176; published Sept. 11, 1928.
Building units. Cemroc, Inc. 250,517; Dec. 11; Serial No. 265,257; published Aug. 7, 1928.
Cabins, Sectional camp. Foldahome Manufacturing Company of California. 250,513; Dec. 11; Serial No. 265,783; published Aug. 7, 1928.
Cement, Building. Utica Hydraulic Cement Company. 250,725; Dec. 11.
Cement or mortar, High-temperature. Denver Fire Clay Company. 250,717; Dec. 11.
Cements, High-temperature. J. A. Faulkner. 250,722; Dec. 11.
Columns, metal window, etc., Steel supporting. James Manufacturing Company. 250,539; Dec. 11; Serial No. 267,054; published Aug. 7, 1928.
Doors, Garage. Overhead Door Corporation. 250,386; Dec. 11; Serial No. 219,134; published Aug. 21, 1928.
Doors, lumber, and plywood, etc. Morrill & Sturgeon Lumber Company. 250,516; Dec. 11; Serial 265,282; published Aug. 7, 1928.
Doors, Wooden. Western Door Manufacturers Association. 250,532; Dec. 11; Serial 263,449; published Aug. 7, 1928.
Flooring and trim, Hardwood. Bradley Lumber Company of Arkansas. 250,655; Dec. 11; Serial 268,418; published Sept. 4, 1928.
Granite in blocks, Quarried. Elberton Quarries Inc. 250,518; Dec. 18; Serial No. 265,201; published Aug. 21, 1928.
Lath, Metal. North Western Expanded Metal Company. 250,531; Dec. 11; Serial No. 263,603; published Aug. 7, 1928.
Lime, Ground. Kelley Island Lime and Transport Company. 250,637; Dec. 11; Serial 267,775; published Aug. 14, 1928.

Lumber, timbers, beams, shingles, etc. Weyerhaeuser Forest Products. 250,548; Dec. 11; Serial 266,409; published Aug. 14, 1928.
Materials for use in partition blocks. Structural Gypsum Corporation. 250,534; Dec. 11; Serial No. 267,325; published Sept. 4, 1929.
Mineral manufactures. Moler Products Limited. 250,526; Dec. 11; Serial No. 264,039; Dec. 11; published Sept. 4, 1928.
Refractories and refractory materials. R. L. Frink. 250,659; Dec. 11; Serial No. 258,740; published Sept. 18, 1928.
Roof coating, Plastic. Mineral-Lac Paint Co. 250,658; Dec. 11; Serial No. 265,299; published Sept. 4, 1928.
Roofing and building paper. Safepack Mills. 250,552; Dec. 11; Serial No. 263,427; published Aug. 21, 1928.
Roofing, composition shingles, etc., Composition roll. Flintkote Company. 250,528–9; Dec. 11; Serial Nos. 263,869–70; published Aug. 21, 1928.
Shingles. Flintkote Company. 250,643; Dec. 11; Serial No. 267,570; published Aug. 21, 1928.
Shingles and shakes, Wooden. Weyerhaeuser Forest Products. 250,590; Dec. 11; Serial No. 268,759; published Sept. 11, 1928.
Shingles, Composition roofing. Flintkote Company. 250,541; Dec. 11; Serial No. 266,858; published Aug. 21, 1928.
Shingles, Wooden. Coast Cedar Shingle Company. 250,648–9; Dec. 11; Serial Nos. 268,582–3; published Aug. 28, 1928.
Shingles, Wooden. Coast Cedar Shingle Company. 250,690; Dec. 11; Serial No. 268,584; published Aug. 28, 1928.
Steel reenforcing element. Duplex Steel Re-Enforcement Company. 250,689; Dec. 11; Serial No. 268,592; published Sept. 11, 1928.
Stone, Artificial building. V. Lachin. 250,646; Dec. 11; Serial No. 267,428; published Aug. 7, 1928.
Tiles, wall tiles, etc., Floor. Grueby Faience and Tile Company. 250,629; Dec. 11; Serial No. 268,093; published Aug. 28, 1928.
Tree-cavity filler. Lilly Tree Surgeons, Inc. 250,520; Dec. 11; Serial No. 264,727; published Aug. 21, 1928.
Tree-cavity filler. Lilly Tree Surgeons, Inc. 250,521; Dec. 11; Serial No. 264,726; published Aug. 28, 1928.
Tree-wound dressing. Davy Tree Expert Company. 250,527; Dec. 11; Serial No. 264,023; published Aug. 7, 1928.
Wall board, fiber board, plaster board, etc. Beaver Products Company. 250,399; Dec. 11; Serial No. 245,077; published Jan. 3, 1928.
Wall-finishing material. Paretex Company. 250,522; Dec. 11; Serial No. 264,695; published Sept. 11, 1928.
Waterproofing material. W. A. Collings. 250,677; Dec. 11; Serial No. 249,512; published Aug. 7, 1928.
Weather strips, screen doors, etc. Victor Parting Bead Co. 250,550; Dec. 11; Serial No. 265,864; published Sept. 18, 1928.

CLASS 13.

Bolts and screws. Buffalo Bolt Company. 73,356; renewed Apr. 13, 1929.
Casters, Steel. Bond Foundry and Machine Company. 250,408; Dec. 11; Serial No. 270,276; published Sept. 25, 1928.
Cord plugs for cleaning condenser tubes. Garlock Packing Company. 250,480; Dec. 11; Serial No. 270,837; published Oct. 2, 1928.
Enameled and sheet-metal wares. Lalance & Grosjean Mfg. Co. 250,639; Dec. 11; Serial No. 267,712; published Sept. 25, 1928.
Faucets. Mueller Co. 250,569; Dec. 11; Serial No. 261,274; published Oct. 2, 1928.
Handles for self-closing bibs and faucets. H. Mueller Manufacturing Company. 72,222; renewed Jan. 12, 1929.
Hangers, Metallic eaves. E. Tangard. 250,599; Dec. 11; Serial No. 270,060; published Sept. 25, 1928.
Ladles, tea strainers, napkin rings, plates, dishes, etc., Gravy. Dirigold Corporation. 250,418; Dec. 11; Serial No. 226,041; published Apr. 19, 1927.
Metal tubes, wire nails, wire staples, etc. Pittsburgh Steel Company. 250,716; Dec. 11.
Pipe joints, Metal. Rapp Company, Inc. 250,572; Dec. 11; Serial No. 260,849; published Sept. 25, 1928.
Pots, pans, kettles, etc., Aluminum. West Bend Aluminum Company. 250,672; Dec. 11; Serial No. 253,169; published Oct. 2, 1928.
Regulators, Fluid-pressure. Cleveland Faucet Co. 82,195; renewed Nov. 29, 1928.
Sprinklers, Lawn, orchard, garden, nursery, and golf-course. Thompson Manufacturing Company. 250,720; Dec. 11.
Strainers. Washburn Company. 250,596; Dec. 11; Serial No. 270,102; published Sept. 25, 1928.
Tubing, Metal. Wolverine Tube Company. 250,433; Dec. 11; Serial No. 269,705; published Sept. 25, 1928.
Valves, Back-water. Kennedy Valve Mfg. Co. 250,693; Dec. 11.
Valves, Cast-iron or steel. Steel Drum Accessories Corporation. 250,698–700; Dec. 11.
Wickets and grilles, Metal door. Ackerman Door Interviewer Corp. 250,501; Dec. 11; Serial No. 269,215; published Sept. 25, 1928.

CLASS 14.

Steel, Tool. Vulcan Crucible Steel Co. 250,715; Dec. 11.
Tin, Roofing. J. S. Hoy. 68,384; renewed Apr. 7, 1928.
Tin roofing. J. S. Hoy. 68,477–8; renewed Apr. 14, 1928.

CLASS 15.

Gasoline, kerosene, etc. Seneca Oil Works. 250,692; Dec. 11; Serial No. 253,552; published Sept. 25, 1928.

CLASS 16.

Calcimine. Muralo Company. 73,126; renewed Mar. 16, 1929.
Cleaner and automobile polishing solution, Automobile. G. I. Spear. 250,636; Dec. 11; Serial No. 267,870; published Oct. 2, 1928.
Decorating materials, Painters'. Beautext Company. 250,440; Dec. 11; Serial No. 269,505; published Sept. 25, 1928.
Enamel paint. Ernecke and Salmstein. 71,334; renewed Nov. 17, 1928.
Hydrocarbon solvents. Standard Oil Company of New Jersey. 250,562; Dec. 11; Serial No. 262,422; published Oct. 2, 1928.
Lacquers, lacquer enamels, varnishes, etc. Egyptian Lacquer Manufacturing Company. 250,478–9; Dec. 11; Serial Nos. 270,833–4; published Sept. 25, 1928.
Paint, Cold-water. Muralo Company. 72,377–8; renewed Jan. 19, 1929.
Paint remover. Jail Bird Paint Remover Co. 250,657; Dec. 11; Serial No. 268,376; published Sept. 25, 1928.
Paints, paint enamels, and varnishes, Ready-mixed. O. Fitzpatrick. 250,703; Dec. 11.
Paints, stains, and colors. A. Wilhelm Company. 71,571; renewed Dec. 1, 1928.
Painters' materials. A. Wilhelm Company. 71,365–6; renewed Nov. 24, 1928.

CLASS 17.

Cigars. De Nobili Cigar Company. 250,597–8; Dec. 11; Serial Nos. 270,076–6; published Oct. 2, 1928.
Cigars. L. F. Geraghty. 250,499; Dec. 11; Serial No. 269,285; published Sept. 25, 1928.
Cigars. George Schafer Cigar Company. 250,483; Dec. 11; Serial No. 270,882; published Sept. 25, 1928.

CLASS 19.

Automobiles and motor trucks, etc. Saint-Didier Automobiles. 250,638; Dec. 11; Serial No. 267,724; published Sept. 25, 1928.
Trailers, Camping. E. P. Gilkison & Sons Company. 250,445; Dec. 11; Serial No. 270,744; published Oct. 2, 1928.

CLASS 20.

Floor covering, Hard-surfaced. George W. Blabon Company. 250,476; Dec. 11; Serial No. 270,819; published Sept. 25, 1928.
Oilcloth and oilcloth table covers. Standard Textile Products Company. 250,605; Dec. 11; Serial No. 271,089; published Sept. 25, 1928.

CLASS 21.

Electrical supplies. F. Bissell Company. 73,134; renewed Mar. 16, 1929.
Electromagnets. Acme Wire Company. 73,129; renewed Mar. 16, 1929.
Insulated electrical conductors. Acme Wire Company. 72,677–9; renewed Feb. 9, 1929.
Testing device for electric wiring systems. S. B. Berkowich. 250,711; Dec. 11.

CLASS 22.

Bait, Animal. Minner & Co. 250,710; Dec. 11.
Bait, Artificial. M. B. Roberts. 250,464; Dec. 11; Serial No. 270,508; published Sept. 18, 1928.
Dolls. Ideal Novelty & Toy Co. 250,428; Dec. 11; Serial No. 269,787; published Sept. 18, 1928.
Fishing tackle. Clark-Horrocks Co. 73,255–7; renewed Apr. 6, 1929.
Games, Board. A. Master. 250,686; Dec. 11; Serial No. 269,905; published Sept. 25, 1928.
Games, Board. A. Master. 250,687; Dec. 11; Serial No. 269,904; published Oct. 2, 1928.
Golf bags. Oshkosh Trunk Company. 250,566; Dec. 11; Serial No. 261,585; published Sept. 25, 1928.
Tennis rackets, tennis balls, and tennis nets. The Fair. 73,135; renewed Mar. 16, 1929.
Toy aeroplanes, Foldable. A. Bissiri. 250,680; Dec. 11; Serial No. 270,006; published Sept. 18, 1928.
Toys, Structural. G. B. Lewis Company. 250,410; Dec. 11; Serial No. 270,252; published Oct. 2, 1928.

CLASS 23.

Bearings and parts thereof, Roller. Railway Motors Corporation. 250,458; Dec. 11; Serial No. 270,558; published Oct. 2, 1928.
Cleaners for internal-combustion engines, Air. Donaldson Company. 250,485–7; Dec. 11; Serial No. 270,917–19; published Sept. 25, 1928.
Clippers, Hedge. American Implement Company. 250,442; Dec. 11; Serial No. 270,762; published Sept. 25, 1928.

Drills and rotary drilling bits, Core. Elliott Core Drilling Company. 250,564; Dec. 11; Serial No. 262,071; published Sept. 25, 1928.
Engines and parts thereof, Internal-combustion. Aeronautical Products Corporation. 250,446; Dec. 11; Serial No. 270,734; published Sept. 25, 1928.
Fire-extinguisher apparatus, Portable hand. R. W. McMullen. 250,400; Dec. 11; Serial No. 233,211; published Nov. 15, 1927.
Fire-extinguishing apparatus, Portable hand. International Fire Equipment Corporation. 250,444; Dec. 11; Serial No. 270,746; published Sept. 25, 1928.
Harvester, thresher, and separator, Combined. Gleaner Combine Harvester Corporation. 250,631; Dec. 11; Serial No. 268,036; published Sept. 25, 1928.
Machinery, Excavating, elevating, and conveying. Jeffrey Manufacturing Company. 250,411; Dec. 11; Serial No. 270,247; published Oct. 2, 1928.
Pins, Fan-pulley. Hays-Fischer Manufacturing Company. 250,664; Dec. 11; Serial No. 257,411; published Sept. 25, 1928.
Pumps and pump parts. Ranchers' Manufacturing Company. 250,685; Dec. 11; Serial No. 269,915; published Sept. 25, 1928.
Rakes, hoes, shovels, etc. A. Roesch. 250,512; Dec. 11; Serial No. 269,037; published Sept. 25, 1928.
Razor blades. Rey Safety Razor Corporation. 250,602; Dec. 11; Serial No. 271,147; published Oct. 2, 1928.
Razors, shears, scissors, etc. C. S. Bresnick. 250,452; Dec. 11; Serial No. 270,689; published Sept. 25, 1928.
Ring travelers. U. S. Ring Traveler Company. 250,571; Dec. 11; Serial No. 261,154; published Sept. 25, 1928.
Saws, etc., All kinds of. E. C. Atkins & Company. 250,666; Dec. 11; Serial No. 256,601; published Jan. 24, 1928.
Slicers, Cheese. Glahnsohn Manufacturing Company. 250,420; Dec. 11; Serial No. 270,407; published Sept. 25, 1928.
Spoons, knives, forks, etc. Dirigold Corporation. 250,390; Dec. 11; Serial No. 192,965; published Oct. 2, 1928.
Tank and nonmeasuring pump, Combined lubricant. Bennett Pumps Corporation. 250,675; Dec. 11; Serial No. 251,163; published Sept. 20, 1927.
Tools for removing rims from automobile tires. J. Otti. 250,706; Dec. 11.

CLASS 24.

Cylinders for clothes-washing machines and extractors, Cast-metal. Asher Manufacturing Company. 250,425; Dec. 11; Serial No. 269,819; published Sept. 25, 1928.

Nuts, Salted. Purity Candy Company. 250,618; Dec. 11; Serial No. 271,196; published Sept. 25, 1928.
Olive oil. I. Nuccio. 250,423; Dec. 11; Serial No. 269,851; published Sept. 18, 1928.
Peanuts, Salted. Lummis & Company. 250,482; Dec. 11; Serial No. 270,880; published Sept. 25, 1928.
Pig's foot tasties, sliced beef, Vienna sausage, etc., Pickled. Silz Packing Company. 250,530; Dec. 11; Serial No. 263,333; published Sept. 25, 1928.
Pop corn. Le-Mul Mfg. Co. 250,559; Dec. 11; Serial No. 262,719; published Oct. 2, 1928.
Potatoes, Fresh. Benson-Le Fort Co. 250,588; Dec. 11; Serial No. 268,840; published Oct. 2, 1928.
Prunes, Dried. Independent Growers Packing Company. 250,620; Dec. 11; Serial No. 271,304; published Oct. 2, 1928.
Sorghum, molasses, and syrup. Bliss Syrup Refining Co. 73,172; renewed Mar. 23, 1929.
Syrup, Malt. Pabst Corporation. 250,494; Dec. 11; Serial No. 269,480; published Sept. 18, 1928.
Vegetables and fruits, Fresh. N. Nojiri. 250,450; Dec. 11; Serial No. 270,714; published Oct. 2, 1928.

CLASS 49.

Alcohol, Pure ethyl. Publicker Commercial Alcohol Co. of Delaware. 250,586; Dec. 11; Serial No. 268,037; published Sept. 25, 1928.

CLASS 50.

Sheeting and holding straps, Rubber. H. L. Kaufmann. 250,713; Dec. 11.

## ALPHABETICAL LIST OF LABELS.

Al. Littlebear's 'Wigwam' Indian Herb Tonic. For a Combination of Herbs as a Medicine. A. Littlebear. 35,074; Dec. 11.
Al. Littlebear's 'Wigwam' Indian Oil. For Combination of Oils, Gums, and Herbs. A. Littlebear. 35,075. Dec. 11.
All Nations. For Baseball Uniforms. P. Mootz. 35,080; Dec. 11.
Arcturus A-C Amplifier Type 48. For Radiotubes. Arcturus Radio Company. 35,055; Dec. 11.
Arcturus A-C Amplifier Type 126. For Radiotubes. Arcturus Radio Company. 35,052; Dec. 11.
Arcturus A-C Amplifier Type 120h. For Radiotubes. Arcturus Radio Company. 35,053; Dec. 11.
Arcturus A-C Detector Type 127. For Radiotubes. Arcturus Radio Company. 35,054; Dec. 11.
Arcturus A-C Full Wave Rectifier Type 180. For Radiotubes. Arcturus Radio Company. 35,057; Dec. 11.
Arcturus A-C Power Amplifier Type 071h. For Radiotubes. Arcturus Radio Company. 35,051; Dec. 11.
Arcturus A-C Power Amplifier Type 40. For Radiotubes. Arcturus Radio Company. 35,056; Dec. 11.
Arwell Klorogas. For Household Deodorant and Insecticide. Arwell Products Company. 35,058; Dec. 11.
Bettina's. For Confectionery. E. Beye. 35,059; Dec. 11.
Blue-Bill. For Canned Salmon. Point Adams Packing Co. 35,086; Dec. 11.
Blue Flag. For Fresh Deciduous Fruits. Earl Fruit Company. 35,063; Dec. 11.
Cachew Nut. For Cashew Nuts. S. Cohn. 35,061; Dec. 11.
Cape Cod Cookie. For Cookies. Johnson Educator Food Co. 35,069; Dec. 11.
Cape Cod Cookies. For Cookies. Johnson Educator Food Co. 35,068; Dec. 11.
Deutscher Club Pale Dry Ginger Ale. For Ginger Ale. Independent Milwaukee Brewery. 35,065–6; Dec. 11.
Foot Saver Shoes. For Footwear. Julian & Kokenge Company. 35,070; Dec. 11.
For You. For Candy. Reichardt Cocoa & Chocolate Co. 35,088; Dec. 11.
Ginger-Bubbles. For Ginger Ale. A. C. Dittrich. 35,062; Dec. 11.
Golden Bear Comb Honey. For Honey. Mountain States Honey Producers Association. 35,081; Dec. 11.
Golden Bear Honey. For Honey. Mountain States Honey Producers Association. 35,082; Dec. 11.
Grandma's Honey Cocoanut Macaroons. For Macaroons. Lantz Bros. Baking Co. 35,073; Dec. 11.
Grandma's Oatmeal Cookies. For Oatmeal Cookies. Lantz Bros. Baking Co. 35,072; Dec. 11.
Han-Dee Bread. For Bread. Papendick Bakery Co. 35,084; Dec. 11.
Have You It? For a Card Game. Selchow and Righter Co. 35,090; Dec. 11.
Honors. For Bridge Scorer. Magnetik Novelty Corp. 35,076; Dec. 11.
It. For Confection Bar. Regal Confections Company. 35,087; Dec. 11.
Jewel Mountain Blend Coffee. For Coffee. Jewel Tea Co. 35,067; Dec. 11.
Lady Lane Arch-Supporting Shoes. For Shoes. Lane Bryant, Inc. 35,060; Dec. 11.
Mystic Rub. For Liniment. Mystic Pharmacal Co. 35,083; Dec. 11.
Nu-A-Gain. For Liquid Polish for Varnish and Lacquered Surfaces. C. W. Fleming and Co. 35,064; Dec. 11.
Pack O-Bulk. For Rice. Lake Charles Rice Milling Company of Louisiana, Inc. 35,071; Dec. 11.
Pico Brand Barley Malt Syrup. For Barley Malt Syrup. Pilzner Importing Co. 35,085; Dec. 11.
Reiter Oil, for Cooking, for Salads, for Frying. For Salad Oil. B. Reiter. 35,089; Dec. 11.
The Reputation Behind This Tag Is the Grocer's Real Safeguard. For Potatoes. Albert Miller & Company. 35,077; Dec. 11.
This Tag Identifies Bill Spud Brand Seed. For Potatoes. Albert Miller & Company. 35,078; Dec. 11.
To The Retailer. For Potatoes. Albert Miller & Company. 35,079; Dec. 11.

## ALPHABETICAL LIST OF PRINTS.

Columbia Clay Co. For Sewer Pipe, Wall Coping, Flue Lining, Flue Pipe, Chimney Tops, Fire Brick, Fire Clay, Hollow Building Tile, and Draintile. Columbia Clay Company. 11,371; Dec. 11.
Cream of the South. For Ice Cream. Southern Dairies, Inc. 11,379; Dec. 11.
Daggett's Chocolates 'Always.' For Chocolates. Daggett Chocolate Co. 11,372; Dec. 11.
Don't be a Trillium. For Mouth Wash. Forhan Company. 11,375; Dec. 11.
Forhan's Antiseptic Refreshant. For Mouth Wash. Forhan Company. 11,374; Dec. 11.
Northern Hemlock. For Hemlock Lumber. Northern Hemlock Mfrs. of Michigan and Wisconsin. 11,378; Dec. 11.
The New International Metered Mailing Machine. For Machines Used in Sealing, Postmarking, and Countering or Metering Mail, and Parts Therefor. International Postal Supply Co. 11,377; Dec. 11.
Welch Concord Harvest Bulletin Number Two. For Grape Juice. Welch Grape Juice Company. 11,380; Dec. 11.
We Use Rich Cream, Too. For Cream of Tomato Soup. H. J. Heinz Company. 11,376; Dec. 11.
Why Forhan's. For Tooth Paste. Forhan Company. 11,373. Dec. 11.

# ALPHABETICAL LIST OF PATENTEES

TO WHOM

## PATENTS WERE ISSUED ON THE 11TH DAY OF DECEMBER, 1928.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

A C Spark Plug Company. (See Kamrath, Herbert G., assignor.)
A C Spark Plug Company. (See Nutt, Frank N., assignor.)
A C Spark Plug Company. (See Spencer, L. M., and Zubaty, assignors.)
A C Spark Plug Company. (See Zubaty, Joseph, assignor.)
Accurate Gasoline Recording Company. (See Mason, A. R., and Failing, assignors.)
Ackerman, Peter, Washington County, assignor of one-half to J. A. Susbauer, Portland, Oreg. Electric cooker. 1,694,762; Dec. 11.
Acme Steel Company. (See MacChesney, C. M., and Norton, assignors.)
Adams, Charles A., assignor to Optical Industries Corporation, Davenport, Iowa. Restraining device for lens-grinding machines. 1,694,728; Dec. 11.
Adams Industries, Inc. (See Jacques, Raynaldo P., assignor.)
Adams, Zenas P., assignor to D. H. Burrell & Co., Inc., Little Falls, N. Y. Pump. 1,694,575; Dec. 11.
Aeschbach, Friedrich, Aarau, Switzerland. Dough kneading and mixing machine. 1,695,221; Dec. 11.
Agfa Ansco Corporation. (See Slocum, Benjamin A., assignor.)
Ainsworth, Chester D., Wollaston, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Auxiliary switch. 1,694,611; Dec. 11.
Ainsworth, Chester D., Wollaston, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Contact structure for electric switches. 1,694,612; Dec. 11.
Ainsworth, Chester D., Wollaston, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Motor-control switch. 1,694,613; Dec. 11.
Ajax Electrothermic Corporation. (See Northrup, Edwin F., assignor.)
Albert, George G., Bangor, Pa. Blackboard hanger. 1,694,433; Dec. 11.
Albino, Luigi, Brooklyn, N. Y. Lamp shade. Des. 77,144; Dec. 11.
Albright, Andrew, 3d, Maplewood, N. J. Shaving brush. 1,694,304; Dec. 11.
Albright, Andrew, 3d, Maplewood, N. J. Shaving brush. 1,694,305; Dec. 11.
Alcorn Combustion Company. (See Nash, A. E., and Alcorn, assignors.)
Alcorn, James S. (See Nash, A. E., and Alcorn.)
Alemite Manufacturing Corporation. (See Piquerez, Emile, assignor.)
Alemite Manufacturing Corporation. (See Roberts, Henry T., assignor.)
Alleman, Gellert, Swarthmore, assignor to Sun Oil Company, Philadelphia, Pa. Fatty acid and soaps derived from mineral oil and making same. 1,694,461; Dec. 11.
Alleman, Gellert, Swarthmore, assignor to Sun Oil Company, Philadelphia, Pa. Mineral-oil derivatives and making same. 1,694,462; Dec. 11.
Alleman, Gellert, Swarthmore, assignor to Sun Oil Company, Philadelphia, Pa. Mineral-oil derivative and making same. 1,694,463; Dec. 11.
Allen, Arthur H., Philadelphia, Pa. Combination sanitary refrigerator and waste-disposal apparatus. 1,695,133; Dec. 11.
Allen, Charles H., assignor to Yates Lumber Company, Penn Yan, N. Y. Mechanism for attaching wire handles to baskets. 1,694,901; Dec. 11.
Allen, Frank B., Lower Merion Township, Montgomery County, Pa., assignor, by mesne assignments, to F. H. Dunbar, Cleveland, Ohio. Sluiceway nozzle. 1,694,635; Dec. 11.
Allen, Harrison L., assignor to Canadian Sturdy Chain Company Limited, Sherbrooke, Quebec, Canada. Vanity case. 1,694,727; Dec. 11.
Allen, W. F., et al. (See Smoot, Samuel K., assignor.)
Aluminum Company of America. (See Norton, Allen B., assignor.)
Ament, Lucy C., New York, N. Y. Atomizer. 1,694,959; Dec. 11.
American Brass Company. (See Bassett, William H., assignor.)
American Brass Company, The. (See Kinnear, Delamar C., assignor.)
American Can Company. (See Edwards, John R., assignor.)
American Can Company. (See Hothersall, John M., assignor.)
American Creosoting Company. (See Grady, William H., assignor.)
American Cyanamid Company. (See Barsky, G., and Freise, assignors.)
American Fork & Hoe Company, The. (See Keough, Robert E., assignor.)
American Heater Corporation. (See Tabler, Harry C., assignor.)
American Hoist & Derrick Company. (See Sederholm, John E., assignor.)
American Incubators, Inc. (See Watson, Harold, L., assignor.)
American Injector Company. (See Diederich, P. E., and Roberts, assignors.)
American La France and Foamite Corporation. (See Witter, W. D., and Harte, assignors.)
American Laundry Machinery Company, The. (See Curtiss, Howard C., assignor.)
American Manganese Steel Company. (See Bruton, William C., assignor.)
American Metallurgical Corporation. (See Hanson, Albert J., assignor.)
American Radiator Company. (See Eggelston, Lewis W., assignor.)
American Radiator Company. (See Mertzanoff, André M., assignor.)
American Telechronometer Company. (See Babcock, Garrison, assignor.)
American Telephone and Telegraph Company. (See Bascom, H. M., and Jacobsen, assignors.)
American Telephone and Telegraph Company. (See Gordon, Chester S., assignor.)
American Telephone and Telegraph Company. (See Haines, W. T., assignor, and Harper.)
American Telephone and Telegraph Company. (See Jacobsen, E., assignor, and Sperry.)
American Telephone and Telegraph Company. (See McCurdy, R. G., and Blye, assignors.)
American Telephone and Telegraph Company. (See Peak, Warner L., assignor.)
American Type Founders Company. (See Kelly, William M., assignor.)
American Type Founders Company. (See Morrison, Lewis E., assignor.)
American Type Founders Company. (See Plum, Stephen H., 2d, assignor.)
American Type Founders Company. (See Plum S. H., 2d, and Duff, assignors.)
American Woodlite Corporation. (See Pagendarm, John F., assignor.)
American World Cue Tip Holder Co. (See Darmis, Cosmas, assignor.)
Anchor Post Fence Company. (See Hawthorne, Louis A., assignor.)
Anderson, Arvid E., Scotia, N. Y., assignor to General Electric Company. Control of electric switches. 1,695,003; Dec. 11.
Anderson-Barngrover Mfg. Co. (See Thompson, Albert R., assignor.)
Anderson, Harry W. (See Seaberg, S., and Anderson.)
Anderson, John W., Gary, Ind. Indicator. 1,694,902; Dec. 11.
Anderson, John W., Gary, Ind. Indicating apparatus. 1,694,903; Dec. 11.
Anderson, John W., Gary, Ind. Indicating device. 1,694,904; Dec. 11.
Anderson, John W., Gary, Ind. Indicating device. 1,694,905; Dec. 11.
Anderson, John W., Gary, Ind. Indicator for cooling systems 1,694,906; Dec. 11.
Anderson, John W., Gary, Ind. Indicating means. 1,694,907; Dec. 11.
Anderson, John W., Gary, Ind. Indicating device for cooling systems. 1,694,908; Dec. 11.
Angel, Joe M., Pauls Valley, Okla. Horse collar. 1,695,167; Dec. 11.
Apple, Vincent G., Dayton, Ohio. Making an armature. 1,694,464; Dec. 11.
Armspear Manufacturing Company. (See Spear, Furman D., assignor.)
Arnold, Edward, and H. Templeton, Yakima, Wash. Box cover. 1,695,222; Dec. 11.
Arnold, Roy J. (See Smith, R. E., and Arnold.)
Asbestos Wood & Shingle Co. (See MacIldowie, John C., assignor.)
Atwater Kent Manufacturing Company. (See Rice, H. E., and Da Costa, assignors.)
Automatic Electric Inc. (See Bellamy, John I., assignor.)
Automatic Electric Inc. (See Ostline, John E., assignor.)
Automatic Merchandizer, Inc., The. (See Lea, Charles, assignor.)

Automatic Washer Company. (See Schroeder, Simon E., assignor.)
Autostrop Patents Corporation. (See Gaisman, Henry J., assignor.)
Autoyre Company, The. (See Mosgrove, Charles A., assignor.)
B. M. C. Patent Company. (See Martin, Robert J., assignor.)
Babcock, Garrison, assignor to American Telechronometer Company, Seattle, Wash. Telephone system. 1,694,934; Dec. 11.
Bacon, Roscoe C., Port Norris, N. J. Milk-bottle holder. 1,694,729; Dec. 11.
Baetz, Jacob H., Kitchener, Ontario, Canada. Standard lamp of candelabra type. 1,694,434; Dec. 11.
Ball, John R. (See Dean, William T., assignor.)
Balmat, Cecil H., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif. Liquid-fuel burner. 1,694,366; Dec. 11.
Baltimore Bottle Machine Corporation. (See Nixon, Clarence R., assignor.)
Balton, James L., Baltimore, Md. Ice-cream cone. Des. 77,145; Dec. 11.
Balzer, Fritz, Moline, assignor, by mesne assignments, to Troy Laundry Machinery Company, Inc., Dover, Del. Centrifugal extractor. 1,694,614; Dec. 11.
Bamford, William E., Belfast, Northern Ireland. Manufacture of confectionery. 1,694,576; Dec. 11.
Bancroft, Albert F., West Newton, Mass. Insertable pad for shoes. 1,695,134; Dec. 11.
Bany, Herman, Scotia, N. Y. and H. T. Seeley, Yeadon, Pa., assignors to General Electric Company. Automatic control system. 1,695,004; Dec. 11.
Barber-Greene Company. (See Barber, Harry H., assignor.)
Barber, Harry H., assignor to Barber-Greene Company, Aurora, Ill. Portable conveyer. Re17,160; Dec. 11.
Barker Bros., Incorporated. (See Krick, George W., assignor.)
Barker, Horace E., Brooklyn, N. Y. Dental device. 1,694,636; Dec. 11.
Barker, Leo Wayne, assignor to Starlighters, Inc., Philadelphia, Pa. Airplane advertising device. 1,695,078; Dec. 11.
Barney, Andrew S., sr., Flushing, N. Y. Valve spring. 1,694,435; Dec. 11.
Barnhart, George E., Los Angeles, Calif. Room heater. 1,695,079; Dec. 11.
Barrett, Edward R., assignor to Wood Hydraulic Hoist & Body Company, Detroit, Mich. Hydraulic dumping-body hoist. 1,694,909; Dec. 11.
Barrett, Harry A., Philadelphia, Pa., assignor to Barrett Lock Company, Inc. Permutation lock. 1,695,080; Dec 11.
Barrett Lock Company. (See Barrett, Harry A., assignor.)
Barrows, Donald S., Rochester, N. Y. Side frame. 1,694,577; Dec. 11.
Barrows, Donald S., Rochester, N. Y. Striking casting. 1,694,900; Dec. 11.
Barsky, George, New York, N. Y., and F. W. Freise, Palmyra, N. J., assignors to American Cyanamid Company, New York, N. Y. Fertilizer. 1,695,081; Dec. 11.
Bartow, Jack B., Darby, Pa., assignor to Treiber Diesel Engine Corporation, Camden, N. J. Feed-control means for internal-combustion engines. 1,694,367; Dec. 11.
Bascom, Henry M., Brooklyn, and E. Jacobsen, Plandome, N. Y., assignors to American Telephone and Telegraph Company. Telephone-exchange system. 1,694,406; Dec. 11.
Basler, George T., Louisville, Ky. Mechanical movement. 1,694,961; Dec. 11.
Bassett, Alvin J., Milwaukee, Wis., assignor to The Bruce Macbeth Engine Company, Cleveland, Ohio. Oil-gas apparatus. 1,694,910; Dec. 11.
Bassett, William H., Cheshire, assignor to The American Brass Company, Waterbury, Conn. Hollow conductor. Re17,156; Dec. 11.
Bauer, Charles F., Louisville, Ky. Cooling and dispensing machine. 1,694,436; Dec. 11.
Bayha, William G., Perkasie, Pa., assignor to United States Gauge Company, New York, N. Y. Gauge. 1,694,838; Dec. 11.
Beacon Folding Machine Company. (See Ridderstrom, Andrew R., assignor.)
Beatty, Palmer and Beatty. (See Beatty, William H., assignor.)
Beatty, William H., Birmingham, Ala., assignor to Beatty, Palmer and Beatty. Centrifugal molding apparatus. 1,694,763; Dec. 11.
Beaver Machine & Tool Co. Inc. (See Rider, Herbert E., assignor.)
Beech-Nut Packing Company. (See Washburn, Walter B. C., assignor.)
Behnke, George W. (See Soldan, L. E., and Behnke.)
Beidatsch, Fred W., Milwaukee, Wis. Weedless fish bait. 1,694,697; Dec. 11.
Bell, Benjamin F., sr., Tyler, Tex. Mouth gag and tongue holder. 1,695,168; Dec. 11.
Bell Telephone Laboratories. (See Clement, Lewis M., assignor.)
Bell Telephone Laboratories, Incorporated. (See Clokey, Allison A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Elmen, Gustaf W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Ives, Herbert E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Lum, George R., assignor.)
Bell Telephone Laboratories, Incorporated. (See Murphy, Paul B., assignor.)
Bell Telephone Laboratories, Incorporated. (See Stoller, Hugh M., assignor.)
Bellamy, John I., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Automatic telephone system. 1,694,615; Dec. 11.
Beloit Iron Works. (See Berry, Earl E., assignor.)
Benner, Harry P. (See Egloff, G. and Benner.)
Bennington, Earl T., Cleveland Heights, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio. Switch. 1,694,578; Dec. 11.
Berchielli, William, Albany, N. Y. Safety-razor cleaner. 1,695,135; Dec. 11.
Berger, Kornel C., New York, N. Y. Lamp-shade-frame holder. 1,695,223; Dec. 11.
Bergh, Ingvald G., and L. Nelsen, Watertown, S. Dak. Amalgamator attachment. 1,694,678; Dec. 11.
Bergmann, Leo O. (See Walker, L. P., and Bergmann.)
Beringer, Roecoe, assignor to General Motors Corporation, Detroit, Mich. Cowl ventilator. 1,694,764; Dec. 11.
Berry, Earl E., Beloit, assignor to Beloit Iron Works, Beloit, Wis. Suction roll for paper-making machines. 1,694,698; Dec. 11.
Berry, Edward R., Malden, Mass., assignor to General Electric Company. Metal tubing. 1,694,962; Dec. 11.
Besta, Adalbert, Duisberg, Germany. Heat-treating furnace. 1,695,224; Dec. 11.
Bethlehem Steel Company. (See West, Arthur J., assignor.)
Bethenod, Joseph, Paris, France. Speed regulator. 1,694,637; Dec. 11.
Bigler, Oscar A., Wyoming, Ohio. Bathing cap. 1,695,005; Dec. 11.
Bissell, Richard E., Cleveland Heights, assignor to Thompson Products Inc., Cleveland, Ohio. Tool for rotating valve heads. 1,694,699; Dec. 11.
Bitzer, Christian, New York, N. Y. Sewing-table attachments. 1,695,082; Dec. 11.
Black, Lester C., Los Angeles, Calif. Well-drilling tool. 1,694,679; Dec. 11.
Blackburne, Frederick W., London, England, assignor to Otis Elevator Company, New York, N. Y. Escalator safety device. 1,695,083; Dec. 11.
Bleecker, Warren F., Boulder, Colo. Impervious material. 1,694,730; Dec. 11.
Blevins, Thomas B., and J. C. Phillips, Long Beach, Calif. Auto signal device. 1,694,616; Dec. 11.
Bliss, E. W., Company. (See Kruse, Peter, assignor.)
Blode, William O., and L. J. Haming, Louisville, Ky. 1,694,963; Dec. 11.
Bloemsma, Bernard J., Wayne, Mich. Tongs. 1,694,525; Dec. 11.
Blye Paul W. (See McCurdy, R. G., and Blye.)
Bockius, George H., assignor to Diebold Safe & Lock Company, Canton, Ohio. Auxiliary lock. 1,695,136; Dec. 11.
Bodmer, Albert, assignor to Heberlein & Co. A. G., Wattwil, Switzerland. Dyeing. 1,694,526; Dec. 11.
Boeing Airplane Company. (See Monteith, Charles N., assignor.)
Boggs, Guy E. (See McElroy, David W., assignor.)
Bogin, Charles, assignor to Commercial Solvents Corporation, Terre Haute, Ind. Purification of butyric aldehyde. Re17,157; Dec. 11.
Bohner, Clyde C., Maplewood, assignor to Tung-Sol-Lamp Works, Newark, N. J. Manufacturing electric bulbs and bulb blanks for use therein. 1,694,368; Dec. 11.
Bohr, Frank M., Boston, Mass. Boot or shoe and manufacturing same. 1,695,225; Dec. 11.
Bol, Cornelis, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Electric discharge tube. 1,695,226; Dec. 11.
Bolinger, Ernest E., Emmett, Idaho. Electric water heater. 1,695 227; Dec. 11.
Booth, William N., Detroit, Mich. Demountable-rim tool. 1,694,527; Dec. 11.
Borden Company, The. (See McClatchie, John M., assignor.)
Borgnis, Samson, Philadelphia, Pa. Loom fabric protector. 1,695,137; Dec. 11.
Borrowdale, Russell W., assignor to J. Toman, Chicago, Ill. Attachment for printing presses. 1,694,638; Dec. 11.
Borst, Frederick C., et al. (See Dukesmith, Frank H., assignor.)
Böttger, Oskar, Frankfort-on-the-Main, Germany, assignor to The Turner Tanning Machinery Company, Portland, Me. Leather-working machine. 1,694,437; Dec. 11.
Bourjois, Inc. (See Guillaume, Paul M., assignor.)
Bradner, Donald B., Philadelphia, Pa., and N. E. Oglesby, Edgewood, Md., assignors, by mesne assignments, to Federal Laboratories, Inc., Pittsburgh, Pa. Process and apparatus for dispersing irritants. 1,695,228; Dec. 11.
Brainard, William W., New York, N. Y. Hog gambrel. 1,695,138; Dec. 11.
Brandes Laboratories, Inc. (See Worthington, Everett, assignor.)
Branson, Walter J., assignor, by mesne assignments, to Robbins & Myers, Inc., Springfield, Ohio. Centrifugal operating mechanism. 1,694,700; Dec. 11.

Breaker, Harry O., Buffalo, N. Y. Heat-treating furnace. 1,694,964; Dec. 11.
Brenek, Hans. (See Rothe, F., and Brenek.)
Breet, Albert, New Castle, Pa. Furnace cleaner. 1,695,169; Dec. 11.
Brintnall Manufacturing Company, Inc. of Delaware. (See Stack, Maurice J., assignor.)
Brock, Holden, assignor of one-half to J. Brock, St. Louis, Mo. Machine for forming plastic tile. 1,694,579; Dec. 11.
Brock, James. (See Brock, Holden, assignor.)
Brockhagen, Eugene F. (See Brockhagen, George J., assignor.)
Brockhagen, George J., assignor of one-half to E. F. Brockhagen, Brooklyn, N. Y. Golf-ball-teeing device. 1,695,006; Dec. 11.
Brown, Charles A., Gardner, assignor to Heywood-Wakefield Company, Boston, Mass. Chair. 1,694,617; Dec. 11.
Brown Company. (See Daw, Joseph, assignor.)
Brown Company. (See Root, Bertwell C., assignor.)
Brown, Davis, assignor of one-half to W. A. Riddell, Bucyrus, Ohio. Indicator board. 1,694,639; Dec. 11.
Brown, Elmer B., assignor to The Fleischmann Company, New York, N. Y. Coiling and drying materials. 1,694 807; Dec. 11.
Brown, George R., New Haven, Conn. Hydraulic system and means for propelling vessels. 1,694,840; Dec. 11.
Brown, Henry K., assignor to Cook Laboratories, Inc., Chicago, Ill. Syringe. 1,694,766; Dec. 11.
Brown, Sumner E., Dedham, Mass. Lamp-focusing device. 1,694,765; Dec. 11.
Brown, Westgarth S. F., and J. Maina, London, England. Variable-speed gearing. 1,694,808; Dec. 11.
Brooks, William L., Ardmore, Okla. Gas stove. 1,694,839; Dec. 11.
Bruce Macbeth Engine Company, The. (See Bassett, Alvin J., assignor.)
Brunner, Eugen, assignor to Goodyear-Zeppelin Corporation, Akron, Ohio. Landing bumper for airships. 1,694,873; Dec. 11.
Bruton, William C., Berkeley, Calif., assignor to American Manganese Steel Company, Chicago, Ill. Rotary screen or plate for producing same. 1,694,498; Dec. 11.
Buckley, Joseph B., Detroit, Mich. Combination game board and score counter. 1,694,965; Dec. 11.
Buckley, Oliver E., Maplewood, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated. Magnetic alloy. 1,695,038; Dec. 11.
Budd, Edward G., Manufacturing Company. (See Ledwinka, Joseph, assignor.)
Burdick, Charles L., assignor to Guggenheim Brothers, New York, N. Y. Refrigerating apparatus. 1,694,369; Dec. 11.
Burdick, Charles L., New York, N. Y. Refrigerating and heat-interchanging apparatus. 1,694,370; Dec. 11.
Burdick, Charles L., assignor to Guggenheim Brothers, New York, N. Y. Multiple-tube cleaner. 1,694,371; Dec. 11.
Burdick, Charles L., London, England. Respirator. 1,695,170; Dec. 11.
Burnham, George A., Saugus, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Electrical apparatus and switch. 1,694,618; Dec. 11.
Burrell, D. H., & Co. (See Adams, Zenas P., assignor.)
Burton, Edward F., and J. H. Montgomery, assignors to Honey-Butter Company, Los Angeles, Calif. Food product and producing the same. 1,694,680; Dec. 11.
Bush, Arthur G., Davenport, Iowa. Pivot bolt for automobiles. 1,694,681; Dec. 11.
Bushnell, James E., North Plainfield, assignor to Ransome Concrete Machinery Company, Plainfield, N. J. Boom track for bucket concrete distributors. 1,694,372; Dec. 11.
Busold, William, West Orange, assignor to The Trimble Hat Company, Orange, N. J. Hat welt and forming same. 1,695,084; Dec. 11.
Buttress, George A., Los Angeles, Calif. Lath board. 1,694,640; Dec. 11.
C. G. Spring & Bumper Company, The. (See Jandus, H. S., and Morgan, assignors.)
Cable, Julius L., Boston, Mass. Chair. 1,694,935; Dec. 11.
Camp, Curtis B. (See Stokes, Charles L., assignor.)
Campbell, Arthur J. (See Moore, B. J., and Campbell.)
Canadian Pacific Railway Company, The. (See Sturrock, Archibald, assignor.)
Canadian Sturdy Chain Company Limited. (See Allen, Harrison L., assignor.)
Carbide and Carbon Chemicals Corporation. (See Curme, George O., jr., assignor.)
Carbide and Carbon Chemicals Corporation. (See Curme, G. O., jr., and Reid, assignors.)
Carbide and Carbon Chemicals Corporation. (See Thompson, Harold E., assignor.)
Cardwell, James R., Chicago, Ill. Railway-car truck. 1,695,085; Dec. 11.
Cardwell, James R., Chicago, Ill. Railway-car truck. 1,695,086; Dec. 11.
Carlson, Elof L., assignor to The E. Ingraham Co., Bristol, Conn. Producing gong stands for clocks. 1,695,087; Dec. 11.
Carlson, Nelson A., assignor to Erie Meter Systems, Inc., Erie, Pa. Tank-discharge-controlling mechanism. 1,694,407; Dec. 11.
Carlton, James A., St. Louis, Mo. Paper jogger. 1,694,499; Dec. 11.
Carlton, James A., assignor to Massey-Harris Company, Limited, Toronto, Ontario, Canada. Safety device for elevators. 1,694,731; Dec. 11.
Carr Fastener Company. (See Carr, Fred S., assignor.)
Carr, Fred S., Newton, assignor to Carr Fastener Company, Cambridge, Mass. Shiftable nut fastening. 1,694,580; Dec. 11.
Carr, Henry W., San Francico, Calif. Recovering values by evaporation. 1,694,841; Dec. 11.
Cash, A. W., Company. (See Howse, Curtis L., assignor.)
Casper, Louis, Brooklyn, N. Y. Telegraph transmission of signals. 1,694,769; Dec. 11.
Catá, Ramon M., Barcelona, Spain. Device for sharpening the points of pencils. 1,694,581; Dec. 11.
Cavnah, William H. (See Vogan, Frank M., assignor.)
Cawood, Clarence A., Big Stone Gap, Va., assignors to The Electric Railway Equipment Company, Cincinnati, Ohio. Hanger for electric wires. 1,695,007; Dec. 11.
Cazenove, James O. H., New York, N. Y. Egg beater. 1,694,500; Dec. 11.
Celanese Corporation of America. (See Ellis, George H., assignor.)
Celanese Corporation of America. (See Palmer, Charles W., assignor.)
Chadwick, Lee S., Shaker Heights, assignor to Perfection Stove Company, Cleveland, Ohio. Automatically-controlled burner. 1,694,501; Dec. 11.
Chemische Fabrik von Heyden. (See Zellmann, R., and Lammering, assignors.)
Chicago-Cleveland Car Roofing Company. (See Mattingley, Edward H., assignor.)
Chicago Flexible Shaft Company. (See Sjolin, Ernest, assignor.)
Chicago Jefferson Fuse & Electric Company. (See Johnson, Chester A., assignor.)
Chicago Mill and Lumber Corporation. (See Gerlach, Charles W., assignor.)
Child, Herbert E. (See Penney, L. W., and Child.)
Chinn, Neil M., assignor of one-fourth to R. H. Wilson and one-fourth to T. B. Wilson, Perry, Okla. Bearing. 1,694,438; Dec. 11.
Christensen, Valdemar, Cincinnati, Ohio. Sterilizing and incubating apparatus. 1,695,008; Dec. 11.
Christianson, Milton E., Jasper, Minn. Arch supporter. 1,694,582; Dec. 11.
Cincinnati Butchers' Supply Company, The. (See McTavish, Robert, assignor.)
Clark, James E., (See Clark, Thomas E. and J. E., and Coop.)
Clark, Lucius R., and A. M. Yeomans, Chicago, Ill.; said Yeomans assignor to said Clark. Furniture bracing. 1,695,189; Dec. 11.
Clark, Thomas E. and J. E., and W. L. Coop, assignors to Continuous Train Control Corporation, Detroit, Mich. Train-control system. 1,694,373; Dec. 11.
Clarkson, John L., Nashville, Ill. Flexible railway track. 1,694,528; Dec. 11.
Claus, Emil L. and W. E., assignors to Claus Manufacturing Co., Milwaukee, Wis. Oven-heat-regulating device. 1,694,682; Dec. 11.
Claus Manufacturing Co. (See Claus, Emil L. and W. E., assignors.)
Claus, Walter E. (See Claus, Emil L. and W. E.)
Clausing, George, assignor, by mesne assignments, to Vulcan Corporation, Portsmouth, Ohio. Heel-turning machine. 1,694,465; Dec. 11.
Clavel, René, Basel-Augst, Switzerland. Obtaining metallic effects on fabrics containing organic derivatives of cellulose. 1,694,466; Dec. 11.
Clement, Edward E. (See Hoge, J. B., and Clement.)
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Radio broadcast selecting and distributing system. Re17,163; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Radio receiving instrument. 1,695,172; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Radio broadcast selecting and distributing system. 1,695,173; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Radio receiving instrument for systems of broadcast distribution. 1,695,174; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Traffic-control system for radio broadcast distribution. 1,695,176; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Radio service metering system. 1,695,177; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Selective key for radio systems. 1,695,178; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Secrecy system of radio broadcast distribution. 1,695,179; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Secrecy system of radio broadcast distribution. 1,695,180; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Radio receiving instrument for systems of broadcast distribution. 1,695,181; Dec. 11.
Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. Trunking system for radio distribution. 1,695,182; Dec. 11.

Clement, Lewis M., Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric wave signaling system. 1,695,039; Dec. 11.

Cleveland Crane & Engineering Company, The. (See Bennington, Earl T., assignor.)

Clifford, Albert M., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Antioxidant or age resister. 1,694,529; Dec. 11.

Clinker, Reginald C., Bilton, near Rugby, England, assignor to General Electric Company. Electrical system. 1,694,966; Dec. 11.

Clisson, Albert B., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y. Operating mechanism for pressing machines. 1,695,088; Dec. 11.

Clokey, Allison A., Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Multiplex telegraph system. 1,695,040; Dec. 11.

Cochran, James P., Canyon City, Oreg. Tool and handle connection. 1,695,009; Dec. 11.

Coe Manufacturing Company, The. (See Lockhart, James, assignor.)

Cogswell, Leander A., assignor to Lacene Manufacturing Company, Manchester, N. H. Grading and distributing machine. 1,694,408; Dec. 11.

Cohen, Arthur, Dorchester, Mass. Slip cover. 1,695,244; Dec. 11.

Cohen, Louis A., Central City, Ky. Truck for transporting poultry. 1,694,732; Dec. 11.

Cole, Elmer K., Winterset, Iowa. Cable clamp. 1,694,683; Dec. 11.

Colladay, Edward F. (See Clement, Edward E., assignor.)

Colladay, Edward F. (See Hoge, J. B., and Clement, assignors.)

Colladay, Edward F. (See Löwenstein, Harry F., assignor.)

Columbia Steel Company, The. (See Naugle, H. M., and Townsend, assignors.)

Colwell, Byron E., Addison, Mich. Roller skate. 1,694,374; Dec. 11.

Commercial Solvents Corporation. (See Bogin, Charles, assignor.)

Compagnie des Forges & Acieries de la Marine & d'Homecourt et al. (See de Courseulles, Robert, assignor.)

Concrete Engineering Company. (See Meyer, Charles L., assignor.)

Condit Electrical Manufacturing Corporation. (See Ainsworth, Chester D., assignor.)

Condit Electrical Manufacturing Corporation. (See Burnham, George A., assignor.)

Conklin, Roscoe D., Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y. Air compressor. 1,694,583; Dec. 11.

Continental Can Company. (See Fink, Henry A., assignor.)

Continental Can Company. (See Hodgson, William W., assignor.)

Continental Can Company. (See Sedwick, Mathew M., assignor.)

Continuous Train Control Corporation. (See Clark, Thomas E. and J. E., and Coop, assignors.)

Cook, Harvey S., Valparaiso, Ind., assignor to Cook Laboratories, Inc., Chicago, Ill. Hypodermic syringe. 1,694,767; Dec. 11.

Cook, Harvey S., Valparaiso, Ind., assignor to Cook Laboratories, Inc., Chicago, Ill. Aseptic needle holder. 1,694,768; Dec. 11.

Cook Laboratories, Inc. (See Brown, Henry K., assignor.)

Cook, Merlin S. (See Curtis, Zenas A., assignor.)

Coolbaugh, Melville F. (See Read, J. B., and Coolbaugh.)

Coolidge, William D., Schenectady, N. Y., assignor to General Electric Company. Vacuum device. 1,694,967; Dec. 11.

Coop, William L. (See Clark, Thomas E. and J. E., and Coop.)

Cooper, Basil P. (See Gouldbourn, J., Cooper, and Elliott.)

Cooper Hewitt Electric Company. (See Walker, Warren R., assignor.)

Cooper Hewitt Electric Company. (See Winninghoff, Wilford J., assignor.)

Cope, Frank T., assignor to The Electrical Furnace Company, Salem, Ohio. Annealing furnace. 1,694,684; Dec. 11.

Covel, Nathan E., Newtonville, Mass. Advertising wrapping for packages. 1,694,701; Dec. 11.

Cox, Edwin R., and D. A. Cushman, Los Angeles, Calif. Combined absorption and fractionation for recovering gasoline from gas. 1,695,139; Dec. 11.

Coy, Herbert C., Chicago, Ill. Combination lock. 1,694,968; Dec. 11.

Crago, Paul H., Forest Hills Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Car-operated switching mechanism. 1,694,409; Dec. 11.

Craig, Ollison, assignor to Riley Stoker Corporation, Worcester, Mass. Fuel-pusher mechanism for stokers. 1,695,229; Dec. 11.

Cram, Leroy V., Flint, assignor to General Motors Corporation, Detroit, Mich. Oil-pump screen. 1,694,770; Dec. 11.

Crane Co. (See Graham, Lucy J., assignor.)

Crerar, Adams, & Co. (See Rostron, Robert, assignor.)

Crompton, Thomas A., Ilford, England. Pressure-relieving valve. 1,695,248; Dec. 11.

Crosby, Arthur P., assignor of one-half to W. T. Price, Minneapolis, Minn. Radiator return trap. 1,694,641; Dec. 11.

Cross Manufacturing Company. (See McNaught, Norris F., assignor.)

Cullinan, Ralph, Richmond, assignor, by mesne assignments, to The Texas Company, New York, N. Y. Container. 1,694,584; Dec. 11.

Cummins, Roy M., Barberton, Ohio. Automobile cleaning brush. 1,694,733; Dec. 11.

Curme, George O., jr., Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation. Manufacture of glycols. 1,695,250; Dec. 11.

Curme, George O., jr., and E. W. Reid, Pittsburgh, Pa., assignors, by mesne assignments, to Carbide and Carbon Chemicals Corporation, New York, N. Y. Making isopropyl alcohol. 1,695,249; Dec. 11.

Curtis Aeroplane & Motor Co. (See Wright, T. P., and Walt, assignors.)

Curtis, Arthur R., Cleveland, Ohio. Support and bearing for gratifying shafts. 1,695,230; Dec. 11.

Curtis, Milton, Beckley, W. Va. Shade roller. 1,694,969; Dec. 11.

Curtis, Zeenas A., Cimarron, N. Mex., assignor of one-eighth to M. S. Cook, Lansdowne, Pa. Alarm for automobiles. 1,694,842; Dec. 11.

Curtiss, Howard C., Norwood, assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Ironing machine. 1,694,970; Dec. 11.

Cushman, Dexter A. (See Cox, E. R., and Cushman.)

Cutler, Frank W., Portland, Oreg. (Spray washer. 1,694,734; Dec. 11.

Da Costa, Robert C. (See Rice, H. E., and Da Costa.)

Dalrymple, William P., assignor, by meane assignments, to Gorlen Company, Inc., Chicago, Ill. Automobile radiator cap. 1,694,771; Dec. 11.

Daly, John J. (See Shopneck, Henry P., assignor.)

D'Ascanio, Corradino. (See Trojani, P., and D'Ascanio.)

Darmis, Cosmas, assignor to American World Cue Tip Holder Co., Philadelphia, Pa. Billiard-cue-tip holder. 1,694,375; Dec. 11.

Davis, Dean W., Elmhurst, assignor to L. New, Greenfield, Ind. Catalytic agent in storage battery. 1,694,530; Dec. 11.

Davis, Harry A., assignor to Draper Corporation, Hopedale, Mass. Cross-weaving loom. 1,695,010; Dec. 11.

Daw, Joseph, Quebec, Quebec, Canada, assignor to Brown Company, Berlin, N. H. Blade construction. 1,694,410; Dec. 11.

Dawson, Aaron G. (See Langton, E. W., and Dawson.)

Dawson-Evans Construction Co., The. (See Rankin, Ollie W., assignor.)

Day, Charles M., Kirkwood, and C. J. Scullin, St. Louis, Mo. Furnace for reduction of iron. 1,694,376; Dec. 11.

Deak, Michael. (See Déri, S., and Deak.)

Dean, Peter P., New Canaan, Conn. Valve. 1,694,809; Dec. 11.

Dean, William T., Glencoe, Ill., assignor by mesne assignments to J. R. Ball, Milwaukee, Wis. Liquid-fuel-burning system. 1,694,772; Dec. 11.

Debrebant, Francis. (See Remy, A., Renaux, Delort, and Debrebant.)

De Courseulles, Robert, assignor to Société Schneider & Co. and Compagnie des Forges & Acieries de la Marine & d'Homecourt, Paris, France. Device for the horizontal aiming of turrets comprising several guns. 1,694,843; Dec. 11.

Dédisse, Henri, Boulogne-sur-Seine, France. Mudguard for motor vehicles. 1,695,247; Dec. 11.

De Gerson, Raesfeld J., born Berthier, Paris, France. Manufacture of artificial flower. 1,694,844; Dec. 11.

De Graff, Ellis A., assignor to Leather Makers' Process Company, Detroit, Mich. Turning table for skin-drying plates. 1,694,531; Dec. 11.

Deitel, Benjamin B., Brooklyn, N. Y. Vanity case. 1,694,702; Dec. 11.

De Laval Separator Company, The. (See Gilmore, Vincent J., assignor.)

De Laval Separator Company, The. (See Hapgood, Cyrus H., assignor.)

De Laval Separator Company, The. (See Miller, Philip F., assignor.)

De Laval Separator Company, The. (See Sangster, William, assignor.)

De Lavaud, Dimitri S., Paris, France. Free-wheel clutch. 1,694,377; Dec. 11.

Delort, Jean. (See Remy, A., Renaux, Delort, and Debrebant.)

Demers, Honore, Manchester, N. H. Loom stop mechanism. 1,694,411; Dec. 11.

Dennison, French E., assignor to National Refrigeration Corporation, Beloit, Wis. Refrigerating apparatus. 1,694,532; Dec. 11.

Deppeler, John H., Weehawken, N. J., assignor to The Heat Research and Service Corporation, Wilmington, Del. Thermal mine. 1,695,089; Dec. 11.

Déri, Stephen, and M. Deak, assignors of one-fourth to R. Nohavicska, Fairmont, W. Va. Rail joint. 1,695,140; Dec. 11.

De Trey, Emanuel, Zurich, Switzerland. Kneading device. 1,694,845; Dec. 11.

De Villegas, Rafael D., Allston, Mass. Shaving brush. 1,695,141; Dec. 11.

Dick, William R., San Diego, Calif. Internal-heat-circulating cooking utensil. 1,694,773; Dec. 11.

Diebold Safe & Lock Company. (See Bocklus, George H., assignor.)

Diederich, Paul E., and M. G. Roberts, assignors to American Injector Company, Detroit, Mich. Automobile heater. 1,694,412; Dec. 11.

Diemer, John A., assignor to Stromberg Motor Devices Company, Chicago, Ill. Feeding fuel by waste heat. 1,694,911; Dec. 11.

Diestelkamp, Frederick A., Lowell, Oreg. Loose-leaf binder. 1,694,846; Dec. 11.

Dillon, Thomas H., jr., Greeley, Nebr. Snapping-roll cleaner. 1,694,533; Dec. 11.

Dodge, Carl V., Bellevue, assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Apparatus for reshaping annealing boxes. 1,695,142; Dec. 11.

Doherty Research Company. (See Lowe, Russell E., assignor.)

Donald, Harry G., Philadelphia, Pa. Liquid vaporizer. 1,694,936; Dec. 11.

Donaldson, Alfred S., Newark, N. J., assignor to Du Pont Viscoloid Company, Wilmington, Del. Decorated cellulose-ester article and making same. 1,694,847; Dec. 11.

Döppenschmitt, Friedrich, Pforsheim, Germany. Beaded article of jewelry. 1,694,703; Dec. 11.

Downey, Michael J., Springfield, Mass. Portable ash-can truck. 1,695,183; Dec. 11.

Drapeau, Benjamin L., assignor to Standard Abrasive Co., Jersey City, N. J. Box. 1,695,143; Dec. 11.

Draper Corporation. (See Davis, Harry A., assignor.)

Dreis, Herman C., Chicago, Ill. Bending machine for bending plates or strips of sheet metal. 1,694,585; Dec. 11.

Dry Zero Corporation. (See Lindsay, Harvey B., assignor.)

Dryden, William W., assignor to W. F. Stimpson, Louisville, Ky. Food grinder. 1,694,502; Dec. 11.

Duff, Harry. (See Plum, S. H., 2d, and Duff.)

Dukesmith, Frank H., Meadville, Pa., assignor, by mesne assignments, to F. C. Borst and F. R. Stewart. Air-brake system. 1,695,245; Dec. 11.

Dunbar, Frank H. (See Allen, Frank B., assignor.)

Dunbar, Harold F., Turners Falls, Mass. Variable-speed control for paper-making machines. 1,694,704; Dec. 11.

Duncan, William M., Alton, Ill. Furnace arch. 1,694,534; Dec. 11.

Dunham, George W., New Haven, Conn., assignor to Whirldry Corporation, Utica, N. Y. Automatic clutch arrangement for laundry machines. 1,694,810; Dec. 11.

Dunham, Robert A., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Treatment of spent clays. 1,694,971; Dec. 11.

Dunn, Edward L. (See Lindquist, D. L., Dunn, and Larson.)

Duparquet, Huot & Moneuse Co. (See Fuller, Louis J., assignor.)

Du Pont Viscoloid Company. (See Donaldson, Alfred S., assignor.)

Duro Company, The. (See Eisenhauer, Charles P., assignor.)

Duro Company, The. (See Toulmin, Harry A., jr., assignor.)

Dyhrberg, Lauritz N., Ashburton, New Zealand. Brick delivering and stacking means. 1,694,586; Dec. 11.

Dykstra, James, Lansing, assignor to General Motors Corporation, Detroit, Mich. Spring hanger and bumper support. 1,694,774; Dec. 11.

Easton Car & Construction Company. (See Fraunfelder, George D., assignor.)

Edison Electric Appliance Company. (See Randolph, Charles P., assignor.)

Edson, Elmer R., Portland, Oreg. Railway roadbed and track construction. 1,694,811; Dec. 11.

Edwards, Earl, Santa Ana, Calif. Game. 1,695,144; Dec. 11.

Edwards, Henry J., assignor to Industrial Research Corporation, Toledo, Ohio. Internal-combustion engine. 1,694,642; Dec. 11.

Edwards, John R., Vancouver, British Columbia, Canada, assignor to American Can Company, New York, N. Y. Rail car and attaching same. 1,694,775; Dec. 11.

Egan, Alfred. London, England. Hack-saw frame. 1,695,231; Dec. 11.

Eggleston, Lewis W., Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill. Automatic draft regulator for boilers. 1,695,241; Dec. 11.

Eggleston, Lewis W., Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill. Automatic draft regulator for boilers. 1,695,242; Dec. 11.

Eggleston, Lewis W., Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill. Automatic draft regulator for boilers. 1,695,243; Dec. 11.

Egloff, Gustav, and H. P. Benner, assignors to Universal Oil Products Company, Chicago, Ill. Apparatus for treating emulsified oil. 1,694,643; Dec. 11.

Eichwede, Heinz. (See Wagner, H., Eichwede, and Fischer.)

Eisenhauer, Charles P., assignor to The Duro Company, Dayton, Ohio. Filter. 1,694,407; Dec. 11.

Electric Manufacturing Company, The. (See Levy, Henri G., assignor.)

Electric Railway Equipment Company, The. (See Cawood, Clarence A., assignor.)

Electrical Furnace Company, The. (See Cope, Frank T., assignor.)

Electrolock Manufacturing Company, The. (See Hemingway, Wilson, jr., assignor.)

Elder & Jenks. (See Reese, William, assignor.)

Elliott-Fisher Company. (See Vickers, Harry H., assignor.)

Elliott, Harmon P., Watertown, Mass. Addressing machine. 1,694,619; Dec. 11.

Elliott, Harold E. (See Gouldbourn, J., Cooper, and Elliott.)

Ellis, George H., Spondon, near Derby, England, assignor to Celanese Corporation of America. Treatment of cellulose acetate. 1,694,413; Dec. 11.

Ellis, George H., Spondon, near Derby, England, assignor to Celanese Corporation of America. Dyeing, printing, or stenciling of cellulose. 1,694,414; Dec. 11.

Ellsworth, Ross J., assignor to Holmes Disappearing Bed Company, Woodstock, Ill. Safety lock. 1,695,184; Dec. 11.

Elmen, Gustaf W., Leonia, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Production of magnetic dust cores. 1,695,041; Dec. 11.

Elrick Rotating Engine Company. (See Elrick, William, assignor.)

Elrick, William, assignor to Elrick Rotating Engine Company, Limited, Toronto, Ontario, Canada. Rotary engine. 1,694,587; Dec. 11.

Emmons, Arthur N., Nedrow, assignor to The Porter-Cable Machine Company, Syracuse, N. Y. Abrading machine. 1,695,090; Dec. 11.

Engeln Electric Company, The. (See Goldfield, E. R., and Horsley, assignors.)

Erie Meter Systems, Inc. (See Carlson, Nelson A., assignor.)

Eskridge, James T., La Jara, Colo. Supporter for wearing apparel. 1,694,735; Dec. 11.

Essex Rubber Company. (See Oakley, Laurence M., assignor.)

Everhard, Harry H., Canton, Ohio. Ventilating screen. 1,695,091; Dec. 11.

Failing, Otto C. (See Mason, A. R., and Failing.)

Fair Play Caramels, Inc. (See Trauger, John W., assignor.)

Farrand, Clair L., Forest Hills, N. Y. Loud-speaker casing. Des. 77,146; Dec. 11.

Fearing, Justin L., Jamaica, assignor to Western Electric Company, Incorporated, New York, N. Y. High-efficiency discharge-device system. 1,695,042; Dec. 11.

Federal Laboratories, Inc. (See Bradner, D. B., and Oglesby, assignors.)

Fejes, Eugene, Budapest, Hungary. Crank and like case. 1,694,535; Dec. 11.

Fekete, Stephen L., assignor to Hudson Motor Car Company, Detroit, Mich. Governor for ignition systems. 1,694,644; Dec. 11.

Fender, John B., Kaufman, Tex. Concrete culvert. 1,694,736; Dec. 11.

Findlay, Robert, Manufacturing Company. (See Schwartz, Frederick, assignor.)

Fink, Henry A., Syracuse, assignor to Continental Can Company, Inc., New York, N. Y. Flanging can bodies and flanging head for carrying out the same. 1,695,232; Dec. 11.

Fink, Henry A., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Automatic stack-lifting device. 1,695,233; Dec. 11.

Finley, Dozier, Berkeley, and W. L. Rhoades, assignors to The Paraffine Companies, Inc., San Francisco, Calif. Curing concrete. 1,694,588; Dec. 11.

Finnell, Walter S., Hannibal, Mo. Scrubbing machine. 1,694,737; Dec. 11.

Finnicum, Louis G., St. Paul, Minn. Glare shield. 1,694,645; Dec. 11.

Fischer, Erich. (See Wagner, H., Eichwede, and Fischer.)

Fischer, Wilhelm. (See Liebert, H. R., and Fischer.)

Fish, George L., Los Angeles, assignor to R. Salisbury, trustee, Oakland, Calif. Emulsifying apparatus. 1,694,589; Dec. 11.

Fitch, Benjamin F., Evanston, Ill., assignor to Motor Terminals Company, Wilmington, Del. Handling freight. 1,694,912; Dec. 11.

Fitch, Benjamin F., New York, N. Y., assignor to Motor Terminals Company, Wilmington, Del. Freight-handling apparatus. 1,694,913; Dec. 11.

Flanigan, Edwin B., assignor to E. B. Flanigan, Incorporated, Wilkes-Barre, Pa. Vehicle brake. 1,694,776; Dec. 11.

Flanigan, E. B., Incorporated. (See Flanigan, Edwin B., assignor.)

Fleischmann Company, The. (See Brown, Elmer B., assignor.)

Flint, Alston H. (See Riley, T. H., and Flint.)

Flintkote Company, The. (See Heppes, Otto A., assignor.)

Floeter, Frederick S., Saginaw, Mich. Floor-scrubbing machine. 1,694,937; Dec. 11.

Floraday, Burton S., Toledo, Ohio, assignor to Hydraulic Brake Company, Detroit, Mich. Piston and cylinder construction. 1,694,503; Dec. 11.

Floyd, George G., Riverside, Ill. Dispensing device. 1,694,812; Dec. 11.

Flynt, Augustus M., Savannah, Ga. Spare-tire carrier. 1,694,439; Dec. 11.

Foley, Charles B., Fort Wayne, Ind., assignor to Charles B. Foley, Inc., New York, N. Y. Electric furnace. 1,694,536; Dec. 11.

Foley, Charles B., Inc. (See Foley, Charles B., assignor.)

Fornaca, Guido, Turin, Italy. Valve gear. 1,695,011; Dec. 11.
Forster, H. J., trustee of the American Railway Association. (See Kivlin, Alfred P., assignor.)
Fowler, Mack J., Roanoke, Va. Lubricator. 1,694 813; Dec. 11.
Fowler, William S., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass. Cover paper or the like. Des. 77,147; Dec. 11.
Frankart, Inc. (See Von Frankenberg, Arthur, assignor.)
Franklin, Charles S., London, England, assignor, by mesne assignments, to Radio Corporation of America. Wirless telegraph receiver. 1,694,646; Dec. 11.
Fraser, Fred L., Philadelphia, Pa. Pipe-bowl knife. 1,695,145; Dec. 11.
Fraunfelder, George D., assignor to Easton Car & Construction Company, Easton, Pa. Box-girder construction for car bodies. 1,694,537; Dec. 11.
Freeborn, Cornelius C., ar. (See Freeborn, Edward H., assignor.)
Freeborn, Edward H., New York, N. Y., assignor to C. C. Freeborn, sr., New Milford, N. J. Sound clarifier. 1,694,848; Dec. 11.
Freise, Frederick W. (See Barsky, G., and Freise.)
Frick Company. (See Good, Daniel F., assignor.)
Friedley-Voshardt Company. (See Wellman, Lester R., assignor.)
Friedman, William F., Washington, D. C. Electrical signaling. 1,694,874; Dec. 11.
Frier, James H., jr., Webster Groves, Mo. Toy house. Des. 77,148; Dec. 11.
Frier, James H., jr., Webster Groves, Mo. Toy house. Des. 77,149; Dec. 11.
Fritz, John L., Geauga Lake, Ohio. Centrifugal separator. 1,694,972; Dec. 11.
Fujii, Sunao, Honolulu, Hawaii. Knitting device. 1,694,849; Dec. 11.
Fulenwider, Harry. (See Fulenwider, Jesse and H., Robinson, and Norris.)
Fulenwider, Harry, et al. (See Fulenwider, Jesse and H., Robinson, and Norris, assignors.)
Fulenwider, Jesse and H., E. W. Robinson, and H. Norris, assignors to H. and J. Fulenwider, Savannah, Ga. Ridge-cap-forming machine. 1,694,440; Dec. 11.
Fulenwider, Jesse, et al. (See Fulenwider, Jesse and H., Robinson, and Norris, assignors.)
Fuller Brush Company, The. (See Van Veen, Anton, assignor.)
Fuller, Louis J., Bloomfield, N. J., assignor to Duparquet, Huot & Moneuse Co., New York, N. Y. Insulating support for electric resistance heating element. 1,695,234; Dec. 11.
Gaisman, Henry J., New York, N. Y., assignor to Autostrop Patents Corporation, Dover, Del. Carpet-wire blade-inserting machine. 1,694,875; Dec. 11.
Gale, George T., Toronto, Ontario, Canada. Holder for dentifrice-container tubes. 1,695,185; Dec. 11.
Gallon Metallic Vault Company, The. (See Smith, R. E., and Arnold, assignors.)
Galloway, Robert M., assignor to The National Automatic Tool Company, Richmond, Ind. Head mount for multiple drills. 1,694,814; Dec. 11.
Galvin, Charles E., assignor to The Ridgely Trimmer Company, Springfield, Ohio. Straightedge for wall-paper trimmers. 1,694,850; Dec. 11.
Gammeter, John R., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Fender for sweepers. 1,695,246; Dec. 11.
Gardner, David S. (See Gardner, Joseph A. and D. S.)
Gardner, Joseph A. and D. S., Memphis, Tenn. Centrifugal casting machine. 1,694 504; Dec. 11.
Garfield, James L., Drexel Hill, Pa. Billing device. 1,694,647; Dec. 11.
Garlick, Ralph, Totowa, N. J. Christmas-tree stand. 1,694,815; Dec. 11.
Geary, George, Toronto, Ontario, Canada. Floor-finishing apparatus. 1,694,738; Dec. 11.
Geiger, Edward F., Chicago, Ill., assignor to International Time Recording Company of New York, Binghamton, N. Y. Watchmen's deliquency alarm. 1,695,092; Dec. 11.
Geiger, Josef, assignor to Maschinenfabrik Augsburg-Nuernberg, Aktiengesellschaft, Augsburg, Germany. Locomotive. 1,694,648; Dec. 11.
General Chemical Company. (See Thompson, Alfred P., assignor.)
General Electric Company. (See Anderson, Arvid E., assignor.)
General Electric Company. (See Bany, H., and Seeley, assignors.)
General Electric Company. (See Berry, Edward R., assignor.)
General Electric Company. (See Clinker, Reginald C., assignor.)
General Electric Company. (See Coolidge, William D., assignor.)
General Electric Company. (See Goodwin, Alan M., assignor.)
General Electric Company. (See Hall, Chester I., assignor.)
General Electric Company. (See Newton, E. G., and Wade, assignors.)
General Electric Company. (See Sabbah, Camille A., assignor.)
General Electric Company. (See Schrage, Hidde K., assignor.)
General Electric Company. (See Sensui, Nobuo, assignor.)
General Electric Company. (See Sohlberg, Erik G., assignor.)
General Electric Company. (See Van Horn, Irving H., assignor.)
General Electric Company. (See Wolff, Walther, assignor.)
General Highways System, Incorporated. (See Johnson, Gordon S., assignor.)
General Motors Corporation. (See Beringer, Roscoe, assignor.)
General Motors Corporation. (See Cram, Leroy V., assignor.)
General Motors Corporation. (See Dykstra, James, assignor.)
General Motors Corporation. (See Hicks, Harlie H., assignor.)
General Motors Corporation. (See Spencer, Louis M., assignor.)
General Motors Corporation. (See Taub, Alex, assignor.)
General Motors Research Corporation. (See Short, Charles R., assignor.)
General Motors Research Corporation. (See Summers, C. E., and Lee, assignors.)
Gerlach, Charles W., assignor, by mesne assignments, to Chicago Mill and Lumber Corporation, Chicago, Ill. Packing case. 1,694,973; Dec. 11.
Gesellschaft für Drahtlose Telegraphie m. b. H. (See Meissener, Alexander, assignor.)
Gibbons Brothers Limited. (See Moore, B. J., and Campbell, assignors.)
Gilbert, A. C., Company, The. (See Gilbert, Albert C., assignor.)
Gilbert, Albert C., Hamden, assignor to The A. C. Gilbert Company, New Haven, Conn. Toy machine frame. Des. 77,150; Dec. 11
Gilmore, Vincent J., Wappingers Falls, assignor to The De Laval Separator Company, New York, N. Y. Centrifugal-separator feeding device. 1,694,468; Dec. 11.
Glass, William, Campbell, Ohio. Bottle cap. 1,694,851; Dec. 11.
Glascock Brothers Mfg. Company. (See Miller, Calvin N., assignor.)
Glidden, Alfred A., and T. M. Knowland, Watertown, and W. T. Rich, jr., Newton, assignors to Hood Rubber Company, Watertown, Mass. Valve-stem adapter for inner-tube molds. 1,695,012; Dec. 11.
Glidden, Alfred A., and T. M. Knowland, Watertown, and W. T. Rich, jr., Newton, assignors of Hood Rubber Company, Watertown, Mass. Valve-stem adapter for inner-tube molds. 1,695,013; Dec. 11.
Glover, Charles H., La Grange, Ill. Artificial Christmas tree. 1,694,974; Dec. 11.
Goddard, Alvin C., Richmond Hill, N. Y. Pivot hinge. 1,695,235; Dec. 11.
Goldberg, Samuel, assignor to Goldberg & Squire, Incorporated, New York, N. Y. Necktie. 1,694,816; Dec. 11.
Goldberg & Squire, Incorporated. (See Goldberg, Samuel, assignor.)
Goldfield, Edwin R., and C. Horsely, assignors to The Engeln Electric Company, Cleveland, Ohio. Applicator-securing means. 1,694,649; Dec. 11.
Good, Daniel, F., assignor to Frick Company, Waynesboro, Pa. Casing for antifriction bearing. 1,695,146; Dec. 11.
Good Inventions Co. (See Good, John, assignor.)
Good, John, Garden City, assignor to Good Inventions Co., New York, N. Y. Combustion engine. 1,6951,186; Dec. 11.
Goodall, Howard W., Aldan, and J. W. Walsh, Philadelphia, Pa. Hose clamp. 1,694,538; Dec. 11.
Goodman, Patrick, Brooklyn, N. Y. Gas-main stopper. 1,695,187; Dec. 11.
Goodrich, B. F., Company, The. (See Gammeter, John R., assignor.)
Goodwin, Alan M., Boston, Mass., assignor to General Electric Company. Auxiliary control means for prime movers. 1,694,975; Dec. 11.
Goodwin, Henry L., New York, N. Y. Cooking vessel. 1,694,378; Dec. 11.
Goodwin, Joseph W., et al. (See Muckly, Floyd S., assignor.)
Goodyear Tire & Rubber Company, The. (See Clifford, Albert M., assignor.)
Goodyear Tire & Rubber Company, The. (See Haase, Jorgan L., assignor.)
Goodyear Tire & Rubber Company, The. (See Kurtz, Stewart S., jr., assignor.)
Goodyear Tire & Rubber Company, The. (See Templin, Ellis W., assignor.)
Goodyear Tire & Rubber Company, The. (See Van Rennes, Cornelis, assignor.)
Goodyear-Zeppelin Corporation. (See Brunner, Eugen, assignor.)
Goodyear Zeppelin Corporation. (See Liebert, H. R., and Fischer, assignors.)
Göpel, Carl, Halle-on-the-Saale, Germany. Device for dispowdering confectionery. 1,694,590; Dec. 11.
Gordon, Chester S., New York, N. Y., assignor to American Telephone and Telegraph Company. Insulator. 1,694,415; Dec. 11.
Gorlen Company. (See Dalrymple, William P., assignor.)

Gorsuch, George J., assignor to Hickok Manufacturing Company, Rochester, N. Y. Machine for beveling the edges of leather or similar material. 1,694,379; Dec. 11.
Gould, Rufus, assignor of one-half to Postal Telegraph-Cable Company, New York, N. Y. Anchor rod.
Gouldbourn, Joseph. (See Ricks, F., and Gouldbourn.) 1,694,739; Dec. 11.
Gouldbourn, Joseph, B. P. Cooper, and H. E. Elliott, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J. Splitting machine. 1,694,441; Dec. 11.
Grady, William H., Louisville, Ky., assignor, by mesne assignments, to American Creosoting Company. Dumping table. 1,694,591; Dec. 11.
Graf, Franz, Baden, Switzerland. Electrically heated tile stove. 1,694,539; Dec. 11.
Graf-Lite Corporation. (See Graf, Richard, assignor.)
Graf, Richard, South Bend, Ind., assignor to Graf-Lite Corporation, Chicago, Ill. Lamp. 1,694,592; Dec. 11.
Graf, Richard, South Bend, Ind., assignor to Graf-Lite Corporation, Chicago, Ill. Lamp. 1,694,593; Dec. 11.
Graham, Lucy J., New York, N. Y., assignor to Crane Co., Chicago, Ill. Combination lavatory and dressing table. Des. 77,151; Dec. 11.
Grand Rapids Brass Company. (See Roedding, Gordon E., assignor.)
Grasselli Dyestuff Corporation. See Rabe, P., Stötter, Wenk, and Schepss, assignors.)
Grasselli Dyestuff Corporation. (See Wagner, Hermann, assignor.)
Grasselli Dyestuff Corporation. (See Wagner, H., Eichwede, and Fischer, assignors.)
Gravel, David, assignor to The Standard-Coosa-Thatcher Company, Chattanooga, Tenn. Slub catcher. 1,695,236; Dec. 11.
Green, Ellis, assignor of one-half to L. A. Green, Tulsa, Okla. Tubing support. 1,695,093; Dec. 11.
Green, L. A. (See Green, Ellis, assignor.)
Greenbaum, Leo, Far Rockaway, E. Van Hoofstadt, Oceanside, and C. Gustavson, Brooklyn, N. Y., assignors to Lion Match Company, Inc. Book-match machine. 1,694,505; Dec. 11.
Greene, Bartholomew, H., Sebring, Ohio. Kiln. 1,694,650; Dec. 11.
Greene, Edward F., New York, N. Y., assignor to Revere Rubber Company, Chelsea, Mass. Combined sole and heel. Des. 77,152; Dec. 11.
Greist Manufacturing Company, The. (See Hinman, George L., assignor.
Grillet, Nicolas B., Neuilly, assignor to Société pour la Fabrications de la Soie "Rhodiaseta," Paris, France. Apparatus for the manufacture of artificial silk. 1,695,094; Dec. 11.
Griscom-Russell Company, The. (See Price, Joseph, assignor.)
Griswold Manufacturing Company, The. (See Griswold, Roger W., assignor.)
Griswold, Roger W., assignor to The Griswold Manufacturing Company, Erie, Pa. Stove damper. 1,694,740; Dec. 11.
Grobman, Harold, Brooklyn, N. Y. Lamp shade. Des. 77,153; Dec. 11.
Gruenfeldt, Emil. (See Peters, Frederick W., assignor.)
Gruhl, Edwin. (See Ruhmer, Ernst, assignor.)
Gudmundsen, Abraham, American Fork, and A. Gudmundsen, Salt Lake City, Utah. Beet cleaner. 1,694,817; Dec. 11.
Gudmundsen, Austin. (See Gudmundsen, Abraham and A.)
Guggenheim Brothers. (See Burdick, Charles L., assignor.)
Gulberson Corporation, The. (See Peters, Archie R., assignor.)
Guillaume, Paul M., Paris, France, assignor to Bourjois, Inc., N. Y. Receptacle for powder or rouge. 1,694,818; Dec. 11.
Gunderman, Lester S., Pittsburgh, Pa. Game. 1,694,819; Dec. 11.
Gustafson, Benjamin F., Redfield, S. Dak. Seed-dusting apparatus. 1,694,442; Dec. 11.
Gustavson, Charles. (See Greenbaum, L., Van Hoofstadt, and Gustavson.)
Guthrie, William H., Atlantic City, N. J. Tool for removing headlight rims. 1,694,443; Dec. 11.
Gyger, Adolf, Riverside, Calif. Mechanical doll. 1,694,976; Dec. 11.
Haase, Jorgen L., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Machine for manufacturing solid tires. 1,694,876; Dec. 11.
Hackmann, Frederick, deceased, Chicago, Ill.; I. R. Hackmann, administratrix. Track liner. 1,694,651; Dec 11.
Hackmann, Ida R., administratrix. (See Hackmann, Frederick.)
Hahl, Hans, and W. Kropp, Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Vanadium compound. 1,695,147; Dec. 11.
Haines, William T., Mountain Lakes, and R. W. Harper, East Orange, N. J.; said Haines assignor to American Telephone and Telegraph Company and said Harper assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone exchange system. 1,695,043; Dec. 11.
Hager, Almiron A., Wellington, Wash. Locomotive governor. 1,694,652; Dec. 11.
Hagner, Lewis, jr., Norristown, Pa. Rim contractor. 1,694,741; Dec. 11.
Hall, Chester I., Fort Wayne, Ind., assignor to General Electric Company. Circuit-controlling device and system employing the same. 1,694,977; Dec. 11.
Hall Draft Gear Corporation. (See Sherman, C. W., and Hall, assignors.)
Hall, Edward A., Baltimore, Md. Apparatus for harvesting artificial ice. 1,694,742; Dec. 11.
Hall, Ernest A., assignor to The Hall Manufacturing Company, Toledo, Ohio. Valve hone. 1,694,705; Dec. 11.
Hall, George N., Los Angeles, Calif. Mechanical toy. 1,695,095; Dec. 11.
Hall, Joseph. (See Sherman, C. W., and Hall.)
Hall Manufacturing Company, The. (See Hall, Ernest A., assignor.)
Hall, Ray E., Evanston, assignor to Hall Research Corporation, Chicago, Ill. Electrolyte and electrolytic apparatus. 1,694,653; Dec. 11.
Hall Research Corporation. (See Hall, Ray E., assignor.)
Hallmann, Karl, Munich, Germany. Increasing the electrical conductivity and the flexibility of metals or alloys. 1,695,044; Dec. 11.
Halvorsen, Birger F., assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Oslo, Norway. Purification of gases to be used in the production of ammonia. 1,694,594; Dec. 11.
Hamburger, Aron, London, England. Color photography and the like. 1,695,045; Dec. 11.
Hamilton, Paul H., assignor to The Sands Manufacturing Company, Cleveland, Ohio. Valve. 1,694,777; Dec. 11.
Haming, Lawrence J. (See Bode, W. O., and Haming.)
Hammond, John H., jr., Gloucester, Mass. Method of and system for electrical signaling. 1,694,654; Dec. 11.
Hammond, John H., jr., Gloucester, Mass. System and method of production and reception of continuous oscillations. 1,694,655; Dec. 11.
Hampden Glazed Paper & Card Company. (See Fowler, William S., assignor.)
Hanovia Chemical and Manufacturing Company. (See Robinson, F. W., and Knapp, assignors.)
Hansen, Charles C., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Chuck for crank handles. 1,694,380; Dec. 11.
Hansen, Sinius M. (See Johnson, L. E., Hansen, and McTarnahan.)
Hansen, John W., Chicago, Ill. Vehicle towing device. 1,695,096; Dec. 11.
Hanson, Albert J., Arlington, assignor to American Metallurgical Corporation, Boston, Mass. Pot furnace. 1,694,416; Dec. 11.
Hapgood, Cyrus H., Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y. Controlling the feed of gasoline engines. 1,694,469; Dec. 11.
Harper, Philip S., Chicago, Ill. Valve. 1,694,978; Dec. 11.
Harper, Robert W. (See Haines, W. T., and Harper.)
Harr, Karl, Horde, Germany. Sintered magnesite brick and making the same. 1,694,540; Dec. 11.
Harrell, Walter A., Richland, Kans. Kafir-corn header. 1,694,852; Dec. 11.
Harrington, Edward L., assignor to G. H. Williams Company, Erie, Pa. Floor scraper. 1,694,417; Dec. 11.
Harris, Leonard B., New York, N. Y. Apparatus for power transmission. 1,694,938; Dec. 11.
Harris, Neal, San Francisco, Calif. Rust-resisting can. 1,694,820; Dec. 11.
Harrison, Dewey L., Fort Smith, Ark. Electric signal-transmitting switch. 1,695,148; Dec. 11.
Harry, George Y., Wapakoneta, Ohio. Honey extractor. 1,694,541; Dec. 11.
Hart, Milton H., Hartford, Conn. Hose nozzle. 1,695,097; Dec. 11.
Harte, James A. (See Witter, W. D., and Harte.)
Hartman, George H., Cleveland, Ohio. Apparatus for elevating popped corn and delivering it. 1,694,381; Dec. 11.
Haseltine, Stacy B., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,694,778; Dec. 11.
Hatcher, Manning F. (See Klooz, L. F., and Hatcher.)
Haughton Elevator and Machine Co., The. (See Ohler, Frank L., assignor.)
Hawthorne, Louis A., Hillside, assignor to Anchor Post Fence Company, Garwood, N. J. Gate hinge. 1,694,914; Dec. 11.
Heany, John A., assignor to Heany Laboratories, Inc., New Haven, Conn. Air spring. 1,694,821; Dec. 11.
Heany Laboratories, Inc. (See Heany, John A., assignor.)
Heat Research and Service Corporation, The. (See Deppeler, John H., assignor.)
Hebebrand, George H. (See Neal, B., and Hebebrand.)
Heberlin & Co. A. G. (See Bodmer, Albert, assignor.)
Hedden, Vern D., Santa Barbara, Calif. Constructing buildings. 1,694,542; Dec. 11.
Heftler, Victor R., Detroit, Mich. Assembling filter-stack units. 1,694,939; Dec. 11.
Heggem, Alfred G., Tulsa, Okla. Valve. 1,695,014; Dec. 11.
Heidt, Guilelmus V., Governors Island, N. Y. Hat net. Des. 77,154; Dec. 11.
Hein, Julius, Lakewood, Ohio. Machine for shaping the ends of hollow ducts. 1,694,685; Dec. 11.
Heller, David, New York, N. Y. Flexible seam fastener. 1,694,915; Dec. 11.
Hemingway, Wilson, jr., Melrose Park, Pa., assignor to The Electrolock Manufacturing Company, Vicksburg, Miss. Locking means for automobiles. 1,694,382; Dec. 11.

Hencken, John K., Brooklyn, N. Y. Highway buildings. 1,694,383; Dec. 11.
Henkel, Fay M., New Rochelle, N. Y. Portable bench saw. 1,695,188; Dec. 11.
Heppes, Otto A., La Grange, Ill., assignor to The Flintkote Company, Boston, Mass. Roofing. 1,694,418; Dec. 11.
Herman, Henry F., Chappaqua, assignor to Straitline Radio Corporation, New York, N. Y. Electrical condenser and indicating means. 1,694,384; Dec. 11.
Hershey Manufacturing Company. (See Hershey, Orville S., assignor.)
Hershey, Orville S., assignor to Hershey Manufacturing Company, Chicago, Ill. Automobile lock. 1,694,506; Dec. 11.
Herz, Alfred, Chicago, Ill. Screen. 1,694,706; Dec. 11.
Herz Bed Company. (See Herz, Gene, assignor.)
Herz, Gene, assignor to Herz Bed Company, Chicago, Ill. Bed. 1,694,940; Dec. 11.
Hess, Edward C., Pittsburgh, Pa., assignor of one-half to A. L. Maass, Baltimore, Md. Shoe protecting and handling device. 1,694,853; Dec. 11.
Heywood-Wakefield Company. (See Brown, Charles A., assignor.)
Hickman, Joseph T., Washington, D. C. Dual-control apparatus. 1,694,916; Dec. 11.
Hickok Manufacturing Company. (See Gorsuch, George J., assignor.)
Hicks, Harlie H., assignor to General Motors Corporation, Detroit, Mich. Making pressed-steel hubs. 1,694,779; Dec. 11.
Hiering, William C., assignor to J. E. Mergott Co., Newark, N. J. Bottle-opening implement. 1,695,098; Dec. 11.
Hight, Eugene S., Peoria, Ill. Variable-speed device. 1,695,099; Dec. 11.
Hill, George E. C., Niagara Falls, N. Y. Toothbrush holder. 1,694,941; Dec. 11.
Hinman, George L., New Haven, Conn., assignor to The Greist Manufacturing Company. Strainer. 1,694,743; Dec. 11.
Hippensteel, Claude L., Elizabeth, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y. Testing apparatus. 1,695,046; Dec. 11.
Hobart, Arthur H., Honolulu, Hawaii. Cementing wells. 1,694,419; Dec. 11.
Hockley, Horace R., and H. B. White, Slough, England, assignors to The National Pneumatic Company, New York, N. Y. Apparatus for operating and controlling the doors of tramway or like vehicles. 1,694,543; Dec. 11.
Hodgson, William W., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Metal containers. 1,695,100; Dec. 11.
Hoffman, Irving, Philadelphia, Pa. Reversible back for upholstered furniture. 1,695,101; Dec. 11.
Hoffman, Irving, Philadelphia, Pa. Bearing for reversible furniture backs. 1,695,102; Dec. 11.
Hoffman, Michael, Brooklyn, N. Y. Indicator for motion-picture-projection apparatus. 1,694,942; Dec. 11.
Hoffman, Michael, Brooklyn, N. Y. Indicator for motion-picture-projection apparatus. 1,694,943; Dec. 11.
Hoge, James B., Cleveland, Ohio, and E. E. Clement, assignors to E. F. Colladay, Washington, D. C. Combined radio telephone and power-distributing system. 1,695,171; Dec. 11.
Holmes Disappearing Bed Company. (See Ellsworth, Ross J., assignor.)
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining apparatus. 1,694,780; Dec. 11.
Holmes, Thomas E., Glasgow, Scotland. Rolling mill. 1,694,854; Dec. 11.
Honey-Butter Company. (See Burton, E. F., and Montgomery, assignors.)
Hood Rubber Company. (See Glidden, A. A., Knowland, and Rich, assignors.)
Hook, Arley U., New Washington, Ohio. Thermoelectric switch. 1,695,103; Dec. 11.
Horix, Carl, Chicago, Ill. Fountain-pen desk set. 1,694,918; Dec. 11.
Horix, Carl, Chicago, Ill. Expansion belt. 1,694,944; Dec. 11.
Horsley, Caperton. (See Goldfield, E. R., and Horsley.)
Horton, Joseph W., Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical measurements. 1,695,047; Dec. 11.
Hose, Henry G., Brooklyn, N. Y. Toy. 1,694,917; Dec. 11.
Hothersall, John M., Brooklyn, assignor to American Can Company, New York, N. Y. Closure for sifter-top cans. 1,694,781; Dec. 11.
Howard, Jesse C., Columbus, Ohio. Valve. 1,694,595; Dec. 11.
Howse, Curtis L., Detroit, Mich., assignor to A. W. Cash Company. Pressure-regulation means. 1,694,507; Dec. 11.
Hudson Motor Car Company. (See Fekete, Stephen I., assignor.)
Huetten, Peter E., assignor to Simmons Company, Kenosha, Wis. Framing for metal furniture. 1,694,656; Dec. 11.
Hughes, Henry L., Co. Inc. (See Sherman, William T., assignor.)
Hughes Tool Company. (See Scott, Floyd L., assignor.)
Hughes Tool Company. (See Scott, F. L., and Wellensiek, assignors.)
Hunt, Arthur W., Kansas City, Mo. Furnace-door opener. 1,694,686; Dec. 11.
Huntley, Burton L., assignor to Speedpak Dispenser Corporation, Minneapolis, Minn. Carton. 1,695,104; Dec. 11.
Hursh, Eva Z., Detroit, Mich. Combination trunk. 1,694,470; Dec. 11.
Huston, Roy, Seattle, Wash. Fence-wire spacer and holder. 1,695,149; Dec. 11.
Hutchings, Le Roi E., Tonawanda, assignor, by mesne assignments, to Remington Rand, Inc., New York, N. Y. Stock-indicating device. 1,694,877; Dec. 11.
Hydraulic Brake Company. (See Floraday, Burton S., assignor.)
Hyman, Charles, Gary, Ind. Automatic control means for quenching coke. 1,695,105; Dec. 11.
I. G. Farbenindustrie Aktiengesellschaft. (See Wietzel, Gustav, assignor.)
Industrial Research Corporation. (See Edwards, Henry J., assignor.)
Ingersoll-Rand Company. (See Hansen, Charles C., assignor.)
Ingersoll-Rand Company. (See Lear, Earl B., assignor.)
Ingersoll-Rand Company. (See Tuttle, Grover G., assignor.)
Ingraham E., Co., The. (See Carlson, Elof L., assignor.)
Inman, Edward R., Franklin, Pa. Section liner. 1,694,385; Dec. 11.
Innes, William, Monkseaton, England, assignor to Westinghouse Electric and Manufacturing Company. Turbine-governing system. Re17,161; Dec. 11.
International Corset Company. (See Ulman, Rosanna D., assignor.)
International Time Recording Company of New York. (See Geiger, Edward F., assignor.)
Irmscher, Hans. (See Zukor, A., and Irmscher.)
Irons, George C., La Verne, Calif. Automobile door pocket. 1,694,855; Dec. 11.
Ives, Herbert E., Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated. Picture transmission. 1,695,048; Dec. 11.
Jackson, John G., Chatham, Ontario, Canada. Storage battery. 1,694,856; Dec. 11.
Jacobi, Norbert J., Electra, Tex. Oil saver. 1,694,471; Dec. 11.
Jacobs, Frank, Prairie, Idaho. Air and steam line coupler. 1,694,744; Dec. 11.
Jacobsen, Emil. (See Bascom, H. M., and Jacobsen.)
Jacobsen, Emil, Port Washington, and A. B. Sperry; said Jacobsen assignor to American Telephone and Telegraph Company and said Sperry assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone exchange system. 1,695,049; Dec. 11.
Jacques, Raynaldo P., Woonsocket, R. I., assignor to Adams Industries, Inc., New York, N. Y. Flexible tubular conduit. 1,695,263; Dec. 11.
Jaeger, Alphons O., Crafton, assignor, by mesne assignments, to The Selden Research & Engineering Corporation, Pittsburgh, Pa. Base-exchange body. 1,694,620; Dec. 11.
James, Charles L., San Francisco, Calif. Razor-blade sharpener. 1,694,544; Dec. 11.
Jandus, Herbert S., and J. R. Morgan, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Clamp plate. Des. 77,155; Dec. 11.
Jandus, Herbert S., and J. R. Morgan, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Clamp plate. Des. 77,156; Dec. 11.
Jandus, Herbert S., and J. R. Morgan, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Plate for vehicle bumpers. Des. 77,157; Dec. 11.
Jeffrey Manufacturing Company, The. (See Liggett, William K., assignor.)
Jenness, Leslie G., Leonia, N. J. Dry-cell element and making the same. 1,694,919; Dec. 11.
Jensen, Louis, assignor to United Autographic Register Company, Chicago, Ill. Filing mechanism for autographic registers. 1,694,782; Dec. 11.
Jett, George C., assignor to Runge Corn Harvester Company, Milwaukee, Wis. Distributor. 1,694,657; Dec. 11.
Johansen, Jens M., Omaha, Nebr. Combined milking stool and bucket. 1,694,545; Dec. 11.
Johnson & Bassett, Inc. (See Riley, T. H., and Flint, assignors.)
Johnson, Chester A., assignor to Chicago Jefferson Fuse & Electric Company, Chicago, Ill. Outlet box. 1,694,707; Dec. 11.
Johnson, Gordon S., Wheaton, assignor to General Highways System, Incorporated, Chicago, Ill. Outdoor advertising sign. 1,695,106; Dec. 11.
Johnson, Lawrence E., Melrose, S. M. Hansen, Lynn, and J. T. McTarnahan, Brighton; said Hansen and said Johnson, assignors, by mesne assignments, to Victor Shoe Machinery Company, Lynn, Mass. Pump. 1,694,783; Dec. 11.
Johnson, Olaf A., Minneapolis, Minn. Scale indicator. 1,694,658; Dec. 11.
Jones, Fred A., Canton, Ohio. Rotary drier. 1,694,708; Dec. 11.
Jones, Richard G., Hynes, Calif. Liquid-feed control. 1,694,621; Dec. 11.
Jorgensen, Bernhardt, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Trimming machine. 1,694,444; Dec. 11.
Jorgensen, Bernhardt, Beverly, Mass., assignor to United Oil Company of California, Los Angeles, Calif. Decolorizing kerosene, gasoline, and similar light petroleum distillates. 1,695,251; Dec. 11.

Joselowitz, Harry A., Minneapolis, Minn. Folding bed. 1,694,420; Dec. 11.
Joseph, Edward L., London, England. Filter for air and other gases. 1,695,237; Dec. 11.
Judd, H. L., Company. (See Long, George M., assignor.)
Juhasz, John, New York, N. Y. Carburetor. 1,694,386; Dec. 11.
Kahl, Franz, assignor of six-tenths to W. Landau, Berlin, Germany. Therapeutic implement. 1,695,107; Dec. 11.
Kalenoff, Godel, Brooklyn, N. Y. Tooth cleaner. 1,695,238; Dec. 11.
Kamrath, Herbert G., assignor to A C Spark Plug Company, Flint, Mich. Air cleaner. 1,694,784; Dec. 11.
Kane, Daniel H., Dayton, Ohio. Milk-bottle closure. 1,695,190; Dec. 11.
Kapnek, William S., Philadelphia, Pa. Booth construction. 1,694,920; Dec. 11.
Karr, Francis, Holland, Mich. Pillow. 1,694,547; Dec. 11.
Kaufmann, August H. (See Kaufmann, Herman H., and A. H.)
Kaufmann, Herman H., and A. H., Cascade, Wis. Cheese formula. 1,694,921; Dec. 11.
Keene, John W., Westport, Conn. Water skate. 1,695,191; Dec. 11.
Keeran, Charles R., Evanston, assignor to Keeran Products Company, Chicago, Ill. Mechanical pencil. 1,694,945; Dec. 11.
Keeran Products Company. (See Keeran, Charles R., assignor.)
Keith, Irving L. (See Sawyer, Albert F., assignor.)
Kelleher, Thomas J., Chicago, Ill. Machine for closing the fold of a sheet of metal. 1,694,596; Dec. 11.
Kelleher, Thomas J., Chicago, Ill. Electrical sheet-metal cutter. 1,694,597; Dec. 11.
Kelly, William M., Westfield, assignor to American Type Founders Company, Jersey City, N. Y. Sheet feeder. 1,694,745; Dec. 11.
Kelso, William. (See Regan, W. J., and Kelso.)
Kelso, William, assignor to The McConway & Torley Company, Pittsburgh, Pa. Car coupler. 1,695,015; Dec. 11.
Kelvin Engineering Co. (See Merlis, Ira, assignor.)
Kempf, Herman H., New York, N. Y. Time switch. 1,694,472; Dec. 11.
Kendall, Burton W., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. High-frequency signaling. 1,694,473; Dec. 11.
Kennedy, Edward, New York, N. Y. Pipe joint. 1,694,822; Dec. 11.
Keough, Robert E., Montreal, Quebec, Canada, assignor to The American Fork & Hoe Company, Cleveland, Ohio. Rail anchor. 1,694,878; Dec. 11.
King, George A., assignor to Scovill Manufacturing Company, Waterbury, Conn. Pin-attached button. 1,695,252; Dec. 11.
Kinnear, Delamar C., assignor to The American Brass Company, Waterbury, Conn. Drawing apparatus. 1,694,922; Dec. 11.
Kivlin, Alfred P., New York, N. Y., assignor to H. J. Forster, trustee of the American Railway Association. Method of and apparatus for crating furniture. 1,694,508; Dec. 11.
Klemperer, Wolfgang, Akron, Ohio, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschraenkter Haftung, Friedrichshafen, Bodensee, Germany. Tensiometer. 1,694,509; Dec. 11.
Klooz, Louis F., and M. F. Hatcher, Pittsburgh, Pa. Window fastener. 1,695,108; Dec. 11.
Kluftinger, Hermann, Kempten, Germany. Drawing frame. 1,694,510; Dec. 11.
Knapp Brothers Manufacturing Co. (See Peck, P. D., and Thomas, assignors.)
Knapp Brothers Manufacturing Company. (See Thomas, Wingate S., assignor.)
Knapp, Kenneth V. (See Robinson, F. W., and Knapp.)
Knowland, Thomas M. (See Glidden, A. A., Knowland, and Rich.)
Knowlton, Norwood H., Rockport, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sole-pressing machine. 1,694,445; Dec. 11.
Kole, Lessing L., Milwaukee, Wis. Vanity case adapted to separate compacts of contrasting shades. 1,694,946; Dec. 11.
Koppers Company, The. (See Sperr, Frederick W., jr., assignor.)
Kosloff, Rose, Jamaica, N. Y. Waterproof baby pants. 1,695,109; Dec. 11.
Kotzebue, Meinhard H., Tulsa, Okla. Vapor extractor. 1,695,192; Dec. 11.
Krall, Reginald F., assignor to Woodall-Duckham (1920) Limited, London, England. Apparatus for separating solids from liquids. 1,695,193; Dec. 11.
Krick, George W., assignor to Barker Bros., Incorporated, Los Angeles, Calif. Extension-leaf construction for permanent-top tables. 1,695,110; Dec. 11.
Kronowit, Isidor S., New York, N. Y. Toy bank. Des. 77,158. Dec. 11.
Kropp, Walter. (See Hahl, H., and Kropp.)
Kruse, Mads, London, England. Holding and locking spare wheels and the like on motor vehicles. 1,695,016; Dec. 11.
Kruse, Peter, assignor to E. W. Bliss Company, Brooklyn, N. Y. Blank feeding and positioning mechanism for can-body-making machines. 1,694,387; Dec. 11.
Kubatzky, Otto, assignor to O. K. Playing Card Company, Tulsa, Okla. Set of playing cards. Des. 77,159; Dec. 11.
Kubatzky, Otto, assignor to O. K. Playing Card Company, Tulsa, Okla. Set of playing cards. Des. 77,160; Dec. 11.
Kubatzky, Otto, assignor to O. K. Playing Card Company, Tulsa, Okla. Set of playing cards. Des. 77,161; Dec. 11.
Kuckuck, Heinrich, Bremen, Germany. Precision bore and producing same. 1,695,017; Dec. 11.
Kulik, Irving, Brooklyn, N. Y. Apparatus for filling root canals. 1,694,857; Dec. 11.
Kurowski, Alfred G. F., Brooklyn, assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 1,694,923; Dec. 11.
Kurtz, Stewart S., jr., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Treating air bags. 1,694,879; Dec. 11.
Kusterle, Frank, Kenosha, Wis., assignor to Simmons Company, New York, N. Y. Crib and adjustable spring-bottom support therefor. 1,694,650; Dec. 11.
Lacene Manufacturing Company. (See Cogswell, Leander A., assignor.)
Lafferty, Jacob W., assignor of one-half to J. M. Lafferty, Mechanicsburg, Ohio. Door for hogpens. 1,694,598; Dec. 11.
Lafferty, John M. (See Lafferty, Jacob W., assignor.)
Lafite, Roger G., Kansas City, Mo. Brush holder for electric generators or motors. 1,694,709; Dec. 11.
Lahousse, Joseph E. G., Lyon, assignor to Societe pour la Fabrication de la Soie "Rhodiaseta," Paris, France. Apparatus for the manufacture of artificial silk. 1,695,111; Dec. 11.
Lainer, Abraham A., Worcester, Mass. Holding and clamping device. 1,694,474; Dec. 11.
La Lux Manufacturing Company. (See Underwood, Western, assignor.)
Lambie, James M. (See Ross, D. W., and Lambie.)
Lammering, Dietrich. (See Zellmann, R., and Lammering.)
Lamoureux, Georges, Puteaux, France. Carburetor. 1,695,112; Dec. 11.
Lancia, Vincenzo, Turin, Italy. Motor car. 1,694,546; Dec. 11.
Landahl, Eugene E., Chicago, Ill. Drive and conveyer chain. 1,694,746; Dec. 11.
Landau, Willi. (See Kahl, Franz, assignor.)
Landis Machine Company. (See Shearer, Harry T., assignor.)
Landon, Archer A., Buffalo, N. Y. Dry-heat bath cabinet. 1,694,858; Dec. 11.
Langdon, Jesse D., Los Angeles, Calif. Airship. 1,694,880; Dec. 11.
Lange, Otto, Chicago, Ill. Revolving teeter. 1,694,785; Dec. 11.
Langton, Edmond W., and A. G. Dawson, Richmond, Va. Self-locking cotter pin. 1,695,113; Dec. 11.
Lansinger, John, Clarks Summit, Pa. Liquid-pressure brake. 1,695,194; Dec. 11.
Larsen, John E., Millis, Mass. Attachment for stringed instruments. 1,694,786; Dec. 11.
Larson, David C. (See Lindquist, D. L., Dunn, and Larson.)
Larson, David C., Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J. Automatic elevator. 1,694,823; Dec. 11.
Laugaudin, Eugène J., Paris, France. Fluid-tight piston. 1,694,859; Dec. 11.
Lea, Charles, assignor to The Automatic Merchandizer, Inc., Boston, Mass. Vending machine. 1,694,599; Dec. 11.
Lea, Charles, Milton, assignor to Shawmut Engineering Company, Boston, Mass. Spool-retarding device for tube frames. 1,694,881; Dec. 11.
Lear, Earl B., Phillipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Valve for rock drills. 1,694,882; Dec. 11.
Leather Makers' Process Company. (See De Graff, Ellis A., assignor.)
Ledwinka, Joseph, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Jig for use in making automobile bodies. 1,694,475; Dec. 11.
Ledwinka, Joseph, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Curtain support for automobile doors. 1,694,824; Dec. 11.
Ledwinka, Joseph, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Automobile door. 1,694,825; Dec. 11.
Ledwinka, Joseph, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Automobile body. 1,694,883; Dec. 11.
Lee, Howard S., Peabody, assignor to J. Marsh, Danvers, Mass. Electric resistance heating element. 1,694,600; Dec. 11.
Lee, Roger K. (See Summers, C. E., and Lee.)
Lefebure, Victor, London, England. Rubber flooring. 1,694,476; Dec. 11.
Le Floch, Georges, Paris, France. Manufacture of dyestuffs from naphthidine. 1,694,884; Dec. 11.
Leisy, Clifford J., assignor to The Glenn L. Martin Company, Cleveland, Ohio. Airplane. 1,695,114; Dec. 11.
Lenander, Nils E., assignor to Orkla Grube-Aktiebolag, Lokken Verk, Norway. Recovery of zinc from zinc-bearing solutions. 1,694,710; Dec. 11.

Lentz, Rea D., assignor of one-fourth to R. Mitchell, Los Angeles, Calif. Automatically-operating mechanism for elevating liquids. 1,694,421; Dec. 11.

Leslak, Charles C., Fullerton, Nebr.. Paintbrush. 1,694,860; Dec. 11.

Leuchtenberg, William E., New York, N. Y. Removing hydrogen sulphide from coal or water gases. Re17,162; Dec. 11.

Le Van, Nelson, Battle Creek, Mich. Clutch. 1,695,150; Dec. 11.

Levine, Harry D., Philadelphia, Pa. Manufacture of Javelle water. 1,694,711; Dec. 11.

Levy, Henri G., assignor to The Electric Manufacturing Company, San Francisco, Calif. Electric hair drier. Des. 77,162; Dec. 11.

Leytens, Marcel, Antwerp, Belgium. Spring suspension for lorries. 1,694,422; Dec. 11.

Liebert, Herman R., and W. Fischer, assignors to Goodyear Zeppelin Corporation, Akron, Ohio. Landing equipment for airships. 1,694,861; Dec. 11.

Liggett, William K., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Crushing machine. 1,694,423; Dec. 11.

Lincoln Manufacturing Company. (See McFadden, Glenn E., assignor.)

Lindgren, Bror J., assignor to Niagara Machine & Tool Works, Buffalo, N. Y. Side-seaming press. 1,694,862; Dec. 11.

Lindquist, Ernest W., Helsingfors, Finland. Rotary screen for screening pulp and paper stock. 1,694,622; Dec. 11.

Lindquist, David L., Hartsdale, N. Y., E. L. Dunn, East Orange, N. J., and D. C. Larson, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J. Elevator system. 1,694,712; Dec. 11.

Lindsay, Harvey B., Evanston, Ill., assignor to Dry Zero Corporation, Wilmington, Del. Thermal insulating structure. 1,694,947; Dec. 11.

Lion Match Company. (See Greenbaum, L., Van Hoofstadt, and Gustavson, assignors.)

Liquid Veneer Corporation. (See Schaedel, Henry V., assignor.)

Little, William F., Nepperhan Heights, N. Y. Tail light for automobiles. 1,694,660; Dec. 11.

Lockhart, James, assignor to The Coe Manufacturing Company, Painesville, Ohio. Conveyer. 1,695,115; Dec. 11.

Logan, William H. (See Parker, Charles A., assignor.)

Long, George M., Boston, Mass., assignor to H. L. Judd Company, Inc., Wallingford, Conn. Drapery-pole center. Des. 77,163; Dec. 11.

Long, George M., Boston, Mass., assignor to H. L. Judd Company, Inc., Wallingford, Conn. Drapery-pole center. Des. 77,164; Dec. 11.

Long, George W. H., Indianapolis, Ind. Dirigible mounting and control mechanism therefor. 1,694,477; Dec. 11.

Lord, Hugh C., Erie, Pa. Universal joint. 1,695,116; Dec. 11.

Lowe, Russell E., assignor to Doherty Research Company, New York, N. Y. Bonded refractory. 1,694,924; Dec. 11.

Löwenstein, Harry F., assignor to E. F. Colladay, Washington, D. C. Radio receiving station. 1,695,175; Dec. 11.

Luftschiffbau Zeppelin Gesellschaft mit beschraenkter Haftung. (See Klemperer, Wolfgang, assignor.)

Lum, George R., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Diaphragm for a loud speaker. Des. 77,165; Dec. 11.

Lundius, Eric R., Richmond Hill, assignor to Western Electric Company, Incorporated, New York, N. Y. Pulsing system. 1,695,050; Dec. 11.

Maass, Arthur L. (See Hess, Edward C., assignor.)

MacChesney, Chester M., and R. H. Norton, assignors to Acme Steel Company, Chicago, Ill. Electric welding machine. 1,694,512; Dec. 11.

MacFarlane, John, Riverside, Calif. Clothes drier. 1,695,151; Dec. 11.

Macildowie, John C., assignor to Asbestos Wood & Shingle Co., Nashua, N. H. Finishing the surfaces of bonded asbestos and the like and resulting product. 1,695,253; Dec. 11.

MacLean, William G., jr., Arnprior, Ontario, Canada. Animal-mouth tongs. 1,694,713; Dec. 11.

Magann, Merritt W., assignor to St. Louis Steel Ball Corporation, St. Louis, Mo. Ball-forming machine. 1,695,195; Dec. 11.

Maina, Joseph. (See Brown, W. S. F., and Maina.)

Marchus, Amos S., Oakland, Calif. Combination air nozzle and gauge. 1,695,018; Dec. 11.

Marcuson, Henry, Chicago, Ill. Coffee urn. 1,694,548; Dec. 11.

Marcy, Frank E., San Diego, Calif. Casing for mechanical exercisers. Des. 77,166; Dec. 11.

Markus, Peter, Kansas City, Mo. Inflatable life preserver. 1,694,714; Dec. 11.

Marrison, Warren A., East Orange, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated. Translating circuits. 1,695,051; Dec. 11.

Marsh, Jasper. (See Lee, Howard S., assignor.)

Marten, Elmer W., Los Angeles, assignor to Monolith Hollow Wall Company, San Diego, Calif. Method of and apparatus for forming hollow concrete walls. 1,694,826; Dec. 11.

Martin, Glenn L., Company, The. (See Leisy, Clifford J., assignor.)

Martin, Perry S., Harrisonburg, Va. Automatic temperature-controlling device for incubators. 1,694,518; Dec. 11.

Martin, Robert J., North Asbury Park, assignor to B. M. C. Patent Company, Trenton, N. J. Control mechanism for radio apparatus. 1,694,601; Dec. 11.

Martindale, Charles A., assignor to The Reliable Machine Company, Anderson, Ind. Oil burner. 1,695,152; Dec. 11.

Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft. (See Geiger, Josef, assignor.)

Mason, Arthur R., and O. C. Failing, Medford, Oreg., assignors to Accurate Gasoline Recording Company. Safety means for fluid-dispensing pumps. 1,694,827; Dec. 11.

Massey-Harris Company. (See Carlton, James A., assignor.)

Matheson, William A., assignor to Roll-A-Way Bed Corporation, Chicago, Ill. Hinge. 1,694,885; Dec. 11.

Mathieu, Albert E., Natick, Mass. Lining for boots and shoes. 1,694,388; Dec. 11.

Matteson, George F., Rockyhill, assignor to The F. B. Shuster Company, New Haven, Conn. Wireworking machine. 1,695,255; Dec. 11.

Mattingly, Edward H., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill. Railway car. 1,694,424; Dec. 11.

McArdle, Michael W., Chicago, Ill. Razor strop. 1,694,389; Dec. 11.

McArdle, Michael W., Chicago, Ill. Contact device for electrically-energized implements. 1,694,715; Dec. 11.

McCartie, Thomas, Newark,, N. J. Electrolyte level gauge. 1,694,687; Dec. 11.

McClatchie, John M., assignor to The Borden Company, New York, N. Y. Apparatus for testing cans for leakage. 1,694,828; Dec. 11.

McClellan, Samuel A., Sallneville, Ohio. Window. 1,694,886; Dec. 11.

McColley, Robert C., Indianapolis, Ind. Windshield wiper. 1,694,390; Dec. 11.

McConway & Torley Company, The. (See Kelso, William, assignor.)

McConway & Torley Company, The. (See Regan, W. J., and Kelso, assignors.)

McCulloch, J. J., et al. (See Moss, G. R., and Parks, assignors.)

McCurdy, Ralph G., Englewood, and P. W. Bixe, Rutherford, N. J., assignors to American Telephone and Telegraph Company. Electrical testing system. 1,694,425; Dec. 11.

McElroy, David W., assignor of one-half to G. E. Boggs, Kaufman, Tex. Water head for drilling rigs. 1,695,019; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture canopy ring or the like. Des. 77,167; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture band or similar article. Des. 77,168; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture arm or the like. Des. 77,169; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture arm or the like. Des. 77,170; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture bracket or similar article. Des. 77,171; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture band or the like. Des. 77,172; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture wall bracket or the like. Des. 77,173; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture wall bracket or the like. Des. 77,174; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture wall bracket or the like. Des. 77,175; Dec. 11.

McFadden, Glenn E., assignor to Lincoln Manufacturing Company, Detroit, Mich. Lighting-fixture wall bracket or the like. Des. 77,176; Dec. 11.

McGogy, Donald H., assignor to McGogy Pump Co., Inc., McMinnville, Oreg. Liquid meter. 1,694,747; Dec. 11.

McGogy Pump Co. (See McGogy, Donald H., assignor.)

McKee, Louis H., Trenton, N. J. Folding chair. 1,695,117; Dec. 11.

McLaughlin, Celia B., administratrix. (See McLaughlin, Wharton, B.)

McLaughlin, Wharton B., deceased, New York, N. Y.; C. B. McLaughlin, administratrix. Preparation of edible fats. 1,694,391; Dec. 11.

McMurray, William C., Avalon, Pa. Knockdown fusee and carrying case. 1,695,052; Dec. 11.

McNaught, Norris F., Chicago, assignor to Cross Manufacturing Company, Woodstock, Ill. Rebound check. 1,694,549; Dec. 11.

McTarnahan, John T. (See Johnson, L. E., Hansen, and McTarnahan.)

McTavish, Robert, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio. Rendering apparatus. 1,695,254; Dec. 11.

Mechlovits, Bernat, New York, N. Y. Brooch or similar article. Des. 77,177; Dec. 11.

Mechlovits, Bernat, New York, N. Y. Brooch or similar article. Des. 77,178; Dec. 11.

Mechlovits, Bernat, New York, N. Y. Brooch or similar article. Des. 77,179; Dec. 11.

Mechlovits, Bernat, New York, N. Y. Brooch or similar article. Des. 77,180; Dec. 11.

Meissner, Alexander, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Means to influence luminous rays. 1,694,861; Dec. 11.

Mellem, Guy G., Minneapolis, Minn. Doorstop. 1,964,550; Dec. 11.

Meller, Reginald B., Alameda, assignor to The Paraffine Companies, Inc., San Francisco, Calif. Display device. 1,694,551; Dec. 11.

Meloon, James W., Wellesley, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Attachment of sole to shoe. 1,694,446; Dec. 11.

Menczer, Samuel A., Fort Worth, Tex. Glare shield for motor vehicles. 1,694,552; Dec. 11.

Mercadante, Joseph. (See Thomson, Alfred M., assignor.)

Mergoth, J. E., Co. (See Hiering, William C., assignor.)

Merlis, Ira, assignor to Kelvin Engineering Co., Inc., New York, N. Y. Cane-cutting attachment for mills. 1,695,196; Dec. 11.

Merrill, David R., Berkeley, assignor to Union Oil Company of California, Los Angeles, Calif. Emulsifiable oil. 1,695,197; Dec. 11.

Merrill, David R., Berkeley, assignor to Union Oil Company, Los Angeles, Calif. Clarifying, decolorizing, and neutralizing oils. 1,695,198; Dec. 11.

Merritt, Matthew M., Middleton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method of and apparatus for treating hides and skins. 1,694,447; Dec. 11.

Mertzanoff, André M., assignor to American Radiator Company, New York, N. Y. Automatic draft regulator for boilers. 1,695,240; Dec. 11.

Meyer, Charles L., assignor to Concrete Engineering Company, Omaha, Nebr. Shore-brace clip. 1,694,887; Dec. 11.

Meyer, Christian F., assignor to Textile Machine Works, Wyomissing, Pa. Universal loop-regulating mechanism for full-fashioned-knitting machines. 1,694,888; Dec. 11.

Middlemiss, George H., Birmingham, Ala. Switch-controlling device. 1,694,448; Dec. 11.

Miller, Calvin N., assignor to Glascock Brothers Mfg. Company, Muncie, Ind. Bottle refrigerators. 1,695,256; Dec. 11.

Miller, Edward G., Grand Rapids, Mich. Air feed for hot-air furnaces. 1,694,392; Dec. 11.

Miller, Leo J. (See Newland, K., and Miller.)

Miller, Melcher, assignor of one-half to L. Stiefel, Leipzig, Saskatchewan, Canada. Harness ferrule. 1,694,716; Dec. 11.

Miller, Philip F., Maplewood, N. J., assignor to The De Laval Separator Company, New York, N. Y. Apparatus for reclaiming used lubricating oil. 1,694,478; Dec. 11.

Miller, Robert J., Oakland, Calif. Wall louver ventilator. Re17,164; Dec. 11.

Milligan, Daniel G., Fort Wayne, Ind. Portable liquid-recording funnel. 1,695,053; Dec. 11.

Mills, Roscoe C. (See Riddle, Kenneth M., assignor.)

Millward, William, Pittsburgh, Pa. Regenerative furnace. 1,695,199; Dec. 11.

Milton, John L., Louisville, Ky. Electric switch. 1,694,479; Dec. 11.

Miner, W. H., Inc. (See Haseltine, Stacy B., assignor.)

Miner, W. H., Inc. (See O'Connor, John F., assignor.)

Miranda, Josephine O, Los Angeles, Calif. Motion-picture card game. 1,694,748; Dec. 11.

Mitchell, John E., St. Louis, Mo. Boll-breaking and cotton-separating machine. 1,694,480; Dec. 11.

Mitchell, Ralph. (See Lentz, Rea D., assignor.)

Mittinger, George E., Cleveland Heights, Ohio. Metallic head for wooden keys and the like. 1,695,118; Dec. 11.

Molyneux, George E., Bayonne, N. J., assignor to United Shoe Machinery Corporation, Boston, Mass. Machine for operating on pieces of sheet material. 1,694,787; Dec. 11.

Monolith Hollow Wall Company. (See Marten, Elmer W., assignor.)

Monteith, Charles N., assignor to Boeing Airplane Company, Seattle, Wash. Retractable light for aircraft. 1,694,889; Dec. 11.

Montgomery, Jay H. (See Burton, E. F., and Montgomery.)

Moody, Lewis F., Philadelphia, Pa. Propeller-type turbine or pump. 1,694,481; Dec. 11.

Moody, Lewis F., Philadelphia, Pa. Hydraulic draft tube. 1,695,200; Dec. 11.

Moore, Bernard J., Stoke-on-Trent, and A. J. Campbell, Stone, assignors of one-half to Gibbons Brothers Limited, Dudley, England. Truck. 1,694,749; Dec. 11.

Morahan, Grace S., Sag Harbor, N. Y. Doll. Des. 77,181; Dec. 11.

Morejon, Rafael F., Habana, Cuba. Photographic camera. 1,694,750; Dec. 11.

Morgan Blodgett Morgan, Inc. (See Morgan, Porter S., assignor.)

Morgan, Horace H., assignor to Palmer-Bee Company, Detroit, Mich. Conveyer. 1,694,054; Dec. 11.

Morgan, John A., assignor to The John A. Morgan Machinery Company, Los Angeles, Calif. Water-circulation-control mechanism for automobiles. 1,695,055; Dec. 11.

Morgan, John A., Machinery Company, The. (See Morgan, John A., assignor.)

Morgan, John R. (See Jandus, H. S., and Morgan.)

Morgan, Porter S., assignor to Morgan Blodgett, Morgan, Inc., New York, N. Y. Shock absorber. 1,694,788; Dec. 11.

Morris, Richard H., 3d, Philadelphia, Pa. Mushroom bed. 1,694,482; Dec. 11.

Morrison, Fred S., Newark, N. J. Dispensing device. 1,694,925; Dec. 11.

Morrison, Lewis E., Newark, N. J., assignor to American Type Founders Company. Sheet-feeding mechanism. 1,694,717; Dec. 11.

Mosely, Harmon, et al. (See Smoot, Samuel K., assignor.)

Mosgrove, Charles A., Waterbury, assignor to The Autoyre Company, Oakville, Conn. Slide buckle. 1,695,056; Dec. 11.

Moss, George R., and R. D. Parks, Lobrville, assignors to J. J. McCulloch, Pomeroy, and S. C. Sweet, Des Moines, Ia. Barn and garage door latch. 1,694,553; Dec. 11.

Motor Terminals Company. (See Fitch, Benjamin F., assignor.)

Muckey, Floyd S., New York, N. Y., assignor of one-tenth to J. F. O'Brien, West New York, N. J., three-tenths to J. W. Goodwin, Richmond Hill, N. Y., and six-tenths to Muckey Patents Corporation. Piano. 1,694,789; Dec. 11.

Muckey Patents Corporation et al. (See Muckey, Floyd S., assignor.)

Müller, Adolf M., Chemnitz, Germany. Operating jack for double-hooked needles in knitting machines. 1,694,426; Dec. 11.

Munro, Thomas, Philadelphia, Pa. Vehicle spring cover. 1,694,483; Dec. 11.

Murphy, Paul B., Nyack, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 1,695,057; Dec. 11.

Murray, Hugh B., Wellington, New Zealand. Variable-speed gear and reverse for motor vehicles and other machines. 1,694,554; Dec. 11.

Myerson, Simon, Cambridge, Mass. Artificial tooth. 1,694,948; Dec. 11.

N. V. Philips' Gloeilampenfabrieken. (See Bol, Cornelis, assignor.)

Napier Co., The. (See Schuelke, Emil A., assignor.)

Nash, Arthur E., Philadelphia, and J. S. Alcorn, Cynwyd, assignors to Alcorn Combustion Company, Philadelphia, Pa. Radiating combustion chamber. 1,694,393; Dec. 11.

National Automatic Tool Company, The. (See Galloway, Robert M., assignor.)

National Pneumatic Company. (See Conklin, Roscoe D., assignor.)

National Pneumatic Company, The. (See Hockley, H. R., and White, assignors.)

National Refrigeration Corporation. (See Dennison, French E., assignor.)

Naugle, Harry M., and A. J. Townsend, Canton, Ohio, assignors, by mesne asignments, to The Columbia Steel Company, Pittsburgh, Pa. Floor joist. 1,694,514; Dec. 11.

Naugle, Harry M., and A. J. Townsend, Canton, Ohio, assignors, by mesne assignments, to The Columbia Steel Company, Pittsburgh, Pa. Welding machine. 1,694,555; Dec. 11.

Neal, Burton, St. Louis, and G. H. Hebebrand, Kinloch, Mo. Percentage feeder. 1,694,484; Dec. 11.

Neely, George W., Santa Ana, Calif. Safety device for banks. 1,694,556; Dec. 11.

Nelson, Fred N., Seattle, Wash. Engine housing. 1,694,790; Dec. 11.

Nelson, Lawrence. (See Bergh, I. G., and Nelson.)

Nelson, Lettie Z., St. Joseph, Mo. Sanitary-napkin holder. 1,695,153; Dec. 11.

New, Albert L. (See Davis, Dean W., assignor.)

Newell, Alfred T., Birmingham, Ala. Asphalt spreader. 1,695,201; Dec. 11.

Newell, Alfred T., Birmingham, Ala. Asphalt spreader. 1,695,202; Dec. 11.

Newell, Alfred T., Birmingham, Ala. Asphalt spreader. 1,695,203; Dec. 11.

Newland, Kelly, and L. J. Miller, Columbus, Ohio. Vehicle headlamp. 1,694,485; Dec. 11.

Newton, Edward G., and E. J. Wade, Pittsfield, Mass., assignors to General Electric Company. High-voltage primary cut-out. 1,694,979; Dec. 11.

Niagara Machine & Tool Works. (See Lindgren, Bror J., assignor.)

Nicles, Hiram W., assignor to Vento Steel Sash Company, Muskegon Heights, Mich. Window fastener. 1,964,662; Dec. 11.

Nielsen, Holger, Buffalo, N. Y.. Refrigerating machine. 1,694,427; Dec. 11.

Nixon, Clarence R., assignor to Baltimore Bottle Machine Corporation, Baltimore, Md. Glass-blowing machine. 1,694,486; Dec. 11.

Nock, Harold E., assignor to Towle Manufacturing Company, Newburyport, Mass. Spoon or analogous article. Des. 77,182; Dec. 11.

Nohavicska, Roza. (See Déri, S., and Denk, assignors.)

Norris, Harry. (See Fulenwider, Jesse and H., Robinson, and Norris.)

Norsk Hydro-Elektrisk Kvaelstofaktieselskab. (See Halvorsen, Birger F., assignor.)

Northrup, Edwin F., Princeton, assignor to Ajax Electrothermic Corporation, Trenton, N. J. Induction electric furnace. 1,694,791; Dec. 11.

Northrup, Edwin F., Princeton, assignor to Ajax Electrothermic Corporation, Trenton, N. J. High-frequency induction furnace. 1,694,792; Dec. 11.

Norton, Allen B., Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa. Preventing warpage of castings in cooling. 1,695,239; Dec. 11.

Norton, Ralph H. (See MacChesney, C. M., and Norton.)

Nutt, Frank N., assignor to A C Spark Plug Company, Flint, Mich. Automatic heat-control device. 1,694,751; Dec. 11.

Nutt, Frank N., assignor to A C Spark Plug Company, Flint, Mich. Instrument-panel bezel. 1,694,752; Dec. 11.

Nuttall, Richard, Sydney, New South Wales, Australia. Propulsion means for aircraft or the like. 1,694,602; Dec. 11.

Nutting, Willard H., Oakland, assignor to The Paraffine Companies, Inc., San Francisco, Calif. Lowervator. 1,694,515; Dec. 11.

O. K. Playing Card Company. (See Kubatzky, Otto, assignor.)

Oakley, Laurence M., assignor to Essex Rubber Company, Trenton, N. J. Shoe sole. Des. 77,183; Dec. 11.

O'Brien, Joseph F., et al. (See Muckey, Floyd S., assignor.)

O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,694,793; Dec. 11.

O'Connell, William J. (See Truesdell, J. G., and O'Connell.)

Oettinger, Henry, Jersey City, N. J. Flangeway guard. 1,694,557; Dec. 11.

O'Flaherty, Edward J., Lakewood, Ohio. Tool chuck. 1,694,538; Dec. 11.

Ogden, J. Edward. (See Prescott, Arthur T., assignor.)

Ogden, John E. (See Tomkinson, Charles C., assignor.)

Oglesby, Nicholas E. (See Bradner, D. B., and Oglesby.)

Ohler, Frank L., assignor to The Haughton Elevator and Machine Co., Toledo, Ohio. Elevator-gearing adjustment. 1,694,663; Dec. 11.

Ohnstrand, Enoch, Kenmore, N. Y. Hinged compressor. 1,695,257; Dec. 11.

Olson, Gottfrid. (See Steiner, F. M., and Olson.)

Olson, Walter A., Twin Valley, Minn. Motor-driven sleigh. 1,694,829; Dec. 11.

Optical Industries Corporation. (See Adams, Charles A., assignor.)

Ordmann, Max D. (See Pandolfo, Joseph, assignor.)

Orkla Grube-Aktiebolag. (See Lenander, Nils E., assignor.)

Osgood, John L., Buffalo, N. Y. Tool handle. 1,694,559; Dec. 11.

Ostline, John E., Liverpool, England, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Telephone system. 1,694,623; Dec. 11.

Ostrowsky, Harry, London, England. Frog for violin bows. 1,695,020; Dec. 11.

Otis Elevator Company. (See Blackburne, Frederick W., assignor.)

Otis Elevator Company. (See Larson, David C., assignor.)

Otis Elevator Company. (See Lindquist, D. L., Dunn, and Larson, assignors.)

Otto, Carl, Essen-Ruhr, Germany. Vertical-chamber coke oven. 1,695,204; Dec. 11.

Otwell, Walter E., Linn, Kans. Radiator-cap ornament. Des. 77,184; Dec. 11.

Owens, Frank R., Beaver Crossing, Nebr. Windmill. 1,695,154; Dec. 11.

Pacific Manufacturing Company. (See Reinhold, William J., assignor.)

Pagendarm, John F., Oakland, assignor to American Woodlite Corporation, San Francisco, Calif. Universal focusing device. 1,694,830; Dec. 11.

Palmer-Bee Company. (See Morgan, Horace H., assignor.)

Palmer, Charles W., Spondon, near Derby, England, assignor to Celanese Corporation of America, New York, N. Y. Manufacture of bobbins, spools, or the like. 1,694,428; Dec. 11.

Pandolfo, Joseph, assignor of one-third to M. D. Ordmann, New York, N. Y. Support attachment for flatirons. 1,694,688; Dec. 11.

Paraffine Companies, The. (See Finley, D., and Rhoades, assignors.)

Paraffine Companies, The. (See Meller, Reginald B., assignor.)

Paraffine Companies, The. (See Nutting, Willard H., assignor.)

Paraffine Companies, The. (See Tucker, Edgar M., assignor.)

Parent, Raymond C., assignor of one-half to J. C. Willard, Los Angeles, Calif. Game. 1,695,120; Dec. 11.

Parish, Frank P., Chicago, Ill. Machine tool. 1,694,560; Dec. 11.

Parker, Charles A., Haugan, assignor of one-half to W. H. Logan, St. Regis, Mont. Hose clamp. 1,694,664; Dec. 11.

Parker, Eugene, Los Angeles, Calif. Tile. 1,694,665; Dec. 11.

Parker, George A., Brockton, Mass. Staple. 1,695,155; Dec. 11.

Parks, Robert D. (See Moss, G. R., and Parks.)

Parks & Woolson Machine Company. (See Richardson, Charles G., assignor.)

Parsons, Arthur W., Miami, Fla. Safety device for doors. 1,694,394; Dec. 11.

Pavek, William J., Cicero, Ill. Shock absorber. 1,694,949; Dec. 11.

Peak, Warner L., Los Angeles, Calif., assignor to American Telephone and Telegraph Company. Auxiliary dialing tool. 1,694,429; Dec. 11.

Pearmain, William J., assignor to Twin Disc Clutch Company, Racine, Wis. Clutch. 1,694,980; Dec. 11.

Pease, F. F., Inc. (See Pease, Fred F., assignor.)

Pease, Fred F., East Braintree, assignor to F. F. Pease Inc., Boston, Mass. Separating apparatus. 1,694,666; Dec. 11.

Peck, Harley T., Lebanon, assignor to The Peters Cartridge Company, Cincinnati, Ohio. Priming mixture for small-arms ammunition. 1,694,890; Dec. 11.

Peck, Percy D., and W. S. Thomas, assignors to Knapp Brothers Manufacturing Co., Chicago, Ill. Mitered-joint bracket. 1,694,667; Dec. 11.

Penney, Loren W., Newton Highlands, and H. E. Child, Newton Upper Falls, assignors to Saco-Lowell Shops, Boston, Mass. Cotton-working apparatus. 1,694,950; Dec. 11.

Peppin, Joseph, Sciota, N. Y. Portable guard fence. 1,694,753; Dec. 11.

Perfection Stove Company. (See Chadwick, Lee S., assignor.)

Peters, Archie R., Winfield, Kans., assignor of one-half to The Gulberson Corporation, Dallas, Tex. Oil-tank baffle. 1,694,668; Dec. 11.

Peters Cartridge Company, The. (See Peck, Harley T., assignor.)

Peters, Emil, Crefeld, Germany. Dynamic and efficiency meter. 1,694,718; Dec. 11.

Peters, Frederick W., assignor of one-half to E. Gruenfeldt, Cleveland, Ohio. Universal coupling. 1,694,926; Dec. 11.

Peterson, Andrew O., Santa Barbara, Calif. Vehicle-operated switch. 1,695,121; Dec. 11.

Peterson, Eugene, assignor to Western Electric Company, Incorporated, New York, N. Y. High-frequency signaling. 1,695,058; Dec. 11.

Phillips, Charles F., Blackheath, London, England. Electrical transformer. 1,695,122; Dec. 11.

Phillips, Jim C. (See Blevins, T. B., and Phillips.)

Plagneri, Umberto, San Francisco, Calif. Combination fountain pen and cigarette holder. 1,694,603; Dec. 11.

Pickett, Oliver B., Long Beach, Calif. Bolt and rod cutter. 1,694,561; Dec. 11.

Pieper, Oscar H., Rochester, N. Y. Cord-holding structure. 1,694,669; Dec. 11.

Pilant, Charles A., New Orleans, La. Separator. 1,695,156; Dec. 11.

Piquerez, Emile, Paris, France, assignor to Alemite Manufacturing Corporation, Chicago, Ill. Lubricant compressor. 1,694,624; Dec. 11.

Pittsburgh Train Control Company. (See Williamson, Arba G., assignor.)

Plum, Stephen H., 2d, Madison, N. J., assignor to American Type Founders Company. Sheet-holding device. 1,694,720; Dec. 11.

Plum, Stephen H., 2d, Madison, N. J., and H. Duff, Brooklyn, N. Y., assignors to American Type Founders Company. Suction nozzle for printing presses. 1,694,719; Dec. 11.

Porter-Cable Machine Company, The. (See Emmons, Arthur N., assignor.)

Porter, Omer, Evansville, Ind. Automatic vent for bottles and other liquid containers. 1,694,754; Dec. 11.

Postal Telegraph-Cable Company. (See Gould, Rufus, assignor.)

Poston, Emmett V., Springfield, Ill. Machine for veneering brick. 1,695,123; Dec. 11.

Poulsen, Hans R., Lyme, Conn. Eaves-trough hanger. 1,695,059; Dec. 11.

Prentice, James M., Holyoke, Mass. Electric baseball game. 1,694,721; Dec. 11.

Prescott, Arthur T., East Orange, N. J., assignor to J. E. Ogden, Mountainville, N. Y. Ferry bridge. 1,694,516; Dec. 11.

Price, Herbert E., Seattle, Wash. Animated toy. 1,695,205; Dec. 11.

Price, Joseph, West New Brighton, assignor to The Griscom-Russell Company, New York, N. Y. Air cooler. 1,694,395; Dec. 11.

Price, William T. (See Crosby, Arthur P., assignor.)

Priess, William H., assignor to Wireless Specialty Apparatus Company, Boston, Mass. Electrical condenser. 1,695,060; Dec. 11.

Prigge, Beatrice M., administratrix. (See Prigge, Hugh G.)

Prigge, Hugh G., deceased, Springfield, Ill.; B. M. Prigge, administratrix, assignor to B. M. Prigge. Automobile locking device. 1,694,863; Dec. 11.

Pritchard, Carl B., Scottdale, Pa. Making metallic rims for bull wheels. 1,694,689; Dec. 11.

Pritchett, William H., San Diego, Calif. Air valve and fuel cut-off. 1,695,206; Dec. 11.

Prosperity Company, The. (See Clisson, Albert B., assignor.)

Pullen, Rodney S., Atlantic City, N. J., assignor to Pullenlite Company, Philadelphia, Pa. Match book. 1,694,864; Dec. 11.

Pullenlite Company. (See Pullen, Rodney S., assignor.)

Purwin, Klemens. (See Stoney, J. T., and Purwin.)

Puryear, Samuel R., Nashville, Tenn. Apparatus for separating solids. 1,695,021; Dec. 11.

Quast, Herman, Arlington, Minn. Finger ring. 1,695,157; Dec. 11.

Rabe, Paul, H. Stötter, B. Wenk, Leverkusen-on-the-Rhine, and W. Schepss, Wiesdorf-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y. Producing dyeings fast to light. 1,694,562; Dec. 11.

Radio Corporation of America. (See Franklin, Charles S., assignor.)

Rado, Adelaide D. W. (See Rado, Adolph and A. D. W.)

Rado, Adolph and A. D. W., East Orange, N. J. Dust-mop cleaner. 1,694,891; Dec. 11.

Randolph, Charles P., Oak Park, assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill. Electric waffle iron. 1,694,981; Dec. 11.

Rankin, Ollie W., Covington, Ky., assignor to The Dawson-Evans Construction Co., St. Bernard, Ohio. Cutting tool for the tie wires or bands of concrete building forms, barrels, boxes, bales, and the like. 1,695,022; Dec. 11.

Ransome Concrete Machinery Company. (See Bushnell, James E., assignor.)

Read, John B., and M. F. Coolbaugh, Golden, Colo. Roasting sulphide minerals. 1,694,794; Dec. 11.

Recker, John, Newark, N. J. Keyless lock. 1,694,795; Dec. 11.

Redman, Charles M., Evansville, Ind. Electrically-operated organ-valve control. 1,694,722; Dec. 11.

Reed, Joseph S., Houston, Tex. Cleaning device. 1,695,023; Dec. 11.

Reese, William, assignor to Elder & Jenks, Philadelphia, Pa. Brush. 1,695,124; Dec. 11.

Regan, William J., and W. Kelso, assignors to The McConway & Torley Company, Pittsburgh, Pa. Car coupler. 1,695,026; Dec. 11.

Regan, William J., Wilkinsburg, and W. Kelso, assignors to The McConway & Torley Company, Pittsburgh, Pa. Car coupler. 1,695,024; Dec. 11.

Reid, Ernest W. (See Curme, G. O., jr., and Reid.)

Reinhold, William J., assignor to Pacific Manufacturing Company, San Francisco, Calif. Sectional partition. 1,694,690; Dec. 11.

Reliable Machine Company, The. (See Martindale, Charles A., assignor.)

Remington Rand, Inc. (See Hutchings, Le Roi E., assignor.)

Remy, Auguste, J. Renaux, J. Delort, and F. Debrebant, Rezu St. Eloi, France. Sound-recording and sound-reproducing machine. 1,695,025; Dec. 11.

Renaux, Jean. (See Remy, A., Renaux, Delort, and Debrebant.)

Rensing, Theodor, Kansas City, Mo. Swimming device. 1,695,125; Dec. 11.

Rentos, Constantinos G., Brooklyn, N. Y. Picture frame. 1,694,755; Dec. 11.

Rentz, Frank, Yankton, S. Dak. Golf game apparatus. 1,694,691; Dec. 11.

Revere Rubber Company. (See Greene, Edward F., assignor.)

Reynolds, Joy S., Detroit, Mich. Maintaining pressure on liquid for use in vehicle braking. 1,694,951; Dec. 11.

Rhenania-Kunheim, Verein Chemischer Fabriken, Aktiengesellschaft. (See Rothe, F., and Brenek, assignors.)

Rhoades, William L. (See Finley, D., and Rhoades.)

Rice, Horace E., deceased, and R. C. Da Costa, said Da Costa assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa.; K. F. Rice, administratrix. Condenser structure. 1,694,927; Dec. 11.

Rice, Kathleen F., administratrix. (See Rice, H. E., and Da Costa.)

Rich, William T., jr. (See Glidden, A. A., Knowland, and Rich.)

Richards, James H., Glendale, Calif. Engine-trouble diagnoser. 1,694,670; Dec. 11.

Richardson, Charles G., assignor to Parks & Woolson Machine Company, Springfield, Vt. Cloth-finishing machine. 1,694,865; Dec. 11.

Richardson, O. C., Chicago, Ill. Tag. 1,694,723; Dec. 11.

Ricks, Fred, and J. Gouldbourn, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J. Apparatus for use in assembling uppers and insoles. 1,694,449; Dec. 11.

Ricks, Fred, and J. Gouldbourn, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J. Assembling uppers and insoles. 1,694,450; Dec. 11.

Riddell, W. A. (See Brown, Davis, assignor.)

Ridderstrom, Andrew R., Nahant, assignor to Beacon Folding Machine Company, Lynn, Mass. Folding method and article produced thereby. 1,694,796; Dec. 11.

Riddle, Kenneth M., assignor of one-half to R. C. Mills, Tulsa, Okla. Bag holders. 1,695,027; Dec. 11.

Rider, Herbert E., Lynbrook, N. Y., assignor to Beaver Machine & Tool Co. Inc., Newark, N. J. Thermostat. 1,694,928; Dec. 11.

Ridgely Trimmer Company, The. (See Galvin, Charles E., assignor.)

Riley Stoker Corporation. (See Craig, Ollison, assignor.)

Riley, Thomas H., Skaneateles Falls, N. Y., and A. H. Flint, assignors to Johnson & Bassett, Inc., Worcester, Mass. Bunch builder for spinning mules. 1,695,028; Dec. 11.

Ringer, Soren, assignor to Ringer-Worcester Company, Worcester, Mass. Metal receptacle. 1,694,487; Dec. 11.

Ringer-Worcester Company. (See Ringer, Soren, assignor.)

Rizzi, Vito, Windsor Locks, Conn. Automobile radiator ornament or similar article. Des. 77,185; Dec. 11.

Robbins & Myers, Inc. (See Branson, Walter J., assignor.)

Roberts, Henry T., assignor to Alemite Manufacturing Corporation, Chicago, Ill. Valve. 1,694,625; Dec. 11.

Roberts, Henry T., assignor to Alemite Manufacturing Corporation, Chicago, Ill. Valve. 1,694,626; Dec. 11.

Roberts, Marshal G. (See Diederich, P. E., and Roberts.)

Roberts, William T. B., Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Fastening-inserting machine. 1,694,451; Dec. 11.

Robinson, Clarence R., Brooklyn, N. Y., assignor to Robinson Fibre Corporation, Wilmington, Del. Apparatus for manufacturing containers. 1,694,627; Dec. 11.

Robinson, Edward W. (See Fulenwider, Jesse and H., Robinson, and Norris.)

Robinson Fibre Corporation. (See Robinson, Clarence R., assignor.)

Robinson, Frederic W., and K. V. Knapp, assignors to Hanovia Chemical and Manufacturing Company, Newark, N. J. Therapeutical lamp. 1,695,061; Dec. 11.

Rodelli, Michele, Brooklyn, N. Y. Motor roller-skate brake. 1,694,671; Dec. 11.

Roedding, Gordon E., assignor to Grand Rapids Brass Company, Grand Rapids, Mich. Latch. 1,694,866; Dec. 11.

Rogers, Arthur R., Jonesport, Me. Separator. 1,694,724; Dec. 11.

Rogler, Max, Dussldorf, Germany. Hair-curling means. 1,694,672; Dec. 11.

Roll-A-Way Bed Corporation. (See Matheson, William A., assignor.)

Root, Bertwell C., assignor to Brown Company, Berlin, N. H. Tubular bend and making same. 1,694,430; Dec. 11.

Root, Chapman J. (See Samuelson, Alexander, assignor.)

Rooth, Paul H., Chicago, Ill. Radio apparatus. 1,694,396; Dec. 11.

Ross, Donald W., and J. M. Lambie, Washington, Pa. Molding ceramic materials. 1,694,563; Dec. 11.

Ross, Herbert O., St. Louis, Mo. Index or record. 1,694,517; Dec. 11.

Ross, Oscar A., New York, N. Y. Synchronized machine gun for airplanes. 1,694,488; Dec. 11.

Rostron, Robert, assignor to Crerar, Adams & Co., Chicago, Ill. Track drill. 1,695,062; Dec. 11.

Rothe, Fritz, and H. Brenek, assignors to the firm of Rhenania-Kunheim Verein Chemischer Fabriken Aktiengesellschaft, Berlin, Germany. Manufacture of glass containing barium. 1,694,831; Dec. 11.

Rubinstein, Leo, Vienna, Austria. Machine for drying veneers. 1,694,489; Dec. 11.

Ruffo, Louis, New York, N. Y. Control device. 1,694,797; Dec. 11.

Rufty, Henry E. (See Russell, J. F., and Rufty.)

Ruhmer, Ernst, deceased, Berlin Germany, by E. Gruhl, assignee, assignor to Wired Radio, Inc., New York, N. Y. Multiple telephony. Re17,158; Dec. 11.

Runge Corn Harvester Company. (See Jett, Georg C. assignor.)

Rushmore, Samuel W., Plainfield, N. J. Engine-cooling system. 1,694,397; Dec. 11.

Rushmore, Samuel W., Plainfield, N. J. Engine-lubricating system. 1,694,518; Dec. 11.

Russell, John F., and H. E. Rufty, Salisbury, N. C. Door-operating device. 1,694,431; Dec. 11.

Russell Manufacturing Company, The. (See Zimmerer, Frederick J., jr., assignor.)

Ryan, Catherine V., Quincy, Ill. Individual coffeepot. Des. 77,186; Dec. 11.

Ryan, George E., Taunton, Mass. Heat-deflection shield. 1,694,604; Dec. 11.

Ryder, Samuel C., Sydney, New South Wales, Australia. Apparatus for automatically displaying lantern slides bearing advertisements or other matter. 1,695,029; Dec. 11.

St. Clair, Reuben, Wilwaukee, Wis. Lawn trimmer. 1,694,894; Dec. 11.

St. Louis Steel Ball Corporation. See Magann, Merritt W., assignor.)

Sabbah, Camile A., Schenectady, N. Y., assignor to General Electric Company. Transmission of pictures and views. 1,694,982; Dec. 11.

Salisbury, Raymond, trustee. (See Fish, George L., assignor.)

Salzmann, Ernst, Solothurn, Switzerland. Marking device. 1,694,490; Dec. 11.

Samuelson, Alexander, assignor to C. J. Root, Terre Haute, Ind. Glassworking machine. 1,694,867; Dec. 11.

Sands Manufacturing Company, The. (See Hamilton, Paul H., assignor.)

Sangster, William, Peterborough, Ontario, Canada, assignor to The De Laval Separator Company, New York, N. Y. Milk pasteurizer. 1,694,452; Dec. 11.

Sangster, William, Peterborough, Ontario, Canada, assignor to The De Laval Separator Company, New York, N. Y. Milk pasteurizer. 1,695,207; Dec. 11.

Santi, Louis, Marseille, France. Ear plug for bathers. 1,694,952; Dec. 11.

Saraniti, Thomas, Brooklyn, N. Y. Shoe. 1,695,063; Dec. 11.

Sauveur, Harry, Berlin, Germany. Tool for inserting stud bolts. 1,694,628; Dec. 11.

Savage, Ralph V., Los Angeles, Calif. Keyhole guard. 1,694,798; Dec. 11.
Sawyer, Albert F., assignor to I. L. Keith, Haverhill, Mass. Motor support. 1,694,868; Dec. 11.
Saco-Lowell Shops. (See Penney, L. W., and Child, assignors.)
Schaedel, Henry V., assignor to Liquid Veneer Corporation, Buffalo, N. Y. Floor polisher. 1,694,983; Dec. 11.
Schaer, Charles, Langenthal, assignor to the firm Sulzer Freres, Société Anonyme, Winterthur, Switzerland. Process and apparatus for welding plates. 1,694,629; Dec. 11.
Scharhag, Peter, Milwaukee, Wis., assignor to Scott & Williams, Incorporated, New York, N. Y. Dial-harmonizing device for circular-knitting machines. 1,695,208; Dec. 11.
Scheminger, John, jr., Providence, R. I. Rotary oil burner. 1,695,030; Dec. 11.
Schepss, Wilhelm. (See Rabe, P., Stötter, Wenk, and Schepss.)
Schilling, John M. and W. G., Lima, Ohio. Carrier for bottle coolers. 1,694,929; Dec. 11.
Schilling, Willard G. (See Schilling, John M. and W. G.)
Schleicher, Frank J., St. Louis, Mo. Box cover. 1,694,892; Dec. 11.
Schleifer, Carlo, Novara, Italy. Device for delivering the tufts of textile fibers from combing machines having intermittently rotating nipper drums. 1,694,432; Dec. 11.
Schleper, Johannes F., Amsterdam, Netherlands. Testing lamp for heavy-current installations. 1,694,605; Dec. 11.
Schmick, Hans, Berlin-Charlottenburg, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Determining gaseous carbonic acid. 1,695,031; Dec. 11.
Schneider, Xaver, Yonkers, N. Y. Tire-rim tool. 1,694,893; Dec. 11.
Schnoor, Raymond D., Chicago, Ill. Mechanical movement. 1,695,064; Dec. 11.
Schrader's, A., Son, Inc. (See Volckhausen, Julius, assignor.)
Schrage, Hidde K., Paris, France, assignor to General Electric Company. Speed control of induction motors. 1,694,984; Dec. 11.
Schrage, Hidde K., Paris, France, assignor to General Electric Company. Speed control of induction motors. 1,694,985; Dec. 11.
Schroeder, Simon E., assignor, by mesne assignments, to Automatic Washer Company, Newton, Iowa. Washing machine. 1,695,065; Dec. 11.
Schubart, Benno, Nuremburg, assignor to Vereingte Schuhfabriken, Bemels-Wessels Aktiengesellschaft, Augsburg, Oberhausen, Germany. Baby's shoe. Des. 77,187; Dec. 11.
Schuelke, Emil A., assignor to The Napier Co., Meriden, Conn. Necklace or similar article. Des. 77,188; Dec. 11.
Schuyler, Ella S., executrix. (See Schuyler, Frank, B.)
Schuyler, Frank B., deceased, Berkeley, Calif.; E. S. Schuyler, executrix. Washing machine. 1,694,606; Dec. 11.
Schwartz, Frederick, assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y. Table for radio receiving sets or the like. Des. 77,189; Dec. 11.
Schwarz, Hermann, Hamburg, Germany. Apparatus for setting up skittle pins. 1,695,209; Dec. 11.
Scott, Floyd L., and L. H. Wellensiek, assignor to Hughes Tool Company, Houston, Tex. Cutter cone for well drills. 1,694,869; Dec. 11.
Scott, Floyd L., assignor to Hughes Tool Company, Houston, Tex. Support for reamer cutters. 1,694,870; Dec. 11.
Scott, William M., Treddyfrin Township, Chester County, Pa. Switchboard mounting of circuit-breaker units. 1,694,398; Dec. 11.
Scott & Williams, Incoroprated. (See Scharhag, Peter, assignor.)
Scovill Manufacturing Company. (See King, George A., assignor.)
Scullin, Charles J. (See Day, C. M., and Scullin.)
Seaberg, Severin, and H. W. Anderson, Moline, Ill. Magnetic circuit-control apparatus. 1,694,692; Dec. 11.
Sebring Manufacturing Corporation, The. (See Watts, Verner, assignor.)
Sederholm, John E., assignor to American Hoist & Derrick Company, St. Paul, Minn. Loud speaker. 1,695,126; Dec. 11.
Sedwick, Mathew M., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Seaming head for can-closing machines. 1,695,210; Dec. 11.
Seeley, Harold T. (See Bany, H., and Seeley.)
Seel, Reidar G., Chicago, Ill. Dispensing device for safety matches. 1,694,930; Dec. 11.
Seifert, John O., Auburndale-Flushing, N. Y. Match book and making the same. 1,694,799; Dec. 11.
Seitz, Theobald F., assignor The Corporation of Seitz-Werke G. m. b. H., Kreuznach, Germany. Bottle sterilizing and cleansing apparatus. 1,695,212; Dec. 11.
Seitz-Werke G. m. b. H. (See Seitz, Theobald F., assignor.)
Selden Research & Engineering Corporation, The. (See Jaeger, Alphons O., assignor.)
Sensui, Nobuo, Kanagawaken, Japan, assignor to General Electric Company. Protective arrangement. 1,694,986; Dec. 11.
Shackelton, William J., Scotch Plains, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Impedance-measuring bridge. 1,695,032; Dec. 11.
Shawmut Engineering Company. (See Lea, Charles, assignor.)
Shearer, Harry T., assignor to Landis Machine Company, Waynesboro, Pa. Die head for cutting tapered threads. 1,695,158; Dec. 11.
Shelton, Edward L., Memphis, Tenn. License-plate holder. 1,694,832; Dec. 11.
Sherman, Clifton W., and J. M. Hall, Hamilton, Ontario, Canada, assignors to Hall Draft Gear Corporation, Buffalo, N. Y. Shock absorber. 1,694,987; Dec. 11.
Sherman, William T., assignor to Henry L. Hughes Co. Inc., Troy, N. Y. Brush-filling apparatus and method of filling brush pads. 1,695,159; Dec. 11.
Sherran, Amelia C., assignor of one-half to R. E. Sherran, Brooklyn, N. Y. Pad and bed vessel. 1,695,160; Dec. 11.
Sherran, Ruth E. (See Sherran, Amelia C., assignor.)
Shilander, Oscar G., Dearborn, Mich. Rack. 1,695,211; Dec. 11.
Shively, Louis S., assignor to The Weightograph Company, St. Louis, Mo. Adjustable reflector frame. 1,694,833; Dec. 11.
Shively, Louis S., assignor to The Weightograph Company, St. Louis, Mo. Coin-trip mechanism for personal weighing scales. 1,695,066; Dec. 11.
Shopneck, Henry P., Dorchester, assignor to J. J. Daly, West Newton, Mass. Wrapper for receptacles and preparing the same. 1,694,399; Dec. 11.
Short, Charles R., Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich. Support for internal-combustion engines with rubber cushions. 1,694,756; Dec. 11.
Shugart, Herbert A., Santa Ana, Calif. Making tile clay products and apparatus therefor. 1,695,119; Dec. 11.
Shuster, F. B., Company, The. (See Matteson, George F., assignor.)
Siemens & Halske Aktiengesellschaft. (See Schmick, Hans, assignor.)
Simmons Company. (See Huetten, Peter E., assignor.)
Simmons Company. (See Kusterle, Frank, assignor.)
Simplex Piston Ring Company. (See Solenberger, Dean M., assignor.)
Simplicity Engineering Company. (See Soldan, L. E., and Behnke, assignors.)
Sinclair, George W., Eton, England. Mechanism for transmitting movement. 1,694,834; Dec. 11.
Sisson, Harry W., Hammond, Ind. Lamp. 1,694,564; Dec. 11.
Sjoestroem, Kurt, Chicago, Ill. Combined cigar cutter, ash tray, and lighter. Des. 77,190; Dec. 11.
Sjolin, Ernest, assignor to Chicago Flexible Shaft Company, Chicago, Ill. Socket and switch plug. 1,694,400; Dec. 11.
Skinner, William C., Vancouver, British Columbia, Canada. Bracket. 1,695,213; Dec. 11.
Slade, James W., New York, N. Y. Heater. 1,694,695; Dec. 11.
Sleeman, William C., Birmingham, Ala. Railway-car truck. 1,694,988; Dec. 11.
Sleeman, William C., Birmingham, Ala. Reversible brake-shoe head. 1,694,989; Dec. 11.
Slocum, Benjamin A., assignor, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y. Photographic-film package. 1,694,401; Dec. 11.
Smith, Birney K., Newcastle, Ind. Light diffuser for headlights. 1,694,491; Dec. 11.
Smith, Frank S., Los Angeles, Calif. Golf-club head. Des. 77,191; Dec. 11.
Smith, George W., Sistersville, W. Va. Depth-measuring devise. 1,695,033; Dec. 11.
Smith, Hubert J., Long Beach, Calif. Long-stroke pumping jack. 1,694,402; Dec. 11.
Smith, Jesse A. B., Stramford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 1,694,519; Dec. 11.
Smith, Norman C., Pittsburgh, Pa. Ice pick. Des. 77,192; Dec. 11.
Smith, Ralph E. and R. J. Arnold, assignors to The Galion Metallic Vault Company, Galion, Ohio. Dump body. 1,695,034; Dec. 11.
Smoot, Samuel K., assignor of one-half to W. F. Allen and H. Mosely, Flomot, Tex. Pipe-pulling device. 1,694,953; Dec. 11.
Société pour la Fabrication de la Soie "Rhodiaseta." (See Grillet, Nicolas B., assignor.)
Société pour la Fabrication de la Soie "Rhodiaseta." (See La Housse, Joseph E. G., assignor.)
Société Schneider & Co., et al. (See de Courseulles, Robert, assignor.)
Sohlberg, Erik G., Schenectady, N. Y., assignor to General Electric Company. Ventilation of dynamo-electric machines. 1,694,990; Dec. 11.
Soldan, Lewis E., and G. W. Behnke, Gladwin, Mich., assignors to Simplicity Engineering Company. Vibratory screen. 1,694,565; Dec. 11.
Solenberger, Dean M., assignor to Simplex Piston Ring Company, Cleveland, Ohio. Expander for sealing rings. 1,694,566; Dec. 11.
Sonora Phonograph Company. (See Wolff, Joseph, assignor.)
Sörensen, Niels E. E., Safvenas, Gottenborg, Sweden. Change-speed gear for motor cars or other power-propelled vehicles. 1,695,214; Dec. 11.

Sovig, Conrad B. (See Yale, Frank H., assignor.)
Spain, Gail E., assignor to Willamette Iron and Steel Works, Portland, Oreg. Method of and apparatus for transporting logs. 1,694,931; Dec. 11.
Spaulding, Eugene A., Portland, Me. Humidifier. 1,694,453; Dec. 11.
Spear, Furman D., assignor to Armspear Manufacturing Company, New York, N. Y. Train signal lamp. 1,695,258; Dec. 11.
Speedpak Dispenser Corporation. (See Huntley, Burton L., assignor.)
Spencer, Louis M., assignor to General Motors Corporation, Detroit, Mich. Removing snow and ice from windshields. 1,694,757; Dec. 11.
Spencer, Louis M., Detroit, and J. Zubaty, assignors to A C Spark Plug Company, Flint, Mich. Heat indicator for internal-combustion engines. 1,694,871; Dec. 11.
Sperr, Frederick W., jr., assignor to The Koppers Company, Pittsburgh, Pa. Pitch-coking process and product. 1,694,800; Dec. 11.
Sperry, Arthur R. (See Jacobsen, E., and Sperry.)
Stack, Maurice J., Cohoes, N. Y., assignor to Brintnall Manufacturing Company Inc. of Delaware, Wilmington, Del. Preparing cotton batting for shipment and use. 1,694,954; Dec. 11.
Standard Abrasive Co. (See Drapeau, Benjamin L., assignor.)
Standard-Coosa-Thatcher Company, The. (See Gravel, David, assignor.)
Standard Oil Company. (See Walker, Harry L., assignor.)
Standard Oil Company of California. (See Balmat, Cecil H., assignor.)
Staples, Earle I., New York, N. Y. Liquid-fuel burner. 1,695,215; Dec. 11.
Starlighters, Inc. (See Barker, Leo, assignor.)
Steiner, Frank M., and G. Olson, Minneapolis, Minn., assignors to Steiner Sales Company, Salt Lake City, Utah. Towel cabinet. 1,694,991; Dec. 11.
Steiner Sales Company. (See Steiner, F. M., and Olson, A., assignor.)
Stevens, Charles W., Columbus, Ohio. Adjustable-plug valve. 1,694,403; Dec. 11.
Stevens, Charles W., Bexley, Ohio. Lubricated adjustable-plug valve. 1,694,404; Dec. 11.
Stewart, Floyd R., et al. (See Dukesmith, Frank H., assignor.)
Stiefel, Ludwig. (See Miller, Melcher, assignor.)
Stimpson, Walter F. (See Dryden, William W., assignor.)
Stine, Samuel B., Osceola Mills, Pa. Metal-cutting apparatus. 1,694,567; Dec. 11.
Stoeffler, Ralph F., St. Louis, Mo. Thumb rest and stroke-control device for golf clubs. 1,694,992; Dec. 11.
Stokes, Charles L., Los Angeles, Calif., assignor to C. B. Camp, trustee, Glencoe, Ill. Automatic fuel regulator. 1,694,801; Dec. 11.
Stoller, Hugh M., Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric regulator. 1,695,035; Dec. 11.
Stoney Foundry Engineering and Equipment Co., The. (See Stoney, J. T., and Purwin, assignors.)
Stoney, John T., and K. Purwin, assignors to The Stoney Foundry Engineering and Equipment Co., Cleveland, Ohio. Apparatus for vibrating objects. 1,695,127; Dec. 11.
Stötter, Hermann. (See Rabe, P., Stötter, Wenk, and Schepss.)
Straitline Radio Corporation. (See Herman, Henry F., assignor.)
Stromberg Motor Devices Company. (See Dienner, John A., assignor.)
Stuart, Clyde W., Brooklyn, N. Y. Button. 1,694,802; Dec. 11.
Sturdavant, Charles E., Wichita Falls, Tex. Shelving. 1,694,520; Dec. 11.
Sturrock, Archibald, Winnipeg, Manitoba, Canada, assignor to The Canadian Pacific Railway Company. Ventilating and deflecting of air through railway cars. 1,694,993; Dec. 11.
Suarez, Aguilino, Mount Carmel, Pa. Coal auger. 1,694,994; Dec. 11.
Suderov, Abraham, New York, N. Y. Making finger rings. 1,695,067; Dec. 11.
Sullivan Machinery Company. (See Holmes, Morris P., assignor.)
Sulzer Freres, Societe Anonyme. (See Schaer, Charles, assignor.)
Summers, Caleb E., and R. K. Lee, assignors to General Motors Research Corporation, Detroit, Mich. Motor mounting. 1,694,758; Dec. 11.
Sun Oil Company. (See Alleman, Gellert, assignor.)
Sundstrand Corporation, The. (See Sundstrand, Oscar J., assignor.)
Sundstrand, Oscar J., Rockford, Ill., assignor, by mesne assignments, to The Sundstrand Corporation, Wilmington, Del. Adding and listing machine. 1,694,803; Dec. 11.
Susbauer, John A. (See Ackerman, Peter, assignor.)
Suter, Eugéne F., London, England. Apparatus for waving or curling the hair. 1,694,607; Dec. 11.
Sweet, Silas C., et al. (See Moss, G. R., and Parks, assignors.)
Tabb, Warner T., Mahwah, N. J. Heating apparatus. 1,694,725; Dec. 11.
Tabler, Harry C., assignor to American Heater Corporation, St. Louis, Mo. Pressure and temperature control valve. 1,694,492; Dec. 11.
Taub, Alex, assignor to General Motors Corporation, Detroit, Mich. Thermostatic control of carburetors. 1,694,759; Dec. 11.
Taylor, Albert H., and L. C. Young, Washington, D. C. High-frequency electrical system. 1,694,895; Dec. 11.
Taylor, Harvey B., Philadelphia, Pa. Hydraulic turbine. 1,694,454; Dec. 11.
Taylor, William L., Cincinnati, Ohio. Multiplex bag and making it. 1,694,455; Dec. 11.
Teigland, George J., Haddonfield, N. J. Marine governor for seagoing ships. 1,695,216; Dec. 11.
Templeton, Henry. (See Arnold, E., and Templeton.)
Templin, Ellis W., Philadelphia, Pa., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Running gear for motor vehicles. 1,695,259; Dec. 11.
Texas Company, The. (See Cullinan, Ralph, assignor.)
Textile Machine Works. (See Meyer, Christian F., assignor.)
Thies, Adolf, St. Louis, Mo. Suspenders. 1,694,835; Dec. 11.
Thomas, Joseph R., Fort Madison, Iowa. Spring construction for furniture. 1,694,995; Dec. 11.
Thomas, Wingate S. (See Peck, P. D., and Thomas.)
Thomas, Wingate S., assignor to Knapp Brothers Manufacturing Company, Chicago, Ill. Plaster casing. 1,694,673; Dec. 11.
Thompson, Albert R., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif. Combined cooker and cooler. 1,694,996; Dec. 11.
Thompson, Alfred P., Jackson Heights, assignor to General Chemical Company, New York, N. Y. Producing elemental sulphur. 1,695,068; Dec. 11.
Thompson, Ayers F., Sunland, Calif. Weather stripping for windows and doors. 1,695,161; Dec. 11.
Thompson, Harold E., Clendenin, W. Va., assignor to Carbide and Carbon Chemicals Corporation. Manufacture of natural gasoline. 1,695,162; Dec. 11.
Thompson, John L., Meadow, Va. Mortising and boring machine. 1,694,456; Dec. 11.
Thompson Products Inc. (See Bissell, Richard E., assignor.)
Thomson, Alfred M., Newark, N. J., assignor to J. Mercadante, New York, N. Y. Refrigerating apparatus. 1,694,030; Dec. 11.
Thorne, Clarence O., Watervliet, Mich. Paper cutter. 1,694,896; Dec. 11.
Thurell, John P., Fort Myers, Fla. Septic tank. 1,695,217; Dec. 11.
Thursby, Arthur P., St. Louis, Mo. Display device. 1,695,036; Dec. 11.
Tjossem, Kinney, Paullina, Iowa. Power attachment for corn pickers. 1,694,608; Dec. 11.
Toman, John. (See Borrowdale, Russell W., assignor.)
Tomkinson, Charles C., Plainfield, N. J., assignor to J. E. Ogden, Mountainville, N. Y. Toggle bolt. 1,694,493; Dec. 11.
Tomkinson, Charles C., Plainfield, N. J., assignor to J. E. Ogden, Mountainville, N. Y. Toggle bolt. 1,694,494; Dec. 11.
Toulmin, Harry A., jr., assignor to The Duro Company, Dayton, Ohio. Water-softening apparatus. 1,694,457; Dec. 11.
Towle Manufacturing Company. (See Nock, Harold E., assignor.)
Townsend, Arthur J. (See Naugle, H. M., and Townsend.)
Trafelet, Robert, Fostoria, assignor to The Yoder Company, Cleveland, Ohio. Machine for rolling sheet metal. 1,694,495; Dec. 11.
Trauger, John W., Binghamton, N. Y., assignor to Fair Play Caramels, Inc. Confection. 1,694,458; Dec. 11.
Treiber Diesel Engine Corporation. (See Bartow, Jack B., assignor.)
Trimble Hat Company, The. (See Busold, William, assignor.)
Troidl, Nellie Y., Niagara Falls, N. Y. Educational appliance. 1,694,405; Dec. 11.
Trojani, Pietro, and C. D'Ascanio, Rome, Italy. Electromechanical recording and controlling achine. 1,694,631; Dec. 11.
Troy Laundry Machinery Company. (See Balzer, Fritz, assignor.)
Truesdell, John G., and W. J. O'Connell, Colorado Springs, Colo. Windshield cleaner. 1,695,163; Dec. 11.
Tucker, Edgar M., South Pasadena, assignor to The Paraffine Companies, Inc., San Francisco, Calif. Flashing structure. 1,694,521; Dec. 11.
Tung-Sol-Lamp Works. (See Bohner, Clyde C., assignor.)
Turner, Edward T., Dayton, Ohio. Water-softening apparatus. 1,694,804; Dec. 11.
Turner Tanning Machinery Company, The. See Böttger, Oskar, assignor.)
Tuttle, Grover G., Phillipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Plate valve. 1,695,069; Dec. 11.
Twin Disc Clutch Company. (See Pearmain, William J., assignor.)
Ubel, Frank A., St. Paul, Minn. Ophthalmic mounting. Des. 77,193; Dec. 11.
Ulbrich, Wilhelm, Jena, Germany. Mercury-vapor lamp. 1,694,836; Dec. 11.

Ulman, Rosanna D., assignor to International Corset Company, Aurora, Ill. Combination corset and brassière. 1,694,693; Dec. 11.
Underwood Elliott Fisher Company. (See Kurowski, Alfred G. F., assignor.)
Underwood Elliott Fisher Company. (See Smith, Jesse A. B., assignor.)
Underwood, Western, assignor to La Lux Manufacturing Company, Los Angeles, Calif. Lighting post. Des. 77,194; Dec. 11.
Underwood, Western, assignor to La Lux Manufacturing Company, Los Angeles, Calif. Head for lighting posts. Des. 77,195; Dec. 11.
Underwood, Western, assignor of one-half to H. H. Walker, Los Angeles, Calif. Lantern for lighting posts. Des. 77,196; Dec. 11.
Union Oil Company of California. (See Dunham, Robert A., assignor.)
Union Oil Company of California. (See Kalichevsky, Vladimir A., assignor.)
Union Oil Company of California. (See Merrill, David R., assignor.)
Union Switch & Signal Company, The. (See Crago, Paul H., assignor.)
United Autographic Register Company. (See Jensen, Louis, assignor.)
United Engineering & Foundry Company. (See Dodge, Carl Y., assignor.
United Shoe Machinery Corporation. (See Gouldbourn, J., Cooper, and Elliott, assignors.)
United Shoe Machinery Corporation. (See Jorgensen, Bernhardt, assignor.)
United Shoe Machinery Corporation. (See Knowlton, Norwood H., assignor.)
United Shoe Machinery Corporation. (See Meloon, James W., assignor.)
United Shoe Machinery Corporation. (See Merritt, Matthew M., assignor.)
United Shoe Machinery Corporation. (See Molyneux, George E., assignor.)
United Shoe Machinery Corporation. (See Ricks, F., and Gouldbourn, assignors.)
United Shoe Machinery Corporation. (See Roberts, William T. B., assignor.)
United States Gauge Company. (See Bayha, William G., assignor.)
Universal Oil Products Company. (See Egloff, G., and Benner, assignors.)
Van Hoofstadt, Edward. (See Greenbaum, L., Van Hoofstadt, and Gustavson.)
Van Horn, Irving H., East Cleveland, Ohio, assignor to General Electric Company. Base for incandescent lamps or similar articles. 1,694,997; Dec. 11.
Van Rennes, Cornelis, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Air-bag valve. 1,694,872; Dec. 11.
Van Veen, Anton, assignor to The Fuller Brush Company, Hartford, Conn. Marking machine. 1,694,955; Dec. 11.
Varaud, André, Geneva, Switzerland. Mechanical fuse for artillery projectiles. 1,695,070; Dec. 11.
Vento Steel Sash Company. (See Nicles, Hiram W., assignor.)
Vereinigte Schuhfabriken Bemels-Wessels Aktiengesellschaft. (See Schubart, Benno, assignor.)
Vereinigte Stahlwerke Aktiengesellschaft. (See Weber, Friedrich W., assignor.)
Vestine, Andrew O., Philadelphia, Pa. Machine for picking poultry. 1,695,128; Dec. 11.
Vickers, Harry H., Corona, assignor, by mesne assignments, to Elliott-Fisher Company, New York, N. Y. Combined typewriting and computing machine. 1,694,932; Dec. 11.
Victor, Frank, Ridgway, Pa. Flush door. 1,694,522; Dec. 11.
Victor Shoe Machinery Company. (See Johnson, L. E., Hansen, assignors, and McTarnahan.)
Viet, Paul, Billancourt, France. Starting arrangement for internal-combustion engines. 1,695,218; Dec. 11.
Villalpando, Antonio M., Mexico, Mexico. Attachment for revolvers. 1,695,071; Dec. 11.
Vogan, Frank M., assignor of one-half to W. H. Cavnah, Canton, Ohio. Spring support. 1,695,129; Dec. 11.
Volckhausen, Julius, Weehawken, N. J., assignor to A. Schrader's Son, Inc., Brooklyn, N. Y. Rim nut. 1,694,459; Dec. 11.
Von der Lippe-Lipski, Elaine, Atlantic Highlands, N. J. Automatic control for headlights. 1,694,511; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc, New York, N. Y. Ash tray. Des. 77,197; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Ash receiver. Des. 77,198; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Cigarette container. Des. 77,199; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Ash tray. Des. 77,200; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Lamp. Des. 77,201; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Lamp. Des. 77,202; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Lamp. Des. 77,203; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Ash receiver. Des. 77,204; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Smoking stand. Des. 77,205; Dec. 11.
Von Frankenberg, Arthur, assignor to Frankart, Inc., New York, N. Y. Lamp. Des. 77,206; Dec. 11.
Vulcan Corporation. (See Clausing, George, assignor.)
Wade, Elmer J. (See Newton, E. G., and Wade.)
Wade, Martin J., Iowa City, Iowa. Diary, memorandum book, etc. 1,694,632; Dec. 11.
Wagner Electric Corporation. (See Weichsel, Hans., assignor.)
Wagner, Hermann, Hochst-on-the-Main, Germany, assignor, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y. Azo dye. 1,695,164; Dec. 11.
Wagner, Hermann, Soden-on-the-Taunus, H. Eichwede, and E. Fischer, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y. Azo dye and making same. 1,694,568; Dec. 11.
Wait, William, jr. (See Wright, T. P., and Wait.)
Waldman, Herman, Chicago, Ill. Desk set. Des. 77,207; Dec. 11.
Walker, Fletcher L., jr., Westwood, Calif. Rectifying system. 1,694,837; Dec. 11.
Walker, H. H. (See Underwood, Western, assignor.)
Walker, Harry E., Elyria, Ohio. Draft faucet. 1,694,694; Dec. 11.
Walker, Harry L., assignor to Standard Oil Company, Whiting, Ind. Filter press. 1,694,956; Dec. 11.
Walker, Lewis P., Hartford, and L. O. Bergmann, Coloma, Mich. Folding rocking-chair. 1,694,933; Dec. 11.
Walker, Warren R., New Dorp, N. Y., assignor to Cooper Hewitt Electric Company, Hoboken, N. J. Switch mounting. 1,695,260; Dec. 11.
Walsh, Arthur E., Chicago, Ill. Switch. 1,694,569; Dec. 11.
Walsh, Joseph W. (See Goodall, H. W., and Walsh.)
Washburn, Walter B. C., assignor to Beech-Nut Packing Company, Canajoharie, N. Y. Distributing device. 1,694,897; Dec. 11.
Wasson, Robert R., Cranford, N. J. Ring-tensioning machine. 1,695,037; Dec. 11.
Watson, Harold L., Highland Park, assignor, by mesne assignments, to American Incubators, Inc., New Brunswick, N. J. Incubator. 1,694,674; Dec. 11.
Watts, Verner, Alliance, assignor to The Sebring Manufacturing Corporation, Sebring, Ohio. Enameled electric percolator. 1,694,570; Dec. 11.
Weber, Friedrich W., Bochum, assignor to the firm: Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Device for fastening rails. 1,694,898; Dec. 11.
Wedler, Harry G., assignor to The Wedler-Shuford Co., St. Louis, Mo. Seat cushion. 1,695,072; Dec. 11.
Wedler-Shuford Co., The. (See Wedler, Harry G., assignor.)
Weichsel, Hans, assignor to Wagner Electric Corporation, St. Louis, Mo. Alternating-current motor. 1,694,460; Dec. 11.
Weightograph Company, The. (See Shively, Louis S., assignor.)
Weir, Esta O., Chicago, Ill. Serving dish. 1,694,957; Dec. 11.
Wellensiek, Louis H. (See Scott, F. L., and Wellensiek.)
Wellman, Lester R., assignor to Friedley-Voshardt Company, Chicago, Ill. Husk for lighting fixtures. Des. 77,208; Dec. 11.
Wellman, Lester R., assignor to Friedley-Voshardt Company, Chicago, Ill. Husk for lighting fixtures. Des. 77,209; Dec. 11.
Wells, Arthur E., Toronto, Ontario, Canada. Tool for making gratings. 1,694,633; Dec. 11.
Wendell, Constant, Dedham, Mass. Tag. 1,694,998; Dec. 11.
Wenk, Berthold. (See Rabe, P., Stötter, Wenk, and Schepss.)
Werner, George W., Easton, Pa. Coin control for automatic sound reproducers. 1,694,726; Dec. 11.
West, Arthur J., assignor to Bethlehem Steel Company, Bethlehem, Pa. Compressor drive mechanism. 1,694,571; Dec. 11.
Western Electric Company. (See Buckley, Oliver E., assignor.)
Western Electric Company. (See Fearing, Justin L., assignor.)
Western Electric Company. (See Haines, W. T., and Harper, assignor.)
Western Electric Company. (See Hippensteel, Claude L., assignor.)
Western Electric Company. (See Horton, Joseph W., assignor.)
Western Electric Company. (See Jacobsen, E., and Sperry, assignor.)
Western Electric Company. (See Kendall, Burton W., assignor.)
Western Electric Company. (See Lundius, Eric R., assignor.)
Western Electric Company. (See Marrison, Warren A., assignor.)
Western Electric Company. (See Peterson, Eugene, assignor.)
Western Electric Company. (See Shackelton, William J., assignor.)
Westinghouse Electric and Manufacturing Company. (See Innes, William, assignor.)
Weymann, Charles T., Paris, France. Close road-motor-vehicle body. 1,694,572; Dec. 11.
Whirldry Corporation. (See Dunham, George W., assignor.)

White, Edward A., Lewiston, Idaho. Fruit-cleaning mechanism. 1,694,675; Dec. 11.
White, Hedley B. (See Hockley, H. R., and White.)
White, John F., assignor to White Products Company, Chicago, Ill. Waterproof sheet structure. 1,694,523; Dec. 11.
White Products Company. (See White, John F., assignor.)
Whiting, Phineas S., Royal Oak, Mich. Tool container for tire carriers. 1,694,634; Dec. 11.
Wietzel, Gustav, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the Main, Germany. Production of pure carbon monoxide. 1,695,130; Dec. 11.
Wilberg, Henry A., Valley City, N. Dak. Seed planter and packer. 1,695,165; Dec. 11.
Will, Carl H., assignor to C. H. Will Motors Corporation, Minneapolis, Minn. Antifrosting device for windows. 1,694,676; Dec. 11.
Will, Carl H., assignor to C. H. Will Motors Corporation, Minneapolis, Minn. Antifrosting device for windows. 1,694,677; Dec. 11.
Will, C. H., Motors Corporation. (See Will, Carl H., assignor.)
Willamette Iron and Steel Works. (See Spain, Gail E., assignor.)
Willard, James C. (See Parent, Raymond C., assignor.)
Williams, G. H., Company. (See Harrington, Edward L., assignor.)
Williamson, Arba G., Carnegie, assignor to Pittsburgh Train Control Company, Pittsburgh, Pa. Traffic-controlling system. 1,695,131; Dec. 11.
Willits, Leland R., Atlantic City, N. J. Battery water-level indicator. 1,694,609; Dec. 11.
Wilson, Frederick A., London, England. Apparatus for the manufacture of roofing tiles. 1,695,132; Dec. 11.
Wilson, Harry T., Easton, Pa. Holder. 1,695,166; Dec. 11.
Wilson, Onnolee M., Wilton, Conn. Extension side for pans. 1,694,958; Dec. 11.
Wilson, Robert H., et al. (See Chinn, Neil M., assignor.)
Wilson, Theodora B., et al. (See Chinn, Neil M., assignor.)
Wiltse Appliance Company. (See Wiltse, Sumner, assignor.)
Wiltse, Sumner, Detroit, Mich., assignor to Wiltse Appliance Company. Fuel-supply system for internal-combustion engines. 1,694,805; Dec. 11.
Winninghoff, Wilford J., East Orange, assignor to Cooper Hewitt Electric Company, Hoboken, N. J. Thermostatic electric switch. 1,695,261; Dec. 11.
Winslow, Edward N., Shaker Heights, Ohio. Signal mechanism. 1,694,573; Dec. 11.
Winsor, Ray J., Bucyrus, Ohio. Steering device. 1,695,219; Dec. 11.
Winthrop Chemical Company. (See Hahl, H., and Kropp, assignors.)
Wired Radio, Inc. (See Ruhmer, Ernst, assignor.)
Wireless Specialty Apparatus Company. (See Priess, William H., assignor.)
Wirfs, E. J., Organization, Inc. (See Wirfs, Edward J., jr., assignor.)
Wirfs, Edward J., jr., Glendale, assignor to E. J. Wirfs Organization, Inc., St. Louis, Mo. Gasket. 1,695,073; Dec. 11.
Witter, Willis D., and J. A. Harte, Utica, N. Y., assignors, by mesne assignments, to American La France and Foamite Corporation. Motor fire apparatus. 1,694,574; Dec. 11.
Wittlinger, Richard. Goppingen, Germany. Knife. 1,694,999; Dec. 11.
Wolf, Walter F., New York, N. Y. Loose-leaf binder. 1,695,220; Dec. 11.
Wolff, Joseph, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc. Radiocabinet. Des. 77,211; Dec. 11.
Wolff, Walther, Copenick, Berlin, Germany, assignor to General Electric Company. Method and apparatus for testing telephone circuits. 1,695,000; Dec. 11.
Wood, Charles A., Clay Center, Kans. Mold. 1,695,001; Dec. 11.
Wood, Frederick H., assignor to L. B. Wood, Chicago, Ill. Circulating air past the heating surfaces of warm air furnaces for heating buildings which provides fresh air and ventilation. 1,695,262; Dec. 11.
Wood Hydraulic Hoist & Body Company. (See Barrett, Edward R., assignor.)
Wood, Lettie B. (See Wood, Frederick H., assignor.)
Woodall-Duckham (1920) Limited. (See Krall, Reginald F., assignor.)
Worthington, Everett, assignor to Brandes Laboratories, Inc., Newark, N. J. Radiocabinet. Des. 77,210; Dec. 11.
Wright, Theodore P., Port Washington, and W. Wait, jr., Garden City, N. Y., assignors to Curtiss Aeroplane & Motor Co., Inc. Rudder-operating mechanism for aircraft. 1,694,496; Dec. 11.
Wurdack Electric Manufacturing Company. (See Wurdack, William, jr., assignor.)
Wurdack, William, jr., assignor to Wurdack Electric Manufacturing Company, St. Louis, Mo. Electric snap switch. 1,694,899; Dec. 11.
Xippas, Socrates A., Pittsburgh, Pa. Electric fan. 1,695,002; Dec. 11.
Yale, Frank H., Alameda, assignor of one-half to C. B. Sovig, San Francisco, Calif. Spraying machine. 1,694,806; Dec. 11.
Yates Lumber Company. (See Allen, Charles H., assignor.)
Yeomans, Alfred M. (See Clark, L. R., and Yeomans.)
Yoder Company, The. (See Trafelet, Robert, assignor.)
Young, Fred M., Racine, Wis. Radiator. 1,694,696; Dec. 11.
Young, Henry R., Muskegon, Mich. Piston for internal-combustion engines. Re17,159; Dec. 11.
Young, Leo C. (See Taylor, A. H., and Young.)
Zellmann, Rudolf, Radebeul, and D. Lammering, Brunswick, assignors to Chemische Fabrik von Heyden, Radebeul-Dresden, Germany. Plant disinfectant and producing the same. 1,694,497; Dec. 11.
Zendron, Benjamin, Craig, Colo. Planter. 1,695,074; Dec. 11.
Zentner, Karl, Frankfort-on-the-Main, Germany. Apparatus for kneading and forming amalgams. 1,694,524; Dec. 11.
Zimmerer, Frederick J., jr., assignor to The Russell Manufacturing Company, Middletown, Conn. Elastic fabric. Des. 77,212; Dec. 11.
Zimmerling, Otto E., Wauwatosa, Wis. Bowling-ball-polishing attachment for pin trimming and polishing machines. 1,694,900; Dec. 11.
Zimmerman, Earl W., Syracuse, N. Y. Roller for conveyers. 1,695,075; Dec. 11.
Zohe, Ludwig A., Syracuse, N. Y. Liquid container, nursing bottle. 1,695,076; Dec. 11.
Zubaty, Joseph. (See Spencer, L. M., and Zubaty.)
Zubaty, Joseph, assignor to A C Spark Plug Company, Flint, Mich. Clock construction. 1,694,760; Dec. 11.
Zubaty, Joseph, assignor to A C Spark Plug Company, Flint, Mich. Connection of flexible shaft to speedometer. 1,694,761; Dec. 11.
Zukor, Arnold, and H. Irmscher, New York, N. Y. Combined door fastener and alarm. 1,695,077; Dec. 11.
Zwicky, Jean, London, England. Pump. 1,694,610; Dec. 11.

# ALPHABETICAL LIST OF INVENTIONS.

FOR WHICH

## PATENTS WERE ISSUED ON THE 11TH DAY OF DECEMBER, 1928.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Abrading machine. A. N. Emmons. 1,695,090; Dec. 11.
Acid and soap derived from mineral oil and making same. Fatty. G. Alleman. 1,694,461; Dec. 11.
Acid, Determining gaseous carbonic. H. Schmick. 1,695,031; Dec. 11.
Adding and listing machine. O. J. Sundstrand. 1,694,803; Dec. 11.
Addressing machine. H. P. Elliott. 1,694,619; Dec. 11.
Advertising device, Airplane. L. Barker. 1,695,078; Dec. 11.
Aiming of turrets comprising several guns, Device for the horizontal. R. de Courseulles. 1,694,843; Dec. 11.
Air cleaner. H. G. Kamrath. 1,694,784; Dec. 11.
Air compressor. R. D. Conklin. 1,694,583; Dec. 11.
Air cooler. J. Price. 1,694,395; Dec. 11.
Aircraft or the like, Propulsion means for. R. Nuttall. 1,694,602; Dec. 11.
Aircraft, Rudder-operating mechanism for. T. P. Wright and W. Walt, jr. 1,694,496; Dec. 11.
Airplane. C. J. Leisy. 1,695,114; Dec. 11.
Airship. J. D. Langdon. 1,694,880; Dec. 11.
Air spring. J. A. Heany. 1,694,821; Dec. 11.
Alarm for automobiles. Z. A. Curtis. 1,694,842; Dec. 11.
Alcohol, Making isopropyl. G. O. Curme, Jr., and E. W. Reid. 1,695,249; Dec. 11.
Aldehyde, Purification of butyric. C. Bogin. Re17,157; Dec. 11.
Alloy, Magnetic. O. E. Buckley. 1,695,038; Dec. 11.
Amalgamator attachment. I. G. Bergh and L. Nelsen. 1,694,678; Dec. 11.
Amalgams, Apparatus for kneading and forming. K. Zentner. 1,694,524; Dec. 11.
Anchor, Rail. R. E. Keough. 1,694,878; Dec. 11.
Anchor rod. R. Gould. 1,694,739; Dec. 11.
Annealing furnace. F. T. Cope. 1,694,684; Dec. 11.
Antifrosting device for windows. C. H. Will. 1,694,676–7; Dec. 11.
Antioxidant or age resistor. A. M. Clifford. 1,694,529; Dec. 11.
Applicator-securing means. E. R. Goldfield and C. Horsely. 1,694,649; Dec. 11.
Arch supporter. M. E. Christianson. 1,694,582; Dec. 11.
Armature, Making an. V. G. Apple. 1,694,464; Dec. 11.
Asbestos and the like and resulting product, Finishing the surfaces of bonded. J. C. Macildowie. 1,695,253; Dec. 11.
Ash receiver. A. von Frankenberg. Des. 77,198; Dec. 11.
Ash receiver. A. von Frankenberg. Des. 77,204; Dec. 11.
Ash tray. A. von Frankenberg. Des. 77,197; Dec. 11.
Ash tray. A. von Frankenberg. Des. 77,200; Dec. 11.
Assembling filter-stack units. V. R. Heftler. 1,694,939; Dec. 11.
Atomizer. L. C. Ament. 1,694,959; Dec. 11.
Auger, Coal. A. Suarez. 1,694,994; Dec. 11.
Automatic elevator. D. C. Larson. 1,694,823; Dec. 11.
Automatically-controlled burner. L. S. Chadwick. 1,694,501; Dec. 11.
Automobile body. J. Ledwinka. 1,694,883; Dec. 11.
Automobile heater. P. E. Diederich and M. G. Roberts. 1,694,412; Dec. 11.
Automobile lock. O. S. Hershey. 1,694,506; Dec. 11.
Automobiles, Water-circulation-control mechanism for. J. A. Morgan. 1,695,055; Dec. 11.
Auxiliary lock. G. H. Bocklus. 1,695,136; Dec. 11.
Auxiliary switch. C. D. Ainsworth. 1,694,611; Dec. 11.
Bag and making it, Multiplex. W. L. Taylor. 1,694,455; Dec. 11.
Ball ear and attaching same. J. R. Edwards. 1,694,775; Dec. 11.
Baseball game, Electric. J. M. Prentice. 1,694,721; Dec. 11.
Base-exchange body. A. O. Jaeger. 1,694,620; Dec. 11.
Bathing cap. O. A. Bigler. 1,695,005; Dec. 11.
Battery: *See*—
  Storage battery.
Bearing. N. M. Chinn. 1,694,438; Dec. 11.
Bearing for reversible furniture backs. I. Hoffman. 1,695,102; Dec. 11.
Beater, Egg. J. O. H. Cazenove. 1,694,500; Dec. 11.
Beet cleaner. A. and A. Gudmundsen. 1,694,817; Dec. 11.
Bed. G. Herz. 1,694,940; Dec. 11.
Bed, Folding. H. A. Joselowitz. 1,694,420; Dec. 11.
Belt, Expansion. C. Horix. 1,694,944; Dec. 11.
Bending machine for bending plates or strips of sheet metal. H. C. Dreis. 1,694,585; Dec. 11.
Billing device. J. L. Garfield. 1,694,647; Dec. 11.
Binder, Loose-leaf. F. A. Diestelkamp. 1,694,846; Dec. 11.
Binder, Loose-leaf. W. F. Wolf. 1,695,220; Dec. 11.
Blackboard hanger. G. G. Albert. 1,694,433; Dec. 11.
Blade construction. J. Daw. 1,694,410; Dec. 11.
Board: *See*—
  Indicator board. Lath board.
Bobbins, spools, or the like, Manufacture of. C. W. Palmer. 1,694,428; Dec. 11.
Boll-breaking and cotton-separating machine. J. E. Mitchell. 1,694,480; Dec. 11.
Bolt: *See*—
  Toggle bolt.
Bolt and rod cutter. O. B. Pickett. 1,694,561; Dec. 11.
Bolt for automobiles, Pivot. A. G. Bush. 1,694,681; Dec. 11.
Book-match machine. L. Greenbaum, E. Van Hoofstadt, and C. Gustavson. 1,694,505; Dec. 11.
Boot or shoe and manufacturing same. F. M. Bohr. 1,695,225; Dec. 11.
Booth construction. W. S. Kapnek. 1,694,920; Dec. 11.
Bore and producing same, Precision. H. Kuckuck. 1,695,017; Dec. 11.
Bottle cap. W. Glass. 1,694,851; Dec. 11.
Bottle closure, Milk-. D. H. Kane. 1,695,190; Dec. 11.
Bottle, Liquid container, nursing. L. A. Zohe. 1,695,076; Dec. 11.
Bottle-opening implement. W. C. Hiering. 1,695,098; Dec. 11.
Box: *See*—
  Outlet box.
Box. B. L. Drapeau. 1,695,143; Dec. 11.
Brace clip, Shore-. C. L. Meyer. 1,694,887; Dec. 11.
Bracing, Furniture. L. R. Clark and A. M. Yeomans. 1,695,189; Dec. 11.
Bracket: *See*—
  Mitered-joint bracket.
Bracket. W. C. Skinner. 1,695,213; Dec. 11.
Brake: *See*—
  Liquid-pressure brake. Vehicle brake.
  Skate brake.
Brake-shoe head, Reversible. W. C. Sleeman. 1,694,989; Dec. 11.
Brake system, Air-. F. H. Dukesmith. 1,695,245; Dec. 11.
Brick and making the same, Sintered magnesite. K. Harr. 1,694,540; Dec. 11.
Brick delivering and stacking means. L. N. Dyhrberg. 1,694,586; Dec. 11.
Bridge, Ferry. A. T. Prescott. 1,694,516; Dec. 11.
Brooch or similar article. B. Mechlovits. Des. 77,177–80; Dec. 11.
Brush. W. Reese. 1,695,124; Dec. 11.
Brush, Automobile cleaning. R. M. Cummins. 1,694,733; Dec. 11.
Brush-filling apparatus and filling brush pads. W. T. Sherman. 1,695,159; Dec. 11.
Brush, Shaving. A. Albright. 1,694,364–5; Dec. 11.
Brush, Shaving. R. D. De Villegas. 1,695,141; Dec. 11.
Buckle, Slide. C. A. Mosgrove. 1,695,056; Dec. 11.
Builder for spinning mules, Buch. T. H. Riley and A. H. Flint. 1,695,028; Dec. 11.
Buildings, Construction. V. D. Hedden. 1,694,542; Dec. 11.
Buildings, Highway. J. K. Hencken. 1,694,383; Dec. 11.
Bumper for airships, Landing. E. Brunner. 1,694,873; Dec. 11.
Bumpers, Plate for vehicle. H. S. Jandus and J. R. Morgan. Des. 77,157; Dec. 11.
Burner: *See*—
  Liquid-fuel burner. Oil burner.
Burning system, Liquid-fuel-. W. T. Dean. 1,694,772; Dec. 11.
Button. C. W. Stuart. 1,694,802; Dec. 11.
Button, Pin-attached. G. A. King. 1,695,252; Dec. 11.
Cabinet, Dry-heat bath. A. A. Landon. 1,694,858; Dec. 11.
Cabinet, Towel. F. M. Steiner and G. Olson. 1,694,991; Dec. 11.
Cable clamp. E. K. Cole. 1,694,683; Dec. 11.
Camera, Photographic. R. F. Morejon. 1,694,750; Dec. 11.
Can: *See*—
  Rust-resisting can.
Can-body-making machines, Blank feeding and positioning mechanism for. P. Kruse. 1,694,387; Dec. 11.
Car bodies, Box-girder construction for. G. D. Fraunfelder. 1,694,537; Dec. 11.
Car, Motor. V. Lancia. 1,694,546; Dec. 11.
Car, Railway. E. H. Mattingley. 1,694,424; Dec. 11.
Carbon monoxide, Production of pure. G. Wietzel. 1,695,130; Dec. 11.
Carburetor. J. Juhasz. 1,694,386; Dec. 11.
Carburetor. G. Lamoureux. 1,695,112; Dec. 11.

Cards, Set of playing. O. Kubatzky. Des. 77,159–61; Dec. 11.
Carrier: *See*—
  Tire carrier.
Carrier for bottle coolers. J. M. and W. G. Schilling. 1,694,929; Dec. 11.
Carton. B. L. Huntley. 1,695,104; Dec. 11.
Case: *See*—
  Crank and like case. Vanity case.
  Packing case.
Casing for antifriction bearing. D. F. Good. 1,695,146; Dec. 11.
Casing for mechanical exercisers. F. E. Marcy. Des. 77,176; Dec. 11.
Casing, Plaster. W. S. Thomas. 1,694,673; Dec. 11.
Casting machine, Centrifugal. J. A. and D. S. Gardner. 1,694,504; Dec. 11.
Casting, Striking. D. S. Barrows. 1,694,960; Dec. 11.
Cell element and making the same, Dry-. L. G. Jenness. 1,694,919; Dec. 11.
Cellulose-ester article and making same, Decorated. A. S. Donaldson. 1,694,847; Dec. 11.
Cementing wells. A. H. Hobart. 1,694,419; Dec. 11.
Centrifugal extractor. F. Balzer. 1,694,614; Dec. 11.
Centrifugal operating mechanism. W. J. Branson. 1,694,700; Dec. 11.
Centrifugal separator. J. I. Fritz. 1,694,972; Dec. 11.
Chain, Drive and conveyer. E. E. Landahl. 1,694,746; Dec. 11.
Chair: *See*—
  Folding chair. Rocking-chair.
Chair. C. A. Brown. 1,694,617; Dec. 11.
Chair. J. L. Cable. 1,694,935; Dec. 11.
Check, Rebound. N. F. McNaught. 1,694,549; Dec. 11.
Christmas tree, Artificial. C. H. Glover. 1,694,974; Dec. 11.
Chuck for crank handles. C. C. Hansen. 1,694,380; Dec. 11.
Cigar cutter, ash tray, and lighter, Combined. K. Sjoestroem. Des. 77,190; Dec. 11.
Circuit-controlling device and system employing the same. C. I. Hall. 1,694,977; Dec. 11.
Circuits, Translating. W. A. Marrison. 1,695,051; Dec. 11.
Circulating air past the heating surfaces of warm-air furnaces for heating buildings which provide fresh air and ventilation. F. H. Wood. 1,695,262; Dec. 11.
Clamp: *See*—
  Cable clamp. Hose clamp.
Clamp plate. H. S. Jandus and J. R. Morgan. Des. 77,155–6; Dec. 11.
Clarifier, Sound. E. H. Freeborn. 1,694,848; Dec. 11.
Clarifying, decoloring, and neutralizing oils. D. R. Merrill. 1,695,198; Dec. 11.
Cleaner: *See*—
  Air cleaner. Roll cleaner.
  Beet cleaner. Tooth cleaner.
  Furnace cleaner. Tube cleaner.
  Mop cleaner. Windshield cleaner.
  Razor cleaner.
Cleaning device. J. S. Reed. 1,695,023; Dec. 11.
Clip: *See*—
  Brace clip.
Clock construction. J. Zubaty. 1,694,760; Dec. 11.
Closure for sifter-top cans. J. M. Hothersall. 1,694,781; Dec. 11.
Clothes drier. J. MacFarlane. 1,695,151; Dec. 11.
Clutch. N. Le Van. 1,695,150; Dec. 11.
Clutch. W. J. Pearmain. 1,694,980; Dec. 11.
Clutch arrangement for laundry machines, Automatic. G. W. Dunham. 1,694,810; Dec. 11.
Clutch, Free-wheel. D. S. de Lavaud. 1,694,377; Dec. 11.
Coffeepot, Individual. C. V. Ryan. Des. 77,186; Dec. 11.
Coin control for automatic sound reproducers. G. W. Werner. 1,694,726; Dec. 11.
Coin-trip mechanism for personal weighing scales. L. S. Shively. 1,695,066; Dec. 11.
Coking process and product, Pitch-. F. W. Sperr, jr. 1,694,800; Dec. 11.
Collar, Horse. J. M. Angel. 1,695,167; Dec. 11.
Combination lock. H. C. Coy. 1,694,968; Dec. 11.
Combustion chamber, Radiating. A. E. Nash and J. S. Alcorn. 1,694,393; Dec. 11.
Combustion engine. J. Good. 1,695,186; Dec. 11.
Compressor drive mechanism. A. J. West. 1,694,571; Dec. 11.
Compressor, Hinged. E. Ohnstrand. 1,695,257; Dec. 11.
Compressor, Lubricant. E. Piquerez. 1,694,624; Dec. 11.
Concrete, Curing. D. Finley and W. L. Rhoades. 1,694,588; Dec. 11.
Concrete distributors, Boom track for bucket. J. E. Bushnell. 1,694,372; Dec. 11.
Concrete walls, Method of and apparatus for forming hollow. E. W. Marten. 1,694,826; Dec. 11.
Condenser and indicating means, Electrical. H. F. Herman. 1,694,384; Dec. 11.
Condenser, Electrical. W. H. Priess. 1,695,060; Dec. 11.
Condenser structure. H. E. Rice and R. C. Da Costa. 1,694,927; Dec. 11.
Conductor, Hollow. W. H. Bassett. Re17,156; Dec. 11.
Conduit, Flexible tubular. R. P. Jacques. 1,695,263; Dec. 11.
Confection. J. W. Trauger. 1,694,458; Dec. 11.
Confectionery, Device for dispowdering. C. Göpel. 1,694,590; Dec. 11.
Confectionery, Manufacture of. W. E. Bamford. 1,694,576; Dec. 11.
Contact device for electrically-energized implements. M. W. McArdle. 1,694,715; Dec. 11.
Container. R. Cullinan. 1,694,584; Dec. 11.
Container, Cigarette. A. von Frankenberg. Des. 77,199; Dec. 11.
Container for tire carriers, Tool. P. S. Whiting. 1,694,634; Dec. 11.
Container, Metal. W. W. Hodgson. 1,695,100; Dec. 11.
Containers, Apparatus for manufacturing. C. R. Robinson. 1,694,627; Dec. 11.
Control apparatus, Dual-. J. T. Hickman. 1,694,916; Dec. 11.
Control device. L. Ruffo. 1,694,797; Dec. 11.
Control means for prime movers, Auxiliary. A. M. Goodwin. 1,694,975; Dec. 11.
Control means for quenching coke, Automatic. C. Hyman. 1,695,105; Dec. 11.
Control of induction motors, Speed. H. K. Schrage. 1,694,984–5; Dec. 11.
Control system, Automatic. H. Bany and H. T. Seeley. 1,695,004; Dec. 11.
Controlling the feed of gasoline engines. C. H. Hapgood. 1,694,469; Dec. 11.
Conveyer. J. Lockhart. 1,695,115; Dec. 11.
Conveyer. H. H. Morgan. 1,694,054; Dec. 11.
Conveyer, Portable. H. H. Barber. Re17,160; Dec. 11.
Cooker and cooler, Combined. A. R. Thompson. 1,694,996; Dec. 11.
Cooker, Electric. P. Ackerman. 1,694,762; Dec. 11.
Cooking utensil, Internal-heat-circulating. W. R. Dick. 1,694,773. Dec. 11.
Cooking vessel. H. L. Goodwin. 1,694,378; Dec. 11.
Cooler: *See*—
  Air cooler.
Cooling and dispensing machine. C. F. Bauer. 1,694,436; Dec. 11.
Cooling and drying materials. E. B. Brown. 1,694,807; Dec. 11.
Cooling system, Engine-. S. W. Rushmore. 1,694,397; Dec. 11.
Cord-holding structure. O. H. Pieper. 1,694,669; Dec. 11.
Corset and brassière, Combination. R. D. Ulman. 1,694,693; Dec. 11.
Cotter pin, Self-locking. E. W. Langton and A. G. Dawson. 1,695,113; Dec. 11.
Cotton batting for shipment and use, Preparing. M. J. Stack. 1,694,954; Dec. 11.
Cotton-working apparatus. L. W. Penney and H. E. Child. 1,694,950; Dec. 11.
Coupler, Air and steam line. F. Jacobs. 1,694,744; Dec. 11.
Coupler, Car. W. Kelso. 1,695,015; Dec. 11.
Coupler, Car. W. J. Regan and W. Kelso. 1,695,024; Dec. 11.
Coupler, Car. W. J. Regan and W. Kelso. 1,695,026; Dec. 11.
Coupling: *See*—
  Universal coupling.
Cover, Box. E. Arnold and H. Templeton. 1,695,222; Dec. 11.
Cover, Box. F. J. Schleicher. 1,694,892; Dec. 11.
Cover, Slip. A. Cohen. 1,695,244; Dec. 11.
Cowl ventilator. R. Beringer. 1,694,764; Dec. 11.
Crank and like case. E. Fejes. 1,694,535; Dec. 11.
Crating furniture, Method of and apparatus for. A. P. Kivlin. 1,694,508; Dec. 11.
Crib and adjustable spring-bottom support therefor. F. Kusterle. 1,694,659; Dec. 11.
Crushing machine. W. K. Liggett. 1,694,423; Dec. 11.
Culvert, Concrete. J. B. Fender. 1,694,736; Dec. 11.
Curling means, Hair-. M. Rogier. 1,694,672; Dec. 11.
Current motor, Alternating-. H. Weichsel. 1,694,460; Dec. 11.
Cushion: *See*—
  Seat cushion.
Cut-out, High-voltage primary. E. G. Newton and E. J. Wade. 1,694,979; Dec. 11.
Cutter: *See*—
  Bolt and rod cutter. Sheet-metal cutter.
  Paper cutter.
Cutter cone for well drills. F. L. Scott and L. H. Wellensiek. 1,694,869; Dec. 11.
Cutting apparatus, Metal-. S. B. Stine. 1,694,567; Dec. 11.
Cutting attachment for mills, Cane-. I. Merlis. 1,695,196; Dec. 11.
Cutting tapered threads, Die head for. H. T. Shearer. 1,695,158; Dec. 11.
Damper, Stove. R. W. Griswold. 1,694,740; Dec. 11.
Decolorizing kerosene, gasoline, and similar light petroleum distillates. V. A. Kalichevsky. 1,695,251; Dec. 11.
Delinquency alarm, Watchman's. E. F. Geiger. 1,695,092; Dec. 11.
Delivering the tufts of textile fibers from combing machines having intermittently-rotating nipper drums, Device for. C. Schleifer. 1,694,432; Dec. 11.
Dental device. H. E. Barker. 1,694,636; Dec. 11.
Desk set. H. Waldman. Des. 77,207; Dec. 11.
Desk set, Fountain-pen. C. Horix. 1,694,918; Dec. 11.
Diagnoser, Engine-trouble. J. H. Richards. 1,694,670; Dec. 11.

Diary, memorandum book, etc. M. J. Wade. 1,694,632; Dec. 11.
Dirigible mounting and control mechanism therefor. G. W. H. Long. 1,694,477; Dec. 11.
Discharge-device system, High-efficiency. J. L. Fearing. 1,695,042; Dec. 11.
Discharge tube, Electric. C. Bol. 1,695,226; Dec. 11.
Dish, Serving. E. O. Weir. 1,694,957; Dec. 11.
Disinfectant and producing the same, Plant. R. Zellmann and D. Lammering. 1,694,497; Dec. 11.
Dispensing device. G. G. Floyd. 1,694,812; Dec. 11.
Dispensing device. F. S. Morrison. 1,694,925; Dec. 11.
Dispensing device for safety matches. R. G. Seel. 1,694,930; Dec. 11.
Dispersing irritants, Process and apparatus for. D. B. Bradner and N. E. Oglesby. 1,695,228; Dec. 11.
Display device. R. B. Meller. 1,694,551; Dec. 11.
Display device. A. P. Thursby. 1,695,036; Dec. 11.
Displaying lantern slides bearing advertisements or other matter, Apparatus for automatically. S. C. Ryder. 1,695,029; Dec. 11.
Distributing device. W. B. C. Washburn. 1,694,897; Dec. 11.
Distributor. G. C. Jett. 1,694,657; Dec. 11.
Doll. G. S. Morahan. Des. 77,181; Dec. 11.
Doll, Mechanical. A. Gyger. 1,694,976; Dec. 11.
Door, Automobile. J. Ledwinka. 1,694,823; Dec. 11.
Door, Flush. F. Victor. 1,694,522; Dec. 11.
Door for hogpens. J. W. Lafferty. 1,694,598; Dec. 11.
Door opener, Furnace-. A. W. Hunt. 1,694,686; Dec. 11.
Door-operating device. J. F. Russell and H. E. Rufty. 1,694,431; Dec. 11.
Doorstop. G. G. Meliem. 1,694,550; Dec. 11.
Doors of tramway or like vehicles, Apparatus for operating and controlling the. H. R. Hockley and H. B. White. 1,694,543; Dec. 11.
Doors, Safety device for. A. W. Parsons. 1,694,394; Dec. 11.
Draft tube, Hydraulic. L. F. Moody. 1,695,200; Dec. 11.
Drawing apparatus. D. C. Kinnear. 1,694,922; Dec. 11.
Drawing frame. H. Kluftinger. 1,694,510; Dec. 11.
Drier: *See*—
  Clothes drier.
  Rotary drier.
Drill: *See*—
  Track drill.
Drilling rigs, Water head for. D. W. McElroy. 1,695,019; Dec. 11.
Drills, Head mount for multiple. R. M. Galloway. 1,694,814; Dec. 11.
Dump body. R. E. Smith and R. J. Arnold. 1,695,034; Dec. 11.
Dumping table. W. H. Grady. 1,694,591; Dec. 11.
Dusting apparatus, Seed-. B. F. Gustafson. 1,694,442; Dec. 11.
Dye, Azo. H. Wagner. 1,695,164; Dec. 11.
Dyestuff from naphthidine, Manufacture of. G. Le Floch. 1,694,884; Dec. 11.
Dyeing. A. Bodmer. 1,694,526; Dec. 11.
Dyeing, printing, or stenciling of cellulose acetate. G. H. Ellis. 1,694,414; Dec. 11.
Dyeings fast to light, Producing. P. Rabe, H. Stötter, B. Wenk, and W. Schepss. 1,694,562; Dec. 11.
Dyes and making same, Azo. H. Wagner, H. Eichwede, and E. Fischer. 1,694,568; Dec. 11.
Dynamic and efficiency meter. E. Peters. 1,694,718; Dec. 11.
Eaves-trough hanger. H. R. Poulsen. 1,695,059; Dec. 11.
Educational appliance. N. Y. Troidl. 1,694,405; Dec. 11.
Elastic fabric. F. J. Zimmerer, jr. Des. 77,212; Dec. 11.
Electric bulbs and bulb blanks for use therein, Manufacturing. C. C. Bohner. 1,694,368; Dec. 11.
Electric furnace. C. B. Foley. 1,694,536; Dec. 11.
Electric furnace, Induction. E. F. Northrup. 1,694,791; Dec. 11.
Electric regulator. H. M. Stoller. 1,695,035; Dec. 11.
Electric switch. J. L. Milton. 1,694,479; Dec. 11.
Electric switch, Thermostatic. W. J. Winninghoff. 1,695,261; Dec. 11.
Electric switches, Contact structure for. C. D. Ainsworth. 1,694,612; Dec. 11.
Electrical apparatus and switch. G. A. Burnham. 1,694,618; Dec. 11.
Electrical conductivity and the flexibility of metals or alloys, Increasing the. K. Hallmann. 1,695,044; Dec. 11.
Electrical system. R. C. Clinker. 1,694,966; Dec. 11.
Electrical system, High-frequency. A. H. Taylor and L. C. Young. 1,694,895; Dec. 11.
Electrolyte and electrolytic apparatus. R. E. Hall. 1,694,653; Dec. 11.
Elevating popped corn and delivering it, Apparatus for. G. H. Hartman. 1,694,381; Dec. 11.
Elevator: *See*—
  Automatic elevator.
Elevator system. D. L. Lindquist and D. C. Larson. 1,694,712; Dec. 11.
Emulsifying apparatus. G. L. Fish. 1,694,589; Dec. 11.
Engine: *See*—
  Combustion engine.
  Internal-combustion engine.
  Rotary engine.
Evaporation, Recovering values by. H. W. Carr. 1,694,841; Dec. 11.
Expander for sealing rings. D. M. Solenberger. 1,694,566; Dec. 11.
Extractor: *See*—

  Honey extractor.
  Vapor extractor.
Fan, Electric. S. A. Xippas. 1,695,002; Dec. 11.
Fastener and alarm, Combined door. A. Zukor and H. Irmscher. 1,695,077; Dec. 11.
Fastener, Flexible seam. D. Heller. 1,694,915; Dec. 11.
Fastener, Window. L. F. Kloos and M. F. Hatcher. 1,695,108; Dec. 11.
Fastener, Window. H. W. Nicles. 1,694,662; Dec. 11.
Fastening-inserting machine. W. T. B. Roberts. 1,694,451; Dec. 11.
Fastening rails, Device for. F. W. Weber. 1,694,898; Dec. 11.
Fastening, Shiftable nut. F. S. Carr. 1,694,580; Dec. 11.
Fats, Preparation of edible. W. B. McLaughlin. 1,694,391; Dec. 11.
Faucet, Draft. H. E. Walker. 1,694,694; Dec. 11.
Feed control, Liquid-. R. G. Jones. 1,694,621; Dec. 11.
Feed-control means for internal-combustion engines. J. B. Bartow. 1,694,367; Dec. 11.
Feeder, Sheet. W. M. Kelly. 1,694,745; Dec. 11.
Feeding device, Centrifugal-separator. V. J. Gilmore. 1,694,468; Dec. 11.
Feeding fuel by waste heat. J. A. Dienner. 1,649,911; Dec. 11.
Feeding mechanism, Sheet-. L. E. Morrison. 1,694,717; Dec. 11.
Fence, Portable guard. J. Peppin. 1,694,753; Dec. 11.
Fender for sweepers. J. R. Gammeter. 1,695,246; Dec. 11.
Ferrule, Harness. M. Miller. 1,694,716; Dec. 11.
Fertilizer. G. Barsky and F. W. Freise. 1,695,081; Dec. 11.
Filing mechanism for autographic registers. L. Jensen. 1,694,782; Dec. 11.
Filling root canals, Apparatus for. I. Kulik. 1,694,857; Dec. 11.
Filter. C. P. Eisenhauer. 1,694,467; Dec. 11.
Filter for air and other gases. E. L. Joseph. 1,695,237; Dec. 11.
Filter press. H. L. Walker. 1,694,956; Dec. 11.
Finger ring. H. Quast. 1,695,157; Dec. 11.
Finishing machine, Cloth-. C. G. Richardson. 1,694,865; Dec. 11.
Fish bait, Weedless. F. W. Beidatsch. 1,694,697; Dec. 11.
Flanging can bodies and flanging head for carrying out the same. H. A. Fink. 1,695,232; Dec. 11.
Flashing structure. E. M. Tucker. 1,694,521; Dec. 11.
Floor-finishing apparatus. G. Geary. 1,694,738; Dec. 11.
Flooring, Rubber. V. Lefebure. 1,694,476; Dec. 11.
Flowers, Manufacture of artificial. R. J. de Gerson. 1,694,844; Dec. 11.
Focusing device, Lamp-. S. E. Brown. 1,694,765; Dec. 11.
Focusing device, Universal. J. F. Pagendarm. 1,694,830; Dec. 11.
Folding chair. L. H. McKee. 1,695,117; Dec. 11.
Folding method and article produced thereby. A. R. Ridderstrom. 1,694,796; Dec. 11.
Food product and producing the same. E. F. Burton and J. H. Montgomery. 1,694,680; Dec. 11.
Forming machine, Ball-. M. W. Magann. 1,695,195; Dec. 11.
Forming machine, Ridge-cap. J. and H. Fulenwider, E. W. Robinson, and H. Norris. 1,694,440; Dec. 11.
Formula, Cheese. H. H. and A. H. Kaufmann. 1,694,921; Dec. 11.
Frame: *See*—
  Drawing frame.
  Picture frame.
  Reflector frame.
  Saw frame.
  Side frame.
Framing for metal furniture. P. E. Huetten. 1,694,656; Dec. 11.
Frog for violin bows. H. Ostrovsky. 1,695,020; Dec. 11.
Fruit-cleaning mechanism. E. A. White. 1,694,675; Dec. 11.
Fuel regulator, Automatic. C. L. Stokes. 1,694,801; Dec. 11.
Fuel-supply system for internal-combustion engines. S. Wiltse. 1,694,805; Dec. 11.
Funnel, Portable liquid-recording. D. G. Milligan. 1,695,053; Dec. 11.
Furnace: *See*—
  Annealing furnace.
  Electric furnace.
  Heat-treating furnace.
  Induction furnace.
  Pot furnace.
  Regenerative furnace.
Furnace arch. W. M. Duncan. 1,694,534; Dec. 11.
Furnace cleaner. A. Brest. 1,695,169; Dec. 11.
Furnace for reduction of iron. C. M. Day and C. J. Scullin. 1,694,376; Dec. 11.
Furnaces, Air feed for hot-air. E. G. Miller. 1,694,392; Dec. 11.
Furniture, Reversible back for upholstered. I. Hoffman. 1,695,101; Dec. 11.
Fuse for artillery projectiles, Mechanical. A. Varaud. 1,695,070; Dec. 11.
Fusee and carrying case, Knockdown. W. C. McMurray. 1,695,052; Dec. 11.
Gag and tongue holder, Mouth. B. F. Bell, sr. 1,695,168; Dec. 11.
Gambrel, Hog. W. W. Brainard. 1,695,138; Dec. 11.
Game. E. Edwards. 1,695,144; Dec. 11.
Game. L. S. Gunderman. 1,694,819; Dec. 11.

Game. R. C. Parent. 1,695,120; Dec. 11.
Game board and score counter, Combination. J. B. Buckley. 1,694,965; Dec. 11.
Game, Motion-picture card. J. O. Miranda. 1,694,748; Dec. 11.
Gases to be used in the production of ammonia, Purification of. B. F. Halvorsen. 1,694,594; Dec. 11.
Gasket. E. J. Wirfs, jr. 1,695,073; Dec. 11.
Gasoline from gas, Combined absorption and fractionation for recovering. E. R. Cox and D. A. Cushman. 1,695,139; Dec. 11.
Gasoline, Manufacture of natural. H. E. Thompson. 1,695,102; Dec. 11.
Gauge: *See*—
  Level gauge.
  Liquid-level gauge.
Gauge. W. G. Bayha. 1,694,838; Dec. 11.
Gear and reverse for motor vehicles and other machines, Variable-speed. H. B. Murray. 1,694,554; Dec. 11.
Gear for motor cars or other power-propelled vehicles, Change-speed. N. E. E. Sörensen. 1,695,214; Dec. 11.
Gear for motor vehicles, Running. E. W. Templin. 1,695,259; Dec. 11.
Gear, Valve. G. Fornaca. 1,695,011; Dec. 11.
Gearing adjustment, Elevator-. F. L. Obler. 1,694,663; Dec. 11.
Gearing, Variable-speed. W. S. F. Brown and J. Maina. 1,694,808; Dec. 11.
Glare shield. L. G. Finnicum. 1,694,645; Dec. 11.
Glass-blowing machine. C. R. Nixon. 1,694,486; Dec. 11.
Glass containing barium, Manufacture of. F. Rothe and H. Brenck. 1,694,831; Dec. 11.
Glassworking machine. A. Samuelson. 1,694,867; Dec. 11.
Globe, Theftproof lamp. W. O. Bode and L. J. Haming. 1,694,963; Dec. 11.
Glycols, Manufacture of. G. O. Curme, jr. 1,695,250; Dec. 11.
Golf-ball-teeing device. G. J. Brockhagen. 1,695,006; Dec. 11.
Golf-club head. F. S. Smith. Des. 77,191; Dec. 11.
Golf clubs, Thumb rest and stroke-control device for. R. F. Stoeffler. 1,694,992; Dec. 11.
Golf game apparatus. F. Rentz. 1,694,691; Dec. 11.
Gong stands for clocks, Producing. E. L. Carlson. 1,695,087; Dec. 11.
Governor for ignition systems. S. I. Fekete. 1,694,644; Dec. 11.
Governor for seagoing ships, Marine. G. J. Teigland. 1,695,216; Dec. 11.
Governor, Locomotive. A. A. Hager. 1,694,652; Dec. 11.
Grading and distributing machine. L. A. Cogswell. 1,694,408; Dec. 11.
Grinder, Food. W. W. Dryden. 1,694,502; Dec. 11.
Guard, Flangeway. H. Oettinger. 1,694,557; Dec. 11.
Gun for airplanes, Synchronized machine. O. A. Ross. 1,694,488; Dec. 11.
Hair drier, Electric. H. G. Levy. Des. 77,162; Dec. 11.
Handle: *See*—
  Tool handle.
Handles to baskets, Mechanism for attaching wire. C. H. Allen. 1,694,901; Dec. 11.
Handling apparatus, Freight-. B. F. Fitch. 1,694,913; Dec. 11.
Handling freight. B. F. Fitch. 1,694,912; Dec. 11.
Hanger: *See*—
  Blackboard hanger.
  Eaves-trough hanger.
Hanger for electric wires. C. A. Cawood. 1,695,007; Dec. 11.
Harvesting artificial ice, Apparatus for. E. A. Hall. 1,694,742; Dec. 11.
Hat net. G. V. Heidt. Des. 77,154; Dec. 11.
Hat welt and forming same. W. Busold. 1,695,084; Dec. 11.
Header, Kafir-corn. W. A. Harrell. 1,694,852; Dec. 11.
Headlights, Automatic control for. E. von der Lippe-Lipski. 1,694,511; Dec. 11.
Headlights, Light diffuser for. B. K. Smith. 1,694,491; Dec. 11.
Heat-control device, Automatic. F. N. Nutt. 1,694,751; Dec. 11.
Heat-regulating device, Oven-. E. L. Claus and W. E. Claus. 1,694,682; Dec. 11.
Heat-treating furnace. A. Besta. 1,695,224; Dec. 11.
Heat-treating furnace. H. O. Breaker. 1,694,964; Dec. 11.
Heater: *See*—
  Automobile heater.
  Electric heater.
  Room heater.
  Water heater.
Heater. J. W. Slade. 1,694,695; Dec. 11.
Heating apparatus. W. T. Tabb. 1,694,725; Dec. 11.
Heating element, Electric resistance. H. S. Lee. 1,694,600; Dec. 11.
Heel-turning machine. G. Clausing. 1,694,465; Dec. 11.
Hinge. W. A. Matheson. 1,694,885; Dec. 11.
Hinge, Gate. L. A. Hawthorne. 1,694,914; Dec. 11.
Hinge, Pivot. A. C. Goddard. 1,695,235; Dec. 11.
Hoist, Hydraulic dumping-body. E. R. Barrett. 1,694,909; Dec. 11.
Holder. H. T. Wilson. 1,695,166; Dec. 11.
Holder, Aseptic-needle. H. S. Cook. 1,694,768; Dec. 11.
Holder, Bag. K. M. Riddle. 1,695,027; Dec. 11.
Holder, Billiard-cue-tip. C. Darmis. 1,694,375; Dec. 11.
Holder, Combination fountain pen and cigarette. U. Piagneri. 1,694,603; Dec. 11.
Holder for dentifrice-container tubes. G. T. Gale. 1,695,185; Dec. 11.
Holder for electric generators or motors, Brush. R. G. Lafite. 1,694,709; Dec. 11.
Holder, Lamp-shade-frame. K. C. Berger. 1,695,223; Dec. 11.
Holder, License-plate. E. L. Shelton. 1,694,832; Dec. 11.
Holder, Milk-bottle. R. C. Bacon. 1,694,729; Dec. 11.
Holder, Sanitary-napkin. L. Z. Nelson. 1,695,153; Dec. 11.
Holder, Toothbrush. G. E. C. Hill. 1,694,941; Dec. 11.
Holding and clamping device. A. A. Lainer. 1,694,474; Dec. 11.
Holding and locking spare wheels and the like on motor vehicles. M. Kruse. 1,695,016; Dec. 11.
Holding device, Sheet-. S. H. Plum, 2d. 1,694,720; Dec. 11.
Hone, Valve. E. A. Hall. 1,694,705; Dec. 11.
Honey extractor. G. Y. Harry. 1,694,541; Dec. 11.
Hose clamp. H. W. Goodall and J. W. Walsh. 1,694,538; Dec. 11.
Hose clamp. C. A. Parker. 1,694,664; Dec. 11.
Housing, Engine. F. N. Nelson. 1,694,790; Dec. 11.
Hubs, Making pressed-steel. H. H. Hicks. 1,694,779; Dec. 11.
Humidifier. E. A. Spaulding. 1,694,453; Dec. 11.
Hydraulic system and propelling vessels. G. R. Brown. 1,694,840; Dec. 11.
Hydrogen sulphide from coal or water gases, Removing. W. E. Leuchtenberg. Re. 17,162; Dec. 11.
Ice-cream cone. J. L. Balton. Des. 77,145; Dec. 11.
Ice pick. N. C. Smith. Des. 77,192; Dec. 11.
Impervious material. W. F. Bleecker. 1,694,730; Dec. 11.
Incubator. H. L. Watson. 1,694,674; Dec. 11.
Index or record. H. O. Ross. 1,694,517; Dec. 11.
Indicating apparatus. J. W. Anderson. 1,694,903; Dec. 11.
Indicating device. J. W. Anderson. 1,694,904–5; Dec. 11.
Indicating device for cooling systems. J. W. Anderson. 1,694,908; Dec. 11.
Indicating device, Stock-. L. E. Hutchings. 1,694,877; Dec. 11.
Indicating means. J. W. Anderson. 1,694,907; Dec. 11.
Indicator: *See*—
  Scale indicator.
  Temperature indicator.
Indicator. J. W. Anderson. 1,694,902; Dec. 11.
Indicator board. D. Brown. 1,694,639; Dec. 11.
Indicator for cooling systems. J. W. Anderson. 1,694,906; Dec. 11.
Indicator for internal-combustion engines, Heat. L. M. Spencer and J. Zubaty. 1,694,871; Dec. 11.
Indicator for motion-picture-projection apparatus. M. Hoffman. 1,694,942–3; Dec. 11.
Induction furnace, High-frequency. E. F. Northrup. 1,694,792; Dec. 11.
Inserting machine, Carpet-wire blade-. H. J. Galsman. 1,694,875; Dec. 11.
Insulating structure, Thermal. H. B. Lindsay. 1,694,947; Dec. 11.
Insulating support for electric resistance heating element. L. J. Fuller. 1,695,234; Dec. 11.
Insulator. C. S. Gordon. 1,694,415; Dec. 11.
Internal-combustion engine. H. J. Edwards. 1,694,642; Dec. 11.
Iron: *See*—
  Waffle iron.
Ironing machine. H. C. Curtiss. 1,694,970; Dec. 11.
Jack: *See*—
  Pumping jack.
Jack for double-hooked needles in knitting machines, Operating. A. M. Müller. 1,694,426; Dec. 11.
Javelle water, Manufacture of. H. D. Levine. 1,694,711; Dec. 11.
Jewelry, Beaded article of. F. Döppenschmitt. 1,694,703; Dec. 11.
Jig for use in making automobile bodies. J. Ledwinka. 1,694,475; Dec. 11.
Joint: *See*—
  Pipe joint.

Pasteurizer, Milk. W. Sangster. 1,694,452; Dec. 11.
Pasteurizer, Milk. W. Sangster. 1,695,207; Dec. 11.
Pencil, Mechanical. C. R. Keeran. 1,694,945; Dec. 11.
Percentage feeder. B. Neal and G. H. Hebebrand. 1,694,484; Dec. 11.
Percolator, Enameled electric. V. Watts. 1,694,570; Dec. 11.
Permutation lock. H. A. Barrett. 1,695,080; Dec. 11.
Photographic-film package. B. A. Slocum. 1,694,401; Dec. 11.
Photography and the like, Color. A. Hamburger. 1,695,045; Dec. 11.
Piano. F. S. Muckey. 1,694,789; Dec. 11.
Picture frame. C. G. Reutos. 1,694,755; Dec. 11.
Picture transmission. H. E. Ives. 1,695,048; Dec. 11.
Pillow. F. Karr. 1,694,547; Dec. 11.
Pin: *See*—
Cotter pin.
Pipe joint. E. Kennedy. 1,694,822; Dec. 11.
Piston and cylinder construction. B. S. Floraday. 1,694,503; Dec. 11.
Piston, Fluid-tight. E. J. Laugaudin. 1,694,859; Dec. 11.
Piston for internal-combustion engines. H. R. Young. Re17,159; Dec. 11.
Planter. B. Zendron. 1,695,074; Dec. 11.
Planter and packer, Seed. H. A. Wilberg. 1,695,165; Dec. 11.
Plug for bathers, Ear. L. Santi. 1,694,952; Dec. 11.
Pocket, Automobile door-. G. C. Irons. 1,694,855; Dec. 11.
Pole center, Drapery-. G. M. Long. Des. 77,168–4; Dec. 11.
Polisher, Floor. H. V. Schaedel. 1,694,983; Dec. 11.

Polishing attachment for pin trimming and polishing machines, Bowling ball-. O. E. Zimmerling. 1,694,900; Dec. 11.
Pot furnace. A. J. Hanson. 1,694,416; Dec. 11.
Power attachment for corn pickers. K. Tjossem. 1,694,608; Dec. 11.
Power transmission, Apparatus for. L. B. Harris. 1,694,938; Dec. 11.
Preserver, Inflatable life. P. Markus. 1,694,714; Dec. 11
Press: *See*—
Filter press. Seaming press.
Pressing machine, Sole-. N. H. Knowlton. 1,694,445; Dec. 11.
Pressing machines, Operating mechanism for. A. B. Closson. 1,695,088; Dec. 11.
Pressure on liquid for use in vehicle braking, Maintaining. J. S. Reynolds. 1,694,951; Dec. 11.
Pressure-regulation means. C. L. Howse. 1,694,507; Dec. 11.
Priming mixture for small-arms ammunition. H. T. Peck. 1,694,800; Dec. 11.
Printing presses, Attachment for. R. W. Borrowdale. 1,694,638; Dec. 11.
Production and reception of continuous oscillations, System and method of. J. H. Hammond, jr. 1,694,655; Dec. 11.
Protective arrangement. N. Sensui. 1,694,986; Dec. 11.
Pulling device, Pipe-. S. K. Smoot. 1,694,953; Dec. 11.
Pulsing system. E. R. Lundins. 1,695,050; Dec. 11.
Pump. Z. P. Adams. 1,694,575; Dec. 11.
Pump. L. E. Johnson, S. M. Hansen, and J. T. McTarnahan. 1,694,783; Dec. 11.
Pump. J. Zwicky. 1,694,610; Dec. 11.
Pumping jack, Long-stroke. H. J. Smith. 1,694,402; Dec. 11.
Pusher mechanism for stokers, Fuel-. O. Craig. 1,695,229; Dec. 11.
Rack. O. G. Shilander. 1,695,211; Dec. 11.
Radiator. F. M. Young. 1,694,696; Dec. 11.
Radiator cap, Automobile. W. P. Dalrymple. 1,694,771; Dec. 11.
Radiator-cap ornament. W. E. Otwell. Des. 77,184; Dec. 11.
Radiator ornament or similar article, Automobile. V. Rizzi. Des. 77,185; Dec. 11.
Radiator return trap. A. P. Crosby. 1,694,641; Dec. 11.
Radio apparatus. P. H. Rooth. 1,694,396; Dec. 11.
Radio apparatus, Control mechanism for. R. J. Martin. 1,694,601; Dec. 11.
Radio broadcast distribution, Secrecy system of. E. E. Clement. 1,695,179–80; Dec. 11.
Radio broadcast selecting and distributing system. E. E. Clement. Re17,163; Dec. 11.
Radio broadcast selecting and distributing system. E. E. Clement. 1,695,173; Dec. 11.
Radiocabinet. J. Wolff. Des. 77,211; Dec. 11.
Radiocabinet. E. Worthington. Des. 77,210; Dec. 11.
Radio receiving instrument. E. E. Clement. 1,695,172; Dec. 11.
Radio receiving instrument for systems of broadcast distribution. E. E. Clement. 1,695,174; Dec. 11.
Radio receiving instrument for systems of broadcast distribution. E. E. Clement. 1,695,181; Dec. 11.
Radio receiving station. H. F. Löwenstein. 1,695,175; Dec. 11.
Radio service metering system. E. E. Clement. 1,695,177; Dec. 11.
Radio telephone and power-distributing system, Combined. J. B. Hoge and E. E. Clement. 1,695,171; Dec. 11.
Rail joint. S. Déri and M. Deak. 1,695,140; Dec. 11.
Railway track, Flexible. J. L. Clarkson. 1,694,528; Dec. 11.
Razor cleaner, Safety-. W. Berchielli. 1,695,135; Dec. 11.
Receptacle for powder or rouge. P. M. Guillaume. 1,694,818; Dec. 11.
Receptacle, Metal. S. Ringer. 1,694,487; Dec. 11.
Recording and controlling machine, Electromechanical. P. Trojani and C. D'Ascanio. 1,694,631; Dec. 11.
Recording and sound-reproducing machine. Sound-. A. Remy, J. Reneaux, J. Delort, and F. Debrebant. 1,695,025; Dec. 11.
Rectifying system. F. L. Walker, jr. 1,694,837; Dec. 11.
Reflector frame, Adjustable. L. S. Shively. 1,694,833; Dec. 11.
Refractory, Bonded. R. E. Lowe. 1,694,924; Dec. 11.
Refrigerating and heat-interchanging apparatus. C. L. Burdick. 1,694,370; Dec. 11.
Refrigerating apparatus. C. L. Burdick. 1,694,369; Dec. 11.
Refrigerating apparatus. F. E. Dennison. 1,694,532; Dec. 11.
Refrigerating apparatus. A. M. Thomson. 1,694,630; Dec. 11.
Refrigerating machine. H. Nielsen. 1,694,427; Dec. 11.
Refrigerator and waste-disposal apparatus, Combination sanitary. A. H. Allen. 1,695,133; Dec. 11.
Refrigerator, Bottle. C. N. Miller. 1,695,256; Dec. 11.
Regenerative furnace. W. Millward. 1,695,199; Dec. 11.
Regulating mechanism for full-fashioned-knitting machines, Universal loop-. C. F. Meyer. 1,694,888; Dec. 11.
Regulator: *See*—
Electric regulator. Speed regulator.
Fuel regulator. Temperature regulator.
Regulator for boilers, Automatic draft. L. W. Eggleston. 1,695,241–3; Dec. 11.
Regulator for boilers, Automatic draft. A. M. Mertzanoff. 1,695,240; Dec. 11.
Rendering apparatus. R. McTavish. 1,695,254; Dec. 11.
Reshaping annealing boxes, Apparatus for. C. V. Dodge. 1,695,142; Dec. 11.
Respirator. C. L. Burdick. 1,695,170; Dec. 11.
Restraining device for lens-grinding machines. C. A. Adams. 1,694,728; Dec. 11.
Retarding device for tube frames, Spool-. C. Lea. 1,694,881; Dec. 11.
Revolvers, Attachment for. A. M. Villalpando. 1,695,071; Dec. 11.
Rim contractor. L. Hagner, jr. 1,694,741; Dec. 11.
Rims for bull wheels, Making metallic. C. B. Pritchard. 1,694,680; Dec. 11.
Ring: *See*—
Finger ring.
Rings, Making finger. A. Suderov. 1,695,067; Dec. 11.
Roadbed and track construction, Railway. E. R. Edson. 1,694,811; Dec. 11.
Roasting sulphide minerals. J. B. Read and M. F. Coolbaugh. 1,694,794; Dec. 11.
Rocking-chair, Folding. L. P. Walker and L. O. Bergmann. 1,694,933; Dec. 11.
Rod: *See*—
Anchor rod.
Roll cleaner, Snapping-. T. H. Dillon, jr. 1,694,533; Dec. 11.
Roll for paper-making machines, Suction. E. E. Berry. 1,694,698; Dec. 11.
Roller: *See*—
Shade roller.
Roller for conveyers. E. W. Zimmerman. 1,695,075; Dec. 11.

Thermostatic control of carburetors. A. Taub. 1,694,759; Dec. 11.
Tile. E. Parker. 1,694,665; Dec. 11.
Tile clay products and apparatus therefor, Making. H. A. Shugart. 1,695,119; Dec. 11.
Tiles, Apparatus for the manufacture of roofing. F. A. Wilson. 1,695,132; Dec. 11.
Time switch. H. H. Kempf. 1,694,472; Dec. 11.
Tire carrier, Spare-. A. M. Flynt. 1,694,439; Dec. 11.
Toggle bolt. C. C. Tomkinson. 1,694,493–4; Dec. 11.
Tongs. B. J. Bloemsma. 1,694,525; Dec. 11.
Tongs, Animal-mouth. W. G. MacLean, jr. 1,694,713; Dec. 11.
Tool and handle connection. J. P. Cochran. 1,695,009; Dec. 11.
Tool, Auxiliary dialing. W. L. Peak. 1,694,429; Dec. 11.
Tool chuck. E. J. O'Flaherty. 1,694,558; Dec. 11.
Tool, Demountable-rim. W. W. Booth. 1,694,527; Dec. 11.
Tool for inserting stud bolts. H. Sauveur. 1,694,628; Dec. 11.
Tool for making gratings. A. E. Wells. 1,694,633; Dec. 11.
Tool for removing headlight rims. W. H. Guthrie. 1,694,443; Dec. 11.
Tool for rotating valve heads. R. E. Bissell. 1,694,699; Dec. 11.

Tool for the tie wires or bands of concrete building forms, barrels, boxes, bales, and the like, Cutting. O. W. Rankin. 1,695,022; Dec. 11.
Tool handle. J. L. Osgood. 1,694,559; Dec. 11.
Tool, Machine. F. P. Parish. 1,694,560; Dec. 11.
Tool, Tire-rim. X. Schneider. 1,694,893; Dec. 11.
Tool, Well-drilling. L. C. Black. 1,694,679; Dec. 11.
Tooth, Artificial. S. Myerson. 1,694,948; Dec. 11.
Tooth cleaner. G. Kalenoff. 1,695,238; Dec. 11.
Towing device, Vehicle. J. W. Hansen. 1,695,096; Dec. 11.
Toy. H. G. Hose. 1,694,917; Dec. 11.
Toy, Animated. H. E. Price. 1,695,205; Dec. 11.
Toy bank. I. S. Kronowit. Des. 77,158; Dec. 11.
Toy house. J. H. Frier, jr. Des. 77,148-9; Dec. 11.
Toy machine frame. A. C. Gilbert. Des. 77,150; Dec. 11.
Toy, Mechanical. G. N. Hall. 1,695,095; Dec. 11.
Track drill. R. Rostron. 1,695,062; Dec. 11.
Track liner. F. Hackmann. 1,694,651; Dec. 11.
Traffic-control system for radio broadcast distribution. B. E. Clement. 1,695,176; Dec. 11.
Traffic-controlling system. A. G. Williamson. 1,695,131; Dec. 11.
Train-control system. T. E. and J. E. Clark, and W. L. Coop. 1,694,373; Dec. 11.
Transformer, Electrical. C. F. Phillips. 1,695,122; Dec. 11.
Transmission of pictures and views. C. A. Sabbah. 1,694 982; Dec. 11.
Transmitting movement, Mechanism for. G. W. Sinclair. 1,694,834; Dec. 11.
Transporting logs, Method of and apparatus for. G. E. Spain. 1,694,931; Dec. 11.
Trap: *See*—
Radiator return trap
Treating air bags. S. S. Kurtz, jr. 1,694,879; Dec. 11.
Treating emulsified oil, Apparatus for. G. Egloff and H. P. Benner. 1,694,643; Dec. 11.
Treating hides and skins, Method of and apparatus for. M. M. Merritt. 1,694,447; Dec. 11.
Treatment of cellulose acetate. G. H. Ellis. 1,694,413; Dec. 11.
Treatment of spent clays. R. A. Dunham. 1,694,971; Dec. 11.
Tree: *See*—
Christmas tree.
Tree stand, Christmas-. R. Garlick. 1,694,815; Dec. 11.
Trimmer: *See*—
Lawn trimmer.
Trimming machine. B. Jorgensen. 1,694,444; Dec. 11.
Truck. B. J. Moore. 1,694,749; Dec. 11.
Truck for transporting poultry. L. A. Cohen. 1,694,732; Dec. 11.
Truck, Portable ash-can. M. J. Downey. 1,695,183; Dec. 11.
Truck, Railway-car. J. R. Cardwell. 1,695,085–6; Dec. 11.
Truck, Railway-car. W. C. Sleeman. 1,694,988; Dec. 11.
Trunk, Combination. E. Z. Hursh. 1,694,470; Dec. 11.
Trunking system for radio distribution. E. E. Clement. 1,695,182; Dec. 11.
Tube: *See*—
Discharge tube. Draft tube.
Tube cleaner, Multiple-. C. L. Burdick. 1,694,371; Dec. 11.
Tubing bend and making same. B. C. Root. 1,694,430; Dec. 11.
Tubing, Metal. E. R. Berry. 1,694,962; Dec. 11.
Turbine-governing system. W. Innes. Re17,161; Dec. 11.
Turbine, Hydraulic. H. B. Taylor. 1,694,454; Dec. 11.
Turbine or pump, Propeller-type. L. F. Moody. 1,694,481; Dec. 11.
Typewriting and computing machine, Combined. H. H. Vickers. 1,694,932; Dec. 11.
Typewriting machine. A. G. F. Kurowski. 1,694,923; Dec. 11.
Typewriting machine. J. A. B. Smith. 1,694,519; Dec. 11.
Universal coupling. F. W. Peters. 1,694,926; Dec. 11.
Universal joint. H. C. Lord. 1,695,116; Dec. 11.
Uppers and insoles, Apparatus for use in assembling. F. Ricks and J. Gouldbourn. 1,694,449; Dec. 11.
Uppers and insoles, Assembling. F. Ricks and J. Gouldbourn. 1,694,450; Dec. 11.
Urn, Coffee. H. Marcuson. 1,694,548; Dec. 11.
Vacuum device. W. D. Coolidge. 1,694,967; Dec. 11.
Valve. P. P. Dean. 1,694,809; Dec. 11.
Valve. P. H. Hamilton. 1,694,777; Dec. 11.
Valve. P. S. Harper. 1,694,978; Dec. 11.
Valve. A. G. Heggem. 1,695,014; Dec. 11.
Valve. J. C. Howard. 1,694,595; Dec. 11.
Valve. H. T. Roberts. 1,694,625–6; Dec. 11.
Valve, Adjustable-plug. C. W. Stevens. 1,694,403; Dec. 11.
Valve, Air-bag. C. Van Rennes. 1,694,872; Dec. 11.
Valve and fuel cut-off, Air. W. H. Pritchett. 1,695,206; Dec. 11.
Valve control, Electrically-operated organ-. C. F. Redman. 1,694,722; Dec. 11.
Valve for rock drills. E. B. Lear. 1,694,882; Dec. 11.
Valve, Lubricated adjustable-plug. C. W. Stevens. 1,694,404; Dec. 11.
Valve, Plate. G. G. Tuttle. 1,695,069; Dec. 11.
Valve, Pressure and temperature control. H. C. Tabler. 1,694,492; Dec. 11.
Valve, Pressure-relieving. T. A. Crompton. 1,695,248; Dec. 11.
Valve spring. A. S. Barney, sr. 1,694,435; Dec. 11.
Valve-stem adapter for inner-tube molds. A. A. Glidden, T. M. Knowland, and W. T. Rich, jr. 1,695,012–13; Dec. 11.
Vanadium compound. H. Hahl and W. Kropp. 1,695,147; Dec. 11.
Vanity case. H. L. Allen. 1,694,727; Dec. 11.
Vanity case. B. B. Deitel. 1,694,702; Dec. 11.
Vanity case adapted to separate compacts of contracting shades. L. L. Kole. 1,694,946; Dec. 11.
Vapor extractor. M. H. Kotzebue. 1,695,192; Dec. 11.
Vaporizer, Liquid. H. G. Donald. 1,694,936; Dec. 11.
Vehicle body, Closed road-motor-. C. T. Weymann. 1,694,572; Dec. 11.
Vehicle brake. E. B. Flanigan. 1,694,776; Dec. 11.
Vehicle-operated switch. A. O. Peterson. 1,695,121; Dec. 11.
Vehicle spring cover. T. Munroe. 1,694,483; Dec. 11.
Vending machine. C. Lea. 1,694,599; Dec. 11.
Veneering brick, Machine for. E. V. Poston. 1,695,123; Dec. 11.
Vent for bottles and other liquid containers, Automatic. O. Porter. 1,694,754; Dec. 11.
Ventilating and deflecting of air through railway cars. A. Sturrock. 1,694,993; Dec. 11.
Ventilating screen. H. H. Everhard. 1,695,091; Dec. 11.
Ventilation of dynamo-electric machines. E. G. Sohlberg. 1,694,990; Dec. 11.
Ventilator: *See*—
Cowl ventilator. Wall louver ventilator.
Vibrating objects, Apparatus for. J. T. Stoney and K. Purwin. 1,695,127; Dec. 11.
Vibratory screen. L. E. Soldan and G. W. Behnke. 1,694,563; Dec. 11.
Waffle iron, Electric. C. P. Randolph. 1,694,981; Dec. 11.
Wall louver ventilator. R. J. Miller. Re17,164; Dec. 11.
Warpage of castings in cooling, Preventing. A. B. Norton. 1,695,239; Dec. 11.
Washer: *See*—
Spray washer.
Washing machine. S. E. Schroeder. 1,695,065; Dec. 11.
Washing machine. F. B. Schuyler. 1,694,606; Dec. 11.
Water heater, Electric. E. R. Bolinger. 1,695,227; Dec. 11.
Water-level indicator, Battery. L. R. Willits. 1,694,609; Dec. 11.
Waterproof sheet structure. J. F. White. 1,694,523; Dec. 11.
Water-softening apparatus. H. A. Toulmin, jr. 1,694,457; Dec. 11.
Waving or curling the hair, Apparatus for. E. F. Suter. 1,694,607; Dec. 11.
Welding machine. H. M. Naugle and A. J. Townsend. 1,694,555; Dec. 11.
Welding machine, Electric. C. M. MacChesney and R. H. Norton. 1,694,512; Dec. 11.
Welding plates, Process and apparatus for. C. Schaer. 1,694,629; Dec. 11.
Windmill. F. R. Owens. 1,695,154; Dec. 11.
Window, S. A. McClellan. 1,694,886; Dec. 11.
Windshield cleaner. J. G. Truesdell and W. J. O'Connell. 1,695,163; Dec. 11.
Wiper, Windshield. R. C. McColley. 1,694,390; Dec. 11.
Wireworking machine. G. F. Matteson. 1,695,255; Dec. 11.
Wrapper for receptacles and preparing the same. H. P. Shopneck. 1,694,399; Dec. 11.
Wrapping for packages, Advertising. N. E. Covel. 1,694,701; Dec. 11.
Zinc from zinc-bearing solutions, Recovery of. N. E. Lenander. 1,694,710; Dec. 11.

# CLASSIFICATION OF PATENTS

## ISSUED DECEMBER 11, 1928.

NOTE.—First number=class, second number=subclass, third number=patent number.

1— 18: 1,694,451
2— 30: 1,694,693
68: 1,695,005
146: 1,694,816
178: 1,695,084
4— 113: 1,695,160
5— 11: 1,694,659
25: 1,694,995
53: 1,694,940
112: 1,694,420
167: 1,695,184
263: 1,695,129

Syrup, Table. Tea Garden Products Co. 250,895; Dec. 18; Serial No. 269,806; published Oct. 2, 1928.
Syrups, Malt. Great West Sales Corporation. 250,958; Dec. 18; Serial No. 270,025; published Sept. 25, 1928.
Toast. H. G. Cubbison. 250,962; Dec. 18; Serial No. 269,947; published Oct. 2, 1928.
Tomato catsup. H. H. Meyer Packing Company. 250,945; Dec. 18; Serial No. 270,383; published Sept. 25, 1928.
Vegetables, melons, berries, cranberries, Fresh. F. J. Day. 250,765; Dec. 18; Serial No. 254,127; published Oct. 2, 1928.

# ALPHABETICAL LIST OF LABELS.

A Safe Ladder. For Ladders. Ladder Manufacturers Association of America. 35,112; Dec. 18.
Aunt Nellie's. For Canned Peas. Aunt Nellie's Farm Kitchen, Inc. 35,092; Dec. 18.
Bandsco. For Fresh Sweet Potatoes. Barnett & Sibille Co. 35,093; Dec. 18.
Beech-Nut Fruit Flavored Candy Coated Gum—Beechies. For Candy-Coated Chewing Gum. Beech-Nut Packing Company. 35,095; Dec. 18.
Beech-Nut Spearmint Candy Coated Gum—Beechies. For Candy-Coated Chewing Gum. Beech-Nut Packing Company. 35,094; Dec. 18.
Chewee. For Candy. John D. Hamilton Company. 35,105; Dec. 18.
Chuckles Circus-Box. For Candy. Fred W. Amend Co. 35,091; Dec. 18.
Colored Twist Ends Home Made Cream Checkerberry. For Chocolate-Covered Cream Checkerberry Candy. E. F. Kemp. 35,109; Dec. 18.
Colored Twist Ends Home-Made Cream Pe-Nu-Che. For Chocolate Covered Cream Peppermint Candy. E. F. Kemp. 35,108; Dec. 18.
Colored Twist Ends Home Made Cream Peppermint. For Chocolate-Covered Cream Peppermint Candy. E. F. Kemp. 35,110; Dec. 18.
Como Butter. For Butter. Miller & Holmes. 35,116; Dec. 18.
Countess Cake. For Dark Fruit Cake. General Baking Company. 35,101; Dec. 18.
Dr. Miles Health Shoe. For Footwear. Bleeker Shoe Co. 35,097; Dec. 18.
Frisch Process. For Bread. E. Frisch. 35,100; Dec. 18.
Grennan Cakes (Made from Tested Cook Book Recipes) Cookies Every Bite a Delight. For Fruit Cake. Grennan Bakeries, Inc. 35,104; Dec. 18.
Jumbo Twins. For Bread. Johnson's Bakery, Inc. 35,106; Dec. 18.
Katsafana's Hotel Special. For Coffee. Katsafanas Coffee Company. 35,107; Dec. 18.
Keyspray. For Insecticide. Keystone Chemical Co. 35,111; Dec. 18.
La Margé Cucumber-Almond Creme. For Cold Cream. M. Weber. 35,122; Dec. 18.
Monte Carlo Sandal. For Footwear. Bleecker Shoe Co. 35,096; Dec. 18.
Oriole. For Butter. Menasha Printing and Carton Company. 35,115; Dec. 18.
Penlo. For Cigars. Coraza Cigar Company. 35,099; Dec. 18.
Pyrro. For Home Treatment for Pyorrhea, Sore, Bleeding, Receding, Swollen, Spongy Gums, and Bad Breath. M. A. Payne, D. D. S. 35,119; Dec. 18.
Radio Brend. For Bread. Menasha Printing and Carton Company. 35,113; Dec. 18.
Rum Refill for the Rumidor. For a Smoker's Article for Flavoring and Moistening Cigars Cigarettes, and Pipe Tobacco. Rumidor Corporation. 35,121; Dec. 18.
Shredded Sweet Biscuit. For Candy. Gilliam Candy Company. 35,102; Dec. 18.
Skeet Loads. For Ammunition. Remington Arms Company. 35,120; Dec. 18.
The Globe Screen Door Check & Closer. For Doorchecks. Bright Automatic Machine Co. 35,098; Dec. 18.
The Invisible Adjustable. For Caps for Men, Boys, and Children. Greenstein & Josephson. 35,103; Dec. 18.
The Long Expected Coffee. For Coffee. P. Pascal Inc. 35,118; Dec 18.
The Mornanite Dental Creams. For Dental Creams. Mornanite Laboratories, Inc. 35,117; Dec. 18.
Tuscarawas. For Butter. Menasha Printing and Carton Company. 35,114; Dec. 18.
Western Weld Special Cement. For Special Nonfreezing Cement for Cementing Tire Patches. Western States Mfg. Co. 35,123; Dec 18.

# ALPHABETICAL LIST OF PRINTS.

Better Grocers Incorp. For Groceries. Armstrong Grocery Company. 11,381; Dec. 18.
C. E. Lewis. For Spark Plugs. Defiance Spark Plugs, Inc. 11,383; Dec. 18.
Chez Francois. For Crystallized Fruits and Candies. A. F. Jacquemoux. 11,393; Dec. 18.
Drink Pep, a Beverage. For Beverage. J. P. Devir. 11,384; Dec. 18.
For Real Buckwheat Pancakes. For Buckwheat Flour. Hecker H-O Co. Inc. 11,386; Dec. 18.
For Real Old Fashioned Buckwheat. For Buckwheat Flour. Hecker H-O Co. Inc. 11,390; Dec. 18.
Harva—Bobbed Hair Combs. For Combs. Julius Schmid, Inc. 11,395; Dec. 18.
Harva Women's Dressing Combs. For Combs. Julius Schmid, Inc. 11,396; Dec. 18.
Hearts of Selected Wheat. For Cream Farina. Hecker H-O Co. Inc. 11,389; Dec. 18.
New Presto. For New Presto Improved Cake Flour. Hecker H-O Co. Inc. 11,391; Dec. 18.
One Cent Luncheon Set. For Luncheon Sets. H. L. Scholl. 11,401; Dec. 18.
One Cent Scarf. For Dresser Scarfs. H. L. Scholl. 11,397; Dec. 18.
One Cent Vanity Set or Scarf. For Pillowcases, Scarfs, and Vanity Sets. H. L. Scholl. 11,398–400; Dec. 18.
The New Kind of Oatmeal. For New-Style H-O (Quick-Cooking Oats). Hecker H-O Co. Inc. 11,392; Dec. 18.
United Food Stores. For Groceries and Provisions. National Merchandising Service Co. 11,394; Dec. 18.
Vermont Teachers find this Ingenious Material Grips Children's Attention. For Wheat Breakfast Food. Cream of Wheat Co. 11,382; Dec. 18.
Waffles and Pancakes. For Old Homestead Pancake Flour. Hecker H-O Co. Inc. 11,387; Dec. 18.
Win a Brand New Ford Sedan. For Perfume. S. M. Freid. 11,385; Dec. 18.
You can't Buy a Cake like this. For New Presto Improved Cake Flour. Hecker H-O Co. Inc. 11,388; Dec. 18.

# ALPHABETICAL LIST OF PATENTEES

TO WHOM

## PATENTS WERE ISSUED ON THE 18TH DAY OF DECEMBER, 1928.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

Aarons, Alfred H. (See James, William B., assignor.)
Abbey, Orville E., Corning, Iowa. Automobile license-certificate holder. 1,695,941; Dec. 18.
Abbott, Henry H. (See Bascom, H. M., and Abbott.)
Abbott, Henry H., New York, N. Y., assignor to American Telephone and Telegraph Company. Telephone system. 1,695,312; Dec. 18.
Abraham, Herbert, New York, N. Y., assignor to The Rubberoid Company. Roof. Des. 77,213; Dec. 18.
Adams, Clark M., Ottawa Hills, assignor to The W. G. Nagel Electric Company, Toledo, Ohio. Electrical indicating instrument. 1,695,264; Dec. 18.
Adams Industries, Inc. (See Jacques, Raynaldo P., assignor.)
Advance-Rumely Company. (See Higgins, William H. C., jr., assignor.)
Agnew, John P. (See Thurlow, L. K., and Agnew.)
Ahern, Albert M., Santa Monica, Calif. Dishwashing device. 1,695,703; Dec. 18.
Ahlborn, Theodor, Chicago, Ill. Portable cottage. Des. 77,214; Dec. 18.
Aiken, Joseph E., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Microphone system. 1,695,875; Dec. 18.
Albright, Edward C., assignor to Indiana Lamp Corporation, Connersville, Ind. Headlamp construction. 1,695,478; Dec. 18.
Aldendorff, Charlotte, (sole heir). (See Aldendorff, Fritz.)
Aldendorff, Fritz, deceased, Berlin-Wilmersdorf, Germany; C. Aldendorff, heiress. Automatic telephone system. 1,695,267; Dec. 18.
Aldendorff, Fritz, deceased, Berlin-Wilmersdorf, Germany, assignor of one-fourth to P. Kollsch, New York, N. Y.; C. Aldendorf, sole heir. Automatic telephone system. 1,695,268; Dec. 18.
Alemite Manufacturing Corporation. (See Burton, Charles S., assignor.)
Alemite Manufacturing Corporation. (See Herb, Otto J., assignor.)
Alemite Manufacturing Corporation. (See Zerk, Oscar, assignor.)
Alexander, Grant. (See Panaile, A., and Alexander.)
Algyre, Harry D., Holdenville, Okla. Pipe coupling. 1,696,134; Dec. 18.
Allen, Benjamin H., Beaumont, Tex. Serving device. 1,695,628; Dec. 18.
Allen, Jack, Brooklyn, N. Y. Resilient wheel. 1,695,629; Dec. 18.
Allen, Stratford B., Cambridge, Mass. Reception apparatus for telephone systems. 1,696,024; Dec. 18.
Alma Manufacturing Company of Baltimore City. (See Kerngood, Allen H., assignor.)
Altpeter, Ludwig, Trier, Germany. Centrifuge. 1,695,990; Dec. 18.
American Arch Company. (See Himmelright, Raleigh J., assignor.)
American Can Company. (See Stollberg, Charles, assignor.)
American Chain Company. (See Reifsnider, John M., assignor.)
American Cystoscope Makers, Inc. (See Wappler, Reinhold H., assignor.)
American Electric Motor Company. (See Daun, Carl L., assignor.)
American Elevator and Machine Co. (See Roberston, Martin J., assignor.)
American Engineering Company. (See Harrison, Clifford E., assignor.)
American Hardware Corporation, The. (See Stone, Elmer B., assignor.)
American Sheet and Tin Plate Company. (See McArthur, Arthur R., assignor.)
American Signa Corporation. (See Norton, Don W., assignor.)
American Stay Co. (See Merrick, Frank W., assignor.)
American Telephone and Telegraph Company. (See Abbott, Henry H., assignor.)
American Telephone and Telegraph Company. (See Bascom, H. M., and Abbott, assignors.)
American Telephone and Telegraph Company. (See Gordon, W. A., Murphy, and Perrone, assignors.)
American Writing Paper Company. (See Yoerg, Leon M., assignor.)
Amitin, Alexander. (See Marshak, Isidore, assignor.)
Amrad Corporation, The. (See Woodhull, Samuel T., assignor.)
Amsler, Walter O., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Draw-table-heating unit. 1,695,265; Dec. 18.
Anderson, Ernst G. K., Evanston, Ill., assignor to Appleton Electric Company. Thermostatically-controlled heating plug. 1,696,146; Dec. 18.
Anderson, George F., assignor to Scovill Manufacturing Company, Waterbury, Conn. Lip stick. 1,695,407; Dec. 18.
Anderson, Harry G., New York, N. Y. Keyless lock. 1,695,266; Dec. 18.
Anderson, John A. (See Hobbs, W. F., and Anderson.)
Andrews, James M., Brooklyn, assignor to Robert Gair Company, New York, N. Y. Box board or caddy stock. 1,695,837; Dec. 18.
Appleman, Boyd K., Beaumont, Tex. Oil-storage tank. 1,695,358; Dec. 18.
Appleton Electric Company. (See Anderson, Ernst G. K., assignor.)
Archer, Lenah B., executrix. (See Burrows, Linus P.)
Archer, Raymond, Redmond, Oreg. Internal-combustion engine. 1,695,704; Dec. 18.
Arctic Nu-Air Corporation. (See Feinberg, Allen A., assignor.)
Arctic Nu-Air Corporation. (See Sternberg, Irving C., assignor.)
Arima, Hikosuke, Tokyo, Japan. Mechanism for automatically replenishing weft in power looms. 1,695,630; Dec. 18.
Arms, Ray W., assignor to Roberts and Schaefer Company, Chicago, Ill. Dry-separating machine. 1,695,569; Dec. 18.
Arms, Ray W., assignor to Roberts & Schaefer Company, Chicago, Ill. Dust-collecting system for dry-cleaning tables. 1,695,570; Dec. 18.
Armstrong Cork Company. (See Busch, Herman F., assignor.)
Armstrong, Howard, Humberstone, Ontario, Canada. Brake for conveyers. 1,696,072; Dec. 18.
Arndt, Hermann, Berlin, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Automatic block-signal system. 1,695,313; Dec. 18.
Art in Buttons Incorporated. (See Noyes, Henry T., assignor.)
Art in Buttons Incorporated. (See Noyes, H. T., and Stanforth, assignors.)
Artlite, Inc. (See McGunnigle, Harold A., assignor.)
Ashmun, Harry S. (See Titcomb, L. R., and Ashmun.)
Associated Attleboro Manufacturers, Inc., The. (See Wallenthin, Walfrid, assignor.)
Atherton, Alfred L., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Balancing means for hot-cathode rectifiers. 1,696,025; Dec. 18.
Atlantic Service Company. (See Laemmel, Charles A., assignor.)
Atlas Powder Company. (See Huyett, Daniel D., assignor.)
Atwater, John H., Jamestown, N. Y. Protecting lawns. 1,695,942; Dec. 18.
Atwood Vacuum Machine Company, The. (See Kenyon, William C., assignor.)
Auchter, Anton F. A., Pittsburgh, Pa. Safety device for vehicles. 1,696,073; Dec. 18.
Automatic Advertiser, Incorporated, The. (See Proctor, Barton A., assignor.)
Avery, True M. (See Gibson, J. R., and Avery.)
Babcock & Wilcox Company, The. (See Seifert, Charles H., assignor.)
Bakelite Corporation. (See Turkington, Victor H., assignor.)
Baker, Bertram F., Tannersville, N. Y. Dispensing-tube base. 1,696,147; Dec. 18.
Baker, John M., Columbus, Ohio. Electrical heater. 1,695,753; Dec. 18.
Ball & Ball Carburetor Company. (See Ball, Frederick O. and T. M., assignors.)
Ball, Frederick O. and T. M., assignors to Ball & Ball Carburetor Company, Detroit, Mich. Constant-level device. 1,695,705; Dec. 18.
Ball, Thomas M. (See Ball, Frederick O. and T. M.)
Ballard, Harrie A., Beverly, Mass., assignor, by mesne assignments, to International Shoe Company, St. Louis, Mo. Inner sole and making the same. 1,695,408; Dec. 18.
Bally, Albert C., Toledo, Ohio. Spring shackle. 1,695,943; Dec. 18.
Bane, Oscar W., Cumberland, Md. Carpenter's combination tool. 1,695,944; Dec. 18.
Banks, Herbert B., Chicago, Ill. Baby cab. 1,695,409; Dec. 18.
Bannister, William J. (See Woodruff, J. C., Bloomfield, and Bannister.)

Bannister William J., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Manufacture of esters. 1,695,449; Dec. 18.

Barany, Edmund R., Brooklyn, N. Y. Vanity case. 1,695,677; Dec. 18.

Barany, Edmund R., Brooklyn, N. Y., assignor to French Battery Company, Madison, Wis. Electrical handlamp. 1,695 876; Dec. 18.

Barber, Frank E., Brooklyn, assignor to Intertype Corporation, New York, N. Y. Casting means for typographical machines. 1,696,074; Dec. 18.

Barbour, John A., et al. (See Lyon Harry, assignor.)

Barbour, Perley E. (See Lyon, Harry, assignor.)

Barbour, Perley E., et al. (See Lyon, Harry, assignor.)

Barbour Welting Company. (See Lyon, Harry.)

Bardons and Oliver. (See Hornberger, Earl J.)

Barker, Stanley F., Chicago, Ill. Temperature-indicating mechanism. 1,695,838; Dec. 18.

Barnard, Fred C. (See Wood, F. H., and Barnard.)

Barton, Francis M., Chicago, Ill. Concrete reenforcement. 1,695,269; Dec. 18.

Barton, Louis E., and C. J. Kinzie, Niagara Falls, assignors to Titanium Pigment Company, Inc., New York, N. Y. Obtaining titanic oxide. 1,695,270; Dec. 18.

Baruth, Albert J., et al. (See McCollum, James H. K., assignor.)

Bascom, Henry M., Brooklyn, and H. H. Abbott, New York, N. Y., assignors to American Telephone and Telegraph Company. Telephone system. 1,695,314; Dec. 18.

Baseler, Wolfgang, Munich, assignor to Lorenz-Zeiss-Zugsicherungs-G. m. b. H., Berlin-Tempelhof, Germany. Train-controlling means by light rays. 1,695,410; Dec. 18.

Bath, John. (See Bath, Stanley W., assignor.)

Bath, Stanley W., Worcester, Mass., assignor, by mesne assignments, to John Bath. Motor-control mechanism for machine tools. 1,695,359; Dec. 18.

Bauer, Charles H., Milwaukee, Wis. Adjustable metal insert for concrete work. 1,695,909; Dec. 18.

Bauer, Marius A., Worcester, Mass., assignor to M. J. Whittall Associates. Actuating and supporting mechanism for the knotting tables of oriental-rug looms. 1,695,360; Dec. 18.

Baughman, George W., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,695,678; Dec. 18.

Baxter, William C., assignor to E. M. Trimble Mfg. Co. Inc., Rochester N. Y. Crib. 1,695,571; Dec. 18.

Becker, Otto, jr., Barmen, Germany. Electric safety lamp for miners. 1,695,794; Dec. 18.

Belke, William E., Chicago, Ill. Plating tank. 1,695,795; Dec. 18.

Bell Telephone Laboratories, Incorporated. (See Stokely, Ray L., assignor.)

Bemm, Frank W., Milwaukee, Wis., assignor to O. G. Stoffregen, Chicago, Ill. Lingerie clasp. 1,695,521; Dec. 18.

Benit, Henri, assignor to Compagnie Generale d'Electricité, Paris, France. Spring-belt stretcher. 1,695,945; Dec. 18.

Benjamin, Bert R., Oak Park, C. R. Raney, Chicago, and W. Webber, La Grange, assignors to International Harvester Company, Chicago, Ill. Power-drive grain binder. 1,695,522; Dec. 18.

Benn, Noah, Anderson, Ind. Oil cellar for journal boxes. 1,695,754; Dec. 18.

Bennett, Charles A., Tallulah, La., dedicated, by assignments, to the Government and the People of the United States of America. Seed-cotton-drying apparatus. 1,695,991; Dec. 18.

Bennett, Morris H., assignor to Scovill Manufacturing Company, Waterbury, Conn. Condenser. 1,695,470; Dec. 18.

Bergman, Sven R., Nahant, Mass., assignor to General Electric Company. Induction motor. 1,695,946; Dec. 18.

Bergman, Sven R., Nahant, Mass., assignor to General Electric Company. Forming induction motors. 1,695,947; Dec. 18.

Bergsten, John, Redondo Beach, assignor of one-half to N. W. Hendershot, Lomita, Calif. Combined casing-head packer and blow-out preventer. 1,695,992; Dec. 18.

Berliner, Robert, B. Stein, and W. Trautner, Elberfeld, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y. Vat dyestuff derived from 2-halogen-1.9-pyrazolanthrone. 1,695,631; Dec. 18.

Berlowitz, Max E., Belleville, N. J., assignor, by mesne assignments, to Magnetic Analysis Corporation, Long Island City, N. Y. Testing coil. 1,695,679; Dec. 18.

Bernini, John, Allentown, Pa. Warp-let-off mechanism for looms. 1,695,361; Dec. 18.

Berns, Max A., Chicago, Ill. Booklet. 1,695,315; Dec. 18.

Berry, Bert C., Calgary, Alberta, Canada, and H. S. Dickinson, Moline, Ill., assignors to Peerless Shock Loader Company, Wilmington, Del. Shock loader. 1,695,572; Dec. 18.

Bertsch, Johann A. (See Jaeger, A. O., and Bertsch.)

Bethlehem Steel Company. (See Froelich, Clarence H., assignor.)

Bettcher Stamping & Manufacturing Company, The. (See Bump, Edward D., assignor.)

Bettscher Stamping & Manufacturing Company. (See Bump, Spencer M., assignor.)

Bezzenberger, Fred K., Cleveland Heights, Ohio, assignors, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn. Closed metallic corrugated wall and making same. 1,695,948; Dec. 18.

Bierbower, Richard C., San Antonio, Tex. Automatic magnetic switch. 1,696,107; Dec. 18.

Bierman, George H. (See Kinney, L. W., and Bierman.)

Biggert, Florence C., jr., assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Continuous sheet mill and making finished sheets. 1,695,910; Dec. 18.

Bilhorn Construction Company. (See Bilhorn, Walter E., assignor.)

Bilhorn, Walter E., assignor to Bilhorn Construction Company, St. Louis, Mo. Concrete anchor. 1,695,523; Dec. 18.

Bird, Frank, Hamilton, assignor to Bird's Patents Limited, Auckland, New Zealand. Operating means for faulights and the like. 1,695,755; Dec. 18.

Bird's Patents Limited. (See Bird, Frank, assignor.)

Bishop, Joseph W., and B. C. Booth, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Wilmington, Del. Combined phonograph and radio apparatus. 1,695,911; Dec. 18.

Blacher, Benjamin, assignor to Blacher Brothers, Providence, R. I. Fastener for bag frames. 1,695,706; Dec. 18.

Blacher Brothers. (See Blacher, Benjamin, assignor.)

Blackman, Albert E., Mount Vernon, N. Y. Mail box. 1,695,524; Dec. 18.

Blesch, Charles, Newport, Ky., assignor to The Crane & Breed Manufacturing Company, Cincinnati, Ohio. Burial-casket handle. Des. 77,216; Dec. 18.

Bloomfield, Grover. (See Woodruff, J. C., Bloomfield, and Bannister.)

Blumenberg, Henry, jr., Los Angeles, Calif. Mining boron compounds. 1,696,075; Dec. 18.

Blystone Manufacturing Company. (See Goldston, David C., assignor.)

Bode, Peter J., St. Louis, Mo. Fishing tackle. 1,696,026; Dec. 18.

Boeing Airplane Company. (See Sanders, John C., assignor.)

Booe, John A. (See Seward, R. R., and Booe.)

Booth, Byron C. (See Bishop, J. W., and Booth.)

Booth, William N., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich. Wheel hub. 1,695,525; Dec. 18.

Booth, William N., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich. Brake drum. 1,695,526; Dec. 18.

Borenstein, Abraham D., Brooklyn, N. Y. Hose supporter. 1,695,573; Dec. 18.

Borklund, Peter E., Spokane, Wash. Duplex screw driver. 1,695,949; Dec. 18.

Bosch, Robert, Aktiengesellschaft. (See Schmid, A., and Stoll, assignors.)

Bots, Hermann, and A. Catineau, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Bluish sulphurized indophenol dyes and making the same. 1,695,756; Dec. 18.

Bourges, Carl, Hagen, assignor to Metallisator Berlin A. G., Berlin, Germany. Separating apparatus. 1,695,362; Dec. 18.

Bourne-Fuller Company, The. (See Chapin, Fred H., assignor.)

Bowers, William J. (See Moore, W. D., Loring, and Bowers.)

Boyce, Harrison H., Jericho, N. Y. Illuminating means for motor heat indicators. 1,695,707; Dec. 18.

Boyd, James K., Wilkinsburg, and F. F. Slick, North Braddock, Pa. Rail joint. 1,696,108; Dec. 18.

Brace, Porter H., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Temperature-responsive device. 1,695,877; Dec. 18.

Braun, Nicholas, St. Louis, Mo. Outlet hood. 1,695,527; Dec. 18.

Bridgeport Brass Company. (See Oakley, Erastus G., assignor.)

Bridgeport Hardware Manufacturing Corporation, The. (See Hobbs, W. F., and Anderson, assignors.)

Briggs & Stratton Corporation. (See Jacobi, Edward N., assignor.)

Brown, Arthur L., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Treating fibrous material. 1,695,912; Dec. 18.

Brown & Bigelow. (See Kristofek, F. J., and Hammerquist, assignors.)

Brown Instrument Company. (See Harrison, Thomas R., assignor.)

Brown, John W., Mfg. Co., The. (See Donley, Harold B., assignor.)

Brownlee, William K., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Glass furnace. 1,695,528; Dec. 18.

Brownridge, James B., Toronto, Ontario, Canada. Anti-rail-creeping device. 1,695,993; Dec. 18.

Brownyer, Nelson R., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Car wheel. 1,695,529; Dec. 18.

Bruckner, Charles C. (See McKeown, S. C., and Bruckner.)

Bruder, August J., Holly, Mich. Toilet seat. 1,695,530; Dec. 18.

Bruni, Pasquale, Fort Lee, N. J. Combination implement. 1,696,076; Dec. 18.

Brunswick-Balke-Collender Company, The. (See Bishop, J. W., and Booth, assignors.)

Bryant Electric Company, The. (See Forstrom, Edward E., assignor.)

Bryant, Frank H., Mill Valley, Calif. Tire shoe. 1,695,450; Dec. 18.

Buchwalter, Marguerite A., New York, N. Y. Candlestick or similar article. Des. 77,217; Dec. 18.

Buckham, George T. (See Dawson, A. T., and Buckham.)

Budd, Edward G., assignor to Budd Wheel Company, Philadelphia, Pa. Rolling wheel rims. 1,595,531; Dec. 18.

Budd Wheel Company. (See Budd, Edward G., assignor.)

Bugatti, Ettore, Molsheim, France. Contact device for magnetos. 1,695,708; Dec. 18.

Bugbee & Niles Co. (See King, Rufus, assignor.)

Bullard, Edward P., jr., Stratford, assignor to The Bullard Machine Tool Company, Bridgeport, Conn. Automatic multiple-spindle lathe. 1,696,027; Dec. 18.

Bullard Machine Tool Company, The. (See Bullard, Edward P., jr., assignor.)

Bullis, Carleton H., Cleveland, Ohio. Musical instrument. 1,695,574; Dec. 18.

Bump, Edward D., Lakewood, assignor to The Bettcher Stamping & Manufacturing Company, Cleveland, Ohio. Chair. 1,696,153; Dec. 18.

Bump, Spencer M., Lakewood, assignor, to The Bettcher Stamping & Manufacturing Company, Cleveland, Ohio. Chair-seat mounting. 1,696,154; Dec. 18.

Buoy, Chester D., assignor to G. H. Williams Company, Erie, Pa. Drag-line excavator. 1,695,480; Dec. 18.

Burch, Donald D., Earlsboro, Okla. Oil-well pump. 1,696,135; Dec. 18.

Burke, Nora T., Stoneham, Mass. Fountain pen. 1,695,913; Dec. 18.

Burke, Robert J., assignor to Lincoln Scale Corporation, Pittsburgh, Pa. Check link for scales. 1,695,316; Dec. 18.

Burlington Separator Co., The. (See Wheeler, George E., assignor.)

Burns, Gordon E. (See Hall, E. A., and Burns.)

Burrows, Lenah. (See Burrows, Linus P.)

Burrows, Linus P., deceased, Erie, Pa.; L. B. Archer, executrix, now, by change of name, Lenah Burrows, Navarre, Ohio. Producing gas. 1,695,914; Dec. 18.

Burt, F. N., Company. (See Dreux, Alexander H., assignor.)

Burton, Charles S., Oak Park, assignor, by mesne assignments, to Alemite Manufacturing Corporation, Chicago, Ill. Oil gun. Re17,165; Dec. 18.

Busch, Charles H., assignor to Simmons Company, Kenosha, Wis. Metal furniture. 1,695,411; Dec. 18.

Busch, Herman F., Millvale, assignor to Armstrong Cork Company, Pittsburgh, Pa. Cork facing for rolls. 1,695,317 Dec. 18.

Buvinger, George A., and C. Warner, assignors to Delco-Light Company, Dayton, Ohio. Pumping apparatus. 1,695,318; Dec. 18.

Byers Machine Company, The. (See Shaffer, Layton S., assignor.)

C. G. Spring & Bumper Company, The. (See Jandus, H. S., and Rasmussen, assignors.)

C. G. Spring & Bumper Company, The. (See Jandus, H. S., and Van Husen, assignors.)

Cady, Sherman W., Richmond, Ind., assignor to International Harvester Company. Chaffer for thrashers. 1,695,532; Dec. 18.

Caldwell, Edwin, New York, N. Y. Pipe holder. 1,695,533; Dec. 18.

Callsen, Albert, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company. Induction meter. 1,695,878; Dec. 18.

Cambridge Rubber Company. (See Westling, Herman, assignor.)

Camp, Percy B., Maywood, Ill., assignor to Universal Draft Gear Attachment Co. Dynamometer. 1,696,148; Dec. 18.

Camp, Troy E., Stephenson, Miss. Cant support and guide. 1,695,757; Dec. 18.

Campbell, Charles C., Washington, D. C. Spark plug. 1,695,632; Dec. 18.

Campbell, David W., Minneapolis, Minn. Door-mounting structure. 1,696,175; Dec. 18.

Campbell, David W., Minneapolis, Minn. Door-operating mechanism. 1,696,176; Dec. 18.

Campbell, Earl F. B., assignor of one-half to E. J. Francis, New Kensington, Pa. Dental mirror. 1,695,451; Dec. 18.

Cantini S, Pio, Bogota, Colombia. Automatically-dirigible headlight for vehicles. 1,695,758; Dec. 18.

Capital Caps Limited. (See Levinsky, Jacob, assignor.)

Caplinger, John D., Newark, N. J., assignor to C. A. Kellogg, New York, N. Y. Web-printing machine. 1,695,271; Dec. 18.

Caps, Arthur W., Kansas City, Mo., assignor to Photostat Corporation, Providence, R. I. Photographic-copying machine. 1,695,481; Dec. 18.

Card, Frederic M., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing-machine-needle-controlling mechanism. 1,695,680; Dec. 18.

Carlsson, Frans O. (See Öhlin, E. A., and Carlsson.)

Carnes, Almus T., Kansas City, Mo. Hose nozzle. 1,695,452; Dec. 18.

Caron, Arthur J., Oak Park, assignor to Sears, Roebuck and Co., Chicago, Ill. Shingled roof. Des. 77,218; Dec. 18.

Carpenter, Cranston H., Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company. Furnace. 1,695,950; Dec. 18.

Carpenter, James C., jr. (See Major, W. W., and Carpenter.)

Carpenter, Teunauski Z., Providence, R. I. Gauge. 1,695,453; Dec. 18.

Carrier Engineering Corporation. (See Carrier, Willis H., assignor.)

Carrier, Willis H., Essex Fells, assignor to Carrier Engineering Corporation, Newark, N. J. Stuffing box or sealing means for compressors and the like. 1,695,320; Dec. 18.

Carroll, Louis W., Riverside, assignor of one-half to G. Muffly, Chicago, Ill. Steam-heating system. 1,696,028; Dec. 18.

Carter, Edward B., Boston, Mass. Stringing machine. 1,695,796; Dec. 18.

Carter, George R., Company, The. (See Creamer, Edgar R., assignor.)

Carter, William C., Flint, Mich. Pump diaphragm. 1,695,534; Dec. 18.

Carter, William O., Flint, Mich. Liquid-fuel-pumping apparatus. 1,695,535; Dec. 18.

Caruthers, Eugene W., Secane, Pa. Rail joint. 1,695,839; Dec. 18.

Case, Lynn B., assignor to John Waldron Corporation, New Brunswick, N. J. Coating machine. 1,695,319; Dec. 18.

Casella, Secondo L., New York, assignor to Yale Electric Corporation, Brooklyn, N. Y. Bobbin trimming and cleaning machine. 1,695,681; Dec. 18.

Catanzarite, Frank, Danville, Ind. Cutter-guard construction. 1,695,994; Dec. 18.

Catineau, André. (See Bots, H., and Catineau.)

Causey, Guy M., Salem, Oreg., and M. E. Miller, Washington, D. C. Pipe cutter. 1,695,363; Dec. 18.

Cavicchi, Ernest, Arlington, Mass. Button. 1,695,482; Dec. 18.

Cederlund, Albert, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Side-slipping weft detector for looms. 1,695,365; Dec. 18.

Cederlund, Albert, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft detector in loom transferrer. 1,695,366; Dec. 18.

Cee-Bee Machine Corporation. (See Cohn, Max, assignor.)

Century Rubber Works. (See Venn, Henry L., assignor.)

Chadeloid Chemical Company. (See Ellis, Carleton, assignor.)

Chamberlin Metal Weather Strip Company. (See Glaser, Joseph P., assignor.)

Chandler, Harvey V., Sulphur Springs, Tex. Article carrier. 1,696,029; Dec. 18.

Chapin, Fred H., Cleveland Heights, assignor to The Bourne-Fuller Company, Cleveland, Ohio. Shrink-head casing. 1,695,797; Dec. 18.

Chase, Elroy A., Northfield, Vt. Stone-sawing machine. 1,695,364; Dec. 18.

Chauveau, Louis L., Paris, France. Call selector. 1,695,840; Dec. 18.

Chicago-Cleveland Car Roofing Company. (See Wright, William, assignor.)

Chicago Forging & Manufacturing Company. (See Gilmore, Charles B., assignor.)

Chicago Railway Equipment Company. (See De Long, Frederic T., assignor.)

Christian, Charles H., and C. F. Walker, Cleveland, Ohio. Bin-gate arrangement. 1,695,272; Dec. 18.

Ciner, Emanuel, New York, N. Y. Ring. Des. 77,219; Dec. 18.

Clark, Alfred T., H. A. Leonhauser, and J. R. Jester, Baltimore, Md. Junction-box mounting. 1,695,633; Dec. 18.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company. Thermostatic device. 1,695,879; Dec. 18.

Clark, J. R., Company. (See Kalgren, John E., assignor.)

Clark, William C. (See Pugh, J. P., and Clark.)

Clench, William A., Vancouver, British Columbia, Canada. Manual rim lock. 1,695,798; Dec. 18.

Cleveland Crane & Engineering Company, The. (See Wehr, William G., assignor.)

Cleveland Trust Company, The. (See Diamond, James E., assignor.)

Clifford, Patrick J., Falls, Pa., assignor to Train Control Corporation of America, New York, N. Y. Train-control apparatus. 1,695,880; Dec. 18.

Clum Manufacturing Co. (See Winning, Robert K., assignor.)

Clyde Iron Works. (See McGiffert, John R., assignor.)

Coburn, Azro A., Holyoke, Mass. Golf tee. 1,696,136; Dec. 18.

Coffman, Charles M., Gallipolis, Ohio. Auto jack. 1,695,881; Dec. 18.

Cohen, Leon, St. Louis, Mo. Sectional page. 1,695,575; Dec. 18.

Cohn, Max, Brooklyn, N. Y., assignor to Cee-Bee Machine Corporation. Machine for making hat linings. 1,695,273; Dec. 18.

Colborne Manufacturing Company. (See Smith, Dennis W., assignor.)

Colby, Ora A., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company. Electric furnace. 1,695,882; Dec. 18.

Colby, Ora A., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company. Rotary-hearth furnace. 1,695,883; Dec. 18.

Cole, William A., Belding, Mich. Machine for hanging wall paper. 1,695,915; Dec. 18.

Collins, George B., Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y. Metal-testing apparatus. 1,695,367; Dec. 18.

Collis, O. D. (See Grant, Clair R., assignor.)

Colson, Victor, Brussels, Belgium. Door or the like latching device. 1,696,137; Dec. 18.

Combustion Engineering Corporation. (See Nygaard, Oscar O., assignor.)

Commercial Solvents Corporation. (See Bannister, William J., assignor.)

Commercial Solvents Corporation. (See Woodruff, J. C., Bloomfield, and Bannister, assignors.)

Compagnie Generale d'Electricité. (See Bénit, Henri, assignor.)

Comstock, Gregory J., Pittsburgh, assignor to Firth-Sterling Steel Company, McKeesport, Pa. Alloy steel. 1,695,916; Dec. 18.

Conant, David J., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Collector ring. 1,695,884; Dec. 18.

Cone, Bennie M., et al. (See Rueppel, W., and Cone, assignors.)

Cone, Gifford A., et al. (See Rueppel, W., and Cone, assignors.)

Cone, Loris. (See Rueppel, W., and Cone.)

Conner, Charles E., Auburn, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J. Work-holding device. 1,695,321; Dec. 18.

Conrad, Frank, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electrical measuring instrument. 1,695,917; Dec. 18.

Conrader, Rudolph, Erie, Pa. Controlling mechanism for compressors. 1,695,368; Dec. 18.

Conradson, Prentice, Evansville, Wis., assignor, by mesne assignments, to The Heald Machine Company, Worcester, Mass. Grinding machine. 1,695,759; Dec. 18.

Conradt, William F., Davenport, Iowa. Percolator top. 1,695,918; Dec. 18.

Corcoran, Edwin, Portland, Oreg. Stovepipe lock. 1,695,634; Dec. 18.

Cordley, Henry G., New York, N. Y. Water cooler. Des. 77,220; Dec. 18.

Coryell, William C., Youngstown, Ohio. Screw-down mechanism for rolling mills. 1,695,274; Dec. 18.

Cotterill, Robert L., Philadelphia, Pa. Dishwasher. 1,695,412; Dec. 18.

Coulston, Earl V., Shaker Heights, Ohio. Cooking vessel. 1,695,995; Dec. 18.

Coyne, Edward J., Brooklyn, N. Y. Door spring. 1,695,454; Dec. 18.

Crane & Breed Manufacturing Company, The. (See Blesch, Charles, assignor.)

Creamer, Edgar R., assignor to The George R. Carter Company, Connersville, Ind. Window molding for automobiles. 1,695,682; Dec. 18.

Crichton, Leslie N., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Protective system. 1,695,885; Dec. 18.

Crockett, William P., Chicago, Ill. Electric-light fixture. 1,695,413; Dec. 18.

Crompton & Knowles Loom Works. (See Cederlund, Albert, assignor.)

Crompton & Knowles Loom Works. (See Hollingworth, Edward, assignor.)

Crompton & Knowles Loom Works. (See Jacob, Elmer, assignor.)

Crompton & Knowles Loom Works. (See Jennings, Victor H., assignor.)

Crompton & Knowles Loom Works. (See Payne, Oscar V., assignor.)

Crompton & Knowles Loom Works. (See Regan, John, assignor.)

Crompton & Knowles Loom Works. (See Robertson, William W., assignor.)

Crompton & Knowles Loom Works. (See Turner, Richard G., assignor.)

Crompton & Knowles Loom Works. (See Unwin, Kenneth J., assignor.)

Crompton & Knowles Loom Works. (See Wakefield, Walter H., assignor.)

Cross, Walter M., Kansas City, Mo., assignor, by mesne assignments, to Gasoline Products Company, Inc., Wilmington, Del. Treating petroleum oils. 1,696,030; Dec. 18.

Crowley, Joseph P., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Valve. 1,695,536; Dec. 18.

Culp, John W., Johnstown, Pa. Mechanical game toy. 1,695,683; Dec. 18.

Cunningham, Philip J., New York, N. Y. Power transmission. 1,695,951; Dec. 18.

Curcuruto, Philip. (See Orszag, L., and Curcuruto.)

Curin, Joseph, Chicago, Ill. Face plate. Des. 77,221; Dec. 18.

Dahlgren, Bror E., Chicago, Ill. Bookrest. Des. 77,224; Dec. 18.

Danly Machine Specialties, Inc. (See Danly, Philo H., assignor.)

Danly, Philo H., assignor to Danly Machine Specialties, Inc., Chicago, Ill. Drawing template for die sets. 1,696,140; Dec. 18.

Dann, Walter M., and L. H. Hill, Sharon, and E. F. Sipher, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company. Tap-changer system. 1,695,886; Dec. 18.

Danz, Emil, New York, N. Y. Flowerpot holder. Des. 77,225; Dec. 18.

Daun, Carl L., assignor, by mesne assignments, to American Electric Motor Company, Milwaukee, Wis. Producing integral bar windings in the rotors of electric motors. 1,695,799; Dec. 18.

Davis, Anthony E., Philadelphia, Pa. Tree holder. 1,695,275; Dec. 18.

Davis, Charles T., assignor to Davis & Geck, Inc., Brooklyn, N. Y. Surgical needle. 1,695,887; Dec. 18.

Davis & Furber Machine Company. (See Howes, Irving C., assignor.)

Davis & Geck, Inc. (See Davis, Charles T., assignor.)

Davis, Harry A., assignor to Draper Corporation, Hopedale, Mass. Cloth-cutting attachment for looms. 1,696,155; Dec. 18.

Davis, Kenneth, St. Benedict, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del. Mechanism and process for separating intermixed divided materials. 1,695,369; Dec. 18.

Davis, Robert, and I. Tapman, Brooklyn, N. Y. Shoe shank. 1,695,996; Dec. 18.

Davis, Robert L. (See Little, D. G., and Davis.)

Dawson, Arthur T., and G. T. Buckham, Westminster, London, England, assignors to United States Ordnance Company, Washington, D. C. Ordnance breech mechanism. 1,695,728; Dec. 18.

Dawson, Arthur T., and G. T. Buckham, assignors to Vickers Limited, Westminster, London, England. Breech-loading ordnance. 1,695,841; Dec. 18.

Dawson, Arthur T., G. E. Watt, and A. L. Perham, assignors to Vickers Limited, Westminster, London, England. Means for use in the laying of ordnance. 1,695,483; Dec. 18.

Day, Harold K. (See Day, John W. and H. K.)

Day, J. H., Company, The. (See Kirchhoff, William G., assignor.)

Day, J. H., Company, The. (See Moores, Joel, assignor.)

Day, John W. and H. K., Pocatello, Idaho. Combined water bag and food cooler. 1,696,138; Dec. 18.

Day, William H., East Haven, Conn., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y. Index or file. 1,695,322; Dec. 18.

Dayton Steel Racquet Company, The. (See Larned, William A., assignor.)

Dean, Horace, assignor of one-half to T. Lloyd, Laurier, Manitoba, Canada. Hook. 1,696,077; Dec. 18.

De Forest, Lee, New York, N. Y., assignor to De Forest Phonofilm Corporation. Talking-moving-picture machine. 1,695,414; Dec. 18.

De Forest, Lee, assignor to De Forest Phonofilm Corporation, New York, N. Y. Talking-moving-picture record. 1,695,415; Dec. 18.

De Forest Phonofilm Corporation. (See de Forest, Lee, assignor.)

De Forest Radio Telephone & Telegraph Co. (See Holborn, Frederick, assignor.)

De La Mare, Thomas, Salt Lake City, Utah. Repairing pipes. Re17,166; Dec. 18.

Delco-Light Company. (See Buvinger, G. A., and Warner, assignors.)

Delco-Light Company. (See Starr, Frank F., assignor.)

De-Lite-Us Spring Clasp Corporation, The. (See Fridolph, John S., assignor.)

De Long, Frederic T., assignor to Chicago Railway Equipment Company, Chicago, Ill. Brake-beam structure. 1,695,416; Dec. 18.

Delpech, Jacques, Rennes, France. Apparatus for the manufacture of artificial filaments. 1,695,455; Dec. 18.

Dennis, John E., London, Ontario, Canada. Metal window construction. 1,695,576; Dec. 18.

De Pascal, Vincent, Marseille, France. Ring for a shoe heel or similar article. Des. 77,226; Dec. 18.

De Ruvo, Joseph, New York, N. Y. Heating apparatus. 1,696,078; Dec. 18.

Design Laboratories, Incorporated. (See Wilson, Edwin B., assignor.)

Des Moines Silo & Manufacturing Company. (See Lydon, Patrick C., assignor.)

Dever, Bernard J., Oakland, Calif. Self-raising seat. 1,695,800; Dec. 18.

Dewhurst, William, Methuen, Mass. Electric stopping device for stretching machines. 1,696,109; Dec. 18.

Diamond, James E., Mount Vernon, N. Y., assignor to The Cleveland Trust Company, Cleveland, Ohio. Piston. 1,695,417; Dec. 18.

Dibble, Claude M., assignor to Moore Brothers Company, Joliet, Ill. Element support for electric stoves. 1,695,801; Dec. 18.

Dickinson, Harry S. (See Berry, B. C., and Dickinson.)

Diescher, Samuel E., assignor to S. Diescher & Sons, Pittsburgh, Pa. Piercing mill. 1,695,323; Dec. 18.

Diescher, S., & Sons. (See Diescher, Samuel E., assignor.)

Dietzgen, Eugene, Company. (See Langsner, Adolph, assignor.)

Direct-Control Valve Company. (See Lawler, James J., assignor.)

Döbele, Otto, Constance, Germany. Dental plate with sucker. 1,696,110; Dec. 18.

Dodge, William G., Newburyport, assignor to United Shank & Findings Company, Boston, Mass. Turn shoe and shank stiffener therefor. 1,695,577; Dec. 18.

Dodge, William G., Newburyport, assignor to United Shank & Findings Company, Boston, Mass. Manufactuer of turn shoes. 1,695,578; Dec. 18.

Donley, Harold B., assignor to The John W. Brown Mfg. Co., Columbus, Ohio. Vehicle head lamp. 1,696,111; Dec. 18.

Doolin, Charles B., San Antonio, Tex. Measuring and dispensing receptacle. 1,696,079; Dec. 18.

Dorrance, David W., Minneapolis, Minn. Artificial hand. 1,695,952; Dec. 18.

Dougan, Leland S. (See Singelton, John A., assignor.)

Dougherty, George, assignor to Economy Glass Company, Morgantown, W. Va. Goblet. Des. 77,227; Dec. 18.

Dowdey, Landon A., Washington, D. C. Rotary internal-combustion engine. 1,695,888; Dec. 18.

Dräger, Alexander B. (See Schröder, Hans W. C., assignor.)

Dräger, Alexander B., deceased, Lubeck, Germany; E. Dräger, née Stange, executrix. Self-contained lung-power breathing device. 1,695,537; Dec. 18.

Dräger, Elfriede, née Stange, executrix. (See Dräger, Alexander B.)

Dräger, Elfriede, née Stange, executrix. (See Schröder, Hans W. C.)

Draggie, John, Pittsburgh, Pa. Toothpick holder. 1,696,080; Dec. 18.

Drake, John L., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Treating glass. 1,695,538; Dec. 18.

Draper Corporation. (See Davis, Harry A., assignor.)

Draper Corporation. (See Kearsley, Richard A., assignor.)

Draughon, William H., Detroit, Mich. Calendar. 1,695,539; Dec. 18.

Drenning, Percy R., assignor to T. H. Symington & Son, Inc., Baltimore, Md. Bolster with absorption mechanism. 1,695,456; Dec. 18.

Dreux, Alexander H., Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Toronto, Ontario, Canada. Container. 1,695,802; Dec. 18.

Dreyer, John F., jr., Brooklyn, N. Y., assignor to Hazeltine Corporation. Wave signaling system. 1,695,842; Dec. 18.

Duerr, Philip F., South Bend, Nebr. Corn husker. 1,695,324; Dec. 18.

Duffield, Thomas L., Orient, Wash. Road scraper. 1,695,635; Dec. 18.

Duncan Electric Manufacturing Company. (See Harris, Jesse, assignor.)

Duncan, Merritt E., Atlanta, Ga. Automatic pen-setting attachment. 1,695,457; Dec. 18.

Dunlop Tire and Rubber Corporation of America. (See Willshaw, Harry, assignor.)

Du Pont Viscoloid Company. (See Stacey, Charles E., assignor.)

Durham, Joseph, Rozelle, near Sydney, New South Wales, Australia. Resilient mounting for the stylus holder of talking machines. 1,695,418; Dec. 18.

Duro Company, The. (See Eisenhauer, Charles P., assignor.)

Duryea, Paul G., Trenton, N. J., assignor to Woodward-Wanger Company, Philadelphia, Pa. Bathroom fixture. Des. 77,228; Dec. 18.

Dusseau, Maurice G., Allston, Mass. Wheel assembly. 1,695,579; Dec. 18.

Dwyer, James P. (See McCormick, F. H., and Dwyer.)

Eames, George M., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Supporting structure for power tables. 1,695,419; Dec. 18.

Eaton Axle & Spring Company, The. (See Veale, George W., assignor.)

Eaton, Leslie E., assignor of one-half to C. E. Griffin, Kansas City, Mo. Swaging machine for artificial dentures. 1,695,684; Dec. 18.

Eckert, Anton, Pittsburgh, Pa. Potato peeler. 1,695,420; Dec. 18.

Economy Glass Company. (See Dougherty, George, assignor.)

Eder, John, Philadelphia, Pa. Automatic ejector for bottle-labeling machines. 1,695,325; Dec. 18.

Edmundson, Ruben E., St. Joseph, Mo. Combined coat and trousers hanger. 1,695,580; Dec. 18.

Edquist, Einar, Chicago, Ill. Vacuum bottle. 1,695,540; Dec. 18.

Eichner, Robert F., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Belt buckle. Des. 77,222; Dec. 18.

Elmer, August, New York, N. Y. Electric pressure generator. 1,695,803; Dec. 18.

Eisenhauer, Charles P., Dayton, Ohio. Water-softener valve. 1,695,541; Dec. 18.

Eisenhauer, Charles P., assignor to The Duro Company, Dayton, Ohio. Water-softening apparatus. 1,695,542; Dec. 18.

Eisenhauer, Charles P., assignor to The Duro Company, Dayton, Ohio. Pump. 1,695,543; Dec. 18.

Electric Thermostatic Control Company, trustees of the. (See Goodhue, Julian G., assignor.)

Electropure Corporation. (See Templeton, John O., assignor.)

Elliott, Harry D. (See Glass, P. R., and Elliott.)

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y. Chemical product and making the same. 1,695,636; Dec. 18.

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company. Cement. 1,695,637; Dec. 18.

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y. Coating composition and making same. 1,695,638; Dec. 18.

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y. Liquid composition containing chlorinated rubber. 1,695,639; Dec. 18.

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y. Chlorinated rubber composition containing linseed oil. 1,695,640; Dec. 18.

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company. Stabilized chlorinated rubber. 1,695,641; Dec. 18.

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company. Varnish. 1,695,642; Dec. 18.

Ellis, Carleton, Montclair, N. J., assignor to Chadeloid Chemical Company. Artificial fiber and making same. 1,695,643; Dec. 18.

Ellis-Foster Company. (See Weber, Harry M., assignor.)

Ellis, Horace R., Meadville, Pa. Side extension for window screens. 1,696,081; Dec. 18.

Ellis, John H., Vancouver, British Columbia, Canada. Buck for clothes-pressing machines. 1,695,760; Dec. 18.

Engravograph Corporation, The. (See McKeown, S. C., and Bruckner, assignors.)

Ern, August F., Scarsdale, assignor to K. C. Seelbach Company, New York, N. Y. Pair of scissors. Des. 77,223; Dec. 18.

Essex Rubber Company. (See Hoopes, Penrose R., assignor.)

Evans, Earl R., Great Barrington, Mass. System of distribution. 1,696,177; Dec. 18.

Evers, William H., and J. W. Shimek, Lakewood, assignors to The R. C. Products Company, Cleveland, Ohio. Retaining-wall structure. 1,695,997; Dec. 18.

Faber, Merle F., Daly City, and J. Kneber, jr., Colma, Calif. Frame for photographic films. 1,695,644; Dec. 18.

Fain, Walter C., Norfolk, Va. Concealable furnishings. 1,695,870; Dec. 18.

Faris, Harold P., Chicago, assignor to Kroehler Manufacturing Company, Naperville, Ill. Upholstering. 1,695,581; Dec. 18.

Farley, John W., Cleveland, Ohio. Plate thimble for pipes. 1,695,645; Dec. 18.

Fayer, Charles, Flushing, N. Y., assignor to Wappler Electric Company, Inc. Self-starting synchronous induction motor. 1,695,484; Dec. 18.

Fayer, Charles, Flushing, N. Y., assignor to Wappler Electric Company, Inc. Electrosurgical apparatus. 1,695,485; Dec. 18.

Federal Phosphorus Company. (See Noble, Albert, assignor.)

Feild, Alexander L., Jackson Heights, N. Y., assignor to The Linde Air Products Company. Preheating the charge in shaft furnaces. 1,695,953; Dec. 18.

Feinberg, Allen A., Minneapolis, Minn., assignor to Arctic Nu-Air Corporation, Chicago, Ill. Ventilating apparatus. 1,695,804; Dec. 18.

Felde, Andrew L., Barnesville, Minn. Screen. 1,695,371; Dec. 18.

Fenninger, Carl W. (See Ives, Frederic E., assignor.)

Fenton, Paul E., Thomaston, assignor to Scovill Manufacturing Company, Waterbury, Conn. Floating-trim stud. 1,696,156; Dec. 18.

Ferris, Walter, assignor to The Oilgear Company, Milwaukee, Wis. Pump or motor. 1,696,139; Dec. 18.

Ferris, Walter, assignor to The Oilgear Company, Milwaukee, Wis. Hydraulic blank holder. 1,696,140; Dec. 18.

Ferris, Walter, assignor to The Oilgear Company, Milwaukee, Wis. Hydraulic blank holder. 1,696,141; Dec. 18.

Field, Frank H., Jamestown, N. Y. Ice rug. 1,695,709; Dec. 18.

Finnen, William J., Sharon, Pa., assignor to Westinghouse Electric & Manufacturing Company. Transformer. 1,695,889; Dec. 18.

Firth-Sterling Steel Company. (See Comstock, Gregory J., assignor.)

Fishel, Robert G., Chicago, Ill. Combined display and vending cabinet. Des. 77,229; Dec. 18.

Flarsheim, Edwin S., assignor to The Liebel-Flarsheim Company, Cincinnati, Ohio. Spark gap. 1,696,157; Dec. 18.

Flemming, Walter, Ludwigshafen, and H. Klein, Mannheim, assignors to Silesia Verein Chemischer Fabriken Ida- und Marienhuette, Sarrau, Germany. Separation of mono- and dialkyl derivatives of aromatic amines. 1,695,372; Dec. 18.

Flicker, Annie, administratrix. (See Flicker, Louis.)

Flicker, Louis, deceased, Los Angeles, Calif.; A. Flicker, administratrix. Hat-renovating machine. 1,695,646; Dec. 18.

Flohr, Henry C., New York, and L. Ornstein, Brooklyn, N. Y. Surfacing element and manufacturing the same. 1,695,276; Dec. 18.

Folberth, Frederick G., and W. M., Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y. Windshield cleaner. 1,695,326; Dec. 18.
Folberth, William M. (See Folberth, Frederick G. and W. M.)
Foley, Alma B., et al. (See Keck, Max, assignor.)
Foley, James J., et al. (See Keck, Max, assignor.)
Follansbee Brothers Company. (See Kinter, C. W., and Manion, assignors.)
Forshee, Frank F. (See Sutherland, E. E., and Forshee.)
Forstner Chain Corporation. (See Kollmar, Reinhard, assignor.)
Forstrom, Edward E., Stratford, assignor to The Bryant Electric Company, Bridgeport, Conn. Electric relay. 1,696,082; Dec. 18.
Forsyth, Benjamin F., Chicago, Ill. Conveyer. 1,695,277; Dec. 18.
Fortescue, Charles L., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Measuring instrument. 1,695,890; Dec. 18.
Fortescue, Charles L., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system. 1,695,891; Dec. 18.
Fortescue, Charles L., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Transmission-line device. 1,695,892; Dec. 18.
Foster Machine Company. (See McKeen, John O., assignor.)
Francis, Evan J. (See Campbell, Earl F. B., assignor.)
Franklin Railway Supply Company. (See Vincent, Harry S., assignor.)
Fraser, Andrew, Croyden, England. Colloid mill. 1,696,083; Dec. 18.
Frayer, Lee A., Columbus, Ohio. Clutch mechanism for bar machines. 1,695,954; Dec. 18.
Frayer, Lee A., Columbus, Ohio. Blanking metallic articles. 1,695,955; Dec. 18.
Freeman, Michael N., Racine, Wis. Heating apparatus. 1,696,031; Dec. 18.
Freese, Frank G., Aldan, and R. C. Paxson, Llanerch, Pa. Rail anchor. 1,695,998; Dec. 18.
French Battery Company. (See Barany, Edmund R., assignor.)
French Oil Mill Machinery Co., The. (See Upton, Charles B., assignor.)
Frick, Chester A., assignor to Glascock Brothers Mfg. Company, Muncie, Ind. Bottle-dispensing refrigerator. 1,695,956; Dec. 18.
Fridolph, John S., assignor to The De-Lite-Us Spring Clasp Corporation, New York, N. Y. Pin wheel. Des. 77,230; Dec. 18.
Froelich, Clarence H., assignor to Bethlehem Steel Company, Bethlehem, Pa. Gun carriage. 1,695,685; Dec. 18.
Full View Windshield Wiper, Inc. (See Kuskin, David, assignor.)
Fulton Syphon Company, The. (See Bezzenberger, Fred K., assignor.)
Furler, Emil, Zurich, Switzerland. File, rasp, or like tool. 1,695,647; Dec. 18.
G. & G. Atlas Systems. (See Stoetzel, Joseph J., assignor.)
Gage, Walter C., Holyoke, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Pump piston. 1,695,999; Dec. 18.
Gail, John F., Evanston, Ill., assignor to Simmons Company, New York, N. Y. Machine for slitting and folding fabric. 1,695,421; Dec. 18.
Gair, Robert, Company. (See Andrews, James M., assignor.)
Gallant, Hubert J. (See Pashigian, B., and Gallant.)
Garbell, Max, assignor, to Victor Adding Machine Company, Chicago, Ill. Card holder. 1,695,278; Dec. 18.
Gardner, Florinda, assignor of one-half to M. N. Mason, Tampa, Fla. Hanger. 1,696,084; Dec. 18.
Gardner, John E. (See White, T. U., and Gardner.)
Gardner Motor Company. (See Tilton, Webster, assignor.)
Gasoline Products Company. (See Cross, Walter M., assignor.)
Gatti, Joseph, assignor to Gatti Service Incorporated, New York, N. Y. Wadding and bat. 1,695,805; Dec. 18.
Gatti Service Incorporated. (See Gatti, Joseph, assignor.)
Gehe & Co. A.-G. (See Hesse, Erich, assignor.)
General Electric Company. (See Bergman, Sven R., assignor.)
General Electric Company. (See Townsend, George R., assignor.)
General Railway Signal Company. (See Leake, Richard C., assignor.)
George, James H., Orange, N. J. Metallic barrel. 1,696,112; Dec. 18.
Georgius, Henry C., Manning, Iowa. Runner attachment for farm implements. 1,695,710; Dec. 18.
Germain, Philip, jr., New York, N. Y. Display stand. 1,695,893; Dec. 18.
Gernsback, Hugo, New York, N. Y. Switch. 1,695,957; Dec. 18.
Getchell, Benjamin E., assignor to Trumbull Electric Manufacturing Company, Plainville, Conn. Electric switch. 1,695,958; Dec. 18.
Gibbs, Elmer W., assignor to The Gibbs Manufacturing Company, Canton, Ohio. Top. 1,695,486; Dec. 18.
Gibbs Manufacturing Company, The. (See Gibbs, Elmer W., assignor.)
Gibson, James R., Brooklyn, and T. M. Avery, Glens Falls, assignors to Union Bag and Paper Corporation, New York( N. Y. Shopping bag. 1,696,085; Dec. 18.
Gies, Frank G., assignor of one-half to L. Leszczynski, Detroit, Mich. Washing machine. 1,695,279; Dec. 18.
Giesecke, Hermann. (See Giesecke, Julius and H.)
Giesecke, Julius and H., Leipsig-Leutzsch, Germany. Apparatus for feeding paper sheets. 1,695,648; Dec. 18.
Giesecke, Julius and H., Leipzig-Leutzsch, Germany. Apparatus for feeding paper sheets. 1,695,649; Dec. 18.
Gilbert, James G. (See Grant, Patrick M., assignor.)
Gilchrist, David H. (See Musil, J., and Gilchrist.)
Gilkison, Edward R., Terre Haute, Ind. Auto camp trailer. 1,696,113; Dec. 18.
Gilmore, Charles B., assignor to Chicago Forging & Manufacturing Company, Chicago, Ill. Hood latch. 1,695,544; Dec. 18.
Glascock Brothers Mfg. Company. (See Frick, Chester A., assignor.)
Glaser, Joseph P., assignor to Chamberlin Metal Weather Strip Company, Detroit, Mich. Ventilator. 1,696,000; Dec. 18.
Glaspey, Warren E., Bridgeton, N. J., assignor to Spring Stopper Company. Machine for making glass containers. 1,695,894; Dec. 18.
Glass, Perley R., Wayland, and H. D. Elliott, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J. Marking machine. 1,695,582; Dec. 18.
Glidden, Arthur R., Seattle, Wash. Window-sash fastener. 1,695,729; Dec. 18.
Globe-Wernicke Company. (See Ringler, William A., assignor.)
Glover, Frank B., Brooklyn, N. Y. Engraving cutter head and depth gauge. 1,696,032; Dec. 18.
Goddard, Walter T., Hamilton, Ontario, Canada, assignor to Locke Insulator Corporation, Baltimore, Md. Insulator. 1,695,458; Dec. 18.
Godefroy, Alexandre F., St. Louis, Mo. Hair-curling device. 1,695,545; Dec. 18.
Godilliot, Edouard, assignor to R. Laraque, Paris, France. Pump and the like. 1,695,650; Dec. 18.
Goff, Madison L., Los Angeles, Calif. Signal arm for vehicles. 1,695,843; Dec. 18.
Goffin, Sydney F. H., St. Albans, England. Sheet-feeding mechanism. 1,696,114; Dec. 18.
Goldberg, Samuel and V., Baltimore, Md.; said V. Goldberg assignor to said S. Goldberg. Liquid receptacle. 1,695,583; Dec. 18.
Goldberg, Victor. (See Goldberg, Samuel and V.)
Goldsmith, Louis, Altoona, Pa. Electric sign. 1,695,895; Dec. 18.
Goldston, David C., assignor to Bystone Manufacturing Company, Cambridge Springs, Pa. Molding machine. 1,695,327; Dec. 18.
Gollomb, Herman, Brooklyn, N. Y. Tube compressor. 1,695,280; Dec. 18.
Goodhue, Julian G., Evanston, assignor to trustees of the Electric Thermostatic Control Company, Chicago, Ill. Thermostatic control of electric circuits and apparatus and other devices. 1,695,546; Dec. 18.
Goodwin, Edward W., Detroit, Mich. Combination automobile body hood, and fenders. Des. 77,231; Dec. 18.
Goodwin, Ernest G., Pelham, assignor to Standard Coupler Company, New York, N. Y. Draft gear. 1,696,115; Dec. 18.
Goodwin, Ernest G., Pelham, assignor to Standard Coupler Company, New York, N. Y. Wear plate. 1,696,116; Dec. 18.
Gordon, Walter A., Garden City, and J. J. Murphy and P. Perrone, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company. Adjustable reference book. 1,695,328; Dec. 18.
Gorton, William S., London, England, assignor to Western Electric Company, Incorporated, New York, N. Y. Signaling system. 1,695,844; Dec. 18.
Gould, Leslie A., Bridgeport, Conn. Tuning device. 1,695,919; Dec. 18.
Government and the People of the United States of America. (See Bennett, Charles A., assignor.)
Gradick, Wiley N., assignor to Alex Woldert Company, Tyler, Tex. Nut-cracking machine. 1,695,651; Dec. 18.
Graffenberger, Friedrich, assignor to Milwaukee Lace Paper Company, Milwaukee, Wis. Plant cover. Des. 77,232; Dec. 18.
Graham, Leslie B., East Chicago, Ind., assignor to Union Metal Products Company, Chicago, Ill. Car-coupler-positioning device. 1,695,829; Dec. 18.
Gramarben Company, The. (See Holden, Benedict M., assignor.)
Grant, Clair R., assignor to O. D. Collis, Clinton, Iowa. Radiator and flywheel. 1,696,033; Dec. 18.
Grant, Patrick M., Chicago Ill., assignor of one-half to J. G. Gilbert. Fluid-pressure regulator. 1,695,330; Dec. 18.
Grasselli Dyestuff Corporation. (See Berliner, R., Stein, and Trautner, assignors.)
Grasselli Dyestuff Corporation. (See Hentrich, Winfrid, assignor.)
Grasselli Dyestuff Corporation. (See Wolfgram, A., and Greune, assignors.)
Great Western Electro Chemical Company. (See Hirschkind, W., and Schedler, assignors.)
Green, Sherwood, Berkeley, Calif. Drying apparatus. 1,695,652; Dec. 18.

Gregg Company, Limited, The. (See Gregg, Louis D., assignor.)
Gregg, Louis D., Hackensack, N. J., assignor to The Gregg Company, Limited, New York, N. Y. Car coupler. 1,695,281; Dec. 18.
Greune, Heinrich. (See Wolfram, A., and Greune.)
Griffin, Cedric E. (See Eaton, Leslie E., assignor.)
Grisdale, George W., and E. Schneider, assignors to Republic Flow Meters Company, Chicago, Ill. Electric meter. 1,695,422; Dec. 18.
Grohs, Josef, Vienna, Austria. Fixation device for rails with removable heads. 1,695,730; Dec. 18.
Grolemund, Lawrence A., Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Drawing sheet glass. 1,695,547; Dec. 18.
Groove Lock Co. Inc. (See Zeindlhofer, Anton, assignor.)
Grossman, Harold, Caldwell, N. J., assignor of one-fourth to W. S. Pritchard, New York, N. Y. Producing oiled pigments. 1,696,034; Dec. 18.
Grossmann, Marcus A. (See Langenberg, F. C., and Grossmann.)
Grover, Albert D., Long Island City, N. Y. Banjo rim. 1,695,282; Dec. 18.
Guimont, Joseph W., Lachine, Quebec, assignor to L. Lemieux, Montreal, Canada. Radiator. 1,695,959; Dec. 18.
Gunkel, Paul O., Welland, Ontario, Canada, assignor to Joseph Stokes Rubber Company, Trenton, N. J. Storage-battery case. 1,696,001; Dec. 18.
Gustafson, Carl H., Albert City, Iowa. Radiator guard. 1,695,584; Dec. 18.
Gutmann, Victor. (See Steiner, L., and Gutmann.)
Guy, Joseph E., Waynesboro, Pa. Sign. 1,696,117; Dec. 18.
Gyllenberg, Wallace W., Detroit, Mich. Printing chart. 1,695,423; Dec. 18.
Hanck, Walter J., Racine, Minn. Dispensing machine for bottled milk. 1,696,035; Dec. 18.
Hackworth, Jesse, and W. Kuehne, Ironton, Ohio; said Hackworth assignor to said Kuehne. Device for handling railroad ties. 1,695,960; Dec. 18.
Hadaway, John B., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Manufacture of shoes. 1,695,331; Dec. 18.
Hadley, Art, assignor to The Hadley Company, Providence, R. I. Wrist-watch strap. 1,695,487; Dec. 18.
Hadley Company, The. (See Hadley, Art, assignor.)
Hadley Company, The. (See Tost, Charles R., assignor.)
Hall, Elbert J., assignor to Ruckstell Sales and Manufacturing Company, Berkeley, Calif. Change-speed axle. 1,695,585; Dec. 18.
Hall, Ernest A., and G. E. Burns, assignors to The Hall Manufacturing Company, Toledo, Ohio. Gas burner. 1,695,548; Dec. 18.
Hall, J. Sid. (See Morgan, William C., assignor.)
Hall Manufacturing Company, The. (See Hall, E. A., and Burns, assignors.)
Halleck, Frank A., Michigan City, Ind., assignor to Sullivan Machinery Company. Valve mechanism. 1,695,586; Dec. 18.
Hallock, George W., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Alloy base for oxide-coated cathodes. 1,695,845; Dec. 18.
Halpert, Max, New York, N. Y. Vegetable cabinet. Des. 77,233; Dec. 18.
Hamburg-Amerikanische Uhrenfabrik. (See Landenberger, Kurt, assignor.)
Hammerquist, Oscar W. (See Kristofek, F. J., and Hammerquist.)
Handy Governor Corporation. (See Welch, George R., assignor.)
Hanzlik, Henry J., Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company. Turbine. 1,696,002; Dec. 18.
Harding, Leonard H., Brooklyn, N. Y. Liquid-level control. 1,695,846; Dec. 18.
Hardwick & Magee Company. (See Oakley, Alfred, assignor.)
Hardy, Ralph P., Ocean Springs, Miss. Nut grader and sorter. 1,696,086; Dec. 18.
Harmes, Edward, Wilkinsburg, Pa., assignor to New Process Multi-Castings Company. Molding machine. 1,695,921; Dec. 18.
Harper, Ray O., and R. C. Hitchin, Los Angeles, Calif. Sanitary toilet seat. 1,696,142; Dec. 18.
Harper, William D., Waltham, Mass. Vehicle body support. 1,695,373; Dec. 18.
Harris, Jesse, assignor to Duncan Electric Manufacturing Company, La Fayette, Ind. Totalizing mechanism. 1,696,087; Dec. 18.
Harris, John, Cleveland, Ohio, assignor of one-half to J. R. Rose, Edgeworth, Pa. Gaseous-fuel burner. 1,695,587; Dec. 18.
Harrison, Clifford E., assignor to American Engineering Company, Philadelphia, Pa. Stoker plunger. 1,696,088; Dec. 18.
Harrison, John, Roxbury, Mass. Camp convenience chair. 1,695,374; Dec. 18.
Harrison, Thomas N., jr., Littleton, N. C. Metallic milk bottle. 1,695,920; Dec. 18.
Harrison, Thomas R., assignor to The Brown Instrument Company, Philadelphia, Pa. Wheatstone-bridge meter system. 1,695,424; Dec. 18.
Harrison, Thomas R., assignor to Brown Instrument Company, Philadelphia, Pa. Circuit-controlling means. 1,695,488; Dec. 18.
Hart, Stephen H., assignor to Lord & Burnham Company, Irvington, N. Y. Combination gutter support for greenhouses. 1,696,158; Dec. 18.
Hart, Stephen H., assignor to Lord & Burnham Company, Irvington, N. Y. Combination outlet and gutter construction for greenhouse. 1,696,159; Dec. 18.
Hart, Stephen H., assignor to Lord & Burnham Company, Irvington, N. Y. Greenhouse combination outlet. 1,696,160; Dec. 18.
Hartnacke, Margaret T., Grand Rapids, Mich. Playing card. 1,695,425; Dec. 18.
Harvey, Walter J., Toronto, Ontario, Canada. Solar-heat-accumulating system. 1,696,003; Dec. 18.
Hathaway, Edgar F., Wellesley, assignor to Shawmut Engineering Company, Boston, Mass. Spool-supporting means for tube frames. 1,696,161; Dec. 18.
Hathaway, Edgar F., Wellesley, assignor to Shawmut Engineering Company, Boston, Mass. Tube frame. 1,696,162; Dec. 18.
Hathaway, Edgar F., Wellesley, assignor to Shawmut Engineering Company, Boston, Mass. Axminster tube frame. 1,696,163; Dec. 18.
Hausler, Joseph, Chicago, Ill. Adjustable arm rest for automobiles. 1,695,549; Dec. 18.
Hazeltine Corporation. (See Dreyer, John F., jr., assignor.)
Head, Drew, Chicago, Ill. Air conditioner. 1,695,426; Dec. 18.
Heald Machine Company, The. (See Conradson, Prentice, assignor.)
Heald Machine Company, The. (See Woytych, Ramond M., assignor.)
Heather, Frederick, Fulham, London, England. Exhaust silencer for internal-combustion or other engines. 1,695,375; Dec. 18.
Hecker, John H., Gardnerville, Nev. Cheese-curd knife. 1,695,761; Dec. 18.
Heefner, La Port W., Greensburg, assignor to Pennsylvania Rubber Company, Jeannette, Pa. Vehicle tire. Des. 77,234; Dec. 18.
Heeter, Joseph W., Butler, Pa. Oil saver for oil wells and packing screws therefor. 1,695,332; Dec. 18.
Heintz Edith R., Cincinnati, Ohio. Separable fastener. 1,696,118; Dec. 18.
Heinzman, Robert C., Cincinnati, Ohio. Reconditioning iron and steel drums. 1,696,036; Dec. 18.
Heisel, Ralph E., Chillicothe, assignor to The Mead Pulp & Paper Company, Dayton, Ohio. Paper machinery. 1,696,119; Dec. 18.
Helfgott, Solomon, New York, N. Y. Perogen dough cutting and trimming tool. 1,695,427; Dec. 18.
Heller, Paul E., Newark, N. J. Golf club. 1,695,806; Dec. 18.
Heltzel, John N., Warren, Ohio. Automobile bumper. 1,695,653; Dec. 18.
Hendershot, N. W. (See Bergsten, John, assignor.)
Hentrich, Winfrid, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y. Azo dyestuff and cellulose derivatives dyed therewith. 1,695,654; Dec. 18.
Herb, Otto J., assignor to Alemite Manufacturing Corporation, Chicago, Ill. Lubricant compressor. 1,695,588; Dec. 18.
Herrly, Clarence J., and A. M. Matheson, Niagara Falls, N. Y., assignors to Niacet Chemicals Corp. Material for tanning and making the same. 1,695,655; Dec. 18.
Hertzberg, Harry, Brooklyn, assignor to Morris Propp, New York, N. Y. Detachable electric-plug fitting. 1,695,847; Dec. 18.
Hess, Simon B., New York, N. Y. Door securer. 1,695,686; Dec. 18.
Hesse, Erich, Breslau, assignor to the firm Gehe & Co. A.-G., Dresden, Germany. Producing narcotics. 1,695,656; Dec. 18.
Heynacher, Walter. (See Mackenzie, John, assignor.)
Hewett George S., Corning, Calif. Curing ripe olives. 1,695,489; Dec. 18.
Hickok Manufacturing Company. (See Eichner, Robert F., assignor.)
Hickok Manufacturing Company. (See Mix, Edwin S., assignor.)
Higby, B. P. (See Swanberg, Arthur W., assignor.)
Higgins, John J., East Orange, N. J., assignor to Westinghouse Lamp Company. Gas economizer. 1,695,848; Dec. 18.
Higgins, William H. C., jr., assignor to Advance Ruinely Company, La Porte, Ind. Carburetor. 1,695,550; Dec. 18.
Hill, Leland H. (See Dann, W. M., Hill, and Sipher.)
Hill, N. G., Brass Co., The. (See Hill, Wyman N., assignor.)
Hill, Samuel, and J. Latvala, Tweoma, Mich. Furnace. 1,695,551; Dec. 18.
Hill, Wyman N., assignor to The N. N. Hill Brass Co., East Hampton, Conn. Wheeled toy. 1,695,333; Dec. 18.
Himmelright, Raleigh J., New York, N. Y., assignor to American Arch Company. Arch brick. 1,695,459; Dec. 18.

Hinchman, Alva K., Gloucester City, N. J., assignor to J. H. Malone, Drexel Hill, Pa. Automatic pressure-regulator valve. 1,696,143; Dec. 18.

Hinks, Fred L., Fort Dodge, Iowa. Rotatable sign. 1,695,589; Dec. 18.

Hirschkind, Wilhelm, Antioch, and C. W. Schedler, Berkeley, assignors to Great Western Electro Chemical Company, San Francisco, Calif. Producing hydrochloric acid synthetically. 1,695,552; Dec. 18.

Hitchin, Ralph C. (See Harper, R. O., and Hitchin.)

Hoagland, Frank O., Worcester, Mass. Backing-off device for cutters having angularly-disposed teeth. 1,695,762; Dec. 18.

Hobbs, Willis F., and J. A. Anderson, assignors to The Bridgeport Hardware Manufacturing Corporation, Bridgeport, Conn. Valve lifter. 1,695,490; Dec. 18.

Hochstetter, Frederick W. (See McCurdy, R. P., and Hochstetter.)

Hoe, R., & Co. (See Zuckerman, Adolph M., assignor.)

Hofstee, Albert C., The Hague, Netherlands. Apparatus for machining polygonal parts on ordinary lathes. 1,695,763; Dec. 18.

Hogland, Joseph L., assignor of one-half to H. P. Thomson, Kansas City, Mo. Vehicle body. 1,695,491; Dec. 18.

Hokanson, Otto A., assignor to Woodstock Typewriter Company, Woodstock, Ill. Typewriter. 1,695,492; Dec. 18.

Holborn, Frederick, Hackensack, assignor to De Forest Radio Telephone & Telegraph Co., Jersey City, N. J. Filament. 1,695,687; Dec. 18.

Holcomb, Russell S., Los Angeles, Calif. Hanging device for screens. 1,695,764; Dec. 18.

Holden, Benedict M., assignor to The Gramarben Company, Hartford, Conn. Drawer fastener. 1,695,896; Dec. 18.

Hol-Fast Bedlock Company. (See Howse, Philip M., assignor.)

Hollander, Charles S., Philadelphia, Pa., assignor to Rohm & Haas Company. Use of sulphoxylates for stripping dyes. 1,696,164; Dec. 18.

Hollingworth, Edward, Dobcross, England, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Regulating the tension of warps in looms for weaving. 1,695,376; Dec. 18.

Hollis, Robert H., Kamloops, British Columbia, Canada. Tongue and neck-yoke coupling. 1,695,731; Dec. 18.

Hollup, C. H., Corporation. (See Pennington, H. R., and Hollup, assignors.)

Hollup, Charles H. (See Pennington, H. R., and Hollup.)

Holmes, Edward C., Cincinnati, Ohio. Carriage for drilling mechanism. 1,695,493; Dec. 18.

Hooker, James E., Coral Gables, Fla. Shingle. 1,696,120; Dec. 18.

Hoopes, Penrose R., Hartford, Conn., assignor to Essex Rubber Company, Trenton, N. J. Trimming machine. 1,695,688; Dec. 18.

Hornberger, Earl J., assignor to J. G. Oliver, doing business as Bardons and Oliver, Cleveland, Ohio. Automatic chuck and roller feed. 1,696,037; Dec. 18.

Hotchkin, Paul M., Chicago, Ill. Bank-screen-lighting device. 1,695,283; Dec. 18.

Houghton, E. F., and Company. (See Langenberg, Frederick C., assignor.)

Howard, Kyle, et al. (See Wagoner, Samuel O., assignor.)

Hower, Harry C., Chicago, Ill. Automobile tire. Des. 77,235; Dec. 18.

Howes, Irving C., assignor to Davis & Furber Machine Company, North Andover, Mass. Hand card. 1,695,765; Dec. 18.

Howse, Philip M., assignor to Hol-Fast Bedlock Company, Nashville, Tenn. Side-rail fastener for beds. 1,695,961; Dec. 18.

Howse, Philip M., assignor to Hol-Fast Bedlock Company, Nashville, Tenn. Side-rail fastener for beds. 1,695,962; Dec. 18.

Huey, Helen T., Stonehurst, Pa. Window-curtain guard. 1,696,089; Dec. 18.

Hulander, Henry N., Brooklyn, N. Y. Sport rider. 1,695,689; Dec. 18.

Humason, Granville A., Houston, Tex. Swab. 1,695,494; Dec. 18.

Huyett, Daniel D., assignor to Atlas Powder Company, Wilmington, Del. Wire folding and cutting machine. 1,696,121; Dec. 18.

Hymans, Frederick, Yonkers, N. Y., and C. T. Westlin, Westfield, N. J., assignors to Otis Elevator Company, New York, N. Y. Elevator platform. 1,695,690; Dec. 18.

Hyndman, Peter, Balcarres, Saskatchewan, Canada. Wagon seat. 1,695,732; Dec. 18.

I. G. Farbenindustrie Aktiengesellschaft. (See Schirmacher, K., Stolz, Schlichenmaier, and Krohs, assignors.)

Ideal Electric & Manufacturing Company. (See Schou, Theodor, assignor.)

Ikofsky, Benjamin, Brooklyn, and J. Josephs, Bronx, N. Y. Shape-retaining packing device. 1,695,495; Dec. 18.

Independent Pneumatic Tool Company. (See Norling, Reinhold A., assignor.)

Indiana Lamp Corporation. (See Albright, Edward C., assignor.)

Indiana Lamp Corporation. (See Neuner, Frederick W. C., assignor.)

Ingersoll-Rand Company. (See Redfield, Snowden B., assignor.)

Insley, Birddine T., Stockton, Calif. Reversible tractor transmission. 1,695,849; Dec. 18.

Intercontinental Rubber Company. (See Yeandle, William H., assignor.)

International Combustion Engineering Corporation. (See Kreisinger, Henry, assignor.)

International Harvester Company. (See Benjamin, B. R., Raney, and Webber, assignors.)

International Harvester Company. (See Cady, Sherman W., assignor.)

International Harvester Company. (See Pearson, Charles, assignor.)

International Harvester Company. (See Smith, Daniel W., assignor.)

International Harvester Company. (See Sturrock, John, assignor.)

International Motor Company. (See Robbins, Azor D., assignor.)

International Shoe Company. (See Ballard, Harrie A., assignor.)

International Spotlight Corporation. (See Sklarek, Clifford, assignor.)

Intertype Corporation. (See Barber, Frank E., assignor.)

Ives, Frederic E., assignor to C. W. Fenninger, Philadelphia, Pa. Color photograph or film and producing same. 1,695,284; Dec. 18.

Iwanicki, Joseph, Detroit, Mich. Toothpick distributor. 1,695,460; Dec. 18.

Jackson, Henry M. (See Mingle, W., and Jackson.)

Jackson, Joseph G., assignor to Edward Katzinger Company, Chicago, Ill. Baking pan. 1,696,004; Dec. 18.

Jacob, Elmer, North Adams, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Device to prevent unwinding of yarn from bobbins. 1,695,878; Dec. 18.

Jacobi, Edward N., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis. Automobile instrument panel. Des. 77,236; Dec. 18.

Jacques, Raynaldo P., Woonsocket, R. I., assignor to Adams Industries, Inc., New York, N. Y. Making grease cups. 1,695,496; Dec. 18.

Jaeger, Alphons O., and J. A. Bertsch, St. Louis, Mo.; said Jaeger assignor to The Selden Company, Pittsburgh, Pa. Catalytic oxidation of sulphur dioxide. 1,695,285; Dec. 18.

James, William B., assignor to A. H. Aarons, Los Angeles, Calif. Dial telephone locking device. 1,696,038; Dec. 18.

Jandus, Herbert S., and C. E. Rasmussen, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Bumper. Des. 77,238; Dec. 18.

Jandus, Herbert S., and N. Van Husen, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Mask plate for vehicle bumpers. Des. 77,237; Dec. 18.

Jarboe, Thomas, San Francisco, Calif. Hot plate. 1,695,711; Dec. 18.

Jenkins, Charles F., Washington, D. C. Light-converging-lens system. 1,695,980; Dec. 18.

Jennings, Arthur J. (See Vogel, J. A., and Jennings.)

Jennings, Victor H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Side-slip weft detector for looms. 1,695,377; Dec. 18.

Jensen, Edith C., San Francisco, Calif. Stage garment. 1,695,590; Dec. 18.

Jester, John R. (See Clark, A. T., Leonhauser, and Jester.)

Johnson, Albert C., Chicago, Ill. Can. 1,695,286; Dec. 18.

Johnson, Chester W., Allston, assignor, by mesne assignments, to The A. L. Smith Iron Works, Chelsea, Mass. Traffic signal. 1,695,712; Dec. 18.

Johnson, Joseph A., Weston, Mass. Detachable hook for roof ladders. 1,695,428; Dec. 18.

Johnson, William V., Washington, D. C. Bookholder. 1,695,767; Dec. 18.

Johnston, Wayburn E., Minneapolis, Minn. Vacuum torch. 1,695,334; Dec. 18.

Jones, Alvin, Fort Benton, Mont. Valve-spring compressor. 1,696,090; Dec. 18.

Jones, Francis D. (See Jones, Frances E., and F. D.)

Jones, Frances E., San Diego, Calif., and F. D. Jones, Helena, Mont. Toy building block and wall construction. 1,695,553; Dec. 18.

Josephs, Julius. (See Ikofsky, B., and Josephs.)

Judd, Earle S., and R. Russo, Southington, Conn. Paperhanger's board. 1,695,766; Dec. 18.

Juhasz, Kalman, Hamburg-Wandsbeck, Germany. Pressure indicator. 1,695,591; Dec. 18.

Kalm, Edmund, assignor to J. Koenig, Jersey City, N. J. Niche. Des. 77,239; Dec. 18.

Kalgren, John E., assignor to J. R. Clark Company, Minneapolis, Minn. Extension-ladder-assembling machine. 1,695,461; Dec. 18.

Kane, Thomas H., assignor to Truscon Steel Company, Youngstown, Ohio. Joist. 1,696,039; Dec. 18.

Kartzmark, Otto, West Haven, Conn. Kitchen towel rack. 1,695,429; Dec. 18.

Kasdan, Nathan, New York, and D. Pollack, Brooklyn, assignors to Majestic Metal Specialties, Inc., New York, N. Y. Vanity case. 1,695,287; Dec. 18.

Kates, Willard A., Philadelphia, Pa. Phase indicator and determining the phase relation of alternating currents. 1,695,850; Dec. 18.

Katzinger, Edward, Company. (See Jackson, Joseph G., assignor.)

Kaufman, Frederick B., Philadelphia, Pa. Combination cabinet. 1,695,335; Dec. 18.

Kawneer Company, The. (See Toney, Edward, assignor.)

Kearfott Engineering Company. (See Kraemer, Waldo L., assignor.)

Kearsley, Richard A., Milford, assignor to Draper Corporation, Hopedale, Mass. Stop motion for twisters. 1,696,165; Dec. 18.

Keck, Alwine, et al. (See Keck, Max, assignor.)

Keck, Christian, administrator. (See Keck, Max.)

Keck, Martha, et al. (See Keck, Max, assignor.)

Keck, Max, deceased; C. Keck, administrator, assignor of one-eighth each to A. Keck, Kenton County, Ky., J. J. Foley and A. B. Foley, Cincinnati, Ohio, and M. Keck, and one-fourth to J. J. Stevee, Kenton County, Ky. Vehicle suspension. 1,695,379; Dec. 18.

Kégresse, Adolphe, Paris, France. Traction-increasing device for endless flexible track belts. 1,695,657; Dec. 18.

Kehl, Robert J., Chicago, Ill., assignor to Oxweld Acetylene Company. Blowpipe nozzle. 1,696,091; Dec. 18.

Kehl, Robert J., Chicago, Ill., assignor to Oxweld Acetylene Company. Multiple-flame blowpipe nozzle. 1,696,092; Dec. 18.

Kell, Francis, & Son, Inc. (See Staedell, Felix, assignor.)

Kellogg, Carl A. (See Caplinger, John D., assignor.)

Kellogg, Frank P. (See Redfield, John H., assignor.)

Kelly, Richard S., Jersey City, N. J. Window sash. 1,695,768; Dec. 18.

Kelsey-Hayes Wheel Corporation. (See Booth, William N., assignor.)

Kelso, William, assignor to The McConway & Torley Company, Pittsburgh, Pa. Car coupler. 1,696,040; Dec. 18.

Kenyon, William C., assignor to The Atwood Vacuum Machine Company, Rockford, Ill. Manufacturing covered-joint hinges. 1,695,288; Dec. 18.

Kerngood, Allen H., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md. Slide buckle. 1,696,166; Dec. 18.

Kersten, Carl C. E., Columbus, Ga. Scum trap. 1,695,851; Dec. 18.

King, Rufus, Plainville, assignor to Bugbee & Niles Co., North Attleboro, Mass. Watch-bracelet clasp. 1,696,167; Dec. 18.

Kinney, Le Baron W., Cleveland, and G. H. Bierman, East Cleveland, assignors to The White Motor Company, Cleveland, Ohio. Heat treating steel. 1,695,922; Dec. 18.

Kinter, Charles W., and C. H. Manion, Follansbee, W. Va., assignors to Follansbee Brothers Company, Pittsburgh, Pa. Plate reversing and cooling mechanism. 1,695,923; Dec. 18.

Kintner, Samuel M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Television apparatus. 1,695,924; Dec. 18.

Kinzie, Charles J. (See Barton, L. E., and Kinzie.)

Kirchhoff, William G., assignor to The J. H. Day Company, Cincinnati, Ohio. Combined blending and sifting device. 1,696,093; Dec. 18.

Kirchhoff, William G., assignor to The J. H. Day Company, Cincinnati, Ohio. Stuffing box and bearing structure. 1,696,094; Dec. 18.

Kishaw, Michale, Detroit, Mich. Vehicle radiator cover. Des. 77,240; Dec. 18.

Klein, Benjamin F., Cleveland, Ohio. Combination lighting fixture and support for loud-speaker units. Des. 77,241; Dec. 18.

Klein, Hans. (See Flemming, W., and Klein.)

Kleinman, Jacob L., New York, N. Y. Top. 1,695,807; Dec. 18.

Klinger, James D., Detroit, Mich. Agent for cleaning and imparting rust-inhibitive properties to steel. 1,695,430; Dec. 18.

Knapp, Clayton W., Cleveland, Ohio. Sachet device. Des. 77,243; Dec. 18.

Knapp, Clayton W., Cleveland, Ohio. Sachet device. Des. 77,244; Dec. 18.

Knappe, Paul A., Santa Rosa, Calif. Combined hammock seat and frame. Des. 77,242; Dec. 18.

Knowlton, John A., trustee. (See Knowlton, John A., assignor.)

Knowlton, John A., Dorchester, assignor to said Knowlton, trustee for Universal Tide Power Co., Boston, Mass. System for developing power from tides. 1,695,733; Dec. 18.

Knoxville Glove Company. (See Kyle, Arch, assignor.)

Koenig, Jacob. (See Kalm, Edmund, assignor.)

Koeniger, Karl W., Orange, N. J., assignor, to The Turner Tanning Machinery Company, Portland, Me. Hide setting-out and oiling machine. 1,695,963; Dec. 18.)

Kohlhaas, George N., Elmira, N. Y. Micrometer. 1,695,336; Dec. 18.

Kolisch, Paul. (See Aldendorff, Fritz, assignor.)

Kolitsch, August, Port Alfred, Quebec, Canada. Feed control of paper-making machines and apparatus therefor. 1,695,380; Dec. 18.

Kollmar, Reinhard, assignor to Forstner Chain Corporation, Irvington, N. J. Chain. 1,695,462; Dec. 18.

Kothé, Charles A., Meadville, Pa. Removing sludge from boilers. 1,695,005; Dec. 18.

Kresmer, Waldo L., Brooklyn, N. Y., assignor to Kearfoot Engineering Company, Inc. Window opener. 1,695,691; Dec. 18.

Kreisinger, Henry, Pierpont, assignor to International Combustion Engineering Corporation, New York, N. Y. Pulverized-fuel-feeding apparatus. 1,695,692; Dec. 18.

Kreutzberg, Otto A., Lake Bluff, Ill. Carburetor for powdered coal. 1,696,041; Dec. 18.

Kristek, George H., Ellinger, Tex. Cotton-seed-loading device. 1,696,042; Dec. 18.

Kristofek, Frank J., and O. W. Hammerquist, assignors to Brown & Bigelow, St. Paul, Minn. Automatic calendar stitcher. 1,695,897; Dec. 18.

Kroehler Manufacturing Company. (See Faris, Harold P., assignor.)

Krohs, Walter. (See Schirmacher, K., Stolz, Schlichenmaier, and Krohs.)

Kromer, George J., Milwaukee, Wis. Garment fastener. 1,695,592; Dec. 18.

Kropf, Frank, Wamego, Kans. Wall. 1,696,043; Dec. 18.

Krupp, Leo A., assignor to The Star Drilling Machine Company, Akron, Ohio. Tractor steering control for revolving excavators or cranes. 1,696,168; Dec. 18.

Kuehne, William. (See Hackworth, J., and Kuehne.)

Kusber, Joseph, jr. (See Fabor, M. F., and Kusber.)

Kuskin, David, New York, N. Y., assignor to Full View Windshield Wiper, Inc. Windshield wiper. 1,696,044; Dec. 18.

Kyle, Arch, assignor to Knoxville Glove Company, Knoxville, Tenn. Glove. 1,696,095; Dec. 18.

L. & R. Company, The. (See Lipschutz, David, assignor.)

Lach, Joseph S., Bridgeport, assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Locking device. 1,696,045; Dec. 18.

Ladislaus, Henry R., Los Angeles, Calif. Composition of matter. 1,695,693; Dec. 18.

Laemmel, Charles A., assignor to Atlantic Service Company, Inc., Brooklyn, N. Y. Plate for meat-grinding machines. 1,695,898; Dec. 18.

Lalliberte, Joseph H., Nashua, N. H., assignor to Nashua Manufacturing Company, Boston, Mass. Wind-down mechanism for spinning frames. 1,695,713; Dec. 18.

La Montagne Patrick P., Bourbonnais, assignor, by mesne assignments, to Pope Machine Company, Kankakee, Ill. Knitting machine. 1,695,734; Dec. 18.

Land, Charles H., Detroit, Mich. Hydraulic-controlled trailer leg. 1,695,497; Dec. 18.

Landenberger, Kurt, assignor to Hamburg-Amerikanische Uhrenfabrik, Schramberg, Germany. Savings clock. 1,695,593; Dec. 18.

Lang, George H., Boston, Mass. Printing machine. 1,695,964; Dec. 18.

Langbein, John, Hamburg, Germany. Composition to be added to cement mixings for cold glazes or the like. 1,695,808; Dec. 18.

Lange, Henry, Quincy, Ill. Heater. 1,695,658; Dec. 18.

Langenberg, Frederick C., Watertown, Mass., assignor to E. F. Houghton and Company, Philadelphia, Pa. Carburizer. 1,695,337; Dec. 18.

Langenberg, Frederick C., Watertown, Mass., assignor to E. F. Houghton and Company, Philadelphia, Pa. Carburizer. 1,695,338; Dec. 18.

Langenberg, Frederick C., New York, N. Y., and M. A. Grossmann, Canton, Ohio. Steel and making the same. 1,695,594; Dec. 18.

Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Stopper for india-ink bottles and the like. 1,696,006; Dec. 18.

Laraque, Roland. (See Godillot, Edouard, assignor.)

Larned, William A., Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio. Elastic metal stringing and making the same. 1,695,595; Dec. 18.

Larrabee, John H., Washington, D. C. Compensating apparatus for pantographs. 1,695,381; Dec. 18.

Lasker, William W., and C. A. Mezger, Brooklyn, assignors, by mesne assignments, to Remington Rand Inc., New York, N. Y. Contact mechanism for typewriter-key punches. 1,695,965; Dec. 18.

Latvala, Juha. (See Hill, S., and Latvala.)

Lawler, James J., Mount Vernon, assignor to Direct-Control Valve Company, New York, N. Y. Automatic heat-controlling regulator. 1,695,809; Dec. 18.

Lawlor, John J., Plainfield, N. J., assignor to New Process Multi-Castings Company. Molding machine. 1,695,925; Dec. 18.

Lawyer, Frank W., Placerville, Calif. Distributor attachment for oil cans. 1,696,046; Dec. 18.

Leake, Richard C., Rochester, assignor to General Railway Signal Company, Gates, N. Y. Train-control relay. 1,696,169; Dec. 18.

Leake, Richard C., Rochester, assignor to General Railway Signal Company, Gates, N. Y. Engine relay. 1,696,170; Dec. 18.

Leathers, Ward, Haworth, N. J., assignor, by mesne assignments, to Radio Corporation of America. Radio-phonograph combination. 1,695,852; Dec. 18.

Le Bus, George F., Electra, Tex. Sand-tester pump. 1,696,096; Dec. 18.

Lee Engineering Research Corporation. (See Lee, Royal, assignor.)

Lee, Royal, assignor to Lee Engineering Research Corporation, Milwaukee, Wis. Hydraulic transmission. 1,695,289; Dec. 18.

Leet, Lynn T., Montreal, Quebec, Canada. Liquid-vending machine. 1,695,735; Dec. 18.

Leff, Saul, New York, N. Y. Shape-retaining device for hats. 1,695,200; Dec. 18.

Lemieux, Ludger. (See Guimont, Joseph W., assignor.)
Leonhauser, Henry A. (See Clark, A. T., Leonhauser, and Jester.)
Leszczynski, Leonard. (See Gies, Frank G., assignor.)
Levinsky, Jacob, assignor to Capital Caps Limited, Toronto, Ontario, Canada. Motoring cap. 1,695,596; Dec. 18.
Levy, Mark. (See Travis, Bertram C., assignor.)
Lewis, Charles B., and E. D. Robertson, Los Angeles, Calif. Relief valve for deep-well pumps. 1,696,007; Dec. 18.
Libbey-Owens Sheet Glass Company, The. (See Amsler, Walter O., assignor.)
Libbey-Owens Sheet Glass Company, The. (See Brownlee, William K., assignor.)
Libbey-Owens Sheet Glass Company, The. (See Crowley, Joseph P., assignor.)
Libbey-Owens Sheet Glass Company, The. (See Drake, John L., assignor.)
Libbey-Owens Sheet Glass Company, The. (See Grolemund, Lawrence A., assignor.)
Libert, Arthur J., Green Bay, Wis. Turret attachment for lathes. 1,695,926; Dec. 18.
Liebel-Flarsheim Company, The. (See Flarsheim, Edwin S., assignor.)
Lieberman, Joseph, Bayonne, N. J. Lamp standard. Des. 77,245; Dec. 18.
Lincoln, Rollo B., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Temperature-control system. 1,695,853; Dec. 18.
Lincoln Scale Corporation. (See Burke, Robert J., assignor.)
Linde Air Products Company, The. (See Feild, Alexander L., assignor.)
Link-Belt Company. (See Pierce, Harold S., assignor.)
Linley, Fred H., Duluth, Minn. Combustion control in steam-boiler furnaces. 1,695,431; Dec. 18.
Lipschutz, David, assignor to The L. & R. Company, Louisville, Ky. Display and vending device. 1,695,463; Dec. 18.
Lipsius, Samuel, New York, N. Y. Automatic powdering machine. 1,696,171; Dec. 18.
Liquo-Gas Company. (See Wood, James A., assignor.)
Little, Donald G., Edgewood, and R. L. Davis, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company. Radio system. 1,695,966; Dec. 18.
Lloyd, Thomas. (See Dean, Horace, assignor.)
Lochhead, Andrew, Oakland, Calif. Nail-holding attachment for hammers. 1,695,339; Dec. 18.
Locke Insulator Corporation. (See Goddard, Walter T., assignor.)
Loewenbach, Hugo, Milwaukee, Wis. Mask. Des. 77,246; Dec. 18.
Lord & Burnham Company. (See Hart, Stephen H., assignor.)
Lorenz-Zeiss-Zugsicherungs-G. m. b. H. (See Bäseler, Wolfgang, assignor.)
Loring, Joseph B. (See Moore, W. D., Loring, and Bowers.)
Lovejoy, Arthur W., Lowell, Mass. Toilet-paper holder. 1,695,432; Dec. 18.
Ludwig, William C., Chillicothe, assignor to The Mead Pulp & Paper Company, Dayton, Ohio. Apparatus and method for packaging paper. 1,696,008; Dec. 18.
Lydon, Patrick C., assignor to Des Moines Silo & Manufacturing Company, Des Moines, Iowa. Agitator for feeders. 1,695,927; Dec. 18.
Lyjak, Wladyslaw, Braddock, Pa. Necktie stretcher. 1,695,927; Dec. 18.
Lyon, Harry, Brockton, assignor to J. A. Barbour, Brookline, and P. E. Barbour, Quincy, doing business as a copartnership under the name and style of Barbour Welting Company, Brockton, Mass. Welt and method of making. 1,695,967; Dec. 18.
Lyon, Harry, Holbrook, assignor to P. E. Barbour, Quincy, Mass. Beaded welting. 1,695,968; Dec. 18.
Lyon, Harry, Holbrook, assignor to P. E. Barbour, Quincy, Mass. Reverse welting and method of making. 1,695,969; Dec. 18.
Lyon, Harry, Holbrook, Mass., assignor to P. E. Barbour, Quincy, Mass., doing business as Barbour Welting Company. Welting and making the same. 1,695,970; Dec. 18.
Macallen Company, The. (See McCarthy, Louis, assignor.)
MacClain, Edwin K., Houston, Tex. Sand wedge. 1,695,598; Dec. 18.
Macdonald, Angus S., Great Neck, N. Y., assignor to Snead & Company. Heat treatment of metals. 1,695,433; Dec. 18.
MacFarland, Allis M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Automatic electric welding apparatus. 1,695,694; Dec. 18.
Mackenzie, John, assignor of one-half to W. Heynacher, Minneapolis, Minn. Gas producing and heating appliance. 1,695,854; Dec. 18.
Mackie, James, and Sons, Limited. (See Mackie, John P., assignor.)
Mackie, John P., commonly known as Jack P. Mackie, assignor to James Mackie and Sons, Limited, Belfast, Ireland. Doffing mechanism for spinning, twisting, and like machines. 1,695,659; Dec. 18.
Magidson, Frank, Pittsburgh, Pa., assignor to Star Service Hanger Company, Detroit, Mich. Machine for manufacturing wire garment hangers. 1,695,603; Dec. 18.
Magill, Urwin J., Rye, N. Y. Areaway construction. 1,695,810; Dec. 18.
Magnavox Company, The. (See Metcalf, Herbert E., assignor.)
Magnetic Analysis Corporation. (See Berlowitz, Max E., assignor.)
Majestic Metal Specialties, Inc. (See Kasdan, N., and Pollack, assignors.)
Major, William W., and J. C. Carpenter, jr., Clifton Forge, Va. Tie nipper. 1,695,660; Dec. 18.
Malone, J. H. (See Hinchman, Alva K., assignor.)
Manion, Charles H. (See Kinter, C. W., and Manion.)
Manning, Fred W., Berkeley, Calif., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Magazine filter. 1,695,811; Dec. 18.
Mansfield, Virgil D., Columbus, Ohio. Power-driven billing machine. 1,695,769; Dec. 18.
Marden, John W., East Orange, and H. K. Richardson, Newark, N. J., assignors to Westinghouse Lamp Company. Refractory cement. 1,695,812; Dec. 18.
Markels, Leonard, New York, N. Y. Exhaust purifier. 1,695,554; Dec. 18.
Markon Manufacturing Co. (See Wilhelm, John H., assignor.)
Marquette Manufacturing Company. (See Nordgren, Algot W., assignor.)
Marshak, Isidore, assignor to A. Amitin, Brooklyn, N. Y. Fern stand. Des. 77,247; Dec. 18.
Marshak, Isidore, assignor to A. Amitin, Brooklyn, N. Y. Fern stand. Des. 77,248; Dec. 18.
Mart, Leon T., Kansas City, Mo. Air preheater for furnaces. 1,695,434; Dec. 18.
Martin, Henry, Eddyville, Ky. Hat brace. 1,696,047; Dec. 18.
Maserang, John B., Belleville, Ill. Railway tie. 1,695,770; Dec. 18.
Mason, Mattie N. (See Gardner, Florinda, assignor.)
Mathes, Robert C., Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Electric-current transmission. 1,695,813; Dec. 18.
Matheson, Arthur M. (See Herrly, C. J., and Matheson.)
Mathewson, Wilfred B., North Weymouth, Mass., assignor to Simmons Company, Kenosha, Wis. Mattress and side stitching the same. 1,695,736; Dec. 18.
Maxim, Hiram P., assignor to The Maxim Silencer Company, Hartford, Conn. Silencer. 1,695,435; Dec. 18.
Maxim Silencer Company, The. (See Maxim, Hiram P., assignor.)
Mayo, Benjamin F., Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for operating on pieces of sheet material. 1,695,555; Dec. 18.
McArthur, Arthur R., Gary, Ind., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa. Doubling apparatus. 1,696,097; Dec. 18.
McCandless, Byron, Annapolis, Md. Roll-holding camera. 1,695,382; Dec. 18.
McCarthy, Louis, assignor to The Macallen Company, Boston, Mass. Method of and apparatus for separating and cleaning mica. 1,695,383; Dec. 18.
McCollum, James H. K., assignor of one-half to B. J. Wright, Long Branch, N. J., and one-fourth to A. J. Baruth, Lawrence, N. Y. Constant-volume and constant-compression engine and operating same. 1,695,714; Dec. 18.
McConway & Torley Company, The. (See Kelso, William, assignor.)
McCormick, Francis H., and J. P. Dwyer, Perth, Western Australia, Australia. Machine for the pickling of grain. 1,696,048; Dec. 18.
McCormick, Thomas J., Detroit, Mich. Vehicle tire cover. 1,696,009; Dec. 18.
McCulloch, Leon, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electron-emitting element. 1,695,899; Dec. 18.
McCurdy, Robert P., Pittsburgh, Pa., and F. W. Hochstetter, Dayton, Ohio, assignors, by mesne assignments, to said Hochstetter. Nonglare electric lamp for headlights. 1,695,464; Dec. 18.
McGiffert, John R., assignor to Clyde Iron Works, Duluth, Minn. Winding engine. 1,695,498; Dec. 18.
McGranighan, John R., Philadelphia, Pa. Cake-plate leveler. 1,696,098; Dec. 18.
McGunnigle, Harold A., assignor to Artlite, Inc., New York, N. Y. Apparatus for projecting light. 1,695,556; Dec. 18.
McKean, John O., assignor to Foster Machine Company, Westfield, Mass. Yarn-compensating device for creels. 1,695,814; Dec. 18.
McKeown, Samuel C., New Rochelle, N. Y., and C. C. Bruckner, Ironia, N. J., assignors, by mesne assignments, to The Engravograph Corporation. Engraving machine. 1,695,771; Dec. 18.
McKinley, Charles W. (See Tillotson, H. C., Rullison, and McKinley.)
Mead Pulp & Paper Company, The. (See Heisel, Ralph E., assignor.)
Mead Pulp & Paper Company, The. (See Ludwig, William C., assignor.)
Mechlovits, Bernat, New York, N. Y. Brooch or similar article. Des. 77,249; Dec. 18.

Melville Shoe Corporation. (See Melville, Ward, assignor.)
Melville Shoe Corporation. (See Melville, W., and Smythe, assignors.)
Melville, Ward, Brooklyn, N. Y., assignor to Melville Shoe Corporation. Store front. Des. 77,250; Dec. 18.
Melville, Ward, Old Field, N. Y., assignor to Melville Shoe Corporation. Store front. Des. 77,251; Dec. 18.
Melville, Ward, Old Field, and R. H. Smythe, Brooklyn, N. Y., assignors to Melville Shoe Corporation. Store front. Des. 77,252; Dec. 18.
Merrick, Frank W., Dorchester, assignor to American Stay Co., East Boston, Mass. Slitting machine. 1,695,715; Dec. 18.
Merzoian, Edward L., Porterville, Calif. Dispenser. 1,695,599; Dec. 18.
Metallisator Berlin A. G. (See Bourges, Carl, assignor.)
Metcalf, Herbert E., San Leandro, assignor to The Magnavox Company, San Francisco, Calif. Vibration dampener for vacuum tubes. 1,695,600; Dec. 18.
Mexco Limited. (See Scott, Alexander C., assignor.)
Meyers, George W., Rahway, N. J. Fuel economizer. 1,695,695; Dec. 18.
Mezger, Charles A. (See Lasker, W. W., and Mezger.)
Miller, James S., Bedford, Ind. Gearshift. 1,696,049; Dec. 18.
Miller, Monroe E. (See Causey, G. M., and Miller.)
Miller, Wilbur G., Los Angeles, Calif. Hose and tube clamp. 1,695,340; Dec. 18.
Mills, Chester B., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y. Automatic steering for dirigible craft. 1,695,601; Dec. 18.
Milwaukee Lace Paper Company. (See Graffenberger, Friedrich, assignor.)
Miner, W. H., Inc. (See O'Connor, John F., assignor.)
Mingle, William, and H. M. Jackson, assignors to Simmons Limited, Montreal, Quebec, Canada. Bed. 1,695,772; Dec. 18.
Misb, Frank C., Greenville, Va. Concrete and steel spring rail tie. 1,695,604; Dec. 18.
Mix, Edwin S., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Belt buckle. Des. 77,253; Dec. 18.
Mochel, Norman L., Ridley Park, Pa., assignor to Westinghouse Electric & Manufacturing Company. Turbine-blade lashing. 1,695,971; Dec. 18.
Moladale, Theodore C., Chattanooga, Tenn. Seesaw. 1,695,737; Dec. 18.
Monk, Reginald H., Montreal, Quebec, Canada. Obtaining titanium oxide. 1,695,324; Dec. 18.
Montague, Henry C., Washington, D. C. Garment bag. 1,695,661; Dec. 18.
Moore Brothers Company. (See Dibble, Claude M., assignor.)
Moore, William D., J. B. Loring, and W. J. Bowers, Birmingham, Ala., assignors to Sand Spun Patents Corporation, New York, N. Y. Apparatus for marking pipes. 1,695,855; Dec. 18.
Moores, Joel, Norwood, assignor to The J. H. Day Company, Cincinnati, Ohio. Cake forming and depositing machine. 1,696,099; Dec. 18.
Morgan, Thomas A., and H. H. Thompson, assignors to The Sperry Gyroscope Company, Brooklyn, N. Y. Transmission and follow-up system for gyrocompasses. 1,695,774; Dec. 18.
Morgan, William C., assignor of one-fourth to J. S. Hall, Beeville, Tex. Attachment for dentil engine handpieces. 1,695,773; Dec. 18.
Morin, Adelard, Nashua, N. H. Shade bracket. 1,696,050; Dec. 18.
Morin, Edgar G., jr., San Francisco, Calif. Combination tool. 1,695,662; Dec. 18.
Morrison, Charles F., Chattanooga, Tenn., assignor to Morrison-Mertins, Inc. Drier. 1,696,172; Dec. 18.
Morrison-Mertins, Inc. (See Morrison, Charles F., assignor.)
Mueller, Moritz L., Seattle, Wash., assignor to Northwest Blower Kiln Company, Portland, Oreg. Controlling the processing of materials. 1,695,738; Dec. 18.
Muffly, Glenn. (See Carroll, Louis W., assignor.)
Müller, Friederich, Elizabeth, N. J. Joint for golf clubs. 1,695,291; Dec. 18.
Murphy, James J. (See Gordon, W. A., Murphy, and Perrone.)
Musil, James, and D. H. Gilchrist, Olivia, Minn. Snowplow. 1,695,775; Dec. 18.
Myers, Roy H., Hagerstown, Md., assignor to W. H. Strauss, Waynesboro, Pa. Spark-plug-testing device. 1,695,557; Dec. 18.
Mylius, Walter G. (See Rutter, A. R., and Mylius.)
Naamlooze Vennotschap Maatschappij tot Veraardiging van Snijmachines Volgens van Berkel's Patent en van andere Werktuigen. (See van Berkel, Cornelius F. M., assignor.)
Nagel, W. G., Electrical Company, The. (See Adams, Clark M., assignor.)
Nashua Manufacturing Company. (See Laliberte, Joseph H., assignor.)
National Carbon Company. (See Plimmer, Alfred G., assignor.)
National Electric Producta Corporation. (See Staples, Horace A., assignor.)
National Supply Company, The. (See Young, Forrest J., assignor.)
Nemec, Fred A., Brea, Calif. Eccentric yoke. 1,695,776; Dec. 18.
Neuner, Frederick W. C., assignor to Indiana Lamp Corporation, Connerville, Ind. Reflector-supported light-socket mounting. 1,695,465; Dec. 18.
Newell, Elwood B., Grand Rapids, Mich. Collar fastener. 1,695,815; Dec. 18.
New Jersey Chain Corporation. (See Prestinari, Eugen, assignor.)
Newman, George A., St. Paul, Minn. Device for decorating walls and similar surfaces. 1,696,010; Dec. 18.
New Process Multi-Casting Company. (See Harmes, Edward, assignor.)
New Process Multi-Castings Company. (See Lawlor, John J., assignor.)
Newton, Ira F., St. Paul, Minn. Gasoline-dispensing device. 1,695,436; Dec. 18.
Niacet Chemicals Corp. (See Herrly, C. J., and Matheson, assignors.)
Nissen, John P., jr., Philadelphia, Pa. Printing roller. 1,695,437; Dec. 18.
Noble, Albert, Anniston, assignor to Federal Phosphorus Company, Birmingham, Ala. Production of phosphoric acid. 1,695,558; Dec. 18.
Nordgren, Algot W., assignor to Marquette Manufacturing Company, St. Paul, Minn. Bumper mounting. 1,695,602; Dec. 18.
Nordland, Alfred, De Smet, S. Dak. Elevator. 1,696,122; Dec. 18.
Norling, Reinhold A., Aurora, assignor to Independent Pneumatic Tool Company, Chicago, Ill. Reversible drill throttle. 1,695,777; Dec. 18.
Northwest Blower Kiln Company. (See Mueller, Moritz L., assignor.)
Norton, Don W., assignor to American Signs Corporation, Kalamazoo, Mich. Sign. Des. 77,254; Dec. 18.
Nowosielski, Edward B., Bloomfield, assignor to Splitdorf Electrical Company, Newark, N. J. Electrical condenser. 1,695,778; Dec. 18.
Noyes, Henry T., assignor to Art in Buttons Incorporated, Rochester, N. Y. Production or manufacture of disks or blanks for buttons or the like from irregularly-shaped pieces of material. 1,695,817; Dec. 18.
Noyes, Henry T., and R. Stanforth, assignors to Art in Buttons Incorporated, Rochester, N. Y. Production or manufacture of disks or blanks for buttons or the like from irregularly-shaped pieces of material. 1,695,816; Dec. 18.
Nygaard, Oscar O., Saugus, Mass., assignor to Combustion Engineering Corporation, New York, N. Y. Stoker air control. 1,696,144; Dec. 18.
Nyman, Alexander, New York, N. Y. Loud speaker. 1,695,779; Dec. 18.
Oakley, Alfred, assignor to Hardwick & Magee Company, Philadelphia, Pa. Carpet. Des. 77,255; Dec. 18.
Oakley, Erastus G., Southport, assignor to Bridgeport Brass Company, Bridgeport, Conn. Dust cap for tire valves. 1,695,818; Dec. 18.
O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,695,499; Dec. 18.
O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,695,500; Dec. 18.
O'Friel, William, Braddock, Pa. Wall-paper bracket. 1,695,466; Dec. 18.
Ogden, John E. (See Tomkinson, Charles C., assignor.)
Ohio State Stove Mfg. Co. (See Packer, William H., assignor.)
Ohlenbusch, John M. (See Steiner, Leopold, assignor.)
Ohlin, Erik A., and F. O. Carlsson, Hyltebruk, Sweden. Paper-making machinery. 1,695,972; Dec. 18.
Oilgear Company, The. (See Ferris, Walter, assignor.)
Oishei, John R., assignor to Trico Products Corporation, Buffalo, N. Y. Windshield wiper. 1,695,342; Dec. 18.
Oliver, John G. (See Hornberger, Earl J., assignor.)
Olsen, Konrad, Tacoma, Wash. Electric hammer. 1,695,780; Dec. 18.
Olsson, Harry A., Chicago, Ill. Adjustable corner bar for plate-glass windows. 1,695,978; Dec. 18.
O'Neill, George D., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Activation of filaments. 1,695,819; Dec. 18.
Opitz, Bernhard, Portland, Oreg. Automatic volumetric measuring device. 1,695,501; Dec. 18.
Ornstein, Leon. (See Flohr, H. C., and Ornstein.)
Orszag, Ladislaus, and P. Curcuruto, Bronx, N. Y. Tire. 1,696,051; Dec. 18.
Osborne Process, Inc. (See Osborne, William L., assignor.)
Osborne, William L., assignor to Osborne Process, Inc., Los Angeles, Calif. Cleaning lubricant cases of engines. 1,696,100; Dec. 18.
Otis Elevator Company. (See Hymans, F., and Westlin, assignors.)
Otis, John E., West New York, N. J. Grease trap. 1,695,781; Dec. 18.
Ovtschinnikoff, Alexander, Arnstadt, Germany. Machine for manufacturing and packing matches. 1,696,052; Dec. 18.
Owen, Edward R., Nyack, N. Y. Holder for receptacles. 1,695,739; Dec. 18.
Owens Bottle Company, The. (See Williams, Percy Q., assignor.)

Oxweld Acetylene Company. (See Kehl, Robert J., assignor.)
Packard Motor Car Company. (See Woolson, Lionel M., assignor.)
Packer, William H., assignor to Ohio State Stove Mfg. Co., Columbus, Ohio. Hinge mounting for cabinet doors. 1,696,123; Dec. 18.
Page, Harry B., East Haven, assignor to Sargent & Company, New Haven, Conn. Padlock for tire carriers and the like. 1,695,696; Dec. 18.
Palmer, Cassius C., New York, N. Y. Refrigeration and apparatus therefor. 1,695,292; Dec. 18.
Palmer, Harry A., Dorchester, assignor to Palmer Inventions, Inc., Boston, Mass. Internal-combustion engine. 1,696,054; Dec. 18.
Palmer Inventions, Inc. (See Palmer, Harry A., assignor.)
Palmieri, Giuseppe, Providence, R. I. Automobile traffic lamp. Des. 77,256; Dec. 18.
Panalle, Anatole, and G. Alexander, Washington, D. C. Lawn-mower attachment. 1,695,438; Dec. 18.
Pappert, Emanuel, New York, N. Y. Optical mounting. Des. 77,257; Dec. 18.
Parkes, Deric W. (See Robinson, H. W., and Parkes.)
Parsons, William A., Fort Atkinson, Wis. Cap for silos. 1,695,502; Dec. 18.
Parts Corporation. (See Winkler, Louis G., assignor.)
Pashigian, Bagsar, Haverhill, Mass., and H. J. Gallant, Exeter, N. H. Attachment for utilizing shoe-sewing machines to stick a cold-process tape on shoes to reenforce same. 1,695,605; Dec. 18.
Pasini, Jerome, New York, N. Y. Ship. 1,696,053; Dec. 18.
Patrick, Walter A., assignor to The Silica Gel Corporation, Baltimore, Md. Catalytic agent and preparing the same. 1,695,740; Dec. 18.
Paxson, Russell C. (See Freese, F. G., and Paxson.)
Payne, Oscar V., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Side-slipping weft detector for looms. 1,695,384; Dec. 18.
Payne, Oscar V., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Pick-out device for looms. 1,695,385; Dec. 18.
Payne, Oscar V., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Picker-rod lubricator for looms. 1,695,386; Dec. 18.
Peale-Davis Company. (See Davis, Kenneth, assignor.)
Pearson, Charles, Chicago, Ill., assignor to International Harvester Company. Adjusting mechanism for sweep rakes. 1,695,503; Dec. 18.
Pearson, Charles, Chicago, Ill., assignor to International Harvester Company. Adjusting mechanism for sweep rakes. 1,695,504; Dec. 18.
Peebles, George, Elizabeth, N. J., assignor to Selbec, Inc., New York, N. Y. Roller vacuum extractor. 1,695,974; Dec. 18.
Peerless Shock Loader Company. (See Berry, B. C., and Dickinson, assignors.)
Pelich, Eduard, Prague, Czechoslovakia. Revolving-cylinder and reciprocating-piston pump. 1,695,975; Dec. 18.
Penn Utility Company. (See Williners, John A., assignor.)
Pennington, Harry R., Chicago, Ill., and C. H. Hollup, Milwaukee, Wis., assignors to C. H. Hollup Corporation. Arc-welding electrode. 1,696,011; Dec. 18.
Pennsylvania Crusher Company. (See Rouse, Charles R., assignor.)
Pennsylvania Rubber Company. (See Heefner, La Port W., assignor.)
Perfex Corporation. (See Young, Fred M., assignor.)
Perham, Arthur L. (See Dawson, A. T., Watt, and Perham.)
Perin, Donald W., Brookline, Mass., assignor to Perin-Walsh Company, Boston, Mass. Rolling container. 1,695,928; Dec. 18.
Perin, Donald W., Brookline, assignor to Perin-Walsh Company, Boston, Mass. Removable container for vehicles. 1,695,929; Dec. 18.
Perin-Walsh Company. (See Perin, Donald W., assignor.)
Perrone, Pascal. (See Gordon, W. A., Murphy, and Perrone.)
Peterson, Fredolf J., Detroit, Mich. Supporting and sealing means for cyanide pots. 1,695,467; Dec. 18.
Pettibone Mulliken Company. (See Powell, Edward W., assignor.)
Photostat Corporation. (See Caps, Arthur W., assignor.)
Pierce, Harold S., Indianapolis, Ind., assignor to Link-Belt Company, Chicago, Ill. Coupling. 1,695,343; Dec. 18.
Plimmer, Alfred G., Cleveland, Ohio, assignor to National Carbon Company, Inc. Electrical connection and forming the same. 1,696,124; Dec. 18.
Pollack, Daniel. (See Kasdan, N., and Pollack.)
Ponsonby, Amos A., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system. 1,695,856; Dec. 18.
Pope Machine Company. (See La Montagne, Patrick P., assignor.)
Porter, Benjamin, Fullerton, N. Dak. Glareless headlight. 1,696,055; Dec. 18.
Poston, Emmett V., Springfield, Ill. Machine for veneering brick. 1,695,293; Dec. 18.
Powell, Edward W., assignor to Pettibone Mulliken Company, Chicago, Ill. Switch-lock device. 1,695,900; Dec. 18.
Power, Thomas J., Milwaukee, Wis. Forced-ventilation system. 1,695,820; Dec. 18.
Prestinari, Eugen, Irvington, assignor to New Jersey Chain Corporation, Newark, N. J. Bracelet chain. 1,695,505; Dec. 18.
Preston, Harrison O., Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y. Container for lubricants. 1,695,976; Dec. 18.
Pritchard, William S. (See Grossman, Harold, assignor.)
Proctor, Barton A., assignor, by mesne assignments, to The Automatic Advertiser, Incorporated, New York, N. Y. Film-reversing mechanism. 1,695,857; Dec. 18.
Proctor, John W., Pittsburgh, Pa. Clothesline holder. 1,696,056; Dec. 18.
Propp, Morris. (See Hertzberg, Harry, assignor.)
Proulx, H. C. (See Welpley, Walter W., assignor.)
Proulx, Walter, Norridgewock, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for turning shoes. 1,695,344; Dec. 18.
Pugh, John P., and W. C. Clark, Shreveport, La. Well packer. 1,695,741; Dec. 18.
Pym, Charles F., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Pulling-over machine. 1,695,560; Dec. 18.
Pym, Charles F., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for shaping uppers over lasts. 1,695,561; Dec. 18.
Pym, Charles F., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for shaping uppers over lasts. 1,695,559; Dec. 18.
Quinn, Charles H., San Francisco, Calif. Pressure and temperature change responsive furnace-control means. 1,695,606; Dec. 18.
Quisling, Sverre, Philadelphia, Pa. Vehicle brake. 1,695,901; Dec. 18.
R. C. Products Company, The. (See Evers, W. H., and Shimek, assignors.)
Rabinowitz, Louis M., New York, N. Y. Attachment for sewing machines. 1,695,607; Dec. 18.
Radio Corporation of America. (See Leathers, Ward, assignor.)
Ramsey, Edward J., New York, N. Y. Stitch-down welt-less shoe. 1,695,697; Dec. 18.
Raney, Clemma R. (See Benjamin, B. R., Raney, and Webber.)
Raney, Estell C., Columbus, Ohio. Automatically-reclosing circuit breaker. 1,695,506; Dec. 18.
Rantasa, Jakob, Vienna, Austria. Propelling arrangement on sleighs. 1,696,125; Dec. 18.
Rasmussen, Charles E. (See Jandus, H. S., and Rasmussen.)
Rasmussen, Kristian, Buffalo, N. Y. Fuel-oil-injection pump. 1,695,716; Dec. 18.
Rast, Felix Q., New York, N. Y. Coin-operative device. 1,695,439; Dec. 18.
Rawling, Francis G., Madison, Wis. Producing sodium acetate. 1,695,742; Dec. 18.
Ray, William H., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for interconnecting and testing electrical apparatus. 1,696,012; Dec. 18.
Read Machinery Co. (See Read, Otto R., assignor.)
Read, Otto R., assignor to Read Machinery Co., Inc., York, Pa. Mixing machine. 1,695,345; Dec. 18.
Reagan, William J., Lynn, Mass. French cord binder. 1,695,977; Dec. 18.
Redfield, John H., assignor to F. P. Kellogg, Denver, Colo. Gun sight. 1,695,440; Dec. 18.
Redfield, Snowden B., Easton, Pa. assignor to Ingersoll-Rand Company, Jersey City, N. J. Damper for check valves. 1,695,978; Dec. 18.
Redinger, Joseph M., Johnston, R. I. Ignition device. 1,695,507; Dec. 18.
Reese, Henry A., Glendale, assignor of one-half to E. S. Webster, Long Island City, N. Y. Smokeless receptacle. 1,695,346; Dec. 18.
Reese, Samuel S., Brooklyn, N. Y. Loose-leaf container. 1,695,441; Dec. 18.
Reeves, Robert W., Newport, R. I. Electric-lamp guard. 1,695,468; Dec. 18.
Regan, John, New Bedford, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Stopping mechanism for knitting machines. 1,695,387; Dec. 18.
Reid, James E., Moorestown, N. J. Air compressor for dental and other purposes. 1,696,013; Dec. 18.
Reid, Matthew, Vancouver, British Columbia, Canada. Tube-testing machine. 1,695,979; Dec. 18.
Reid, Robert G. (See Ricks, F., and Reid.)
Reifsnider, John M., Adrian, Mich., assignor to American Chain Company, Inc. Automobile bumper. 1,695,294; Dec. 18.
Reiter, Franz, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric and Manufacturing Company. Insulator. 1,695,858; Dec. 18.
Remick, Walter L., Philadelphia, Pa. Apparatus for the treatment of solid-bearing solutions. 1,696,014; Dec. 18.
Remington Rand Inc. (See Day, William H., assignor.)
Remington Rand Inc. (See Lasker, W. W., and Mezger, assignors.)
Republic Flow Meters Company. (See Grisdale, G. W., and Schneider, assignors.)
Resseguie, Alba A., Schaller, Iowa. Planter depth gauge. 1,695,608; Dec. 18.

Restein, Clement, Hatboro, Pa. Packing and making the same. 1,695,821; Dec. 18.
Restein, Clement, Hatboro, Pa. Packing and making the same. 1,695,822; Dec. 18.
Reynier, Edmond H., Passaic, N. J. Tentering machine. 1,695,717; Dec. 18.
Reynolds, Robert A., Detroit, Mich. Internal-combustion engine. 1,695,823; Dec. 18.
Rich, George R., Battle Creek, Mich., assignor, by mesne assignments, to Wilcox-Rich Corporation. Making valve tappets. 1,695,961; Dec. 18.
Richardson, Henry K. (See Marden, J. W., and Richardson.)
Richter, Frank, Union, N. J. Tailboard and tailboard mounting for trucks and the like. 1,695,609; Dec. 18.
Richter, Hans, Behringersdorf, near Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company. Slip-ring assembly with short-circuiting contact. 1,695,859; Dec. 18.
Ricks, Fred, and R. G. Reid, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J. Machine for sewing bags. 1,695,718; Dec. 18.
Ringler, William A., Philadelphia, Pa., assignor to Globe-Wernicke Company, Cincinnati, Ohio. Visible index-card system. 1,695,698; Dec. 18.
Ringler, William A., Philadelphia, Pa., assignor to The Globe-Wernicke Co. Record-sheet holder and sheets therefor. 1,695,699; Dec. 18.
Ritter, Ira E., Kalamazoo, Mich. Valve-spring-compressing device. 1,695,610; Dec. 18.
Robbins, Azor D., assignor to International Motor Company, New York, N. Y. Drive for motor vehicles. 1,695,296; Dec. 18.
Roberts and Schaefer Company. (See Arms, Ray W., assignor.)
Robertson, Edgar D. (See Lewis, C. B., and Robertson.)
Robertson, Martin J., assignor to American Elevator and Machine Co., Louisville, Ky. Interlock for elevators. 1,695,469; Dec. 18.
Robertson, William W., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Needle motion for Axminster looms. 1,695,388; Dec. 18.
Robertson, William W., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Pile-cutting mechanism for double-fabric looms. 1,695,389; Dec. 18.
Robinson, H. E., et al. (See Wagoner, Samuel O., assignor.)
Robinson, Herbert W., Birmingham, and D. W. Parkes, West Bromwich, England. Resolving emulsions of tar or tar oils. 1,696,057; Dec. 18.
Robinson, Wirt R., Providence, R. I. Vehicle wheel rim. 1,696,015; Dec. 18.
Roche, John, Hoboken, N. J. Dimming headlights for automobiles. 1,695,824; Dec. 18.
Rodanet, Charles H. H., Versailles, assignor to Societe Anonyme, Etablissements Ed. Jaeger, Paris, France. Register wheel. 1,695,663; Dec. 18.
Rogers, Erastus W., Durham, N. C. Stove. Des. 77,258; Dec. 18.
Rohm & Haas Company. (See Hollander, Charles S., assignor.)
Rohn, Wilhelm, Hanau-on-the-Main, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany. Electric annealing or heating furnace. 1,695,860; Dec. 18.
Rollins, Edward A., Roxbury, Mass. Temperature indicator. 1,695,295; Dec. 18.
Rolls-Royce Limited. (See Royce, Frederick H., assignor.)
Rose, James R. (See Harris, John, assignor.)
Ross, Walter C., New York, N. Y. Combination pitcher and drinking glass. Des. 77,259; Dec. 18.
Roučka, Erich, Blansko, Czechoslovakia. Regulating combustion. 1,695,470; Dec. 18.
Roučka, Erich, Blansko, Czechoslovakia. Automatic liquid-feed regulator. 1,695,471; Dec. 18.
Roučka, Erich, Blansko, Czechoslovakia. Furnace-controlling apparatus. 1,695,472; Dec. 18.
Rouge, Joseph A., Remiremont, France. Thread guide and cleaner for spinning looms and the like machines. 1,695,743; Dec. 18.
Rouse, Charles R., Swissvale, Pa., assignor to Pennsylvania Crusher Company, New York, N. Y. Cage-adjusting mechanism for crushing machinery. 1,695,562; Dec. 18.
Roussens, Peter G., Brooklyn, N. Y. Coffee urn and biggin. 1,695,347; Dec. 18.
Royce, Frederick H., West Wittering, near Chichester, assignor to Rolls-Royce Limited, Derby, England. Steering mechanism for mechanically-driven road vehicles. 1,695,664; Dec. 18.
Ruberoid Company, The. (See Abraham, Herbert, assignor.)
Rubin, Benjamin, Philadelphia, Pa. Detachable tread member. 1,696,058; Dec. 18.
Ruckert, Harry E., assignor to Sanitary Products Corporation of America, Philadelphia, Pa. Mechanism for counting and stacking articles. 1,695,982; Dec. 18.
Ruckstell Sales and Manufacturing Company. (See Hall, Elbert J., assignor.)
Rüdenberg, Reinhold, Berlin-Grunewald, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany. Oscillograph. 1,695,719; Dec. 18.
Rudman, Mark. (See Rudman, Maude, assignor.)
Rudman, Maude, assignor to M. Rudman, Indianapolis, Ind. Composite elastic top lift for shoe heels. 1,696,173; Dec. 18.
Rueppel, Walter, and L. Cone, Princeton, assignors, by mesne assignments, of one-sixth to B. M. Cone and one-sixth to G. A. Cone, Princeton, Idaho. Brake. 1,695,665; Dec. 18.
Rullison, Karl A. (See Tillotson, H. C., Rullison, and McKinley.)
Russell, Robert C., Pittsburgh, Pa. Index. 1,696,016; Dec. 18.
Russo, Ralph. (See Judd, E. S., and Russo.)
Rutter, Argyle R., Forest Hills, and W. G. Mylius, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company. Electrical measuring instrument. 1,695,861; Dec. 18.
Sachs, Joseph, Hartford, Conn. Electric service installation. 1,696,150; Dec. 18.
Saito, Haruko, Tokyo, Japan. Making bobbed-hair holders. 1,695,983; Dec. 18.
Salmon, Albert H., Twickenham Park, England. Spring support for chairs, couches, and the like. 1,696,126; Dec. 18.
Salsbury, Henry P., London, England. Lifting jack. 1,696,101; Dec. 18.
Sand Spun Patents Corporation. (See Moore, W. D., Lorling, and Bowers, assignors.)
Sanders, John C., assignor to Boeing Airplane Company, Seattle, Wash. Adjustable airplane strut terminal. 1,695,611; Dec. 18.
Sandfield, Michael, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Slot-insulating cell. 1,695,862; Dec. 18.
Sandifur, William H., Medaryville, Ind. Corn machine. 1,695,902; Dec. 18.
Sanford, Alfred F., Knoxville, Tenn. Radio apparatus. 1,695,390; Dec. 18.
Sanitary Products Corporation of America. (See Ruckert, Harry E., assignor.)
Santilli, Stefano, Canton, Ohio. Paring and slicing knife. 1,695,478; Dec. 18.
Sappenfield, Devere D., and F. M. Sheets, Kansas City, Kans. Windshield heater. 1,696,127; Dec. 18.
Sargent & Company. (See Page, Harry B., assignor.)
Saunders, Philip K., Johannesburg, Transvaal, South Africa. Piston for use in the cylinders of internal-combustion engines. 1,696,017; Dec. 18.
Savage, Lawrence F., London, England. Stereoscopic cinematography. 1,695,744; Dec. 18.
Sawyer, Frank M., Miami Beach, Fla. Window construction. 1,695,903; Dec. 18.
Schachter, Karl, Dorchester, Mass. Periodical holder. 1,695,297; Dec. 18.
Schedler, Carl W. (See Hirschkind, W., and Schedler.)
Scheel, Herbert, Maplewood, Mo., assignor, by mesne assignments, to Scheel Motors Corporation. Rotary valve. 1,695,348; Dec. 18.
Scheel Motors Corporation. (See Scheel, Herbert, assignor.)
Schellberg, Oscar B., New York, N. Y. Colonic therapy apparatus. 1,696,018; Dec. 18.
Schirmacher, Karl, and F. Stolz, Hochst-on-the-Main, and Hans Schlichenmaier and W. Krohs, Soden-on-the-Taunus, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Producing a new catalyst. 1,695,666; Dec. 18.
Schleicher, Frank J., St. Louis, Mo. Box. Des. 77,260; Dec. 18.
Schlichenmaier, Hans. (See Schirmacher, K., Stolz, Schlichenmaier, and Krohs.)
Schmid, Anton, and A. Stoll, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Continuous-current dynamo-electric machine. 1,696,102; Dec. 18.
Schmitt, Georg, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company. Tiltable furnace. 1,695,863; Dec. 18.
Schneider, Elmer. (See Grisdale, G. W., and Schneider.)
Schou, Theodor, assignor to Ideal Electric & Manufacturing Company, Mansfield, Ohio. Squirrel-cage winding. 1,695,391; Dec. 18.
Schraner, John, Tell City, Ind. Tire. 1,696,059; Dec. 18.
Schreiber, Sigmond, Pittsburgh, Pa. Direction signal. 1,695,349; Dec. 18.
Schröder, Georg, Schomberg, near Wildbad, Germany. Producing remedies from glandular organs. 1,695,612; Dec. 18.
Schröder, Hans W. C., Lubeck, assignor to A. B. Dräger, deceased, Finkenberg, Lubeck, Germany; E. Dräger, née Stange, executrix. Inhaling device for administering gases and the like. 1,695,930; Dec. 18.
Schulte, Bernard F., New York, N. Y. Store front. Des. 77,261; Dec. 18.
Schürmann, Julius, Berlin-Zehlendorf, Germany. Electric fuse. 1,695,825; Dec. 18.
Schuster, Richard, Berlin-Halensee, Germany. Making electrolytes. 1,695,667; Dec. 18.
Schweyer, Daniel H., Easton, Pa. Train-controlling apparatus. 1,695,931; Dec. 18.
Scott, Alexander C., assignor to Mexco Limited, London, England. Explosive. 1,695,932; Dec. 18.
Scovill Manufacturing Company. (See Anderson, George F., assignor.)
Scovill Manufacturing Company. (See Bennett, Morris H., assignor.)

Scovill Manufacturing Company. (See Fenton, Paul E., assignor.)
Scovill Manufacturing Company. (See Wild, Henry W., assignor.)
Searles, Volney A., Jackson, Mich., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Liquid-feeding device. 1,695,782; Dec. 18.
Sears, Roebuck and Co. (See Caron, Arthur J., assignor.)
Seelbach, K. C., Company. (See Ern, August F., assignor.)
Seibt, Georg, Berlin-Schoneberg, Germany. Electric discharge tube. 1,696,103; Dec. 18.
Seidelinger, Roble, Philadelphia, Pa. Signal means for typewriters. 1,695,392; Dec. 18.
Seifert, Charles H., Barberton, Ohio, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Casing. 1,695,298; Dec. 18.
Seibec, inc. (See Peebles, George, assignor.)
Selden Company, The. (See Jaeger, A. O., assignor, and Bertsch.)
Sessinghaus, Johannes, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company. Instrument-transformer mounting. 1,695,864; Dec. 18.
Seward, Roy R., and J. A. Booe, Indianapolis, Ind. Clip for securing wood to iron beams. 1,696,104; Dec. 18.
Shaffer, Layton S., assignor to The Byers Machine Company, Ravenna, Ohio. Portable crane. 1,696,174; Dec. 18.
Shaver, Phillip A., Puente, Calif. Child's high chair. Des. 77,279; Dec. 18.
Shawmut Engineering Company. (See Hathaway, Edgar F., assignor.)
Shee, Parke E., Lancaster, Pa. Hanger. 1,696,128; Dec. 18.
Sheets, Fred M. (See Sappenfield, D. D., and Sheets.)
Sherbondy, William E., Cleveland, Ohio. Suction cleaner. 1,695,984; Dec. 18.
Shimek, John W. (See Evers, W. H., and Shimek.)
Shindel, Harry F., assignor to Willson Products, Inc., Reading, Pa. Nose-protecting strap for goggles. 1,695,393; Dec. 18.
Shipp, Clarence C., Indianapolis, Ind. Combined box base and damper. 1,696,105; Dec. 18.
Shively, George B., Waynesboro, Pa. Safety clamp. 1,695,350; Dec. 18.
Shultz, Albert B., Buffalo, N. Y. Shock absorber. 1,695,933; Dec. 18.
Siebers, Willibald, Amsterdam, Netherlands. Electrical registering device. 1,695,668; Dec. 18.
Siemens & Halske Aktiengesellschaft. (See Arndt, Hermann, assignor.)
Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung. (See Rohn, Wilhelm, assignor.)
Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung. (See Rüdenberg, Reinhold, assignor.)
Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung. (See Steiner, L., and Gutmann, assignors.)
Sievern, Fredrick, McKeesport, Pa. Tool. 1,696,019; Dec. 18.
Silesia Verein Chemischer Fabriken Ida- und Marienhuette. (See Flemming, W., and Klein, assignors.)
Silica Gel Corporation, The. (See Patrick, Walter A., assignor.)
Silver, Myer S., Boston, Mass. Making auxiliary heel linings. 1,696,129; Dec. 18.
Simmons Company. (See Busch, Charles H., assignor.)
Simmons Company. (See Gail, John F., assignor.)
Simmons Company. (See Mathewson, Wilfred B., assignor.)
Simmons Limited. (See Mingle, W., and Jackson, assignors.)
Sincere, Frank E., Mount Vernon, N. Y. Umbrella. 1,695,826; Dec. 18.
Singelton, John A., assignor of one-fourth to L. S. Dougan, Columbus, Ohio. Frogless switch. 1,695,720; Dec. 18.
Singer Manufacturing Company, The. (See Card, Frederic M., assignor.)
Singer Manufacturing Company, The. (See Eames, George M., assignor.)
Sipe, Harry E., New York, N. Y. Signal device. 1,695,827; Dec. 18.
Sipher, Edmund F. (See Dann, W. M., Hill, and Sipher.)
Skinkle, George E., Cleveland, Ohio. Hose protector. 1,695,745; Dec. 18.
Skinner, Asa H., Watervliet, and H. J. Stambaugh, Troy, N. Y. Automatic gun. 1,695,508; Dec. 18.
Sklarek, Clifford, assignor to International Spotlight Corporation, Chicago, Ill. Dirigibly-mounted light. 1,695,509; Dec. 18.
Slick, Frank F. (See Boyd, J. K., and Slick.)
Small, Arthur E., assignor to Union Metal Products Company, Chicago, Ill. Positioning device for railway-car couplers. 1,695,351; Dec. 18.
Smith, A. L., Iron Works, The. (See Johnson, Chester W., assignor.)
Smith, Daniel W., Oak Park, Ill., assignor to International Harvester Company. Adjusting mechanism for harvester reels. 1,695,510; Dec. 18.
Smith, David F., Washington, D. C. Compressor. 1,695,721; Dec. 18.
Smith, Dennis W., Wilmette, assignor to Colborne Manufacturing Company, Chicago, Ill. Discharge mechanism for pie machines and the like. 1,695,511; Dec. 18.
Smith, George G., Littleton, Colo. System and apparatus for sewage. 1,695,669; Dec. 18.
Smith, George W., jr., assignor to The White Motor Company, Cleveland, Ohio. Internal-combustion engine. 1,696,060; Dec. 18.
Smith, Harry T., Miami, Fla. Table top. Des. 77,262; Dec. 18.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Accounting-machine demonstration chart. 1,695,700; Dec. 18.
Smith, John J., Allston, Mass. Pelt stretcher. 1,695,613; Dec. 18.
Smith, Walter A., Houston, Tex. Oil-injecting apparatus for asphalt mixers. 1,695,722; Dec. 18.
Smythe, Richard H. (See Melville, W., and Smythe.)
Snead & Company. (See MacDonald, Angus S., assignor.)
Societe Anonyme, Etablissements Ed. Jaeger. (See Rodanet, Charles H. H., assignor.)
Société "Etablissements Samga & Bavox Réunis." (See Voreaux, Paul, assignor.)
Society of Chemical Industry in Basle. (See Bots, H., and Catineau, assignors.)
Soderberg, Carl R., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Balancing machine. 1,695,904; Dec. 18.
Soley, Frank, Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Combination padlock. 1,696,061; Dec. 18.
Specht, Hans C., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Brush holder. 1,695,865; Dec. 18.
Speiser, Gottlieb, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, New York, N. Y. Automatic safety switch for induction motors. 1,695,866; Dec. 18.
Speller, Frank N., Pittsburgh, Pa. Water-deactivating apparatus. 1,696,106; Dec. 18.
Sperry, Edwin A., Tientsin, China. Apparatus for the recovery of fine values from sand. 1,695,614; Dec. 18.
Sperry, Elmer A., jr., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y. Automatic steering for dirigible craft. 1,695,615; Dec. 18.
Sperry Gyroscope Company, The. (See Mills, Chester B., assignor.)
Sperry Gyroscope Company, The. (See Morgan, T. A., and Thompson, assignors.)
Sperry Gyroscope Company, The. (See Sperry, Elmer A., jr., assignor.)
Sperry Gyroscope Company, The. (See Stark, Kimball H., assignor.)
Splitdorf Electrical Company. (See Nowosielski, Edward B., assignor.)
Spring Stopper Company. (See Glaspey, Warren E., assignor.)
Spullies, William, Maywood, N. J. Friction-guide lubricator. 1,695,985; Dec. 18.
Stacey, Charles E., London, England, assignor to Du Pont Viscoloid Company, Wilmington, Del. Comb slide, binder, or the like for ladies' hair. 1,695,986; Dec. 18.
Staedell, Felix, New York, N. Y., assignor to Francis Keil & Son, Inc. Push-button-switch construction. 1,696,151; Dec. 18.
Stambaugh, Henry J. (See Skinner, A. H., and Stambaugh.)
Stamp, Thomas H., Buffalo, N. Y. Heater for domestic boilers. 1,695,352; Dec. 18.
Standard Coupler Company. (See Goodwin, Ernest G., assignor.)
Stanforth, Richard. (See Noyes, H. T., and Stanforth.)
Staples, Horace A., Plainfield, N. J., assignor to National Electric Products Corporation, New York, N. Y. Method of and tool for packing condenser tubes or the like. 1,695,616; Dec. 18.
Star Drilling Machine Company, The. (See Krupp, Leo A., assignor.)
Star Service Hanger Company. (See Magidson, Frank, assignor.)
Stark, Kimball H., New York, assignor to The Sperry Gyroscope Company, Brooklyn, N. Y. Electron-discharge device. 1,695,746; Dec. 18.
Starr, Frank F., assignor to Delco-Light Company, Dayton, Ohio. Electrical generating system. 1,695,353; Dec. 18.
Stein, Berthold. (See Berliner, R., Stein, and Trautner.)
Steindorff, Ulrich F. L., New York, N. Y. Portable electric lamp. 1,695,987; Dec. 18.
Steiner, Leopold, Brooklyn, assignor to J. M. Ohlenbusch, New York, N. Y. Hair curler. 1,695,442; Dec. 18.
Steiner, Ludwig, Berlin, and V. Gutmann, Nuremberg, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Berlin-Siemensstadt, Germany. Sounding device for liquid levels. 1,695,701; Dec. 18.
Stephenson, Ralph W., Davenport, Iowa. Sound post for violins. 1,695,783; Dec. 18.
Sternberg, Irving C., New York, N. Y., assignor to Arctic Nu-Air Corporation, Chicago, Ill. Ventilating apparatus. 1,695,784; Dec. 18.
Stevee, Joseph J., et al. (See Keck, Max, assignor.)
Stevens, Leslie, Glen Ridge, N. J., assignor to Stevens Manufacturing Corporation, New York, N. Y. Loud-speaker diaphragm. Des. 77,263; Dec. 18.
Stevens Manufacturing Corporation. (See Stevens, Leslie, assignor.)

Stewart-Warner Speedometer Corporation. (See Manning, Fred W., assignor.)
Stewart-Warner Speedometer Corporation. (See Searles, Volney A., assignor.)
Stickney, Fernald S., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Temperature-measuring device. 1,695,807; Dec. 18.
Stoetzel, Joseph J., Bellaire, assignor to G. & G. Atlas Systems, Inc., New York, N. Y. Pressure-vacuum system of pneumatic dispatch. 1,695,785; Dec. 18.
Stoffregen, Otto G. (See Bemm, Frank W., assignor.)
Stokely, Ray L., Floral Park, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone-exchange system. 1,695,828; Dec. 18.
Stokes, Joseph, Rubber Company, (See Gunkel, Paul O., assignor.)
Stoll, Adolf. (See Schmid, A., and Stoll.)
Stollberg, Charles, assignor to American Can Company, New York, N. Y. Container. 1,695,563; Dec. 18.
Stolz, Friedrich. (See Schirmacher, K., Stolz, Schlichenmaier, and Kroha.)
Stolz, Joseph, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company. Disconnecting switch. 1,695,868; Dec. 18.
Stone, Elmer B., assignor to The American Hardware Corporation, New Britain, Conn. Hasp lock. Des. 77,264; Dec. 18.
Stone, Elmer B., assignor to The American Hardware Corporation, New Britain, Conn. Suitcase lock. Des. 77,265; Dec. 18.
Strauss, William H. (See Myers, Roy H., assignor.)
Studley, Gilbert, jr., Yarmouth, Mass. Building block. 1,695,443; Dec. 18.
Sturrock, John, assignor to International Harvester Company, Chicago, Ill. Frame-adjusting means. 1,695,512; Dec. 18.
Sullivan Machinery Company. (See Halleck, Frank A., assignor.)
Sullivan, Sarah B., Berkeley, Calif. Furring and fastening device. 1,695,934; Dec. 18.
Sutherland, Ernest E., and F. F. Forshee, Mansfield, Ohio, assignors to Westinghouse Electric and Manufacturing Company. Heating unit. 1,695,869; Dec. 18.
Swanberg, Arthur W., assignor of one-half to B. P. Higby, Youngstown, Ohio. Lubricating mixture. 1,696,152; Dec. 18.
Sweetser, George T., New York, N. Y. Collar. 1,695,474; Dec. 18.
Symington, T. H., & Son, Inc. (See Drenning, Percy R., assignor.)
Tabor, Edward P., Worcester, Mass. Auto repair light. 1,695,670; Dec. 18.
Tallei, Guido, Rome, Italy. Airship with mixed sustentation. 1,695,394; Dec. 18.
Tapman, Isaac. (See Davis, R., and Tapman.)
Taudvin, Joseph T., New York, N. Y. Suspension device for punching bags. 1,695,829; Dec. 18.
Taylor, Waverly, Inc. (See Taylor, William W., jr., assignor.)
Taylor, William W., jr., assignor to Waverly Taylor, Inc., Washington, D. C. Door knocker. Des. 77,266; Dec. 18.
Teissère, Albert and J., St. Julien, France. Process of and apparatus for engraving printing cylinders. 1,695,617; Dec. 18.
Teissère, Jean. (See Teissère, Albert and J.)
Templeton, John O., assignor to Electropure Corporation, Detroit, Mich. Pasteurizing milk. 1,695,300; Dec. 18.
Tevander, Olof N., Chicago, Ill. Bottle closure. 1,695,301; Dec. 18.
Texas Company, The. (See Collins, George B., assignor.)
Texas Company, The. (See Preston, Harrison O., assignor.)
Thomas, Charles S., San Diego, Calif. Tool-coupling device. 1,695,564; Dec. 18.
Thomas, Charles S., San Diego, Calif. Tool-coupling means. 1,695,565; Dec. 18.
Thomason, John A., Atlanta, Ga. Boiler-compound dissolver. 1,695,354; Dec. 18.
Thompson, Frank W., West Haven, Conn. Electric heater. 1,695,302; Dec. 18.
Thompson, Herbert H. (See Morgan, T. A., and Thompson.)
Thompson, Robert E., Des Moines, Iowa. Glove-display rack. 1,695,618; Dec. 18.
Thomson, Harry P. (See Hogland, Joseph L., assignor.)
Thorp, Orison H., sr., Trenton, N. J. Horse collar. 1,696,063; Dec. 18.
Thurlow, Lewis K., and J. P. Agnew, Brooklyn, N. Y.; said Thurlow assignor to said Agnew. Golf-club carrier. 1,696,062; Dec. 18.
Thurneyssen, Guy T., Paris, France. Joint and connection. 1,695,830; Dec. 18.
Tiffany, Leverett W., Winsted, Conn. Assorting machine. 1,695,395; Dec. 18.
Tillotson, Harry C., E. A. Rullison, and C. W. McKinley, assignors to The Tillotson Manufacturing Co., Toledo, Ohio. Carburetor. 1,695,671; Dec. 18.
Tillotson Manufacturing Co., The. (See Tillotson, H. C., Rullison, and McKinley, assignors.)
Tilton, Webster, St. Louis County, assignor to Gardner Motor Company, Inc., St. Louis, Mo. Motor-car body. Des. 77,267; Dec. 18.
Timken-Detroit Axle Company, The. (See Brownyer, Nelson R., assignor.)
Titanium Pigment Company. (See Barton, L. E., and Kinzie, assignors.)
Titcomb, Lee R., Brooklyn, and H. S. Ashmun, New York, N. Y. Pipe-cleaning device. 1,695,831; Dec. 18.
Titgen, Harry W., Philadelphia, Pa. Sand cleaning and reclaiming unit. 1,696,064; Dec. 18.
Tomkinson, Charles C., Plainfield, N. J., assignor to J. E. Ogden, Mountainville, N. Y. Anchor. 1,695,303; Dec. 18.
Toney, Edward, assignor to The Kawneer Company, Niles, Mich. Molding. Des. 77,268; Dec. 18.
Toney, Edward, assignor to The Kawneer Company, Niles, Mich. Molding. Des. 77,269; Dec. 18.
Toney, Edward, assignor to The Kawneer Company, Niles, Mich. Molding. Des. 77,270; Dec. 18.
Tost, Charles R., Centerdale, assignor to The Hadley Company, Providence, R. I. Cord watch bracelet. 1,695,747; Dec. 18.
Townsend, George R., Schenectady, N. Y., assignor to General Electric Company. Time-element electroresponsive device. 1,695,723; Dec. 18.
Townsend, George R., Schenectady, N. Y., assignor to General Electric Company. Time-element electroresponsive device. 1,695,748; Dec. 18.
Train Control Corporation of America. (See Clifford, Patrick J., assignor.)
Traub Company, Inc. (See Traub, Lazar M., assignor.)
Traub, Lazar M., Brookline, assignor to Traub Company Inc., Boston, Mass. Bottle cover, especially adapted for the use with milk bottles. 1,695,396; Dec. 18.
Trautmann, Otto C., New York, N. Y. Acid-concentrating chamber. 1,695,619; Dec. 18.
Trautner, Willy. (See Berliner, R., Stein, and Trautner.)
Trautwein, George F. (See Walker, C. J., and Trautwein.)
Travis, Bertram C., assignor of one-half to M. Levy, Los Angeles, Calif. Pipe-slotting machine. 1,695,513; Dec. 18.
Trent, Harley H., Bozeman, Mont. Folding handle for frying pans and the like. 1,695,724; Dec. 18.
Trew, James W., Baltimore, Md. Upholstering welt. 1,695,444; Dec. 18.
Trico Products Corporation. (See Folberth, Frederick G. and W. M., assignors.)
Trico Products Corporation. (See Oishei, John R., assignor.)
Trimble, E. M., Mfg. Co. Inc. (See Baxter, William C., assignor.)
True, Thomas A., Declo, Idaho. Seed-potato cutter. 1,695,905; Dec. 18.
Trumbull Electric Manufacturing Company. (See Getchell, Benjamin E., assignor.)
Truscon Steel Company. (See Kane, Thomas H., assignor.)
Tucker, Ralph H., Los Angeles, Calif. Exhaust sleeve for deep-well air pumps. 1,696,065; Dec. 18.
Turcotte, Louis J., Montreal, Quebec, Canada. Window construction. 1,696,130; Dec. 18.
Turkington, Victor H., Caldwell, N. J., assignor to Bakelite Corporation, New York, N. Y. Phenolic resin composition. 1,695,566; Dec. 18.
Turner, Charles P., Mishawaka, Ind. Boat-propelling device. 1,695,304; Dec. 18.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Feeler in transferrer arm. 1,695,397; Dec. 18.
Turner Tanning Machinery Company, The. (See Koeniger, Karl W., assignor.)
Tyndall, Jessie C., St. Louis, Mo. Toy balloon. Des. 77,271; Dec. 18.
Uhrig, John H., Beverly, assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J. Centrifugal pipe-casting machine and mold. 1,695,514; Dec. 18.
Uhrig, John H., Beverly, assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J. Transporting mechanism for pipe-annealing furnaces. 1,695,515; Dec. 18.
Underwood Elliott Fisher Company. (See Smith, Jesse A. B., assignor.)
Underwood, Western, Los Angeles, Calif. Street-lighting post. Des. 77,272; Dec. 18.
Union Bag and Paper Corporation. (See Gibson, J. R., and Avery, assignors.)
Union Metal Products Company. (See Graham, Leslie B., assignor.)
Union Metal Products Company. (See Small, Arthur E., assignor.)
Union Switch & Signal Company, The. (See Baughman, George W., assignor.)
United Engineering & Foundry Company. (See Biggert, Florence C., jr., assignor.)
United Shank & Findings Company. (See Dodge, William G., assignor.)
United Shoe Machinery Corporation. (See Conner, Charles E., assignor.)
United Shoe Machinery Corporation. (See Glass, P. R., and Elliott, assignors.)
United Shoe Machinery Corporation. (See Hadaway, John B., assignor.)
United Shoe Machinery Corporation. (See Mayo, Benjamin F., assignor.)
United Shoe Machinery Corporation. (See Proulx, Walter, assignor.)

United Shoe Machinery Corporation. (See Pym, Charles F., assignor.)
United Shoe Machinery Corporation. (See Ricks, F., and Reid, assignors.)
United States Cast Iron Pipe & Foundry Company. (See Uhrig, John H., assignor.)
United States Ordnance Company. (See Dawson, A. T., and Buckham, assignors.)
Universal Draft Gear Attachment Co. (See Camp, Percy B., assignor.)
Universal Tide Power Co. (See Knowlton, John A.)
Unwin, Kenneth J., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Side-slip weft detector. 1,695,398; Dec. 18.
Upton, Charles B., assignor to The French Oil Mill Machinery Co., Piqua, Ohio. Ram. 1,695,305; Dec. 18.
Vagneux, Edmond F. L., Paris, France. Wooden plug for anchoring rails on concrete supports. 1,696,131; Dec. 18.
Van Berkel, Cornelis F. M., Wassenaar, assignor to Naamlooze Vennootschap Maatschappij tot Veraardiging van Snijmachines volgens van Berkel's Patent en van andere Werktuigen, Rotterdam, Netherlands. Computing scale. 1,695,620; Dec. 18.
Van Buren, John, Brooklyn, N. Y. Wrapping and labeling machine. 1,696,020; Dec. 18.
Van Husen, Norman. (See Jandus, H. S., and Van Husen.)
Van Osdel, William J., Chicago, Ill. Clipper. 1,695,516; Dec. 18.
Vaughan, Victor G., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company. Electric air heater. 1,695,870; Dec. 18.
Vautrin, Fernand E., Cleveland, Ohio. Figure wheeled toy. 1,695,475; Dec. 18.
Veale, George W., Cleveland Heights, assignor to The Eaton Axle & Spring Company, Cleveland, Ohio. Bumper. 1,695,786; Dec. 18.
Venn, Henry L., River Forest, assignor to Century Rubber Works, Cicero, Ill. Tire. Des. 77,273; Dec. 18.
Venn, Henry L., River Forest, assignor to Century Rubber Works, Cicero, Ill. Tire. Des. 77,274; Dec. 18.
Vesley, Charles J., Portland, Oreg. Display stand. 1,695,935; Dec. 18.
Vickers Limited. (See Dawson, A. T., and Buckham, assignors.)
Vickers Limited. (See Dawson, A. T., Watt, and Perham, assignors.)
Victor Adding Machine Company. (See Garbell, Max, assignor.)
Vincent, Harry S., Ridgewood, N. J., assignor to Franklin Railway Supply Company. Locomotive construction. 1,695,399; Dec. 18.
Vining, De Quincey, Manchester, Ga. Fastener for sliding doors. 1,696,021; Dec. 18.
Vogel, Joseph A., Company. (See Vogel, J. A., and Jennings, assignors.)
Vogel, Joseph A., and A. J. Jennings, assignors to Joseph A. Vogel Company, Wilmington, Del. Flushing mechanism. 1,695,621; Dec. 18.
Voreaux, Paul, assignor of one-half to Société "Etablissements Samga & Bavox Réunis," Paris, France. Air pump. 1,695,401; Dec. 18.
Voss, William H., Davenport, Iowa. Link driving mechanism for washing machines. 1,695,400; Dec. 18.
Wachsmuth, Albert J., Muskegon, Mich. Artificial-cane-making apparatus. 1,695,622; Dec. 18.
Wagner Electric Corporation. (See Wolff, Carl H., assignor.)
Wagoner, Samuel O., Pasadena, assignor of one-half to H. E. Robinson and one-half to K. Howard, Los Angeles, Calif. Ironing board. 1,696,145; Dec. 18.
Wakefield, Walter H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft detector mounted on indicating plunger of regularly-moving transferrer arm. 1,695,402; Dec. 18.
Waldbauer, Carl A., Chicago, Ill. Garment hanger and protective device therefor. 1,695,517; Dec. 18.
Waldman, Herman C., St. Louis, Mo. Elevator-door-operating mechanism. 1,695,988; Dec. 18.
Waldron, John, Corporation. (See Case, Lynn B., assignor.)
Walker, Carl F. (See Christian, C. H., and Walker.)
Walker, Clarence J., Salina, Kans., and G. F. Trautwein, Kansas City, Mo. Automobile seat construction. 1,695,871; Dec. 18.
Wallenthin, Walfrid, assignor to The Associated Attleboro Manufacturers, Inc., Attleboro, Mass. Lighter. Des. 77,275; Dec. 18.
Wappler Electric Company. (See Fayer, Charles, assignor.)
Wappler, Reinhold H., Yonkers, assignor to American Cystoscope Makers, Inc., Long Island City, N. Y. Rearward-vision surgical telescope. 1,695,672; Dec. 18.
Warner, Clarence. (See Buvinger, G. A., and Warner.)
Watson, George D., Torrance, Calif. Cleaning casings. 1,695,749; Dec. 18.
Watson, Glenn W., Detroit, Mich. Electric lock. 1,695,518; Dec. 18.
Watt, George E. (See Dawson, A. T., Watt, and Perham.)
Wayland, Edwin M., Covesville, Va. Up-edging means for fruit sizers. 1,696,066; Dec. 18.
Webber, George R., Augusta, Me. Casing for a vending machine. Des. 77,276; Dec. 18.
Webber, William. (See Benjamin, B. R., Raney, and Webber.)
Weber, Harry M., assignor to Ellis-Foster Company, Montclair, N. J. Animal food. 1,695,567; Dec. 18.
Weber, Heinrich H., Maspeth, N. Y. Egg boiler. 1,695,832; Dec. 18.
Webster, Evan S. (See Reese, Henry A., assignor.)
Webster, Francis H., St. Louis, Mo. Rim tool. 1,695,403; Dec. 18.
Wehr, William G., East Cleveland, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio. Hoist-trolley frame. 1,695,623; Dec. 18.
Weir, G. & J., Limited. (See Weir, James G., assignor.)
Weir, James G., Cathcart, Glasgow, assignor to G. & J. Weir, Limited, Glasgow, Scotland. Power plant. 1,695,936; Dec. 18.
Weiss, Howard F., Madison, Wis., assignor, by mesne assignments, to Wood Conversion Company, Cloquet, Minn. Food product. 1,695,445; Dec. 18.
Welch, Duraine E., Upper Sandusky, Ohio. Concrete shingle block for building walls. Des. 77,277; Dec. 18.
Welch, Frank M., St. Paul, Minn. Toy game. 1,695,937; Dec. 18.
Welch, George R., assignor, by mesne assignments, to Handy Governor Corporation, Detroit, Mich. Vaporizer. 1,695,833; Dec. 18.
Welch, Walter H., Bristol, England. Rim-contracting device. Re17,167; Dec. 18.
Welpley, Walter W., Hawthorne, assignor of one-half to H. C. Proulx, Pasadena, Calif. Game apparatus. 1,695,624; Dec. 18.
Wensley, Roy J., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Pneumatically-operated station. 1,695,906; Dec. 18.
Wensley, Roy J., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electrical relay. 1,695,907; Dec. 18.
Wermeille, Werner, St.-Aubin, Switzerland. Measuring instrument. 1,696,132; Dec. 18.
Western Electric Company. (See Gorton, William S., assignor.)
Western Electric Company. (See Mathes, Robert C., assignor.)
Western Electric Company. (See Ray, William H., assignor.)
Western Wire Products Company. (See Young, Lee C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Aiken, Joseph E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Atherton, Alfred L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Brace, Porter H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Brown, Arthur L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Callsen, Albert, assignor.)
Westinghouse Electric & Manufacturing Company. (See Carpenter, Cranston H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Clark, Earl K., assignor.)
Westinghouse Electric & Manufacturing Company. (See Colby, Ora A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Conant, David J., assignor.)
Westinghouse Electric & Manufacturing Company. (See Conrad, Frank, assignor.)
Westinghouse Electric & Manufacturing Company. (See Chrichton, Leslie N., assignor.)
Westinghouse Electric and Manufacturing Company. (See Dann, W. M., Hill, and Sipher, assignors.)
Westinghouse Electric & Manufacturing Company. (See Finnen, William J., assignor.)
Westinghouse Electric & Manufacturing Company. (See Fortescue, Charles L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hanzlik, Henry J., assignor.)
Westinghouse Electric & Manufacturing Company. (See Kintner, Samuel M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Lincoln, Rollo B., assignor.)
Westinghouse Electric and Manufacturing Company. (See Little, D. G., and Davis, assignors.)
Westinghouse Electric & Manufacturing Company. (See MacFarland, Allis M., assignor.)
Westinghouse Electric & Manufacturing Company. (See McCulloch, Leon, assignor.)
Westinghouse Electric & Manufacturing Company. (See Mochel, Norman L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Ponsonby, Amos A., assignor.)
Westinghouse Electric and Manufacturing Company. (See Reiter, Franz, assignor.)
Westinghouse Electric & Manufacturing Company. (See Richter, Hans, assignor.)
Westinghouse Electric and Manufacturing Company. (See Rutter, A. R., and Myllus, assignors.)
Westinghouse Electric & Manufacturing Company. (See Sandfield, Michael, assignor.)
Westinghouse Electric & Manufacturing Company. (See Schmitt, Georg, assignor.)
Westinghouse Electric & Manufacturing Company. (See Sessinghaus, Johannes, assignor.)
Westinghouse Electric & Manufacturing Company. (See Soderberg, Carl R., assignor.)
Westinghouse Electric & Manufacturing Company. (See Specht, Hans C., assignor.)

Westinghouse Electric & Manufacturing Company. (See Speiser, Gottlieb, assignor.)
Westinghouse Electric & Manufacturing Company. (See Stickney, Fernald S., assignor.)
Westinghouse Electric & Manufacturing Company. (See Stolz, Joseph, assignor.)
Westinghouse Electric and Manufacturing Company. (See Sutherland, E. E., and Forshee, assignors.)
Westinghouse Electric & Manufacturing Company. (See Vaughan, Victor G., assignor.)
Westinghouse Electric & Manufacturing Company. (See Wensley, Roy J., assignor.)
Westinghouse Electric & Manufacturing Company. (See White, T. U., and Gardner, assignors.)
Westinghouse Electric & Manufacturing Company. (See Woodson, James C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Zworykin, Vladimir K., assignor.)
Westinghouse Lamp Company. (See Hallock, George W., assignor.)
Westinghouse Lamp Company. (See Higgins, John J., assignor.)
Westinghouse Lamp Company. (See Marden, J. W., and Richardson, assignors.)
Westinghouse Lamp Company. (See O'Neill, George D., assignor.)
Westinghouse Lamp Company. (See Whitmore, James B., assignor.)
Westlin, Carl T. (See Hymans, F., and Westlin.)
Westling Herman, Watertown, assignor to Cambridge Rubber Company, Cambridge, Mass. Overshoe. Des. 77,278; Dec. 18.
Weston, Frederick W., Chicago, Ill. Cooling-system control. 1,695,446; Dec. 18.
Westwick, John W., sr., Galena, Ill. Furnace. 1,696,067; Dec. 18.
Weyer, Elliott R., Washington, Pa. Fermentation process. 1,696,022; Dec. 18.
Wheeler, George E., assignor to The Burlington Separator Co., Burlington, Iowa. Churn. 1,695,404; Dec. 18.
Wheeler, William I., Scottville, Ill. Clutch mechanism. 1,695,355; Dec. 18.
Wheeler, William I., Scottville, Ill. Transmission mechanism. 1,695,356; Dec. 18.
White, Henry, jr., Buffalo, N. Y. Antirattler for doors and windows. 1,695,872; Dec. 18.
White Motor Company, The. (See Kinney, L. W., and Bierman, assignors.)
White Motor Company, The. (See Smith, George W., jr., assignor.)
White, Thomas U., Pittsburgh, and J. E. Gardner, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company. Supervisory control system. 1,695,908; Dec. 18.
Whiteley, Robert H., Oak Park, Ill., assignor to himself as trustee. Lubricating device. 1,695,750; Dec. 18.
Whitmore, James B., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Machine for manufacturing stems for tipless lamps. 1,695,834; Dec. 18.
Whittall, M. J., Associates. (See Bauer, Marius A., assignor.)
Wiberg, Oscar A., Finspong, Sweden. Radial-flow turbine. 1,695,751; Dec. 18.
Wiemer, Lawrence F., Burlington, Wis. Milk strainer. 1,695,306; Dec. 18.
Wilcox-Rich Corporation. (See Rich, George R., assignor.)
Wild, Henry W., assignor to Scovill Manufacturing Company, Waterbury, Conn. Lip-stick container. 1,695,625; Dec. 18.
Wilhelm, John H., Long Island, assignor to Markon Manufacturing Co., Inc., New York, N. Y. Crier. 1,695,675; Dec. 18.
Williams Alloy Products Company. (See Williams, Edward M., assignor.)
Williams, Edward M., assignor to Williams Alloy Products Company, Elyria, Ohio. Making piston rings. 1,695,787; Dec. 18.
Williams, G. H., Company. (See Buoy, Chester D., assignor.)
Williams, Harrison R., Chicago, Ill. Paper-making machine. 1,695,873; Dec. 18.
Williams, Percy Q., assignor to The Owens Bottle Company, Toledo, Ohio. Glassware-annealing leer. 1,695,788; Dec. 18.
Willners, John A., Philadelphia, assignor to Penn Utility Company, Conshohocken, Pa. Locking device for closures. 1,695,405; Dec. 18.
Willshaw, Harry, Birmingham, England, assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y. Vulcanizing apparatus. 1,695,835; Dec. 18.
Willson Products, Inc. (See Shindel, Harry F., assignor.)
Wilson, Edwin B., Forest Hills, assignor to Design Laboratories, Incorporated, New York, N. Y. Christmas-tree ornament. 1,695,307; Dec. 18.
Wilson, Prescott C., Brooklyn, N. Y. Traveling sail-securing device. 1,695,673; Dec. 18.
Wilson, Prescott C., Brooklyn, N. Y. Traveler slide for sail attachments. 1,695,674; Dec. 18.
Wilt, Frank E., Zanesville, Ohio. Gas vent for gas stoves. 1,695,308; Dec. 18.
Winkler, Louis G., assignor to Parts Corporation, Indianapolis, Ind. Countersinking holes in metal. 1,695,476; Dec. 18.
Winning, Robert K., Wauwatosa, assignor to Clum Manufacturing Co., Milwaukee, Wis. Control mechanism. 1,695,938; Dec. 18.
Winning, Robert K., Wauwatosa, assignor to Clum Manufacturing Company, Milwaukee, Wis. Dash switch. 1,695,939; Dec. 18.
Winning, Robert K., Wauwatosa, assignor to Clum Manufacturing Company, Milwaukee, Wis. Electric switch. 1,695,940; Dec. 18.
Withycombe, Robert M., Sydney, New South Wales, Australia. Artificial denture. 1,696,068; Dec. 18.
Witmer, Victor M., Milwaukee, Wis. Machine for bending bars. 1,695,836; Dec. 18.
Woldert, Alex, Company. (See Gradick, Wiley N., assignor.)
Wolf, Albert, et al. (See Wolf, Howard A., assignor.)
Wolf, Benjamin, et al. (See Wolf, Howard A., assignor.)
Wolf Brothers. (See Wolf, Howard A.)
Wolf, Elias, et al. (See Wolf, Howard A., assignor.)
Wolf, Howard, et al. (See Wolf, Howard A., assignor.)
Wolf, Howard A., Elkins Park, assignor, by mesne assignments, to H., B., E., L., and A. Wolf, copartners, doing business as Wolf Brothers, Philadelphia, Pa. Paper bag. 1,695,568; Dec. 18.
Wolf, Louis, et al. (See Wolf, Howard A., assignor.)
Wolfe, Otto L., San Francisco, Calif. Rotary chair. 1,695,725; Dec. 18.
Wolff, Carl H., assignor, to Wagner Electric Corporation, St. Louis, Mo. Short-circuiting mechanism. 1,695,789; Dec. 18.
Wolfram, Arthur, and H. Greune, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y. Bz-methyl benzanthrones and preparing the same. 1,695,622; Dec. 18.
Wood Conversion Company. (See Weiss, Howard F., assignor.)
Wood, Frank H., and F. C. Barnard, Ithaca, N. Y. Engine. 1,696,071; Dec. 18.
Wood, James A., Toledo, Ohio, assignor to Liquo-Gas Company, Erie, Pa. Burner. 1,696,069; Dec. 18.
Wood, James A., Toledo, Ohio, assignor to Liquo-Gas Company, Erie, Pa. Valve. 1,696,070; Dec. 18.
Wood, John H. P., Albany, N. Y. Automatic temperature regulator. 1,695,309; Dec. 18.
Woodhull, Samuel T., Winchester, assignor to The Amrad Corporation, Medford, Mass. Electrolytic cell. 1,695,989; Dec. 18.
Woodruff, John C., G. Bloomfield, and W. J. Bannister, assignors to Commerical Solvents Corporation, Terre Haute, Ind. Catalyst for synthetic methanol production. 1,695,447; Dec. 18.
Woodson, James C., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company. Electric furnace. 1,695,874; Dec. 18.
Woodstock Typewriter Company. (See Hokanson, Otto A., assignor.)
Woodstock Typewriter Company. (See Youngberg, Conrad D., assignor.)
Woodward-Wanger Company. (See Duryea, Paul G., assignor.)
Woolson, Lionel M., assignor to Packard Motor Car Company, Detroit, Mich. Valve-operating mechanism. 1,695,726; Dec. 18.
Worden, Ira L., Wichita, Kans. Automobile antiglare shield. 1,695,357; Dec. 18.
Worthington Pump and Machinery Corporation. See Gage, Walter C., assignor.)
Woytych, Raymond M., Fond du Lac, Wis., assignor, by mesne assignments, to The Heald Machine Company, Worcester, Mass. Work holder. 1,695,752; Dec. 18.
Wright, Bartley J., et al. (See McCollum, James H. K., assignor.)
Wright, William, assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill. Car roof. 1,695,727; Dec. 18.
Wurdack, Isabelle K., Normandy, Mo. Chair. 1,695,790; Dec. 18.
Wüstendörfer, Philipp, Furth, Germany. Somersaulting toy. 1,695,310; Dec. 18.
Yale Electric Corporation. (See Casella, Secondo L., assignor.)
Yale & Towne Manufacturing Company, The. (See Lach, Joseph S., assignor.)
Yale & Towne Manufacturing Company, The. (See Soley, Frank, assignor.)
Yeandle, William H., Torreon, Mexico, assignor to Intercontinental Rubber Company, Wilmington, Del. Recovery of rubber. 1,695,676; Dec. 18.
Yoerg, Leon M., assignor, by mesne assignments, to American Writing Paper Company, Incorporated, Holyoke, Mass. Paper-making machine. 1,695,448; Dec. 18.
Young, Charles E., Rochester, Minn. Button. 1,696,133; Dec. 18.
Young, Clarence H., Boston, Mass. Shoe stick. 1,695,702; Dec. 18.
Young, Forrest J., Torrance, Calif., assignor to The National Supply Company, Toledo, Ohio. Casing swab. 1,695,406; Dec. 18.
Young, Fred M., assignor to Perfex Corporation, Racine, Wis. Sectional radiator. 1,695,519; Dec. 18.
Young, Lee C., assignor, by mesne assignments, to Western Wire Products Company, St. Louis, Mo. Pipe-vise stand. 1,695,311; Dec. 18.

Youngberg, Conrad D., assignor to Woodstock Typewriter Company, Woodstock, Ill. Case-shift mechanism for typewriters. 1,695,520; Dec. 18.
Yunck, John A., South Orange, N. J. Leading-in wire for evacuated containers and making same. 1,695,791; Dec. 18.
Zeindlhofer, Anton, Vienna, Austria, assignor to Groove Lock Co. Inc., New York, N. Y. Receptacle. 1,695,477; Dec. 18.
Zeman, Anton, Chicago, Ill. Internal-combustion engine. 1,695,792; Dec. 18.
Zerk, Oscar, now, by judicial change of name, O. U. Zerk, Cleveland, Ohio, assignor, by mesne assignments, to Alemite Manufacturing Corporation, Chicago, Ill. Grease gun. 1,695,627; Dec. 18.
Zerk, Oscar U. (See Zerk, Oscar.)
Zuckerman, Adolph M., assignor to R. Hoe & Co., Inc., New York, N. Y. Inking mechanism for intaglio-printing machines. 1,695,793; Dec. 18.
Zworykin, Vladimir K., Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. Mercury-arc device. 1,696,023; Dec. 18.

# ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

## PATENTS WERE ISSUED ON THE 18TH DAY OF DECEMBER, 1928.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

Acid-concentrating chamber. O. C. Trautmann. 1,695,619; Dec. 18.
Acid, Production of phosphoric. A. Noble. 1,695,558; Dec. 18.
Acid synthetically, Producing hydrochloric. W. Hirschkind and C. W. Schedler. 1,695,552; Dec. 18.
Air conditioner. D. Head. 1,695,426; Dec. 18.
Air heater, Electric. V. G. Vaughan. 1,695,870; Dec. 18.
Airplane strut terminal, Adjustable. J. C. Sanders. 1,695,611; Dec. 18.
Airship with mixed sustentation. G. Tallei. 1,695,394; Dec. 18.
Alloy base for oxide-coated cathodes. G. W. Hallock. 1,695,845; Dec. 18.
Alloy steel. G. J. Comstock. 1,695,916; Dec. 18.
Anchor. C. C. Tomkinson. 1,695,303; Dec. 18.
Anchor, Concrete. W. E. Bilhorn. 1,695,523; Dec. 18.
Anchor, Rail. F. G. Freese and R. C. Paxson. 1,695,998; Dec. 18.
Annealing or heating furnace, Electric. W. Rohn. 1,695,860; Dec. 18.
Anti-rail-creeping device. J. B. Brownridge. 1,695,993; Dec. 18.
Antirattler for doors and windows. H. White, jr. 1,695,872; Dec. 18.
Areaway construction. U. J. Magill. 1,695,810; Dec. 18.
Article carrier. H. V. Chandler. 1,696,029; Dec. 18.
Assorting machine. L. W. Tiffany. 1,695,395; Dec. 18.
Auto jack. C. M. Coffman. 1,695,881; Dec. 18.
Auto repair light. E. P. Tabor. 1,695,670; Dec. 18.
Automobile body, hood, and fenders, Combination. E. W. Goodwin. Des. 77,231; Dec. 18.
Automobile instrument panel. E. N. Jacobi. Des. 77,236; Dec. 18.
Automobiles, Adjustable arm rest for. J. Hausler. 1,695,549; Dec. 18.
Axle, Change-speed. E. J. Hall. 1,695,585; Dec. 18.
Axminster tube frame. E. F. Hathaway. 1,696,163; Dec. 18.
Bag: *See*—
Garment bag. Shopping bag.
Paper bag.
Bag and food cooler, Combined water. J. W. and H. K. Day. 1,696,138; Dec. 18.
Baking pan. J. G. Jackson. 1,696,004; Dec. 18.
Balancing machine. C. R. Soderberg. 1,695,904; Dec. 18.
Banjo rim. A. D. Grover. 1,695,282; Dec. 18.
Bar for plate-glass windows, Adjustable corner. H. A. Olsson. 1,695,973; Dec. 18.
Barrel, Metallic. J. H. George. 1,696,112; Dec. 18.
Bathroom fixture. P. G. Duryea. Des. 77,228; Dec. 18.
Beam structure, Brake-. F. T. De Long. 6,195,416; Dec. 18.
Bed. W. Mingle and H. M. Jackson. 1,695,772; Dec. 18.
Billing machine, Power-driven. V. D. Mansfield. 1,695,769; Dec. 18.
Binder, French cord. W. J. Reagan. 1,695,977; Dec. 18.
Binder, Power-drive grain. B. R. Benjamin, C. R. Raney, and W. Webber. 1,695,522; Dec. 18.
Blending and sifting device, Combined. W. G. Kirchhoff. 1,696,093; Dec. 18.
Block: *See*—
Building block.
Board: *See*—
Ironing board. Paper-hanger's board.
Bobbin trimming and cleaning machine. S. L. Casella. 1,695,681; Dec. 18.
Boiler: *See*—
Egg boiler.
Book, Adjustable reference. W. A. Gordon, J. J. Murphy, and P. Perrone. 1,695,328; Dec. 18.
Bookholder. W. V. Johnson. 1,695,767; Dec. 18.
Booklet. M. A. Berns. 1,695,315; Dec. 18.
Bookrest. B. E. Dahlgren. Des. 77,224; Dec. 18.
Bolster with absorption mechanism. P. R. Drenning. 1,695,456; Dec. 18.
Boron compounds, Mining. H. Blumenberg, jr. 1,696,075; Dec. 18.
Bottle closure. O. N. Tevander. 1,695,301; Dec. 18.
Bottle cover, especially adapted for use with milk bottles. L. M. Traub. 1,695,396; Dec. 18.
Bottle, Metallic milk. T. N. Harrison, jr. 1,695,920; Dec. 18.
Bottle, Vacuum. E. Edquist. 1,695,540; Dec. 18.
Box: *See*—
Mail box.
Box. F. J. Schleicher. Des. 77,260; Dec. 18.
Box base and damper, Combined. C. C. Shipp. 1,696,105; Dec. 18.
Box board or caddy stock. J. M. Andrews. 1,695,837; Dec. 18.
Box or sealing means for compressors and the like, Stuffing. W. H. Carrier. 1,695,320; Dec. 18.
Brace: *See*—
Hat brace.
Bracelet, Cord watch. C. R. Tost. 1,695,747; Dec. 18.
Bracket: *See*—
Shade bracket. Wall-paper bracket.
Brake: *See*—
Vehicle brake.
Brake. W. Rueppel and L. Cone. 1,695,665; Dec. 18.
Brake drum. W. N. Booth. 1,695,526; Dec. 18.
Brake for conveyers. H. Armstrong. 1,696,072; Dec. 18.
Breathing device, Self-contained lung-power. A. B. Dräger. 1,695,537; Dec. 18.
Brick, Arch. R. J. Himmelright. 1,695,459; Dec. 18.
Brooch or similar article. B. Mechlovits. Des. 77,249; Dec. 18.
Buck for clothes-pressing machines. J. H. Ellis. 1,695,760; Dec. 18.
Buckle, Belt. R. F. Elchner. Des. 77,222; Dec. 18.
Buckle, Belt. E. S. Mix. Des. 77,253; Dec. 18.

Clasp: *See*—
Lingerie clasp. Watch-bracelet clasp.
Cleaner: *See*—
Suction cleaner. Windshield cleaner.
Cleaning and imparting rust-inhibitive properties to steel, Agent for. J. D. Klinger. 1,695,430; Dec. 18.
Cleaning casings. G. D. Watson. 1,695,749; Dec. 18.
Cleaning device, Pipe-. L. R. Titcomb and H. S. Ashmun. 1,695,831; Dec. 18.
Cleaning lubricant cases of engines. W. L. Osborne. 1,696,100; Dec. 18.
Clip for securing wood to iron beams. R. R. Seward and J. A. Booe. 1,696,104; Dec. 18.
Clipper. W. J. Van Osdel. 1,695,516; Dec. 18.
Clock, Savings. K. Landenberger. 1,695,593; Dec. 18.
Clutch mechanism. W. I. Wheeler. 1,695,355; Dec. 18.
Clutch mechanism for bar machines. L. A. Frayer. 1,695,954; Dec. 18.
Coat and trousers hanger, Combined. R. E. Edmundson. 1,695,580; Dec. 18.
Coating composition and making same. C. Ellis. 1,695,638; Dec. 18.
Coating machine. L. B. Case. 1,695,319; Dec. 18.
Coil, Testing. M. E. Berlowitz. 1,695,679; Dec. 18.
Coin-operative device. F. Q. Rast. 1,695,439; Dec. 18.
Collar. G. T. Sweetser. 1,695,474; Dec. 18.
Collector ring. D. J. Conant. 1,695,884; Dec. 18.
Colloid mill. A. Fraser. 1,696,083; Dec. 18.
Comb slide, binder, or the like for ladies' hair. C. E. Stacey. 1,695,986; Dec. 18.
Combustion control in steam-boiler furnaces. F. H. Linley. 1,695,431; Dec. 18.
Compensating apparatus for pantographs. J. H. Larrabee. 1,695,881; Dec. 18.
Composition of matter. H. R. Ladislaus. 1,695,693; Dec. 18.
Compressor. D. F. Smith. 1,695,721; Dec. 18.
Compressor for dental and other purposes, Air. J. E. Reid. 1,696,013; Dec. 18.
Compressor, Lubricant. O. J. Herb. 1,695,588; Dec. 18.
Compressor, Tube. H. Gollomb. 1,695,280; Dec. 18.
Compressor, Valve-spring. A. Jones. 1,696,090; Dec. 18.
Concrete reenforcement. F. M. Barton. 1,695,269; Dec. 18.
Concrete shingle block for building walls. D. E. Welch. Des. 77,277; Dec. 18.
Condenser. M. H. Bennett. 1,695,479; Dec. 18.
Condenser, Electrical. E. B. Nowosielski. 1,695,778; Dec. 18.
Constant-level device. F. O. and T. M. Ball. 1,695,705; Dec. 18.
Contact mechanism for typewriter-key punches. W. W. Lasker and C. A. Mazger. 1,695,965; Dec. 18.
Container. A. H. Dreux. 1,695,802; Dec. 18.
Container. C. Stollberg. 1,695,563; Dec. 18.
Container for lubricants. H. O. Preston. 1,695,976; Dec. 18.
Container for vehicles, Removable. D. W. Perin. 1,695,929; Dec. 18.
Container, Lip-stick. H. W. Wild. 1,695,625; Dec. 18.
Container, Loose-leaf. S. S. Reese. 1,695,441; Dec. 18.
Container, Rolling. D. W. Perin. 1,695,928; Dec. 18.
Control mechanism. R. K. Winning. 1,695,938; Dec. 18.
Control system. C. L. Fortescue. 1,695,891; Dec. 18.
Control system. A. A. Ponsonby. 1,695,856; Dec. 18.
Control system, Supervisory. T. U. White and J. E. Gardner. 1,695,908; Dec. 18.
Controlling mechanism for compressors. R. Conrader. 1,695,868; Dec. 18.
Controlling the processing of materials. M. L. Mueller. 1,695,738; Dec. 18.
Conveyer. B. F. Forsyth. 1,695,277; Dec. 18.
Cooking vessel. E. V. Coulston. 1,695,995; Dec. 18.
Cooler: *See*—
Bag and food cooler.
Cooling-system control. F. W. Weston. 1,695,446; Dec. 18.
Copying machine, Photographic-. A. W. Caps. 1,695,481; Dec. 18.
Cork facing for rolls. H. F. Busch. 1,695,317; Dec. 18.
Corn machine. W. H. Sandifur. 1,695,902; Dec. 18.
Cottage, Portable. T. Ahlborn. Des. 77,214; Dec. 18.
Counting and stacking articles, Mechanism for. H. E. Ruckert. 1,695,982; Dec. 18.
Coupler, Car. L. D. Gregg. 1,695,281; Dec. 18.
Coupler-positioning device, Car-. L. B. Graham. 1,695,329; Dec. 18.
Coupling: *See*—
Pipe coupling.
Coupling. H. S. Pierce. 1,695,343; Dec. 18.
Cover, Vehicle tire-. T. J. McCormick. 1,696,009; Dec. 18.
Crane, Portable. L. S. Shaffer. 1,696,174; Dec. 18.
Creels, Yarn-compensating device for. J. O. McKean. 1,695,814; Dec. 18.
Crib. W. C. Baxter. 1,695,571; Dec. 18.
Crier. J. H. Wilhelm. 1,695,675; Dec. 18.
Crushing machinery, Cage-adjusting mechanism for. C. R. Rouse. 1,695,562; Dec. 18.
Curing ripe olives. G. S. Hewett. 1,695,489; Dec. 18.
Curler, Hair. L. Steiner. 1,695,442; Dec. 18.
Curling device, Hair-. A. F. Godefroy. 1,695,545; Dec. 18.
Curtain guard, Window-. H. T. Huey. 1,696,089; Dec. 18.
Cutter: *See*—
Pipe cutter. Seed-potato cutter.
Cutter-guard construction. F. Catanzarite. 1,695,994; Dec. 18.
Cutters having angularly-disposed teeth, Backing-off device for. F. O. Hoagland. 1,695,762; Dec. 18.
Damper for check valves. S. B. Redfield. 1,695,978; Dec. 18.
Dash switch. R. K. Winning. 1,695,939; Dec. 18.
Decorating walls and similar surfaces, Device for. G. A. Newman. 1,696,010; Dec. 18.
Dental engine handpieces, Attachment for. W. C. Morgan. 1,695,773; Dec. 18.
Dental plate with sucker. O. Döbele. 1,696,110; Dec. 18.
Denture, Artificial. R. M. Withycombe. 1,696,068; Dec. 18.
Detector: *See*—
Weft detector.
Detector mounted on indicating plunger of regularly-moving transferrer arm, Weft. W. H. Wakefield. 1,695,402; Dec. 18.
Die sets, Drawing template for. P. H. Danly. 1,696,149; Dec. 18.
Direction signal. S. Schreiber. 1,695,349; Dec. 18.
Dirigibly-mounted light. C. Sklarek. 1,695,509; Dec. 18.
Discharge mechanism for pie machines and the like. D. W. Smith. 1,695,511; Dec. 18.
Discharge tube, Electric. G. Seibt. 1,696,103; Dec. 18.
Disconnecting switch. J. Stolz. 1,695,868; Dec. 18.
Dishwasher. R. L. Cotterill. 1,695,412; Dec. 18.
Dishwashing device. A. M. Ahern. 1,695,703; Dec. 18.
Disks or blanks for buttons or the like from irregularly-shaped pieces of material, Production or manufacture of. H. T. Noyes. 1,695,817; Dec. 18.
Disks or blanks for buttons or the like from irregularly-shaped pieces of material, Production or manufacture of. H. T. Noyes and R. Stanforth. 1,695,816; Dec. 18.
Dispenser, E. L. Merzoian. 1,695,599; Dec. 18.
Dispensing device, Gasoline. I. F. Newton. 1,695,436; Dec. 18.
Dispensing machine for bottled milk. W. J. Hauck. 1,696,035; Dec. 18.
Display and vending device. D. Lipschutz. 1,695,463; Dec. 18.
Display rack, Glove-. R. E. Thompson. 1,695,618; Dec. 18.
Display stand. P. Germain, jr. 1,695,893; Dec. 18.
Display stand. C. J. Vesley. 1,695,935; Dec. 18.
Dissolver, Boiler-compound. J. A. Thomason. 1,695,354; Dec. 18.
Distribution system. E. R. Evans. 1,696,177; Dec. 18.
Distributor, Toothpick. J. Iwanicki. 1,695,460; Dec. 18.
Door knocker. W. W. Taylor, jr. Des. 77,266; Dec. 18.
Door-mounting structure D. W. Campbell. 1,696,175; Dec. 18.
Door-operating mechanism. D. W. Campbell. 1,696,176; Dec. 18.
Door-operating mechanism, Elevator-. H. C. Waldman. 1,695,988; Dec. 18.
Door securer. S. B. Hess. 1,695,686; Dec. 18.
Door spring. E. J. Coyne. 1,695,454; Dec. 18.
Doubling apparatus. A. R. McArthur. 1,696,097; Dec. 18.

Electric furnace.
Furnace. C. H. Carpenter. 1,695,950; Dec. 18.
Furnace. S. Hill and J. Latvala. 1,695,551; Dec. 18.
Furnace. J. W. Westwick, sr. 1,696,067; Dec. 18.
Furnace-control means. Pressure and temperature change responsive. C. H. Quinn. 1,695,606; Dec. 18.
Furnace-controlling apparatus. E. Roučka. 1,695,472; Dec. 18.
Furnishings, Concealable. W. C. Fain. 1,695,370; Dec. 18.
Furniture, Metal. C. H. Busch. 1,695,411; Dec. 18.
Furring and fastening device. S. B. Sullivan. 1,695,934; Dec. 18.
Fuse, Electric. J. Schürmann. 1,695,825; Dec. 18.
Game apparatus. W. W. Welpley. 1,695,624; Dec. 18.
Garment bag. H. C. Montague. 1,695,661; Dec. 18.
Garment, Stage. E. C. Jensen. 1,695,590; Dec. 18.
Gas burner. E. A. Hall and G. E. Burns. 1,695,548; Dec. 18.
Gas economizer. J. J. Higgins. 1,695,848; Dec. 18.
Gas, Producing. L. P. Burrows. 1,695,914; Dec. 18.
Gas producing and heating appliance. J. Mackenzie. 1,695,854; Dec. 18.
Gate arrangement, Bin-. C. H. Christian and C. F. Walker. 1,695,272; Dec. 18.
Gauge: *See*—
Liquid-level gauge. Planter depth gauge.
Gauge. T. Z. Carpenter. 1,695,453; Dec. 18.
Gear, Draft. E. G. Goodwin. 1,696,115; Dec. 18.
Gear shift. J. S. Miller. 1,696,049; Dec. 18.
Generating system, Electrical. F. F. Starr. 1,695,353; Dec. 18.
Generator: *See*—
Pressure generator.
Glass furnace. W. K. Brownlee. 1,695,528; Dec. 18.
Glassware-annealing leer. P. Q. Williams. 1,695,788; Dec. 18.
Glove. A. Kyle. 1,696,095; Dec. 18.
Goblet. G. Dougherty. Des. 77,227; Dec. 18.
Goggles, Nose-protecting strap for. H. F. Shindel. 1,695,393; Dec. 18.
Golf club. P. E. Heller. 1,695,806; Dec. 18.
Golf-club carrier. L. K. Thurlow and J. P. Agnew. 1,696,062; Dec. 18.
Golf tee. A. A. Coburn. 1,696,136; Dec. 18.
Glass, Drawing sheet. L. A. Grolemund. 1,695,547; Dec. 18.
Grader and sorter, Nut. R. P. Hardy. 1,696,086; Dec. 18.
Grease cups, Making. R. P. Jacques. 1,695,496; Dec. 18.
Grease gun. O. Zerk. 1,695,627; Dec. 18.
Grease trap. J. E. Otis. 1,695,781; Dec. 18.
Grinding machine. P. Conradson. 1,695,759; Dec. 18.
Grinding machines, Plate for meat-. C. A. Laemmel. 1,695,898; Dec. 18.
Gun, Automatic. A. H. Skinner and H. J. Stambaugh. 1,695,508; Dec. 18.
Gun carriage. C. H. Froelich. 1,695,685; Dec. 18.
Gun sight. J. H. Redfield. 1,695,440; Dec. 18.
Gutter support for greenhouses, Combination. S. H. Hart. 1,696,158; Dec. 18.
Hammer, Electric. K. Olsen. 1,695,780; Dec. 18.
Hammock seat and frame, Combined. P. A. Knappe. Des. 77,242; Dec. 18.
Hand, Artificial. D. W. Dorrance. 1,695,952; Dec. 18.
Hand lamp, Electrical. E. R. Barany. 1,695,876; Dec. 18.
Handle for frying pans and the like, Folding. H. H. Trent. 1,695,724; Dec. 18.
Handling railroad ties, Device for. J. Hackworth and W. Kuehne. 1,695,960; Dec. 18.
Hanger: *See*—
Coat and trousers hanger.
Hanger. F. Gardner. 1,696,084; Dec. 18.
Hanger. P. E. Shee. 1,696,128; Dec. 18.
Hanger and protective device therefor, Garment. C. A. Waldbauer. 1,695,517; Dec. 18.
Hanging device for screens. R. S. Holcomb. 1,695,764; Dec. 18.
Harvester reels, Adjusting mechanism for. D. W. Smith. 1,695,510; Dec. 18.
Hasp lock. E. B. Stone. Des. 77,264; Dec. 18.
Hat brace. H. Martin. 1,696,047; Dec. 18.
Headlamp construction. E. C. Albright. 1,695,478; Dec. 18.
Headlight for vehicles, Automatically-dirigible. P. Cantini S. 1,695,758; Dec. 18.
Headlight, Glareless. B. Porter. 1,696,055; Dec. 18.

Headlights for automobiles, Dimming. J. Roche. 1,695,824; Dec. 18.
Hearth furnace, Rotary-. O. A. Colby. 1,695,883; Dec. 18.
Heat-accumulating system, Solar-. W. J. Harvey. 1,696,003; Dec. 18.
Heat-controlling regulator, Automatic. J. J. Lawler. 1,695,809; Dec. 18.
Heat-treating steel. L. W. Kinney and G. H. Bierman. 1,695,922; Dec. 18.
Heat treatment of metals. A. S. MacDonald. 1,695,433; Dec. 18.
Heater: *See*—
Air heater. Electrical heater.
Electric heater. Windshield heater.
Heater. H. Lange. 1,695,658; Dec. 18.
Heater for domestic boilers. T. H. Stamp. 1,695,352; Dec. 18.
Heating apparatus. J. De Ruvo. 1,696,078; Dec. 18.
Heating apparatus. M. N. Freeman. 1,696,031; Dec. 18.
Heating plug, Thermostatically-controlled. E. G. K. Anderson. 1,696,146; Dec. 18.
Heating system, Steam. L. W. Carroll. 1,696,028; Dec. 18.
Heating unit. E. E. Sutherland and F. F. Forshee. 1,695,869; Dec. 18.
Heating unit, Draw-table-. W. O. Amsler. 1,695,265; Dec. 18.
Heel linings, Making auxiliary. M. S. Silver. 1,696,129; Dec. 18.
Heels, Composite elastic top lift for shoe. M. Rudman. 1,696,173; Dec. 18.
Hide setting-out and oiling machine. K. W. Koeniger. 1,695,963; Dec. 18.
High chair, Child's. P. A. Shaver. Des. 77,279; Dec. 18.
Hinge mounting for cabinet doors. W. H. Packer. 1,696,123; Dec. 18.
Hinges, Manufacturing covered-joint. W. C. Kenyon. 1,695,288; Dec. 18.
Hoist-trolley frame. W. G. Wehr. 1,695,623; Dec. 18.
Holder and sheets therefor, Record-sheet. W. A. Ringler. 1,695,699; Dec. 18.
Holder, Automobile license-certificate. O. E. Abbey. 1,695,941; Dec. 18.
Holder, Brush-. H. C. Specht. 1,695,865; Dec. 18.
Holder, Card. M. Garbell. 1,695,278; Dec. 18.
Holder, Clothesline. J. W. Proctor. 1,696,056; Dec. 18.
Holder, Flowerpot. E. Danz. Des. 77,225; Dec. 18.
Holder for receptacles. E. R. Owen. 1,695,739; Dec. 18.
Holder, Hydraulic blank. W. Ferris. 1,696,140–1; Dec. 18.
Holder, Periodical. K. Schachter. 1,695,297; Dec. 18.
Holder, Pipe. E. Caldwell. 1,695,533; Dec. 18.
Holder, Toilet-paper. A. W. Lovejoy. 1,695,432; Dec. 18.
Holder, Toothpick. J. Draggie. 1,696,080; Dec. 18.
Holder, Tree. A. E. Davis. 1,695,275; Dec. 18.
Holder, Work. R. M. Woytych. 1,695,752; Dec. 18.
Holders, Making bobbed-hair. H. Saito. 1,695,983; Dec. 18.
Holding device, Work-. C. E. Conner. 1,695,321; Dec. 18.
Holes in metal, Countersinking. L. G. Winkler. 1,695,476; Dec. 18.
Hood, Outlet. N. Braun. 1,695,527; Dec. 18.
Hook. H. Dean. 1,696,077; Dec. 18.
Hook for roof ladders, Detachable. J. A. Johnson. 1,695,428; Dec. 18.
Horse collar. O. H. Thorp, sr. 1,696,063; Dec. 18.
Hose and tube clamp. W. G. Miller. 1,695,340; Dec. 18.
Hot plate. T. Jarboe. 1,695,711; Dec. 18.
Hub, Wheel. W. N. Booth. 1,695,525; Dec. 18.
Husker, Corn. P. F. Duerr. 1,695,324; Dec. 18.
Ignition device. J. M. Redinger. 1,695,507; Dec. 18.
Illuminating means for motor heat indicators. H. H. Boyce. 1,695,707; Dec. 18.
Implement, Combination. P. Bruni. 1,696,076; Dec. 18.
Implements, Runner attachment for farm. H. C. Georgius. 1,695,710; Dec. 18.
Index. R. C. Russell. 1,696,016; Dec. 18.
Index-card system, Visible. W. A. Ringler. 1,695,698; Dec. 18.
Index or file. W. H. Day. 1,695,322; Dec. 18.
Indicating instrument, Electrical. C. M. Adams. 1,695,264; Dec. 18.
Indicator: *See*—
Pressure indicator. Temperature indicator.
Induction meter. A. Callsen. 1,695,878; Dec. 18.
Induction motor. S. R. Bergman. 1,695,946; Dec. 18.
Induction motor, Self-starting synchronous. C. Fayer. 1,695,484; Dec. 18.
Induction motors, Forming. S. R. Bergman. 1,695,947; Dec. 18.
Inhaling device for administering gases and the like. H. W. C. Schröder. 1,695,930; Dec. 18.
Inking mechanism for intaglio-printing machines. A. M. Zuckerman. 1,695,793; Dec. 18.
Insulating cell, Slot-. M. Sandfield. 1,695,862; Dec. 18.
Insulator. W. T. Goddard. 1,695,458; Dec. 18.
Insulator. F. Reiter. 1,695,858; Dec. 18.
Interlock for elevators. M. J. Robertson. 1,695,469; Dec. 18.
Internal-combustion engine. R. Archer. 1,695,704; Dec. 18.
Internal-combustion engine. H. A. Palmer. 1,696,054; Dec. 18.
Internal-combustion engine. R. A. Reynolds. 1,695,823; Dec. 18.
Internal-combustion engine. G. W. Smith, jr. 1,696,060; Dec. 18.
Internal-combustion engine. A. Zeman. 1,695,792; Dec. 18.
Internal-combustion engine, Rotary. L. A. Dowdey. 1,695,888; Dec. 18.
Ironing board. S. O. Wagoner. 1,696,145; Dec. 18.
Jack: *See*—
Auto jack. Lifting jack.
Joint: *See*—
Rail joint.
Joint and connection. G. T. Thurneyssen. 1,695,830; Dec. 18.

Overshoe. H. Westling. Des. 77,278; Dec. 18.
Oxidation of sulphur dioxide, Catalytic. A. O. Jaeger and J. A. Bertsch. 1,695,285; Dec. 18.
Oxide, Obtaining titanic. L. E. Barton and C. J. Kinzie. 1,695,270; Dec. 18.
Oxide, Obtaining titanium. R. H. Monk. 1,695,341; Dec. 18.
Packaging paper, Apparatus and method for. W. C. Ludwig. 1,696,008; Dec. 18.
Packer, Well. J. P. Pugh and W. C. Clark. 1,695,741; Dec. 18.
Packing and making the same. C. Restein. 1,695,821–2; Dec. 18.
Packing condenser tubes or the like, Method of and tool for. H. A. Staples. 1,695,616; Dec. 18.
Packing device, Shape-retaining. B. Ikofsky and J. Josephs. 1,695,495; Dec. 18.
Padlock, Combination. F. Soley. 1,696,061; Dec. 18.
Padlock for tire carriers and the like. H. B. Page. 1,695,696; Dec. 18.
Page, Sectional. L. Cohen. 1,695,575; Dec. 18.
Pan: *See*—
Baking pan.
Paper bag. H. A. Wolf. 1,695,568; Dec. 18.
Paper-hanger's board. E. S. Judd and R. Russo. 1,695,766; Dec. 18.
Paper-making machine. H. R. Williams. 1,695,873; Dec. 18.
Paper-making machine. L. M. Yoerg. 1,695,448; Dec. 18.
Paper-making machines and apparatus therefor, Feed control of. A. Kolitsch. 1,695,380; Dec. 18.
Paper-making machinery. E. A. Öhlin and F. O. Carlsson. 1,695,972; Dec. 18.
Pasteurizing milk. J. O. Templeton. 1,695,300; Dec. 18.
Peeler, Potato. A. Eckert. 1,695,420; Dec. 18.
Pen, Fountain. N. T. Burke. 1,695,913; Dec. 18.
Pen-setting attachment, Automatic. M. E. Duncan. 1,695,457; Dec. 18.
Percolator top. W. F. Conradt. 1,695,918; Dec. 18.
Phase indicator and determining the phase relation of alternating currents. W. A. Kates. 1,695,850; Dec. 18.
Phonograph and radio apparatus, Combined. J. W. Bishop and B. C. Booth. 1,695,911; Dec. 18.
Photograph or film and producing same, Color. F. E. Ives. 1,695,284; Dec. 18.
Picture machine, Talking-moving-. L. de Forest. 1,695,414; Dec. 18.
Piercing mill. S. E. Diescher. 1,695,323; Dec. 18.
Pigments, Producing oiled. H. Grossman. 1,696,034; Dec. 18.
Pin wheel. J. S. Fridolph. Des. 77,230; Dec. 18.
Pipe coupling. H. D. Algyre. 1,696,134; Dec. 18.
Pipe cutter. G. M. Causey and M. E. Miller. 1,695,363; Dec. 18.
Pipe-vise stand. L. C. Young. 1,695,311; Dec. 18.
Pipes, Preparing. T. De La Mare. Re17,166; Dec. 18.
Piston. J. E. Diamond. 1,695,417; Dec. 18.
Piston for use in the cylinders of internal-combustion engines. P. K. Saunders. 1,696,017; Dec. 18.
Piston rings, Making. E. M. Williams. 1,695,787; Dec. 18.
Pitcher and drinking glass, Combination. W. C. Ross. Des. 77,259; Dec. 18.
Plant cover. F. Graffenberger. Des. 77,232; Dec. 18.
Planter depth gauge. A. A. Resseguie. 1,695,608; Dec. 18.
Plate reversing and cooling mechanism. C. W. Kinter and C. H. Manion. 1,695,923; Dec. 18.
Platform, Elevator. F. Hymans and C. T. Westlin. 1,695,690; Dec. 18.
Plating tank. W. E. Belke. 1,695,795; Dec. 18.
Plug for anchoring rails on concrete supports, Wooden. E. F. L. Vagneux. 1,696,131; Dec. 18.
Pneumatically-operated station. R. J. Wensley. 1,695,906; Dec. 18.
Positioning device for railway-car couplers. A. E. Small. 1,695,351; Dec. 18.
Potato cutter, Seed-. T. A. True. 1,695,905; Dec. 18.
Powdering machine, Automatic. S. Lipsius. 1,696,171; Dec. 18.

Power from tides, System for developing. J. A. Knowlton. 1,695,733; Dec. 18.
Power plant. J. G. Weir. 1,695,936; Dec. 18.
Power transmission. P. J. Cunningham. 1,695,951; Dec. 18.
Preheater for furnaces, Air. L. T. Mart. 1,695,434; Dec. 18.
Preheating the charge in shaft furnaces. A. L. Feild. 1,695,953; Dec. 18.
Pressure generator, Electric. A. Elmer. 1,695,803; Dec. 18.
Pressure indicator. K. Juhasz. 1,695,501; Dec. 18.
Pressure-vacuum system of pneumatic dispatch. J. J. Stoetzel. 1,695,785; Dec. 18.
Printing machine. G. H. Lang. 1,695,964; Dec. 18.
Printing machine, Web-. J. D. Caplinger. 1,695,271; Dec. 18.
Printing roller. J. P. Nissen, jr. 1,695,437; Dec. 18.
Propelling arrangement on sleighs. J. Rantasa. 1,696,125; Dec. 18.
Propelling device, Boat-. C. P. Turner. 1,695,304; Dec. 18.
Protecting lawns. J. H. Atwater. 1,695,942; Dec. 18.
Protective system. L. N. Crichton. 1,695,885; Dec. 18.
Protector, Hose. G. E. Skinkle. 1,695,745; Dec. 18.
Pulling-over machine. C. F. Pym. 1,695,560; Dec. 18.
Pump. C. P. Eisenhauer. 1,695,543; Dec. 18.
Pump, Air. P. Voreaux. 1,695,401; Dec. 18.
Pump and the like. E. Godillot. 1,695,650; Dec. 18.
Pump diaphragm. W. C. Carter. 1,695,534; Dec. 18.
Pump, Fuel-oil-injection. K. Rasmussen. 1,695,716; Dec. 18.
Pump, Oil-well. D. D. Burch. 1,696,135; Dec. 18.
Pump or motor. W. Ferris. 1,696,139; Dec. 18.
Pump piston. W. C. Gage. 1,695,999; Dec. 18.
Pump, Revolving-cylinder and reciprocating-piston. E. Pelich. 1,695,975; Dec. 18.
Pump, Sand-tester. G. F. Le Bus. 1,696,096; Dec. 18.
Pumping apparatus. G. A. Buvinger and C. Warner. 1,695,318; Dec. 18.
Pumping apparatus, Liquid-fuel-. W. C. Carter. 1,695,535; Dec. 18.
Pumps, Exhaust sleeve for deep-well air. R. H. Tucker. 1,696,065; Dec. 18.
Purifier, Exhaust. L. Markels. 1,695,554; Dec. 18.
Rack: *See*—
Display rack. Towel rack.
Radiator. J. W. Guimont. 1,695,959; Dec. 18.
Radiator and flywheel. C. R. Grant. 1,696,033; Dec. 18.
Radiator cover, Vehicle. M. Kishaw. Des. 77,240; Dec. 18.
Radiator guard. C. H. Gustafson. 1,695,584; Dec. 18.
Radiator, Sectional. F. M. Young. 1,695,519; Dec. 18.
Radio apparatus. A. F. Sanford. 1,695,390; Dec. 18.
Radio-phonograph combination. W. Leathers. 1,695,852; Dec. 18.
Radio system. D. G. Little and R. L. Davis. 1,695,966; Dec. 18.
Rail joint. J. K. Boyd and F. F. Slick. 1,696,108; Dec. 18.
Rail joint. E. W. Caruthers. 1,695,839; Dec. 18.
Rail tie, Concrete and steel spring. F. C. Mish. 1,695,604; Dec. 18.
Rails with removable heads, Fixation device for. J. Grohs. 1,695,730; Dec. 18.
Railway tie. J. B. Maserang. 1,695,770; Dec. 18.
Rakes, Adjusting mechanism for sweep. C. Pearson. 1,695,503–4; Dec. 18.
Ram. C. B. Upton. 1,695,305; Dec. 18.
Receptacle. A. Zeindlhofer. 1,695,477; Dec. 18.
Receptacle, Liquid. S. and V. Goldberg. 1,695,583; Dec. 18.
Receptacle, Measuring and dispensing. C. B. Doolin. 1,696,079; Dec. 18.
Receptacle, Smokeless. H. A. Reese. 1,695,346; Dec. 18.
Record, Talking-motion-picture. L. de Forest. 1,695,415; Dec. 18.
Reflector-supported light-socket mounting. F. W. C. Neuner. 1,695,465; Dec. 18.
Refrigeration and apparatus therefor. C. C. Palmer. 1,695,292; Dec. 18.
Refrigerator, Bottle-dispensing. C. A. Frick. 1,695,956; Dec. 18.
Register wheel. C. H. H. Rodanet. 1,695,663; Dec. 18.
Registering device, Electrical. W. Siebers. 1,695,668; Dec. 18.
Regulating combustion. E. Roučka. 1,695,470; Dec. 18.
Regulator: *See*—
Feed regulator. Temperature regulator.
Fluid-pressure regulator.
Relay, Engine. R. C. Leake. 1,696,170; Dec. 18.
Remedies from glandular organs, Producing. G. Schröder. 1,695,612; Dec. 18.
Renovating machine, Hat-. L. Flicker. 1,695,646; Dec. 18.
Replenishing weft in power looms, Mechanism for automatically. H. Arima. 1,695,630; Dec. 18.
Resilient wheel. J. Allen. 1,695,629; Dec. 18.
Resin composition, Phenolic. V. H. Turkington. 1,695,566; Dec. 18.
Rim-contracting device. W. H. Welch. Re17,167; Dec. 18.
Rim, Vehicle wheel. W. R. Robinson. 1,696,015; Dec. 18.
Ring: *See*—
Collector ring.
Ring. E. Ciner. Des. 77,219; Dec. 18.
Ring for a shoe heel or similar article. V. de Pascal. Des. 77,226; Dec. 18.
Roller: *See*—
Printing roller.
Roller vacuum extractor. G. Peebles. 1,695,974; Dec. 18.
Rolling wheel rims. E. G. Budd. 1,695,531; Dec. 18.
Roof. H. Abraham. Des. 77,213; Dec. 18.
Roof, Car. W. Wright. 1,695,727; Dec. 18.
Roof, Shingled. A. J. Caron. Des. 77,218; Dec. 18.
Rotary chair. O. L. Wolfe. 1,695,725; Dec. 18.
Rotors of electric motors, Producing integral bar windings in the. C. L. Daun. 1,695,799; Dec. 18.
Rubber composition containing linseed oil, Chlorinated. C. Ellis. 1,695,640; Dec. 18.
Rubber, Recovery of. W. H. Yeandle. 1,695,676; Dec. 18.
Rubber, Stabilized chlorinated. C. Ellis. 1,695,641; Dec. 18.
Rug, Ice. F. H. Field. 1,695,709; Dec. 18.
Sachet device. C. W. Knapp. Des. 77,243–4; Dec. 18.
Safety-clamp. G. B. Shively. 1,695,350; Dec. 18.
Sail attachments, Traveler slide for. P. C. Wilson. 1,695,674; Dec. 18.
Sail-securing device, Traveling. P. C. Wilson. 1,695,673; Dec. 18.
Sand, Apparatus for the recovery of fine values from. E. A. Sperry. 1,695,614; Dec. 18.
Sand cleaning and reclaiming unit. H. W. Titgen. 1,696,064; Dec. 18.
Sand wedge. E. K. MacClain. 1,695,598; Dec. 18.
Sash, Window. R. S. Kelly. 1,695,768; Dec. 18.
Sawing machine, Stone-. E. A. Chase. 1,695,364; Dec 18.
Scale, Computing. C. F. M. van Berkel 1,695,620; Dec. 18.
Scissors, Pair of. A. F. Ern. Des. 77,223; Dec. 18.
Scraper, Road. T. L. Duffield. 1,695,635; Dec. 18.
Screen A. L. Feide. 1,695,371; Dec. 18.
Screens, Side extension for window. H. R. Ellis. 1,696,081; Dec. 18.
Screw-down mechanism for rolling mills. W. C. Coryell. 1,695,274; Dec. 18.
Screw driver, Duplex. P. E. Borklund. 1,695,949; Dec. 18.
Scum trap. C. C. E. Kersten. 1,695,851; Dec. 18.
Seat: *See*—
Self-raising seat. Wagon seat.
Toilet seat.
Seat construction, Automobile. C. J. Walker and G. F. Trautwein. 1,695,871; Dec. 18.
Seesaw. T. C. Molsdale. 1,695,737; Dec. 18.
Self-raising seat. B. J. Dever. 1,695,800; Dec. 18.
Separating and cleaning mica, Method of and apparatus for. L. McCarthy. 1,695,383; Dec. 18.
Separating apparatus. C. Bourges. 1,695,362; Dec. 18.
Separating intermixed divided materials, Mechanism and process for. K. Davis. 1,695,369; Dec. 18.
Separating machine, Dry-. R. W. Arms. 1,695,569; Dec. 18.
Separation of mono- and dialkyl derivatives of aromatic amines. W. Flemming and H. Klein. 1,695,372; Dec. 18.
Serving device. B. H. Allen. 1,695,628; Dec. 18.
Sewage, System and apparatus for. G. G. Smith. 1,695,669; Dec. 18.
Sewing machines, Attachment for. L. M. Rabinowitz. 1,695,607; Dec. 18.
Sewing machines to stick a cold-process tape on shoes to reenforce same, Attachment for utilizing shoe-. B. Pashigian and H. J. Gallant. 1,695,605; Dec. 18.
Shackle, Spring. A. C. Bally. 1,695,943; Dec. 18.
Shade bracket. A. Morin. 1,696,050; Dec. 18.
Shape-retaining device for hats. S. Leff. 1,695,290; Dec. 18.
Sheet mill and making finished sheets, Continuous. F. C. Biggert, jr. 1,695,910; Dec. 18.
Shield, Automobile antiglare. I. L. Worden. 1,695,357; Dec. 18.
Shingle. J. E. Hooker. 1,696,120; Dec. 18.
Ship. J. Pasini. 1,696,053; Dec. 18.
Shock absorber. A. B. Shultz. 1,695,933; Dec. 18.
Shock-absorbing mechanism, Friction. J. F. O'Connor. 1,695,499–500; Dec. 18.
Shock loader. B. C. Berry and H. S. Dickinson. 1,695,572; Dec. 18.
Shoe and shank stiffener therefor, Turn. W. G. Dodge. 1,695,577; Dec. 18.
Shoe shank. R. Davis and I. Tapman. 1,695,996; Dec. 18.
Shoe stick. C. H. Young. 1,695,702; Dec. 18.
Shoe, Stitch-down weltless. E. J. Ramsey. 1,695,607; Dec. 18.
Shoes, Manufacture of. J. B. Hadaway. 1,695,331; Dec. 18.
Shoes, Manufacture of turn. W. G. Dodge. 1,695,578; Dec. 18.
Shopping bag. J. R. Gibson and T. M. Avery. 1,696,085; Dec. 18.
Short-circuiting mechanism. C. H. Wolff. 1,695,789; Dec. 18.
Sign. J. E. Guy. 1,696,117; Dec. 18.
Sign. D. W. Norton. Des. 77,254.; Dec. 18.
Sign, Electric. L. Goldsmith. 1,695,895; Dec. 18.
Sign, Rotatable. F. L. Hinks. 1,695,589; Dec. 18.
Signal: *See*—
Direction signal. Traffic signal.
Signal device. H. E. Sipe. 1,695,827; Dec. 18.

Signal means for typewriters. R. Seidelinger. 1,695,392; Dec. 18.
Signal system, Automatic block-. H. Arndt. 1,695,313; Dec. 18.
Signaling system. W. S. Gorton. 1,695,844; Dec. 18.
Silencer. H. P. Maxim. 1,695,435; Dec. 18.
Silencer for internal combustion or other engines, Exhaust. F. Heather. 1,695,375; Dec. 18.
Silos, Cap for. W. A. Parsons. 1,695,502; Dec. 18.
Sizers, Up-edging means for fruit. E. M. Wayland. 1,696,066; Dec. 18.
Slip-ring assembly with short-circuiting contact. H. Richter. 1,695,859; Dec. 18.
Slitting machine. F. W. Merrick. 1,695,715; Dec. 18.
Slotting machine, Pipe-. B. C. Travis. 1,695,513; Dec. 18.
Sludge from boilers, Removing. C. A. Kothé. 1,696,005; Dec. 18.
Snowplow. J. Musil and D. H. Gilchrist. 1,695,775; Dec. 18.
Sodium acetate, Producing. F. G. Rawling. 1,695,742; Dec. 18.
Sole and making the same, Inner. H. A. Ballard. 1,695,408; Dec. 18.
Sound post for violins. R. W. Stephenson. 1,695,783; Dec. 18.
Sounding device for liquid levels. L. Steiner and V. Gutmann. 1,695,701; Dec. 18.
Spark gap. E. S. Flarsheim. 1,696,157; Dec. 18.
Spark plug. C. C. Campbell. 1,695,632; Dec. 18.
Spinning frames, Wind-down mechanism for. J. H. Laliberte. 1,695,713; Dec. 18.
Spinning, twisting, and like machines, Doffing mechanism for. J. P. Mackie. 1,695,659; Dec. 18.
Sport rider. H. N. Hulander. 1,695,689; Dec. 18.
Spring: *See*—
Door spring.
Spring support for chairs, couches, and the like. A. H. Salmon. 1,696,126; Dec. 18.
Stand: *See*—
Display stand. Pipe-vise stand.
Steel and making the same. F. C. Langenberg, and M. A. Grossman. 1,695,594; Dec. 18.
Steering control for revolving excavators or cranes, Tractor. L. A. Krupp. 1,696,168; Dec. 18.
Steering for dirigible craft, Automatic. C. B. Mills. 1,695,601; Dc. 18.
Steering for dirigible craft, Automatic. E. A. Sperry, jr. 1,695,615; Dec. 18.
Steering mechanism for mechanically-driven road vehicles. F. H. Royce. 1,695,664; Dec. 18.
Stereoscopic cinematography. L. F. Savage. 1,695,744; Dec. 18.
Stoker air control. O. O. Nygaard. 1,696,144; Dec. 18.
Stoker, plunger. C. E. Harrison. 1,696,088; Dec. 18.
Stopper for india-ink bottles and the like. A. Langsner. 1,696,006; Dec. 18.
Stopping device for stretching machines, Electric. W. Dewhurst. 1,696,109; Dec. 18.
Stopping mechanism for knitting machines. J. Regan. 1,695,387; Dec. 18.
Storage-battery case. P. O. Gunkel. 1,696,001; Dec. 18.
Storage tank, Oil-. B. K. Appleman. 1,695,338; Dec. 18.
Store front. W. Melville. Des. 77,250–1; Dec. 18
Store front. W. Melville and R. H. Smythe. Des. 77,252; Dec. 18.
Store front. B. F. Schulte. Des. 77,261; Dec. 18.
Stove. E. W. Rogers. Des. 77,258; Dec. 18.
Stoves, Element support for electric. C. M. Dibble. 1,695,801; Dec. 18.
Stovepipe lock. E. Corcoran. 1,695,634; Dec. 18.
Strainer, Milk. L. F. Wiemer. 1,695,306; Dec. 18.
Strap: *See*—
Wrist-watch strap.

Telephone systems, Reception apparatus for. S. B. Allen. 1,696,024; Dec. 18.
Television apparatus. S. M. Kintner. 1,695,924; Dec. 18.
Temperature-control system. R. B. Lincoln. 1,695,853; Dec. 18.
Temperature-indicating mechanism. S. F. Barker. 1,695,838; Dec. 18.
Temperature indicator. E. A. Rollins. 1,695,295; Dec. 18.
Temperature regulator, Automatic. J. H. P. Wood. 1,695,309; Dec. 18.
Temperature-responsive device. P. H. Brace. 1,695,877; Dec. 18.
Tentering machine. E. H. Reynier. 1,695,717; Dec. 18.
Testing apparatus, Metal-. G. B. Collins. 1,695,367; Dec. 18.
Testing device, Spark-plug-. R. H. Myers. 1,695,557; Dec. 18.
Therapy apparatus, Colonic. O. B. Schellberg. 1,696,018; Dec. 18.
Thermostatic control of electric circuits and apparatus and other devices. J. G. Goodhue. 1,695,546; Dec. 18.
Thermostatic device. E. K. Clark. 1,695,879; Dec. 18.
Thimble for pipes, Plate. J. W. Farley. 1,695,645; Dec. 18.
Throttle, Reversible drill. R. A. Norling. 1,695,777; Dec. 18.
Tie: *See*—
Rail tie. Railway tie.
Tie nipper. W. W. Major and J. C. Carpenter, jr. 1,695,660; Dec. 18.
Tiltable furnace. G. Schmitt. 1,695,863; Dec. 18.
Time-element electroresponsive device. G. R. Townsend. 1,695,723; Dec. 18.
Time-element electroresponsive device. G. R. Townsend. 1,695,748; Dec. 18.
Tire. H. L. Venn. Des. 77,273–4; Dec. 18.
Tire. L. Orszag and P. Curcuruto. 1,696,051; Dec. 18.
Tire. J. Schraner. 1,696,059; Dec. 18.
Tire, Automobile. H. C. Hower. Des. 77,235; Dec. 18.
Tire shoe. F. H. Bryant. 1,695,450; Dec. 18.
Tire, Vehicle. L. W. Heefner. Des. 77,234; Dec. 18.
Toilet seat. A. J. Bruder. 1,695,530; Dec. 18.
Toilet seat, Sanitary. R. O. Harper and R. C. Hitchin. 1,696,142; Dec. 18.
Tongue and neck-yoke coupling. R. H. Hollis. 1,695,731; Dec. 18.
Tool. F. Sievern. 1,696,019; Dec. 18.
Tool, Carpenter's combination. O. W. Bane. 1,695,944; Dec. 18.
Tool, Combination. E. G. Morin, jr. 1,695,662; Dec. 18.
Tool-coupling device. C. S. Thomas. 1,695,564; Dec. 18.
Tool-coupling means. C. E. Thomas. 1,695,565; Dec. 18.
Tool, Perogen dough cutting and trimming. S. Helfgott. 1,695,427; Dec. 18.
Tool, Rim. F. H. Webster. 1,695,403; Dec. 18.
Tools, Motor-control mechanism for machine. S. W. Bath. 1,695,359; Dec. 18.
Top. E. W. Gibbs. 1,695,486; Dec. 18.
Top. J. L. Kleinman. 1,695,807; Dec. 18.
Torch, Vacuum. W. E. Johnston. 1,695,334; Dec. 18.
Totalizing mechanism. J. Harris. 1,696,087; Dec. 18.
Towel rack, Kitchen. O. Kartzmark. 1,695,429; Dec. 18.
Toy balloon. J. Tyndall. Des. 77,271; Dec. 18.
Toy building block and wall construction. F. E. and F. D. Jones. 1,695,553; Dec. 18.
Toy, Figure wheeled. F. E. Vautrin. 1,695,475; Dec. 18.
Toy game. F. M. Welch. 1,695,937; Dec. 18.
Toy, Mechanical game. J. W. Culp. 1,695,683; Dec. 18.
Toy, Somersaulting. P. Wüstendörfer. 1,695,310; Dec. 18.
Toy, Wheeled. W. N. Hill. 1,695,333; Dec. 18.
Traction increasing device for endless flexible track belts. A. Kégresse. 1,695,657; Dec. 18.
Traffic-controlling apparatus, Railway-. G. W. Baughman. 1,695,678; Dec. 18.
Traffic signal. C. W. Johnson. 1,695,712; Dec. 18.
Trailer, Auto camp. E. R. Gilkison. 1,696,113; Dec. 18.
Trailer leg, Hydraulic-controlled. C. H. Land. 1,695,497; Dec. 18.
Train-control apparatus. P. J. Clifford. 1,695,880; Dec. 18.
Train-control relay. R. C. Leake. 1,696,169; Dec. 18.
Train-controlling apparatus. D. H. Schweyer. 1,695,931; Dec. 18.

Train-controlling means by light rays. W. Blaeler. 1,695,410; Dec. 18.
Transformer. W. J. Finnen. 1,695,889; Dec. 18.
Transformer mounting, Instrument-. J. Sessinghaus. 1,695,864; Dec. 18.
Transmission and follow-up system for gyrocompasses. T. A. Morgan and H. H. Thompson. 1,695,774; Dec. 18.
Transmission, Electric-current. R. C. Mathes. 1,695,813; Dec. 18.
Transmission, Hydraulic. R. Lee. 1,695,289; Dec. 18.
Transmission-line device. C. Le G. Fortescue. 1,695,892; Dec. 18.
Transmission mechanism. W. I. Wheeler. 1,695,356; Dec. 18.
Transmission, Reversible tractor. B. T. Insley. 1,695,849; Dec. 18.
Transporting mechanism for pipe-annealing furnaces. J. H. Ubrig. 1,695,515; Dec. 18.
Trap: *See*—
Grease trap. Scum trap.
Tread member, Detachable. B. Rubin. 1,696,058; Dec. 18.
Treating fibrous material. A. L. Brown. 1,695,912; Dec. 18.
Treating glass. J. L. Drake. 1,695,538; Dec. 18.
Treating petroleum oils. W. M. Cross. 1,696,030; Dec. 18.
Treatment of solid-bearing solutions, Apparatus for the. W. L. Remick. 1,696,014; Dec. 18.
Trim stud, Floating-. P. E. Fenton. 1,696,156; Dec. 18.
Trimming machine. P. R. Hoopes. 1,695,688; Dec. 18.
Trucks and the like, Tailboard and tailboard mounting for. F. Richter. 1,695,609; Dec. 18.
Tube: *See*—
Discharge tube.
Tube base, Dispensing-. B. F. Baker. 1,696,147; Dec. 18.
Tube frame. E. F. Hathaway. 1,696,162; Dec. 18.
Tube frames, Spool-supporting means for. E. F. Hathaway. 1,696,161; Dec. 18.
Tube-testing machine. M. Reid. 1,695,979; Dec. 18.
Tuning device. L. A. Gould. 1,695,919; Dec. 18.
Turbine. H. J. Hanzlik. 1,696,002; Dec. 18.
Turbine-blade lashing. N. L. Mochel. 1,695,971; Dec. 18.
Turbine, Radial-flow. O. A. Wiberg. 1,695,751; Dec. 18.
Twisters, Stop motion for. R. A. Kearsley. 1,696,165; Dec. 18.
Typewriter. O. A. Hokanson. 1,695,492; Dec. 18.
Typewriters, Case-shift mechanism for. C. D. Youngberg. 1,695,520; Dec. 18.
Umbrella. F. E. Sincere. 1,695,826; Dec. 18.
Unwinding of yarn from bobbins, Device to prevent. E. Jacob. 1,695,378; Dec. 18.
Upholstering. H. P. Faris. 1,695,581; Dec. 18.
Urn and biggin, Coffee. P. G. Roussens. 1,695,347; Dec. 18.
Vacuum tubes, Vibration dampener for. H. E. Metcalf. 1,695,600; Dec. 18.
Valve. J. P. Crowley. 1,695,536; Dec. 18.
Valve. J. A. Wood. 1,696,070; Dec. 18.
Valve, Automatic pressure-regulator. A. K. Hinchman. 1,696,143; Dec. 18.
Valve for deep-well pumps, Relief. C. B. Lewis and E. D. Robertson. 1,696,007; Dec. 18.
Valve lifter. W. F. Hobbs and J. A. Anderson. 1,695,490; Dec. 18.
Valve mechanism. F. A. Halleck. 1,695,586; Dec. 18.
Valve-operating mechanism. L. M. Woolson. 1,695,726; Dec. 18.
Valve, Rotary. H. Scheel. 1,695,348; Dec. 18.
Valve-spring-compressing device. I. E. Ritter. 1,695,610; Dec. 18.
Valve tappets, Making. G. R. Rich. 1,695,981; Dec. 18.
Valve, Water-softener. C. P. Eisenhauer. 1,695,541; Dec. 18.
Valves, Dust cap for tire. E. G. Oakley. 1,695,818; Dec. 18.
Vanity case. E. R. Barany. 1,695,677; Dec. 18.
Vanity case. N. Kasdan and D. Pollack. 1,695,287; Dec. 18.
Vaporizer. G. R. Welch. 1,695,833; Dec. 18.
Varnish. C. Ellis. 1,695,642; Dec. 18.
Vehicle body. J. L. Hogland. 1,695,491; Dec. 18.
Vehicle brake. S. Quisling. 1,695,901; Dec. 18.
Vehicle signal arm. M. L. Goff. 1,695,843; Dec. 18.
Vehicle suspension. M. Keck. 1,695,379; Dec. 18.
Vehicles, Safety device for. A. F. A. Auchter. 1,696,073; Dec. 18.
Vending machine, Liquid. L. T. Leet. 1,695,735; Dec. 18.
Vent for gas stoves, Gas. F. E. Wilt. 1,695,308; Dec. 18.
Ventilating apparatus. A. A. Feinberg. 1,695,804; Dec. 18.
Ventilating apparatus. I. C. Sternberg. 1,695,784; Dec. 18.
Ventilation system, Forced-. T. J. Power. 1,695,820; Dec. 18.
Ventilator. J. P. Glaser. 1,696,000; Dec. 18.
Vulcanizing apparatus. H. Willshaw. 1,695,835; Dec. 18.
Wadding and bat. J. Gatti. 1,695,805; Dec. 18.
Wagon seat. P. Hyndman. 1,695,732; Dec. 18.
Wall. F. Kropf. 1,696,043; Dec. 18.
Wall and making same, Closed metallic corrugated. F. K. Bezzenberger. 1,695,948; Dec. 18.
Wall-paper bracket. W. O'Friel. 1,695,466; Dec. 18.
Wall structure, Retaining. W. H. Evers and J. W. Shimek. 1,695,997; Dec. 18.
Washing machine. F. G. Gies. 1,695,279; Dec. 18.
Washing machines, Link driving mechanism for. W. H. Voss. 1,695,400; Dec. 18.
Watch-bracelet clasp. R. King. 1,696,167; Dec. 18.
Water cooler. H. G. Cordley. Des. 77,220; Dec. 18.
Water-deactivating apparatus. F. N. Speller. 1,696,106; Dec. 18.
Water-softening apparatus. C. P. Eisenhauer. 1,695,542; Dec. 18.
Wave signaling system. J. F. Dreyer, jr. 1,695,842; Dec. 18.
Wear plate. E. G. Goodwin. 1,696,116; Dec. 18.
Weft detector, Side-slip. K. J. Unwin. 1,695,398; Dec. 18.
Welding apparatus, Automatic electric. A. M. MacFarland. 1,695,694; Dec. 18.
Welt and method of making. H. Lyon. 1,695,967; Dec. 18.
Welt, Upholstering. J. W. Trew. 1,695,444; Dec. 18.
Welting and making the same. H. Lyon. 1,695,970; Dec. 18.
Welting and method of making, Reverse. H. Lyon. 1,695,969; Dec. 18.
Welting, Beaded. H. Lyon. 1,695,968; Dec. 18.
Wheel: *See*—
Car wheel. Register wheel.
Radiator and fly wheel. Resilient wheel.
Wheel assembly. M. G. Dusseau. 1,695,579; Dec. 18.
Winding engine. J. R. McGiffert. 1,695,498; Dec. 18.
Winding, Squirrel-cage. T. Schou. 1,695,391; Dec. 18.
Window construction. F. M. Sawyer. 1,695,903; Dec. 18.
Window construction. L. J. Turcotte. 1,696,130; Dec. 18.
Window construction, Metal. J. E. Dennis. 1,695,576; Dec. 18.
Window molding for automobiles. E. R. Creamer. 1,695,682; Dec. 18.
Window opener. W. L. Kraimer. 1,695,691; Dec. 18.
Windshield cleaner. F. G. and W. M. Folberth. 1,695,326; Dec. 18.
Windshield heater. D. D. Sappenfield and F. M. Sheets. 1,696,127; Dec. 18.
Wiper, Windshield. D. Kuskin. 1,696,044; Dec. 18.
Wiper, Windshield. J. R. Olshel. 1,695,342; Dec. 18.
Wire folding and cutting machine. D. D. Huyett. 1,696,121; Dec. 18.
Wires for evacuated containers and making same, Leading-in. J. A. Yunck. 1,695,791; Dec. 18.
Wrapping and labeling machine. J. Van Buren. 1,696,020; Dec. 18.
Wrist-watch strap. A. Hadley. 1,695,487; Dec. 18.
Yoke, Eccentric. F. A. Nemec. 1,695,776; Dec. 18.

# CLASSIFICATION OF PATENTS

## ISSUE OF DECEMBER 18, 1928.

NOTE.—First number=class, second number=subclass, third number=patent number.

1— 7: 1,695,807
2— 2: 1,695,709
10: 1,695,596
14: 1,695,393
74: 1,695,590
137: 1,695,474
161: 1,696,095
185: 1,695,290
1,696,047
3— 12: 1,695,952
4— 21: 1,695,621
217: 1,695,530
247: 1,696,142
5— 77: 1,695,772
100: 1,695,571
279: 1,695,411
298: 1,695,961
1,695,962
7— 13: 1,695,944
8— 2: 1,696,164
12— 4: 1,695,559
1,695,561
9: 1,695,560
67: 1,695,344
92: 1,695,994
125: 1,695,321
142: 1,695,578
146: 1,696,129
15— 16: 1,695,984
104. 12: 1,695,831
105: 1,696,076
120: 1,695,703
253: 1,695,326
255: 1,695,342
18— 8: 1,695,455
17: 1,695,835
50: 1,695,676
54: 1,695,643
19— 143: 1,695,317
146: 1,695,805
20— 40. 5: 1,696,127
50: 1,696,130
62: 1,695,768
22— 10: 1,695,855
32: 1,695,921
43: 1,695,925
65: 1,695,514
147: 1,695,797
202: 1,695,458
203: 1,695,948
23— 156: 1,695,552
165: 1,695,558
175: 1,695,285
202: 1,695,270
1,695,341
233: 1,695,740
236: 1,695,666

# ALPHABETICAL LIST OF PATENTEES

TO WHOM

## PATENTS WERE ISSUED ON THE 25TH DAY OF DECEMBER, 1928.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Acoustic Products Company. (See Hutchison, Miller R., assignor.)

Agthe, Carl A., Zurich, assignor to the firm J. R. Geigy S. A., Basel, Switzerland. Manufacture of disperse systems. 1,696,374; Dec. 25.

Ahlm, Charles E. F., assignor to Automotive Patent Holding Company, Cleveland, Ohio. Transmission gearing. 1,696,178; Dec. 25.

Ahlm, Charles E. F., assignor to Automotive Patent Holding Company, Cleveland, Ohio. Gear and clutch mechanism. 1,696,179; Dec. 25.

Ahlqvist, Harald, Rye, N. Y. Treating filter liquor. 1,696,224; Dec. 25.

Air Reduction Company. (See Van Nuys, Claude C., assignor.)

Aktiengesellschaft Brown, Boveri & Cie. (See Brown, Eric, assignor.)

Aldrich, Carl G., Medford, Mass. Making leather cases. 1,696,788; Dec. 25.

Aldrich, Lester K., Sidney, Ohio. Convertible single or double rotary feeder. 1,696,705; Dec. 25.

Alemite Manufacturing Corporation. (See Manzel, Charles W., assignor.)

Allen, Albert B., Santa Monica, Calif. Fastener. 1,696,467; Dec. 25.

Allen, Charles J., Moorestown, N. J., assignor to S. L. Allen & Co., Inc. Seeding implement. 1,696,562; Dec. 25.

Allen, S. L., & Co. (See Allen, Charles J., assignor.)

Alexander, Samuel, New York, N. Y. Scraper. 1,696,561; Dec. 25.

Alexander, William L. (See Haynes, H. S., and Alexander.)

Allis-Chalmers Manufacturing Company. (See Newhouse, Ray C., assignor.)

Alschuler, Ernest, St. Louis, Mo., assignor of one-half to National Carbon Company, Inc., and one-half to H. Hyman, New York, N. Y. Battery hand lamp. 1,696,513; Dec. 25.

American Brake Materials Corporation. (See Thompson, James S., assignor.)

American Cable Company. (See Scott, Rumsey W., assignor.)

American Chain Company. (See Reyburn, John R., assignor.)

American Dairy Supply Company. (See Norwood, Harry G., assignor.)

American Flyer Manufacturing Company. (See Cuff, James E., assignor.)

American Fork & Hoe Company, The. (See Keough, Robert E., assignor.)

American Logging Tool Co. (See Latta, William, assignor.)

American Magnesium Corporation. (See Wood, Robert T., assignor.)

American Motor Body Corporation, The. (See Hansen, C. T., and Bell, assignors.)

American Patents Development Corporation. (See Slate, Thomas B., assignor.)

American Pulverizer Company. (See Teipel, Joseph, assignor.)

American Rolling Mill Company, The. (See Tytus, John B., assignor.)

American Sheet and Tin Plate Company. (See McArthur, Arthur R., assignor.)

American Telephone and Telegraph Company. (See Roberts, Leland C., assignor.)

Anchor Cap and Closure Corporation. (See Podel, Abraham, assignor.)

Anchor Cap & Closure Corporation. (See Scofield, Edgar, assignor.)

Andersen, Lauritz W., Waterbury, Conn. Clinch collar for shades. 1,696,875; Dec. 25.

Anderson, Clarence M., Oklahoma City, Okla. Prescription-filing cabinet and the like. 1,696,375; Dec. 25.

Andux y Perez, Pedro C., Habana, Cuba. Automatic radio telegraphic transmitter. 1,696,779; Dec. 25.

Anson, Edward D., Willamette, Oreg. Flower-vase holder. Des. 77,280; Dec. 25.

Anthony, David S., San Antonio, Tex. Burr for gristmills. 1,696,514; Dec. 25.

Archer, Capelle H., Tampa, Fla. Wheel-aligning gauge. 1,696,290; Dec. 25.

Arcus, James S., and R. E. Beaubien, Chicago, Ill.; said Beaubien assignor to said Arcus. Ticket-issuing machine. 1,696,180; Dec. 25.

Armstrong, Arthur N., assignor of one-half to H. J. Sommers, Norwich, N. Y. Striker attachment for animal traps. Re17,174; Dec. 25.

Ashley, Charles H., and L. H. Philleo, Los Angeles, Calif. Towel holding and dispensing cabinet. 1,696,184; Dec. 25.

Athon, Walter C., Lavoye, Wyo. Toothbrush holder. 1,696,706; Dec. 25.

Atkinson, Jerome T., Bayside, N. Y. Stabilizer for bed-springs. 1,696,291; Dec. 25.

Aulson, Philip G., Salem, Mass. Frame for leather-spraying devices. 1,696,185; Dec. 25.

Automotive Patent Holding Company. (See Ahlm, Charles E. F., assignor.)

Ayars, Charles H., Salem, N. J. Can-filling machine. 1,696,376; Dec. 25.

Babcock & Wilcox Company, The. (See Innes, William, assignor.)

Bacon, Charles C., assignor to Ross Tacony Crucible Company, Philadelphia, Pa. Ladle stopper. 1,696,876; Dec. 25.

Bailey, Edwin W. M., Amesbury, Mass. Sliding-window-glass support. 1,696,588; Dec. 25.

Bailey, Edwin W. M., Amesbury, Mass. Window-glass channel. 1,696,589; Dec. 25.

Baker, William H., Montreal, Quebec, Canada. Combined gramophone and motion-picture apparatus. 1,696,831; Dec. 25.

Ballou, Virgil, Des Moines, Iowa. Furnace. 1,696,538; Dec. 25.

Ballowe, Leigh M., assignor to T. G. Smith, Dallas, Tex. Fastening and releasing means for document receptacles. 1,696,181; Dec. 25.

Bandur, Adolph F., Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Conductor for the transmission of electrical energy and producing the same. 1,696,262; Dec. 25.

Bane, Ferman L., Cincinnati, Ohio. Combined measuring and drafting instrument. 1,696,832; Dec. 25.

Barber Asphalt Company, The. (See Barnes, Eugene L., assignor.)

Barden, Herbert W. (See Settles, Simon G., assignor.)

Barennes, Robert, Bordeaux, France. Composing apparatus for type-setting machines. 1,696,515; Dec. 25.

Barnard, Davis, Apple Valley, Calif. Pump plunger. 1,696,563; Dec. 25.

Barnes, Eugene L., Watertown, N. Y., assignor to The Barber Asphalt Company, Philadelphia, Pa. Compressor. 1,696,564; Dec. 25.

Barney, Edwin E., New Rochelle, assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,696,789; Dec. 25.

Barney, William R., assignor to W. C. Norris, Tulsa, Okla. Pumping jack. 1,696,182; Dec. 25.

Bartlett-Collins Company. (See Bartlett, Edward E., assignor.)

Bartlett, Edward E., assignor to Bartlett-Collins Company, Sapulpa, Okla. Tumbler. Des. 77,281; Dec. 25.

Bassett, Gerald L., assignor to The Conklin Pen Company, Toledo, Ohio. Clip for pencils and the like. 1,696,183; Dec. 25.

Batchelder, Charles H., North Attleboro, Mass. Clasp for bracelets or the like. 1,696,292; Dec. 25.

Bates Expanded Steel Truss Co. (See Bates, Walter A., signor.)

Bates, Walter A., assignor to Bates Expanded Steel Truss Co., Chicago, Ill. Rolled truss metal shape and producing same. 1,696,833; Dec. 25.

Bauer, Carl, assignor to Doetsch & Bauer Company, Chicago, Ill. Settee frame or similar article. Des. 77,282; Dec. 25.

Bauer, Carl, assignor to Doetsch & Bauer Company, Chicago, Ill. Settee frame or similar article. Des. 77,283; Dec. 25.

Bauer, Carl, assignor to Doetsch & Bauer Company, Chicago, Ill. Settee frame or similar article. Des. 77,284; Dec. 25.

Bauer, Carl, assignor to Doetsch & Bauer Company, Chicago, Ill. Settee frame or similar article. Des. 77,285; Dec. 25.

Bauer, Carl, assignor to Doetsch & Bauer Company, Chicago, Ill. Settee frame or similar article. Des. 77,286; Dec. 25.

Baum, Isaac A., Chicago, Ill. Metal trim. 1,696,749; Dec. 25.

Beaubien, Robert E. (See Arcus, J. S., and Beaubien.)

Becker, Georg F., Bremen, Germany. Connecter for incandescent lamps. 1,696,603; Dec. 25.

Bell, Alfred B. (See Hansen, C. T., and Bell.)

Bell, George W., assignor to Messrs. Getty and Scott Limited, Galt, Ontario, Canada. Spike base for athletic shoes. 1,696,619; Dec. 25.

Bell Telephone Laboratories, Incorporated. (See Buckley, Oliver E., assignor.)

Bell Telephone Laboratories, Incorporated. (See Dunham, Bert G., assignor.)

Bell Telephone Laboratories, Incorporated. (See Hague, Alfred B., assignor.)
Bell Telephone Laboratories, Incorporated. (See Johnson, Kenneth S., assignor.)
Bell Telephone Laboratories, Incorporated. (See Johnson, L. H., and Hague, assignors.)
Bell Telephone Laboratories, Incorporated. (See Morton, Edmund R., assignor.)
Bell Telephone Laboratories, Incorporated. (See Williams, Samuel B., assignor.)
Bendix Brake Company. (See Lyman, Kenneth E., assignor.)
Bercloux, Eugene, New York, N. Y. Mouthpiece for musical wind instruments. 1,696,516; Dec. 25.
Berggren Engineering Corporation. (See Berggren, Gustaf, assignor.)
Berggren, Gustaf, assignor to Berggren Engineering Corporation, Brooklyn, N. Y. Rotary pump or compressor. 1,696,517; Dec. 25.
Bernard, George. (See Halfley, George H., assignor.)
Bernheimer, Alfred G., New York, N. Y. Watchcase. Des. 77,287; Dec. 25.
Bernitz Furnace Appliance Company. (See Nygaard, Oscar, assignor.)
Bernitz Furnace Appliance Company. (See Nygaard, O., and Snow, assignors.)
Bertsch, Johann A. (See Jaeger, A. O., and Bertsch.)
Bethlehem Steel Company. (See Lehr, Charles E., assignor.)
Bethlehem Steel Company. (See McCarty, Richard J., jr., assignor.)
Bierce, Harold E., Pasadena, Calif. Decolorizing vegetable oils. 1,696,338; Dec. 25.
Bird, Lester F., Irvington, N. J., assignor to General Electric Company. Signaling system. 1,696,590; Dec. 25.
Birdsey, Charles R., Hinsdale, assignor to The United States Gypsum Co., Chicago, Ill. Plaster-board bundle. 1,696,877; Dec. 25.
Birge, M. H., & Sons Co. (See Burchfield, Charles E., assignor.)
Bishop & Babcock Manufacturing Company, The. (See Palm, John V. O., assignor.)
Bishop & Babcock Manufacturing Company, The. (See Sebring, James A., assignor.)
Black-Clawson Company, The. (See Martindale, Homer D., assignor.)
Black, John C., Los Angeles, and W. H. Low, Long Beach, assignors to Pan American Petroleum Company, Los Angeles, Calif. Purifying hydrocarbons. 1,696,377; Dec. 25.
Blakely, Phylander, Piano, Tex. Double-row stalk cutter. 1,696,186; Dec. 25.
Blanchard, Julius M., Oak Park, assignor of one-half to J. M. Mabbs, Chicago, Ill. Shipping box. 1,696,341; Dec. 25.
Bland, John, Tinton, S. Dak. Screen. Re17,173; Dec. 25.
Blieberger, Charles, New York, N. Y. Acoustic diaphragm. 1,696,565; Dec. 25.
Bliss, Elmer J., Boston, assignor to Regal Shoe Company, Whitman, Mass. Display sign. 1,696,878; Dec. 25.
Blood, Edwin J., Chicago, Ill. Cannon. 1,696,339; Dec. 25.
Blood, Harold L., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Thread-forming mechanism. 1,696,225; Dec. 25.
Bloss, Richard R., assignor to The International Derrick & Equipment Company, Columbus, Ohio. Bull-wheel structure. 1,696,664; Dec. 25.
Blume, Louis F., Pittsfield, Mass., assignor to General Electric Company. System of distribution. 1,696,591; Dec. 25.
Bohlman, Ernest A., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Distributor. 1,696,340; Dec. 25.
Bohn Aluminum and Brass Corporation. (See Eggenweiler, C. W., and Fiegel, assignors.)
Bonglovanni, Antoni, assignor of one-fourth to J. Fridman, Barnesboro, and one-fourth to S. I. Callet and one-fourth to T. J. Callet, Johnstown, Pa. Shoe-lace-fastening device. 1,696,790; Dec. 25.
Bonglovanni, Antonio, assignor of one-fourth to J. Fridman Barnesboro, and one-fourth to S. I. Callet, Johnstown, Pa. Shoe-lace-fastening device. 1,696,791; Dec. 25.
Bonin, Annie P., et al. (See Laplerre, G. J., and Gilligan, assignors.)
Bonine, Charles E., Melrose Park, Pa. Radio apparatus. 1,696,263; Dec. 25.
Booth, David N., New York, N. Y. Vehicle tire. 1,696,707; Dec. 25.
Borden Company, The. (See Ward, William C., assignor.)
Bourne-Fuller Company, The. (See Newpher, Charles F., assignor.)
Boving, Jens O., Westminster, London, England. Apparatus for raising liquids. 1,696,792; Dec. 25.
Bowen, Carl R., Wilmington, Calif. Air brake. 1,696,665; Dec. 25.
Bowman, Fred E., and G. F. Cameron, Anchorage, Alaska. Iron holder. 1,696,518; Dec. 25.
Bowman, Lee M., assignor of one-third to J. B. Primm and one-third to T. L. Shepherd, Los Angeles, Calif. Device for commercial radio reception and operation. 1,696,519; Dec. 25.
Boyle, Leo V., et al. (See Laplerre, G. J., and Gilligan, assignor.)
Bradburn, Curtis E., Garden City, Kans. Jack. 1,696,520; Dec. 25.
Bradner, Donald B., Gordon Heights, Del. Purification of organic compounds. 1,696,539; Dec. 25.
Brady, Charles T., Detroit, Mich. Illuminated hand glass. Des. 77,288; Dec. 25.
Brady, Charles T., Detroit, Mich. Desk unit magnifying lamp. Des. 77,289; Dec. 25.
Brasseur, Ernest J., assignor to A. B. Dick Company, Chicago, Ill. Static-discharge device for rotary stencil duplicating machines. 1,696,750; Dec. 25.
Brauer Bros., Inc. (See Brauer, Edward J., assignor.)
Brauer, Edward J., St. Louis, Mo., assignor to Brauer Bros., Inc. Holster. 1,696,708; Dec. 25.
Brauer, Walter, Seminole, Okla. Hydraulic casing hook. 1,696,378; Dec. 25.
Brayman, Benjamin. (See Zelkowitz, Nathan and H. L., and Brayman.)
Breister, Albert J. (See Sander, H. J., and Breister.)
Bremer, Frederick G., assignor to United States Chain & Forging Company, Pittsburgh, Pa. Automobile bumper. 1,696,187; Dec. 25.
Brewer, Hazel E., Seattle, Wash. Combination garment. 1,696,620; Dec. 25.
Bridges, John R. (See Crawford, G. C., and Bridges.)
Bridgewater, George H., Maryville, and C. M. Goben, Collinsville, Ill. Door-operating mechanism for swinging doors of garages and the like. 1,696,379; Dec. 25.
Brodfuehrer, Bismarck B., B. W. Freeman, and C. A. Jester, Cincinnati, Ohio, assignors, by mesne assignments, to said Freeman. Bed for shoe ornamenting machinery. 1,696,834; Dec. 25.
Brophy, Gerald R. (See Hegel, G. W., and Brophy.)
Brower, William M., Palo Alto, assignor to Federal Telegraph Company, San Francisco, Calif. Instrument control. 1,696,380; Dec. 25.
Brown, Albert C., Chicago, Ill. Soap dish. 1,696,666; Dec. 25.
Brown, E. C., Company, The. (See Brown, Edward C., assignor.)
Brown, Edward C., assignor to The E. C. Brown Company, Rochester, N. Y. Atomizer. 1,696,428; Dec. 25.
Brown, Eric, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. Machine bearing. 1,696,667; Dec. 25.
Brown, George W., Bloomington, Ill. Buckle. 1,696,293; Dec. 25.
Brown-Lipe Gear Company. (See Carhart, George C., assignor.)
Brueck, Theodore M., assignor to Ilex Optical Company, Rochester, N. Y. Photographic shutter. 1,696,264; Dec. 25.
Brump, Herbert L., assignor to The Day-Fan Electric Company, Dayton, Ohio. Centrifugal switch. 1,696,621; Dec. 25.
Buckeye Traction Ditcher Company, The. (See George, Charles L., assignor.)
Buckley, Oliver E., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Acoustic device. 1,696,265; Dec. 25.
Budd, Edward G., Manufacturing Company. (See Ledwinka, Joseph, assignor.)
Buhr, Joseph F., Detroit, Mich. Multiple-spindle drill head. 1,696,468; Dec. 25.
Buiman, Elvah O., Grand Rapids, Mich. Sectional display device. 1,696,342; Dec. 25.
Bunting, James H., Clifton, N. J., assignor to Susquehanna Silk Mills. Textile fabric. Des. 77,290; Dec. 25.
Bunting, James H., Clifton, N. J., assignor to Susquehanna Silk Mills. Textile fabric. Des. 77,291; Dec. 25.
Burchfield, Charles E., assignor to M. H. Birge & Sons Co., Buffalo, N. Y. Wall paper. Des. 77,292; Dec. 25.
Burdick, Frederick E., New London, Conn. Making edible rolls. 1,696,343; Dec. 25.
Burghard, Edward G. (See von Sydow, Rudolf W., assignor.)
Burket, Russell C., Pottsville, Pa. Attachment for concrete mixers. 1,696,751; Dec. 25.
Burnett, Walter E., Los Angeles, Calif. Rotary hydraulic bath brush. 1,696,835; Dec. 25.
Burnham Chemical Company. (See Burnham, George B., assignor.)
Burnham, George B., assignor to Burnham Chemical Company, Reno, Nev. Evaporating brines. 1,696,542; Dec. 25.
Bushyager, Lee R., Hasbrouck Heights, N. J. Power transmission. 1,696,836; Dec. 25.
Button, William S., Riverside, Calif., assignor to Riverside Sheet Metal Works. Orchard heater. 1,696,668; Dec. 25.
Byerlein, Arthur A., Detroit, Mich. Toggle press. 1,696,622; Dec. 25.
Byerlein, Erle J., Wauwatosa, Wis. Foundry jolt squeezer. 1,696,669; Dec. 25.
Byerlein, Erle J., Wauwatosa, Wis. Method of and machine for casting. 1,696,670; Dec. 25.
Byron Jackson Pump Co. (See Hollander, Aladar, assignor.)
C. G. Spring & Bumper Company, The. (See Jandus, Herbert S., assignor.)
C. G. Spring & Bumper Company, The. (See Jandus, H. S., and Reed, assignors.)
Callet, Samuel E., et al. (See Bonglovanni, Antonio, assignor.)

Callet, Tobias J., et al. (See Bonglovanni, Antonio, assignor.)
Cameron, Guy F. (See Bowman, F. E., and Cameron.)
Campbell, David N. E., Atlantic City, N. J. Powdered-medicament dispenser for lung treatments. 1,696,469; Dec. 25.
Campbell, Thomas P., Denver, Colo. Treating iron ores. 1,696,188; Dec. 25.
Cantzler, Adolf. (See Günther, F., and Cantzler.)
Capell, William H., Aberdeen, Md. Retractable landing light. 1,696,521; Dec. 25.
Caps, Arthur W., Kansas City, Mo., assignor to Photostat Corporation, Providence, R. I. Photographic-copying machine. 1,696,381; Dec. 25.
Caracristi, Virginius Z., Bronxville, N. Y. Operating means for speed indicators or recorders for locomotives. 1,696,470; Dec. 25.
Carbide & Carbon Chemicals Corporation. (See Massa, Robert F., assignor.)
Carbide & Carbon Chemicals Corporation. (See Young, Charles O., assignor.)
Carhart, George C., assignor to Brown-Lipe Gear Company, Syracuse, N. Y. Motion-transmitting mechanism. 1,696,623; Dec. 25.
Carless, Thomas, Haledon, N. J. Snow-removing machine. 1,696,592; Dec. 25.
Carlson, Nelson A., assignor to Erie Meter Systems, Inc., Erie, Pa. Safety device for gasoline filling stations. 1,696,540; Dec. 25.
Carlson, Nelson A., assignor to Erie Meter Systems, Inc., Erie, Pa. Controlling mechanism for gasoline tanks. 1,696,541; Dec. 25.
Carroll, Robert A. (See Elliott, H. L., and Carroll.)
Carstens, Hans. (See Müller, W. J., Carstens, and Drucker.)
Carter, Emmett F., Schenectady, N. Y., assignor to General Electric Company. High-frequency duplex signaling system. 1,696,566; Dec. 25.
Carter, Emmett F., Schenectady, N. Y., assignor to General Electric Company. High-frequency signaling system. 1,696,593; Dec. 25.
Carter, Emmett F., Schenectady, N. Y., assignor to General Electric Company. High-frequency duplex signaling system. 1,696,595; Dec. 25.
Carter, Ernest, Melrose Highlands, Mass. Humidifier for internal-combustion engines. 1,696,752; Dec. 25.
Cartun, Paul O., Cleveland Heights, Ohio, assignor to General Electric Company. Electric incandescent lamp. 1,696,594; Dec. 25.
Castagna, Cesare F., Hurley Wis. Window display device. 1,696,189; Dec. 25.
Celanese Corporation of America. (See Dreyfus, H., and Haney, assignors.)
Celanese Corporation of America. (See Skertchly, William P., assignor.)
Central Union Trust Company of New York, trustee. (See Liddell, Robert P. F., assignor.)
Chapman Self Locking Nut Company, trustees. (See Emery, I. C., asignor.)
Charlebois, Joseph P. C., Toronto, Ontario, Canada. Headlight. 1,696,793; Dec. 25.
Chase, Hamilton C., asignor of one-half to T. Weber, Los Angeles, Calif. Brake for vehicle. 1,696,879; Dec. 25.
Chemische Fabrik auf Actien, vorm. E. Schering. (See Jordan, Hans, assignor.)
Chemische Fabrik auf Actien, vorm. E. Schering. (See Schoeller, W., and Jordan, assignors.)
Chicago Hardware Foundry Company. (See Wackerle, Lewis E., assignor.)
Chicago Telephone Supply Company. (See Schellenger, Newton C., assignor.)
Christen, John E., San Rafael, Calif. Shock absorber. 1,696,429; Dec. 25.
Christensen, Niels C., Salt Lake City, Utah. Treating ores with chloride solutions. 1,696,471; Dec. 25.
Christiansen, Nels, and E. A. Hierburn, Gull Lake, Saskatchewan, Canada. Intermediate gear for automobiles. 1,696,837; Dec. 25.
Cincinnati Bickford Tool Company, The. (See Klausmeyer, David C., assignor.)
Clark, Frank J., Battle Creek, Mich. Door-operating mechanism. 1,696,344; Dec. 25.
Clark, Nathaniel A., Clinton, Iowa. Sound amplifier. 1,696,624; Dec. 25.
Clarke, Edward H., Periora, Ill. Apparel hanger. 1,696,753; Dec. 25.
Clegg, Alice E. (See Clegg, William F. and A. E.)
Clegg, William F. and A. E., Oakland, Calif. Safety money container. 1,696,522; Dec. 25.
Clifford, Patrick J., Falls, Pa., assignor, by mesne assignments, to Train Control Corporation of America. Train-control apparatus. 1,696,382; Dec. 25.
Clifford, Patrick J., Falls, assignor to Train Control Corporation of America, Scranton, Pa. System of eliminating automatic train-control apparatus. 1,696,383; Dec. 25.
Clow, James B., and Sons. (See Patterson, Elam D., assignor.)
Cochran, William F., assignor to R. H. Osbrink, Los Angeles, Calif. Lock nut. 1,696,523; Dec. 25.
Coene, Emile, Haledon, assignor to The Schwarzenbach Huber Co., West Hoboken, N. J. Textile fabric. Des. 77,293; Dec. 25.
Cole, Ellis P., Chicago, Ill. Resonator. 1,696,524; Dec. 25.
Cole, Frederick W., Chicago, Ill. Egg-case flat. 1,696,430; Dec. 25.
Coles, Walter H., Troy Ohio. Irrigating apparatus. 1,696,384; Dec. 25.
Coles, Walter H., assignor to The Skinner Irrigation Company, Troy, Ohio. Irrigating device. 1,696,385; Dec. 25.
Color Cinema Productions, Inc. (See Treleaven, Clifford L. R., asignor.)
Commonwealth Steel Company. (See Pflager, Harry M., assignor.)
Commonwealth Steel Company. (See Sheehan, William M., assignor.)
Conant, Arthur P., Fort Thomas, assignor to The Wadsworth Watch Case Company, Dayton, Ky. Watchcase. Des. 77,294; Dec. 25.
Conant, Arthur P., Fort Thomas, assignor to The Wadsworth Watch Case Company, Dayton, Ohio. Watchcase. Des. 77,295; Dec. 25.
Conant, Arthur P., Fort Thomas, assignor to The Wadsworth Watch Case Company, Dayton, Ohio. Watchcase. Des. 77,295; Dec. 25.
Condit Electrical Manufacturing Corporation. (See Edsall, William S., assignor.)
Condit Electrical Manufacturing Corporation. (See Greenwood, Talma T., assignor.)
Condit Electrical Manufacturing Corporation. (See Kelle, Arthur C., assignor.)
Condit Electrical Manufacturing Corporation. (See Wood, Joseph D., assignor.)
Conklin Pen Company, The. (See Bassett, Gerald L., assignor.)
Connersville Blower Co., The. (See Hassler, Ernest C., assignor.)
Connery, Michael J., Farley, Iowa. Fuse-dispensing cabinet. 1,696,190; Dec. 25.
Conti, Emile, Alfortville, France. Shock arrester. 1,696,472; Dec. 25.
Continental Can Company. (See Fink, Henry A., assignor.)
Coolidge, Leigh H., Seattle, Wash. Propeller-blade measuring instrument. 1,696,525; Dec. 25.
Coote, John M., Elizabeth, N. J., assignor to Coote Products Corporation, New York, N. Y. Electrical testing device. 1,696,266; Dec. 25.
Coote Products Corporation. (See Coote, John M., assignor.)
Corey, James W., Cleveland Heights, assignor to The Reliance Electric & Engineering Co., Cleveland, Ohio. Range drive. 1,696,386; Dec. 25.
Cotton, Walter H., assignor to Union Draft Gear Company, Chicago, Ill. Draft gear. 1,696,345; Dec. 25.
Coulson, Hugh G., Newcastle, Ontario, Canada. Pack. 1,696,191; Dec. 25.
Crawford, George C., and J. R. Bridges, Zanesville, Ohio, assignors to Hazel-Atlas Glass Co., Wheeling, W. Va. Bottle-turning mechanism. 1,696,294; Dec. 25.
Crawford, Ralph F., Salina, Kans. Clutch control for transmission mechanism. 1,696,838; Dec. 25.
Critchfield, Robert M., Anderson, Ind., assignor, by mesne assignments to Delco-Remy Corporation, Dayton, Ohio. Sound signal. 1,696,625; Dec. 25.
Crockett, Ernest J., assignor to Mack Sennett Inc., Los Angeles, Calif. Camera attachment. 1,696,431; Dec. 25.
Crosby Steam Gage and Valve Co. (See Raymond, Fairfield E., assignor.)
Crosland, Edward M., Helsby, England. Machine for sheeting dough. 1,696,891; Dec. 25.
Crossen, Carl R., Bell, Calif. Apparatus for handling well casings. 1,696,526; Dec. 25.
Crossley, Alfred, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y. Control circuit for electron tubes. 1,696,626; Dec. 25.
Crossley, Alfred, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y. Piezo-electric crystal. 1,696,627; Dec. 25.
Crowe, Paul L., Baltimore, Md. Crushing machine. 1,696,387; Dec. 25.
Crumly, Owen M., Carlisle, Ia. Saw attachment for tractors. 1,696,527; Dec. 25.
Cuff, James E., assignor to American Flyer Manufacturing Company, Chicago, Ill. Toy watchman's tower. Des. 77,297; Dec. 25.
Currie, Robert A., Syracuse, assignor to R. E. Dietz Company, New York, N. Y. Ball construction for lanterns and the like. 1,696,567; Dec. 25.
Curtis, David W., Oakland, Calif. Clamping lid for containers. 1,696,388; Dec. 25.
Curtis, Thomas S., Huntington Park, assignor, by mesne assignments, to The Vitrefrax Corporation, Los Angeles, Calif. Apparatus for heat treatment of materials. 1,696,794; Dec. 25.
Cutler, William C., Glendale, assignor, by mesne assignments, to Selective Automatic Manufacturing Corporation, Los Angeles, Calif. Manually-selective vending machine. 1,696,795; Dec. 25.
Dantsizen, Christian, Schenectady, N. Y., assignor to General Electric Company. Resistance unit. 1,696,596; Dec. 25.
Daseu, Paul, Ottosen, Ia., assignor to H. J. Dorweiler, Hemel, Minn. Clearing guard for planter shoes. 1,696,192; Dec. 25.
Davis and Son Manufacturing Company, The. (See Davis, Harold G., assignor.)

Davis, Clark W., Swarthmore, Pa. and G. B. Taylor, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Contact-screen holder. 1,696,528; Dec. 25.

Davis, Ernest, assignor to The Prosperity Company Inc., Syracuse, N. Y. Mechanical movement. 1,696,628; Dec. 25.

Davis, Harold G., assignor to The Davis and Son Manufacturing Company, Denver, Colo. Oil-dispensing device. Re17,168; Dec. 25.

Davis, Thomas M. (See Trogner, A. M., and Davis.)

Day, J. H., Company, The. (See Kirchhoff, William G., assignor.)

Day-Fan Electric Company. (See Brump, Herbert L., assignor.)

Debaecker, Charles E., Paris, France. Vapor burner. 1,696,389; Dec. 25.

Deland, Benjamin, South Euclid, Ohio. Folding table. 1,696,193; Dec. 25.

Delco-Remy Corporation. (See Critchfield, Robert M., assignor.)

Deltox Rug Company. (See Krueger, Edward F., assignor.)

Dempsey, Edwin R. (See Hysert, Hobert E., assignor.)

De Reamer, Frank C. (See Sargent, H. R., and De Reamer.)

Des Rosiers, John B., Providence, R. I. Controlling mechanism for wheel brakes. 1,696,839; Dec. 25.

Deutschman, Tobe C., Boston, Mass. Loop antenna. 1,696,529; Dec. 25.

De Vilbiss Company, The. (See De Vilbiss, Thomas A., assignor.)

De Vilbiss, Thomas A., assignor to The De Vilbiss Company, Toledo, Ohio. Tray or similar article. Des. 77,298; Dec. 25.

De Vilbiss, Thomas A., assignor to The De Vilbiss Company, Toledo, Ohio. Tray or similar article. Des. 77,299; Dec. 25.

De Vilbiss, Thomas A., assignor to The De Vilbiss Company, Toledo, Ohio. Tray or similar article. Des. 77,300; Dec. 25.

De Vilbiss, Thomas A., assignor to The De Vilbiss Company, Toledo, Ohio. Tray or similar article. Des. 77,301; Dec. 25.

De Vilbiss, Thomas A., assignor to The De Vilbiss Company, Toledo, Ohio. Tray or similar article. Des. 77,302; Dec. 25.

De Vilbiss, Thomas A., assignor to The De Vilbiss Company, Toledo, Ohio. Tray or similar article. Des. 77,303; Dec. 25.

De Vilbiss, Thomas A., assignor to The De Vilbiss Company, Toledo, Ohio. Tray or similar article. Des. 77,304; Dec. 25.

De Vry Corporation, The. (See De Vry, Herman A., assignor.)

De Vry, Herman A., assignor to The De Vry Corporation, Chicago, Ill. Film reel. 1,696,473; Dec. 25.

Dibble, Claude M., assignor to Moore Brothers Company, Joliet, Ill. Stove. Des. 77,305; Dec. 25.

Dibelka, Henry G., assignor to The Kingsley-Miller Company, Chicago, Ill. Radiator cap. Des. 77,306; Dec. 25.

Dibelka, Henry G., assignor to The Kingsley-Miller Company, Chicago, Ill. Radiator cap. Des. 77,307; Dec. 25.

Dick, A. B., Company. (See Brasseur, Ernest J., assignor.)

Dick, Hugo P., assignor to Merrimack Manufacturing Company, Lowell, Mass. Pile fabric. Des. 77,308; Dec. 25.

Dickinson, Harry E., Houston, Tex. Gas burner. 1,696,840; Dec. 25.

Dietz, R. E., Company. (See Currie, Robert A., assignor.)

Divine, Bradford H., Utica, N. Y. Machine for extracting juice from fruit. 1,696,390; Dec. 25.

Diouhy, August, assignor to H. L. Judd Company, Inc., Wallingford, Conn. Drapery-pole center. Des. 77,309; Dec. 25.

Doetsch & Bauer Company. (See Bauer, Carl, assignor.)

Dokkenwadel, Frederick G., Mobile, Ala., assignor of one-tenth to T. W. Milliner, one-tenth to V. R. Walley, one-tenth to B. M. Stevens, one-tenth to E. C. Fishel, and one-tenth to J. E. Green, Richton, Miss. Insecticidal plant food or fertilizer. 1,696,709; Dec. 25.

Donart, G. F. (See Slusser, Lee D., assignor.)

Donle Electrical Products Corporation. (See Donle, Harold P., assignor.)

Donle, Harold P., assignor to Donle Electrical Products Corporation, Meriden, Conn. Power supply. 1,696,880; Dec. 25.

Dorweiler, Harry J. (See Dasen, Paul, assignor.)

Douchet, Florimond, assignor to Forges & Ateliers de Constructions Electriques de Jeumont Société Anonyme, Paris, France. Protective system for electric cables. 1,696,226; Dec. 25.

Doudna, Earl E. (See McKay, M. A., and Doudna.)

Dreyfus, Henry, London, and C. I. Haney, Spondon, near Derby, England, assignors to Celanese Corporation of America. Concentrating lower-aliphatic-acid solutions. 1,696,432; Dec. 25.

Drucker, Julius. (See Müller, W. J., Carstens, and Drucker.)

Drum, Alphonsus L., et al. (See Smith, William J., assignor.)

Duncan, James E., De Kalb, Ill. Mail-box support. 1,696,530; Dec. 25.

Duncan, John A., assignor to Mercury Mills, Limited, Hamilton, Ontario, Canada. Garment. 1,696,671; Dec. 25.

Dunham, Bert G., Hawthorne, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 1,696,267; Dec. 25.

Dunham, Rex J., Oshkosh, Wis. Combination spare-tire carrier and rim tool. 1,696,295; Dec. 25.

Du Pont, E. I., de Nemours & Company. (See Davis, C. W., and Taylor, assignors.)

Dura Company, The. (See Haskins, Howard B., assignor.)

Durant Motor Co. (See Harder, D. S., and Vrooman, assignors.)

Dützmann, Wilhelm, Neustadt, Germany. Press for treating boards of alkaline cellulose and the like. 1,696,474; Dec. 25.

Dworkis, Hyman, Chicago, Ill. Cedar chest. Des. 77,310; Dec. 25.

Dworkis, Hyman, Chicago, Ill. Cedar chest. Des. 77,311; Dec. 25.

Dworkis, Hyman, Chicago, Ill. Cedar chest. Des. 77,312; Dec. 25.

Eaton, James H., Colby, Kans. Terminal connection. 1,696,531; Dec. 25.

Eckberg, Curtis R., Chicago, Ill. Liquid dispenser. 1,696,391; Dec. 25.

Eclipse Petrol Economizer System Company, The. (See Godward, Ernest R., assignor.)

Edison Electric Appliance Company. (See Shroyer, Jacob L., assignor.)

Edison, Russell L., assignor to Fleckenstein Pump Company, Grand Rapids, Mich. Liquid measuring and dispensing apparatus. 1,696,841; Dec. 25.

Edison, Thomas A., Incorporated. (See Holland, Newman H., assignor.)

Edsall, William S., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Multibreak electric switch. 1,696,296; Dec. 25.

Edwards, John F., Warren, Ark. Compound for tempering tools and tool steel. 1,696,297; Dec. 25.

Eggenweiler, Charles W. and W. J. Fiegel, assignors to Bohn Aluminum and Brass Corporation, Detroit, Mich. Machine for trimming the edges of bearings or like sections. 1,696,392; Dec. 25.

Ehret, Cornelius D. (See Porter, Harry F., assignor.)

Eller, Lou C., Spokane, Wash., assignor to Lockit Cap Company. Tank-riser closure. 1,696,754; Dec. 25.

Elliott Addressing Machine Company. (See Geiger, E. A., Schraegle, and Jennings, assignors.)

Elliott Addressing Machine Company. (See Geiger, Erwin A. and A., assignors.)

Elliott, Henry L. and R. A. Carroll, Claysville, Pa. Internal-combustion engine. 1,696,475; Dec. 25.

Ely, Alonzo B., and E. L. Harmon, Groton, assignors, by mesne assignments, to L C Smith & Corona Typewriting Inc., Syracuse, N. Y. Typewriting machine. 1,696,227; Dec. 25.

Ely, Alonzo B., and E. L. Harmon, Groton, assignors, by mesne assignments, to L C Smith & Corona Typewriters Inc., Syracuse, N. Y. Typewriting machine. 1,696,228; Dec. 25.

Emerson, Leo F. (See Strand, Harry L., assignor.)

Emery, I. C., assignor to Chapman Self Locking Nut Company, Baltimore, Md., trustees of a common-law-trust estate. Apparatus for making lock-nut blanks. 1,696,672; Dec. 25.

Engstrom, Gustaf W. (See French, C. A., and Engstrom.)

Enloe, Thomas B., Little Rock, Ark. Toy. 1,696,532; Dec. 25.

Erie Meter Systems, Inc. (See Carlson, Nelson A., assignor.)

Ern, August F., Scarsdale, assignor to K. C. Seelbach Company, New York, N. Y. Razor blade. Des. 77,313; Dec. 25.

Fageros, Edgar D., Minneapolis, Minn. Motor gauge. 1,696,393; Dec. 25.

Fantz, Fred C., Webster Groves, assignor to Midwest Piping & Supply Company, Incorporated, St. Louis, Mo. Forming flanges on pipes. 1,696,229; Dec. 25.

Faubert, Harry W., and E. E. Wheelock, Woonsocket, R. I. Denture brush. 1,696,433; Dec. 25.

Fay, Joseph W., Villa Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for producing soldering units comprising solder and fluxing material. 1,696,268; Dec. 25.

Federal Manufacturing Company. (See Jackson, Aldrich L., assignor.)

Federal Telegraph Company. (See Brower, William M., assignor.)

Feichter, John, Chicago, Ill. Radiator construction. 1,696,346; Dec. 25.

Fenno, Grace L., Palos Park, Ill. Book-cover file. 1,696,629; Dec. 25.

Fergusson, A. R., Mfg. Corp. (See Fergusson, Alan R., assignor.)

Fergusson, Alan R., assignor to A. R. Fergusson Mfg. Corp., Buffalo, N. Y. Ice skate. 1,696,597; Dec. 25.

Feybusch, Martin, New York, N. Y., and P. W. Fleischer, Weehawken, assignors to New Jersey Machine Corporation, Hoboken, N. J. Gumming machine. 1,696,755; Dec. 25.

Fiegel, William J. (See Eggenweiler, C. W., and Fiegel.)

Filer, George A., Cornell, Wis. Egg-case flat. 1,696,434; Dec. 25.

Fink, Henry A., Oak Park, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Packing device for filled-can-closing machines. 1,696,706; Dec. 25.

Firth, Herbert M., Niles Center, Ill. Light fixture. Des. 77,314; Dec. 25.

Fishel, E. C., et al. (See Dokkenwadel, Frederick G., assignor.)

Fisk Rubber Company, The. (See Hansen, Raymond, assignor.)

Fisk Rubber Company, The. (See Irrgang, William F., assignor.)

Fisk Rubber Company, The. (See Whittier, Elmer S., assignor.)

Fitch, Francis E., Philadelphia, Pa., and M. W. Torbet, Jackson, Mich. Direct-reading viscosimeter. 1,696,630; Dec. 25.

Fitz Gerald, Allan S., London, England, assignor to General Electric Company. Protective system. 1,696,598; Dec. 25.

Flam, Stephen, Walnut Park, assignor to Supertile Machinery Corporation, Los Angeles, Calif. Multiple mold. 1,696,756; Dec. 25.

Fleckenstein Pump Company. (See Edison, Russell L., assignor.)

Fleischer, Paul W. (See Feybusch, M., and Fleischer.)

Flood, George A., Los Angeles, Calif. Cultivator. 1,696,710; Dec. 25.

Fogel, Fred F., Hawarden, Iowa. Battery terminal. 1,696,568; Dec. 25.

Ford, Henry, Dearborn, Mich. Liquid-level gauge. 1,696,347; Dec. 25.

Ford, William B., Birmingham, Ala. Suspending and controlling header for meters. 1,696,757; Dec. 25.

Foreman, John H., Denison, Tex. Tool for applying patches to flexible hose. 1,696,194; Dec. 25.

Forges & Ateliers de Constructions Electriques de Jeumont Société Anonyme. (See Douchet, Florimond, assignor.)

Fornaca, Guido, Turin, Italy. Spring-controlled gear. 1,696,797; Dec. 25.

Forsberg, Peter W., Schenectady, N. Y., assignor to General Electric Company. Regenerative braking. 1,696,599; Dec. 25.

Foundation Oven Corporation. (See Schrader, Lloyd F., assignor.)

Fourness Development Corporation, The. (See Fourness, Wilfred, assignor.)

Fourness, Wilfred, Pasadena, Calif., assignor, by mesne assignments, to The Fourness Development Corporation, New York, N. Y. Compressor. 1,696,673; Dec. 25.

Fourness, Wilfred, Pasadena, Calif., assignor, by mesne assignments, to The Fourness Development Corporation, New York, N. Y. Compressor. 1,696,674; Dec. 25.

Fox, Martin, assignor to The Seng Company, Chicago, Ill. Corner lock. 1,696,269; Dec. 25.

Fraley, Clifford A., Belleville, N. J., assignor to Revere Rubber Company, Chelsea, Mass. Expansion joint. 1,696,435; Dec. 25.

Frampton, William R., assignor to Southern California Edison Company, Los Angeles, Calif. Electrical apparatus. 1,696,348; Dec. 25.

Fraser, Grace L., and C. T. Kent, London, England. Doll. Des. 77,325; Dec. 25.

Freeman, Benjamin W. (See Brodfuehrer, B. B., Freeman, and Jester.)

Freeman, Benjamin W., Cincinnati, Ohio. Shoe-ornamenting machinery. 1,696,631; Dec. 25.

French, Charles A., Chicago, and G. W. Engstrom, Riverside, Ill., assignors to International Harvester Company. Semiflash boiler. 1,696,892; Dec. 25.

French, Cyril. (See Mackintosh, E. V., and French.)

Fridman, Jess, et al. (See Bongiovanni, Antonio, assignor.)

Friend, Theodore E., Norwalk, Ohio. Radiofrequency unit. 1,696,675; Dec. 25.

Frigidaire Corporation. (See Summers, Otto M., assignor.)

Fritz, Edward M., assignor to Grand Rapids Cabinet Company, Grand Rapids, Mich. Brick-ice-cream packing and cooling cabinet. 1,696,349; Dec. 25.

Froussard, Albert F., St. Louis, Mo. Cutter head. 1,696,195; Dec. 25.

Fuchs, Henry, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,696,350; Dec. 25.

Fuhr, William, Chicago, Ill. Internal-combustion motor. 1,696,676; Dec. 25.

Fuller Lehigh Company. (See Jacobus, David S., assignor.)

Gage, Fred W., Los Angeles, and A. W. Tondreau, Glendale, Calif. Film signaling device for cameras. 1,696,533; Dec. 25.

Galdi, Armando, Somerville, and E. S. Peterson, Lexington, Mass. Water heater. 1,696,758; Dec. 25.

Galloway, Alexander G. (See Mann, C. W., and Galloway.)

Garankin, Theodore P., assignor of one-half to B. A. Mueller, New York, N. Y. Trap nest. 1,696,394; Dec. 25.

Garrott, John C., Houston, Tex. Detachable sucker-rod guide. 1,696,543; Dec. 25.

Gat Gun Lubricating Corporation. (See Hundemer, Walter F., assignor.)

Gathmann, Emil, Baltimore, Md. Shrink-head casing for ingot molds. 1,696,395; Dec. 25.

Gaylord, Robert H., Los Angeles, Calif. Signaling system for elevators. 1,696,842; Dec. 25.

Geiger, Adolph. (See Geiger, Erwin A. and A.)

Geiger, Erwin A., Westfield, and A. Geiger, Elizabeth, N. J., assignors, by mesne assignments, to Elliott Addressing Machine Company. Hand-operated addressing machine. 1,696,760; Dec. 25.

Geiger, Erwin A., Westfield, A. F. Schraegle, Roselle, N. J., and H. T. Jennings, Glendale, N. Y., assignors, by mesne assignments, to Elliott Addressing Machine Company. Automatic selective attachment for addressing machines. 1,696,759; Dec. 25.

Geiger, William A., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,696,351; Dec. 25.

Geigy, J. R., S. A. (See Agthe, Carl A., assignor.)

General Electric Company. (See Bird, Lester F., assignor.)

General Electric Company. (See Blume, Louis F., assignor.)

General Electric Company. (See Carter, Emmett F., assignor.)

General Electric Company. (See Cartun, Paul O., assignor.)

General Electric Company. (See Dantsizen, Christian, assignor.)

General Electric Company. (See Fitz Gerald, Allan S., assignor.)

General Electric Company. (See Forsberg, Peter W., assignor.)

General Electric Company. (See Hall, Chester I., assignor.)

General Electric Company. (See Hegel, G. W., and Brophy, assignors.)

General Electric Company. (See Hilliard, John D., assignor.)

General Electric Company. (See Hollnagel, Herbert P., assignor.)

General Electric Company. (See Kjolseth, Ole K., assignor.)

General Electric Company. (See McDonald, Gordon R., assignor.)

General Electric Company. (See Otis, A. N., and Ipsen, assignors.)

General Electric Company. (See Prince, David C., assignor.)

General Electric Company. (See Rankin, William K., assignor.)

General Electric Company. (See Rice, Chester W., assignor.)

General Electric Company. (See Sargent, H. R., and De Reamer, assignors.)

General Electric Company. (See Steele, Williard R., assignor.)

General Electric Company. (See Trombetta, Panfilo, assignor.)

General Electric Company. (See Welch, Alfred F., assignor.)

George, Charles L., assignor to The Buckeye Traction Ditcher Company, Findlay, Ohio. Friction drive means. 1,696,476; Dec. 25.

Gerlinger, Lawrence C., Seattle, Wash. Valve. 1,696,396; Dec. 25.

Getty and Scott Limited, Messrs. (See Bell, George W., assignor.)

Gilbert, John J., Port Washington, assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical pilotage. 1,696,230; Dec. 25.

Gill, Aaron H., West Haven, Conn. Toy electric-railway control device. 1,696,534; Dec. 25.

Gilligan, Thomas A. (See Lapierre, G. J., and Gilligan.)

Givens, Clara B., administratrix. (See Givens, Frank C.)

Givens, Frank C., deceased, Tuolumne, Calif., C. B. Givens, administratrix. Carburetor. 1,696,711; Dec. 25.

Glaser, Herbert, New York, N. Y. Door-operated switch. 1,696,712; Dec. 25.

Glaze, John H. (See Stem, I. F., and Glaze.)

Goben, Charles M. (See Bridgewater, G. H., and Goben.)

Godward, Ernest R., New York, N. Y., assignor to The Eclipse Petrol Economizer System Company, Limited, Christchurch, New Zealand. Vaporizer for liquid fuels. 1,696,761; Dec. 25.

Godward, Ernest R., New York, N. Y., assignor to The Eclipse Petrol Economizer System Company, Limited, Christchurch, New Zealand. Vaporizer for liquid fuel. 1,696,881; Dec. 25.

Goldwyn Brothers. (See Manly, Fred G.)

Goldwyn, George I., et al. (See Manly, Fred G., assignor.)

Goldwyn, Herman, et al. (See Manly, Fred G., assignor.)

Goodiatte, T. R., & Sons (Inc.). (See Thorne, Edward, assignor.)

Goodman, Clara R., Ithaca, N. Y. Ironing board. 1,696 798; Dec. 25.

Goodwin, James J., assignor to Goodwin Laboratories, Inc., Louisville, Ky. Germicidal compound. 1,696,762; Dec. 25.

Goodwin Laboratories, Inc. (See Goodwin, James J., assignor.)

Gordon, William, New York, N. Y. Tobacco-ash receiver. Des. 77,315; Dec. 25.

Goucher, Elma E., McMinnville, Oreg. Automatic agricultural machine. 1,696,352; Dec. 25.

Gould, Roy F., assignor to Reserve Holding Company, Chicago, Ill. Automatic telephone system. 1,696,270; Dec. 25.

Gouldbourn, Joseph, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Controlling mechanism. 1,696,535; Dec. 25.

Graham, William H., Oakland Calif. Disappearing or telescopic lawn sprinkler. 1,696,298; Dec. 25.

Grand Rapids Cabinet Company. (See Fritz, Edward M., assignor.)

Grant, Richard F., et al. (See Wetherbee, Herbert E., assignor.)

Grasselli Dyestuff Corporation. (See Mieg, W., and Job, assignors.)

Gray, James H., Nice, France. Liquid-fuel burner. 1,696,196; Dec. 25.

Gray William H., Portland, Oreg. Pump for refrigerating apparatus. 1,696,436; Dec. 25.

Green, Howard H., Bardwell, Tex. Agricultural machine. 1,696,299; Dec. 25.

Green, Howard H., Bardwell, Tex. . Steering mechanism. 1,696,300; Dec. 25.

Green, J. E., et al. (See Dokkenwadel, Frederick G., assignor.)

Greenwood, Talma T., East Templeton, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Contact structure for electric switches. 1,696,301; Dec. 25.

Griessbach, Robert, Ludwigshafen-on-the-Rhine, and K. Röhre, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of sodium nitrate. 1,696,197; Dec. 25.

Gross, Otto, Dallas, Tex. Combination cap and eye shield. 1,696,198; Dec. 25.

Guinn, Samuel E., Johnson City, Tenn. Vanity case. Des. 77,316; Dec. 25.

Günther, Fritz, Ludwigshafen-on-the-Rhine, and A. Cantzler, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Aromatic sulphonic acid. 1,696,199; Dec. 25.

Haefly Emil, Basel, Switzerland. Apparatus for the manufacture of mica-coated fibrous material. 1,696,397; Dec. 25.

Hague, Alfred E. (See Johnson, L. H., and Hague.)

Hague, Alfred E., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Call-charging telephone-exchange system. 1,696,271; Dec. 25.

Haifley, George H., assignor of one-half to G. Bernard, Eureka, Kans. Fishing tool. 1,696,200; Dec. 25.

Haist, Foster A. (See Miller, E. S., and Haist.)

Hall, Chester I., Fort Wayne, Ind., assignor to General Electric Company. Demand-meter attachment for fluid meters. 1,696,600; Dec. 25.

Hall, Chester I., Fort Wayne, Ind., assignor to General Electric Company. System of motor control. 1,696,601; Dec. 25.

Hall, Ernest A., and G. J. Lindroth, assignors to The Hall Manufacturing Company, Toledo, Ohio. Cylinder hone. 1,696,477; Dec. 25.

Hall, Joseph M., Hamilton, Ontario, Canada. Shock absorber. 1,696,478; Dec. 25.

Hall Manufacturing Company, The. (See Hall, E. A., and Lindroth, assignors.)

Hand, Carl N., Nitro, W. Va. assignor to The Rubber Service Laboratories Co., Akron, Ohio. Manufacture of acetaldehyde. 1,696,479; Dec. 25.

Haney, Clifford I. (See Dreyfus, H., and Haney.)

Haney, Myron L., Beloit, Wis. Coin-controlled fan. 1,696,231; Dec. 25.

Haney, Myron L., Chicago, Ill. Coin-controlled fan. 1,696,232; Dec. 25.

Hanna, Howard M., et al. (See Wetherbee, Herbert E., assignor.)

Hansen Canning Machinery Corporation. (See Hansen, Oswald H., assignor.)

Hansen, Conrad T., and A. B. Bell, assignors to The American Motor Body Corporation, Philadelphia, Pa. Car seat. 1,696,536; Dec. 25.

Hansen, Oswald H., Port Washington, assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis. Beet topper. 1,696,398; Dec. 25.

Hansen, Oswald H., Port Washington, assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis. Process of and apparatus for treating fruit. 1,696,399; Dec. 25.

Hansen, Raymond, Cudahy, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Bag inserter. 1,696,843; Dec. 25.

Harder, Delmar S., and F. W. Vrooman, assignors to Durant Motor Co., Oakland, Calif. Mounting means for vehicle engines. 1,696,602; Dec. 25.

Hare, Christopher E., Rochester, Minn. Suprapubic siphon. 1,696,763; Dec. 25.

Harmon, Edwin L. (See Ely, A. B., and Harmon.)

Harrigan, John T., Plainfield, N. J. Circuit closer. 1,696,713; Dec. 25.

Harris, Howard C., Akron, Ohio. Pivotal connection. 1,696,201; Dec. 25.

Harris, Richard M., Dallas, Tex. Protecting window glass in windows and doors of motor vehicles when paint is applied. 1,696,202; Dec. 25.

Hartford-Empire Company. (See Peller, Karl E., assignor.)

Hartford-Empire Company. (See Willetts, Paul G., assignor.)

Hartley, James W. (See Smart, Edmund F., assignor.)

Haseltine, Stacy B., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,696,302; Dec. 25.

Haskins, Howard B., assignor to The Dura Company, Toledo, Ohio. Manufacture of window regulators. 1,696,353; Dec. 25.

Hassler, Ernest C., assignor to The Connersville Blower Co., Connersville, Ind. Blower. 1,696,882; Dec. 25.

Hater, Harry J. (See Rindsberg, Harry D., assignor.)

Haug, Anton J., Nashua, N. H. Pulp-screening machine. 1,696,354; Dec. 25.

Hawkins, Nannie E., Cincinnati, Ohio. Clothes hanger. 1,696,480; Dec. 25.

Haynes, Hugh S., and W. L. Alexander, Tampico, assignors of one-third to G. E. Paddleford, Tampico, Tamaulipas, Mexico. Casing head for oil wells. 1,696,844; Dec. 25.

Hayton, Thomas R., Appleton, Wis. Tube cleaner. 1,696,677; Dec. 25.

Hazel-Atlas Glass Co. (See Crawford, G. C., and Bridges, assignors.)

Healy, Edwin S., et al. (See Malone, Adolph W., assignor.)

Hegel, George W., Schenectady, and G. R. Brophy, Niskayuna, N. Y., assignors to General Electric Company. Carburization of metals. 1,696,603; Dec. 25.

Heideman, Fred J., assignor to T. C. Whitehead, Detroit, Mich. Pump-valve assembly. 1,696,272; Dec. 25.

Heising, Raymond A., Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Energizing vacuum discharge devices by alternating current. 1,696,233; Dec. 25.

Heising, Raymond A., Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Antenna. 1,696,234; Dec. 25.

Held, Georges, Brussels, Belgium. Internal-combustion engine of the two-stroke type. 1,696,799; Dec. 25.

Heller, Hugo, and J. C. Mitchell, assignors to A. C. Koo'z, Milwaukee, Wis. Loud-speaker unit. 1,696,235; Dec. 25.

Heller, Nathan, Brooklyn, N. Y. Seashore outfit. 1,696,714; Dec. 25.

Helm, Charles A., Cleveland, Ohio. Fire-extinguishing apparatus. 1,696,800; Dec. 25.

Helmond, William F., Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 1,696,236; Dec. 25.

Helsing, Hjalmer B., Moberly, Mo. Drain-ditch check device. 1,696,481; Dec. 25.

Henning, Cedric B., Hunters Hill, near Sydney, New South Wales, Australia. Hand cultivator. 1,696,678; Dec. 25.

Henry, William, Philadelphia, Pa. Power-transmission device. 1,696,632; Dec. 25.

Hercules Powder Company. (See Shimer, Abraham A., assignor.)

Hercules Powder Company. (See Symmes, Ernest M., assignor.)

Herrick, Stephen S., Oakland, Calif. Lintel bar, 1,696,764; Dec. 25.

Hespe, Alfred T., East Orange, N. J. Making thermometer tubes. 1,696,400; Dec. 25.

Hesskew, William R., and J. J. Nulty, San Antonio, Tex. Rail crossing. 1,696,482; Dec. 25.

Hiering, William C., assignor to J. E. Mergott Co., Newark, N. J. Metal box. 1,696,483; Dec. 25.

Higgins, Ernest, Gloucester, England. Shirt and like article of wearing apparel. 1,696,679; Dec. 25.

Hill, Harold O., Aspinwall, assignor to Riter-Conley Manufacturing Company, Pittsburgh, Pa. Transmission tower. 1,696,569; Dec. 25.

Hiller, Stanley, assignor to Stanley Hiller, Inc., San Jose, Calif. Continuous screw press. 1,696,401; Dec. 25.

Hiller, Stanley, Inc. (See Hiller, Stanley, assignor.)

Hillery, Purley E. (See Trewhitt, J. E., and Hillery.)

Hilliard, John D., Schenectady, N. Y., assignor to General Electric Company. Oil switch. 1,696,570; Dec. 25.

Hilliard, John D., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 1,696,571; Dec. 25.

Hilliard, John D., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 1,696,572; Dec. 25.

Hilliard, John D., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 1,696,573; Dec. 25.

Hilliard, John D., Schenectady, N. Y., assignor to General Electric Company. Fluid-break switch. 1,696,604; Dec. 25.

Hislop, Robert S., assignor to Racine Confectioners Machinery Company, Racine, Wis. Depositor. 1,696,845; Dec. 25.

Hlavka, James, Burke, S. Dak. Plant guard for cultivators. 1,696,680; Dec. 25.

Hobart Manufacturing Company, The. (See Johnston, Herbert L., assignor.)

Hobbs, Clarence. (See Hobbs, Frank D. and C.)

Hobbs, Frank D. and C., Los Angeles, Calif. Screen latch. 1,696,355; Dec. 25.

Hofmann, Alfred, Fort Lee, and O. Kanis, assignors to Alfred Hofmann Needle Works, Inc., Union City, N. J. Needle-making machine. 1,696,484; Dec. 25.

Hofmann, Alfred, Needle Works, Inc. (See Hofmann, A., and Kanis, assignors.)

Holdaway, Hall H., Long Beach, Calif. Rotary pipe tongs. 1,696,356; Dec. 25.

Holladay, Louis P., jr. (See Rogers, P. L., and Holladay.)

Holland, Newman H., East Orange, assignor, by mesne assignments, to Thomas A. Edison, Incorporated, West Orange, N. J. Signaling system or the like. 1,696,544; Dec. 25.

Hollander, Aladar, Berkeley, Calif., assignor, by mesne assignments, to Byron Jackson Pump Co. Variable-head centrifugal pump. 1,696,545; Dec. 25.

Hollnagel, Herbert P., Swampscott, Mass., assignor to General Electric Company. Combined resistor and fuse. 1,696,605; Dec. 25.

Hoock, Lizzie, Colony, Okla. Reel. 1,696,681; Dec. 25.

Hope Webbing Company. (See Horton, Charles A., assignor.)

Hopkins, George F., deceased, Jackson, Mich.; W. K. Sagendorph, executor. Chuck jaws. 1,696,765; Dec. 25.

Horton, Charles A., Providence, assignor to Hope Webbing Company, Pawtucket, R. I. Radioantenna. 1,696,402; Dec. 25.

Hough, Otto V., Warrenton, Mo. Protecting paved roads against erosion. 1,696,237; Dec. 25.

Howard, Leslie E., Lockport, N. Y., assignor to Simonds Saw and Steel Company, Fitchburg, Mass. Heat-treating apparatus. 1,696,801; Dec. 25.

Howe, Donald W., Biloxi, Miss. Peanut butter. 1,696,766; Dec. 25.

Howell, James W., assignor to The White Motor Company, Cleveland, Ohio. Tool. 1,696,574; Dec. 25.

Hoyois, Léon, Gilly, Belgium. Method of washing coal, ores, and other similar materials, and automatic water-current separator for carrying the method into practice. 1,696,767; Dec. 25.

Huddleston, Robert M., San Francisco, Calif. Can-feeding machine. 1,696,715; Dec. 25.

Hughes, Joel D., Roseberry, Idaho. Railway track. 1,696,633; Dec. 25.

Humphrey, Reginald E., Swanton, Vt. Radio receiving apparatus. 1,696,437; Dec. 25.

Hundemer, Walter F., Alameda, assignor to Gat Gun Lubricating Corporation, Oakland, Calif. Booster grease gun and greasing bearings. 1,696,606; Dec. 25.

Hurley, Edward T., Cincinnati, Ohio. Bowl or similar article. Des. 77,317; Dec. 25.

Hutchins, Frank E., et al. (See Rosentreter, Albert J., assignor.)

Hutchison, Miller R., Llewelyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y. Sound propagation. 1,696,303; Dec. 25.

Hutchison, Miller R., Llewelyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y. Multituned horn. 1,696,304; Dec. 25.

Hutchison, Miller R., West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y. Electromagnetic sounding-board actuator. 1,696,805; Dec. 25.

Huxley, Joseph H., Chelsea, and W. A. Stephens, Shepherds Bush, London, England. Sealing machine. 1,696,575; Dec. 25.

Hyman, Henry, et all. (See Alschuler, Ernst, assignor.)

Hysert, Robert E., assignor of one-half to E. R. Dempsey, Buffalo, N. Y. Reversible window. 1,696,607; Dec. 25.

I. G. Farbenindustrie Aktiengesellschaft. (See Griessbach, R., and Röhre, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Günther, F., and Cantzler, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Müller, W. J., Carstens, and Drucker, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Wulff, P., and Wendt, assignors.)

Ihrmark, Gideon, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Air-line oiler. 1,696,485; Dec. 25.

Ilex Optical Company. (See Brueck, Theodore M., assignor.)

Illerburn, Ernest A. (See Christiansen, N., and Illerburn.)

Imhoff, Karl, Essen, Germany. Sewage treatment with the aid of a screen acting like a filter. 1,696,846; Dec. 25.

Ingersoll-Rand Company. (See Ihrmark, Gideon, assignor.)

Ingersoll-Rand Company. (See Lee, Gordon, assignor.)

Innes, William, Northumberland, England, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Fluid heater. 1,696,306; Dec. 25.

International Derrick & Equipment Company, The. (See Bloss, Richard R., assignor.)

International Harvester Company. (See French, C. A., and Engstrom, assignors.)

Internationale Nahrungs- und Genussmittel Aktiengesellschaft. (See Staudinger, H., and Reichstein, assignors.)

Invincible Vacuum Cleaner Manufacturing Company. (See Nisbet, Edward A., assignor.)

Ipsen, Carl L. (See Otis, A. N., and Ipsen.)

Irrgang, William F., Chicopee, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Stitching device. 1,696,847; Dec. 25.

Irwin, George N., Whitby, Ontario, Canada. Animal trap. 1,696,768; Dec. 25.

Isaksson, Carl, J. E., Spanga, assignor of one-half to H. T. Tillquist, Stockholm, Sweden. Spark plug. 1,696,634; Dec. 25.

Isbell, Arthur C., Ivoryton, Conn. Apparatus for guiding automobiles into position for service. 1,696,238; Dec. 25.

Jackson, Aldrich L., assignor to Federal Manufacturing Company, St. Paul, Minn. Advertising cigar lighter. Des. 77,318; Dec. 25.

Jacobus, David S., Jersey City, N. J., assignor, by mesne assignments, to Fuller Lehigh Company. Furnace wall. 1,696,239; Dec. 25.

Jaeger, Alphons O., and J. A. Bertsch, St. Louis, Mo.; said Jaeger assignor to The Selden Company, Pittsburgh, Pa. Catalytic oxidation of sulphur dioxide. 1,696,546; Dec. 25.

James, Clayton D., Lyon Village, Va. Hydraulic power-transmission device. 1,696,307; Dec. 25.

Jandus, Herbert S., assignor to The C. G. Spring & Bumper Company, Detroit, Mich. Bumper support. 1,696,884; Dec. 25.

Jandus, Herbert S., and L. H. Reed, assignors to The C. G. Spring & Bumper Company, Detroit, Mich. Bumper. 1,696,883; Dec. 25.

Jeffreys, William, East Orange, N. J. Dental implement. 1,696,486; Dec. 25.

Jennings, Henry T. (See Geiger, E. A., Schraegle, and Jennings.)

Jennings, Irving C., assignor to Nash Engineering Company, South Norwalk, Conn. Air and water pump in combination. 1,696,635; Dec. 25.

Jervis, Albert E., Nappanee, Ind. Water filter. 1,696,487; Dec. 25.

Jespersen, Helgo W., Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Mechanism for working pulpous material. 1,696,273; Dec. 25.

Jester, Charles A. (See Brodfuehrer, B. B., Freeman, and Jester.)

Job, Albert. (See Mieg, W., and Job.)

Johnson, Kenneth S., Jersey City, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Substation circuits. 1,696,274; Dec. 25.

Johnson, Lewis H., Madison, and A. E. Hague, West Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Call-charging telephone-exchange system. 1,696,275; Dec. 25.

Johnson, Stephens & Shinkle Shoe Company. (See Spalsbury, Charles B., assignor.)

Johnson, Willis W., Dewittville, N. Y. Fire escape. 1,696,357; Dec. 25.

Johnston, Herbert L., assignor to The Hobart Manufacturing Company, Troy, Ohio. Grinding apparatus. 1,696,636; Dec. 25.

Jones, Clyde W., Bloomington, Ind. Stone-channeling machine. 1,696,576; Dec. 25.

Jordan, George E., Perry, Ga. Safety arrangement for railroad crossings. 1,696,637; Dec. 25.

Jordan, Hans. (See Schoeller, W., and Jordan.)

Jordan, Hans, Berlin-Steglitz, assignor to the firm: Chemische Fabrik auf Actien, vorm. E. Schering, Berlin, Germany. Producing condensation products from crude cresol and acetone. 1,696,769; Dec. 25.

Judd, H. L., Company. (See Dlouhy, August, assignor.)

Judd, H. L., Company. (See Vermillion, Raymond H., assignor.)

Junkunc, John, Chicago, Ill. Lock. 1,696,488; Dec. 25.

Kahn, Herbert, assignor to Kahn Mirror Plate Company, St. Louis, Mo. Display sign and the like. 1,696,489; Dec. 25.

Kahn Mirror Plate Company. (See Kahn, Herbert, assignor.)

Kallenbaugh Corporation. (See Kallenbaugh, Samuel E., assignor.)

Kallenbaugh, Samuel E., Manchester, Ga., assignor to Kallenbaugh Corporation. Web-feeding attachment for job printing presses. 1,696,638; Dec. 25.

Kanis, Oswin. (See Hofmann, A., and Kanis.)

Kasanof, Maurice M., New York, N. Y. Device for drying, steaming, and conditioning tubular fabrics. 1,696,682; Dec. 25.

Kaufman, Frank P., Grand Island, Nebr. Fender extension. 1,696,802; Dec. 25.

Kautz, Jacob, Chicago, Ill. Shore clamp. 1,696,848; Dec. 25.

Keener, Ernest L., New Castle, Ind. Shoe-heel-cutter guard. 1,696,716; Dec. 25.

Kelg, Marshall E., Chicago, Ill. Blotting device. 1,696,308; Dec. 25.

Kelle, Arthur C., Canton, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Multibreak electric switch. 1,696,276; Dec. 25.

Kellecher, Thomas J., Chicago, Ill. Bending machine. 1,696,849; Dec. 25.

Kellogg Switchboard and Supply Company. (See Bohlman, Ernest A., assignor.)

Kendall, Burton W., assignor to Western Electric Company, Incorporated, New York, N. Y. Repeater. 1,696,241; Dec. 25.

Kent, Cynthia F. (See Fraser, G. L., and Kent.)

Keough, Robert E., Montreal West, Canada, assignor to The American Fork & Hoe Company, Cleveland, Ohio. Track gauge. 1,696,885; Dec. 25.

Kern, George P. (See Kuhlmann, Henry F. and E., assignors.)

Kestenman Bros. Mfg. Co. (See Kestenman, Charles H., assignor.)

Kestenman, Charles H., assignor to Kestenman Bros. Mfg. Co., Providence, R. I. Connecter for wrist-watch strap, band, or bracelet. 1,696,577; Dec. 25.

Kewish, John T., New York, N. Y. Automatic firearm. 1,696,537; Dec. 25.
Keystone Mfg. Co., The. (See Miller, E. S., and Haist, assignors.)
Kieffer, Eugene T., and W. B. Stevenson, Philadelphia, Pa., assignors to Victor Talking Machine Company. Talking machine. 1,696,683; Dec. 25.
Klewicz, John, assignor to The Reece Button Hole Machine Company, Boston, Mass. Sewing machine. 1,696,438; Dec. 25.
Klewicz, John, assignor to The Reece Button Hole Machine Company, Boston, Mass. Buttonhole-sewing machine. 1,696,893; Dec. 25.
Killingsworth, John W., Atlanta, Ga. Banding machine. 1,696,850; Dec. 25.
Kingsley-Miller Company, The. (See Dibelka, Henry G., assignor.)
Kircher, Albert G., jr., Jamaica, N. Y. Paint can. 1,696,240; Dec. 25.
Kirchhoff, William G., assignor to The J. H. Day Company, Cincinnati, Ohio. Dough mixer. Re17,169; Dec. 25.
Kjolseth, Ole K., Scotia, N. Y., assignor to General Electric Company. Railway truck. 1,696,608; Dec. 25.
Klausmeyer, David C., Cincinnati, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio. Accessible twin-lever gear shift for drill heads. 1,696,403; Dec. 25.
Klement, Charles W., Toronto, Ontario, Canada. Street stop signal for vehicles. 1,696,277; Dec. 25.
Kluse, Peter G., Los Angeles, Calif. Aeroplane. 1,696,404; Dec. 25.
Knapp, Paul, Woodbury, N. J. Resinous material and making same. 1,696,490; Dec. 25.
Knopp, Otto A., Oakland, Calif. Heater controller. 1,696,684; Dec. 25.
Knox, Harry A., Davenport, Iowa. Fighting tank. 1,696,439; Dec. 25.
Kochendorfer, Frederic S., River Forest, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for forming articles. 1,696,242; Dec. 25.
Koots, A. C. (See Heller, H., and Mitchell, assignors.)
Kopp Glass, Incorporated. (See Kopp, Nicholas, assignor.)
Kopp, Nicholas, Pittsburgh, assignor to Kopp Glass, Incorporated, Swissvale, Pa. Lighting-fixture shade or similar article. Des. 77,319; Dec. 25.
Kopp, Nicholas, Pittsburgh, assignor to Kopp Glass, Inc., Swissvale, Pa. Light shade or similar article. Des. 77,320; Dec. 25.
Krell, George, and G. M. Martinet, Sapulpa, Okla.; said Martinet assignor to said Krell. Variable-speed transmission. 1,696,203; Dec. 25.
Kresky, Jesse E., Petaluma, Calif. Liquid-fuel burner. 1,696,547; Dec. 25.
Kronqvist, Karl F., Helsinki, Suomi-Finland. Feeding device for manufacturing and wrapping of sweetmeats and the like. 1,696,803; Dec. 25.
Krueger, Edward F., assignor to Deltox Rug Company, Oshkosh, Wis. Cop-winder head. 1,696,717; Dec. 25.
Krupp, Louis, New York, N. Y. Power-operated brake. 1,696,851; Dec. 25.
Kubatzky, Otto, assignor to O. K. Playing Card Company, Tulsa, Okla. Set of playing cards. Des. 77,321; Dec. 25.
Kuhlmann, Elenora. (See Kuhlmann, Henry F. and E.)
Kuhlmann, Henry F. and E., assignors of one-half to G. P. Kern, Indianapolis, Ind. Washing machine. 1,696,718; Dec. 25.
Kurowski, Alfred C. F., Brooklyn, assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 1,696,243; Dec. 25.
Kyle, William D., Milwaukee, assignor to Line Material Company, South Milwaukee, Wis. Insulator rack. 1,696,491; Dec. 25.
La Bombard, Leon E., and M. H. Sidebotham, assignors to Specialty Automatic Machine Company, Chelsea, Mass. Feeding and forming box machine. 1,696,204; Dec. 25.
La Bombard, Leon E., and M. H. Sidebotham, assignors to Specialty Automatic Machine Company, Chelsea, Mass. Sanitary napkin. 1,696,205; Dec. 25.
Labombarde, Harold S., Nashua, N. H. Method of and machine for waxing blanks. 1,696,894; Dec. 25.
Lamie, Ralph D. (See Reed, H. S., and Lamie.)
Lane, Francis, Brierley Hill, and W. A. Machin, Birmingham, England. Elevator system and apparatus in connection therewith. 1,696,309; Dec. 25.
Lang, Charles F., Chicago, Ill. Printing press. 1,696,770; Dec. 25.
Lange, Henry J., Lorain, Ohio. Water heater. 1,696,206; Dec. 25.
Langherst, Fred A., Wexford, Pa. Fluid and gas trap. 1,696,492; Dec. 25.
Lapierre, George J., Pawtucket, and T. A. Gilligan, Providence; said Gilligan assignor of one-twentieth to A. P. Bonin, Pawtucket, one-tenth to J. C. Marx, Providence, one-twentieth to L. J. G. Martelle, L. McKenna, and L. V. Boyle, Pawtucket, and one-twentieth to J. W. Plante and E. Plante, Woonsocket, R. I. Automobile license-plate holder. 1,696,804; Dec. 25.
Larkin, David, St. Louis, Mo. Pipe fitting. 1,696,207; Dec. 25.
Larson, Anna J., Naugatuck, Conn. Pincushion for sewing machines. 1,696,771; Dec. 25.
Latta, William, Evart, Mich., assignor to American Logging Tool Co. Peavey. 1,696,852; Dec. 25.
Lauria, Carmelo, New York, N. Y. Electrically-displayed writing apparatus. 1,696,548; Dec. 25.
Leckie, Herbert V., and S. A. North, Bridgeport, Conn., assignors to Remington Arms Company, Inc. Annealing apparatus. 1,696,886; Dec. 25.
Ledwinka, Joseph, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Door structure for automobile bodies. 1,696,310; Dec. 25.
Lee, Gordon, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Valve for percussive tools. 1,696,311; Dec. 25.
Lee, John H. (See Martin, William C., assignor.)
Lehman, Arthur J., Cannelton, Ind. Chair. Des. 77,322; Dec. 25.
Lehr, Charles E., Bethlehem, Pa., assignor to Bethlehem Steel Company. Continuous heating furnace. 1,696,805; Dec. 25.
Lehr, Charles E., assignor to Bethlehem Steel Company, Bethlehem, Pa. Device for treating rods. 1,696,806; Dec. 25.
Lenert, Willy, Chicago, Ill. Airplane. 1,696,493; Dec. 25.
Lethander, Oscar L., Chicago, Ill. Swinging seat. 1,696,312; Dec. 25.
Leutz, Ferdinand, Hebron, N. Dak. Automobile seat hinge. 1,696,685; Dec. 25.
Lewis, Ernest C., Meriden, assignor to The Tubular Products Company, Southington, Conn. Ash receptacle or similar article. Des. 77,323; Dec. 25.
Lewis, Ernest C., Meriden, assignor to The Tubular Products Company, Southington, Conn. Ash receptacle or analogous article. Des. 77,324; Dec. 25.
Lewis-Shepard Company. (See Shepard, F. J., jr., and Warshaw, assignors.)
Lewis, William, Vancouver, British Columbia, Canada. Deinking process and means for performing same. 1,696,639; Dec. 25.
Liddell, Robert P. F., New York, N. Y., assignor, by mesne assignments, to Central Union Trust Company of New York, trustee. Filter. 1,696,313; Dec. 25.
Lindroth, Gerald J. (See Hall, E. A., and Lindroth.)
Lindsay, Donald E., Springfield, assignor to Murlin Manufacturing Company, Incorporated, Philadelphia, Pa. Lantern. 1,696,244; Dec. 25.
Line Material Company. (See Kyle, William D., assignor.)
Lippert, Leo W., Chippewa Falls, Wis. Tool for assembling chain links. 1,696,578; Dec. 25.
Locke Insulator Corporation. (See Plimpton, Bentley A., assignor.)
Lockit Cap Company. (See Filer, Lou C., assignor.)
Lotsch, John L. (See Strindberg, Rickard, assignor.)
Low, Wilson H. (See Black, J. C., and Low.)
Lowry, Henry L., Morrill, Kans. Vending machine. 1,696,494; Dec. 25.
Lowry, Horace, et al. (See Smith, William J., assignor.)
Lowthrop, James W., Lawrenceburg, Tenn. Dishwasher. 1,696,640; Dec. 25.
Lübke, Aloys, Altena, Germany. Air blower for dental purposes. 1,696,440; Dec. 25.
Ludwig, Otto R., Garvin, Minn. Folding trunk. 1,696,853; Dec. 25.
Ludwig, Otto R., Garvin, Minn. Corn ventilating and drying device. 1,696,854; Dec. 25.
Lundberg, Elof K. H., Saltsjobaden, assignor to Sesam Aktiebolag, Stockholm, Sweden. Water-closet. 1,696,855; Dec. 25.
Lundeen, August A., Lynbrook, N. Y. Jar cap. 1,696,719; Dec. 25.
Lyhne, Anker S., Bridgeport, Conn. Flash light. 1,696,720; Dec. 25.
Lyman, Kenneth E., assignor to Bendix Brake Company, Chicago, Ill. Brake mechanism. 1,696,314; Dec. 25.
Mabbs, J. M. (See Blanchard, Julius M., assignor.)
Machin, William A. (See Lane, F., and Machin.)
Mackintosh, Eric V., New Malden, and C. French, Hampton Wick, Kingston-on-Thames, England. Diaphragm for telephone instruments. 1,696,807; Dec. 25.
Madsen, George E., Weston, Iowa. Train-order-hoop holder. 1,696,279; Dec. 25.
Maguire, Sam F., et al. (See Mullins, Ed, assignor.)
Maguth, Michael J., Carlstadt, N. J. Feeding mechanism. 1,696,549; Dec. 25.
Malling, Malte J., Grand Rapids, Mich. Electric appliance. 1,696,495; Dec. 25.
Malone, Adolph W., Fillmore, Utah, assignor of one-third to A. H. Vestal, Anderson, Ind., and one-third to E. S. Healy, New York, N. Y. Pole. 1,696,772; Dec. 25.
Malone, Adolph W., Fillmore, Utah, assignor of one-third to A. H. Vestal, Anderson, Ind., and one-third to E. S. Healy, New York, N. Y. Pole. 1,696,773; Dec. 25.
Manly, Fred G., assignor, by mesne assignments, to G. I. and H. Goldwyn, Chicago, Ill., copartners doing business as Goldwyn Brothers. Folding cot. 1,696,245; Dec. 25.
Mann, Charles W., Los Angeles, Calif., and A. G. Galloway, Washington, D. C. Cooling of fruits and vegetables in refrigerator cars. 1,696,441; Dec. 25.
Mansure, E. L., Company. (See Shults, Herbert O., assignor.)

Manzel, Charles W., Buffalo, N. Y., assignor to Alemite Manufacturing Corporation, Chicago, Ill. Lubricating gun. 1,696,497; Dec. 25.
Marcoux, Arcade, New Bedford, Mass. Clothes returner for ironing machines. 1,696,609; Dec. 25.
Marshall, George G., Cleveland, Ohio. Air-regulating device for automobile radiators. 1,696,208; Dec. 25.
Martelle, Louis J. G., et al. (See Lapierre, G. J., and Gilligan, assignor.)
Martin, Emile, Grenoble, France. Self-feeding lubricator. 1,696,774; Dec. 25.
Martin, William C., Chicago, assignor of one-fifth to J. H. Lee, Oak Park, Ill. Wheel construction. 1,696,405; Dec. 25.
Martindale, Homer D., Middletown, assignor, by mesne assignments, to The Black-Clawson Company, Hamilton, Ohio. Jordan-engine shell lining. 1,696,641; Dec. 25.
Martinet, Guy M. (See Krell, G., and Martinet.)
Martz, Charles C., assignor to Sayford Paper Specialty Company, Vineland, N. J. Sanitary headrest cover. 1,696,775; Dec. 25.
Marx, Julian C., et al. (See Lapierre, G. J., and Gilligan, assignor.)
Masley, Frank S., and A. P. Wasil, Homestead, Pa. Radio tube socket. 1,696,406; Dec. 25.
Massa, Robert F., assignor to Carbide & Carbon Chemicals Corporation, New York, N. Y. Refrigerant lubricant and lubricating refrigerating machinery. 1,696,642; Dec. 25.
Massey, John F., Chicago, Ill. Window. 1,696,498; Dec. 25.
Mathes, Robert C., Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telegraph system. 1,696,246; Dec. 25.
Mathes, Robert C., Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Wave transmission system. 1,696,315; Dec. 25.
Matson, Donald F., Monessen, Pa. Card. 1,696,808; Dec. 25.
Matthael, Frederick C. (See Snell, Samuel A., assignor.)
Mattingly Automatic Valve Company. (See Mattingly, Charles F., assignor.)
Mattingly, Charles F., assignor to Mattingly Automatic Valve Company, St. Louis, Mo. Master cylinder for hydraulic brakes. 1,696,721; Dec. 25.
May Hosiery Mills. (See Perry, Napoleon J., assignor.)
McArthur R., Gary, Ind., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa. Apparatus for crowning annealing boxes. 1,696,686; Dec. 25.
McCarty, Richard J., jr., Bethlehem, Pa., assignor to Bethlehem Steel Company. Auxiliary locomotive. 1,696,610; Dec. 25.
McCauley, Charles G., Jacksonville, Fla. Rail bond. 1,696,316; Dec. 25.
McDonald, Gordon R., Schenectady, N. Y., assignor to General Electric Company. Protective device. 1,696,611; Dec. 25.
McDonell, Malcolm A., Cincinnati, Ohio. Season-greeting frame. 1,696,407; Dec. 25.
McKay, Malcolm A., Kansas City, Mo., and E. E. Doudna, Kansas City, Kans. Automobile lock. 1,696,278; Dec. 25.
McKenna, Leo, et al. (See Lapierre, G. J., and Gilligan, assignors.)
McMahon, William S., Malden, Mass. Game. 1,696,408; Dec. 25.
McManama, John W., Waltham, Mass. Railroad tie. 1,696,247; Dec. 25.
McMillan, Howard O., Minneapolis, Minn. Column clamp for castings. Re17,170; Dec. 25.
McMurdo, Percy F., San Francisco, Calif. Apparatus for surgical uses. 1,696,496; Dec. 25.
Mealer, Earl W. (See Pool, W. R., and Mealer.)
Meiklejohn, John W., Pawtucket, R. I. Trouser-supporting device. 1,696,809; Dec. 25.
Menge, Sidney L., New Orleans, La. Low-lift pump. 1,696,776; Dec. 25.
Mercury Mills, Limited. (See Duncan, John A., assignor.)
Mergott, J. E., Co. (See Hiering, William C., assignor.)
Merrimack Manufacturing Company. (See Dick, Hugo P., assignor.)
Messmer, Charles A., jr., St. Louis, Mo. Die. 1,696,442; Dec. 25.
Meyer, Franz, assignor to the firm Carl Zeiss, Jena, Germany. Holder for arc-lamp carbons. 1,696,777; Dec. 25.
Meyer, Peter, Newark, N. J. Machine for drilling, tapping, and the like. 1,696,550; Dec. 25.
Michaelis, Frederick H., Kansas City, Mo. Wall construction for bathrooms. 1,696,443; Dec. 25.
Midwest Piping & Supply Company. (See Fantz, Fred C., assignor.)
Mieg, Walter, and A. Job, Elberfeld, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y. Monoamino-diphthaloyl acridones and preparing the same. 1,696,499; Dec. 25.
Miehle, Arthur J., Chicago, Ill. Pipe wrench. 1,696,722; Dec. 25.
Miller, Edwin S., and F. A. Haist, Buffalo, N. Y., assignors to The Keystone Mfg. Co. Holder for socket-wrench sets. 1,696,444; Dec. 25.
Miller, William E., Yonkers, N. Y. Garment-hanger continuous support. 1,696,579; Dec. 25.
Milliken, Foster, Lawhence, N. Y., assignor to Milliken Valve Corporation. Lubricated valve. 1,696,723; Dec. 25.

Milliken Valve Corporation. (See Milliken, Foster, assignor.)
Millner, T. W., et al. (See Dokkenwadel, Frederick G., assignor.)
Miner, W. H., Inc. (See Fuchs, Henry, assignor.)
Miner, W. H., Inc. (See Geiger, William A., assignor.)
Miner, W. H., Inc. (See Haseltine, Stacy B., assignor.)
Miner, W. H., Inc. (See O'Connor, John F., assignor.)
Mitchell, John C. (See Heller, H., and Mitchell.)
Mond, Albert, London, England. Radiator for motor cars and the like. 1,696,810; Dec. 25.
Moore Brothers Company. (See Dibble, Claude M., assignor.)
Moran, Martin F., Nekoma, Kans. Weed exterminator. 1,696,856; Dec. 25.
Morden, George W., and M. Weber, Los Angeles, Calif. Bag holder. 1,696,551; Dec. 25.
Morgan, Lon P. and M. C., Chicago, Ill. Lingerie clasp. 1,696,580; Dec. 25.
Morgan, Mae C. (See Morgan, Lon P. and M. C.)
Morris, Charles E., Leavenworth, Kans. Carrousel. 1,696,500; Dec. 25.
Morton, Edmund R., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Circuits for synchronous motors. 1,696,248; Dec. 25.
Mouillefarine, André, Paris, France. Dielectric substance and manufacturing same. 1,696,501; Dec. 25.
Mueller, Bruno A. (See Garankin, Theodore P., assignor.)
Muller, Wolf J., H. Carstens, and J. Drucker, Leverkusen, near Cologne-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Extraction and drying of jellies. 1,696,358; Dec. 25.
Mullins, Arch, et al. (See Mullins, Ed, assignor.)
Mullins, Ed, Cincinnati, Ohio, assignor of one-third to A. Mullins, Latonia, and one-third to S. F. Maguire, Louisville, Ky. Rail clamp. 1,696,724; Dec. 25.
Murlin Manufacturing Company. (See Lindsay, Donald E., assignor.)
Murray, Thomas E., Brooklyn, N. Y. Drum, pipe, fittings, etc. 1,696,725; Dec. 25.
Narbo, Martin, Brooklyn, N. Y. Dispensing faucet. 1,696,687; Dec. 25.
Nash Engineering Company. (See Jennings, Irving C., assignor.)
National Carbon Company et al. (See Alschuler, Ernest, assignor.)
National Fabric and Finishing Company. (See Siracusano, Louis, assignor.)
Nelson, Cecil O., Minneapolis, Minn. Game-playing machine. 1,696,359; Dec. 25.
New Haven Clock Co., The. (See Whitehead, Richard H., assignor.)
Newhouse, Ray C., Chicago, Ill., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Commintor. 1,696,857; Dec. 25.
New Jersey Machine Corporation. (See Feybusch, M., and Fleischer, assignors.)
Newman, Harry, Newark, N. J. Bottle. Des. 77,326; Dec. 25.
Newpher, Charles F., Shaker Heights, assignor to The Bourne-Fuller Company, Cleveland, Ohio. Machine for making hot-pressed nuts. 1,696,887; Dec. 25.
Nichols, Harold W., Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Antenna system. 1,696,249; Dec. 25.
Nisbet, Edward A., assignor to Invincible Vacuum Cleaner Manufacturing Company, Pittsburgh, Pa. Suction cleaner tool. 1,696,811; Dec. 25.
Nordstrom Merco Valve Company. (See Nordstrom, Sven J., assignor.)
Nordstrom, Sven J., Oakland, assignor to Merco Nordstrom Valve Company, San Francisco, Calif. Valve. 1,696,726; Dec. 25.
Norris, Wilbur C. (See Barney, William R., assignor.)
North, Samuel A. (See Leckie, H. V., and North.)
Norton, Frank W., Chicago, Ill. Lamp. 1,696,648; Dec. 25.
Norwood, Harry G., Baltimore, Md., assignor to American Dairy Supply Company, Washington, D. C. Wrapper. 1,696,445; Dec. 25.
Nulty, Joseph J. (See Hesskew, W. R., and Nulty.)
Nygaard, Oscar, Saugus, assignor to Bernitz Furnace Appliance Company, Boston, Mass. Brick for furnace-wall construction. 1,696,813; Dec. 25.
Nygaard, Oscar, Saugus, and B. H. Snow, West Medford, assignors to Bernitz Furnace Appliance Company, Boston, Mass. Furnace wall and brick therefor. 1,696,812; Dec. 25.
O. K. Playing Card Company. (See Kubatzky, Otto, assignor.)
Oakland California Towel Company. (See Trewhitt, J. E., and Hillery, assignors.)
O'Boyle, William, Chicago, Ill. News stand with adjustable top. 1,696,317; Dec. 25.
O'Connor, John F., Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc. Side bearing for railway cars. 1,696,318; Dec. 25.
O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,696,319; Dec. 25.
O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock-absorbing mechanism. 1,696,320; Dec. 25.

O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Journal-box-aligning device. 1,696,321; Dec. 25.
O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Railway-car truck. 1,696,322; Dec. 25.
O'Hara, Skidmore, assignor to O'Hara Waltham Company, Waltham, Mass. Printing machine. 1,696,280; Dec. 25.
O'Hara, Skidmore, assignor to O'Hara Waltham Company, Waltham, Mass. Printing machine. 1,696,281; Dec. 25.
O'Hara Waltham Company. (See O'Hara, Skidmore, assignor.)
Olmazu, Nicholas, New York, N. Y. Pocket clothesbrush. 1,696,727; Dec. 25.
Oreck, James. (See Sweetnam, G. E., and Oreck.)
Org, Hans L., New York, N. Y. Carpenter's plane. 1,696,552; Dec. 25.
Osbrink, Raymond H. (See Cochran, William F., assignor.)
Ostromislensky, Iwan, New York, N. Y., assignor to Revere Rubber Company, Chelsea, Mass. Vulcanizing rubber and products obtained thereby. 1,696,409; Dec. 25.
Otis, Albert N., and C. L. Ipsen, Schenectady, N. Y., assignors to General Electric Company. Electric furnace. 1,696,728; Dec. 25.
Otto, Carl, Essen-Ruhr, Germany. Directly producing ammonia. 1,696,446; Dec. 25.
Owen, Henry A., assignor to Whitin Machine Works, Whitinsville, Mass. Drafting system. 1,696,553; Dec. 25.
Paddleford, George E. (See Haynes, H. S., and Alexander, assignors.)
Palm, John V. O., assignor, by mesne assignments, to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio. Thermostat control valve for cooling systems. 1,696,410; Dec. 25.
Palmer, Harry A., Dorchester, assignor to Palmer Inventions, Inc., Boston, Mass. Air-cooled piston construction. 1,696,858; Dec. 25.
Palmer Inventions, Inc. (See Palmer, Harry A., assignor.)
Palmer, William L., Long Beach, assignor of one-half to Regan Forge & Engineering Company, San Pedro, Calif. Apparatus for dehydrating crude oils. 1,696,859; Dec. 25.
Pan American Petroleum Company. (See Black, J. C., and Low, assignors.)
Parsons, Winslow A., Wellesley, Mass., assignor to Richmond Lace Works, Inc., Alton, R. I. Lace. Des. 77,327; Dec. 25.
Pascoo, Alex., Bronx, N. Y. Honing and stropping device. 1,696,778; Dec. 25.
Patrick, Isaac, Jamaica, N. Y. Composite blade for scissors. 1,696,323; Dec. 25.
Patrick, Walter A., assignor to The Silica Gel Corporation, Baltimore, Md. Catalytic and adsorbent gel. 1,696,644; Dec. 25.
Patrick, Walter A., assignor to The Silica Gel Corporation, Baltimore, Md. Catalytic and adsorbent gel. 1,696,645; Dec. 25.
Patterson, Elam D., Coshocton, Ohio, assignor to James B. Clow and Sons, Chicago, Ill. Machine for ramming molds and the like. 1,696,250; Dec. 25.
Paulson, Charles J., Brooklyn, N. Y. Delivery apparatus. 1,696,447; Dec. 25.
Pearne, Frank D., deceased, Chicago, Ill.; M. K. Pearne, executrix. Radiotransformer. 1,696,860; Dec. 25.
Pearne, Martha K., executrix. (See Pearne, Frank D.)
Peck, Adolph C., Sandusky, Ohio. Shielding for radio apparatus. 1,696,411; Dec. 25.
Peller, Karl E., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Mold for high-temperature casting of refractory bodies. 1,696,688; Dec. 25.
Penney, Harold D., Pelham, assignor to A. G. Spalding & Bros., New York, N. Y. Manufacturing racket frames. 1,696,251; Dec. 25.
Perry, Napoleon J., assignor to May Hosiery Mills, Nashville, Tenn. Knitting machine. 1,696,282; Dec. 25.
Peterson, Eric S. (See Gaidl, A., and Peterson.)
Peterson, Thomas A., Onalaska, Wash. Log-sizing mechanism. 1,696,502; Dec. 25.
Petrelli, Joseph V., New Rochelle, assignor to Tuttle & Bailey Manufacturing Company, New York, N. Y. Register. 1,696,252; Dec. 25.
Pettus, John M., Bell, Calif. Yieldable bulb-socket support. 1,696,504; Dec. 25.
Peyser, Joseph, Mount Vernon, N. Y. Speed accelerator for traveling containers or bodies. 1,696,360; Dec. 25.
Pfeiffer, Charles G., assignor to Specialty Engineering Company, Philadelphia, Pa. Material-handling apparatus. 1,696,780; Dec. 25.
Pfeil, Philip H., Chicago Heights, Ill. Antiskid chain. 1,696,448; Dec. 25.
Pflager, Harry M., assignor to Commonwealth Steel Company, St. Louis, Mo. Booster-motor suspensions. 1,696,324; Dec. 25.
Phelps, Albert W., Heber, Calif. Sizing apparatus for fruit, melons, vegetables, and the like. 1,696,554; Dec. 25.
Phillco, Leigh H. (See Ashley, C. H., and Phillco.)
Phillips, Alfred T., Norwood, Ohio. Nail driver. 1,696,781; Dec. 25.
Phillips, Joseph, Guadalupe, Calif. Adjustable grouser wheel. 1,696,449; Dec. 25.
Photostat Corporation. (See Caps, Arthur W., assignor.)
Pickard, Greenleaf W., Newton Center, assignor to Wireless Specialty Apparatus Company, Boston, Mass. High-tension electrical condenser. 1,696,895; Dec. 25.
Pickup, George E., assignor to The Wehrle Company, Newark, Ohio. Heater. Des. 77,328; Dec. 25.
Pinckney, William E., Portland, Oreg. Washing machine. 1,696,253; Dec. 25.
Pinell, Walter, assignor to Siemens & Halske Aktiengesellschaft Wernerwerk. Siemensstadt, near Berlin, Germany. Automatic telephone system. 1,696,254; Dec. 25.
Pittsburgh Forgings Company. (See Stocking, Walter, H., assignor.)
Plante, Emma, et al. (See Lapierre, G. J., and Gilligan, assignor.)
Plante, Joseph W., et al. (See Lapierre, G. J., and Gilligan, assignor.)
Plimpton, Bentley A., assignor to Locke Insulator Corporation, Baltimore, Md. Insulator-supporting pin. 1,696,861; Dec. 25.
Podel, Abraham, assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y. Closure and method of sealing. 1,696,555; Dec. 25.
Poehls, Richard A., La Moure, N. Dak. Milking stool and pail holder. 1,696,689; Dec. 25.
Pool, William R., Ennis, and E. W. Mealer, Dallas, Tex. Railroad-washout safety device. 1,696,209; Dec. 25.
Porter, Harry F., Trenton, N. J., assignor of one-half to C. D. Ehret, Philadelphia, Pa. Current-rectifying system. 1,696,210; Dec. 25.
Porter, James R., Wantage, England. Aeronautical machine. 1,696,581; Dec. 25.
Potts, Howard W., San Francisco, Calif. Collar band. 1,696,450; Dec. 25.
Pratt, Best, Chicago, Ill. Angle cock. 1,696,283; Dec. 25.
Preisser, Arthur R., Dallas, Tex. Valve stem for inner tubes of pneumatic tires. 1,696,211; Dec. 25.
Prentice, Alexander N. (See Williams, Mulford M., assignor.)
Price, Herbert T., Burwood, Sydney, New South Wales, Australia. Pulp board and manufacturing the same. 1,696,896; Dec. 25.
Price, Thornton W., New Brunswick, N. J. Ceiling bed. 1,696,412; Dec. 25.
Price-Williams, Vernon, Miami, Fla. Water heater. 1,696,828; Dec. 25.
Priest, Harry, Poughkeepsie, N. Y. Bearing for lawn mowers and the like. 1,696,325; Dec. 25.
Primm, Julian B., et al. (See Bowman, Lee M., assignor.)
Prince, David C., Schenectady, N. Y., assignor to General Electric Company. Electrical apparatus. 1,696,862; Dec. 25.
Prosperity Company Inc., The. (See Davis, Ernest, assignor.)
Prosperity Company Inc., The. (See Steele, Harry A., assignor.)
Racine Confectioners Machinery Company. (See Hislop, Robert S., assignor.)
Rackham, George J., assignor to Yellow Coach Manufacturing Company, Chicago, Ill. Brake for vehicles. 1,696,729; Dec. 25.
Radio Frequency Laboratories, Incorporated. (See Seabury, Richard W., assignor.)
Randall, Arthur F., Boston, Mass. Loud speaker. 1,696,863; Dec. 25.
Rankin, William A., assignor to Robeson-Rochester Corporation, Rochester, N. Y. Percolator. 1,696,451; Dec. 25.
Rankin, William K., Schenectady, N. Y., assignor to General Electric Company. Electric-switch-operating mechanism. 1,696,582; Dec. 25.
Raymond, Fairfield E., assignor to Crosby Steam Gage and Valve Co., Boston, Mass. Valve. 1,696,452; Dec. 25.
Reece Button Hole Machine Company, The. (See Klewicz, John, assignor.)
Reed, Harry S., East Lansing, and R. D. Lamie, Lansing, Mich. Distilling shale. 1,696,730; Dec. 25.
Reed, Harry S., East Lansing, and R. D. Lamie, Lansing, Mich. Apparatus and process for utilizing coal. 1,696,731; Dec. 25.
Reed, Leon H. (See Jandus, H. S., and Reed.)
Regal Shoe Company. (See Bliss, Elmer J., assignor.)
Regan Forge & Engineering Company. (See Palmer, William L., assignor.)
Reich, Frederick, Elizabeth, N. J. Compensating means for valve-operating connections. 1,696,361; Dec. 25.
Reichstein, Thadeus. (See Staudinger, H., and Reichstein.)
Reid, Charles T., et al., administrators. (See Reid, James.)
Reid, Emma F., et al., administrators. (See Reid, James.)
Reid, James, deceased, Syracuse, N. Y., E. F. Reid and C. T. Reid, administrators. Apparatus for machining radiators and the like. 1,696,453; Dec. 25.
Reliance Electric & Engineering Co., The. (See Corey, James W., assignor.)
Reliance Fireproof Door Co. (See Zenker, Oscar E., assignor.)
Remington Arms Company. (See Leckie, H. V., and North, assignors.)
Remington Typewriter Company. (See Barney, Edwin E., assignor.)

Renault, Louis. (See Salves, Leon, assignor.)
Reserve Holding Company. (See Gould, Roy F., assignor.)
Revere Rubber Company. (See Fraley, Clifford A., assignor.)
Revere Rubber Company. (See Ostromislensky, Iwan, assignor.)
Reyburn, John R., Fairfield, Conn., assignor to American Chain Company, Inc. Cross chain for vehicle nonskid devices. 1,696,255; Dec. 25.
Rice, Chester W., Schenectady, N. Y., assignor to General Electric Company. Cooling system for dynamo-electric machines. 1,696,612; Dec. 25.
Rice, Wayland W., assignor to United States Gutta Percha Paint Company, Providence, R. I. Packing case or crate. 1,696,413; Dec. 25.
Richard, Clement C. (See Richard, Otis K. and C. C.)
Richard, Otis K. and C. C., Detroit, Mich. Wheel-anchoring device. 1,696,732; Dec. 25.
Richmond Lace Works, Inc. (See Parsons, Winslow A., assignor.)
Ridgely Heater Company. (See Ridgely, William W., assignor.)
Ridgely, William W., Syracuse, N. Y., assignor, by mesne assignments, to Ridgely Heater Company, Scranton, Pa. Heater. 1,696,454; Dec. 25.
Rile, Frederick C., Chicago, Ill. Fastening device. 1,696,284; Dec. 25.
Rile, Frederick C., Chicago, Ill. Fastening device. 1,696,285; Dec. 25.
Rindsberg, Harry D., assignor to H. J. Hater, Cincinnati, Ohio. Mold. 1,696,690; Dec. 25.
Riter-Conley Manufacturing Company. (See Hill, Harold O., assignor.)
Rittenhouse, Arthur E., Honeoye Falls, N. Y. Combined transformer and conduit-box cover. Re17,171; Dec. 25.
Riverside Sheet Metal Works. (See Button, William S., assignor.)
Roberts, Carl W., Parsons, Kans. Clothes and fabric cleaning device. 1,696,414; Dec. 15.
Roberts, Leland C., Towaco, N. J., assignor to American Telephone and Telegraph Company. Voltage-balance regulator. 1,696,415; Dec. 25.
Roberts, Leland C., Towaco, N. J., assignor to American Telephone and Telegraph Company. Voltage regulator. 1,696,416; Dec. 25.
Roberts, Leland C., Towaco, N. J., assignor to American Telephone and Telegraph Company. Voltage regulator. 1,696,417; Dec. 25.
Roberts, Louis G. (See Sommaripa, A., and Roberts.)
Robertson, Richard V., Wauneta, Nebr. Potato-planting attachment for listers. 1,696,864; Dec. 25.
Robeson-Rochester Corporation. (See Rankin, William A., assignor.)
Rochman, Tobias, New York, N. Y. Necktie. 1,696,691; Dec. 25.
Rock, George L., Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Spool and manufacturing spools. 1,696,256; Dec. 25.
Rock, George L., Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for assembling elements of articles. 1,696,257; Dec. 25.
Roethlisberger, Emil, New York, N. Y. Multiple-plug key. 1,696,326; Dec. 25.
Rogers, Price L., Narberth, and L. P. Holladay, jr., Chestnut Hill, Pa. Roof for cars. 1,696,692; Dec. 25.
Röhre, Kurt. (See Griessbach, R., and Röhre.)
Rosenberger, Arthur W., Broadway, Va. Coop or crate. 1,696,693; Dec. 25.
Rosenburgh, Durwood D., assignor to Taylor Instrument Companies, Rochester, N. Y. Pressure gauge. 1,696,814; Dec. 25.
Rosentreter, Albert J., Boonton, assignor to E. Zabriskie, Maplewood, N. J., and F. E. Hutchins, New York, N. Y. Elevator-door mechanism. 1,696,327; Dec. 25.
Rosentreter, Albert J., Boonton, assignor to E. Zabriskie, Maplewood, N. J., and F. E. Hutchins, New York, N. Y. Safety mechanism for elevator-shaft doors. 1,696,328; Dec. 25.
Ross Tacony Crucible Company. (See Bacon Charles C., assignor.)
Roth, Thomas P., Louisville, Ky. Tube and tire saver. 1,696,503; Dec. 25.
Rubber Service Laboratories Co. The. (See Hand, Carl N., assignor.)
Rupley, William E., Los Angeles, assignor to Western Pipe & Steel Company of California, San Francisco, Calif. Circular-seam-welding apparatus. 1,696,455; Dec. 25.
Saatman, Walter A., Roslyn, Pa. Glue-applying roll. 1,696,329; Dec. 25.
St. John, Henry W., Brightwaters, N. Y. Golf accessory. 1,696,817; Dec. 25.
Salves, Leon, assignor to L. Renault, Billancourt, France. Manufacturing of valves and like devices. 1,696,646; Dec. 25.
Sagendorph, William K., executor. (See Hopkins, George F.)
Sander, Herman J., and A. J. Breister, Fond du Lac, Wis. Playing-card holder. 1,696,647; Dec. 25.
Sandusky Tool Corporation. (See Schwer, Wilbert G., assignor.)
Sargent, Howard R., and F. C. De Reamer, Bridgeport, Conn., assignors to General Electric Company. Coupling for electric circuits. 1,696,583; Dec. 25.
Sayford Paper Speciality Company. (See Martz, Charles C., assignor.)
Schafer, John P., Richmond Hill, assignor to Western Electric Company, Incorporated, New York, N. Y. Selective translation system. 7,696,212; Dec. 25.
Schellenger, Newton C., assignor to Chicago Telephone Supply Company, Elkhart, Ind. Jack. 1,696,865; Dec. 25.
Schmied, James W., West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Carrier-wave communication. 1,696,258; Dec. 25.
Schoell, Reinhold, Kelsey City, Pa. Transmission gear. 1,696,331; Dec. 25.
Schoeller, Walter, Berlin-Westend, and H. Jordon, Berlin-Steglitz, assignors to the firm: Chemische Fabrik auf Actien, vorm E. Schering, Berlin, Germany. Making alkyl isoalkyl cyclohexanols. 1,696,782; Dec. 25.
Schoenhut, Harry E., Philadelphia, Pa., assignor to G. E. Studdy, London, England. Toy animal figure. Des. 77,329; Dec. 25.
Schofer, Fred, Bronx, N. Y. Napkin stand. 1,696,556; Dec. 25.
Schofield, Edgar, New York, assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y. Cap and package. 1,696,330; Dec. 25.
Schornack, James, Belleville, N. J. Doorcheck. 1,696,701; Dec. 25.
Schrader, Lloyd F., Richmond Hill, assignor to Foundation Oven Corporation, New York, N. Y. Pusher track for coke ovens. 1,696,259; Dec. 25.
Schraegle, August F. (See Geiger, E. A., Schraegle, and Jennings.)
Schultz, Frank D., assignor of one-half to A. Therry, Seattle, Wash. Portable burning apparatus. 1,696,888; Dec. 25.
Schulz, Emil E., McConnell, Ill. Combined barrel cover and pail support. 1,696,418; Dec. 25.
Schwarzenbach Huber Co., The. (See Coene, Emile, assignor.)
Schwenzer, George V., Brooklyn, N. Y. Bell-ringing device. 1,696,648; Dec. 25.
Schwer, Wilbert G., assignor to Sandusky Tool Corporation, Sandusky, Ohio. Plane. 1,696,584; Dec. 25.
Scott, Rumsey W., Montclair, N. J., assignor to American Cable Company, Inc. Attachment for wire rope. 1,696,889; Dec. 25.
Scovill Manufacturing Company. (See Simons, Ernest D., assignor.)
Scoville, Eugene M., Milwaukee, Wis., assignor of one-half to F. L. Swanberg, Danville, Ill. Oil pump. 1,696,733; Dec. 25.
Scoville, Eugene M., Milwaukee, Wis., assignor of one-half to F. L. Swanberg, Danville, Ill. Oil pump. 1,696,734; Dec. 25.
Scoville, Eugene M., Milwaukee, Wis., assignor of one-half to F. L. Swanberg, Danville, Ill. Oil filter. 1,696,735; Dec. 25.
Scoville, Eugene M., Milwaukee, Wis., assignor of one-half to F. L. Swanberg, Danville, Ill. Telescopic oiler. 1,696,736; Dec. 25.
Scoville, Eugene M., Milwaukee, Wis., assignor of one-half to F. L. Swanberg, Pittsburgh, Pa. Grease cup. 1,696,737; Dec. 25.
Seabury, Richard W., assignor to Radio Frequency Laboratories, Incorporated, Boonton, N. J. Socket for radio instruments. 1,696,649; Dec. 25.
Seaman, William A., Saginaw, Mich. Push-rod-operating mechanism. 1,696,866; Dec. 25.
Sebring, James A., assignor, by mesne assignments, to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio. Telescoping cabinet cover. 1,696,456; Dec. 25.
Seelbach, K. C., Company. (See Ern, August F., assignor.)
Segoria, Martin, Vallejo, Calif. Treating leather. 1,696,867; Dec. 25.
Selden Company, The. (See Jaeger, A. O., and Bertsch, assignors.)
Selective Automatic Manufacturing Corporation. (See Cutler, William C., assignor.)
Senesac, Telesphore J., Chicago, Ill. Concrete form. 1,696,694; Dec. 23.
Senesac, Telesphore J., Chicago, Ill. Anchor for floor sleepers. 1,696,695; Dec. 25.
Seng Company, The. (See Fox, Martin, assignor.)
Sennett, Mack, Inc. (See Crockett, Ernest J., assignor.)
Sesam Aktiebolag. (See Lundberg, Elof K. H., assignor.)
Settles, Simon G., assignor to H. W. Barden, Seattle, Wash. Sink strainer. 1,696,505; Dec. 25.
Sewell, Benjamin F. B., Chula, Va. Reclining mat. 1,696,362; Dec. 25.
Shanahan, Michael A., Libby, Mont. Ventilating means for boots and shoes. 1,696,457; Dec. 25.
Sheaffer, W. A., Pen Company. (See Sweetnam, G. E., and Oreck, assignors.)
Sheehan, William M., St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill. Underframe for well cars. 1,696,332; Dec. 25.
Shelton, Harry J., University City, Mo. Crusher. 1,696,213; Dec. 25.
Shepard, Frederick J., jr., Auburndale, and N. Warshaw, Boston, assignors to Lewis-Shepard Company, Watertown, Mass. Platform for use with elevating trucks. 1,696,585; Dec. 25.
Shepherd, Tom L., et al. (See Bowman, Lee M., assignor.)
Sheridan, Francis. (See Stedwell, George W., assignor.)

Shimer, Abraham A., Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del. Extracting rosin and turpentine from wood. 1,696,696; Dec. 25.
Shire, Harry L., Detroit, Mich. Electrical instrument. 1,696,333; Dec. 25.
Shire, Harry L., Detroit, Mich. Testing storage batteries. 1,696,334; Dec. 25.
Shore, Morris M., New York, N. Y. Telephone index. 1,696,335; Dec. 25.
Showel, Sam H., McKees Rocks, Pa. Method of and apparatus for supporting the side walls of excavations. 1,696,421; Dec. 25.
Shredded Wheat Company, The. (See Webster, Earl P., assignor.)
Shroyer, Jacob L., Oak Park, assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill. Toaster. 1,696,613; Dec. 25.
Shults, Herbert O., assignor to E. L. Mansure Company, Chicago, Ill. Upholstery braid. Des. 77,330; Dec. 25.
Sidebotham, Melvin H. (See La Bombard, L. E., and Sidebotham.)
Siemens & Halske Aktiengesellschaft Wernerwerk. (See Pinell, Walter, assignor.)
Silica Gel Corporation, The. (See Patrick, Walter A., assignor.)
Simons, Ernest D., Cheshire, assignor to Scovill Manufacturing Company, Waterbury, Conn. Fastener slide. 1,696,586; Dec. 25.
Simonds Saw and Steel Company. (See Howard, Leslie E., assignor.)
Siracusano, Louis J., Astoria, assignor to National Fabric and Finishing Company, New York, N. Y. Printed textile fabric or the like. Des. 77,331; Dec. 25.
Sisson, Vinton E., assignor, by mesne assignments, to Union Metal Products Company, Chicago, Ill. Corrugated steel end for railway cars. 1,696,650; Dec. 25.
Skertchly, William P., Spondon, near Derby, England, assignor to Celanese Corporation of America. Purification of acetic anhydride. 1,696,803; Dec. 25.
Skinner, Allan D., assignor to Skinner Engine Company, Erie, Pa. Valve. 1,696,808; Dec. 25.
Skinner Engine Company. (See Skinner, Allan D., assignor.)
Skinner Irrigation Company, The. (See Coles, Walter H., assignor.)
Slate, Thomas B., assignor, by mesne assignments, to American Patents Development Corporation, New York, N. Y. Refrigerating apparatus and method. 1,696,651; Dec. 25.
Slick, Edwin E., Pittsburgh, Pa. Goblet or similar article. Des. 77,332; Dec. 25.
Slusser, Lee D., assignor of one-half to G. F. Donart, Ottawa, Ohio. Coin-controlled time switch. 1,696,364; Dec. 25.
Small, Abram, Danvers, Mass. Leather finishing. 1,696,815; Dec. 25.
Smart, Edmund F., Wallsend-on-Tyne, England, assignor of one-half to J. W. Hartley, Brooklyn, N. Y. Auto signal. 1,696,890; Dec. 25.
Smidth, F. L., & Co. (See Treschow, Michael, assignor.)
Smith, Arthur E., Los Angeles, Calif. Closure for collapsible tubes. 1,696,506; Dec. 25.
Smith, Edward W., Philadelphia, Pa. Ejector for molds. 1,696,652; Dec. 25.
Smith, Goodwin B., New York, N. Y. Coin-controlled vending machine. 1,696,365; Dec. 25.
Smith, Joseph L., Ogden, Utah. Combined tent, bed, and case. 1,696,286; Dec. 25.
Smith, L C, & Corona Typewriters Inc. (See Ely, A. B., and Harmon, assignors.)
Smith, Scott V., Bridgeport, Ill. Automatic vacuum-controlled valve. 1,696,366; Dec. 25.
Smith, T. G. (See Ballowe, Leigh M., assignor.)
Smith, William J., St. Paul, assignor of one-third to H. Lowry, Minneapolis, Minn., and one-third to A. L. Drum, Chicago, Ill. Railway brake. 1,696,869; Dec. 25.
Snell, Samuel A., assignor to F. C. Matthael, Detroit, Mich. Heater for automobiles. 1,696,214; Dec. 25.
Snow, Benjamin H. (See Nygaard, O., and Snow.)
Sommaripa, Alexis, Buffalo, N. Y., and L. G. Roberts, Nashua, N. H. Machine for inspecting and bundling cloth. 1,696,287; Dec. 25.
Sommer, William H., Peoria, Ill. Apparatus for pointing wires. 1,696,697; Dec. 25.
Sommer, William H., Peoria, Ill. Pointing and drawing wires. 1,696,698; Dec. 25.
Sommers, Herman J. (See Armstrong, Arthur N., assignor.)
Sosnowski, Julius C., Long Beach, Calif. Speedometer-actuated circuit closer. 1,696,453; Dec. 25.
Southern California Edison Company. (See Frampton, William R., assignor.)
Spalding, A. G., & Bros. (See Penney, Harold D., assignor.)
Spalsbury, Charles B., assignor to Johnson, Stephens & Shinkle Shoe Company, St. Louis, Mo. Shoe manufacture. Re17,172; Dec. 25.
Specialty Automatic Machine Company. (See La Bombard, L. E., and Sidebotham, assignors.)
Specialty Engineering Company. (See Pfeiffer, Charles G., assignor.)
Spencer, Henry J., Waco, Tex. Sliding-door latch. 1,696,870; Dec. 25.
Spiess, George, Leipzig-Plagwitz, Germany. Apparatus for removing sheets from a pile. 1,696,215; Dec. 25.
Standard Sanitary Manufacturing Company. (See Thompson, William O., assignor.)
Stanhope, Benjamin C., Denver, Colo. Shoveling machine. 1,696,216; Dec. 25.
Staudinger, Hermann, Freiburg, Germany, and T. Reichstein, Zurich, Switzerland, assignors to the firm Internationale Nahrungs- und Genussmittel Aktiengesellschaft, Schaffhausen, Germany. Producing artificial coffee aroma. 1,696,419; Dec. 25.
Stedwell, George W., Brooklyn, assignor of one-half to F. Sheridan, New York, N. Y. Liquid-delivery system. 1,696,738; Dec. 25.
Steel, Willard R., Scotia, N. Y., assignor to General Electric Company. Heat-resistant composition suitable for arc deflectors. 1,696,614; Dec. 25.
Steele, Harry A., assignor to The Prosperity Company Inc., Syracuse, N. Y. Spring pad for pressing machines. 1,696,653; Dec. 25.
Steinarson, Sigurd A., Bucksport, Me. Brush attachment. 1,696,816; Dec. 25.
Stem, Isaac F., and J. H. Glaze, Mountain View, Calif. Roller cultivator. 1,696,654; Dec. 25.
Stember, Bernard, New York, N. Y. Leather or similar article. Des. 77,333; Dec. 25.
Stephens, Elton S., Chicago, Ill. Filter. 1,696,367; Dec. 25.
Stephens, William A. (See Huxley, J. H., and Stephens.)
Stevens, B. M., et al. (See Dokkenwadel, Frederick G., assignor.)
Stevenson, William B. (See Kieffer, E. T., and Stevenson.)
Sthamer, Erich M. A., Hamburg, Germany. Foam-producing composition. 1,696,507; Dec. 25.
Stocking, Walter H., assignor to Pittsburgh Forgings Company, Coraopolis, Pa. Reclaiming of worn car axles. 1,696,217; Dec. 25.
Stout, Edward, Burlington, Iowa. Impact recorder. 1,696,420; Dec. 25.
Strand, Harry L., Boston, assignor of one-half to L. F. Emerson, Brookline, Mass. Building block and wall. 1,696,818; Dec. 25.
Strindber, Richard, New York, assignor of one-third to J. L. Lotsch, Brooklyn, N. Y. Internal-combustion engine. 1,696,336; Dec. 25.
Strouse, Louis V., Linwood, N. J. Electrical shifting mechanism for curtains. 1,696,368; Dec. 25.
Studdy, George E. (See Schoenhut, Harry E., assignor.)
Suiter, Harold R., Grand Rapids, Mich. Mechanism for use with articulated mold forms. 1,696,699; Dec. 25.
Suiter, Harold R., Grand Rapids, Mich. Mold-form structure. 1,696,700; Dec. 25.
Sullivan Machinery Company. (See Wyman, Charles W., assignor.)
Summers, Otto M., Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation. Refrigerating apparatus. 1,696,459; Dec. 25.
Supertile Machinery Corporation. (See Flam, Stephen, assignor.)
Susquehanna Silk Mills. (See Bunting, James H., assignor.)
Sutcliffe, Tom, London, England. Capping machine. 1,696,819; Dec. 25.
Swanberg, Floyd L. (See Scoville, Eugene M., assignor.)
Swasey, Carleton F., New Canaan, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y. Casing and support for electrical apparatus. 1,696,260; Dec. 25.
Sweetnam, George E., and J. Oreck, Chicago, Ill., assignors to W. A. Sheaffer Pen Company, Fort Madison, Iowa. Fountain-pen desk set. 1,696,218; Dec. 25.
Symmes, Ernest M., assignor to Hercules Powder Company, Wilmington, Del. Producing abietic acid esters of polyglycerol. 1,696,337; Dec. 25.
Taylor, Guy B. (See Davis, C. W., and Taylor.)
Taylor Instrument Companies. (See Rosenburgh, Durwood D., assignor.)
Teipel, Joseph, assignor to American Pulverizer Company, St. Louis, Mo. Pulverizing machine. 1,696,219; Dec. 25.
Templeton, John B., Dallas, Tex. Progressive pile-driver support. 1,696,820; Dec. 25.
Teyen, Alfred. (See Teyen, Peter and A.)
Teyen, Peter and A., Pomeroy, Iowa. Poultry-spraying device. 1,696,460; Dec. 25.
Thayer, Eugene A., Urbana, Ill. Prosthetic dentistry. 1,696,422; Dec. 25.
Therry, Albert. (See Schultz, Frank D., assignor.)
Thompson, James H., New Smyrna, Fla. Compression and suction saving construction for piston rings. 1,696,424; Dec. 25.
Thompson, James S., assignor to American Brake Materials Corporation, New York, N. Y. Friction brake. 1,696,821; Dec. 25.
Thompson, William O., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa. Faucet. Des. 77,334; Dec. 25.
Thorburn, Walter, Seattle, Wash. Hand level and angling device. 1,696,508; Dec. 25.
Thorne, Edward, Chicago, Ill., assignor to T. R. Goodlatte & Sons, (Inc.), Delawanna, N. J. Table cover or analogous article. Des. 77,335; Dec. 25.

Thorpe, William, Wellington, New Zealand. Automatic machine for displaying advertisements, posters, pictures, show cards, and the like. 1,696,655; Dec. 25.
Tierney, George G., Minneapolis, Minn. Ventilator. 1,696,423; Dec. 25.
Tillquist Hugo T. (See Isaksson, Carl J. E., assignor.)
Tissler, Josef, Philadelphia, Pa. Electric floor lamp. Des. 77,336; Dec. 25.
Tomlin, Leon A., Baltimore, Md. Safety elevator. 1,696,557; Dec. 25.
Tondreau, Albert W. (See Gage, F. W., and Tondreau.)
Torbet, Mayson W. (See Fitch, F. E., and Torbet.)
Tornberg, Isidor, Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Pump for molten metal. 1,696,656; Dec. 25.
Townsend, Harry A., Minneapolis, Minn. Blanket holder for hoods of automobiles. 1,696,220; Dec. 25.
Train Control Corporation of America. (See Clifford, Patrick J., assignor.)
Treleaven, Clifford L., Jackson Heights, assignor to Color Cinema Productions, Inc. New York, N. Y. Color photography. 1,696,739; Dec. 25
Treschow, Michael, Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y. Gearing. 1,696,740; Dec. 25.
Tresner, Raymond B., Mabton, Wash. Potato-picking belt. 1,696,509; Dec. 25.
Trewhitt, James E., and P. E. Hillery, assignors to Oakland California Towel Company, Oakland, Calif. Water-softening apparatus. 1,696,369; Dec. 25.
Trogner, Arthur M., Takoma, Md., and T. M. Davis, Washington, D. C., assignors to Wired Radio, Inc., New York, N. Y. Shielded telephone plug. 1,696,657; Dec. 25.
Trombetta, Panfilo, Schenectady, N. Y., assignor to General Electric Company. Electromagnet. 1,696,615; Dec. 25.
Trumble, Milon J., Alhambra, Calif. Cracking hydrocarbons. 1,696,658; Dec. 25.
Tubbs, Earl D., New York, N. Y. Wreath form. 1,696,221; Dec. 25.
Tubular Products Company, The. (See Lewis, Ernest C., assignor.)
Tucker, Joseph B., Long Beach, Calif. Drag-handle catch. 1,696,461; Dec. 25.
Turcott, David, assignor to Yates-American Machine Company, Beloit, Wis. Automatic turning machine. 1,696,425; Dec. 25.
Turner, Jacob, assignor to Turner Manufacturing Company, Chicago, Ill. Mirror frame. Des. 77,337; Dec. 25.
Turner Manufacturing Company. (See Turner, Jacob, assignor.)
Turvene, John C., Dayton, Ohio. Valve-operating mechanism and the like. 1,696,370; Dec. 25.
Tuttle & Bailey Manufacturing Company. (See Petrelli, Joseph V., assignor.)
Tytus, John B., assignor to The American Rolling Mill Company, Middletown, Ohio. Continuous furnace. 1,696,822; Dec. 25.
U S L Battery Corporation. (See Wilbur, Samuel P., assignor.)
Underwood Elliott Fisher Company. (See Helmond, William F., assignor.)
Underwood Elliott Fisher Company. (See Kurowski, Alfred G. F., assignor.)
Underwood, Frank K., Oskaloosa, Iowa. Treeholder. 1,696,288; Dec. 25.
Union Draft Gear Company. (See Cotton, Walter H., assignor.)
Union Metal Products Company. (See Sisson, Vinton E., assignor.)
United Shoe Machinery Corporation. (See Gouldbourn, Joseph, assignor.)
United States Chain & Forging Company. (See Bremer, Frederick G., assignor.)
United States Gutta Percha Paint Company. (See Rice, Wayland W., assignor.)
United States Gypsum Co., The. (See Hirdsey, Charles R., assignor.)
Van Bourgonle, Constant A., Bergerhout-Antwerp, Belgium. Elastic wheel. 1,696,741; Dec. 25.
Van Nuys, Claude C., Cranford, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Refrigeration. 1,696,558; Dec. 25.
Vermillion, Raymond H., Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn. Drapery-pole center. Des. 77,338; Dec. 25.
Vermillion, Raymond H., Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn. Drapery-pole center. Des. 77,339; Dec. 25.
Vestal, Albert H., et al. (See Malone, Adolph W., assignor.)
Victor, John H., Chicago, Ill. Sporting implement. 1,696,462; Dec. 25.
Victor Talking Machine Company. (See Kieffer, E. T., and Stevenson, assignors.)
Vitrefrax Corportion, The. (See Curtis, Thomas S., assignor.)
Von Glahn, Charles H., Brooklyn, N. Y. Cheese slicer. Re17,175; Dec. 25.
Von Sydow, Rudolf W., Glendale, assignor of one-half to E. G. Burghard, Los Angeles, Calif. Bottle cap. 196,742; Dec. 25.
Vrooman, Frank W. (See Harder, D. S., and Vrooman.)
Wackerle, Lewis E., Waukegan, assignor to Chicago Hardware Foundry Company, North Chicago, Ill. Table or stand. 1,696,871; Dec. 25.
Wadsworth, Frank L. O., Pittsburgh, Pa. Temperature control for water heaters. 1,696,222; Dec. 25.
Wadsworth Watch Case Company, The. (See Conant, Arthur P., assignor.)
Wald, Calvin R., Birmingham, Ala. Shaking, rocking, and dumping grate. 1,696,463; Dec. 25.
Wakabayashi, Tatsuo, San Francisco, Calif. Glue dispenser. 1,696,783; Dec. 25.
Walker, Willard R., Syracuse, N. Y. Culinary fixture. 1,696,464; Dec. 25.
Wallace, Clifford E., Dallas, Oreg. Clam digger. 1,696,371; Dec. 25.
Wallace, R., & Sons Mfg. Co. (See Warren, William S., assignor.)
Wallace, William A., Oakland, Calif. Traffic marker. 1,696,510; Dec. 25.
Walley, V. R., et al. (See Dokkenwadel, Frederick G., assignor.)
Walsh, Arthur E., Chicago, Ill. Hair waver. 1,696,823; Dec. 25.
Wanner, Frederick W., St. Louis, Mo. Price marker. 1,696,824; Dec. 25.
Wappler, Frederick C., New York, N. Y. Binding post. 1,696,616; Dec. 25.
Ward, Daisy S., Brooklyn, N. Y. Child's garment. 1,696,559; Dec. 25.
Ward, William C., Jamestown, assignor to The Borden Company, New York, N. Y. Automatic control mechanism. 1,696,659; Dec. 25.
Ware, Walter F., Haddonfield, N. J., assignor to The Walter F. Ware Company. Syringe and medicine dropper. 1,696,250; Dec. 25.
Ware, Walter F., Company, The. (See Ware, Walter F., assignor.)
Warren, William S. Meriden, assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn. Spoon or similar article. Des. 77,340; Dec. 25.
Warshaw, Nathaniel. (See Shepard, F. J., jr., and Warshaw.)
Wasil, Albert P. (See Masley, F. S., and Wasil.)
Watlington, William H., Denver, Colo. Brake-releasing device. 1,696,702; Dec. 25.
Weber, Martin. (See Morden, G. W., and Weber.)
Weber, Tobias. (See Chase, Hamilton C., assignor.)
Webner, Julius, New York, N. Y. Machine for grinding or cutting stone. 1,696,660; Dec. 25.
Webster, Earl P., assignor to The Shredded Wheat Company, Niagara Falls, N. Y. Driving endless conveyers. 1,696,465; Dec. 25.
Wehrle Company, The. (See Pickup, George E., assignor.)
Weil, Maximilian, New York, N. Y. Acoustic apparatus. 1,696,784; Dec. 25.
Weil, Miximilian, New York, N. Y. Sound-reprodncing apparatus. 1,696,872; Dec. 25.
Weiss, Charles, New York, N. Y. Plate or similar article. Des. 77,341; Dec. 25.
Welch, Alfred F., Fort Wayne, Ind., assignor to General Electric Company. Electroresponsive controlling device. 1,696,617; Dec. 25.
Wells, James M., Salt Lake City, Utah. Waterspout holder. 1,696,426; Dec. 25.
Welty, Peter P., Pandora, Ohio. Latch for sliding doors. 1,696,785; Dec. 25.
Wendt, Bruno. (See Wulff, P., and Wendt.)
Westcott, Jay M., Syracuse, N. Y. Door lock. 1,696,466; Dec. 25.
Western Electric Company. (See Bandur, Adolph F., assignor.)
Western Electric Company. (See Blood, Harold L., assignor.)
Western Electric Company. (See Fay, Joseph W., assignor.)
Western Electric Company. (See Gilbert, John J., assignor.)
Western Electric Company. (See Heising, Raymond A., assignor.)
Western Electric Company. (See Jespersen, Helgo W., assignor.)
Western Electric Company. (See Kendall, Burton W., assignor.)
Western Electric Company. (See Kochendorfer, Frederic S., assignor.)
Western Electric Company. (See Mathes, Robert C., assignor.)
Western Electric Company. (See Nichols, Harold W., assignor.)
Western Electric Company. (See Rock, George L., assignor.)
Western Electric Company. (See Schafer, John P., assignor.)
Western Electric Company. (See Schmied, James W., assignor.)
Western Electric Company. (See Swasey, Carleton F., assignor.)
Western Electric Company. (See Wotton, James A., assignor.)
Western Pipe & Steel Company of California. (See Rupley, William E., assignor.)
Wetherbee, Herbert E., assignor of one-third to R. F. Grant and one-third to H. M. Hanna, Cleveland, Ohio. Treating artificial fuels. 1,696,511; Dec. 25.
Wheelock, Edward E. (See Faubert, H. W., and Wheelock.)
White, John W., Buffalo, N. Y. Fuel pump. 1,696,825; Dec. 25.

White, Louis A., Brooklyn, N. Y. Indicating mechanism. 1,696,512; Dec. 25.
White Motor Company, The. (See Howell, James W., assignor.)
Whitehead, Richard H., assignor to The New Haven Clock Co., New Haven, Conn. Clock case. Des. 77,342; Dec. 25.
Whitehead, Richard H., assignor to The New Haven Clock Co., New Haven, Conn. Clock case. Des. 77,343; Dec. 25.
Whitehead, Thomas C. (See Heideman, Fred J., assignor.)
Whitin Machine Works. (See Owen, Henry A., assignor.)
Whittier, Elmer S., Springfield, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Device for melting paraffin. 1,696,826; Dec. 25.
Wiener, Elizabeth, New York, N. Y. Whisk-broom holder. Des. 77,344; Dec. 25.
Wilbur, Samuel P., Toledo, Ohio, assignor, by mesne assignments, to U S L Battery Corporation. Hydrometer device. 1,696,618; Dec. 25.
Wilhelm, Herman, New York, N. Y. Shoe. Des. 77,345; Dec. 25.
Willetts, Paul G., Berlin, assignor to Hartford-Empire Company, Hartford, Conn. Composite glass-feeder implement. 1,696,661; Dec. 25.
Williams, Mulford M., assignor to A. N. Prentice, Oakland, Calif. Animated-display device. 1,696,827; Dec. 25.
Williams, Samuel B., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission system. 1,696,261; Dec. 25.
Williams, William E., Wilmette, Ill. Railway-box-car carline. 1,696,427; Dec. 25.
Williams, William E., Wilmette, Ill. Carrier used in making book and other matches. 1,696,743; Dec. 25.
Wills, Harold A., Plainfield, N. J. Railroad crosstie. 1,696,662; Dec. 25.
Wired Radio, Inc. (See Crossley, Alfred, assignor.)
Wired Radio, Inc. (See Trogner, A. M., and Davis, assignors.)
Wireless Specialty Apparatus Company. (See Pickard, Greenleaf W., assignor.)
Wise, Solomon, Cincinnati, Ohio. Lock. 1,696,829; Dec. 25.
Wood, Jonathan T., Chatham, Ontario, Canada. Instep-arch support. 1,696,786; Dec. 25.
Wood, Joseph D., Wollaston, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Protective apparatus and system. 1,696,289; Dec. 25.
Wood Newspaper Machinery Corporation. (See Tornberg, Isidor, assignor.)
Wood, Robert T., Niagara Falls, N. Y., assignor to American Magnesium Corporation. Magnesium primary cell. 1,696,873; Dec. 25.
Wooton, James A., Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Electromagnetic device. 1,696,223; Dec. 25.
Wright, Stephen E., Los Angeles, Calif. Tobacco pipe. 1,696,372; Dec. 25.
Wrobel, S., Slipper C. (See Wrobel, Simon, assignor.)
Wrobel, S., Slipper Co. (See Wrobel, Simon, assignor.)
New York, N. Y. Boudoir slipper. Des. 77,346; Dec. 25.
Wulff, Peter, Starnberg, and B. Wendt, Dessau, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Light-sensitive silver halide emulsions and making the same. 1,696,830; Dec. 25.
Wyman, Charles W., Claremont, N. H., assignor to Sullivan Machinery Company. Electric controlling device. 1,696,744; Dec. 25.
Wyman, Charles W., Claremont, N. H., assignor to Sullivan Machinery Company. Fuse mechanism. 1,696,745; Dec. 25.
Wyman, Charles W., Claremont, N. H., assignor to Sullivan Machinery Company. Controlling mechanism. 1,696,746; Dec. 25.
Wyman, Charles W., Claremont, N. H., assignor to Sullivan Machinery Company. Interlocking mechanism. 1,696,747; Dec. 25.
Wyman, Charles, W., Claremont, N. H., assignor to Sullivan Machinery Company. Controlling apparatus. 1,696,748; Dec. 25.
Yarwood, William A., Buffalo, N. Y. Stoker. 1,696,587; Dec. 25.
Yates-American Machine Company. (See Turcott, David, assignor.)
Yellow Coach Manufacturing Company. (See Rackham, George J., assignor.)
Young, Charles O., Elmhurst, N. Y., assignor to Carbide & Carbon Chemical Corporation. Making ethylene glycol monoalkyl ethers. 1,696,874; Dec. 25.
Zabriskie, Edgar, et al. (See Rosentreter, Albert, J., assignor.)
Zeiss Carl. (See Meyer, Franz, assignor.)
Zelkowitz, Herman L. (See Zelkowitz, Nathan and H. L., and Brayman.)
Zelkowitz, Nathan and H. L., and B. Brayman, Wilkes-Barre, Pa. Dispensing device. 1,696,787; Dec. 25.
Zellner, Henry G., Fort Myers, assignor to Zeltrocide Chemical Corporation, Lakeland, Fla. Composition for treating fruit. 1,696,703; Dec. 25.
Zellner, Henry G., Fort Myers, assignor to Zeltrocide Chemical Corporation, Lakeland, Fla. Composition for treating fresh fruits and vegetables. 1,696,704; Dec. 25.
Zeltrocide Chemical Corporation. (See Zellner, Henry G., assignor.)
Zenker, Oscar E., assignor to Reliance Fireproof Door Co., Brooklyn, N. Y. Metal door and the like. 1,696,373; Dec. 25.

# ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

## PATENTS WERE ISSUED ON THE 25TH DAY OF DECEMBER, 1928.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

Acetaldehyde, Manufacture of. C. N. Hand. 1,696,479; Dec. 25.
Acid, Aromatic sulphonic. F. Günther and A. Cantzler. 1,696,190; Dec. 25.
Acid esters of polyglycerol, Producing abietic. E. M. Symmes. 1,696,337; Dec. 25.
Acid solutions, Concentrating lower-aliphatic-. H. Dreyfus and C. I. Haney. 1,696,432; Dec. 25.
Acoustic apparatus. M. Weil. 1,696,784; Dec. 25.
Acoustic device. O. E. Buckley. 1,696,265; Dec. 25.
Acoustic diaphragm. C. Blieberger. 1,696,565; Dec. 25.
Addressing machine, Hand-operated. E. A. Geiger and A. Geiger. 1,696,760; Dec. 25.
Addressing machines, Automatic selective attachment for. E. A. Geiger, A. F. Schraegle, and H. T. Jennings. 1,696,759; Dec. 25.
Advertising cigar lighter. A. L. Jackson. Des. 77,318; Dec. 25.
Aeronautical machine. J. R. Porter. 1,696,581; Dec. 25.
Aeroplane. P. G. Kluse. 1,696,404; Dec. 25.
Agricultural machine. H. H. Green. 1,696,299; Dec. 25.
Agricultural machine, Automatic. E. E. Goucher. 1,696,352; Dec. 25.
Air blower for dental purposes. A. Lübke. 1,696,440; Dec. 25.
Air brake. C. R. Bowen. 1,696,665; Dec. 25.
Air-regulating device for automobile radiators. G. G. Marshall. 1,696,208; Dec. 25.
Airplane. W. Lenert. 1,696,493; Dec. 25.
Alkyl Isoalkyl cyclohexanols, Making. W. Schoeller and H. Jordan. 1,696,782; Dec. 25.
Ammonia, Directly producing. C. Otto. 1,696,446; Dec. 25.
Anchor for floor sleepers. T. J. Senesac. 1,696,695; Dec. 25.
Anchoring device, Wheel. O. K. and C. C. Richard. 1,696,732; Dec. 25.
Animal trap. G. N. Irwin. 1,696,768; Dec. 25.
Annealing apparatus. H. V. Leckie and S. A. North. 1,696,886; Dec. 25.
Annealing boxes, Apparatus for crowning. A. R. McArthur. 1,696,686; Dec. 25.
Antenna. R. A. Heising. 1,696,234; Dec. 25.
Antenna, Loop. T. C. Deutschmann. 1,696,529; Dec. 25.
Antenna system. H. W. Nichols. 1,696,249; Dec. 25.
Apparel hanger. E. H. Clarke. 1,696,753; Dec. 25.
Ash receptacle or analogous article. E. C. Lewis. Des. 77,324; Dec. 25.
Ash receptacle or similar article. E. C. Lewis. Des. 77,323; Dec. 25.
Assembling elements of articles, Apparatus for. G. L. Rock. 1,696,257; Dec. 25.
Atomizer. E. C. Brown. 1,696,428; Dec. 25.
Auto signal. E. F. Smart. 1,696,890; Dec. 25.
Automobile heater. S. A. Snell. 1,696,214; Dec. 25.
Automobile lock. M. A. McKay and E. E. Doudna. 1,696,278; Dec. 25.
Automobiles, Blanket holder for hoods of. H. A. Townsend. 1,696,220; Dec. 25.
Axles. Reclaiming of worn car. W. H. Stocking. 1,696,217; Dec. 25.
Bag inserter. R. Hansen. 1,696,843; Dec. 25.
Bail construction for lanterns and the like. R. A. Currie. 1,696,567; Dec. 25.
Balance regulator, Voltage-. L. C. Roberts. 1,696,415; Dec. 25.
Bar: *See*—
Lintel bar.
Bearing for lawn mowers and the like. H. Priest. 1,696,325; Dec. 25.
Bearing for railway cars, Side. J. F. O'Connor. 1,696,318; Dec. 25.
Bearing, Machine. E. Brown. 1,696,667; Dec. 25.
Bed, Ceiling. T. W. Price. 1,696,412; Dec. 25.
Bed for shoe-ornamenting machinery. B. B. Brodfuehrer, B. W. Freeman, and C. A. Jester. 1,696,834; Dec. 25.
Bell-ringing device. G. V. Schwenzer. 1,696,648; Dec. 25.
Belt, Potato-picking. R. B. Tresner. 1,696,509; Dec. 25.
Bending machine. T. J. Kelleher. 1,696,849; Dec. 25.
Bending machine. J. W. Killingsworth. 1,696,850; Dec. 25.
Binding post. F. C. Wappler. 1,696,616; Dec. 25.
Blade for scissors, Composite. I. Patrick. 1,696,323; Dec. 25.
Block and wall, Building. H. L. Strand. 1,696,818; Dec. 25.
Blotting device. M. E. Keig. 1,696,308; Dec. 25.
Blower. E. C. Hassler. 1,696,882; Dec. 25.
Board: *See*—
Ironing board.
Board and manufacturing the same, Pulp. H. T. Price. 1,696,896; Dec. 25.
Boiler: *See*—
Semiflash boiler.
Bottle. H. Newman. Des. 77,326; Dec. 25.
Bottle cap. R. W. von Sydow. 1,696,742; Dec. 25.
Bottle-turning mechanism. G. C. Crawford and J. R. Bridges. 1,696,294; Dec. 25.
Bowl or similar article. E. T. Hurley. Des. 77,317; Dec. 25.
Box: *See*—
Metal box. Shipping box.
Braid, Upholstery. H. O. Shults. Des. 77,330; Dec. 25.
Brake: *See*—
Air brake. Railway brake.
Friction brake. Vehicle brake.
Power-operated brake.
Brake mechanism. K. E. Lyman. 1,696,314; Dec. 25.
Brake releasing device. W. H. Watlington. 1,696,702; Dec. 25.
Braking, Regenerative. P. W. Forsberg. 1,696,599; Dec. 25.
Brick for furnace-wall construction. O. Nygaard. 1,696,813; Dec. 25.
Brush attachment. S. A. Steinarson. 1,696,816; Dec. 25.
Brush, Denture. H. W. Faubert and E. E. Wheelock. 1,696,433; Dec. 25.
Brush, Rotary hydraulic bath. W. E. Burnett. 1,696,835; Dec. 25.
Buckle. G. W. Brown. 1,696,293; Dec. 25.
Bumper. H. S. Jandus and L. H. Reed. 1,696,883; Dec. 25.
Bumper, Automobile. F. G. Bremer. 1,696,187; Dec. 25.
Bundle, Plaster-board. C. R. Birdsey. 1,696,877; Dec. 25.
Burner: *See*—
Gas burner. Vapor burner.
Liquid-fuel burner.
Burning apparatus, Portable. F. D. Schultz. 1,696,888; Dec. 25.
Burr for gristmills. D. S. Anthony. 1,696,514; Dec. 25.
Cabinet, Brick-ice-cream packing and cooling. E. M. Fritz. 1,696,349; Dec. 25.
Cabinet, Fuse-dispensing. M. J. Connery. 1,696,190; Dec. 25.
Cabinet, Towel holding and dispensing. C. H. Ashley and L. H. Philleo. 1,696,184; Dec. 25.
Camera attachment. E. J. Crockett. 1,696,431; Dec. 25.
Cameras, Film signaling device for. F. W. Gage and A. W. Tondreau. 1,696,533; Dec. 25.
Can: *See*—
Paint can.
Can-feeding machine. R. M. Huddleston. 1,696,715; Dec. 25.
Can-filling machine. C. H. Ayars. 1,696,376; Dec. 25.
Cannon. E. J. Blood. 1,696,339; Dec. 25.
Cap and package. E. Scofield. 1,696,330; Dec. 25.
Capping machine. T. Sutcliffe. 1,696,819; Dec. 25.
Car seat. C. T. Hansen and A. B. Bell. 1,696,536; Dec. 25.
Carburetor. F. C. Givens. 1,696,711; Dec. 25.
Card. D. F. Matson. 1,696,808; Dec. 25.
Cards, Set of playing. O. Kubatzky. Des. 77,321; Dec. 25.
Carline, Railway-box-car. W. E. Williams. 1,696,427; Dec. 25.
Carrier used in making book and other matches. W. E. Williams. 1,696,743; Dec. 25.
Carrier-wave communication. J. W. Schmied. 1,696,258; Dec. 25.
Carrousel. C. E. Morris. 1,696,500; Dec. 25.
Cases, Making leather. C. G. Aldrich. 1,696,788; Dec. 25.
Casing and support for electrical apparatus. C. F. Swasey. 1,696,260; Dec. 25.
Casing for ingot molds, Shrink-head. E. Gathmann. 1,696,395; Dec. 25.
Casing head for oil wells. H. S. Haynes and W. L. Alexander. 1,696,844; Dec. 25.
Casing hook, Hydraulic. W. Brauer. 1,696,378; Dec. 25.
Casting, Method of and machine for. E. J. Byerlein. 1,696,670; Dec. 25.
Catch, Drag-handle. J. B. Tucker. 1,696,461; Dec. 25.
Cedar chest. H. Dworkis. Des. 77,310–12; Dec. 25.
Centrifugal switch. H. L. Brump. 1,696,621; Dec. 25.
Chain, Antiskid. P. H. Pfeil. 1,696,448; Dec. 25.
Chain for vehicle nonskid devices, Cross-. J. R. Reyburn. 1,696,255; Dec. 25.
Chair. A. J. Lehman. Des. 77,322; Dec. 25.
Check device, Drain-ditch. H. B. Helsing. 1,696,481; Dec. 25.
Chuck jaws. G. F. Hopkins. 1,696,765; Dec. 25.
Circuit closer. J. T. Harrigan. 1,696,713; Dec. 25.
Circuit closer, Speedometer-actuated. J. C. Sosnowski. 1,696,458; Dec. 25.
Circuit for electron tubes, Control. A. Crossley. 1,696,626; Dec. 25.

Circuits for synchronous motors. E. R. Morton. 1,696,248; Dec. 25.
Circuits. Substation. K. S. Johnson. 1,696,274; Dec. 25.
Clam digger. C. E. Wallace. 1,696,371; Dec. 25.
Clamp: *See*—
Rail clamp. Shore clamp.
Clamp with castings, Column. H. O. McMillan. Re17,170; Dec. 25.
Clasp: *See*—
Lingerie clasp.
Clasp for bracelets or the like. C. H. Batchelder. 1,696,292; Dec. 25.
Cleaner: *See*—
Tube cleaner.
Cleaning device, Clothes and fabric. C. W. Roberts. 1,696,414; Dec. 25.
Clinch collar for shades. L. W. Andersen. 1,696,875; Dec. 25.
Clip for pencils and the like. G. L. Bassett. 1,696,183; Dec. 25.
Clock case. R. H. Whitehead. Des. 77,342–3; Dec. 25.
Closet: *See*—
Water-closet.
Closure and method of sealing. A. Podel. 1,696,555; Dec. 25.
Closure for collapsible tubes. A. E. Smith. 1,696,506; Dec. 25.
Closure, Tank-riser. L. C. Eller. 1,696,754; Dec. 25.
Clothesbrush, Pocket. N. Olmazu. 1,696,727; Dec. 25.
Clothes hanger. N. E. Hawkins. 1,696,480; Dec. 25.
Clutch control for transmission mechanism. R. F. Crawford. 1,696,838; Dec. 25.
Coal, Apparatus and process for utilizing. H. S. Reed. 1,696,731; Dec. 25.
Cock, Angle. B. Pratt. 1,696,283; Dec. 25.
Coffee aroma, Producing artificial. H. Staudinger and T. Beichstein. 1,696,419; Dec. 25.
Collar band. H. W. Potts. 1,696,450; Dec. 25.
Combination cap and eye shield. O. Gross. 1,696,198; Dec. 25.
Comminutor R. C. Newhouse. 1,696,857; Dec. 25.
Composition, Foam-producing. E. M. A. Sthamer. 1,696,507; Dec. 25.
Composition for treating fresh fruits and vegetables. H. G. Zellner. 1,696,704; Dec. 25.
Composition for treating fruit. H. G. Zellner. 1,696,703; Dec. 25.
Compound for tempering tools and tool steel. J. F. Edwards. 1,696,297; Dec. 25.
Compressor. E. L. Barnes. 1,696,564; Dec. 25.
Compressor. W. Fourness. 1,696,673–4; Dec. 25.
Concrete form. T. J. Senesac. 1,696,694; Dec. 25.
Condensation products from crude cresol and acetone, Producing. H. Jordan. 1,696,769; Dec. 25.
Condenser, High-tension electrical. G. W. Pickard. 1,696,895; Dec. 25.
Conductor for the transmission of electrical energy and producing the same. A. F. Bandur. 1,696,262; Dec. 25.
Connecter for incandescent lamps. G. F. Becker. 1,696,663; Dec. 25.
Connecter for wrist-watch strap, band, or bracelet. C. H. Kestenman. 1,696,577; Dec. 25.
Connection, Pivotal. H. C. Harris. 1,696,201; Dec. 25.
Contact structure for electric switches. T. T. Greenwood. 1,696,301; Dec. 25.
Container, Safety money. W. F. and A. E. Clegg. 1,696,522; Dec. 25.
Continuous furnace. J. B. Tytus. 1,696,822; Dec. 25.
Control mechanism, Automatic. W. C. Ward. 1,696,659; Dec. 25.
Controlling apparatus. C. W. Wyman. 1,696,748. Dec. 25.
Controlling device, Electric. C. W. Wyman. 1,696,744; Dec. 25.
Controlling device, Electroresponsive. A. F. Welch. 1,696,617; Dec. 25.
Controlling mechanism. J. Gouldbourn. 1,696,535; Dec. 25.
Controlling mechanism. C. W. Wyman. 1,696,746; Dec. 25.
Controlling mechanism for gasoline tanks. N. A. Carlson. 1,696,541; Dec. 25.
Controlling mechanism for wheel brakes. J. B. Des Rosiers. 1,696,839; Dec. 25.
Cooling of fruits and vegetables in refrigerator cars. C. W. Mann. 1,696,441; Dec. 25.
Cooling system for dynamo-electric machines. C. W. Rice. 1,696,612; Dec. 25.
Coop or crate. A. W. Rosenberger. 1,696,693; Dec. 25.
Cop-winder head. E. F. Krueger. 1,696,717; Dec. 25.
Corn ventilating and drying device. O. R. Ludwig. 1,696,854; Dec. 25.
Corner lock. M. Fox. 1,696,269; Dec. 25.
Cot, Folding. F. G. Manly. 1,696,245; Dec. 25.
Coupling: *See*—
Electric-circuit coupling.
Cover and pail support, Combined barrel. E. E. Schulz. 1,696,418; Dec. 25.
Cover or analogous article, Table. E. Thorne. Des. 77,335; Dec. 25.
Cover, Sanitary headrest. C. C. Martz. 1,696,775; Dec. 25.
Cover, Telescoping cabinet. J. A. Sebring. 1,696,456; Dec. 25.
Crusher. H. J. Shelton. 1,696,213; Dec. 25.
Crushing machine. P. L. Crowe. 1,696,387; Dec. 25.
Crystal, Piezo-electric. A. Crossley. 1,696,627; Dec. 25.
Cultivator. G. A. Flood. 1,696,710; Dec. 25.
Cultivator, Hand. C. B. Herning. 1,696,678; Dec. 25.
Cultivator, Roller. I. F. Stem and J. H. Glaze. 1,696,654; Dec. 25.
Cultivators, Plant guard for. J. Hlavka. 1,696,680; Dec. 25.
Current-rectifying system. H. F. Porter. 1,696,210; Dec. 25.
Cutter: *See*—
Stalk cutter.
Cutter head. A. F. Froussard. 1,696,195; Dec. 25.
Cylinder for hydraulic brakes, Master. C. F. Mattingly. 1,696,721; Dec. 25.
Decolorizing vegetable oils. H. E. Bierce. 1,696,338; Dec. 25.
Dehydrating crude oils, Apparatus for. W. L. Palmer. 1,696,859; Dec. 25.
Deinking process and performing same. W. Lewis. 1,696,639; Dec. 25.
Delivery apparatus. C. J. Paulson. 1,696,447; Dec. 25.
Dental implement. W. Jeffreys. 1,696,486; Dec. 25.
Dentistry, Prosthetic. E. A. Thayer. 1,696,422; Dec. 25.
Depositor. R. S. Hislop. 1,696,845; Dec. 25.
Diaphragm for telephone instruments. E. V. Mackintosh. 1,696,807; Dec. 25.
Die. C. A. Messmer, jr. 1,696,442; Dec. 25.
Dielectric substance and manufacturing the same. A. Mouillefarine. 1,696,501; Dec. 25.
Digger: *See*—
Clam digger.
Dish, Soap. A. C. Brown. 1,696,666; Dec. 25.
Dishwasher. J. W. Lowthorp. 1,696,640; Dec. 25.
Dispenser, Glue. T. Wakabayashi. 1,696,783; Dec. 25.
Dispensing device. N. and H. L. Zelkowitz and B. Brayman. 1,696,787; Dec. 25.
Disperse systems, Manufacture of. C. A. Agthe. 1,696,374; Dec. 25.
Display device, Animated. M. M. Williams. 1,696,827; Dec. 25.
Display device, Sectional. E. O. Bulman. 1,696,342; Dec. 25.
Display device, Window. C. F. Castagna. 1,696,189; Dec. 25.
Distilling shale. H. S. Reed and R. D. Lamie. 1,696,730; Dec. 25.
Distribution system. L. F. Blume. 1,696,591; Dec. 25.
Distributor. E. A. Bohlman. 1,696,340; Dec. 25.
Doll. G. L. Fraser and C. T. Kent. Des. 77,325; Dec. 25.
Door and the like, Metal. O. E. Zenker. 1,696,373; Dec. 25.
Doorcheck. J. Schornack. 1,696,701; Dec. 25.
Door lock. J. M. Westcott. 1,696,466; Dec. 25.
Door mechanism, Elevator. A. J. Rosentreter. 1,696,327; Dec. 25.
Door-operated switch. H. Glaser. 1,696,712; Dec. 25.
Door-operating mechanism. F. J. Clark. 1,696,344; Dec. 25.
Door-operating mechanism for swinging doors of garages and the like. G. H. Bridgewater and C. M. Goben. 1,696,379; Dec. 25.
Door structure for automobile bodies. J. Ledwinka. 1,696,310; Dec. 25.
Dough mixer. W. G. Kirchhoff. Re17,169; Dec. 25.
Drafting system. H. A. Owen. 1,696,553; Dec. 25.
Drapery-pole center. A. Diouhy. Des. 77,309; Dec. 25.
Drapery-pole center. R. H. Vermillion. Des. 77,338–9; Dec. 25.
Driving endless conveyers. E. P. Webster. 1,696,465; Dec. 25.
Dropper: *See*—
Syringe and medicine dropper.
Drum, pipe, fittings, etc. T. E. Murray. 1,696,725; Dec. 25.
Drying, steaming, and conditioning tubular fabrics, Device for. M. M. Kasanof. 1,696,682; Dec. 25.
Egg-case flat. F. W. Cole. 1,696,430; Dec. 25.
Egg-case flat. G. A. Filer. 1,696,434; Dec. 25.
Elastic wheel. C. A. Van Bourgonie. 1,696,741; Dec. 25.
Electric appliance. M. J. Malling. 1,696,495; Dec. 25.
Electric-circuit coupling. H. R. Sargent and F. C. De Reamer. 1,696,583; Dec. 25.
Electric furnace. A. N. Otis and C. L. Ipsen. 1,696,728; Dec. 25.
Electric switch. J. D. Hilliard. 1,696,571–3; Dec. 25.
Electric switch, Multibreak. W. S. Edsall. 1,696,296; Dec. 25.
Electric switch, Multibreak. A. C. Kelle. 1,696,276; Dec. 25.
Electrical apparatus. W. R. Frampton. 1,696,348; Dec. 25.
Electrical apparatus. D. C. Prince. 1,696,862; Dec. 25.
Electrical instrument. H. I. Shire. 1,696,333; Dec. 25.
Electrical pilotage. J. J. Gilbert. 1,696,230; Dec. 25.
Electrical shifting mechanism for curtains. L. V. Strouse. 1,696,368; Dec. 25.
Electrical testing device. J. M. Coote. 1,696,266; Dec. 25.
Electromagnet. P. Trombetta. 1,696,615; Dec. 25.

Electromagnetic device. J. A. Wotton. 1,696,223; Dec. 25.
Elevator: *See*—
Safety elevator.
Elevator system and apparatus in connection therewith. F. Lane and W. A. Machin. 1,696,309; Dec. 25.
Emulsions and making the same, Light-sensitive silver halide. P. Wulff and B. Wendt. 1,696,830; Dec. 25.
Engine: *See*—
Internal-combustion engine.
Engine of the two-stroke type, Internal-combustion. G. Heid. 1696,799; Dec. 25.
Engine-shell lining, Jordan. H. D. Martindale. 1,696,641; Dec. 25.
Engines, Mounting means for vehicle. D. S. Harder and F. W. Vrooman. 1,696,602; Dec. 25.
Ethers, Making ethylene glycol monoalkyl. C. O. Young. 1,696,874; Dec. 25.
Evaporating brines, G. B. Burnham. 1,696,542; Dec. 25.
Expansion joint. C. A. Fraley. 1,696,435; Dec. 25.
Exterminator, Weed. M. F. Moran. 1,696,856; Dec. 25.
Extracting rosin and turpentine from wood. A. A. Shimer. 1,696,696; Dec. 25.
Fan, Coin-controlled. M. L. Haney. 1,696,231–2; Dec. 25.
Fastener. A. B. Allen. 1,696,467; Dec. 25.
Fastener slide. E. D. Simons. 1,696,586; Dec. 25.
Fastening and releasing means for document receptacles. L. M. Ballowe. 1,696,181; Dec. 25.
Fastening device. F. C. Rile. 1,696,284–5; Dec. 25.
Fastening device, Shoe-lace. A. Bonglovanni. 1,696,790–1; Dec. 25.
Faucet. W. O. Thompson. Des. 77,334; Dec. 25.
Faucet, Dispensing. M. Narbo. 1,696,687; Dec. 25.
Feeder, Convertible single or double rotary. L. K. Aldrich. 1,696,705; Dec. 25.
Feeding and forming box machine. L. E. La Bombard and M. H. Sidebotham. 1,696,204; Dec. 25.
Feeding device for manufacturing and wrapping of sweetmeats and the like. K. F. Kronqvist. 1,696,803; Dec. 25.
Feeding mechanism. M. J. Maguth. 1,696,549; Dec. 25.
Fender extension. F. P. Kaufman. 1,696,802; Dec. 25.
Fibrous material, Apparatus for the manufacture of mica-coated. E. Haefely. 1,696,397; Dec. 25.
Fighting tank. H. A. Knox. 1,696,439; Dec. 25.
File, Book-cover. G. L. Fenno. 1,696,629; Dec. 25.
Filing cabinet and the like, Prescription. C. M. Anderson. 1,696,375; Dec. 25.
Film reel. H. A. De Vry. 1,696,473; Dec. 25.
Filter. R. P. F. Liddell. 1,696,313; Dec. 25.
Filter. E. S. Stephens. 1,696,367; Dec. 25.
Filter, Oil. E. M. Scoville. 1,696,735; Dec. 25.
Filter, Water. A. E. Jervis. 1,696,487; Dec. 25.
Firearm, Automatic. J. T. Kewish. 1,696,537; Dec. 25.
Fire escape. W. W. Johnson. 1,696 357; Dec. 25.
Fire-extinguishing apparatus. C. A. Helm. 1,696,800; Dec. 25.
Fixture, Culinary. W. R. Walker. 1,696,464; Dec. 25.
Flanges on pipes, Forming. F. C. Fantz. 1,696,229; Dec. 25.
Flash light. A. S. Lyhne. 1,696,720; Dec. 25.
Fluid and gas trap. F. A. Langherst. 1,696,492; Dec. 25.
Fluid-break switch. J. D. Hilliard. 1,696,604; Dec. 25.
Fluid heater. W. Innes. 1,696,306; Dec. 25.
Folding table. B. Deland. 1,696,193; Dec. 25.
Forming articles, Method of and apparatus for. F. S. Kochendorfer. 1,696,242; Dec. 25.
Frame: *See*—
Greeting frame.
Frame for leather-spraying devices. P. G. Aulson. 1,696,185; Dec. 25.
Frames, Manufacturing racket. H. D. Penney. 1,696,251; Dec. 25.
Friction brake. J. S. Thompson. 1,696,821; Dec. 25.
Friction drive means. C. L. George. 1,696,476; Dec. 25.
Furnace: *See*—
Continuous furnace. Heating furnace.
Electric furnace.
Furnace. V. Ballou. 1,696,538; Dec. 25.
Furnace wall. D. S. Jacobus. 1,696,239; Dec. 25.
Furnace wall and brick therefor. O. Nygaard and B. H. Snow. 1,696,812; Dec. 25.
Fuse mechanism. C. W. Wyman. 1,696,745; Dec. 25.
Game. W. S. McMahon. 1,696,408; Dec. 25.
Game-playing machine. C. O. Nelson. 1,696,359; Dec. 25.
Garment. J. A. Duncan. 1,696,671; Dec. 25.
Garment, Child's. D. S. Ward. 1,696,559; Dec. 25.
Garment. Combination. H. E. Brewer. 1,696,620; Dec. 25.
Gas burner. H. E. Dickinson. 1,696,840; Dec. 25.
Gauge: *See*—
Liquid-level gauge. Track gauge.
Motor gauge. Wheel-aligning gauge.
Pressure gauge.
Gear and clutch mechanism. C. E. F. Ahlm. 1,696,179; Dec. 25.
Gear, Draft. W. H. Cotton. 1,696,345; Dec. 25.
Gear for automobiles, Intermediate. N. Christiansen and E. A. Illerburn. 1,696,837; Dec. 25.
Gear shift for drill heads, Accesible twin-lever. D. C. Klausmeyer. 1,696,403; Dec. 25.
Gear, Spring-controlled. G. Fornaca. 1,696,797; Dec. 25.
Gear, Transmission. R. Schoell. 1,696,331; Dec. 25.
Gearing. M. Treschow. 1,696,740; Dec. 25.
Gearing, Transmission. C. E. F. Ahlm. 1,696,178; Dec. 25.
Gel, Catalytic and adsorbent. W. A. Patrick. 1,696,644–5; Dec. 25.
Germicidal compound. J. J. Goodwin. 1,696,762; Dec. 25.
Glass-feeder implement, Composite. P. G. Willetts. 1,696,661; Dec. 25.
Glue-applying roll. W. A. Saatman. 1,696,329; Dec. 25.
Goblet or similar article. E. E. Slick. Des. 77,332; Dec. 25.
Golf accessory. H. W. St. John. 1,696,817; Dec. 25.
Gramophone and motion-picture apparatus, Combined. W. H. Baker. 1,696,831; Dec. 25.
Grate, Shaking, rocking and dumping. C. R. Wald. 1,696,463; Dec. 25.
Grease cup. E. M. Scoville. 1,696,737; Dec. 25.
Grease gun and greasing bearings, Booster. W. F. Hundemer. 1,696,606; Dec. 25.
Greeting frame, Season. M. A. McDonell. 1,696,407; Dec. 25.
Grinding apparatus. H. L. Johnston. 1,696,636; Dec. 25.
Grouser wheel, Adjustable. J. Phillips. 1,696,449; Dec. 25.
Guiding automobiles into position for service, Apparatus for. A. C. Isbell. 1,696,238; Dec. 25.
Gumming machine. M. Feybush and P. W. Fleischer. 1,696,755; Dec. 25.
Hair waver. A. E. Walsh. 1,696,823; Dec. 25.
Hand glass, Illuminated. C. T. Brady. Des. 77,288; Dec. 25.
Handling apparatus, Material. C. G. Pfeiffer. 1,696,780; Dec. 25.
Handling well casings, Apparatus for. C. R. Crossen. 1,696,526; Dec. 25.
Hanger: *See*—
Apparel hanger. Clothes hanger.
Hender for meters, Suspending and controlling. W. B. Ford. 1,696,757; Dec. 25.
Headlight. J. P. C. Charlebois. 1,696,793; Dec. 25.
Heat-resistant composition suitable for arc deflectors. W. R. Steele. 1,696,614; Dec. 25.
Heat-treating apparatus. L. E. Howard. 1,696,801; Dec. 25.
Heater: *See*—
Automobile heater. Orchard heater.
Fluid heater. Water heater.
Heater. G. E. Pickup. Des. 77,328; Dec. 25.
Heater. W. W. Ridgely. 1,696,454; Dec. 25.
Heater controller. O. A. Knopp. 1,696,684; Dec. 25.
Heating furnace, Continuous. C. E. Lehr. 1,696,805; Dec. 25.
Heel-cutter guard, Shoe. E. L. Keener. 1,696,716; Dec. 25.
Hinge, Automobile seat. F. Leutz. 1,696,685; Dec. 25.
Holder, Automobile license-plate. G. J. Laplerre and T. A. Gilligan. 1,696,804; Dec. 25.
Holder, Bag. G. W. Morden and M. Weber. 1,696,551; Dec. 25.
Holder, Contact-screen. C. W. Davis and G. B. Taylor. 1,696,528; Dec. 25.
Holder, Flower-vase. E. D. Anson. Des. 77,280; Dec. 25.
Holder for arc-lamp carbons. F. Meyer. 1,696,777; Dec. 25.
Holder for socket-wrench sets. E. S. Miller and F. A. Hnist. 1,696,444; Dec. 25.
Holder, Iron. F. E. Bowman and G. F. Cameron. 1,696,518; Dec. 25.
Holder, Playing-card. H. J. Sander and A. J. Breister. 1,696,647; Dec. 25.
Holder, Toothbrush. W. C. Athon. 1,696,706; Dec. 25.
Holder, Train-order-hoop. G. E. Madsen. 1,696,279; Dec. 25.
Holder, Tree. F. K. Underwood. 1,696,288; Dec. 25.
Holder, Water-spout. J. M. Wells. 1,696,426; Dec. 25.
Holder, Whisk-broom. E. Wiener. Des. 77,344; Dec. 25.
Holster. E. J. Brauer. 1,696,708; Dec. 25.
Hone, Cylinder. E. A. Hall and G. J. Lindroth. 1,696,477; Dec. 25.
Honing and stropping device. A. Pascoo. 1,696,778; Dec. 25.
Hook: *See*—
Casing hook.
Horn, Multituned. M. R. Hutchison. 1,696,304; Dec. 25.
Humidifier for internal-combustion engines. E. Carter. 1,696,752; Dec. 25.
Hydrocarbons, Cracking. M. J. Trumble. 1,696,658; Dec. 25.
Hydrometer device. S. P. Wilbur. 1,696,618; Dec. 25.
Impact recorder. E. Stout. 1,696,420; Dec. 25.
Index, Telephone. M. M. Shore. 1,696,335; Dec. 25.
Indicating mechanism. L. A. White. 1,696,512; Dec. 25.
Insecticidal plant food. For fertilizer. F. G. Dokkenwadel. 1,696,709; Dec. 25.
Instrument control. W. M. Brower. 1,696,380; Dec. 25.
Insulator rack. W. D. Kyle. 1,696,491; Dec. 25.
Insulator-supporting pin. B. A. Plimpton. 1,696,861; Dec. 25.
Interlocking mechanism. C. W. Wyman. 1,696,747; Dec. 25.
Internal-combustion engine. H. L. Elliott and R. A. Carroll. 1,696,475; Dec. 25.
Internal-combustion engine. R. Strindberg. 1,696,336; Dec. 25.
Internal-combustion motor. W. Fuhr. 1,696,676; Dec. 25.
Ironing board. C. B. Goodman. 1,696,798; Dec. 25.

Ironing machines, Clothes returner for. A. Marcoux. 1,696,609; Dec. 25.
Irrigating apparatus. W. H. Coles. 1,696,384; Dec. 25.
Irrigating device. W. H. Coles. 1,696,385; Dec. 25.
Jack: *See*—
Pumping jack.
Jack. C. E. Bradburn. 1,696,520; Dec. 25.
Jack. N. C. Schellenger. 1,696,865; Dec. 25.
Jar cap. A. A. Lundeen. 1,696,719; Dec. 25.
Jellies, Extraction and drying of. W. J. Müller, H. Carstens, and J. Drucker. 1,696,358; Dec. 25.
Joint: *See*—
Expansion joint.
Journal-box-aligning device. J. F. O'Connor. 1,696,321; Dec. 25.
Key: *See*—
Multiple-plug key.
Knitting machine. N. J. Perry. 1,696,282; Dec. 25.
Lace. W. A. Parsons. Des. 77,327; Dec. 25.
Ladle stopper. C. C. Bacon. 1,696,876; Dec. 25.
Lamp. F. W. Norton. 1,696,643; Dec. 25.
Lamp, Battery hand. E. Aischuler. 1,696,513; Dec. 25.
Lamp, Desk unit magnifying. C. T. Brady. Des. 77,289; Dec. 25.
Lamp, Electric floor. J. Tissler. Des. 77,336; Dec. 25.
Lamp, Electric incandescent. P. O. Cartun. 1,696,594; Dec. 25.
Landing light, Retractable. W. H. Capell. 1,696,521; Dec. 25.
Lantern. D. E. Lindsay. 1,696,244; Dec. 25.
Latch for sliding doors. P. P. Welty. 1,696,785; Dec. 25.
Latch, Screen. F. D. and C. Hobbs. 1,696,355; Dec. 25.
Latch, Sliding-door. H. J. Spencer. 1,696,870; Dec. 25.
Lawn sprinkler, Disappearing or telescopic. W. H. Graham. 1,696,298; Dec. 25.
Leather finishing. A. Small. 1,696,815; Dec. 25.
Leather or similar article. B. Stember. Des. 77,333; Dec. 25.
Level and angling device, Hand. W. Thorburn. 1,696,508; Dec. 25.
Lid for containers, Clamping. D. W. Curtis. 1,696,388; Dec. 25.
Light: *See*—
Flash light. Landing light.

Multiple mold.
Mold. H. D. Rindsberg. 1,696,690; Dec. 25.
Mold ejector. E. W. Smith. 1,696,652; Dec. 25.
Mold for high-temperature casting of refractory bodies. K. E. Peiler. 1,696,688; Dec. 25.
Mold-form structure. H. R. Suiter. 1,696,700; Dec. 25.
Mono-amino-diphthaloyl acridones and preparing the same. W. Mieg and A. Job. 1,696,499; Dec. 25.
Motor: *See*—
Internal-combustion motor.
Motor-control system. C. I. Hall. 1,696,601; Dec. 25.
Motor gauge. E. D. Fageros. 1,696,393; Dec. 25.
Motor suspension, Booster-. H. M. Pflager. 1,696,324; Dec. 25.
Mouthpiece for musical wind instruments. E. Bercioux. 1,696 516; Dec. 25.
Multiple mold. S. Flam. 1,696,756; Dec. 25.
Nail driver. A. T. Phillips. 1,696,781; Dec. 25.
Napkin stand. F. Schofer. 1,696,556; Dec. 25.
Necktie. T. Rochman. 1,696,691; Dec. 25.
Needle-making machine. A. Hofmann and O. Kanis. 1,696,484; Dec. 25.
Nest, Trap. T. P. Garankin. 1,696,394; Dec. 25.
News stand with adjustable top. W. O'Boyle. 1,696,317; Dec. 25.
Nut blanks, Apparatus for making lock. I. C. Emery. 1,696,672; Dec. 25.
Nut, Lock. W. F. Cochran. 1,696,523; Dec. 25.
Oil-dispensing device. H. G. Davis. Re17,168; Dec. 25.
Oil switch. J. D. Hilliard. 1,696,570; Dec. 25.
Oiler, Air-line. G. Ibrmark. 1,696,485; Dec. 25.
Oiler, Telescopic. E. M. Scoville. 1,696,736; Dec. 25.
Operating means for speed indicators or recorders for locomotives. V. Z. Caracristi. 1,696,470; Dec. 25.
Orchard heater. W. S. Button. 1,696,668; Dec. 25.
Organic compounds, Purification of. D. B. Bradner. 1,696,539; Dec. 25.
Pack. H. G. Coulson. 1,696,191; Dec. 25.
Packing case or crate. W. W. Rice. 1,696,413; Dec. 25.
Packing device for filled-can-closing machines. H. A. Fink. 1,696,796; Dec. 25.
Paint can. A. G. Kircher, jr. 1,696,240; Dec. 25.
Paper, Wall. C. E. Burchfield. Des. 77,292; Dec. 25.
Peanut Butter. D. W. Howe. 1,696,706; Dec. 25.
Peavey. W. Latta. 1,696,852; Dec. 25.
Pen desk set, Fountain. G. E. Sweetnam and J. Oreck. 1,696,218; Dec. 25.
Percolator. W. A. Rankin. 1,696,451; Dec. 25.
Photographic-copying machine. A. W. Caps. 1,696,381; Dec. 25.
Photographic shutter. T. M. Brueck. 1,696,264; Dec. 25.
Photography, Color. C. L. Treleaven. 1,696,739; Dec. 25.
Pile fabric. H. P. Dick. Des. 77,308; Dec. 25.
Pin: *See*—
Insulator-supporting pin.
Pincushion for sewing machines. A. J. Larson. 1,696,771; Dec. 25.
Pipe: *See*—
Tobacco pipe.
Pipe fitting. D. Larkin. 1,696,207; Dec. 25.
Pipe tongs, Rotary. H. H. Holdaway. 1,696,356; Dec. 25.
Pipe wrench. A. J. Miehle. 1,696,722; Dec. 25.
Piston construction, Air-cooled. H. A. Palmer. 1,696,858; Dec. 25.
Piston rings, Compression and suction saving construction for. J. H. Thompson. 1,696,424; Dec. 25.
Plane. W. G. Schwer. 1,696,584; Dec. 25.
Plane, Carpenter's. H. L. Org. 1,696,552; Dec. 25.
Planter shoes, Clearing guard for. P. Dasen. 1,696,192; Dec. 25.
Planting attachment for listers, Potato-. R. V. Robertson. 1,696,864; Dec. 25.
Plate or similar article. C. Weiss. Des. 77,341; Dec. 25.
Platform for use with elevating trucks. F. J. Shepard, jr., and N. Warshaw. 1,696,585; Dec. 25.
Plug, key, Multiple-. E. Roethlisberger. 1,696,326; Dec. 25.
Plunger, Pump. D. Barnard. 1,696,563; Dec. 25.
Pointing and drawing wires. W. H. Sommer. 1,696,698; Dec. 25.
Pointing wires, Apparatus for. W. H. Sommer. 1,696,697; Dec. 25.

Pole. A. W. Malone. 1,696,772–3; Dec. 25.
Post: *See*—
Binding post.
Power-operated brake. L. Krupp. 1,696,851; Dec. 25.

Toy animal figure. H. E. Schoenhut. Des. 77,329; Dec. 25.
Toy electric-railway control device. A. H. Gill. 1,696,534; Dec. 25.
Toy watchman's tower. J. E. Cuff. Des. 77,297; Dec. 25.
Track for coke ovens, Pusher. L. F. Schrader. 1,696,259; Dec. 25.
Track gauge. R. E. Keough. 1,696,885; Dec. 25.
Train-control apparatus. P. J. Clifford. 1,696,382; Dec. 25.
Train-control apparatus, System of eliminating automatic. P. J. Clifford. 1,696,383; Dec. 25.
Transformer and conduit-box cover, Combined. A. E. Rittenhouse. Re17,171; Dec. 25.
Translation system, Selective. J. P. Schafer. 1,696,212; Dec. 25.
Transmission system. S. B. Williams. 1,696,261; Dec. 25.
Transmission tower. H. O. Hill. 1,696,569; Dec. 25.
Transmitting mechanism, Motion-. G. C. Carhart. 1,696,623; Dec. 25.
Trap: *See*—
Animal trap.
Fluid and gas trap.
Traps, Striker attachment for animal. A. N. Armstrong. Re17,174; Dec. 25.
Tray or similar article. T. A. De Vilbiss. Des. 77,298–304; Dec. 25.
Treating artificial fuels. H. E. Wetherbee. 1,696,511; Dec. 25.
Treating filter liquor. H. Ahlqvist. 1,696,224; Dec. 25.
Treating fruit, Process of and apparatus for. O. H. Hansen. 1,696,399; Dec. 25.
Treating iron ores. T. P. Campbell. 1,696,188; Dec. 25.
Treating leather. M. Segoria. 1,696,867; Dec. 25.
Treating ores with chloride solutions. N. C. Christensen. 1,696,471; Dec. 25.
Treating rods, Device for. C. E. Lehr. 1,696,806; Dec. 25.
Treatment of materials, Apparatus for heat. T. S. Curtis. 1,696,794; Dec. 25.
Trouser-supporting device. J. W. Meiklejohn. 1,696,809; Dec. 25.
Truck, Railway. O. K. Kjolseth. 1,696,608; Dec. 25.
Truck, Railway-car. J. F. O'Connor. 1,696,322; Dec. 25.
Trunk, Folding. O. R. Ludwig. 1,696,853; Dec. 25.
Truss metal shape and producing same, Rolled. W. A. Bates. 1,696,833; Dec. 25.
Tube and tire saver. T. P. Roth. 1,696,503; Dec. 25.
Tube cleaner. T. R. Hayton. 1,696,677; Dec. 25.
Tumbler. E. E. Bartlett. Des. 77,281; Dec. 25.
Turning machine, Automatic. D. Turcott. 1,696,425; Dec. 25.
Type-setting machines, Composing apparatus for. R. Barennes. 1,696,515; Dec. 25.
Typewriting machine. E. E. Barney. 1,696,789; Dec. 25.
Typewriting machine. A. B. Ely and E. L. Harmon. 1,696,227–8; Dec. 25.
Typewriting machine. W. P. Helmond. 1,696,236; Dec. 25.
Typewriting machine. A. G. F. Kurowski. 1,696,243; Dec. 25.
Underframe for well cars. W. M. Sheehan. 1,696,332; Dec. 25.
Vacuum discharge devices by alternating current, Energizing. R. A. Heising. 1,696,233; Dec. 25.
Valve. L. C. Gerlinger. 1,696,396; Dec. 25.
Valve. F. E. Raymond. 1,696,452; Dec. 25.
Valve. S. J. Nordstrom. 1,696,726; Dec. 25.
Valve. A. D. Skinner. 1,696,868; Dec. 25.
Valve Automatic vacuum-controlled. S. V. Smith. 1,696,366; Dec. 25.
Valve for cooling systems, Thermostat control. J. V. O. Palm. 1,696,410; Dec. 25.
Valve for percussive tools. G. Lee. 1,696,311; Dec. 25.
Valve, Lubricated. F. Milliken. 1,696,723; Dec. 25.
Valve-operating connections, Compensating means for. F. Reich. 1,696,361; Dec. 25.
Valve-operating mechanism and the like. J. C. Turvene. 1,696,370; Dec. 25.
Valve stem for inner tubes of pneumatic tires. A. B. Preisser. 1,696,211; Dec. 25.
Valves and like devices, Manufacturing of. L. Salves. 1,696,646; Dec. 25.
Vanity case. S. E. Guinn. Des. 77,316; Dec. 25.
Vapor burner. C. E. Debaecker. 1,696,389; Dec. 25.
Vaporizer for liquid fuel. E. R. Godward. 1,696,881; Dec. 25.

Vaporizer for liquid fuels. E. R. Godward. 1,696,761; Dec. 25.
Vehicle brake. H. C. Chase. 1,696,879; Dec. 25.
Vehicle brake. G. J. Rackham. 1,696,729; Dec. 25.
Vending machine. H. L. Lowry. 1,696,494; Dec. 25.
Vending machine, Coin-controlled. G. B. Smith. 1,696 365; Dec. 25.
Vending machine, Manually-selective. W. C. Cutler. 1,696,795; Dec. 25.
Ventilating means for boots and shoes. M. A. Shanhan. 1,696,457; Dec. 25.
Ventilator. G. C. Tierney. 1,696,423; Dec. 25.
Viscosimeter, Direct-reading. F. E. Fitch and N. W. Torbet. 1,696,630; Dec. 25.
Voltage regulator. L. C. Roberts. 1,696,416–7; Dec. 25.
Vulcanizing rubber and products obtained thereby. I. Ostromislensky. 1,696,409; Dec. 25.
Wall construction for bathrooms. F. H. Michaelis. 1,696,443; Dec. 25.
Washing coal, ores, and other similar materials, and automatic water-current separator for carrying the method into practice, Method of. L. Hoyois. 1,696,767; Dec. 25.
Washing machine. H. F. and E. Kuhlmann. 1,696,718; Dec. 25.
Washing machine. W. E. Pinckney. 1,696,253; Dec. 25.
Watchcase. A. G. Bernheimer. Des. 77,287; Dec. 25.
Watchcase. A. P. Conant. Des. 77,294–6; Dec. 25.
Water-closet. E. K. H. Lundberg. 1,696,855; Dec. 25.
Water heater. A. Galdi and E. S. Peterson. 1,696,758; Dec. 25.
Water heater. H. J. Lange. 1,696,206; Dec. 25.
Water heater. V. P. Williams. 1,696,828; Dec. 25.
Water-softening apparatus. J. E. Trewhitt and P. E. Hillery. 1,696,369; Dec. 25.
Wave transmission system. R. C. Mathes. 1,696,315; Dec. 25.
Waxing blanks, Method of and machine for. H. S. Labombarde. 1,696,894; Dec. 25.
Welding apparatus, Circular-seam-. W. E. Rupley. 1,696,455; Dec. 25.
Wheel: *See*—
Elastic wheel.
Grouser wheel.
Wheel-aligning gauge. C. H. Archer. 1,696,290; Dec. 25.
Wheel construction. W. C. Martin. 1,696,405; Dec. 25.
Wheel structure, Bull-. R. R. Bloss. 1,696,664; Dec. 25.
Window. J. F. Massey. 1,696,498; Dec. 25.
Window-glass channel. E. W. M. Bailey. 1,696,589; Dec. 25.
Window, Reversible, R. E. Hysert. 1,696,067; Dec. 25.
Wrapper. H. G. Norwood. 1,696,445; Dec. 25.
Wreath form. E. D. Tubbs. 1,696,221; Dec. 25.
Wrench: *See*—
Pipe wrench.
Writing apparatus, Electrically-displayed. C. Lauria. 1,696,548; Dec. 25.

# CLASSIFICATION OF PATENTS

## ISSUED DECEMBER 25, 1928.

NOTE.—First number=class, second number=subclass, third number=patent number.

1— 1: 1,696,257
46: 1,696,781
2— 10: 1,696,198
77: 1,696,679
78: 1,696,620
79: 1,696,714
90: 1,696,671
111: 1,696,559
127: 1,696,450
146: 1,696,691
4— 13: 1,696,855
187: 1,696,464
291: 1,696,505
5— 10: 1,696,412
119: 1,696,286
262: 1,696,291
288: 1,696,269
314: 1,696,245
8— 8: 1,696,414
10— 72: 1,696,672
128: 1,696,453
1,696,550
12— 88: 1,696,716
142: R. 17,172
15— 29: 1,696,835
104.06: 1,696,677
158: 1,696,811
167: 1,696,433
184: 1,696,727
248: 1,696,816
16— 84: 1,696,701
191: 1,696,685
18— 2: 1,696,826
1,696,843
53: 1,696,409
